THE

ENCYCLOPAEDIA OF ISLĀM
ADDITIONS AND CORRECTIONS

P. 13, Bibliography art. Ecua, l. 3, read: "ii. i. p. 58" for "ii. 58"; ibid., l. 4, read: "Nahr Sis (I. Shōb = Guadajoe)" for "a Nahr Šūs"; ibid., l. 6, add: Dā'irat al-Ma‘ārif, iii. 679 sqq. (Oshūna [Lisbon] I. Oshūna = Osuna).

P. 30a, Bibliography of the art. Eritrea, add: Quirino Maio, La Colonia Eritrea, Torino 1891; Nicoletti Altimari, Da Asis a Casalà, Rome 1893; Anonymus, Tre Anni in Eritrea, Milano 1901; Penne, Per l'Italia africana, Rome 1906.

P. 102a, l. 28, add: Cf. Evaristo Carusi, Sui Rapporti fra Diritto romano e Diritto musulmano (Estratto degli Atti della Società italiana per il Progresso delle Scienze, Siena 1913, viii., Riunioni), Rome 1913.

P. 104a, l. 42, read: "three" instead of "two"; l. 43, add: the edition of the Risāla forming the introduction of the Kitāb al-‘Umm, ed. Bālābāl 1312.

P. 191a, l. 1, read: "reliable" instead of "reliable".

P. 192b, l. 31, l. 7 a. f., read: "known" instead of "know".

P. 211a, l. 11 a. f., read: "fol. 153v" instead of "fol. 135v".

P. 211b, l. 20, read: "1553" instead of "1559"; l. 21, read: "1736" instead of "1876"; ult., read: "792" instead of "733".

P. 258a, Art. Ḥandūs, l. 7, read: "Ḥandūsīya" instead of "Ḥandūsīya"; l. 21, read: "Berbères" instead of "Bérères".

P. 366b, l. 15, 25, 28, 30, 36, read: "Musailima" instead of "Musailama"; l. 23, 35, read: "al-Radjudjāl b. Unfuwa" instead of "Radjudjāl b. Unfuwa".
ADDITIONS AND CORRECTIONS

P. 262b, l. 20, read: "Note 1" instead of "Note 19".
P. 265a, l. 8, read: "kəʾimmakām" instead of "kəʾimmakām"; l. 33 a. f., read: "Makrami" instead of "Maqrami".
P. 266a, Art. ʿHĀBE, Bibliography, add: Schwarzlose, Die Waffen der alten Araber, see Index.
P. 267a, l. 18, read: "Barghāl" instead of "Barghāl".
P. 269a, l. 5, read: "125", "1" instead of "125", "9".
P. 270a, l. 4, read: "dʾAlcandetē" instead of "dʾAlcandetē".
P. 281b, Bibliography, l. 14, read: "dʾAlcandetē" instead of "dʾAlcandetē"; add: Berbrugger, Les épisodes militaires de la grande Kabylie, Alger 1897, p. 79 sqq.
P. 282b, l. 17, add: Vaudal, Le pacha Bonneval, Paris 1885, p. 52—60.
P. 286b, l. 19, read: "MANT" instead of "AL-MANĀF".
P. 288b, l. 29, read: "Tabarca" instead of "Tabacco".
P. 290a, l. 15 a. f., add: (cf. R. Basset, Notes sur les Mille et une Nuits, iii., Rev. des Traditions populaires, 1897, p. 146—152).
P. 290b, l. 7, add: The romance was published in Tatar Kazan 1867; l. 15, add: Three chapters of a Malay adaptation of this romance have been edited (without mention of MSS.) and translated by P. P. Roorda van Eysinga (Tjurīṭaśa dari pada ṣevang bhrīnam Hatim Tayi in Uitrekeels uit Maleische Geschiedenis, p. 261 sqq., appendix to his Maleisch en Nederduitsch Woordenboek, Batavia 1824—1825; Dutch transl., in De Oosterling, 1835, i. 352 sqq.; cf. also J. J. de Hollander, Handeling bij de boevingen der Maleishe taal en letterkunde, Breda 1893, 6th ed., p. 68—116). A MS. of the Malay version is found in Paris (A. Cabaton, Catal. somm. des MSS., indio-polynésiens, p. 227, No. 61, ii.); l. 28, add: cf. also R. Basset, Bibliogr. des auteurs arabes, extr. des Annales universit. de l’Algérie, sept.—déc., 1913, p. 2.
P. 295b, l. 5—6, read: "Muṣṭalāh" instead of "Mūṣṭalāh".
P. 299a, Art. ḤEKŠ, l. 6—7, read: "Muṣallā" instead of "Maṣallā".
P. 299b, l. 6, read: "Kādjar" instead of "Kādjar".
P. 307a, l. 17 a. f., add: G. Marçais, Les Arabes en Barbery, Constantine 1913, 1st partie, Ch. i.
P. 313a, l. 7 a. f., add: Garcin de Tassy, Hist. de la littér. hindoue et hindoustanî, Paris 1807, vol. i., Introd.
P. 314a, l. 16—17, read: "Mohan Lal" instead of "Mohanhal".
P. 320a, l. 15, add: see also Max von Berchem, Voyage en Syrie, Cairo 1915, p. 335 sqq.
P. 320b, l. 6 and 27, read: "Wellsted" instead of "Wellsted"; ult., read: "Ortokuśi" instead of "Urukūsūl".
P. 396b, l. 39, add: Besides the works quoted in the article: Bargès, Complément de l’histoire des Beni Zeiyān, Paris 1887, p. 205—217.
P. 397a, l. 21, add: R. Basset, Notice sommaire des mss. orientaux de deux bibliothèques de Lisseboune, Lissabon 1894, p. 4—6.
P. 400a, l. 3, add: cf. also Dozy, Recerches, i. 21—40.
P. 411a, l. 9, add: cf. J. Tkač, Čiër den araban, Kommentar des Averroes zur Poetik des Aristoteles, in Wiener Studien, xxiv. 70 sqq.
P. 414b, l. 25 a. f., add: R. Basset, Mélanges africains et orientaux, Paris 1915, Ch. vii.
P. 417b, l. 24, read: “xvii.” instead of “xviii.”.
P. 424a, l. 29, add: On Ibn al-Ṭīṭākā, cf. also the observation by Mirzā Muḥammad Kazwīnī in the Persian introduction to his edition of Djuwaini’s Tarīkh-i Djaḥān-gūstā, i. (G. M., xvi.), 34 sq. (see also Kit. Umḍat al-Ṭālib fī Anṣāb Aḥ Āḥ Ṭālib, Bombay 1318, p. 159 sq.). According to the same author, ibid., p. 14, the proper title of the Kitāb al-Fakhrī is Munyat al-Fadlā fī Tawārīkh al-Khulafa’ of which the history of the “Abbāsids by Hindūshāh b. Saḥīr, entitled: Kitāb Tadjāriḥ al-Salaf, is an enlarged Persian translation. The Bibl. Nat. of Paris possesses a defective manuscript of the latter work (N°. 373 in Blochet, Catal. des Ms. persans, i. 251), but several copies exist in ʻEṭerān.

P. 426a, l. 10, read: “Asafū” instead of “Asafīr”.
P. 447a, l. 18 a. f., read: “Abū l-Nāṣir” instead of “Abū Nahṣim”.
P. 491b, l. 10 a. f., read: “al-Ālamgirīya” instead of “al-Ālamgīrī”.
P. 560b, l. 30 a. f.: The equation is to be read as follows:

$$2.97 \times 6 + 2 \times \frac{2.07}{6} = 18.81 = 4.72 \times 4 = 18.81$$

P. 563a, l. 18 a. f., read: “iṭṭāḥad” instead of “iṭṭāḥad”.
P. 566b, l. 8 a. f., read: “329 sq.” instead of “322”.
P. 590b, l. 24 a. f., read: “ma’mūr” instead of “ma’mūr”.
P. 592a, l. 17, add: Gaudefroy-Demombynes, Le pélerinage à la Mekke, Paris 1923.
P. 594b, l. 24 a. f., add: E. Chantre, Recherches anthropologiques au Caucase, Lyon 1885—1887.
P. 601a, l. 5, read: “lamghār” instead of “amrur”.
P. 613b, l. 8 a. f., read: “162 sq.” instead of “1623”.
P. 617b, l. 29 a. f., read: “des” instead of “der”; l. 2 a. f., read: “süülichen” instead of “süüliche”.
P. 618a, l. 20 a. f., read: “Drewnestei” instead of “Drewnestei”; l. 9 a. f., read: “Winogradow, Föderisius” instead of “Minogradow, Föderisius”.
P. 796b, Art. KAMI, l. 18, read: “vowel” instead of “consonant”.
P. 730b, Art. ʻARA DENIZ, l. 26 sq., read: “ed. Société géographique de Paris, 1839, mare Ponti quod vulgariter Marc Majus appellant”.
P. 787b, l. 27 ab infra, read: “mafʻūlan” instead of “mafʻūltun”.
P. 884b, l. 21—22, read: “In November 1922 Turkey abolished the Sultanate and on October 30, 1923, declared itself a Republic”.
P. 885b, fin., add: Orientale Moderno, Rome 1922 sq.
P. 1059b, l. 18, read: “Köprüşu”, instead of “Köprüşuya”.

LUZAC & CO
46 GREAT RUSSELL STREET
EBU, the Ottoman-Turkish pronunciation of Abū [q. v., i. 734 et seq.]

ÉCija, the capital of a district in the eastern province of Seville in Spain with 25,000 inhabitants, is picturesquely situated on the left bank of the lower course of the Genil, which is navigable below it, in a torrid valley, — whence it is called el Sairen de España "the bakehouse of Spain"; its streets are narrow and its church towers (formerly minarets) covered with azulejos. It is the ancient Iberian Astigi of which the Arabs made Isti'ja, Esti'ja (rarely Esti'ja in this period) whence is derived the Spanish Écija (st > c, z, as in Basile, Basta, Baza; Caesaraugusta, Sáragosa, Zaragoza; Mustá'rab, Mozárab etc., cf. Grüber, Grandes de los Romanos y Filipíneos, i. p. 520). After the battle of Laguna de la Janda in 711, the Roman Colonia Julia Augusta Firma, one of the four conventus juridici of the Provincia Baetica and the Gothic see of Astigi was forced to conditional surrender by Tāriq after a siege of a month; in the history of the Arab period it played an important part, particularly as the northwestern stronghold of the renegade 'Omar Ibn Ibaṣīn [q. v. and the article IBAZISTO, i. 736]; in his long rebellion, till the town was taken in 891 by Emir 'Abd Allāh of Córdoba [cf. the article CARNOTA, i. 829]. It had always a large Mozárab community, was taken in 1242 by Ferrándiz of Castile, and reoccupied with Christians in 1262 by Alfonso X the Wise after the expulsion of the Moors. In 1402 it was made a city (ciudad) by Henry III and throughout the history of the kingdom of Granada it plays an important part as one of the frontier fortresses of Castile as it did at a later period again in the war of the Spanish Succession and the Peninsular War.

Mehran), p. 35, 232 et seq.; Ibn Duckmāk, Kitāb al-Intiṣār, v. 29; Ibn al-Dīfān, al-Talḥa; al-Samawi, p. 191; Makrīzī, Khiṣāf, i. 237; d'Anville, Mémoires sur l'Égypte ancienne et moderne, p. 209; Quatremère, Mémoires, i. 44; All Bābā Mubārak; al-Khiṣāf al-Qadīd, viii. 44 et seq.; Amelineau, Géographie de l'Égypte; Boinet Bey, Dictionnaire géographique de l'Égypte; Maspero, Egyptische Kunstgeschichte (German edition of Steinor); Baedeker, Ägypten I, p. 330. (E. Graef.)

EDIRNE (Gr. Εδερνοντικός, Engl. Adrianople, Fr. Andrinople, in Idrisi, transl. Jaubert, ii. 383) was taken from the Byzantines in 763 = 1362 with the surrounding country by the Ottomans under Murād I. The Turkish sources give 761, 762 and 763 A.H. as the date of its capture and the statements of western writers on the point are equally divergent and indefinite; Jirecek in his Geschichte der Bulgaren, p. 328, decided on 1363 but Murād I's letter on his victory of the beginning of Dhu l-Ka'da 763 = end of August 1362 in Feridūn, Mumshiyāti Sulṭānīf, i. 91 et seq., suggests 763 = 1362 as the date; cf. v. Hammer, Gesch. d. Ott. Reiches, i. 163 et seq.; Zinkeisen, i. 218—221; Gibbon (ed. Bury), vii. 31.

The city picturesquely situated on an elevation at the confluence of the Maritsa, Arda and Tandja in the centre of a fertile depression, had been strongly fortified against Bulgar invasion in the later years of the Byzantine Empire; Murād I made it the European residence (mādīm) of the
Sultans — 768 A. H. is the year given. During the wars of succession between the sons of Bâyazid I, Mr. Suleimân Çelebi and, after his death, Mûsa Çelebi continued to use it as such. Even after the conquest of Constantinople (1453) it continued to be the second residence while Brusa fell completely into the background. The Sultans stayed there regularly for longer or shorter periods with the whole court and government, notably before the campaigns against Austria and the Poland but also for the sake of the hunting there. From Ahmed I’s reign (beginning of the xvith century) Adrianople became the favourite residence of the Sultans: Mehmed IV (1648—1687) spent the greater part of his reign in Adrianople; in Mustafa II’s reign (1695—1703) the Sultan’s lengthened stay in Adrianople led to a revolt of the Janissaries and to his deposition. Henceforth Adrianople was only visited occasionally by the Sultans and in the course of the xvith century it was gradually abandoned as a royal residence. During the Russo-Turkish wars of the xith century, Adrianople was twice occupied by the Russians, in 1829 from the 20th August—20th November and in 1878 from the 20th January to the end of March. The government of Adrianople was in earlier times (till 1826) in the hands of the Bostândjibashi [q. v., i. 766]. Justice was administered by a Mulla Kâdi of high rank. After the administrative reforms Adrianople became the capital of the vilayet of the same name and in 1911 the head-quarters of the Fourth army corps (kol onu), On the 25th March 1913 the town was captured by the Bulgarians after a siege of five months.

Adrianople was for long of great importance under Turkish rule not only as a royal residence and military centre but also as a commercial town; in the xith century the original Greek population was joined by numerous Jewish emigrants from Spain, Armenians, Ruggans and other foreigners who carried on trade with the west.

The city grew considerably; the old Byzantine fortified town (the so-called warach) remained to the Greeks, Armenians, Jews and Franks while the Turks settled outside the walls. In 1850 there were over 30,000 hearths, i.e. about 150,000 inhabitants; with the retirement of the Sultans from Adrianople began the gradual decline of the city; about the time of the Russo-Turkish war of 1828—1829 the population was estimated at 80,000—90,000 of whom 50% were Turks, 33% Greeks and Bulgars, and the remaining Jews, Armenians and Franks. The number has since risen to somewhat over 100,000.

From the time of the sons of Bâyazid to the reign of Murâd IV (the middle of the xiiith century) and for a brief period again under Mustafa II (1675—1703), Adrianople was one of the mints of the Ottoman Empire.

The splendid monuments of architecture in the city date from its period of greatest prosperity in the xith and xiiith centuries. Of Byzantine buildings there have survived the ruins of a church called Aya Sofâa. The ancient quadrangular fortress had four huge round towers at the corners and twelve square towers in each wall. Nine gates are mentioned, viz.: Kul Kupası, Top K., Kafes (Kafestî) K., also called Mihal K., Köcedilir or Kazandjilir K., Oğrâin (Eger) K., Manis K., Taşk K., Indilir or Stamûli K., Orta K. (according to Enis al-Mustâmirîn; cf. Niebuhr, Reisen, i. 164). The number of gates and their names in Enïylla, iii. 428 and v. Hammer, Gesch. d. Osman. R., vi. 700 differ from these. The Porte Triomphale illustrated in Sayger-Desarnod is probably identical with the German K. in Djewri, p. 6 et seq.

The New Imperial Palace on an island formed by the Tundja was built by Mehemmed II in 1452 and Selim I (1512—1520); later Sultans added individual kiosks and other buildings. By the beginning of the xiiith century it had begun to fall into decay; in 1829 the peace with Russia was signed there; on the 17th January 1858 the Turkish troops retreating before the Russians blew up the main buildings. The outlook tower dating from the xiiith century still remains. We infer from the accounts of European travellers of the xiiith and beginning of the xiiith centuries, that the Serai was similarly planned to the Old Serai of Topkapı in Constantinople, cf. the last account in v. Molte, Briefe aus der Türkei, 6 th ed., p. 150. According to Ewliya the New Serai occupied the hunting-ground of the Greek emperors: as a matter of fact the site does seem identical with the "meadows of Commen" on the Tundja where in 1337 the wedding of the Bulgar Crown-Prince Michael to a Byzantine princess was celebrated (Kantakuzen, Hist., i. 508). — The Old Serai lay near the Selimye on the "planetree square" (Kazâk Meidâni) and is said to have been built by Murâd I in 757 A. H. (according to others in 820 A. H. by Mehemmed I); it was afterwards — according to Ewliya in the reign of Suleimân I — adopted as barracks for the 'Ademogloah, like similar buildings elsewhere (the Galata Serai, the Serai in Brusa, etc.) and is known to have been used as such to the end of the xiiith century.

The Mosques. The old buildings were apparently left to the Christians at the conquest with the exception of the Çelebi Djami, which is considered the oldest mosque; another mosque, the Kilitse Djami, situated like the preceding within the walls, with a central octagonal fountain, was turned into a mosque by Mehemmed II. Gülşah in 1578 counted 15 Greek churches.

The oldest mosque is that of Bâyazid Yildırım also called Kupeli Djami, near the Mihal bridge on the Maritta; 792 is given by Hadidji Khalifa, Ta'kvim, as the date of its erection while the author of the Enîs al-Mustâmirîn gives 802 A. H.; Ewîliya says it was completed by Mehemmed Çelebi.

The second oldest mosque is the "Old Djami" (Ensi Djami, formerly also called Ulû Djami), begun by Mr. Suleiman Çelebi, continued by his brother Mustafa and completed by Mehemmed I, though some authorities say it was only finished by Murâd II; it was burned down on the 14th Redžeb 1159 (30th July 1746) and restored the following year.

Murâd II built three mosques, the largest of which was the Üc Sherfeli, so called from the three balconies on two of its four minarets; it took ten years (841—851 A. H.) to build (Enîs al-Mustâmirîn). The same Sultan built the Dâr al-Hâdith Djami in 838 A. H., in the forecourt of which is the mausoleum of the two princes Hasan and Orkhan, sons of Murâd II, and a year later (839) the Murâdije, originally a Mewlewî monastery.

From this earlier period the following mosques also date:

1. Eṣba (Ar’isha) Kadin Djami, on the
road to Stambul, built in 825 by ʿAlī ʿl-Sūltān, daughter of Mehmed II. 2. Kōdji Elyās at the gate Kafeskapou, dating from 825 H.; 3. the mosque of Mihālheg on the Tundja, hospital and poor-kitchen, dating from 825 H.; 4. the Beilerbei Djamī, dating from 832 H., as well as the mosque of Sarūjian Pasha, which is well-known because the head of the Grand Vizier Kārā Mustafā who was executed after the unsuccessful siege of Vienna in 1683, is buried there.

In the reign of Mehmed II there were built: the Selim Čeľebi Djamī (in 867, or 873 A.H.), the Sultan Djamī, founded by Sitti Sultan, wife of the Sultan, in 877 H., the mosque at the Zāwūj of Sādiķedec (882 A.H.), and the mosque of Djezeri Čāсим Pasha (883 H.). Bāyāzid I built the mosque, which bears his name, on the bank of the Tundja during the years 889—893 (1484—1488); it was particularly celebrated for its splendid philanthropic endowments (medrese, hospital and asylum, poor-kitchen) and is therefore sometime also called Yeni ʿImāret Djamī. His Vizier Sulejmān Pasha founded another mosque near the “New Bridge”. In the reign of Selim I, Lari Čeľebi built a mosque in 920 ʿA.H.; Sulejmān I built the mosque attached to the Zāwūj of Şūdja and the Taşālīk Djamī, the latter being one of the famous Sinān’s works.

The most celebrated building in Adrianople, the Sultan Bayazid mosque was built for Selim II in 976—982 (1568—1574) by the architect Sinān, who describes it as his greatest masterpiece by which he surpassed even Aya Sofya. Situated on the highest part of the town with a large cupola and four slender pillared minarets each with 3 balconies and as many staircases, and a spacious forecourt, and splendidly equipped in the interior, it became the court-mosque of the city. In Adrianople Sinān also built the mosque of ʿAbbās Čeľebi Sultan at the New Bridge and the mosque of Dostārdar Muṭṣafū Pasha.

40 large and small mosques are all mentioned besides others in the former foci, schools of Tradition (Dār-AL-ḤADITH), Dervish monasteries and Zāwūjays. The Selimye is further said to have had a library containing 5000 volumes.

The bezestans (warehouses), čarghi (bazaars) and khāns (fondachi) of this city are equally celebrated. The “Old bezestan”, a wakf of the Dār al-Ḥadith Djamī was built by Murād I, Sultan Mehmed I. These are surpassed by ʿAli Pasha’s Bazaar (967 = 1559—1560) built by Sinān for Semit ʿAlī Pasha, and the Shoemakers’ Bazaar (Kawawāj Carşāsi, also called ʿUsn Carşāsi), built by Murād III as a wakf of the Selimye mosque. Among the 18 larger khāns may be mentioned: the Khan Rustem Pasha, built by Sinān, that of Mustafā Pasha (Ibi Kapan) and the largest of all, the Khan ʿAlīhe Kādīn, near the mosque of the same name, built in 1018 (1609—1610) by Ekmekjīzdeh Ahmed Pasha. The Serais of the Viziers and Pashas (detailed in Ewlyi, i. 458 et seq.) were also very numerous; they were, like the Imperial Palace, left to fall to pieces after Adrianople lost its importance as the second royal residence.

The stone bridges over the Marita and Tundja, which in part date from the Byzantine period, deserve special mention. The following are given:

1. the bridge at the Serrādji-khāne, built in 855 (A.H.) by Shihāb al-Din Pasha, collapsed at the beginning of the xviiith century and was rebuilt; 2. The bridge of Bāyāzid II over the Tundja, with 6 arches; 3. the bridge near the mosque of Bāyāzid I, dating from the Byzantine period and repaired by Sulejmān I in 951 A.H.; 4. a bridge of the year 1010 A.H. at the tomb of the saint Feserāḥ; 5. the Mihāl bridge, of the Byzantine period, repaired in 823 by Mehmed I and in 1059 A.H. by Kemān舒š Muṣṭafā Pasha; 6. The New Bridge of Ekmekjīzdeh Ahmed Pasha of the year 1027 A.H.

The aqueducts were built by Sulejmān I and restored in the beginning of the xviiith century (v. Hammer, Gesch. d. Osm. Reiches, vii. 66).

(E. H. MORDTMANN.)

EDINBE, the Turkish pronunciation of the Arabic Adjinābī, “stranger” [q. v., i. 141].

EDREMD, the capital of a Kāzā of the Sandjak of Karasi in the Vilāyet of Brusa, with a population of Turks and Greeks (c. 8000 souls in all of whom 2000 are Greeks, in 1883 houses), is situated 5-6 miles inland from the port of Ağıvai in the uppermost corner of the Gulf of Edremid. The ruins of the ancient Adramyttion (Ἀδραμύττιτος, Ἀδραμύττιος in the Byzantine authors, آدرمحمد in Idrisi) are at Karataş on the sea near the Skala of Kemew-Edremid. Adriamytion was destroyed by the Turcoman Tūṣ-Zānī who had established himself in Smyrna since 1090, and after it had been rebuilt the town again suffered at the hands of another Turk Monolykos in 1115 (Alexias, ii. 224, 245, ed. Reifferscheid). To defend it against such attacks Manuel I fortified the town (about 1160; Niketas, p. 159). Earlier in the xivth century Edremid fell into the hands of the Karasioglu of Bergama, after the Genoese
of Phocaea had undertaken the defence of the town against the Turks (Pachymeres, ii. 557 et seq.). When Sulṭān Orkhan disposed the Karasoghiļ about 1345, Edremid passed with the other lands of this dynasty under Ottoman rule. In 1403 Timūrlank’s troops on their return march from Brusa to Magnesia made a raid on Adramyttion, Assos and Pergamum from Balikcısı (Ducas, p. 72, compared with Sheref al-Din). It is not known when the town was transferred from the sea-coast to the interior.

**EDRIS.** [See IDRIS.]

EFENDI, an Ottoman-Turkish word borrowed from the Byzantine Greek Ἑφέντης (Du Cange), derived from the ancient Greek ἀφέντής "sir, master", a legal term (used by Phrynicias, Polybius and even Euripides with this meaning). This name is given to men who have had a liberal education; ordinary people and subordinate officers are called Ada (Aa by elision of the velar) they receive the title Efendi when they have completed their literary education. Efendim (abbreviated familiarly and jokingly to Efem), "Sir", "madam". The Khādi of Constantinople is also called İstanbul Efendisi. The Raqqa Efendis (for Raqqa al-Kuttab = "chief of the scribes") was before the reforms the Secretary of State for Foreign Affairs. The Sulṭān also holds but not exclusively the title Efendimiz = "our Lord"; the Arabs of Egypt apply the analoguous expression Efendi-nā to the Khedive. This term is purely Turkish and has penetrated everywhere that Greek influence has made itself felt.

**EGERDİR,** the capital in a Ḍağı of the Sandjak of Hamidabad in the Wilāyet of Kōniya, situated on a tongue of land at the south end of the lake of Egerdir, with a few thousand inhabitants, all Muhammadans; on the adjacent island of Nisi (Νησί), Turkish Nisin, Nis adasi with a monastery live about 1000 Turkish-speaking Greeks. The town presumably fell into the hands of the Seljukis at the same time as the district of Isparta, which Kilidjian Arslan III conquered (600-601 A.H.) (see Houtsma, Reveil, etc., iii. 62); its citadel which now is destroyed is said to have been built by Kaikusbâd I. After the break-up of the Seljuk empire, Egerdir became the capital of the Turkoman Hamidoglu, one of the first rulers of this dynasty, Felek al-Din (beginning of the xivth century) gave it the name Felekbir, or Felekabad (Abu ʿl-Fidā, Geography, transl. by Reinhard, ii. 2, 134). In 783 or 784 A.H. the last Hamidoglu sold his kingdom to Murad I and Egerdir thus passed under Ottoman rule. Timūrlank conquered the town and the fortified island of Nisadasi on the 17th Shaʿbān 805 = 11th March 1403, (Saʿd al-Din, according to Sheref al-Din on the 17th Red hej) on his march through Anatolia and gave them to the Karanmoglu whom he restored; the latter had to return them to the Ottomans in 1425 with the district of Hamideli. The town has no less than 30 large and 18 small mosques and also a small library with 218 manuscripts; the name was originally pronounced Egridir (İbn Baṭṭa, ii. 267; İbn Farraj Allāh in Ṣayt. et Extr., xii. 360, 384).

**Bibliography:** Saʿd al-Din, i. 211 et seq.; Ḥādji Khalifa, Dīhmānummā, p. 630; Sarre, Reise in Kleinasië, p. 142 et seq.; cf. the article Hamidoglu. ([J. H. MORDTMANN.]

EGIN, the capital of a Ḍağı containing about 60,000 people in the Sandjak of Kharpūt in the Wilâyet of Maṇṣūrat al-ʿAzīz, occupies a picturesque site about 3000 feet above sea-level in a wooded hollow, where the river widens, on the right bank of the Kara Șu or western Eu phrates, N. E. of "Arab-kir surrounded by a crescent of hills 1500 feet high, down whose sides fall numerous streams. The town is believed to have been founded in the xiith century by Armenians from Waspurakān (see St. Martin, *Mémoire sur l'Arménie*, i. 189). So recent a writer as Von Molckte still describes it as a stronghold of the Armenians, who leave it in their youth for Constantinople and return with the wealth they have amassed. More recently the population estimated by Cui net at 19,000, by Yörke at 20,000, is composed one half of Armenians the other of Turks. In 1895-1896 there were massacres of Armenians in the town.

EGRI, German Erleau, archbishopric and the political centre of the Hevesian comitate in Hungary, was in Turkish hands from 1576 to 1687. It is particularly celebrated for its heroic and successful defence under Stephen Dobó from the 9th Sept. to the 18th Oct. 1552 against overwhelming forces under the Vicari Ahmed (Von Hammer, Gesch. d. Osman. Reiches, iii. 307; Jorga, Gesch. d. Osman. Reiches, iii. 243). It was not till 1596 that the Turks, in the reign of Mehmed III, succeeded in taking it (v. Hammer, op. cit. iv. 262 et seq.; Jorga, op. cit. iii. 321 et seq.). In 1687 the town surrendered to General Caraffa on the death of the commander of its garrison, ʿOlmān Rustem Agha (v. Hammer, op. cit., vi. 507; Jorga, op. cit., iv. 229).

**EGYPT.**

The name Egypt — the etymology is more correctly preserved in the German form Ägypten — is derived from the Greek Ἑὔγειρος of which only the abbreviation Kīlī survives into the Muhammadan period as the name of the inhabitants of the country. The land itself is known by the old Semitic name the Arabic form of which is Masr; from this the colloquial language has made Masr. The Muslim conquest began at the end of the year 18 = 639. From that year to the present day Egypt has been one of the centres of the political, cultural and religious development of Islam. Nowhere else has Islam come into such active contact with modern Europe as in the land of the Nile. It is a very difficult task to give a survey of the multifarious aspects of Egyptian life in the purely Muslim period but with this modern development it becomes well nigh impossible. If in
spite of this an attempt is here made to give a comprehensive survey, it is only possible by making an essential distinction between medieval and modern Egypt. The modern period in Egypt begins with the French expedition of 1798 and with Muhammad 'Ali. There are many connecting links between this old and the new period but it is nevertheless an entirely new Egypt with entirely new aspects which must be treated in quite a different fashion in such an article as this, that arises in the nineteenth century. The invasion of the Nile valley by European civilisation has been for the latter of immensely greater moment than even the rise of Hellenism was. An entirely new period begins with the Khehives in contrast to which perhaps the whole history of Egypt and certainly the Muslim period forms a distinct unity. The subject has been divided with reference to this distinction. Here we shall only discuss mediaeval Muhammadan Egypt (659—1798) and refer the reader to the article MISNEIVES for Egypt under European influence.

1. The Historical Development.

As all the dynasties and important men are dealt with in separate articles, the object of this article is only to give a general survey and detail the historical aspects and events which cannot or ought not to be given in the separate articles.

Survey of

A. II. the rulers of Egypt. A. D.

18—21 Conquest by 'Amr b. al-'As. 639—641

21—38 Governors for the Orthodox Caliphs. 641—658

38—132 Governors for the Umayyads. 658—750

132—254 Governors for the 'Abbasids. 750—868

254—292 Dynasty of the Tūlūnids. 868—905

292—323 Governors for the 'Abbasids. 905—935

323—358 Ikshīdīd dynasty. 935—969

358—567 Fāṭimid Caliphs. 969—1171

567—648 Ayyūbid dynasty. 1171—1250

648—792 Bahri Mamluks. 1250—1390

792—923 Burdi Mamluks. 1390—1517

923—1212 Ottoman Pashas and Mamluks. 1517—1798

1212 Napoleon's Expedition. Beginning of the modern period. 1798

The great conquests in Syria and the 'Irāq displaced the capital Medina to the outskirts of the new empire. Byzantine Egypt constantly threatened the young empire and even Medina itself lay perilously near the Byzantine naval harbour of Klysma (Khism, Suez). Egypt with its rich corn-supplies might have appeared a much more desirable acquisition to the central government than the more distant Syria or 'Irāq, at least a regular traffic in corn to the Ḥiḍāj began immediately after the conquest. It is most improbable therefore that there is any historical foundation for the Arab story that Egypt was conquered against the wish of the Caliph. By the year 18 (639) the raiding policy of the early years of the conquest had already been abandoned for one of permanent occupation. The state of affairs in Egypt at that time invited the Arab conquest. The ten years of Persian rule had been followed by a strong Byzantine reaction after the victories of Heraclius. The latter hoped by his Īṣṇunās to terminate the endless strife between Monophysites and Dyophysites and at the same time give the restituted empire an united church. But it was too late, the Monophysite Egyptians, who apparently never grasped the Monotheletic proposals for compromise, believed that the hated creed of Chaldon was to be forced upon them. As at the same time the financial claims of the empire on Egypt were very great and the administration of church and finance were in the same hands, it may be imagined that the attachment of the Egyptians to Byzantium was not over great. In 631 the emperor Heraclius had sent Cyrus, previously Bishop of Phasis in the Caucasus, to Alexandria as Patriarch and at the same time head of the civil administration. For ten years this man sought by every means in his power to persuade the Coptic church to adopt the Īṣṇunās and at the same time to increase the revenues of the treasury. The portrait of Cyrus is painted blacker and blacker by later Coptic tradition; for not only did he indirectly pave the way for the Arabs but he was the governor of Egypt who concluded the most important treaties with the Arabs. It is from Cyrus that the essential features of the half-legendary character of the Muḥāwīs [q. v.] of Arab tradition are derived. The conqueror of Egypt was 'Amr b. al-'As [q. v., p. 334 et seq.]. He had already distinguished himself in Syria and now appeared unexpectedly in December 18 (639) on the eastern frontier of Egypt from which the troops had been withdrawn and about a month later (Muḥarram 19 = January 640) captured Pelusium with only 3000—4000 men. 'Amr could not risk a decisive battle till he had been reinforced by about 5000 men under the leadership of Zubair, the celebrated companion of the Prophet. With these he defeated the Byzantines under the Augustalis Theodoros in the battle of Helipollis (Radjab 19 = July 640), which was immediately followed up by the occupation of one of the chief harbours of Babylonia [q. v., i.e. that of the town held out for some time longer. Cyrus who was within its walls entered into negotiations with 'Amr in spite of considerable opposition in his own camp and then left Egypt to have the treaty proposed with 'Amr ratified by the Emperor. Heraclius was exceedingly enraged, Cyrus was accused of treason and banished; soon afterwards Heraclius died (23rd Sāfār 20 = 11th February 641). As his death seemed to destroy all hope of relief, the citadel of Babylon capitulated on the 21st Rabi'il II = 9th April 641. The eastern Delta and, as Babylon was the key to the upper Nile valley, Upper Egypt also thus fell into 'Amr's hands. He now crossed the Nile and following its western arm, slowly advanced on Alexandria via Nikiu, the see of a bishop, which surrendered on the 26th DjiOTTOM 1 = 13th May. Here he met with a vigorous resistance and, although able to occupy the surrounding country temporarily, saw for the time being no hope of actually capturing the strongly fortified seaport. We are not very well informed as to the gradual expansion of his power in the rest of Egypt. Meanwhile affairs had taken a sudden turn in Constantinopole. Cyrus was sent back to Egypt to get the most favourable terms.
possible from 'Amr. Cyrus returned to Alexandria on the 2nd Shawwal 20 (14th Sept. 641). His further course of action is not quite clear. In contrast to his previous attitude he now assiduously courted the support of the Copts and it is not improbable that he wanted to establish an Egyptian primacy under Arab suzerainty. In autumn he concluded, unknown to the Alexandrians, the final treaty of surrender with 'Amr by which the city was to be vacated by the Greeks by the 16th Shawwal 21 (15th Sept. 642). On payment of a certain tribute the inhabitants were guaranteed liberty of life and property as well as the free exercise of their religion. At first they were very indignant at this treaty but ultimately bowed to necessity. The Greeks abandoned the city and it was surrendered to the Arabs at the expiry of the appointed period. Cyrus died before the surrender took place. To protect his rear, 'Amr undertook an expedition in the following winter (22 = 642-643) against the neighbouring Pentapolis (Barqa) and thus concluded the conquest of the land. It was not Alexandria but Fustat, the city which had grown up around the camp before Babylon, that were ceded as the capital of the country [see the article Cairo, i. p. 816 et seq.]. Once again the Byzantines were stirred to activity. In 25-26 (645) a Byzantine fleet under Manuel suddenly appeared in the roadsteads of Alexandria and the city rose in rebellion and welcomed the Byzantines. At this time 'Amr was no longer at the head of affairs in Egypt but he had to be summoned there, as his successor was not able to cope with this unexpected development. His military genius once more triumphed; in a short time he drove the Byzantines out of the country and conquered Alexandria for a second and last time - on this occasion by force of arms - in 25 (646).

The last step in the conquest was to render secure the southern frontier. Egypt has on the whole natural boundaries, the sea in the north, the Libyan desert in the east and the Arabian desert and the Red sea in the west. It was only the southern frontier that was undefined. It was defined by an expedition under 'Abdallâh b. Sa'd who had replaced 'Amr as governor for a time before the second occupation of Alexandria and filled the post a second time till shortly before the murder of 'Othmân. In 31 = 651-652 he advanced against the Christian kingdom of Nubia, south of Assuan, reached Dongola (Dunkula in al-Kindi, ed. Guest, p. 12 and 13) and in Ramâdan of the same year concluded a treaty with the ruler of the Nubians which has been preserved (Kurâ [3], i. 200, 12 et seq.; cf. Zeitschr. für Assyriol. u. Asyr. XXII. 141 et seq.). By its terms an official exchange of commodities with Nubia was instituted. This agreement was called bâṣ [3], v. 3, i. 608 et seq. which - it may be added here - is probably derived from the Latin pactum. Down to the Mamlûk period Philae (Filiâk) formed the southern boundary of Egypt. The most northerly point in the Nubian kingdom was called al-Knâr.

When in the reign of the Caliph 'Othmân quarrles everywhere broke out between the Fiscus and the Arab troops, 'Abdallâh b. Sa'd had to leave Egypt and it was from Egypt that the assassins of 'Othmân went to Medina (35 = 656). Egypt was next under 'Ali's rule till it was taken from him by 'Amr b. al-Askâ, the Anti-caliph Mu'âwiyâ's general (38 = 658). Henceforth it remained in the possession of the Umayyads except for the brief period of the nominal suzerainty of the Anti-caliph 'Abdallâh b. al-Zubâr, who held Egypt from 64-65 (683-684). Of the governors of this period 'Abd al-'Arîz b. Merwân [q. v., i. 36], the brother of the Caliphs 'Abd al-Malîk, was of special importance for the country; he ruled the land practically independently from his headquarters in Hâlwa. It was he who gave the administration the character it long maintained. The later governors of this period are of more importance for economic than purely political history. When the dynasty was overthrown, Egypt was the last refuge of the unhappy Merwân II, who met his end here. This event made such an impression on the Coptic Christians that it has found a place in the Coptic Apocalypse of Daniel where Merwân appears as the seventeenth king with the number 666 (M+e+s-e+e+s+a+s=y = 666). Severus of Ashmûnain gives a very remarkable account at great length of his end from the mouth of an alleged eyewitness which presents a marked contrast to the brief statements in the Muhammadan chronicles (ed. Evetts, p. 119 et seq.; ed. Seyholf, 173 et seq.; Hamalberg text of Severus, ed. Seyholf, p. 165 et seq.). The Muhammadan chroniclers speak of "Turks" and in the Apocalypse of Daniel the conqueror of Merwân is Plutourgos. It is important to note these Christian echoes of the tragedy because the passing of the Caliphate from the Umayyads to the Abbasids seems from the Muhammadan historians to have made no particular impression on the Egyptians. From the point of view of economic history also this transition was of importance.

Under the 'Abbasids the country was ruled by governors, who till the year 242 = 856 were usually Arabs. In this year the last Arab governor left the country which was henceforth to be governed by Turks only till Ahmad b. 'Uthîm founded the first Turkish dynasty. Ma'âmûn was the only Caliph to visit the Nile valley and even the feudal vassals appointed by Ma'âmûn and his successors between the Caliph and the governors rarely visited Egypt. The most important historical movement which, though in the main completed in the pre-'Uthîmîd period, went on down to the Mamlûk period, was the spread of Arab culture and the Muslim religion in Egypt. These were not identical developments; for the Egyptians who remained Christians soon began to adopt the language of the ruling classes also and by the fourth or fifth century we find that the Coptic ecclesiastic has to write Arabic if he wishes to be understood. Arab culture was spread by various causes. The town-dwelling Arabs, who were concentrated in the capital Fustat, the Arabs who held the higher offices in the Coptic speaking provinces contributed very little to the propagation of Arab influence in the provinces. The introduction of the Arabic language in the government offices said to have taken place in 87 (705-706) - in reality both Greek and Arabic were used down to the beginning of the second century - did not affect 1% of the population. The chief factor in the spread of Arab, culture which gave it so much greater effect than the preceding Hellenism, was the gradual settlement of the country districts by Arab nomads. Unlike the Greeks who were town-dwellers and built up civic communities of great importance in the history of civilisation the Arabs had not from
the first been dwellers in cities. The men of Mecca and Medina like the Arabs of Syria of course quickly adapted themselves to the environment of a large city, but they required pastures to be maintained for them, they wanted their rabh (cow-lodges), and out of such a country life permanent settlements frequently grew up in the provinces. The numerous Bedouin tribes on the other hand who came to Egypt in the train of the picked troops of the regular army or were deliberately transported thither as in the case of the Kais in 107 = 725 or lastly gradually migrated casually and without any settled plan led a very nomadic life. These tribes and clans gradually advanced southwards on the borders of the cultivated country on both sides of the Nile valley. Their cattle-rearing was of benefit to the agriculturist population who supplied them with corn. Their relations however were frequently less peaceful particularly as the turbulence of the Bedouins added to the extortions of the treasury became a continual source of affliction to the Copts. Sections or even whole tribes gradually succumbed to the advantages of a settled life and thus a strong vein of Arab blood was constantly being added to the Coptic people of the Nile valley. This process of assimilation is still going on and the government of the Khedives has done much to make these always unruly Bedouins of the frontiers adopt a settled life. From the authorities, rare for the early period but copious later (cf. El-Mansur, Abhandlung über die Inuigen ein bewundernswerte Stämme, ed. Wustenfeld) it would appear that quite a considerable migration took place which even sent offshoots as far as the Sādān. How far direct immigration of tribes and individuals (traders) across the Red Sea into Upper Egypt also played a part has not yet been investigated, but Strabo's description of Coptos in Upper Egypt as a half Arab town is suggestive. The traffic on ancient trade-routes was certainly doubled after Arabia and Egypt had become parts of one and the same empire. These wandering Arabs were of course never great carriers of civilization but the ancient civilization of the Nile valley assimilated by the Arabism of the language remained. The mixing process must have been greater than the anthropological and moral similarity of religion which was so frequent in the age of the Pharaohs would lead one to suppose. The power of assimilation possessed by the climate of the Nile valley which has been observed in animals, must certainly have done its work, but without a great deal of mixing it is inexplicable that the Coptic peasant in the country with his essentially conservative nature should have adopted another language. Not only did the Arabs become naturalised but the Copts must have been arabised to a greater extent.

By side with this adoption of Arab culture, the spread of Islam usually went hand in hand but the latter also followed other laws. In religion the Arabs brought the Copts freedom from the Byzantine yoke but the latter were not the less hostilely disposed to Islam. At the time of the conquest there were two ecclesiastical communities opposed to one another, the Jacobites i.e. the Coptic church and the Malkeites i.e. the orthodox Byzantine church represented by Cyprus. As was their custom the Arabs supported the heterodox movement, and the Jacobites attained unrestricted power, they annexed quite a number of Malkeite churches and monasteries and took advantage of their good relations with the Arab rulers to win as many Malkeites as possible over to their side. For example they succeeded in getting a double poll-tax levied on Malkeites which caused many to become Jacobites. This method was afterwards used by Islam against Christians of both sects. As the Arabs were at first hailed by the Copts as their deliverers from the Byzantine yoke, it naturally followed that even in the early years after the conquest numerous conversions to Islam took place, but on the whole active proselytising was hardly noticeable in the early decades after the conquest. The Arab government even regularly appointed a patriarch and 'Abd al-Aziz and others allowed the building of new Christian churches which was quite contrary to the later practice and the Shari'a. We get the impression from Christian Arabic sources of the time that the Arabs were only concerned about the money they extracted from the Christians but there were of course at the same time occasional attacks on their religion also; thus, for example, al-ṣūdāyah, the son of 'Abd al-Aziz forced the Christians to take part in the yāzīd. The Arab government also found itself forced on economic grounds to take steps against the monastic system which deprived the land of the best of its youthful vigour and it was natural that the Christians had to pay a very considerable tribute, which ceased when they adopted Islam. When only of official recognition the Christians were sometimes badly treated by the Muhammedan populace. All these reasons explain the rather rapid progress of Islam in Egypt and make it seem remarkable that as late as the eighth century there should have been popular risings on account of the number of Christian officials in the Diwan (Maqrizi, Khitaṣ, ii, 512 et seq.). This war on Christian officials lasts throughout the whole history of Egypt. At the end of the first century A.H. we still find Christians in the highest offices in the civil administration. 'Omar II's attempt to replace the Christian officials also by Muslims ('Der Islam, ii, 154) was predestined to failure. In the course of centuries Christians were gradually replaced by Muslims throughout the public offices but the mechanism of administration was so complicated that its management remained for centuries a privilege of the Christian Copts. As late as the Fātimid period we still find Christians and Jews, who at most only formally professed Islam, even in the office of wazir. That the diwan at this time were full of Christian officials is clear from al-Sairafi's polemic in his account of the Diwan al-Inṣād (Qann Diwan al-Kudūs, ii, 94 et seq.). The similar state of affairs in the Manuel period had already been discussed. In all cases one can see that the government for the time being protected Christians—probably for fiscal reasons—but it had occasionally to make concessions to the fanaticism of the mob. Individual rulers also as, for example, the Fātimid al-Hākim had sometimes the same views as the mob. We can thus observe that in course of time the demands of the Shari'a gradually won greater influence in everyday life, for example the prescription of a distinctive dress for Christians and Jews, the interdiction of riding on horseback, of building new churches etc., but even in times of great excitement these orders were only put into execution for a brief period; for otherwise popular anger against their neglect would not have con-
stantly broken out again. Mašrīzī who deals with these matters in several passages of his Kitāb al-makarim tawwurūr marks two important dates in the progress of Islam in Egypt. The first of these is the period following the great Coptic rising in the reign of Ma’āmun. The gradually increasing pressure of taxation had goaded the Copts to several risings, which were ruthlessly put down by Ma’āmun and his generals (see Becker, Beiträge zur Geschichte Ägyptens, p. 129 et seq.). From that time on the Copts began to adopt Islam and the Arabs gained power in the country districts. At a much later period, 1587, the Copts causing a crisis not only in the capital but throughout the country in the reign of Nāṣir b. Ḳalādīn in 720 et seq. Churches were destroyed, Christians tortured and in one of the smaller towns such as Kyūbul 450 Christians became converts to Islam in one day (Wusentfeld, Marzil’s Geschichte der Köpten, p. 81); this place may be taken as typical of the rest of the country. The last resistance of the Christians seems thereby to have been broken and the advance of Islam reached the stage at which it is now. It is in Old Cairo and certain districts of Upper Egypt that Coptic communities of any size have survived. According to a calculation, in Becker’s Beiträge, p. 113, based on the yield of the diyaq, the proportion of Muslims seems by Saladin’s time to correspond to what it is to day. But this is probably not correct; for the average assessment of diyaq is now known from papryi recently discovered to be much lower than the amount there taken on the authority of the Sharī’a so that the number of Christians in Saladin’s reign is to be placed at a much higher figure. It is not till the later Mamluk period that we can say that the process of conversion to Islam is concluded although it had made great progress as early as the beginning of the Tulunid period.

The history of Muhammadan Egypt as an independent state begins with the Tulunids [rev.]. Their accession had been preceded by a period of decline in the economic prosperity of the land as its resources had been recklessly exhausted by the government (cf. Beiträge, p. 136 et seq.). The governors or the often independent finance-administrators were simply tax-farmers. The revenues of the country went partly to Baghdad and partly into the pockets of successive governors without the country itself benefitting in the slightest thereafter. The state of affairs was changed on the foundation of an independent dynasty. The money now remained in the country. When independent of the central government, Ahmad b. Tulun [rev.] no longer made a point of plundering the country but rather tried to make it yield a permanent revenue and increase the glory of his dynasty. From being a dependency Egypt developed into the centre of a great empire, the government improved, and general prosperity increased as at all times when the country has had a strong government. For the first time for centuries Syria was again ruled from Egypt and the whole history of antiquity as of the later Muhammadan period shows that the destinies of these two countries are closely bound up. In this direction lies the natural expansion of an independent Egyptian kingdom. In one point, however, the Tulunids showed themselves true patricians. While the contemporary Persian dynasties were creating a national civilization, the Tulunids were content to be imitators. Just as at one period the German rulers had each to have their little Versailles, the capital of Egypt was modelled on Samarra and Bagdad. This fact has been much exaggerated and Fustat-Cairo denied any genuine development in art or culture (E. Richmond, The Significance of Cairo, Journ. Roy. As. Soc., 1915, p. 23 et seq.). What is undoubtedly true in this, is that a new period in the history of Egypt begins with the Tulunids and that Egypt did not escape the general development of Muslim civilization.

In tracing the history of Egyptian civilization we may divide it into four very distinct periods, the Arabic, the Arabo-Persian, the Perso-Turkish and the pure Turkish, throughout which it must never be forgotten that the backbone of the populace was Arabised Copts. The pre-Tulunid period may be described as the Arabic. The Arabo-Persian period covers the rule of the Tulunids, Íkhshidids and Fāṭimidids. The influence of Persian culture becomes gradually more and more marked. In spite of their Shi’ite creed the Fāṭimidids make no break in the development of culture. A new stage only begins at the end of the Fāṭimid period with Saladin and the Ayyubids. They brought the spirit and culture of the great Saljuq empire to Africa also. In art and industry, in political and intellectual life, indeed even in calligraphy the dawn of a new era may be observed which we shall discuss in detail below. This second Perso-Turkish period covers the whole Mamluk period as the Mamluks regarded themselves in everything as the successors of the Ayyubids, whose political ambitions and even the titles of their court officials they inherited and maintained. The fourth and last period is that of the Ottoman rule in which Egypt is a Turkish province. The successors of the Mamluks created nothing of value to civilization.

From the point of view of political history we get quite another picture. The epochs 18–254 = 639–868 and 923–1212 = 1517–1798 serve as prelude and epilogue to the great period of Egyptian independence. The latter falls into three periods of which the Fāṭimid is the middle one. The pre-Fāṭimid period is characterised by the struggle of the Turkish governors for independence from the central government of the Caliphate. The independence of the Tulunids became possible by the great slave rising after the suppression of which the brief glory of the dynasty was soon at an end. Íkhshid and his successors had to deal with less resistance, the Íkhshidid kingdom being a parallel to the Ḥamdānid and Buḍyid kingdoms, political entities which only became possible on the dissolution of the ʿAbbāsid empire. This is the period of the struggle for the right to exercise suzerainty over the Caliph. The two Egyptian dynasties only lasted into the fourth century A.H. They had neither a national nor a religious footing in the country. They were based on the ability of their founders whose kingdom was held together for some time longer after their death by the community of interest of those who had assisted them. They are ideal examples of the wonderful chances in a soldier’s career in those days, their rulers were promoted generals and yet something different from the Praetorian rulers of the Mamluk period. The idea of rightful
succession had not yet been quite obscured by license and opportunism. Beside the soldiers we have a further important factor in the financier. A phenomenon like the Mādārī’sūn family, whose members without the slightest military power at times unofficially ruled Egypt purely by their economic superiority, is a characteristic of the period. The bureaucracy and the tax-farmer, those inheritances from the ancient world, had not yet lost their power before the all-destroying militarism of the Mamlūk period. The pre-Fāṭimid period differs markedly from the post-Fāṭimid in its internal structure as well as in its political attitude although the two have many features in common.

The character of the Fāṭimid period itself is quite different. For the first time Egypt had a dynasty full of vitality founded on a religious basis. Egypt itself was, however, not ʿAtlīte and the easy manner, in which Salādīn restored orthodoxy, shows that the creed which had been forced upon the country had only been formally adopted. But the prestige of religion was of inestimable value for the preservation of the dynasty and controlling the ambition of the generals which could only find an outlet by becoming at most mayors of the palace. Muʿizz had not come, like the ʿUlānīd and Ikhshīd, as the representative and envoy of a legitimate ruler to the country but as the autocratic ruler of a powerful kingdom for whom the way had been prepared by his generals. The first Egyptian Fāṭimid thus had not to gain his position gradually by force of arms but came with all the prestige of a ruler of North Africa and surrounded by the halo of religion and the regal splendour of an ʿImām and Caliph. The Fāṭimid kingdom was organised on the model of the ʿAbbāṣīd or rather after still older Persian prototypes. They had nothing to learn when they arrived in Egypt but understood perfectly how to reconcile the ancient administrative system of the country with their assumptions of hierarchy. Not only were they themselves in part excellent rulers but they took care to surround themselves with statesmen of great ability. Their authority offered an almost insurmountable barrier to the encroachments of all the pretenders of the ʿAbbāṣīds naturally overtook them also and the Mamlûk system arose out of their troops, but it was only through Salādīn and his successors, more particularly through the military heirs and the abolition of the bureaucracy intermediary between the rulers and the people that the Mamlûks became an all-supreme power and a scourge to the citizens.

The contemporary political problems of the Fāṭimid period also were quite different from those of the preceding epoch. It is true that there again was a struggle for Syria — even in the reign of the conqueror of Egypt — it was no longer however a war against a powerful Caliphate but against the Bāyḍīs and Salādījīs. Between the latter and the Fāṭimid kingdom lay a number of small, independent kingdoms some of which sided with the East and some with the West. It was a war between ʿAbbāṣīds and Fāṭimids for mention in the khwāṭba. It was an insignificant episode from the point of view of the history of the world but to the Fāṭimids it was the fulfillment of their highest ambition when the khwāṭba was pronounced for them and their “holy fathers” for a brief period (449-450 = 1058) even in Baghdad, the capital of the ʿAbbāṣīd, by the ephemeral usurper Baṣṣārī. At its zenith the Fāṭimid empire was the only great Muhammadan power in the eastern Mediterranean. Here we have the historical antagonism of two great powers, — which extended as far as Sicily and South Italy — namely that of Byzantium and Egypt. They created the pre-eminence of Egypt, which was still further increased by Salādīn and survived into the Mamlūk period. This golden period in Egypt’s history lasted from al-Muʿizz to al-Muṣṭaṣir and has been described for us in glowing colours by the Persian Nāṣīr-i Khusrāw, shortly before its economic and political collapse in the reign of the last named Caliph. No other land in Islam could then compare with Egypt. It was only under the great Salādījī Sultān the ʿIrāq regained its premier position. Syria was lost to the Fāṭimids before the Salādījī invasion. Had it still been held by Egypt, Syria might have been able to make a powerful defence against the invasions which were shortly to break in upon it, but an enfeebled Egypt and the small Aṭībīe states could not do this successfully.

Fāṭimid power began to decline rapidly everywhere after the famine and rebellions in the reign of al-Muṣṭaṣir. Badr al-Dīnānī [q. v., i. p. 560] and his son al-Afījī [q. v., i. p. 146] could only temporarily check its decline. The praetorian government ruined the country; another factor was the invasion of the Crusaders and Amaulīch stood at the gates of Cairo when the star of the Fāṭimids was about to set. This period of retrogression takes us to the third period of Egypt’s prosperity under the Ayyūbīds [q. v., i. p. 252 et seq.] and the Mamlūks [q. v.].

Salādīn restored the glory of Egypt anew. The features of the new epoch outlined above are only the expression of a new period in the political history. The well-nigh inexhaustible natural wealth of Egypt enabled every new ruler to devote himself to foreign politics on a large scale, if only he knew how to bring order into domestic affairs. The tasks, which wrecked the declining power of the Fāṭimids, the suppression of rebellions at home and the repulse of the Crusaders, were successfully accomplished by the Ayyūbīds and their successors. The struggle between East and West now centres round Egypt and the name Damietta [q. v., i. p. 920 et seq.] recalls many important events in the history of the later Crusaders. Relying for support on the religious reaction of the Salādījī period, the Ayyūbīds were the true Shāhīds, who recognised the purpose of their dynasty in war against the enemies of Islam. They reunited Syria to Egypt and held it for a long period. But this glorious dynasty unfortunately lacked any cohesion among the members of the family; split up into numerous lines, the main object of the dynasty seemed to be exterminate itself in internecine warfare. Whoever held Egypt had the advantage, as it was the centre of the kingdom. Salādīn, al-ʿĀdīl and al-Kāmīl were essentially Egyptian rulers. The power of the Ayyūbīds lay in the Ghuzz [q. v.]; here lay the possibility of an ethnic basis for the dynasty but it was destroyed by the rivalries of the individual lines. Unity no longer lay in the ruling family but in the ethnic relationship of the troops of the kingdom consisting almost entirely of slaves (Mamlūks). While those who fought under the Ayyūbī flag were not all Turks but included Slavs and Greeks, the Turkish element consider-
ably predominated. As they were constantly at war with one another, the various members of the dynasty became more and more dependent on the good will of their generals and ultimately became mere playthings in the hands of ambitious commanders. It thus created no great stir when in the end the rulers, whose power had now become purely nominal, disappeared from the scene and those who had for long had the real control of the government now openly assumed responsibility for their actions.

The idea of a dynasty slowly disappeared. Although associations with the Ayyūbids remained throughout the whole political system and although Kalā'un, among the Bāḥri Mamluks, was able to found a kind of dynasty, with the Circassian Mamluks the government was a military oligarchy not only in principle, but in practice. The development of the military siefs gave an entirely military character to the government. It was a feudal state, based not on the possession of land but on rent, relying for its defence not on free-born yeomen with a permanent interest in the soil, but on purchased slaves who were often warded off set free. The Mamluk aristocracy was a kind of stratum above the Egyptian people proper, which was at times plundered in the most shameless fashion. Constantly quarrelling with one another, ruling the country as they pleased, ethnically a body of foreigners, numerically in no proportion to the native Egyptians, their survival for several centuries, particularly their energetic bearing, and their great architectural activity, which required enormous financial resources, appears at first sight a puzzle. It should never be forgotten that it was the Mamluks, who under Baibars formed the barrier which checked the advancing tide of Mongol invasion. The battle of Ain Djalut was no chance success, for Kalā'un and other Sulṭāns again and again repulsed the Mongols (Ilkānids). This is the great debt that the world owes to these slave Sulṭāns, for they saved Egypt from the fate of Irāq and it is due to them that the Nile valley has had a continuity of development in culture and political institutions unlike any other Muslim country. Beside this great feat the final expulsion of the Crusaders seems an insignificant and easy success. The subjection of Nubia also was of less importance for the history of Egypt than for that of the Sudān. On all sides the same great power of expansion can be traced. The Egyptian government stood at the centre of international interest as a powerful organism. Its relations with the Golden Horde arose out of their common opposition to the Ilkānids, but Byzantium and other European kingdoms also sought the friendship of the powerful Mamluk Sulṭāns. During the same period one splendid building arose after another in Cairo in spite of the fact that the constant wars were consuming immense treasure. The old buildings which at the present day still give Cairo its characteristic appearance are almost all Mamluk. Whence came the power and the money to do all this in a state with such a precarious constitution? It was probably in the first place the unusual ability of a series of great rulers like Baibars, Kalā'un, Nāṣir, Bārkūs, Qait-Bey, that brought the land this prosperity. In a state organised like that of the Mamluks where every one carried a marshall's baton in his knapsack, it was only men of unusual ability that came to the top; there was a kind of survival of the fittest in the system. In spite of their fondness for quarrelling with one another at home, they developed a strong esprit-de-corps in face of danger from abroad. The Mamluks, moreover, were mainly Turks or Circassians, that is to say, unusually powerful members of naturally warlike peoples, selected for the slave life. The rivalry among the individual generals further provided an excellent military training. It was a clever move of Baibars to offer a home in Cairo to the Ḍāhidā, driven out of Bagdad by the Mongols. The claims of the Mamluk Sulṭāns to the throne which were by no means sound, were raised above all suspicion by this step. This clever coup raised their prestige in a way which can hardly be understood at the present day. The great Mamluks by no means lacked the qualities of rulers. From time to time something was done to improve the state of the country, canals were made, or reforms undertaken. The Arab Bedouin element had become very strong in the country alongside of the Fellahin and energetic steps had to be taken against it from time to time so that agriculture was not generally suffered. The splendid culture of this period could not possibly have been maintained out of the income from the land alone, although the rural population was very heavily burdened. The great source of the governments revenue was the Indian trade which passed through Egypt as will be discussed below. When it ceased, the dominion of the Mamluks came to an end. When the Portuguese obtained a footing in the Indian Ocean and the Red Sea and diverted trade with India round the Cape, a blow was struck at the very heart of Egypt's prosperity. Fortune had willed that in the same decades the might of the Ottomans began to threaten the Nile valley like some inexorable fate. Egypt thus became a Turkish province and its golden age was over. The whole eastern Mediterranean began to sink into the background by the transfer of the world's trade to different routes and the discovery of America. The focus of civilization had shifted. The period 1517—1798 is for Egypt one of stagnation; the great events in the world's history had their scene elsewhere.

Selim I entered Cairo on the last day of Rajab 1 of the year 923 (22nd April 1517). The last Mamluk ruler Tunān Bey had previously been hanged at the Bāb Zuwaila. Selim and his successor Sulaimān organised the constitution of the country with great caution. The holder of the new Paşālīk was not to become too powerful nor was the Mamluk constitution of the military upper stratum to be completely suppressed. The Paşā and six bodies of senators, under Beys, with two Divān or supreme councils were to hold the balance. The Mamluk system thus found new scope for its energies. For about a century the Paşās had some real authority and initiative but after a few unfortunate experiences the Porto began to change its representatives every two years whereby making it impossible for them to have any permanent influence. An endless series of Paşās files before our eyes, whose authority gradually becomes weaker before the power of the Beys; mutiny, deposition or assassination became daily events and ultimately the Porto was forced to send only Paşās, who were acceptable to the Mamluks and who soon sunk to be mere figureheads. The Şaraf al-Balad, the governor of the
city, became the most important figure and next to him the second great official was the Amr al-Hadidh. The prosperity of Egypt continued steadily to decline. But the yearly tribute, which at first had yielded 600,000 piastres, also began to decrease until it finally ceased altogether. The history of these times has been little investigated as the monotonous sameness of a provincial history with its chronicle of petty quarrels between Beys and Pashas is hardly an inviting task. The best account is still that of Marcel in the great work produced by the French expedition. Egyptian troops occasionally took part in the Persian, Syrian and Arab wars of Turkey but the fact that these wars have no importance for the history of Egypt best shows how the times had changed. We find accounts of epidemics and bad harvests, each of which was worse than they had ever been before, appearing in the annals with equal monotony from time to time. Once again, for the last time, we have a movement of some importance emerging from the general turmoil. This was Ali Bey’s [q.v., i. p. 293 et seq.] rising during the Russo-Turkish war in 1182 (1768). Syria once more became a dependency of Egypt and only an evil fate prevented a development of affairs under ‘Ali Bey such as Egypt later experienced under Muhammad ‘Ali. But ‘Ali Bey, as early as 1087 (1773), succumbed to the treachery of a faithless friend. The Porte tried to quell the disorder that arose by sending an army under the Kapitán Pasha Hassan in 1200 (1786) — it was its first energetic interference in the affairs of Egypt since the conquest — but the attempt failed; the ring leaders retired to Upper Egypt and complications with Russia made strenuous action impossible. The ring leaders were soon afterwards able to return to Cairo. These were Ibrahim Bey and Murad Bey who now filled the position of Shaikh al-Balad one after the other. Their common interest in exploiting the population had led these two rivals to throw in their lot with one another. They were the opponents of Napoleon. The Mamluk system had destroyed itself. When Egypt yielded to Turkey the great part it had played in history and when the fertilising stream of international trade ceased to flow, the Mamluk system inevitably collapsed, bringing with it the ruin of Egypt.

To this brief sketch of the history of Muhammadan Egypt before the intervention of European influence we might add that the Muslim historians are acquainted with a pre-Muhammadan history of Egypt in which legend and history are hopelessly intermixed. Egypt had from the beginning had a peculiar interest for the Muslim because it is several times mentioned in the Korân. The celebrated Miyram al-Kibtiya, one of the wives of the Prophet, also belonged to Egypt. Jesus’ stay in Egypt was well known to Muslim Tradition and even the ancient Hadîth has a chapter on the Fadîq Al-Mir which are very much expanded in the Egyptian historians. Their histories did not stop there but give the whole system of pre-Muslim dynasties in which Coptic traditions and Gnostic speculation are mixed in an extraordinary fashion. (Mu’arrzî, Khiitîf, i. 134 et seq.; Kâshkhânî, transl. by Wüstefeld, p. 117 et seq.; and the same scholar's article Die älteste ägyptische Geschichte nach den Zauberk- und Wunderzählungen der Araber in Orient und Occident, i. (1862), p. 326 et seq.). Blochet has recently made the first attempt to investigate more closely the constituent elements of these cycles of legends (Civ. degli Studi Orientali, li. (1909), p. 717 et seq.; iii. (1910), p. 177 et seq.; iv. (1911), p. 47 et seq. and p. 267 et seq.). All accounts of cities and monuments are full of such tales whose existence only can be mentioned here.

2. Constitution and Government.

a. Political Divisions.

In the Arabic geographers and historians we find the administrative unit in the older period the kūrā, a district taking its name from its principal town, and in the post-Fâtîmid period the province (‘amal or more usually plural ‘amāl). In the modern period the ‘amāl have been given the name musârima. The comparison in Milne, A History of Egypt under Roman Rule, p. 216 makes it appear that the most important administrative districts of a higher and lower class have remained unaltered from Roman times to Muhammad ‘Ali, but closer investigation shows that the similarities between ancient and modern times are quite accidental. The political configuration of the country has undergone considerable alterations in the course of centuries. The ancient division into nomes was followed in the Roman period by that into pagi and pagarchies, which in their turn under the Byzantines became entirely remodelled in a more complicated fashion with the increasing influence of the great landlords. The best account of the conditions in this period is to be found in Mathias Gelzer, Studien zur byzantinischen Verwaltung Ägyptens (Leipziger Hist. Abhandlungen, xiii.). Islam developed the Byzantine system as it found it. The first accurate information is given by the Aphroditos papyri of the end of the first (beginning of the eighth) century. They yield the following picture. Egypt was at this time a province of the Caliph’s empire governed by a sūbîn wasl = amîr. Upper and Lower Egypt were separate administrative divisions but not, as might perhaps be expected, so that all subdivisions fell into one or other of these two. The heads of kūrās, which appear as real administrative units and corresponded to the Byzantine pagarchies, were all directly under the governor general. The ancient nomes was now purely a geographical term. The villages (ṣârja) into which the kūrās were divided, were ruled by ṣârîn and ṣârs, Capt. Lashe, Arab. Musulîn, pl. Musulûn (for further details and bibliography see Der Islam, ii. 361 et seq.) who were under the government of the kūrâ. We have no detailed account of the further development of this system and the few notices that exist have not yet been systematically studied. The division into kūrās remained the basis of the administrative system down to the Fâtîmid period. We do however find larger areas containing a number of kūrâs referred to under a single name, such as Asfâl al-‘Arâf, Lower Egypt, which is sometimes also called al-Rīf, Asfâl al-‘Arâf was divided into ḫâlîn al-‘Rīf (the land between the two Nile arms) and al-‘Isâf al-‘Ishârî, the fertile Delta land west of the Rosetta arm and al-‘Isâf al-‘Ishârî, the east of the Damietta arm. Upper Egypt, al-Ṣâ’d, was divided into thether and Farther. But all these names are those of geographical rather than political divisions; and their denotation varied. The kūrâs themselves were by no means inextensible in their boundaries. They were sometimes broken
up or combined with others. Their identification has further been rendered much more difficult especially in the Delta by the considerable shifting that has taken place in the course of the Nile. Valuable preliminary work in this direction has been done by A. R. Guest, The Delta in the Middle Ages in the *Journ. R. As. Soc.*, 1912, p. 941 et seq. The number of kāras is variously given and certainly varied from time to time. According to Maqrizi (*Khitaṣ*, i. 73, 72) there were 25—59 in Lower Egypt, 31—37 according to Guest’s investigations. The figures for Upper Egypt vary between 28 and 30. Lists are given in Maqrizi, i. 72 et seq.; ed. Wiet, i. 306 et seq.; Bibl. Geogr. Arab., v. 73; vi. 81; vii. 331; Ibn Duḫmāk, iv. 128; v. 42; Kalkašandi, transl. Wustenfeld, p. 92 et seq.; Yāṣūt, iv. 549. To these must be added the so-called kāras of the *Ībīla* on the Red Sea and the Sinai peninsula (Kalkašandi, i. c., 100 et seq.). The oases [see Bahrīye, i. p. 587 et seq., Dakhila, i. p. 599 et seq., and Kharga] and Barṣā had a separate government. In Maqrizi, whose authority is acknowledged, the number of kāras in each kāra is given. According to a statement of the year 345 (956) the number of kāras in the whole of Egypt was 2395 of which 1439 were in Lower and 956 in Upper Egypt (*Khitaṣ*, i. 73, 58; Ibn Duḫmāk, v. 43). There were said to have still been over 10,000 flourishing kāras a century after the Arab conquest but this statement seems to be an exaggeration (Maqrizi, ed. Wiet, i. 312). The number is said to have afterwards diminished rapidly.

It is obviously in the steady decline of Egypt’s prosperity that we find the reason for the gradual alteration in the political division of the country. The administrative units were gradually increased in size because the decline in revenues and the decrease in population led to the combination of districts each of which in a period of more intensive cultivation required separate arrangements for its administration. At the end of the Fāṭimid period the old kāras were replaced by *dīmāl*. As Musabbīḥ still knew the old arrangement and we possess a list of the new *dīmāl* of the end of the reign of Mustaṣṣir (Abū Sallīḥ, ed. Evetts, fol. 72, 89), the new arrangement probably dates from Badr al-Dāmālī, the reorganiser of the Fāṭimid kingdom at its collapse. It is improbable that there was any thorough reorganisation of the political divisions of the country at one time, but after the catastrophe under Mustaṣṣir the great setback the land had received made its effects apparent with startling suddenness in the administrative practice of the country also. The *dīmāl*, which is occasionally used as a synonym of kāra, was not a wider denomination than the kāra but its equivalent. In place of the 50—70 kāras we suddenly find 26 *dīmāl* into which Egypt was divided. (*Khitaṣ*, i. 72, 26 et seq.). Ten of these were in Upper and sixteen in Lower Egypt. But the process did not then come to an end, the land continued to decline and the administrative units increased in extent but decreased in number. The celebrated cadastral survey of Muḥammad b. Kallūm, the so-called Rūk Nāṣirī of 715 = 1315 mentions only 15 provinces, 9 of which were in Upper Egypt (*Khitaṣ*, i. 74; ed. Wiet, i. 312), and when Egypt’s prosperity was at its lowest ebb under the Ottomans, the number had sunk as low as 12 (v. Hammer, *Geschichte des Osman. Reiches*, ii. 653) or 14 (de Sacy, *Institut royal de France*, i. 91), at the time of the French expedition there were 16 including Danietta and Rosetta. The variation in the number of provinces is not of course always directly connected with the prosperity of the country; for in Lower Egypt we find partitions or combinations made quite arbitrarily—for example Ibn Dūḵmāk counts 8 divisions there and Ibn Dīḏa as many as 12, or 13 with Dīḏa which he counts in Upper Egypt, although he is writing after the composition of the Rūk Nāṣirī, but the main reason for the replacement of the numerous kāras by a few provinces was undoubtedly the economic decline and desolation of the country. A parallel is offered by the history of the political administration of Egypt in the sixteenth century. Writing in the 60’s Alfred von Kremer (*Ägypten*, ii. 8) mentions the combination of several provinces called Madīliyas since the beginning of the Kāfiya period, into one “from motives of economy”. It is only in quite recent times that these provinces have come to mean more than the ancient kāras; for their subdivisions called *mārakas* correspond to the ancient kāras and the modern *nāḥiyās* are simply the ancient kāras. To make a general survey possible, we have chosen from the numerous lists of provinces, that of the Rūk Nāṣirī, that of the Napoleonic period and that of the present day but it should not be forgotten that in the intervals considerable variations have taken place. The large cities of Alexandria and Cairo and several fortified towns on the frontiers have always occupied a separate position as can only be briefly indicated here. At the present day the following govern-ments (*māhāsi*) still exist: Egypt, Alexandria, Suez Canal and Suez under the Ministry of the Interior and al-Aṣrih i. e. the Sinai Peninsula under the Ministry of War (from the Zīghrāfīyya Mīṣr waal-Sūdān, published by the Egyptian Ministry of Public Instruction, 2nd ed., 112 et seq.). At an earlier period Burullūs, Rosetta, Danietta and the seaports on the Red Sea occupied a similar position.

The date of 1212 = 1798 for the town of Aswan (Nubia) is attributed to the governorship of Khanqa in 1895 (de Sacy, *Institut royal de France*, i. 91).
Administration and Finance.

A history of Egyptian administration cannot yet be written, but a few indications may stimulate further work on the subject. For no period do we have an absolutely clear picture and the Arab period is particularly obscure. The organisation of finance formed the centre of the whole administration, for punctual and abundant revenue from taxation was the main object for which the country was governed. With the money thus obtained the army and the officials were paid and authority maintained. The financial system was from the very first exceedingly complicated and its administration in detail was only understood by Coptic officials who throughout the centuries of the history of Muslim Egypt were regarded by the fellahin as blood-suckers and by the ruling military classes as swindlers. In addition to this most important class of officials, we find in the period of prosperity under Caliphs and Sultans a whole series of court and high central administrative offices about which we are much better informed than the actual mechanism of the machinery of government.

In the early centuries of Arab rule two political functions were sharply distinguished, the governorship and the treasury. The governor, 'Amir, had control over the military and police only — the latter under a 'Sāhib al-χad'ara — and was appointed 'ulā 'l-qal'ala 'sāli' 'l-ma'āli'a. Alongside of him was the head of the treasury the 'Amil who was appointed 'ulā 'l-kharājd. These two officials had to keep a strict watch on one another. As head of the military and executive the 'Amir was the first, but they were equal in rank and the administration of the treasury even had the greater influence as an anecdoté in al-Kindi, ed. Guest, p. 109 clearly shows. The two offices were only occasionally combined (cf. Gestr. 3. 154). Ibn Ṭūlūn did not become master of the situation until he had obtained control of the taxes also. This division of authority extended throughout the financial system. Under the Arab 'Amil there were, down to the beginning of the 'Abbasid period, two Copt chief secretaries to the treasury, charniwarii, who did not, however, for example, control the divānas of Upper and Lower Egypt respectively but administered both jointly. At the beginning of the 'Abbasid period we still find two officials at the head of the treasury but it seems that they administered the two divisions of the country separately (Severus of Asmīnān, Hamburg text, ed. Seybold, 196, 15; the vulgate text of Severus has a different reading). The receipts for corn delivered to the state granaries also were signed by two officials (Zeitschr. für Assyriol., xx. 104). This system taken over from the Byzantines survived for centuries. Even in the Fātimid period and later we still find in addition to the chief of the treasury or to a Muṣāhir a Nādir, a comptroller, who had to countersign all documents (Ibn Mammāt, p. 7); an example is given in Ḫisāyat, i. 82, 28). In the first century A.H. the old eparchy with its head at Ṭūlūn was still retained and financial purposes below the du'āx were 'gumnīrāt, who remitted payments to Ṭūlūn. Their duties are not quite clear. In particular it is uncertain what relation the du'āx had to the pagarch, 'Sāhib al-Kūra or dinārīs. We find the governor writing to him and demanding the taxes. He had to appear from time to time at the seat of the government to render accounts and had a representative (dābouriūrā) permanently there. The ḥanīf (see above) and the clerks were local officials. The collectors of revenues in kind were called ḥabūl (Papyri Schott-Reinhardt, i. 45); they were chosen by the community. The Aphrodito papyri (Papyri Schott Reinhardt 1; Greek Papyri in the British Museum, Vol. iv.; Zeitscr. für Assyriol., xx. 68; Der Islam, ii. 245) contain information about the taxes at the end of the first century and at the same time of the oldest period also. The government expected two kinds of taxes from the 'Sāhib al-Kūra, the dinārīs and the kīrīmīs. Both were levied on the subdivisions of the kūra by the central authority in accordance with returns prepared and sent in beforehand, and were communicated to them directly in a document (kathārīt), which had, however, to pass through the hands of the 'Sāhib al-Kūra. The dinārīs, i.e. the regular principal taxes were divided into 1) kātūs dinārīs = ḥamā, a tax paid in money only and 2) sinūk dinārīs = darbūt al-ja'fit, a tax paid in kind, wheat or barley. The amount of each tax was fixed by the central authority. The system of taxation was therefore a collective one throughout and it was the business of the local officials to distribute these assessments. The kātūs were provided for out of a) a land-tax (dinārīs γῆς), b) a poll-tax (διανόμη, διάγραφος) c) local rates (ζωλόν). Artisans etc. who did not possess land contributed to the land-tax also. The poll-tax was not at first a general one but it is not yet quite clear on what basis it was levied. Besides these taxes in money there was the embol, which was, however, occasionally paid in money also (ζωλόν = θρασμαν). A portion of it was to be applied to local purposes in the form of provisions (ζωλόν) and the remainder sent to the store-houses in Babylon or Alexandria. The extraordinary taxes were quite as regular as the dinārīs. Materials for shipbuilding, tools, or skilled workmen and sailors and their pay were demanded from the kūra. The kūra had to prepare and provide these and ultimately even to buy them. Substitution by the payment of an equivalent in money was not desired but probably the individual members of the community paid their share in money. All these taxes come under the heading of liturgy. The state of affairs as depicted in the papyri does not agree at all well with the statements of the Arab jurists on dzīya [q. v., i. 1051 et seq.] and kharājd; the points that arise out of this are discussed in these articles. In contrast to the interpretations of the jurists an old historian quoted by Makrīzī Ḫisāyat, i. 77, 5 et seq.; ed. Wiet, i. 323 et seq.) gives an excellent account of the system, which well illustrates the collective character of the taxation and is quite reconcilable with the evidence of the papyri. At a later period Muṣaddasī, (ed. de Goeje, 2nd ed., p. 212, 1) tells us that there really was no proper kharājd in Egypt, but that the soil belonged to the government and the peasant only tilled it; the rent was taken in kind by the officials after the harvest and the remainder was the peasant's share. Although the word kharājd regularly appears in Egyptian documents of the 'Abbasid period with the double meaning of tax in general and land-tax in particular, Muṣaddasī's statements are substantially correct because kharājd and rent were combined in Egypt (Zeitschr. für Assyriol., xxx. 312).
To understand the whole agrarian system of Arab Egypt it must be remembered that at the time when the Arabs assumed authority in Egypt, the government was nowhere directly in touch with the actual tax-payers, the peasants, but owing to the Byzantine system of patroniun a mediatory class of powerful patróni had come into existence guaranteeing the taxes and these were recognised as land-owners. The peasants themselves were bound to the soil and could only change their abode after obtaining permission. Throughout the early period of Islam we find the struggle to keep these colonists (gūlūyā, ʿayyātā) on the land. It is not quite certain how far these great land-owners were replaced by regular officials or if they — this is more probable — remained in existence as private tax-farmers and guarantors till they were gradually replaced by Arabs. In any case the administrative practice of the Fātimid period — and probably we here have the survival of a much older system — recognises three classes of tax-collectors (Ibn Manṣūr, 8, 1): 1. bi-amāna, i. e. people who are absolutely trusted to deliver the taxes without guarantee; 2. bi-baḥūl i. e. those who claim to be able to bring in more than their predecessors and who are pledge to pay the amout yielded by their predecessors as a minimum, i. e. bi-dannām; 3. those who pledge themselves to pay a fixed sum and must make up that amount. The latter class, probably the most common, had its analogue in the public bestowal of estates (kaftāʾ) which were granted to private individuals by public auction (bashāmd) on a certain sum being guaranteed as rent and taxes, which was practically dāmūn or taḵāḥul and technically known as iḥā. These kaftāʾ originally comprised probably only the government estates and the agrei deserti (mawār), but, as far as can be seen, more valuable estates were gradually added to them in the long run. It is still doubtful if the farming out of the kaftāʾ was separated from the administration of other taxes. In any case the difference between an official tax-farmer and a private individual, who under the protection of the state guarantees taxes on the land he rents from the state, was not very great especially as the kaftāʾ included not simply the soil but the men who lived on it also and even whole villages. At a later period all the land became iḥāṣat and iḥāṣa received the meaning of military fief. This process which has already been investigated by Silvestre de Sacy (cf. his still important work Sur la Nature et les Révolutions du Droit de Propricté territoriale en Égypte, Institut Royal de France, i., v., vii.), shows several stages. Under the Abūssids and the dynasties of independent governors the letting of the estates took place annually by a kind of public auction in the Amr and afterwards in the Tulunid Mosque. The allotment was for a period of four years to make up for failure of harvest and other contingencies. This rent was the kharāṣ. Sums expended in improvements, maintenance of canals etc. were allowed to be deducted. The remainder, often very considerable, was the profit of the lessee. What the relations of the latter with the local authorities were is not known. Every 30 years a new survey was made (Khitāf, i. 82). At the beginning of the Fatimid period this system remained unaltered, and any one could still be a candidate, but by the later Fatimid period the military formed the great majority. We read of ḥāṣaʿ al-amāna which yielded good return, and of soldiers’ estates which yielded a poor return (Khitāf, i. 83.). The tenants were called muṣṭafa. The leases were for 30 years. These conditions the existence of which in Egypt can be dated 530 = 1107-1108, can be shown to have existed in Jarak two centuries previously (v. Kremer, Einuahenbudjet des Abbasiden-Kataches, p. 17). In Jarak as in Egypt the persons of influence — and these were in the long run the soldiers — gradually paid less and less in taxes and thus these estates in time became appanages or military fiefs while the tax or rent due on the land came to be looked on as reimbursement. According to Maḥṣūl (Khitāf, i. 95 et seq.) Nizām al-Mulk took the decisive step in this direction (cf. also Bondari, ed. Houtsma, p. 58) and from the year 480 = 1087 on his example was generally followed. He probably only legislated the actual practice. A great period of prosperity is thus said to have been brought to these estates. This may be true for the districts held in fief by the Emirs but for the countless small fiefs this step spelled ruin. For it was not merely a question of a rent which the state had confiscated but the individual villages and districts passed into the possession of the fief-holders who took the place of the treasury in the districts concerned. This practice was probably first brought to Egypt by Saladin or one of his successors. In 515 = 1121 one could still trace a clear distinction between tax-farming and military fief (Khitāf, 83, 16). As the troops did not pay, an immense debt (dawāra) had grown up which was remitted in that year. These very dawāra show it was not yet a question of real military fiefs, which soon afterwards became quite usual. Of course a large share of these estates or their yield still remained at the disposal of the government, for the ruling power for the time could not entirely give up the great rents derived from agriculture. An interesting register of distribution is given in the Khitāf, i. 8 for the Ayūb period after Saladin. From time to time new conditions of allotment arose out of new surveys. Thus we read in the Mamluk period of an arrangement by which 4 twenty-fourths (kīrāf) of the land to be allotted were reserved for the Sultan, 10 for the Emirs and 10 for the soldiers. We are best informed about the so-called Rūh Nāṣīrī, the survey of Muḥammad b. Kalaʾūn of the year 715 = 1315 (Khitāf, i. 87 et seq.). Here the proportion was 10 to the Sultan and 4 to the appanages. The poll-taxes (dawāra) in the country were included for the first time in the ḥāṣa but a in the large sums they were allotted separately. The muṣṭafa became more important and more absolute master of his fief. Ibn Dījān’s book gives a much later system of division from the end of the Mamluk period. In the Ottoman period the melûṣa developed from the muṣṭafa and he then appears as the direct owner, for which see de Sacy, p. 81. The charters granting fiefs were called ṣīḏīl in the early period and in later times mihāl. In Maṣūr’s time all Egypt was divided into the following seven classes of lands (Khitāf, i. 97 et seq.): 1. those which belonged to the privy purse, Diwan al-Khaṣṣ (this diwan replaced the vizierate in the reign of Ibn Kalaʾūn, Kalaṣhānī-Wüstenfeld, p. 157) and appertained to the Diwan Mufrad (instituted by Barūk Ḳibīl, ibid., p. 158); 2. fiefs of the
emirs and soldiers; 3, wafás of the most varied description; 4, fiefs could also be made wafá by the sultan himself, but this was no longer so, (on this point see Der Islam, i. 95 et seq.); 4, Ḍhikār (a particular kind of wafá; to be identified with ḍiyāb); cf. Kalkashandi, Dowd al-Sabīb, 250 sub No. 8; 5, Amūlik, estates purchased from the treasury which had become private property (the rent from them again became a fief; cf. Kalkashandi-Wüstenfeld, 158, iv. where the Arabic text of the manuscript has amūlik for "treasury of the crown-lands"; also cf. Sacy, op. cit., i. 86 et seq.); 6 and 7 desert or unirrigated land. This division survived with many inner changes down to the French period, but it cannot be discussed here in all its details. Those interested may be referred to de Sacy's work already quoted several times and to Lancret, Mémoire sur le système d'imposition territoriale sur l'administration des provinces de l'Égypte dans les dernières années du gouvernement des Mamlouks (Description de l'Égypte, État Moderne, 2nd ed., xi. 461 et seq.); Le Comte Estève, Mémoire sur les finances de l'Égypte depuis sa conquête par le Sultan Sélîm Ier jusqu'à celle du grand chef Bonaparte (ib., xii. 41 et seq.); Tailien, Mémoire sur l'administration de l'Égypte à l'époque de l'arrivée des Français (Mémoires sur l'Égypte, iii. 190).

After this survey of its agrarian policy we will return to the organisation of the state itself. The primitive arrangements of the early centuries continued with the occasional institution of new diwāns through the period of the Tālūnids and Khshshōids also, only with this distinction that in this period the chief authority centred in the person of the ruler himself. It is said of Ibn Tūlūn that he introduced a constitution which was not Arab, that he was the first to have a vizier — in deed but not yet in name —; Ṭahshī, we are told, first introduced the ṭawābit, allowances (Ḳiṭḥāṭ, i. 99, 10); we do not know very much about these institutions however. It is not till the Fātimid period that we have a good account of the constitution. According to Maqrīzī (Ḳiṭḥāṭ, i. 99-101) the natural division of the diwān was into threefold: 1. Kiṭḥāt al-Dīqāqī; 2. Kiṭḥāt al-Kharaṣī and 3. Kiṭḥāt al-Inšā' al-Mulūk. We find this threefold division actually in use under the Fātimid Wizarate. Our knowledge of the Diwān al-Inšā' is particularly accurate; for besides Ḥṣīṭāt, ii. 224 et seq. and Kalkashandi (ed. Wüstenfeld), 188 there is a special work by al-Ṣaʿīrī on the Ḥākin Diwān al-Raṣūl (ed. 'Ali Bahgat, Cairo 1905), an invaluable contemporary document, which was copied by Kalkashandi in his great work L'Art du Style, without its title being given and post-dated. For further information see Becker, Beitwürze, iii. The Diwān al-Dīqāqī was one of the greatest importance even in the pre-Fātimid period. In it the lay the genius of the diwān system at least as far as the Arabs were concerned. The military Diwān was reorganised four times in the early period, but it was not till the rise of the Turkish guards and the Barber and negro troops of the Fātimids that it was placed upon an entirely new basis. Maqrīzī's account of this development (Ḳiṭḥāṭ, i. 94) is most instructive. The troops originally received pay (ṭa'i) and this went on till the system of military fiefs arose; at all periods, however, salaries in cash and ṭeṣā'āt existed side by side in the military Diwān (Kalkashandi-Wüstenfeld, 190 et seq.). Here lay the connection between the military Diwān and the Dawā'ir al-Anwa', or police offices (see Der Islam, i. 95 et seq. op. cit. The revenues of the state are lawful or unlawful with reference to the Shari'a. On the lawful cf. the article Bait al-Māl. The unlawful were mainly the civic mukās i.e. a vast amount of small taxes and all sorts of monopolies. The list of the mukās abolished by Salādīn in Ḥṣīṭāt, i. 104; gives a good idea of their nature in the Fātimid period; it is said that Ibn Tūlūn abolished the mukās (ibid., ii. 257, 33) but even Ibn Kālūn had to abolish most oppressive abuses of this kind (ibid., i. 87, 13). The abolition of the mukās was a favourite move by powerful rulers who wished to be assured of popular favour (Ibn 'Iṣām, i. 99). These taxes were called ḍiyāb in opposition to the kharaṣi; the former were reckoned by the lunar and the latter by the solar year. Ibn Muḍābbir, the greatest antagonist of the Tālūnids is said to have been the first to introduce this kind of tax into Egypt (cf. Beiträge, ii. 144 et seq.). Accounts of the monopolies and other unlawful sources of revenue in the Fātimid period are given in Ḥṣīṭāt, i. 107-111; Ibn Mammāt, 10-26; Kalkashandi-Wüstenfeld, 159-171. The warehouses of (books, weapons, clothes etc.) are also detailed in Ḥṣīṭāt-Wüstenfeld, 175 and Ḥṣīṭāt, i. 408, formed an important part of the Fātimid Dawā'ir al-Anwa'.

But these offices in the Diwāns formed only a part of the hierarchy of officials in the Fātimid period. The latter may be subdivided as follows: 1. Military Officers (Arbāb al-Sayyāf): 1. Officers in the army such as vizier, chamberlain (Ṣāḥīb al-Bāb), field-marshall (ṣīnāqāt) etc. 2. The household with numerous officers in more immediate attendance on the Caliph. B. civil officers (Arbāb al-Allāmā: 1. the ecclesiastical officials (chief kādī, chief dā'i, muḥāsib, the head of Bait al-Māl, al-Nā'ūb, and the Korān-readers; 2. the offices in the Diwāns in the threefold division described above with numerous subdivisions; 3. the provincial; 4. the county officials. All these officials lived in the court. Other classes were outside like the governors. Here we have followed Ḥṣīṭāt-Wüstenfeld, 181 et seq. For other offices in the provinces see Ibn Mammāt, 7 et seq. The Fātimid system of state and court officials developed into the complicated system of the Mamlik period which differed in details. Our sources for the latter are excellent (cf. Ḥṣīṭāt, ii. 204-229 and passim; Kalkashandi, Dowd al-Sabīb, 234—269; transl. Wüstenfeld, 157 et seq. and passim; O'mari's chancery-manual, al-Turīf bi-mlāqāt al-ṣāri'a; Quintrémere, Sultans Mamelouks; Khall al-Zahari, Zuhd al-Raṣīf (ṣīnāqāt) of Ibn Lyās, Badīu ʿl-Kulār; van Berchem, Corpus Inscriptionum Arabicarum; Blochet, Histoire de l'Égypte de Maqrīzī). It is quite impossible here to give a detailed account of the elaborate organisation of the Mamlik state. We can only mention a few characteristic differences between the Mamlik and the Fātimid systems. Development proceeded along three lines: Persian influence became very strong, the number of offices was considerably increased and they became more and more the prerogatives of the military classes. In place of the Ḍūr or Khasānāt al-Ṣharīb we find the Shārīkhānā, the Khazānāt al-Firāq becomes the Firāqshāhīnā, the Khazānāt al-Surūf the Ḥṣīṭāt-Wüstenfeld, 190 et
through-trade but had a splendid opportunity for realising its own raw produce and the products of its industry. The importance of these geographical factors was much more apparent in the middle ages than at the present day with the levelling influence of intercourse with foreign countries and the progress of invention. In the middle ages the annual rise of the Nile affected the whole life of the country as may be seen from the example quoted in Beitrüge, i. 47 et seq.

The amount of revenue from taxation depended on the Nile and the price of flour and bread varied from day to day according to the level of the river. In Assuan the rise of the Nile is first noticed in the last week of June and in Cairo in the beginning of July. The flood has half reached its height in Cairo about the 15th August and is at its height at the end of September. After fourteen days it begins to fall, has half sunk by the middle of November and reaches its lowest level at the end of May. At the present day the difference between the highest and lowest level is 23 feet in Assuan and in Cairo 16 feet (Baedeker, Egypt, p. XLVI). In the middle ages the level of the Nile was measured by Nilometers (mikyád) in ells ( guar-da) and fingerlengths. The Arabs built Nilometers in Assuan, Dendera, Asuán, Hulwan and lastly the most known one on the island of Rûdân (ib. p. 821). In the early centuries of Islam 16 ells was the height desired while 12 and 18 were the critical points below and above; for it was possible to have too much even of a blessing; in the later middle ages from the ixth = xvth century the level of the land had so risen that 16 ells were no longer sufficient but 17-18 ells were the normal and floods rose occasionally as high as 20 ells (Kalkashandi-Wüstenfeld, 22 et seq.). When it rose the river did not simply overflow its frequently very high banks, but was also led by an extensive system of canals which changed considerably in the course of centuries into the land behind. The canals were closed till the Nile had reached the certain height. The opening of the Kâldjî at Cairo was one of the greatest festivals of the year and was celebrated with old ceremonial and splendour, like all the Nile festivals which were taken over practically unaltered by Islam (ib. 209 et seq.; Ibn Taghribirdî, ii. 480 et seq.; Khîfat, i. 470 et seq.). The greatest and most important of these canals have been described in detail by the writers (Kalk-Wüst., 23 et seq.; Khîfat, i. 70 et seq.). After the fertilising water had spread over the whole land it was allowed to stand on the fields for some time in a system of tanks — to deposit its fertilising elements and then run off again. Seed was then rolled into the still moist earth in the most primitive fashion. The harvest was ripened in a few months and the land lay fallow and dry till the next flood. This utilisation of the flooded land once a year was called the winter crop (al-asfîf al-khāliwâya). Its principal products were wheat, barley broad beans (fa'îl), peas, chick-peas, lentils, flax, clover, onions, garlic, lupines. The winter crop is to be distinguished from the summer crop (ṣaffâya) on land permanently irrigable; the latter’s products were, sugarcane, melons, labia, sesame, cotton, colocasia, auberges, indigo, raddishes, turnips, lettuce, cauliflower (from Khîfat, i. 101 et seq.; Ibn Mannârî, 29 et seq.; cf. also Kalkashandi-Wüstenfeld, 33 et seq.; von Kremer, Agypten, i.
197 et seq.). Vines, date palms and a few other fruit-trees also flourished. In certain places with a plentiful water-supply, such as the Fayyum, rice was also grown. Durra was cultivated in Upper Egypt. On permanently watered land as many as three crops might be obtained in a year by following a certain rotation. The Egyptian agricultural and revenue year was the Coptic solar year. It began with the month Tūt. In Makrūt, Khiṭat, i. 270 et seq. (transl. Casanova, 54 et seq.) and Ibn Mammātī, p. 26 et seq. there is an instructive list shewing what agricultural duties and what taxes etc. fall in each month. For comparison with modern conditions we may here recommend the reader to the Textbook of Egyptian Agriculture, by G. P. Foden and F. Fletcher, 2 vols., Cairo 1908—1910, published by the Ministry of Education. As the land yielded its harvest by the solar year and taxes were paid by the Arab lunar year a whole year had to be dropped after 33 lunar years as 32 solar years corresponded approximately to 33 lunar years. This equation by which no one lost or gained anything as it only existed on paper, was called tāḥṣīl al-sana (Khiṭat, i. 273 et seq.; Casanova, p. 66 et seq.). The quality of the soil and with it its rent and tax-paying capacity varied considerably. While in the modern period a distinction is only made between rāy, the land reached by the flood, and ḍhāriṣ, the land not affected by it (von Kremer, Agypten, i. 179), the middle ages distinguished a whole series of grades of lands, which are detailed by Ibn Mammātī, p. 28 et seq.; Khiṭat, i. 100; ʿAlāʾ al-Dīn ʿAbd al-Waḥīd, p. 115. The unit of agricultural land was the faddān (= acre), which was divided into 400 square kasābas of Ḥākim (Khiṭat, i. 103; 1): 1 square kasaba at the present day = 16 square yards; 1 linear kasaba = 4 yards. The cll, ḍhāra was smaller (at the present day = 2 feet). On the manner of measuring cf. Ibn Mammātī, p. 32 et seq. The most important cubic measure was the ḫirāb, the ancient Artabe = 198 litres of 6 waḥāls (1 waḥāl = 33 litres), but there were Artabes of different sizes. The standard weight was the kīntūr (44.9 kg) of 100 ṛif. One ṛif is therefore a little less than 1 lb. A distinction was made between laṭṭaḥ and ḍharrānī kīntūrs (ʿĀqīt, p. 224).

Egypt is usually regarded as the typical agricultural country but Momsen has pointed out that in ancient Egypt a large section of the population lived by industry. The industries of Egypt were naturally all dependent on agriculture for their raw material, for example the textile industry, the manufacture of oil and ointments, which were also exported. Only a few industries depended on imported raw material such as the unimportant iron manufactures of the seaport of Tinnis and Dīlās in Central Egypt. The silk which was frequently employed in the textile industries was also imported (probably from Syria). The imports of leather were limited to the hides of rare animals as the leather trade of Central Egypt had its materials supplied by the land itself. Weaving was by far the most important industry. It was only carried on on a large scale in the towns which we know to have been centres of the Christian population: Tinnis, Damietta, Bahnas, Ashmūnain, Asyūt and Akhmīm. The Arabs themselves had no manufactures. A distinction may be made between the manufacture of woolen, cotton and linen goods. Lower Egypt was the centre of the linen industry, and to some extent Central Egypt also while the manufacture of wool and cotton seems to have been confined to Central and Upper Egypt. Wool was manufactured into veils, garments and carpets in numerous factories between Bahnas and Akhmīm. Besides the celebrated veils 30 ells long which were sold in pairs, imitations of the red woollen goods of Armenia were manufactured. The wool of goats was used for the manufacture of cameltooth-like stuffs. The woollen goods made in Upper Egypt were exported in large quantities and were famous as far as Persia, Cotton which at the present day is the dominant factor in Egyptian agriculture, was also grown and manufactured in the Arab period and even earlier. Bahnas was the main centre of this industry. In the oases garments were made of the cotton grown there but here the industry was only prosecuted to supply the local demand and nothing seems to have been exported.

By far the most important branch of the Egyptian textile industry was the weaving of linen, the great centre of which lay in the northeast and northwest corners of the Delta, in Damietta and Tinnis in the east and Alexandria in the west. Its products were carried throughout Europe and Asia (Ali bahgīū, Les Manufactures d’Histoire en Egypte au Moyen Age, Institut Égyptien, 6th April 1903). We possess very full details of the looms of the east. Around Damietta and Tinnis there were a number of smaller places in and around the modern Lake Menzaleh each of which produced its local specialties. Common to them all was the manufacture of a fine linen cloth, called sharb of which a single piece cost as much as 100 dinars. In Damietta it was manufactured only in white and in Tinnis only in colours. In addition the manufacture of brocades and silk appliqué work flourished in all these places. Tinnis alone had 5000 looms. The men and not the women wove as was the case even in the time of Herodotos. This industry was therefore not organised in the women’s apartments but in a way peculiar to itself which can be reconstructed by a careful examination of the sources. It has been thought that the whole industry was a monopoly. This is incorrect. We can distinguish clearly between state and private enterprises. To understand the gigantic scale of some of these state factories it must be remembered that the robes produced there were officially given away as presents in large quantities; the whole court received new garments twice a year; besides, in those days robes were bestowed as orders are at the present day, perhaps even often and more indiscriminately. Besides a large wardrobe was a form of investment not to be despised in a period when the hoarding of objects of value was a securer way of saving money than investing capital in industry. Such products of the royal looms as came into the market came from the wardrobes thus formed by disgraced nobles. When the robes were finished in their place of manufacture they were sent to Cairo where those destined for the Caliph were fitted in one of the women’s apartments of the palace, where 30 girls worked under the supervision of a manageress. This is the only trace we find of the Byzantine gynaeceum. The private factories were organised on quite different lines. Outside Damietta on the river bank lay the

The Encyclopedia of Islam, II.
large buildings in the upper stories of which were workrooms which the weavers could hire. It was here that the valuable stuffs were prepared. Unfortunately we do not know who let these rooms, whether it was the state or rich private individuals. All sales were conducted by brokers licensed by the state. There were the regular middle men. But it was probably they also who supplied the workers with material. They kept accurate note that each worker actually used up the material supplied him for the manufacture of a certain garment. What he saved in material was deducted from the price paid him. When the garments had been woven their further treatment was a highly specialised branch of industry. The first man folded them, the second wrapped them up, the third laid them in baskets and boxes and the fourth tied them; each required to be paid and made his sign on the box. They were then loaded on ships and sent away to be sold.

The other industries can only be briefly detailed. Egypt did not have the olive tree; it was only grown here and there as a garden tree. All olive oil had therefore to be imported and a cheap substitute to be found for lamp-oil. The Egyptians prepared the latter even in ancient times by pressing certain seeds which contain oil. The following were cultivated for this purpose: radish, rape, lettuce, sesame, saffron, mustard, flax and hemp. The manufacture of oil probably never exceeded the demands of local requirements. The remains of the crushed seeds were used as cattle food. The only industrial use of oil was in the soap factories which must have been especially numerous in Koptos. Soap was made in various colours and was a popular article of commerce. The manufacture of sugar was a rather more important. Sugar-cane must have been, as at the present day, very often eaten raw but more usually pressed to obtain the sugar which was considered such a delicacy. We have only to read the accounts of various writers of the castles and figures in sugar which were made in thousands and sent by the Caliph to all the officials to understand that this was a most important industry. Sugar was also exported. Although we know nothing of the organisation of these sugar mills, the actual technical processes are well known. In addition to these the most important industries there were smaller ones like the manufacture of papyrus which disappeared with the introduction of paper in the ivth (xth) century. We cannot here go into the great number of smaller industries. The individual trades were under State and organised into guilds.

Great activity in agriculture and industry presupposes the development of trade. We are unfortunately not well informed about the corn trade. Like all trade in the produce of the soil it was under strict state control but it was probably not entirely a state monopoly. The revenues of the state in kind were however again sold by the state; cf. for example the state traffic called bakṣ [r. y., i. 632]. Corn was exported to Arabia and Syria and, according to the former also to the far end of the country. We know almost nothing of private commerce. We only read railway of the prices produced by private speculation, but the state also speculated as it usually had exactly the same interests as the organiser of a private enterprise. Flax played a certain part as an article of commerce next to wheat. The centre of the flax trade lay above the Faiyum in the Nile valley, the Faiyum itself only produced an inferior quality of flax. The corn trade of Upper Egypt had its centre farther south at Manfalūt near Asyūt. Corn, flax and cotton were exported abroad and even to Italy. Foreign trade in general may be divided into three well marked fields: a. trade to Nubia and the Sudan via Assuan and Asyūt; b. the trade through in Indian goods via the harbours of the Red Sea and lastly; c. the Mediterranean trade.

Arab gold and silver coins were current up to the second century and above it the trade was carried on entirely by barter. Nubia chiefly exported slaves, which after the foundation of black regiments (shabīl) by Ibn Ṭūlūn were required in large numbers. There were also considerable expords of gold from the Ṭallūli gold washings. The gold coined at the state mint was obtained chiefly from Takrūr i.e. the Sudan. We do not know how it came to Egypt, possibly via Assuan and Asyūt. Egypt exported to the Sudan in return, corn and textiles and also glass beads, combs and corals (cf. ASUA, i. p. 492-493). In the early centuries of Islam Assam was by far the most important town in Upper Egypt. In the Fāṭimid period Kūf gradually rose to importance and ultimately supplanted it, which was probably due to the prosperity of trade with India (cf. the article AIJHAR, i. 210.). The development of Indian trade was a result of the commercial activity of the Egyptian nobles. In the pre-Fāṭimid period the renting of land and the usurious trade in corn connected with it formed the usual outlet for the investment of private capital. At all periods shops, baths and inns formed a favourite outlet for private enterprise. But under the Ayūbids and Mam букв Indian trade became the favorite form of investment. It lay in the hands of a company who called themselves Karamites and had their headquarters in Kūf and Cairo. The etymology of the word is uncertain. The Karamites had a bank which conducted international business on a large scale. An attempt was made on one occasion under the Mamlük to oust them from their position as intermediaries in the spice (particularly pepper and cinnamon) trade, but it failed. They had at all times to suffer from the encroachments of the state. All goods passing through Egypt were liable to the zakāt, which in Saladin's time was levied at 5-6 places at the rate of 2½% each time. This made a total customs duty of 15% of the value. In the last year of Fāṭimid rule spices to the value of 800,000 dinārs passed through Cairo. This probably did not increase in the later period. As long as Baghhdād flourished, Indian trade went via that city; the Jewish "Raḍāites", who at that time traded between the Mediterranean and the Red Sea did not touch the Nile valley at all. It was only with the decline of Baghdad and especially after its fall that Egypt became the great centre of exchange until this trade lost its importance with the discovery of the sea-route to the East and of America.

We have abundant material for the study of the Mediterranean trade of Egypt in western sources and in the commercial treaties published by Aamar (Diplomia Arab). There are two excellent works covering the whole field: Heyd, Geschichte des Levanthandels und Schaufel, Handelsgeschichte der Romanischen Volker des Mittelmee-
The Goeje has recently published a short
review in, International Handelskrift in
de Middeloevers (K. Akademie van Wetenschappen,
4th Reeks, Deel ix.). We further propose to give
here a few notes on the tariff policy of Egypt and the
state trade with its monopolies carried on through the
customhouses of which a clear picture is given
by Arabic sources hitherto neglected. It is only
for the Fatimid and post-Fatimid period that we
have fairly detailed information, naturally enough
as intercourse with Europe only began with the
Crusades. Commerce with the Italian cities must
have been more important than the trade with
Byzantium and the west in the pre-Fatimid period.
Customs duties were levied in proportion to the
value of the goods. In the early period the
basis of the tax was one tenth, in Saladin's
time a fifth of the value, but it varied between
10/1% or less and 35/0% or more according to the
nature and place of origin of the goods.
The tenth became the favourite levy; for example Pisa
paid it on wood, iron and pitch i.e. entirely on
articles which Egypt required to import. Precious
metals were for brief periods duty-free but as a
rule the tax on them was 2½—10/0%. The policy of
the Egyptian tariff system was to attract to the
country certain raw products which it could
not do without and were not produced in it.
These were principally wood and iron and all the
articles required for shipbuilding and the munici-
pations of war. Wood, iron and pitch recur contin-
ually in all commercial treaties. The Egyptians did
everything they could to encourage such imports.
In the face of European pressure Egypt
required these articles to maintain its military
efficiency. The Popes of the Crusading period
therefore repeatedly declared these to be con-
traband of war. The re-export of these articles was
also forbidden; for the dogana i.e. the diwaan,
the government customhouses, bought them up at
the current price. We thus find the state acting
not only as an intermediary but as the purchaser
and the process was as follows: when a merchant
imported a number of goods, including wood or
iron, he had first of all to pay the duties on his
whole cargo in wood and iron. If he had still a fair
quantity of the latter left then the government bought
it from him. But he did not receive the whole
price in gold but only a third while he had to
take two thirds in alum. Side by side with the
buying up of all imported wood all forests were
government property, and on them we have full
details (Ali Bahgat, Les Forets en Egypte, Institut
Egyptien 1900, p. 141 et seq.). Wood, iron, pitch,
oakum etc. were state monopolies because they
were not produced in the country and were neces-
sities. To keep the price as low as possible the
government had also a monopoly of such
valuable native products as were much desired
by foreign countries, notably alum, niter and
emeralds, to use them for exchange. Alum was
dug up in the Lybian desert and the oases by
Bedouins and brought to certain harbours on the
Nile notably Kus, Akmim, Assyut and Bahmas.
The government purchased it at these places at
30 dirhems the cwt., or even cheaper. Private
trade was forbidden and strictly punished. The
average amount exported by the state through the
dogana was 5000 cwt.; it sometimes rose to
13,000 cwt. The market price varied from 4—6
dirhams per cwt. Only a small proportion of the
alum remained in the country, the chief purchasers
being the dyers as alum is used for red dye;
but the total disposed of in Cairo was only 80
cwts. The Egyptians had to pay a higher price
than foreigners, viz. 6½—7½ dirhams a cwt.
The nation was obtained in Wadi Natrun, on
the western borders of the Delta. Here the Bedouins
only acted as carriers. The large industry itself
was in the hands of a staff of officials and workmen
appointed by the state. A cwt. cost the state
about 2 dirhems at the mines and was sold in
Cairo and Alexandria for 70 dirhems, which showed
a considerable profit in spite of the high cost of
transport. The latter was not exorbitant as the
Arabs had to carry one third of every consign-
ment free. In the working of the emerald mines
of the Arabian desert the state again appears as a
monopolist. The deposits were in cavities which
were entered with ladders and ropes. While private
enterprise was allowed a free hand in the gold
washing industry of the Bodj country, the state
maintained full control over the emerald mines.
The workers were paid by the government, which
also supplied them with tools. The workers were
only allowed to leave the mines naked so that
they could not conceal any stones. The stones
obtained went to the Sultan's treasury. On the
whole monopolies were a characteristic of the later
period. In the Mamlik period the state claimed
first right to everything. This practice, which was
however known previously, was called farb; i.e.
the state claimed for itself exclusively the part of
middleman. This subject has as yet been but little
investigated. M. Soerberheim's Das Zuckermonopol
unter Sultan Barsch (Zeitschr. für Assyriol., xxvii.
75 et seq.) is an excellent study of one branch of it.
The above material will shortly appear in an
extended form with full references and illustrative
passages in Beiträge, iii. Preliminary articles are
to be found in Klio, iv. 2, p. 1 et seq. and Der
Islam, i. 93 et seq. Ibn al-Hajjaj, Madhhab, iii.
gives an unrivalled account of the details of trade
and industry. With the exception of the works of the
French expedition no preliminary work has been done on the economic conditions of the
Ottoman period.

4. INTELLECTUAL ACTIVITY AND ART.

It is quite impossible to give a full appreciation of the intellectual activities of Egypt in the Muslim
period in the space at our disposal here. We
can only emphasise the fact that in Egypt we
have an unbroken literary development from the
beginnings of Islam to the present day. The bearers
of famous names, who held appointments in mos-
ques and madrasas, libraries and hospitals as well
as in the diwan as innumerable, not to speak of
popular intellectual movements, the popular
romances, and the shadow plays. The architects
and artists to whom the golden age of Egypt
owed its splendid edifices are mostly nameless
and it is as yet hardly possible to comprehend
their influence and inter-connection. Certain it is
that we have here a vast amount of mental energy
to which the whole of mediaeval Egypt owes its
soul. With this wealth of material all that can be
investigated here is what are the essential and
what the special features of the intellectual culture
of Muslim Egypt. Egypt was in the first place
the cradle of important schools of Shī'ī and
Mālikī Law. Secondly Shi'ism as elsewhere here
left its special character on external forms of organisation. In the third place a love for the Nile valley and the splendour of its ancient history had created a historical tradition, which was unequalled by that of any other Muslim country and lastly Egypt was the home of the Oriental populace.

The beginnings of intellectual activity in Egypt are quite obscure. It is clear that the inhabitants of the Nile valley played no part in the decisive controversies of the earliest days of Islam; Egypt was only a province and occupied with other affairs. Maṣṣūzi (Khitat, i. 332) tells us that the various camps followed the teachings of the 'Companions' and Tabbūn among them. Thus the Egyptians attached themselves to 'Abd Allāh b. 'Amr, the son of the conqueror, and in the later generation to the Ḥāʾim b. Sa'd. 'Abd Allāh is said to have expounded decisions of the Prophet and eschatology. Now there has actually survived on papyrus a Shī'a of 'Abdallāh b. 'Amr passing under the name of Ibn Lāha', with traditions which deal with the last judgment (Papyri Schott-Reinhold, i. 9). This Ibn Lāha' is one of the best known traditionists of Egypt of the first half of the second century. He and Lāhā are the principal authorities of the period. Al-Allāni, ed. Guest, provides us with an excellent means of studying how the great religious wars of the East, the development of ritual and in the later period of the Ẓāhirī, the traces of an Egyptian practice also. A certain Mawālī, Yazīd b. Abī Ḥanīfah, in the time of 'Omar II, appears to have been the first actual teacher of the Fāṭimids, who discussed ḥarām and ḥalāl. The Mawālī's on the whole played a considerable part in Egypt. The Mālikī madhhab attained importance at a very early period. It is said to have been first introduced by Mawālī 'Abd al-Rahmān (died 163 = 779). The Mālikī ritual reigned supreme till in 195 = 815 al-Shāfī'i came to Egypt and soon attracted a large following. He worked here till his death in 204 = 820 and his tomb is revered as a holy place. The Ḥanafī school was traditionally represented by a Ḥanafī judge sent from Baghdad, but its first representative at once met with a vigorous opposition, led by Lāhā b. Sa'd, because he wished to abolish the akbas (al-Kindi, 371 et seq.; Khitat, ii. 334; cf. also ib. i. 294 et seq.). The Mālikī and Ṣāfī al-Shāfī'i schools thus remained predominant till the coming of the Fāṭimids, who organised everything after the Shī'ite-Isma'ili fashion. It is not generally known that the Shī'ite creed was something new or unheard of in Egypt; in Khitat, ii. 334 et seq. we have not only a history of the beginnings of the Shī'a but a particular account of its development in Egypt. Even before the Fāṭimid period there were sanguinary street-riots and the fanatical orthodox negro militia used to ask the people for their creed: "nān khālık?" Whereupon they had to answer "Mu'āwiya" (ib. 340) — a proceeding which can only be explained by the presence of a strong Shī'ite opposition. The greater part of the population was, nevertheless, always orthodox and therefore felt it deeply when with the Fāṭimid the Shī'a of Isma'ili type was declared the only valid madhhab. The well-known addition was at once made to the qādi'ān, the qādi was pronounced over by the Shī'a, Fāṭima and her children, the kasnāla had to be uttered aloud, certain prescriptions of the farū'īf were altered, the

ru'ya and the tārāwīh abolished in Kāmān, the sale of meliğhīgya, Mu'āwiya's favourite vegetable, forbidden and many other changes made. Under Ḥākim they even went so far as to introduce the public execution of the orthodox Caliphs but popular opinion protested against this and other Shī'a prescriptions also were from time to time replaced by orthodox. During the brief interregnum in 425-426 = 1033-1034, during which the ẓāhirī was read for the Imām Mūtawakkil, there were four Kātim: an Imāmī, an Isma'ili, a Šāfī'i and a Mālikī. The old principal orthodox rituals had thus survived and at once developed considerably when at length Iskandān restored the orthodox creed to the land which so desired it. Even under the Fāṭimids intellectual pursuits flourished. The vizier Ibn Killis gathered jurists and dogmatics, poets and grammarians around him and made great efforts to propagate an Isma'ili Fīkh in Egypt. The Bān 'l-Nū'mān, a celebrated family of ẓāhirīs during the golden age of the Fāṭimids, worked with similar aims. (R. Gottheil in the Journ. Amer. As. Soc., xxvii. 217-296). Endowments began to be set aside for scholars, the Ḍūr al-Ḥikma, the first Muslim university was founded (Khitat, ii. 342, 3), and Korān readers, jurists, grammarians and physicians appointed to it. When it was closed, the Dūr al-Ġudād was opened (ib. i. 445, 2). A staff of 35 lecturers was maintained at the Aṣṣar Mosque (q. v., i. 532 et seq.) (ib. ii. 341, i). The libraries of the Fāṭimid Caliphs (ibid., i. 407 et seq.) testify to their active interest in intellectual pursuits. This activity did not, however, really reach its zenith till the Sādīqī religious reaction entered Egypt with Saladin. It is a peculiar feature of these warlike times that not only the Ayyūbids but also the great Mamlūks, who were all simple soldiers, took the greatest pleasure in and richly endowed intellectual pursuits, more particularly those connected with religion. Madrasas and Khansās sprang up like mushrooms. The material foundations were laid in the fourth century such a that the study of the Fīkh and Šūṣam could flourish. Naturally madrasas were at first built only for the Mālikis and Šāfī'is. But even by this period Abū Ḥanīfah's school had entered Egypt. The number of Ḥanafī madrasas was disproportionately great. This is explained by the fact that Nūr al-Dīn was an enthusiastic Ḥanafī (ib. ii. 343, 39). The appointment of ẓāhirīs for the three principal rituals also dates from this period; Baghār al-Bundūkādi was the first to add the Ḥanbalī as a fourth but this ritual never attained great influence in Egypt (Suyūtī, ed. cit., i. 274). The external arrangements of the madrasas presented features peculiar to Egypt. Each ritual seems to have had its own madrasa; Saladin for example, founded madrasas for the three principal rituals. It soon became common for two rituals to unite in one madrasa and in no particular combination. There were frequently separate chairs for Ḥadīth and Korān reading in addition to the Fīkh. But by 641 = 1243 we also find all 4 madhbabs combined in one madrasa (Khitat, i. 374, 3); in large madrasas medicine was also taught, being the sole secular subject (ib. ii. 380, 3). It appears particularly remarkable to any one acquainted with the later relation of the Fīkh to Šūṣam that, from the viii<sup>th</sup> = xiv<sup>th</sup> century on, a Fīkh and a Šī'a school were frequently conducted...
alongside of one another in the same madrasa and sometimes even the same Şâhî had charge of both (ib. ii. 392, 14; 394, 38; 398, 2; 399, 12). It can readily be understood how after Saladin the teachings of Ash'arî in dogmatics were regarded as indispensable by all these teachers. This showed itself in the rejection of Ibn Taimiyya. With the decline of the madrasas and the mis-management of the late Mamlûk and Ottoman periods the Ash'arî has more and more become the focus of the intellectual life of Egypt.

In spite of the official patronage of the Hanafî school, it was the old established schools of Mâlik and Şâfîî that made the most remarkable development. Even in the early period of Islâm we find among the Şâfîî al-Munzâni and al-Nasâî, one of the six canonical traditionists, who spent a long time in Egypt; of the later period we may mention the Subûkî, Bûlûnî, Zakariyya al-Ansârî, Ibn Hâdîj al-Gisâlânî, Suyûtî down to Shârâbîni and Shâramallânî. The most important of the Şâfîî's, however, were the two great Şâfîî authorities al-Ramîî (Nihâyát) and Ibn Hâdîj al-Hasîlânî (Tâjüf), of whom the first was an Egyptian, while the second at least began his career there. The Fihrist gives quite a long list of names of Egyptian Mâlikî scholars of the early period. It was from Egypt that the whole of North Africa and Spain was won for the Mâlikî school. For the later period special mention should be made of Ibn al-Hâjîjî, the author of the Mustâkhalîf, and later still Lâkâni, Udhûrî, and Zârâî. While all later writers were merely copyists of older authorities it was nevertheless they who kept alive intellectual interests before the coming of European influence. Their activities were chiefly directed to the Fatwâ, through which alone a certain development was possible. Nevertheless, a gradual deadening of the intellectual life was going on always.

No preparatory studies have as yet been made for the history of Sûfism in Egypt; nevertheless it has always played an important part from the time of the Ayâbîds and Mâlikîs to the present day. One of the earliest mystics, Dhu l-Nūn [q. v., i. 965 et seq.] was an Egyptian; Ibn al-Fârîjî, perhaps the greatest Arab mystic poet, belonged to the Nile valley and it was from here also that Bûsîrî's Burda set forth on its triumphant career throughout the whole Muslim world. The Sûfîyya as an organised body is first mentioned in 200 = 815: a brotherhood played a certain part in some political troubles (al-Kindî, ed. Guest, p. 148). The brotherhood system reached its zenith under Sâlîdîn and his successors, to which the long list of Khânkâhs and Zâwiyyas in Ma'ârî's Khatîfî, ii. 414 et seq. bears eloquent testimony. The first Khânkhâh was a Dîr Sâ'dî al-Sâ'nîdî (Khatîfî, ii. 415) which was used for other purposes in the Fâtimid period but made a wâkî by Sâlîdîn (569 = 1173). It was originally destined for Sûfîs from abroad but soon became the centre of Egyptian Sûfism. Its Şâhî bore the title Şâhî al-Shârîyâkîh, which was afterwards given to all heads of Khânkâhs. These Sûfîs in the Ayâbîid period took a prominent part in the public ritual of the chief mosque. The Şâhî appeared after a baldachin and went in ceremonial procession with his adherents on Fridays to the mosque where they read certain lessons before and after the Şâlât al-Djûmû'a. There were Sûfî settlements of this kind not only for men but also for women (Khatîfî, ii. 428, 1), which succeeded divorced women for example and offered them shelter. Only a few of these seem to have been reserved for definite brotherhoods (e. g. ib., ii. 432 ; 435, 109, 95 — for example the Ādâwîya, the order of Şâhî ah had a settlement here — they were usually called after a Şâhî or the founder. The names of orders so well known in Egypt later are entirely lacking in this period; Ma'ârî however (ixth — xvth century) already mentions 11, Fûserî al-Áhmîdîsî al-Rîfîyâ (Khatîfî, ii. 428, 2). The history of the individual şarîs has not yet been written. The development leads in any case to the conclusion that the following were considered the four great Kûtsîs: 'Abd al-Kâdîr al-Gilânî, Aḥmad al-Rîfîî, Aḥmad al-Badawî, the saint of Tânta and Ibrahim al-Dâsîkî. Of these "pole stars" Badawî and Dâsîkî were Egyptians and Rîfîî also is said to have died in Cairo (ib, ii. 428, 27). The communities called after these saints are the Kâdîrîyya, which has no subdivisions in Egypt, the Rîfîyya, which is divided into 3 sections but is overwhelmed by the large Şâhîî (Banîya, Marîkîya, Habîbîya); the Aḥmîdîyya is the most popular order in Egypt, which is divided into 16 subdivisions each with its own Şâhî (furû') of which the Bâbîyya and the Shârânîya are the best known and lastly the Bârâhîmî, the two independent branches of which are called Shâhâwiya and Shârânîba. This scheme which like the next is taken from 'Ali Mubârâk (Khatîfî dîdîdî, iii. 129) is of course not a product of last century but has gradually arisen within the period discussed in this article. Besides these four communities attaching themselves to the four Kûtsîs, the Şâhîs had settled in Egypt at quite an early period and they even had an Egyptian eponym. From the list of Egyptian mystics in Suyûtî, Iwân al-Mu'âjfarîsî (Cairo 1299), i. 292 et seq. It might be assumed that they were predominant in the earlier period. 'Ali Mubârâk, Khatîfî dîdîdîsî, iii. 129, gives 13 furû'. He also mentions the Sa'dîya, the Nakşibânîya, the Khelwattiya with 4 furû' and lastly the Mirghânîya, which was most popular among the Berbers. The latter is a comparatively modern foundation and at the present day all the brotherhoods are under the Şâhîh al-Bakrî, in whose family the blood of the Wâfa'î sharîs and the descendants of Abû Bakr, the Siddîkîs, is mingled. For centuries the Bakris have played a prominent part in the spiritual and more particularly the mystic life of Egypt. The public appearances of the dervishes are now limited to accompanying the Kiswa and the Maḥmîdî and to the feasts of the various Mawâlîs, particularly Mawlî al-Nâbî, which was formerly celebrated with great splendour in the 'Abbâsîya and now in the 'Abbâsîya. It seems as if reforms were to be introduced under the present Bakrî. The most important intellectual contribution made by Egypt is its historical literature. There is no country in the world which through its historical monuments has such a stimulus to the study of history as Egypt. Nevertheless the Muslims never succeeded in getting beyond fables as regards the pre-Mu'âmmadîan history of the country. The fullest survey of this literature (cf. above p. 11—infra) is given by Ibn Wasi' Şâhî. At a very early period, however, an interest in the Muslim period itself arose which followed these lines: political
history, biography of scholars and studies in topography and archaeology, the so-called Khiṣṭāt literature. The same author frequently cultivated all three fields. The origins are very obscure. A. R. Guest has collected all that is to be known about the early history of the historical literature that has survived in the brilliant introduction to his edition of al-Kindī in Ibn ʿAbī al-Ḥakam (died 257 = 871), the oldest author that has survived to us. The later subdivision into the above three branches is not yet found. In al-Kindī (d. 319/931), however, we find them treated in separate sections. In the field of the history of scholarship it was most difficult to preserve local character. Here two interests combined, that of the criticism of tradition and the biographies necessary for it and that of pride in local celebrities, among whom were early reckoned scholars who had made but a temporary sojourn in Egypt. From al-Kindī to Ibn ʿAbī al-Ḥakam, from Ibn Yūnūs to Ṣuṭṭūtī and Makrīzī’s Miṣqāḥa there run unbroken series. Although Egyptian κήδη or Egyptian scholars generally may be discussed, the principle of selection is connected with Egypt. We are likewise only referring here to those who specialise on Egypt among writers of political history; for people like Subkī, for the history of scholars and Naqwī for the historical encyclopaedia belong to another field. What delightful collections of details we owe to the dossiers of Ibn ʿAbī al-Ḥakām for the Tūlūn period, the versatile Ibn Zalīkā, and the diffuse chronicler Musābīḥī for the Fāṭimid period. An appreciation of the whole work of the Fāṭimid historians is given in Bertschke, I. A characteristic distinction from the earlier period, which becomes gradually more marked from the Fāṭimid period on, is the predominance of Ṭabāqātīn who were historians. Musābīḥī grants a wealth of official documents and this becomes the rule with Ibn al-Maʿmūn and ʿAlī Fāḍīl. The very minute descriptions of etiquette at the Fāṭimid court in Ibn Ṭuwair seem to be copied from a book of court ceremonial. Ibn Mammātī gives from personal knowledge rules for the Dīwāns and later al-ʿOmari a chancery-manual, the most perfect work on the latter’s model being Khalīṣhāndī’s. In his Taṣrīḥ al-Faṭḥām al-Nabūlūsī publishes an official memorial and in his Luma’ a thinly veiled petition for reinstatement in office. Finally writers like Ibn Ḥusnīn and Ibn Dīṣān use or reproduce bodily records of official surveys.

Of course concurrently with this we have the discussion of history proper; we need only mention Ibn ʿIyās and the numerous authors in Syria who at that time embraced both Egypt and Syria in their histories of the Empire. There is no Muslim country that can point to so perfect a historical tradition — on its political institutions also — as Egypt.

Lastly the Khiṣṭāt literature is quite unique. In other countries the rudiments of it may, it is true, be found but nowhere has this style of literature attained such a development as in Egypt. Although many of these Khiṣṭāt’s and al-Ḳāḥīt’s was a Pausanias, yet according to Oriental ideas they maintained a high level of accuracy. An unbroken chain runs from the above mentioned fathers of this literature through Ibn Abī ʿl-Baraqat, Dīwānī, Ibn ʿAbī al-Zāhir and Ibn al-Mutawwādī down to Makrīzī’s Khiṣṭāt, an invaluable work in spite of all its faults. It is true that Makrīzī merits relatively little of the credit; for the book is really the work of centuries. If it be taken with the same author’s Miṣqāḥa and the Siwāk, we get a fairly good idea of the pre-Ottoman period’s contribution to the history of Egypt.

Our sketch of the intellectual life of Egypt would be incomplete without a brief reference to the popular literature, whose home was in Egypt or which at least received its final form here. For the tales of the 1001 Nights the reader may be referred to the articles AL-FAʾILA WA-LAILA (v. 254 et seq.). The great romances of Antar, Ṣāḥib Baybars, Saif b. Dūh ʿYazan and the Banū Ḥilâl have been much less studied (Bibliographie in Brockelmann, Gesch. d. Arab. Lit., i. 62; on the significance of the Saif romance, cf. Der Islam, i. 172 et seq.). The character of the eccentric Fāṭimid Ḥakīm early became the subject of a romance (De Sacy, Essai de la Religion des Druses, i.). Of a more burlesque nature is the Egyptian shadow-theatre, on the earliest representative of which, Ibn Dāniyāl, G. Jacob has published numerous studies (Geschichte des Schattentheaters, p. 36 et seq.; extracts from Ibn Dāniyāl’s Fa’il al-ḥājī). Of great importance for the literature of a period depicted in these pieces is G. Jacob’s Ein ägyptischer Jahrmarkts im XIII. Jahrhundert (Bayer. Ak. d. Wiss., Sitz. Ber., 1910, v).

However difficult it may be to draw a distinction between what is common to Islam in general and what is peculiar to Egypt in the fields of literature and science, in art it is almost impossible, for the development of art and culture in Egypt is indissolubly connected with that of the whole Eastern Mediterranean and the buildings of Cairo are only too often quoted as examples because they are easy of access and so well preserved owing to favourable historical circumstances. As mentioned above, some critics have gone so far as to deny any Egyptian character to this art of Cairo. Art and science are international possessions in Islam. But in spite of all international influence Egyptian art and architecture retained a certain indigenous character; it is quite as much at home there as the doctrines of a Mālik or a Shāfī. In the beginnings of Islam Coptic architecture enjoyed a great reputation, for in many foreign buildings we find ʿAlī appearing as masters provided by leiturgia (cf. Der Islam, iii. 403). The earliest buildings of Islam in Egypt must therefore have had a Coptic character although even in the oldest mosques the tradition which the Arabs had brought with them decided their general plan and disposition. We know very little about these early centuries. The history of Muslim art in Egypt begins with the Tūlūn Mosque, on the ornamentation and architectural principles of which very lively differences of opinion exist (cf. the articles by Herzfeld and Strzygowski in Der Islam, i.-ii. and ib. ii. 396, with the literature given there; more recently Herzfeld, Erster vorläufiger Bericht über die Ausgrabungen von Samarrā, Berlin 1912). Are the ornaments, is the principle of pillar and arch construction, is the peculiar form of minaret indigenous or imported from Samarrā? These are the questions the settlement of which must be left to the historians of art. The general character of the Tūlūn culture is in favour of the theory of importation but it is also quite possible that only the external and obvious elements were brought from the east
and then imitated in native architecture and art. We meet with similar questions in the Fatimid period with its new and strange but pleasing art, whose Persian character cannot be denied (pointed arches, innumerable patterns, exuberant Kufic). Here also Herzfeld sees in the ornamentation continuations from the Tulunid period, while S. Flury combats this viewpoint (Die Ornamentik der Huthin- und Aishor Moscheen, 1912). Van Berchem was the first to discuss Fatimid art in the *Journ. As.*, 1891, p. 411 et seq. and Strzygowski has more recently dealt with it in *Myhanna* and *Amida.* The most important architectural monuments are detailed in the article *CAIRO*, i. p. 822 et seq. A new period begins with Saladin. It is in keeping with the reactionary character of his epoch that the art of the period also shows a new spirit, which finds an external expression in the substitution of Naschi as an decorative script in architecture in place of the previous exuberant Kufic. With the new requirements of the period, new kinds of buildings like the madrasa, or the khānkhāna arose, which continue to develop in the course of time the curiosity of building, which existed under the Fatimids, gradually becomes prevalent and assumes more and more markedly eastern forms and we have already seen that the whole Mamluk period was characterised by Persian influence. The use of stalactites as a means of transition from the quadrangular base to the springing of the dome, underwent a constant and richer development. Another borrowing from the East is probably the accentuation of the façade, unknown at an earlier period, which we first find in the Aṣṣar Mosque of the late Fatimid period and attains its artistic zenith in the grandiose gates of the Suliun Hassān-Mosque. For further details cf. the articles *CAIRO*, *ARABESQUE*, *MIRJAM* as well as the literature given there and the following works, Franz Pascha, *Cairo*: Saladin-Migeon, Manuel d'Art Musulman; Stanley Lane-Poole, *The Art of the Saracens in Egypt*; Herz Bey, *Le Musée national de l'Art arabe* (Catalogue); Gayet, *L'Art arabe*: Fouquet, *Contribution à l'Étude de la Céramique orientale* (Institut égyptien, 1900); Artin Jacob, *Contribution à l'Étude du Bleu en Orient*. The really scientific study of Egyptian architecture and decorative art is still in its infancy, it has not yet even been satisfactorily explained what is peculiarly Egyptian in it.

A civilization, which excludes foreign influence, is as a rule the result of the establishment of political boundaries. Egypt as a state has only from time to time been limited to the valley of the Nile. Egypt was at first a province of the Caliphate and then the centre of an empire including Syria and other countries. There are further to be considered the cosmopolitanism of Muslim civilization and the migratory tendency of Muslim sciences, to be brief the picture given above is, at least in the fields of intellectual life and art not exclusively Egyptian but is characteristic of the Muslim civilization of the whole of the Nearer Asia. Egypt, as we have seen, certainly has indigenous characteristics but it owes its intellectual productive power mainly to the continual immigration of powerful intellects, who were attracted by the splendours of Cairo, the city of the Caliphs and Suliuns. Mediaeval Egypt offers a brilliant picture but the Muslim military constitution already contained the seeds of decay. It was an exhausted, impoverished and desolated land that the French expedition found on its arrival. The new Egypt is a work of the Khédives and of Europe. As to how a modern advancing Egypt has been developed from the mediaeval anarchy of the Mamluks, cf. the articles devoted to the Khédives, Muḥammad 'Ali and his successors.

**Bibliography:** The most important works have been given in the text. Cf. also the articles on separate subjects and the compendious descriptive survey of the ground covered here has not yet been written. Our best authorities are S. Lane-Poole, *A History of Egypt in the Middle Ages* and J. Marcel's history in the *Description de l'Égypte*; Else Reitemeyer has written a systematic though not historical *Beschreibung Ägyptens im Mittelalter* (Leipzig 1903).

(C. H. BECKER.)

**EYÜB.** [See *AIVD*, i. 1220 et seq.]

**EKREM-BEY,** Mahmuud, *one of the most important of modern Turkish lyric poets,* wrote ballads and romances after French models and, by introducing these new forms, improved the popular poetical literature. His collections of poems *Nağahne-i Sefa* ("Morning Lays"), *Zorcune* ("Whisperings") and *Cemiyet* ("Youth") enjoy a great popularity. He also wrote several plays; of these the most original is the *Waslat* (1874), the history of a slave who falls in love with the youthful son of the house and is thereupon sold by her mistress. The poet was still alive in 1902.

**Bibliography:** P. Horn, *Geschichte der türkischen Moderne*, p. 37. (CII. HUARD.)

**ELIAS.** [See *ILANS.*]

**ELISA.** [See *ILISA*, i. p. 300.]

**ELIXIR.** Arab. al-khīr, also *kiyar al-falāṣīf,* the secret means by which the alchemists believed base metals could be transmuted into silver and gold; synonymous with "the philosopher's stone". Although it has not yet been found in the older Greek chemical works, it can hardly be doubted that the word is derived from the Greek χίαρον "powder for wounds". It is frequently mentioned in the writings of Dājjār b. Ḥayyān edited by Berthelot. It enters the metals and permeates them like poison in a body; a small quantity will transmute a million times its weight in metal to gold. It can only be kept in vessels of gold, silver or rock-crystal as it attacks glass. According to the definition in the *Mafṣūḥ of al-'Ulmā* the *kiyar* is the drug which transforms molten metal into gold or silver when it is boiled with it. In less credulous circles, however, it was also called maghāhir al-khir, maghāhir ad-dīssim, famous in name but of unknown composition. The word alexir, elixir reached the scholastic philosophers through the chemical works of the Arabs, notably Ibn Sīnā ("Avicenna in *Libro de Aimea*"); among the earliest may be mentioned Roger Bacon (*Opus Minus, Speculum Alchemiae* etc.) and Albertus Magnus in the xiii. century; in the works ascribed to Raymondus Lullius, the properties attributed to it are vastly increased. Even in Roger Bacon and probably in his Arabic sources also we find the elixir also contained a means of prolonging life; for since it can make perfect the luster metals and heals their "diseases", it surely could remove the imperfections of the body, keep it sound and prolong life. Such *elixir* of "life" were prepared for centuries and are still made out of all sorts of ingredients.
**ELUL**, Arabic Ḥilal, the name of the twelfth month in the Syrian Calendar; see TAʿRIKH.

**ELVIRA**, from the Arabic IBIRA (rarely LEIRA and YELIRA; this should be read in Yākūt, i. 348 with Fleischer, v. 40 instead of Ḫilīrā) from old Iberian I(-sector)IIRR (also ELĪRI, ELĪRRI etc. = New Town: ili town berri new (Municipium Florentinum Illeberitanum of the Romans) was in the later period of the Arab conquest and under the Umayyads the province afterwards called Granada, whose Arab capital was at that time Kašṭilīya or Medina Ibīra, only incorrectly called Ḫilīra alone, and lay 1% miles N.W. of Granada, N. of the Genil between the modern Ataraf (Arab. al-Tarf) and Finos Puente at the foot of the southern slopes of the Sierra de Elvira which still bears its name: the name once so celebrated is still preserved in the Pozos de Elvira, the "Well of Elvira" and in Granada in the Puerta and Calle de Elvira in the N.W. like the ancient Castilia in the farm-place caseria, Castilia, Kašṭilīya. — Medina Ibīra was once the rich and flourishing capital of the province of the Arabs from Saragossa; it began to decline steadily in 400 = 1009–1010, when as a result of the great Berber rebellion in Córdoba and the provinces the inhabitants migrated to the adjoining town of Granada so that the town in time fell completely into ruins. Its ruins were still considerable in the xivth century when they were visited by Ibn al-Khaṭīb [q.v.]. The question whether the ancient Iberian and Roman Iliberi(ī) (cf. the first known Spanish Council at Elvira in 304 or 305) and the Gothic see lay on the site of the modern Granada [q.v.] or on the site now occupied by the ruins of the Arab Elvira, is probably to be decided in favour of Granada. The Arabs then, following their usual aversion to the capitals of their predecessors, must have in this case also moved the site of the capital of the province and at first retained the old name for the province only: Kūrat Ilibra with the capital Medina Ilibra = Kašṭilīya.

**Bibliography**: the most important work is, Dozy, Recherches sur l'Histoire et la Littérature de l'Espagne pendant le Moyen-Âge, i. 327–335; "Castilia, Ilibra, Elvira" and p. 335–340 "Iliberi, Grenade" (but on p. 328 Yelbira should be read for Balbira, see above); and the reference to Maqaddasī, p. 236 l. i. should be deleted, as Ταχθία should be read there for Ilibra); Yākūt, i. 348; iv. 97 (Kašṭilīya); iii. 788 (Gharbāna); Marṣūḥ al-Īlīifa, iv. 158; Irḍīsa, p. 175, 203 (Arab.); Kazwīnī, ii. 337; Abu l-Firdās, p. 167; trad., i. 238; Simo-net, Descripción del Reino de Granada (1872); do., Historia de los Moazabes, Indice s. Elvira; Eguilar, Del lugar donde fue Iliberi; do., Origen de las ciudades Garama e Iliberi y de la Alhambría en Homeja a Codera Zaragoza 1904), p. 333–332; Oliver y Hurtado, Iliberi y Granada (Madrid 1870); Gomez-Moreno, De Iliberi a Granada: Boltoī de la Real Academia de la Historia, 46 (1905, 1.), p. 44–61. (After F. Seybold.)

**ELWEND**, Arwand in the Arab authors and graecised as ORONTES by classical writers (Achaemenid inscription, Semiramis legend), still called ERWEND or NARWEND in the district, a lofty granite mountain mass, about 17,560 feet high, a spur of the Zagros system, S.W. of Ha maḏān,
which owes the fertility of its gardens to its wealth in water and snow. The scanty accounts of the Arab geographers are mainly confined to in part fantastic stories of a well on the top of the mountain, which Muslim tradition describes as one of the wells of Paradise no doubt with reference to older religious ideas which clung to the spot, cf. Jackson, Persia Past and Present, p. 146, 170—173.

(R. Hartmann.)

EMİN. [See AMIN, i. 343.]

EMİN PASHA, a distinguished German explorer and coloniser of Africa. Emin whose real name was Eduard Schnitzer was born in Oppeln (Silesia) on the 28th March 1840. From 1858—1864 he studied medicine and science in Breslau, Berlin and Königsberg, taking his Dr. Med. degree in March 1863. In autumn 1864 he went to Antivari which at that time was still a Turkish possession. Here he began to practise medicine privately but in the following summer he was appointed quarantine and medical officer for the district. Schnitzer became a particular favourite of Ismail Pasha, the governor of northern Albania, who resided in Scutari and his wife, a native of Transylvania. After Ismail’s death in 1873 he lived for two years with his widow, whom he left towards the end of 1875 to go to Kharjum. In the middle of April Gordon, then governor of the Equatorial Provinces appointed him government medical officer in Lad. Schnitzer took up his duties here on the 7th May 1876 and adopted the name Emin Efendi, professing to be a Turk educated in Germany. On the 3rd June he was sent as Gordon’s diplomatic agent to king Mtesa of Uganda and in 1877—1878 to Kabila of Unyoro and a second time to Mtesa. At the end of June 1878 Gordon, who had meanwhile become Governor-general of the Süddan, appointed Emin governor of the Equatorial Province on the suggestion of the Russo-German explorer Jungk. Emin, who now received the title Bey, and later Pasha, displayed a wonderful activity in the advancement of civilization in his new office. He controlled the Danakil (a kind of irregular soldier) who were always inclined to raiding, furthered trade, agriculture and civilization in general and extended his territory. When he took over the government, the province showed a deficit of £ 30,000 annually but after a surplus of £ 1200 (cf. G. Schweitzer, Emin Pascha, p. 220 et seq.) which at a later period when Emin was cut off by the Mahdist from Egypt was stored in the form of ivory. When Gordon left the province the number of stations in it was 15; Emin raised it to 50. At the beginning of the Mahdi’s rising (1881-1882) Emin’s territory stretched 400 miles from E. to W. and 300 from N. to S. From the middle of April 1883, Emin in consequence of the Mahdist rising was cut off for years from any connection with the Egyptian government. In the spring of 1884 Kūram Allīh, the leader of the Mahdist army which had conquered the province of Bahr-al-Gezāl, demanded his submission. He refused to surrender and gradually his position became more difficult. He therefore left Lad on the end of April 1884 and transferred his headquarters farther south to Wadelai. On the 2nd January 1886, Junker who had been with Emin since January 1884, set out for the east coast of Africa, which he reached on the 14th December 1886. Another explorer, the Italian Casati remained with Emin from January 1885 till he was relieved. Early in 1887 Lad, where a garrison had up till then been maintained, had to be entirely abandoned. Emin took up his quarters for a brief while in 1886 and for a long period in 1887 at Kibiro, his station on the east shore of the Albert Nyanza. Meanwhile at the instigation of the Royal Scottish Geographical Society a committee of Scottish commercial gentlemen, perhaps attracted also by the possibilities of the country had equipped an expedition to relieve Emin. Stanley was appointed to lead it. He reached Emin (but not the Equatorial Province proper) in the spring of 1888. Stanley’s caravans had suffered so much on the route that its arrival was more of embarrassment than use to Emin; nor was the attitude of Stanley calculated to strengthen Emin’s position. When Emin announced to his officers the orders of the Egyptian government that they should retire with Stanley (to the east shore of the Albert Nyanza) at the same time he informed Emin a prisoner in Dufalé from the middle of August to the middle of November 1888. On the 17th February 1889 Emin, who had resolved to depart, joined Stanley on the western shore of the Albert Nyanza. Their joint expedition reached the coast at Bagamoyo in the beginning of December 1889. Here Emin was received with the greatest honour but owing to an unfortunate accident was confined to bed for three months. On his recovery Emin (at first provisionally) entered the foreign service of the German Empire. On the 26th April he left the east coast with two officers (Stuhlmann and Langhelt). 3 sergeants, 100 soldiers and 592 bearers. His object was to secure for Germany the lands south of the Victoria Nyanza. The most important events of the expedition were the hoisting of the German flag in Tabora and the foundation of the station of Bukoba on the west coast of the Victoria Nyanza. Both these measures were contrary to the will of von Wissmann the governor of German East Africa, but approved by Karl Peters who had been sent by a German committee to relieve Emin but did not meet him till June 1890 in Mpwopwa. Throughout this expedition Emin showed himself a bitter enemy to the Arabs, not only in his letters to Wissmann, but also in the measures he took to suppress the slave-trade. — In the second half of March 1891 vague rumours reached Emin of fighting between the people he had left in the equatorial province and the surrounding negroes. Although forbidden by Wissmann he now crossed the northern boundary of the German protectorate to attract his old officers and soldiers to his side and march with them wherever possible westwards via Mombuuta and occupy the hinterlands of Kamerun. This plan proved quite impracticable. On the 28th September the retreat was begun from Andelabi (on the upper course of the Ituri or Aruwimi). An epidemic of smallpox reduced the expedition to a very sad state. On the 7th December, Emin sent Stuhlmann with the sound men on to Bukoba, while he remained behind with the invalids. In the absence of any
other possible route of retreat he decided to march westwards; he began his journey on the 8th March 1892, first to Ipoto near Kilonga-longa on the Aruwimi. He next went up the Aruwimi, then in a southwesterly direction right across the primate forest with the object of reaching Kibonge, a station on the upper Congo; but 100 miles from his goal, in Kinena, Emin was treacherously murdered on the 23rd October 1892 by command of the prince of Kibonge. The Belgian Captain Dhannis found one half of Emin's last diary on an embankment near Nyangwe, the capital of the land of Manyumena, in February 1893 and the other half after the taking of Kasongo, the capital of the notorious slave-trader Tippu Tipp, on the 22nd April 1893. Kibonge, the instigator of Emin's murder, was court-martialled and shot on the 9th January 1894.

While yet in Turkey Emin had completely adopted the externals at least of a Muslim and Turk and retained this attitude after he had entered the service of Egypt also (G. Schweitzer, Emin Pasha, i. 21). This is the only explanation of the fact that he was so long able to maintain his position in the Equatorial Province. We have already seen that he was not therefore the less an enemy to the slave-traders. Although he tolerated slavery in his own province, it was only because he could do nothing without slave-labour. At a later period, when in German service, he pleaded for a complete separation of the land of the negroes from the Arab territory and for the expulsion of all Arabs without a fixed abode. He thought most highly of Roman Catholic among Christian missionaries (although himself a Protestant!) because they alone laid out pretty stations and made the negroes useful as labourers (Schweitzer, ii. 109). Emin was on the whole rather pessimistic about the possibility of cultivating the negro mind also (Schweitzer, i. 124). As an administrator Emin was a skilful organiser but hardly a conqueror — a man who made the most of his opportunities but took no risks. In science he achieved a reputation more particularly in ornithology and ethnography; he was also a brilliant linguist.

A. Schaeck.

EMIR. [See AMIR, i. 330.]

EMIR SUL'TAN, i.e. SHAAMS AL-DIN MEHREMED B. 'ALI AL-HUSAINI AL-BUKHARI, also called Saiyid Mehemmed Bukhari, Saiyid Emir Sulthan, Emir Saiyid ('Aschhpashzadeh, p. 148, Haniwald's chronicle in Leuven, Hist. Mus., p. 541, 543, whence Muzafar in Kananos), the great patron saint of Brusa, born about 770 A.H., migrated to Asia Minor from Bukhara and settled in Brusa where he died of the plague in the 14th year of sanctity in 853 A.H. According to tradition Emir Sulthan was held in high esteem by Bâyazid I. Viderim, whose daughter, Khândi Sulthan, he married; when the Sulthan took the field, he had his sword girded on by him and the saint's admonitions persuaded him to give up the drinking of wine (cf. the anecdote in Ewliya, Travel, etc., ii. 25 = Türkîhê Siieh, ii. 32 et seq.); when Bâyazid wished to slay Timur's envoys, Emir Sultan successfully opposed this breach of international law ('Ălî, Kûnlû, v. 83 et seq). On the capture of Brusa by an advance party of Timur's army in 865 he was taken prisoner and brought to Timur's camp; Timur set him free and wanted him to come with him to Samâland; but Emir Sulthan preferred to return to Brusa (Sa'd al-Dîn, i. 188 et seq.; Shereif al-Dîn, i. v. c. 51). Legend, however, knows nothing of this but says that the saint brought about the withdrawal of Timur's troops from Brusa by a miracle (Sa'd al-Dîn, ii. 427; Ewliya, ii. 48). When Murâd II. succeeded to the throne in 824 A.H., he had his sword girded on by Emir Sulthan and the saint is said to have hastened by his prayers the defeat of the false Muşafî, who challenged Murâd II's claim to the throne ('Ălî, i.e., p. 195 et seq.; Leuven, Hist., i. 495 et seq.). In the following year he took part in the siege of Constantinople with a train of 500 devishes; but the fall of the city propelled him because he did not take place. The Byzantine chronicler Kanaos who was present at the siege gives us a full and vivid description of Miraşîyid the "Patriarch of the Turks" as he calls Emir Sulthan (p. 466 et seq., 477 et seq., ed. Bonn), while the Ottoman historians say not a word about this mishap.

After his death a splendid mausoleum was erected over his grave which became one of the most popular places of pilgrimage of Islam (Tashkopràzade, i. 76, 377; Sa'd al-Dîn, i. 188; Leuven, Hist., i. 571 and 516; v. Hammer, Umbliche, etc., p. 58 et seq.), and legend began to tell of the miracles (Manükê) of the saint.

Bibliography: Tashkoprâzade, i. 76 et seq.; Sa'd al-Dîn, ii. 425—427; 'Ălî, Kûnlû, v. 112; Gûlkâzî Yiğâzî Şirînûn, p. 69—79. (J. H. MOKEDDAN.)

ENIF, i.e. AL-NAS "the nose", is the name of star $\star$ of second to third magnitude in Pegasus, or as it is called by the Arabs the larger Horse. Kazwini and Ulugh Beg call this star Fom al-Farâs (= the horse's mouth), the latter also calls it Diâbî-fa al-Farâs (= the horse's lip). Al-Battani has no special name for it, he calls it "the star which is in its (i.e. the horse's) mouth". The name Enif probably passed from the works of western Arab astronomers into the Latin translations of the middle ages.

Bibliography: al-Battâni, Opus astronomicum (ed. Nallino), ii. 154; iii. 254; al-Kazwîni, Kosmographie (ed. Winkler), i. 25—35; L. Ideler, Untersuchungen über den Ursprung u. die Bedeutung der Sternnamen (Berlin 1809), p. 117. (H. Suter.)

ENNAYER (usually بنير in Arabic texts, Berber lûnîr), the name of the first month of the Julian calendar, among the natives of North Africa who reckon by solar years and have retained the Latin names of the months (cf. Awkâs, i. 521), also the name of the New Year festival celebrated at the beginning of that month by Christians and Muslims in North Africa, for the Muslims there as a rule take part in different Christian feasts, for example, the feast of the summer solstice or the Anûsra feast [see Anûsra,
A portion of the meal prepared the night before the Ennayer festival is kept under a dish.

In some districts it is the custom to strew green twigs on the flat roofs of the houses, on the stables and on the doors of the tents, on the day before Ennayer, so that the new year may be "green", i.e. lucky. In Laghout and Géryville and among many Berber tribes, the ashes are swept from the hearth, new stones placed in it and sometimes a new jemâ is dug in another place in the room; it is further the custom to replace an old article of furniture by a new one and put it in another position.

People in disguise collect offerings, such as the "fig-as" and the mood at Nedroma, the jemâ in Tlemcen and the jemâ keftoun in west Tunisia; a lion keft-adj akhir in western Tunisia, a camel etc., are among the disguises adopted.

The day following, the first of January, is a day of rejoicing: it is then the custom, in the towns of Morocco, to eat the sobâ khâdri (seven vegetables). It is an almost universal custom to kill a fowl; rich people kill a young goat or a sheep; in Kabylie, it is sometimes the occasion of a timgred; in some places sheep's heads are eaten instead of fowls.

The condition in which a man is at the Ennayer festival, decides his condition for the whole year. On this day one ought to be happy, amiable, generous and rich. People meeting wish one another good luck; parents, engaged couples, landlords and tenants, Muslims and Jews exchange presents and show little attentions to one another.

Alsms and presents are given and guests entertained. No borrowed articles are allowed in the house and any that have been lent are asked back so that there may be as much good fortune in the house as possible. The house is not swept throughout the whole length of the festival nor are clothes or linen changed nor the finger-nails trimmed; in Kabylie, however, this is the day chosen for shaving off the first growth of hair on boys.

The country people examine the corn of the ber jikes left over at the meal or the blood of the fowls killed for the feast to find out what sort of weather will prevail during the early months of the year.

Just as used to be the custom in France at Christmas time the Kabils at the Ennayer festival talk to their oxen and goats.

The housewife places a scorpion below the vessel in which the milk is to curdle in order to obtain as much butter as possible. To be able to see clearly they smear the edges of the eye-lids with collyrium.

During the festival all work ceases and no journeys are undertaken; mats, carpets or burnuses in process of manufacture are wound round the beams of the loom or put out of the way during the festival.

Orthodox Muslims naturally try to restrain their co-religionists from the celebration of this festival as much as possible and the teachers in the Koran schools for the same reason do not grant their pupils holidays for Ennayer. Among the Muslim population of the Senegal and Upper Niger, whose conversion to Islam is comparatively recent and who take great pride in their orthodoxy, festivals like the Ennayer and Anzar are unknown.

Bibliography: Doutte, Morrocco (Paris
ENOCH, [See IDRIS.]

ENWERI, AL-HAJJI ṢAÐÛLILAH, Efendi, a native of Trebizond, entered the higher Turkish civil service as Khojdja (superintendent of a diwan) and successively filled the office of Teshrifati (1874-1875), Djebedjer Khâshi (1875-1890), Teshrifati (1890-1891), Buyukt Tekzeredji (1897) and from 1200 to his death with several breaks that of an Anadolu Mülâcâbedjisi. At the end of 1182 he was given the post of Historiographer Royal (Waʃîf Nusret), which he held till the end of 1197 with an interval of 18 months (4th Dhu 'l-Ka'da 1188—1190), during which the post was filled by Behjett and Suleimân Mollâ (cf. Djeddet, ii. 153); in 1202, however, when his successor Wāṣîf Efendi went as ambassador to Spain, he was again given the office of official historian and attached to the army in the field during the war with Austria and Russia, while Edib Efendi remained in the capital in the same capacity (Jaβedet, iii. 426, 438; iv. 2 et seq.), and still held the office after his return to the capital in 1206. He died on the 11th or 13th Rabî' I 1209 (6th or 8th October 1794) when over 60 years of age.

Enwer left a history of the country in 5 parts of which he presented the first three to the sultan in 1194 (Jeddet i. 212); they cover the years 1183—1193, and the following parts cover the period to 1206. The first two volumes of Enwer's chronicle (1183—1188) were recast by Wâṣîf Efendi as the second part of his history (cf. Wâṣîf Târîḫi, i. 315 and ii. 3, ed. Constantinople 1210 A.H.); Isâmîl Kaḥmî (cf. Pertach, Ver. d. Türk. Gesch. zu Berlin, ii. 208) undertook a second recension. Enwer's original work, which is considered rare, is to be found complete in the Imperial Library in Vienna (n. 1117—1119 of Flügel's Catalogue); the Egyptian printed edition of Enwer's chronicle referred to by Reinhard (and following him, Zeuner, no. 940) does not exist.

ENZELI, the harbour of Reşî, the capital of Gilân in Persia. Enzeli lies on a narrow tongue of land, which has been cut by a channel, between the Caspian Sea and a freshwater lake called Murdâb. From Enzeli one goes by boat to Pîrî Bâzur on the south side of the Murdâb, thence by land to Reşî, whence the high road runs via Kazvin to Teherân. In the Russian wars with Persia Enzeli played a considerable part. In 1722 Russian troops landed in Pîrî Bâzur. A Russian demonstration at Enzeli in 1804 failed completely on account of the impossibility of penetrating the hinterland. In spite of its unsheltered roadsides Enzeli is the most important harbour in the Caspian provinces of Persia (1908-1909: 49, 1909-1910: 629 steamships). The town on its own seems to have attained particular importance in the latter half of the sixteenth century. While it had only 300—400 houses in the early decades of last century according to contemporary accounts, the latest English Consular reports estimate its population at 9000.

ERBIL, the ancient Arbelah, celebrated for Alexander's battle there (See Paulus-Wissowa, ii. 407 and vii. 861 et seq.), situated between the two Zab on the road from Mosul to Bagdad at the place where it is joined by two roads from the Iranian highlands (cf. Hüsîng, Der Zagros, p. 38 et seq.), the capital of a Kâdî in the Sandjak of Shahr-i Zîr in the Vilayet of Mosul. In the earlier Arab geographers the town is described as a vasty d of the astân of Hulwân in the Sawâd (Bibl. Geogr. Arab., vi. 6 and 235). Erbil attained its greatest prosperity about 600—1200 as the capital of the Begteqânis [q.v., i. 688 et seq.] and is described as having a high, strong citadel below which lay an extensive town which was the great market for the surrounding country. Yâkût says that in the population of the district Kurds predominated. In the second half of the xiii century under the Mongols, we find Erbil in the possession of Kurd Emîrs of the tribe of Mâzêndjani (Notices et Extraits, xiii. 311 et seq.). Even down to the most recent times the affairs of the town were more often managed by the Kurds of the adjoining mountains than by Turkish officials. Although Erbil was still able to offer considerable resistance to Nâdir Shâh in 1732, it has had no importance of its own for a long time and is now a small country town with 3757 inhabitants (Cuiet).

ERDEL, Hungarian Erdély, the old Turkish name for Transylvania or Siebenbûrgen. After the battle of Mohács (1526) the woïdows of this country became to a certain extent vassals of Turkey until by the Peace of Carlowitz (1699), Siebenbûrgen passed to Austria.

ERLEG, to İqâlî̆sîç Kastër des (Theophanes, i. 482, de Boor; h to İqâlî̆sîç Kastërîsîç of Michael Attaliata, p. 136 (ed. Bonn); İqâlî̆sîç or İuqâlî̆sîç to İqâlî̆sîç in the epic of Digenis Acritas; the Ifârâk of the Arabs (L'îkî Portland, ed. Houtsma, Reccell, etc. iii. 11; iv. 5, 249, 260, Turk.) and occasionally archaized İqâlî̆sîç, İqâlî̆sîç, the Reccel, Erachia of the Crusaders (Tomashchev, Zur histor. Topographie von Kleinasiene, p. 84, 88, 92), Aracel in Bertrandon de la Broquière, p. 104 et seq., ed. Ch. Schefer, was a fortress on the Byzantine frontier on the road from Cilicia to Iconium and was repeatedly taken by the Arabs, notably by Hârân in September 806 (Tabari, iii. 709 et seq. = Theophanes, L.C.), but remained a Byzantine possession till it was taken from them.
by the Seldjûks of Konya. (In 484 = 1091, according to Ewliya, iii. 28.) At a later period it belonged to the kingdom of the Karamanoglu and with the rest of territory passed to the Ottomans in 1466. The population (about 5000) is almost exclusively Muslim; there is a small Armenian community. 50 years ago there were 10 large and 11 small mosques. Among the larger mosques there is one which according to the Lıyıkânınâ was founded by the Karamanoglu İbrahimbeg (according to the Menâsik al-Hāḍîjî by Kîlîçı Arslân); the caravanserai built by the architect Sinân in the sixteenth century for Kustem Pasha is also mentioned. Legend says that the springs at an ancient caravan way produced by the Prophet, on which account the titles of the district were a wâzîf of Medina (Lıyıkânınâ, Ewliya, cf. Sa’d al-Dîn, i. 516). Ereğli was formerly a station on the route followed by pilgrims and since 1908 it has been an important station on the Baghâdî railway from Konya; the town is the capital of a kažî in the sandjak of Konya.

ERİTREA. The population of the Italian colony of Eritrea may be divided into nomadic, semi-nomadic and settled tribes. In certain cases one section of a tribe leads a nomadic life, a second is semi-nomadic and the third settled. According to a tradition generally believed the earliest settlers in Eritrea were eight tribes who came one after the other; but any definite, reliable reference to their origin or order is quite wanting. This tradition certainly shows that the population of Eritrea has always been numerous and undergoing radical transformation, passing from a nomadic to a settled and from a pastoral to an agricultural life. This was the case in times of peace; in time of war, however, the divisions among the people which resulted thereby, lead to confusion which lasted for centuries; now central tribes gradually arose in other sites out of the ruins and step by step became linked up with the more or less permanent settlements.

The present population of Eritrea is for the most part of the Hamitic type, which probably showed pure features, in many parts of the area now forming the Italian colony, in the period of Egyptian civilization, but which suffered many changes for the reasons above mentioned. In any case the traditional number, eight, of the peoples in it has now been raised by its learned men to ten, or fifteen, or even more. At the present day there are very marked differences in language and customs among the inhabitants of Eritrea whether they are descended from a common ancestor or not.

The Abyssinians, who inhabit the plateau and are quite identical with the Tigrinya on the other side of frontier in the Ethiopian kingdom preponderate. The Abyssinians of the colony number not quite 110,000 and show traces of a culture well organised on a patriarchal system. They all, herdsmen as well as agriculturists, form settled communities and live in villages, which usually admit another and are therefore small; this is due to the poverty of the districts inhabited by them. The average number of people in each Abyssinian settlement is about 125. Dâneîelli and Marielli point out that, although small and very small villages predominate, some have quite a considerable population, apart from those whose development is due to the Italian occupation. At the most, however, it is improbable that any one has more than 1000 inhabitants. A similar state of affairs probably exists in the Abyssinian provinces, which border on the colony of Eritrea.

Two other settled agricultural peoples, who live in villages, are the Cunama (somewhat over 13,000) and the Daria (about 7000). Tradition says that these belonged to Hamitic stocks and are among the oldest in the colony. They mix to some extent with the Śūdānese. While the Abyssinians are Christians, the Cunama and Daria are heathen.

The other peoples in Eritrea are of the most part nomadic and pastoral tribes and the majority profess Islam. Among the most noteworthy are the Bani ‘Amer, who have arisen through the fusion and superposition of other peoples; they live by cattle-rearing and alternate their abode between the mountains and the sea. As a rule they speak Beşâyî [cf. the art. BEŞAY] and form a community of about 40,000 souls. Next come the Habab and other allied tribes who live between the Bani ‘Amer and the sea numbering about 24,000 in all; they are wandering herdsmen and speak Tigre; next come the Mensa, the Mârīa or Marea, the Sabderat, the ‘Torhâ, the Emîlîs, the Dâhlâsî, the Engana, etc., all very ancient peoples, originally coming from the highlands of Ethiopia but interspersed with Egyptian and Greek colonists who made their way inland from the sea. The Bilani, in the valley of Cheren, form an interesting section of this group; they are divided into Copts, Roman Catholics, and Muslims and do not lead quite such a nomadic life as the preceding.

The Bet Tukê (4000), the Bëgina (1000) and the Mensa are neighbours of the Bilani. The Asaorta (9000), the Mişîferi (5000) and the Ilês (1500) are nomads who rear cattle and devote some attention to agriculture; they profess Islam.

The inhabitants of the Danakil district belong to the Afar type and number about 13,000 in Italian territory. In all probability they are tribes who are mixed with Greek and Egyptian colonists; the majority are nomads and practically all are Muslims.

The islands are only partially inhabited; their total population is about 2500 of various origins, who live chiefly by fishing and pearl trade. About 10,000 people of Semitic origin live on the coast of Massawa in imposing villages.

According to the census of 1905, the Italian colony of Eritrea has a total population of 274,944, of whom 154,170 are Muslims, 825 Copts, 12,362 pagans and 7255 Roman Catholics and 297 Protestants. These figures do not include the white population or the Danakil groups who live within the boundaries defined in 1908. If these be included, we get a total of 282,000 and not 300,000 or more as has been given in certain unofficial works compiled before the census.

The religions represented in the colony are in the order of importance and number of followers: Islam (in the four sects of the Hanaâfs, Şafi‘îs, Mâlikîs, Ḥanbalîs) Coptic Christianity, Roman Catholic, Evangelical and Greek Christianity, Judaism and Buddhism. Islam is spreading most rapidly and is the most attractive.

The authority of the government is enforced on
the natives by commissioners and residents. For this purpose the colony is divided into five commissions to which the central area belongs and five residencies in the border districts.

As regards the administration of justice the current law of criminal law is that established by royal decree on the 14th May 1908. Until the publication of the code of civil law, any one was considered a subject of the colony, as regards the administration of justice, who not being an Italian or citizen of a recognised foreign state, was born in the colony or belonged to a tribe or race of the colony. Any member of an African or other nation of the Red Sea, who regularly fulfils or has fulfilled his obligations to the authorities, or lastly has lived for two years continuously in the colony, is also considered a subject of the colony. A foreigner who belongs to a people that does not possess a civilisation similar to the European, is regarded in the same light.

Among the natives justice is administered in the first instance by their princes, the assemblies of elders and nobles, the chiefs of provinces and tribes, the Kādis and the commissioners and residents, who in cases of appeal deal with the decisions of the Kādis, heads of provinces, tribes and the princes, with the exception of those that come within the jurisdiction of the courts. The government of the colony is always endeavouring to extend further the authority of the ordinary officials of the colony on the basis of a rational regard for the ethnic and religious distinctions among the various coloured peoples who live in the colony. Italian statutes are applied to the colony with such modifications and alterations as are rendered necessary by the economic conditions, law, everyday life, customs and requirements of the land. Italian law recognises with limitations the most important and fundamental customs of coloured people in the matter of religion also. In the case of the Muslims, as far as is compatible with the spirit of Italian legislation, they approximate to the traditional law as contained in the Koran and expounded by the authorities recognised by each tribe. Italian law is administered in criminal cases and customary law in civil, but particularly in the case of the Muslims and more especially in matrimonial cases, in kor, ḥadāfa and ḫaḍ. The exercise of the Muslim religion is freely allowed.

**ERIWAN,** Armenian Hrastan, the capital of a gouvernement in Russian Transcaucasia, in 40° 14' N. lat. and 44° 39' E. long. (Greenw.), about 3000 feet above sea-level on the left bank of the Araxes. In the 2nd and 3rd centuries B.C. Araxes with a population of about 1879 3000, according to other authorities 15000, has a history dating back to remote antiquity according to the Armenian sources (see St. Martin, Mémoires sur l'Arménie, I, 116). It is only since the beginning of the Turkish period that the town, written Rewān by the authorities, has obtained any considerable importance in the history of Islam. The tradition given by Ewīyā places the foundation of Erivan as late as the ixth—xith century and that of the citadel about 100 years later under Shāh Ismā'īl. In the reign of Murād III, Erivan which at first belonged to the Şafawids, was won for the Turks by Ferhad Pasha and fortified. Shāh Abbas I regained it in 1604. After a series of battles with varying result it was taken by Murād IV in 1635, but soon afterwards fell again into the hands of the Persians. A brief survey of the history of the town may be gained from the article ARMENIA 141. In 1587 it was taken by the Russian general Paskevitich, who received the title Ermewski in honour of its capture. Since the peace of 1828 Erivan has belonged to Russia. The mosques, celebrated for their faience and other important buildings, date from the viith century.

**ERMEANEK** (Armānāk), the capital of a kād in the sandjak of Iç Ili in the wilāyet of Adana with 6350 inhabitants (Cuijet), built at the junction of the two streams that form the Gök-Şu (CalycaADIUS), is probably the ancient Germanopolis in Isauria (cf. Pauly-Wissowa, vii. 1253). The Oriental writers of the middle ages locate Ermenek two days' journey south of Larena and three miles from the port of 'Ālā'īya A a grotto there with a spring was particularly famous. In the viith—viiith (xiith—xiiith) century Ermenek was one of the principal strongholds and for a time the capital of the Karaman dynasty [v. v.] until it was taken by the Turks in 1472.

(R. HARTMANN)

**ERTOHGRUL,** I. Son of Sulaiman ponds and father of Othmān I., the founder of the dynasty and empire of the Ottomans. According to the oldest tradition, which is preserved in 'Ashikpashazade, he migrated with 400nomadic Turkoman families from Pāsin Owa and Sūrmedi Çuṣūr to Asia Minor where the Sālādi jā 'Alā al-Dīn allotted him the district of Sogd between Karadjihasār and Biledek as winter pastures (kīshla) and the hills of Ermenibili and Domaniç as summer pastures (yalla). Karadjihasār and Biledek still belonged to the Byzantines but they paid tribute to 'Alā al-Dīn; 'Alīshir, the father of German, ruled the adjoining district of Ahūn Ka rbadja. Ertohorog Đức settled in Sogd and was buried there; he never engaged in hunting, maintained his sons, Othmān, Gunduz, and Sarayati (also called Sarubali or Savadj), of whom Othmān succeeded him. According to Neshri (Zeitschr. d. D. Morgenl. Gesell.), xiii. 188—196 Ertogrul im-
migrated in the reign of 'Ala'- al-Din Kaikbād I (616–634 A. H. = 1219–1236 A. D.), repeatedly fought on the latter’s side against the Tatars, conquered Karadjah-Jur and Kutahia and was still alive in ‘Ala’- al-Din Kaikbād II’s reign (end of the seventh century A. H.). The later historians credit him with further conquests (cf. e.g. the chronicles transl. by Leunel, *Hist. Mus.*, p. 97 et seq.; Chalcolokondylès, p. 12 et seq.; Phrantzes, p. 68–77, but they take their statements regarding Θρησκείας, Ἐστιγμών from Turkish sources). Sa’d al-Din (i. 15, cf. p. 65) says that he was slain in 613 A. H. (1215 A. D.) over ninety years of age. Leunel (Anh., p. 3, Hist. iii.) makes him die in 687 A. H. at the age of 93 while Phrantzes gives anno 6773 mundi = 1264–1265 A. D. and his age 77. We may consider the following elements in the traditions to be historical facts viz. that Ertoghrul had settled with his Turkoman clan (hoş) in Söğüt as one of the frontier boys (Üçlü beşleri) of the Saldžük Sulțan’s of Konia, that he took part in the wars of his overlord against the Turks and occasionally availed himself of Byzantine territory on his account.

2. The eldest son of Bayazid I, born 778 A. H. = 1370–1377 (İsmā’īl Bēlīg, Güldeste, p. 40), was appointed governor of the combined district of Sarpol and Kermān by his father (Neshri, Zeitschrif für d. Morgenl. Ges., XV, 335; Leunel, *Hist. Mus.*, p. 317, 336 et seq. cf. 337 et seq., according to Sa’d al-Din, i. 178, of Aqīnlī) and died about 798 A. H. (cf. Leunel. l. c.), certainly before the war with Timurlenk; he was buried in the mosque built by him in Brusa (Sa’d al-Din, i. 125; Güldeste, l. c.). Leunel, op. cit., p. 371, cf. 347, gives a story that he fell in the war against Kādji Burhan al-Din of Siwās. According to Chalcolokondylès, p. 145–147 he was taken prisoner by Timur at the capture of Siwās in 1396 and afterwards put to death. (J. H. MöRITZMANN).

**ERZERUM**, the capital of a wilāyêt in Turkish Armenia, in the plateau about 600 feet above sea-level between the Karā Su or Western Euphrates, the only natural gateway to northern Asia Minor (Siwās) from Russian Transcaucasia (Kars) and Persia (Tabriz), is at the same time connected by a good road with the Black Sea (Trebizond) in the north and Lake Van in the South. Even in ancient times there was an important town, the Teodosiopolis of the Byzantines, (see Chapot, *La Frontière de l’Euphrate*, p. 361) at this point so important strategically and commercially, the capital of the Armenian district of Karin, Karnoi Kafak, which survived in the name given to the town and district by the Arabs, Kālīkālā (on this point cf. Andreas in M. Hartmann, *Boktān*, p. 144 et seq.; Hübsemann in *Indulg. Forsch.*, xvi, 287 et seq. Kālīkālā was taken by Ḥabib b. Maslama in 645–46, according to the Arab historians, but according to Armenian sources not till after 653 (see Ghazarian, *Armenian unter der arab. Herrschaft*, p. 19, 33 et seq., 73). On the wars of the Byzantines and the Arabs with one another and the Armenians, which filled the following centuries, in the course of which Kālīkālā often changed hands, cf. *Armenia* i. 437 et seq. The town has only borne its modern name since the 16th century. In 1049 the Saldžük destroyed the town of Arzan, not far east of Karan, and its population moved to Theodosiopolis — Kālīkālā and gave this town the name of Arzan al-Rūm = “Arzan of the Romans” which became corrupted to Arz al-Rūm and Arj al-Rūm “land of the Romans”. Shortly afterwards, the Saldžük finally destroyed Byzantine rule in Armenia. From 588–627 (1119–1230) Arzan al-Rūm formed an independent Saldžük kingdom (cf. *Tocherianstif*). In 1241 Erzerum was swept by the Mongol invasion. Mustafî (in the first half of the 12th century) speaks of the numerous churches in the town: it must therefore have been for the most part inhabited by Armenians. On the other hand, Ibn Batūtā found Turkoman tribes preponderating and their doings brought about the ruin of the town. The district of Erzerum from this time on was one of the strongholds of the Aḵ-Ḵuyūnīl; after the wars with the Kara-Kuyūnīl that followed Timur’s invasion, Üzun Hasan, the greatest of the Aḵ-Kuyūnīl, built the citadel of Erzerum, but lost it before his death to the Ottoman Mehmed II after the disastrous battle of Terdjān in 878 = 1473. Erzerum then became the centre of one of the most important paşalıks in the Ottoman dominions, an outpost whose possession was often disputed by their Russian rivals, but which was always successfully retained by the Turks. In the Near Eastern history of Turkey it is celebrated for the rebellion of Ābāz Pasha [q.v. i. 6], which was put down in 1627. Since the xviith century the fortress has had to defend, with little success it must be confessed, the Turkish frontier against Russia. After the battle of Dede Boyun (q.v. i. 951 et seq.) in 1878 Erzerum was irretrievably lost, but was only surrendered to the Russians after the truce.

If we may believe the various estimates, the population of Erzerum has considerably declined in the last century. Although the lack of any railway or of a good system of roads militates against the importance of Erzerum, the town, which Cuijet credits with 38,906 inhabitants, is still of importance on strategic grounds as it is a border fortress with modern, if hardly strong enough, and on commercial grounds as the centre of trade for the wilāyêt (annual exports about £100,000 — mainly products of cattle-rearing; imports £400,000 — £450,000) and its hinterland and as a centre for trade with Persia.

**ERZINDJAN**, the capital of a sanjâq, with about 23,000 inhabitants in the wilāyêt of Erzerum, lying in a fertile plain on the north bank of the Karā-Sī between Erzerum and Siwās, is said by the Armenian sources to date back to pre-Christian times. We first obtain definite facts about the town in the Saldžük period (cf. the article MANGUCAK). According to Yākût it was inhabited mainly by Armenians. In 627 (1230) the Khwārizm-Shāh Ḫājāl-al-Din (q.v. i. 1004) was defeated here by the Saldžük ‘Alā al-Din Kār-
ERZİNDJAN — ESAD EFENDI.

Kubah I and the Ayibidas al-Ashraf. Mustafii (Le Strange, op. cit.), says that the walls of Erzinджan were restored by Kaz-Kubah. In 640 (1243) the power of the Gedikhs fell before the Mongols, who entered Asia Minor under Erzerum. In Ibn Battuta's time the majority of the population was Armenian, but he also found a number of Turkish speaking Muslims. The city, which was always a stronghold of the Turkomans, recognised Ottoman suzerainty for a brief period in the reign of Bayazid I. In Timur's time it was in the hands of Karacı Yaruf of the Kara-Kuyunlu, and then passed to Uzun Hasan of the Kız-Kuyunlu. This period, problems of status and authority, and intrigue with Mehmed II's victory over Uzun Hasan at Terven. Under Ottoman rule it has formed a part of the pashalik of Erzerum down to the present day. Though several times destroyed by earthquake (notably in 1784) the town has always been able to recover, thanks to the fertility of the surrounding country. Its chief exports are fruits and vegetables. As a military station it is one of the main defences of the Turkish eastern frontier.

Ewyia Efendi, Tavrčes (transl. von Hammer), ii. 202 et seq.; G. Le Strange, Eastern Caliphate, p. 118; Ritter, Erdkunde, x. 770—774; Cuinet, Turquie d'Asie, i. 211. (R. Hartmann.)

ESAD EFENDI, AJMED, a Turkish official and learned jurist, son of Shaikh i̇l Muhhammed Şâhi̇b, was Kâdî-askar of Anatolia in 1205 (1790—1791), of Rûmilî in 1208 (1793—1794), became Shaikh-i-âlam in 1218 (1803) and held this office for three years and five months. During his tenure of this office he issued a fatoûr, sanctioning the new organisation of the army, known as irâd-i-dieât, proposed by Sultan Selim III. But the revolution of the Janissaries brought about his deposition and it was with difficulty that he escaped with his life in this troubled period. On the accession of Mahmûd II in 1223 = 1808 he again became Shaikh-i-âlam but was again driven out of his office by the revolutionaries three months later. He died in 1230 = 1815.

Bibliography: Sami Beji, Kamis-i-Alem, ii. 993; Şami-Zade, Tarîkh, i. 45. (Cl. Huart.)

ESAD EFENDI, MUHAMMAD, a Turkish official and poet, son of the historian Sa'd al-Din, born in 978 (1570), became Kâdî of Adria in 1304 (1695—1706) and of Rûmilî, made the pilgrimage to Mecca in 1233 (1764) and after his return succeeded his brother Celebi Muhammad Efendi, who had just died, as Shaikh-i-âlam. He filled this high office for seven years under Sulţan Ahmed I, Mustafa I and Othman II; the latter gave him his daughter in marriage. He soon afterwards left office because of the troubles that had broken out, but in 1233 (1625) he was called upon by Murâd IV to resume the post, which he retained till his death in 1234 (1625). His tomb is at Eiyû. He left a Dvin of poems in Arabic, Persian and Turkish.

ESAD EFENDI, MUHMMAD, a Turkish official and historian, son of Muftı Abû İshâk Isma'il, born in Dhu 'l-Ka'da 1096 (Oct. 1685), filled several judicial offices in the lifetime of his father, accompanied the Turkish army to Belgrade in 1152 (1739), became Kâdî-askar of Rûmilî in Muğarram 1157 (20th July 1744) and succeeded Mufti Aş-Mahmûd-Zade in office on the 24th Radjab 1161 (20th July 1748). He was the author of a Lejîfet al-Lâghâ (Arabic-Persian Dictionary, printed in Constantinople 1211 = 1795), a Bahâlî-nâme ("Book of the Nightingale") a Tâkhârî ("collection of biographies") and Arabic and Turkish poems; he also wrote a Tâkhín to four celebrated poems in praise of the Prophet (Purda, Hamzîya, Dîvîsîya and Muṣîrîya) and a metrical translation of Zâmakhsâri's Aṭâ̧ ăal-Dâhâb. He was a good musician and founded several schools and several churches.

After being deprived of his office for no reason on the accusation of 'Abd Allah Pasha, Sulţan Muhammed Tüs grand vizier, in Şaban 1162 (July 1749) he went to Gallipoli and then to İndir-Ko, near Constantinople, where he died on the 10th Shawal 1166 (23th Aug. 1753).

Bibliography: Wâqif, Muhammed-i-Âshîrî, i. 11; J. von Hammer, Hist. de l'empire ottoman, xv. 176, 198, 261; Gesch. d. Osm. Reiches, Index, do., Gesch. der osm. Dichtkunst, iv. 171; Sâmi-Beji, Kamis-i-Alem, ii. 908. (Cl. Huart.)

ESAD EFENDI, SAYYID MUHAMMAD, called Şâhî̇f-Zade (="son of the bookseller") a Turkish official and historian, son of al-Hâджî̇ Ahmed, who was Muḍarrî and at the same time a bookseller and later Kâdî of Jerusalem and Cairo, born in Constantinople near the Ayâ Sofâ on the 18th Rabî I 1204 (6th Dec. 1790), adopted his father's profession and received the position of a judge in Adrianople and Scutari in Albania without actually filling the offices. On the death of Şâhî̇f-Zade in 1241 (1825) he was appointed Historiographer Royal. He held this office for thirteen years, and in addition in 1247 (1831) was appointed editor of an official gazette, the Ta'hârî-i-Waṣâf. In 1250 (1834) he was sent to Persia to congratulate Muhammad Shah, son of Fâṭî 'Alî Shâh, on his accession to the throne. He died in 1263 (1847) while holding the office of President of the Upper Council of Public Instruction.

He composed numerous chronograms (Tâ'rikh) on various events and wrote a brief account of the dissolution of the corps of Janissaries by Sulţan Muhammed II, entitled Us-i Zafir ("foundation of victory") which has been translated into French by Caussen de Pevreval (Paris 1833).

Bibliography: v. Hammer, Gesch. der Osman. Dichtkunst, iv. 403; Sâmi-Beji, Kamis-i-Alem, ii. 909. (Cl. Huart.)
ESKI (Tur. "old"): frequent in place-names like Eski Şehr "Old-town" [q. v.]; Eski Hisar "Old-citadel"; a name borne by the ancient Dakhlya (see Tomasek in Sitz.-Ber. der Wiener Akad., 1881, viii. 6) and Laodicea ad Lycum (see D'Alciz, i. 639) amongst others. Following a very common custom the Turks usually call ancient ruined sites by the name of some adjacent large town with the prefix Eski, e.g. Eski Şam "Old Damascus", Boğá (q. v., i. 795), Eski Masy, the ancient Balad (see Le Strange, Eastern Caliphat, p. 99); on Eski Baghí, see i. 56a and 926b.

ESKISHEHIR, on the Pursak-cai, the capital of the káç of the same name in the sandjak of Kutahía, in the province of Brusa, with about 25,000 inhabitants, chiefly Muslims, is celebrated for its hot springs and the meerschaum pits near it (see Reinhard in Petreanu's Mitteilungen, 1911, ii. 251 et seq.) and has very recently attained considerable importance as a junction on the Constantinople-Koníya and Constantinople-Ankara railways; of the 11 mosques one dates from the Saljuk period, and another was built by Kaum Musa-ja Pasha. Eskişehir is the successor of the Byzantine Dorylaeum (the أء هرة) of the Arabs) while the ancient town of that name was two miles to the north at the modern Şah-Üyük. In the Byzantine period the Emperor's armies assembled in the plain of Dorylaeum before the eastern campaign against the Arabs and Seldjûks (cf. Khandadeh, ed. de Goeje, p. 106). In 59 = 706 al-Abláns b. al-Walid conquered Dorylaeum (Tabari, ii. 119; cf. Theopanes, i. 376, ed. de Boer) and Hasan b. Kâhtaba advanced as far as this town in 162 = 178 (Tabari, iii. 403; Theopanes, i. 452). The Emperor Manuel Komnenos in 1177 again fortified the town which had been destroyed by the Seldjûks and drove out the Yäriks who led a nomadic life in the neighbourhood (Kimnmos, p. 294, 297; Niketas, p. 236 et seq., 246), but by the next year after the unsuccessful war against Khalid Arslân I. he had to agree to destroy the fortifications and a short time afterwards the town was completely occupied by the Seldjûks.

In the xiiith century Ertogrul settled near Eskishehr in the district of Sultan âyûgi (Sultan ânä), Nesht, Zeytchur, d. D. Morgen. Ges., xii. 198) in the apochryphal letter of investiture (menekhr) of 'Âla al-Din b. Farazmân of the beginning of Shawaâl 688 for Othman I. (Feridun, i. 56 of the second edition) the district of Eskishehr is granted to Othman as a sandjak (cf. Leemel, Hist. Mus., p. 125, 126 et seq.); at a later period it was the residence of the Sandjakbeg of İnönü and a station on the pilgrims' route.

ESNE (Egyptian Tase-net, Coptic Snc, Arabic Isna, Greek Latopolis from the fish Latos worshiped there) a town in Upper Egypt, lying on the left bank of the Nile halfway between Luxor and Edfu. It was for a time the capital of

a Mūdiriyé, now Markaz in the Mūdiriyé of Kena, with 19,103 inhabitants, celebrated for the ruins of the temple of the God Chnum, which dates from the Ptolemaic period, in which a number of Roman emperors are depicted in the garb of the Pharaohs. In the Muslim period Esne was a flourishing provincial town. According to Edinwati quoted by Mâkribi the town had 10,000 houses, produced annually 40,000 irshab of dates and 10,000 irshab of small fruits.

The most detailed account and one which takes account of economic conditions also is: 'Alî Mubâraq, Khita'i Djilidé, viii. 59; Baederker, Egypte (H. Ritter).

EUPHRATES. [See AL-FURAT.]

EUTYCHIUS, Patriarch of Alexandria 321-328 (933-939) known in Arabic as Sâd b. al-Dhirik, born at Fustat in 263 (876) was the author of several medical and historical works. The best edition in his Arabic chronicle Nâm al-Dhikwâr, published by Pococke at Oxford in 1658-1659, which was afterwards continued by Yahyâ b. Sa'id al-Ântâki [cf. i. 359]. The fragment of a history of Sicily contained in a famous Cambridge manuscript (cf. Browne, Handlist of Moham. Mus., p. 27, N°. 170) used to be wrongly ascribed to Eutychius [on this point cf. Vasilew, Visantia i Arabi, p. 79 et seq. and the works cited by him]. In the same library at Cambridge (Browne, cited, p. 281, N°. 1317) there is also a theological pamphlet against Eutychius written by Severus b. al-Muqadda.

Bibliography: Ibn Abâ Usâilî (ed. Muller), ii. 86; Leclerc, Hist. de la Medecine Arabe, i. 405; Brockelmann, Gesch. d. arab. Litteratur, i. 148.

EWLIYA ÇELEBI; or as he repeatedly calls himself, EWLIYA MEHEMMEH B. DERWISH, the "globe-trotter." Siyâh-ı Âlem was born in Constantinople in 1020 (1611-1612) and died soon after 1090 (1679); in the course of forty years he made a series of long journeys within the Turkish empire and took part in the campaigns against Crete, Hungary, Austria etc. under İbrahim and Mehemmed IV and published his observations and experiences in war and peace under the title 'Urdîkhi Siyâh, the 'Traveller's Chronicle' (Vienna Miss., Flügel, N°. 1281; the Stamboul printed edition has Siyâhat-name), an elaborate work in ten parts. For information about himself and his life we are limited to his own statements. According to them his father Derwish Mehemmed âbî (i. 218; iii. 442, 443 of the Stamboul ed., cf. i. 244) had gone with Sultan Suleiman I to Belgrade, Rhodes, Buda, pest, Stuhlweissenburg and Szeged (i. 106, iii. 444); had been present at the siege of Cyprus (iii. 443) and taken part in Mehemmed III's campaign against Eriau (iii. 444); he was also a court-jeweller (Zeh, »dirkî, an-Nâm al-Dhikwâr, or Kuyuwdshîkh) and Vagner served two Sultan from Suleimân I to İbrahim (iii. 442; i. 258); he was died in 1058 A. H. (i. 439), at the age of 117 (iii. 444). His paternal grandfather, Demirîdî Ogâlî Kara Ahmadbeg, Mehemmed II's standard-bearer, had taken part in the capture of Constantinople and attained the age of 147 (iii. 444); his maternalgrandfather, Yawûz
Ozbeg had also been standard-bearer to the conqueror (i. 94); his mother was a sister of Melek Ahmed Pasha, who was Grand Vizier from Sha'bân 1060 to Ramazan 1061 and died in 1073. Ewliya decided to devote himself to scholarship and make a beginning in Ramazan 1045 at Nizâr in Aya Sofia; while here he attracted the attention of Sultan Murad IV, who gave him a post as Muğâbâ in the palace, which he left however two years afterwards as a regular Sipahi (ii. 244–258). Henceforth he gave himself up to his love of travel and we find him on long journeys in the provinces or on campaign, sometimes independently sometimes in the train of some high official, notably his uncle Melek Ahmed Pasha, till he settled down about 1083 (1672-1673). Details are given in the following survey of his travels. Part I contains the description of the capital and its environs which he explored in 1041 and the years following; Part II: Journey to Brusa (Mohtarâm 1050 = April-May 1640). — Excursion to Nikomedia. — Journey to Bitin, Trebizond, Akhîhâz (Djumâa I. 1050=Shabân 1054 = Aug. 1641-Oct. 1644). — Campaign against Crete (1055-1064). — Journey to Eretria, Aïdarbâigân, Georgia etc. (Radjab 1056—end of Dijumâ I. 1058 = Aug. 1646—end of May 1648). Part III: Journey to Damascus, Syria, Palestine, Urmiya, Siwas, Kurdistân, Armenia etc. (Shabân 1058—middle of Radjab 1060 = Sept. 1648—July 1650; in 1059 the author performed the pilgrimage (cf. i. 288) which he describes in a separate part). — Journey to Rumelia (Bulgaria, Dobrudja etc.) 1061-1062 (1651-1652). Part IV: Journey to Van, Tebriz, Bagdad, Bâsm etc. in the years 1065-1066 (1655-1656). Part V: Conclusion of the journey to Van-Yarasa. — Journey to Ossau, campaign against Rakoczy, raid into Russia, 1266-1268 (1656-1658). — Campaign against the rebels in Anatolia; return from Brusa via the Dardanelles to Adrianople, Radjab 1069—beginning of Safar 1070 (March—October 1659). — Mission to the Moldau, in the same year. — Campaign against Transylvania, mission to Bosnia; Campaign against Dalmatia, return to Sofia, from the middle of Shabân 1070-Rabi I. 1071 (April—November 1660). Part VI: Campaign against Transylvania, mission to Albania, return to Constantinople, Dhû l-Ka'da 1071—Radjab 1072 (July 1661—Feb. 1662). — Campaign against Hungary, siege of Udwâr (Tradhuvel), raid made by the author through Austria, Germany and Holland to the North Sea with 40,000 Tatars (14), conquest of Udwâr and other fortresses, return to winter-quarters in Belgrade, Shabân 1073—end of Ramazan 1074 (March 1663—March 1664). Mission to Herzegovina, journey to Ragusa, campaign against Montenegro, Kanâa, Croatia. — The contents of the other parts can only be surmised from the casual statements on p. vi. of the preface to the first volume of the new Stamhö edition; according to these Part VII deals with Austria, the Crimea, the lands of the Carpathians; Part VIII with the Crimea, Crete, Salonika and Thrace, Part IX with the pilgrimage and X with Egypt. In part VII Ewliya presumably describes his journey to Vienna and Central Europe on which he went as for as Dunkirk (cf. Travels, i. 1, 42 et seq.); he probably accompanied Kara Mehmed Pasha, the ambassador of the Porte (in 1075 = end of 1664), and then continued his journey alone from Vienna and after travelling for 3½ years returned to the Crimea, via Sweden, Poland and Russia (i. 300); in 1080 (1669) he accompanied the campaign against Crete and the later one against the Maiotes; part VIII deals with this. Part IX and part X deal specially with his pilgrimage in 1059 and Egypt respectively (cf. i. 288 and 507). The last date that appears in the parts of the Târîh-i Sâlih as yet known is the year 1089 (1678-1679), see i. 301.

Ewliya Çelebi was an imaginative writer with a decided fancy for the marvellous and adventurous; he prefers legend to dry historical facts, delights in exaggeration and does not hesitate at times to draw the long bow. Apart from this, his work is a perfect treasure-house of information on points of social life, folklore and geography, whose value is still further increased by simple and unaffected style in which they are vividly described. He rarely quotes from literary sources although a few are referred to (e.g. the chronicles of Mahly 'l-Din and Muhwî); he himself has been much used by later writers; unfortunately — as e.g. by von Hammer — usually without any attempt at criticism.

Only the first six parts of Ewliya's works have yet been printed, Stamhö 1316—1318; the Manuscript of Ewliya Çelebi (Constantinople 1529 A. 128 = 1843) contain extracts from Part I; v. Hammer translated Parts I—III under the title: Narrative of Travels in Europe, Asia and Africa by Ewliya Efendi (London 1846—1850, Vol. I and II), after giving in the second volume of his Des Osm. Rechts Staatsverfassung etc., p. 455—470 a detailed account of the contents of the first four parts. The only manuscripts of the Târîh-i Sâlih in Europe are in Vienna and in the British Museum.

J. H. Moritzmann.

Ewrenos, the descendants of Ewrenos (أوُرَنُوس), in 'Ashkâpşâhâzâde and Neshri (نَشْرٍ), 'Abârâzâ in Dukas, Bârâzâ in Manuel Palacez, Chron. brev. and Chron. Epigr., Bârâzâ in Chal-kokondyles and Phrantzes, Avranes in Barleuvius) form with the Mihaloghlu, Malkodjoglou and the sons of Türkân the four ancient families of the Ottoman nobility. (Ramberti, Cosi dei Turchi, B. 133 f., ed. 1543; cf. Lencul, Pand., C. 27).

Tradition mentions Ghâzâ Ewrenosbeg among the begs of the Karasîoghlu who on the disposition of this dynasty by Sultan Orkhân in 735 A.H. entered the service of Saleimân Pasha, son of Orkhân. He crossed the Hellispoint with Saleimân Pasha (in 759: or 760) and was installed by Murâd I as 'udîjî (frontier-beg) in the Rumelian territory. In this capacity he conquered Keshan, Ipsala, Gumûldîna (765) Fere (774), Pori, Xântî, Maroanîa (775), Serres (784 or 787), Monastir, Yenidje Wardar and laid the foundations of Ottoman power in western Thrace and Macedonia. After making the pilgrimage he took part in the battle of Kossova (June 1389), conquered Kittros and Wodiena, and repeatedly led Turkish armies against Albania (1398 and beginning of 1396) and the Morea (1391 and 1395). He then fought in the battle of Nikopolis (Sept. 1396) against the Hungarians and accompanied Bayâzid I on his raid into Wallachia. Finally he fought in the battle of Angora in the war against Tiûm. Under Mur Saleimân he took part in the war against the Karamanoglou and besieged the
latter in Aššarai. He afterwards went over to Mūṣṭa Celebi (in 813 a. h.) and finally in 816 a. h. to Meḥmənd I and fought on the latter's side in the battle of Cāmūri. He seems to have died soon afterwards (according to Sījjīl-i ʿOthmānī in 819 or 820 a. h.). If, as the Ottoman historians say, Ewrenos had been a beg under the last Kās-roğān, he must have been over 100 when he died; there is apparently a confusion between two different persons. Even in Murād I's reign Ewrenos was one of the richest vassals, and his estates were so large that tradition relates that he had so much land as a swift steed would carry him round in 24 hours (ʿAlī Kūnch, V, 75; Beaujour, Tablouin Commercio de la Grèce, i. 111 et seq.). He expended a great part of his riches in pious endowments which are still controlled by his descendants and to the present day are free from state inspection by special privilege (Dustur, iv. 400).

On the death of Meḥmənd I in 824 a. h. the sons of Ghazī Ewrenos took the side of the false Muṣṭa, who even had his headquarters for a period in Yenidže before advancing against Murād II, and remained faithful to the pretender after his other followers had forsaken him; they afterwards went over to Murād II. Among them ʿAlībeg and Ḳābībeg were particularly distinguished as brave and skilful generals; they led the Rumelian sipāhs and akhindis (irregulars) in Murād II's campaigns against Albania, the Morea, and notably against Hungary. ʿAlībeg was, according to Ducas, executed by Meḥmənd II on his accession in 1451 A. D. after strangling the Sultan's younger brother by his orders; according to another story (in Beaujour, l. c.) he had run against Murād II in the game of ġirād and the Sultan enraged ordered the aged Ewrenos to put his son to death with his own hands. Of the other sons of Ghazī Ewrenos Baraḵbeg (Bāṣānex, Bāṣānex in Chalkokondyles) and Ahmedbeg are mentioned; the latter took part in the Wallachian campaign of 1462 a. d. and in the siege of Sκόdra in 1478. The two Ewrenosoghlu, ʿĪsā and Suleimān, who fell in battle against the Egyptians in 1488, must have been grandsons of Ewrenos. Henceforth the Ewrenosoghlu begin to lose their important position, although we still find them from time to time acting as provincial governors for the Porte. Nevertheless they remained the most prominent family in the land, chiefly on account of their extensive estates, while the descendants of the other three ancient Ghazī families have retained nothing of the glory of their ancestors except their name.

The celebrated firmān, which Murād I is said to have granted to Ghazī Ewrenos (published by v. Diez, Denkwürdigkeiten von Asien i. 101—132 and in Feridūn's Mīṣḵiātī Ṣalāṭīn, i. 87 et seq. in the second edition) has been doubted as apocryphal by v. Hammer, but is acknowledged by the Porte as genuine. Beaujour (loc. cit.) saw a manuscript history of the Ewrenosoghlu and gave several stories from it. The biographies of Ghazī Ewrenos and his son ʿAlībeg in the collection Meḥlūkhī-i Islāmī (Constantinople, 1501 a. h.) contain valuable material. Von Hammer's account of the Ewrenosoghlu in his Gesch. d. Osm. Reiches, Vol. i. and ii., is only to be used with great caution. (J. H. Mordtmann).

FADAK (Demin. Fudain), a town in Arabia not far from Khaibar [q. v.] and like the latter inhabited by Jews. In the year 626—627 Muhammad sent ʿAlī, afterwards Caliph, against Fadak as he had learned that the latter town was going to support the Jews in Khaibar. When Khaibar was taken in the following year, the Jews of Fadak also submitted and agreed to give up half of their possessions. Muḥaṣṣib al-Maṣʿīdī conducted the negotiations between the Prophet and the people of Fadak and was rewarded by Muhammad for his services. On the death of the Prophet, his daughter Fātimma demanded that Khaibar and Fadak should be given her as her father's inheritance. But Abu Bakr refused to give up these towns and relied here on the words of the Prophet: "No one shall be my heir; what I leave behind me belongs to the poor,"

AL-FADLĪ, MUḤAMMAD B. ʿṢĀFĪ-Ḥ AL-SHĀFĪ, a Cairene Shāikh born at Munayt Fādāl near Samannud in the Delta (Khitāf al-fādāla, in p. 2; xvi. 80; Bāḏjīrī, Ṭabakat al-muṣannaf al-fādāla, p. 9 of ed. of Cairo, 1315) who died in A. H. 1326 (Cat. of Khotiv. Library, ii. p. 39) = A. D. 1821. He appears to be known only as the author of the Kifāyat al-ʿawwām min Ḳifāyat al-ādām, the teacher of the more fertile Bāḏjīrī [q. v.] who added the gloss, written in Arabic, to his master's work. Text and Ḳifāya are now seen to be go together in the Ms. and editions. A translation of the text is given in D. B. Macdonald's Development of Muslim Theology etc., p. 315—351. Bibliography: Brockelmann, ii. p. 489; Ahlwardt's Berlin Cat., iv. p. 459, No. 5148; Ellis, Cat. of Ar. Printed Books in British Mu-
seum, under Muhammad ibn Shahb al-Fadlāl; but the nība according to the Rāmā, idj. is as above. (D. B. Macdonald.)

FADDĀN (A.), an Arabic word derived from the Aramaic (cf. Fränkel, Die Arab. Fremdwörter, p. 129), properly a yoke of oxen for ploughing a piece of ground, an Egyptian measure of area, varying in size with time and place. According to Lane the faddān a few years before his stay in Egypt (1833—1835) measured about 1.1 acres, while during his stay there it was less than an acre. It was divided into 24 ḥirāʾ and contained 333 3/4 σq. kašaba, the kašaba (rood) being first reckoned at 24 and later at 22 ḥirāʾ. In the time of the French expedition there were three different faddān in use: the faddān in use on the banks of the Nile (1,336 arps), that in use away from the Nile (2,375 arps) and the faddān of Damietta (2,012 arps); Upper Egypt (1,670 arps = 5724 sq. metres) and the Copts (5253 sq. metres) had each their own faddān besides. Decourdemanche estimates the ancient faddān of 400 σq. kašaba (the kašaba being reckoned at the length fixed by al-Fāḍil: it was 5.9 rods or 1.8 glasses of Babylonian ells.), at 583.5 square metres and the modern faddān of 333 3/4 σq. kašaba at 4200.83 square metres. In Syria faddān also means a single ox; as a measure of area it is 333 square kašaba.

FAHDĀLAKA (A.) "sum, total" from fahdalika "and this makes", at the end of an addition.

FAIDL. [See FADIL.]

FAĐR (A.) "Daybreak", the title of Sura LXXXIX.

AL-FADĪL b. AL-RABI’, AL-ĀMIN’S visier. A descendant of a Syrian slave manumitted by the Caliph Othmān, al-Fadl proved himself thoroughly Arab in his attitude and constantly championed the Arab spirit in opposition to the numerous Iranian elements in the "Abbāsid empire. His father al-Rabi’ b. Yūnus had played a part in history as visier to the two Caliphs al-Šamār and al-Mahdi. When Ḥarūn on his accession gave the Barmecides preferment, al-Fadl felt himself slighted and became filled with hatred and jealousy of them. On Khaizarān’s death in 173 (789-790) he was appointed visier by Ḥarūn and filled this office till 178 (794-795) when Yahyā b. Khālid al-Barmaki became the real ruler. Al-Fadl then did his best to bring about the fall of the Barmecides and succeeded in once more obtaining the vizierate which he retained under Ḥarūn’s son and successor al-Āmin. Just as his namesake al-Fadl b. Shah ruled al-Āmin’s brother, afterwards Caliph al-Ma’mūn, almost absolutely, al-Fadl exercised an extraordinary influence over al-Āmin. When Ḥarūn died suddenly in Khorāsān in Jhumāḍa II. 193 (March 809), while on a campaign against the rebel Rāfī b. Lāṭif, al-Fadl ordered the whole army destined for Khorāsān back to Baghdad, by command of al-Āmin but in direct violation of the dead Caliph’s last wish, a proceeding which al-Ma’mūn, who was then governor of Khorāsān and at once paid homage to his brother, could not prevent. As al-Fadl feared al-Ma’mūn’s vengeance, if the latter should ever become Caliph, he exerted all his influence to incite al-Āmin against his brother. As early as the year 194 (809-810) at the instigation of al-Fadl and ‘Ali b. Isā, a former governor of Khorāsān, the Caliph had his son Mis‘ūn mentioned in public prayer which was later evidence of his intention to declare him his successor. In consequence al-Ma’mūn broke off all relations with his brother; in Radjab 196 (March—April 812) the latter was taken prisoner and declared deposed, and, although he was soon set free and raised to the throne again, al-Fadl thought it advisable to retire.

In 201 (816-817) he came forth again from retirement. The troops in the capital rose against al-Ma’mūn’s governor, al-Ḥasan b. Sahīl. The commander there, Muhammad b. Abī Khālid, was successful at first; but when he quarrelled with al-Ma’mūn’s other generals, he went over to the rebels himself. Al-Fadl now looked to Muhammad’s side; the latter attacked al-Ḥasan b. Sahīl but was defeated and died of his wounds. Al-Fadl then lived in retirement till his death. On the intercession of Tāhir b. al-Ḥusayn, governor of Khorāsān he was pardoned by al-Ma’mūn. He died in Rabi II. or in Dhu-l-Ka‘da 208 (823-824).

AL-FADIL b. SAHIL, AL-MA’MUN’S visier. Al-Fadl was a native of Persia and did not adopt Islam till 190 (805-806). His family had been strongly recommended to Ḥarūn by the Barmecides and al-Fadl b. Rabi’, their implacable opponent, therefore became a personal enemy of Ibn Sahil. As the former was of Arab origin, the latter was also opposed to him as the representative of the Iranian element, and just as Ibn al-Rabi’ controlled the one brother, al-Āmin, the other, al-Ma’mūn, was simply a tool in the hands of Ibn Sahil. The struggle that arose between the two sons of Ḥarūn was thus also a struggle between their viziers or between Arab and Persian culture. As al-Fadl b. Sahil feared that al-Āmin would on Ḥarūn’s death disregard the arrangements for the succession made by the latter, he persuaded al-Ma’mūn to try to accompany Ḥarūn to Khorāsān in 192 (808). In the following year the Caliph died and when al-Āmin recalled the army sent against Khorāsān and al-Ma’mūn was thinking of hurrying after the troops and reminding them of their duty, Ibn Sahil persuaded him against this. Instead of al-Ma’mūn an envoy was sent to the army; but he could do nothing with them and was received with insults and the army continued its march to Baghdad. In the period following, al-Fadl remained the prince’s faithful friend and adviser and constantly urged him in all things to insist on his own rights against his brother. It was due to the cunning intrigues of Ibn Sahil that al-Ma’mūn allowed himself to be led into trusting the command of the army, which he was sending against al-Ma’mūn in 195 (811) to the incapable ‘Ali b. Isā. ‘Ali was defeated by Tāhir b. al-Ḥusayin; he
himself fell in the battle and his troops were scattered in flight. After this success al-Ma'mūn gave Ibn Sahl the government of the eastern provinces and at the same time gave him the title Dhu 'l-Khāzānatayn (“lord of the two highest offices”) i.e. of vizier and commander in chief. When the aged general Harthama b. A'yan, who had rendered such services to Harūn, was appointed governor of Arabia and Syria, he decided to go to al-Ma'mūn in Merv to give him an account of the condition of various parts of the empire. The Caliph commanded him to go to Damascus; but when Harthama in spite of this appeared in Khorāsān, he was represented by Ibn Sahl as a rebel. The Caliph therefore had him thrown into prison where he was put to death a few days later by Ibn Sahl. Al-Ma'mūn, however, finally found out that the latter did not always do what he told the Caliph and therefore had his former favourite murdered in the bath in Sarks in 202 (818) or 203 (819).

**AL-FAḌL b. YAYHĀ, a Barmakīd, born in Dhu 'l-Hijjah 148 (February 766) governor of Dārjūrān, Tabaristan, al-Raiy etc. 176–180 (792–797) and of Khorāsān 178–179 (794–795–795–796). On the fall of the Barmakids in 187 (806) he was thrown into prison. He died in confinement in al-Raṣṣā in Kamarān 192 or Muḥarrarn 193 (808). For further details see above i. 665a (article Barmakīds).” (K. V. Zettersten.)

**FAḌL ALLĀH, a family of officials in Cairo under the Mamlūks who traced their descent from the Caliph 'Omar I. so that the individual members are also known by the nība al-'Omārī. The founder of the family was Faḍl Allāh Djalāl al-Dīn Abu 'l-Maʿāthir b. 'Izz al-Dīn; one of his sons, Shafar al-Dīn 'Abd al-Wahhāb (died 717 = 1317), was private secretary under Kālāwūn, another son, Muḥyī al-Dīn Yaḥyā (died 738 = 1337), was likewise private secretary under al-Nāṣir in Damascus, but moved to Cairo in 733 (1332–1333). The latter had a son, Shihāb al-Dīn Abu 'l-Abbots Aḥmed (born 700 = 1301), who first became kāfī, then secretary of state, but is best known for his literary works. He compiled a comprehensive, encyclopaedic work entitled Mālālik al-Alārī fī Manālik al-Āmār, as well as an official letter-writer al-Taṣf b. 'Abd al-'Adālāt al-Shirīf, which however contains much other valuable material and was printed in Cairo in 1312 (1894–1895). Other works by the same author are detailed by Brockelmann, Gesch. d. Arab. Litt., ii. 141. Shihāb al-Dīn, or as he is usually called, Ibn Faḍl Allāh, died of the plague in Damascus in 748 (1348).

**Bibliography:** in Brockelmann, op. cit., to which may be added that Tischendorf gives extracts from both the above works in his *Revue de Matériaux rel. à l'Histoire de la Horde d'Or*, p. 204–251. Cf. also Makrīzī, Khīṭat, ii. 56 et seq.

**FAḌL ALLĀH, surnamed ḤūḍRĪ, founder of the ḤūḍRĪ sect, born in Astārābād in 740 (1339), was a dervish who shared the religious opinions of the Kārmājīans. He actually seems to have borrowed the system, which develops a whole theology out of the calculation of the numerical value of the Arabic letters, to which he added the four additional letters of the Persian alphabet [cf. ṭarkh, i. 691 et seq.] from the Ismā'īlīs. He was executed in Shirwān in 796 (1393) by Muḥāsān, son of Timūr. One of his pupils, ʿAlī al-Aʿlā, went to Asia Minor, was received into a Bektashī monastery and began to preach Faḍl Allāh's doctrines, which he gave out to be the teaching of Hāджī Ṭekbāš. Faḍl Allāh considered himself an incarnation of the Deity and impressed this belief on his pupils; [on his teaching cf. the article ḤūḍRĪ]. He is the author of Dākhīrāt al-Kabīr, composed half in Persian and half in the dialect of Astārābād, also of a religious poem, which was probably called Iṣkand-īrānā, of another poem called Arūbānāmā “book of the throne” and of a treatise called Ṭabāhāt-īrānā “book of love”.

**FAḌL ALLĀH. [See RAṢḤID AL-DĪN.]

**FAḌLĪ (FADLI, FUTHALI), the dynastic name of a group of tribes in South Arabia. Besides this name we also find Qūṭmān (Qūṭmānī), as the founder of the dynasty, Faḍlī, is said to have been of Turkish origin. They are a branch of the Yāḥī and formerly bore their name also.

The land of the Faḍlī lies between 45° 10' and 46° 30' E. Lat. (Greenw.) and has an breadth of 20–30 miles. It is bounded on the south by the Arabian Sea, in the west by the Lāhējī, in the north by the Yāḥī and in the east by the land of the 'Awdīhī and Dāthīn. In the west there is the large valley of Abyan, with the Wādī Bona (Bana, Benah) and Hasān, both of fair size, which are filled with water during the summer rains. The Dājel Naḥḵāī with the W. Sālā may be mentioned among the hills in the east. The soil is fertile only in the west (district of Abyan); its chief product here is cotton. The east is mainly steppe-country. The capital of the country and residence of the Sulṭān is the town of Sīrīya, five miles from the coast, with about 400 inhabitants, a large mosque and the fortresslike palace of the Sulṭān. The only seaport or commercial town is Shugra (Shuḵra), with about 100 inhabitants and a palace of the Sulṭān, who lives here two months of the year. Jews live here only during the trading season, which lasts only a few months in the year. Among the towns in Abyan we may mention: 'Asālah, with about 500 inhabitants (a fifth of whom are Jews, who have a large synagogue here), one time a flourishing seaport, now here inclined, Māʾr or the W. Hasān with about 300 inhabitants (including many Jews), a large mosque and a hereditary governor of the 'Uṭhmānī dynasty, and Naʿāb with about 300 inhabitants (including many families of Jews) and a hereditary governor, who bears the title "Sulṭān".

The people of the Faḍlī country are Shāfīʿ
and devout Muslims. They strictly observe fasting in Ramadān, the prescribed prayers, the prohibition of wine and other prescriptions of the Korān. The Murākisha and Aḥl ʿEḥa are the most important of the tribes who inhabit the country. They are as a rule free and independent (kalbāʾiṭ). The people of Abyan and the Jews are on the other hand subject to the Sulṭān (raʾiye); he levies taxes on them at will and administers justice. If a raʾiye commits a murder he is stabbed to death with the knives of the Sulṭān’s soldiers at the murdered man’s grave. When a thief is caught, for his first offence he is beaten before the Sulṭān and forced, between the stolen article, on a second offence his hand is cut off; if he commits the offence again he is thrown into the sea in a loaded sack. Religious transgressions such as the breaking of a fast are punished by imprisonment in chains. Adultery is held equal to murder. If a murderer cannot be found, the so-called “test by fire” is tried (ordałów). This is carried out in the presence of the Sulṭān by the “fire-judge” who places a red-hot knife on the tongue of the suspect. The decision then rests with the fire-judge.

The Faḥl at one time belonged to the Yāfi and was under the rule of the Imams of Yemen from whom they separated when they themselves became independent. They later became enemies of the Yāfi and in the fourth decade of last century took from them the fertile district of Abyan. They live at hereditary enmity with the ʿAbādil of Lāḥēj and the ʿAwālikh, to which latter their district of Daṭṭah became tributary. On the other hand they are on friendly terms with the Wāhjdā, Ṣāyid, and ʿAḥjarī. Their relations with England down to 1856 were strained. In this year England made war on them and inflicted a severe defeat on them at ʿAsāla, whereupon they made peace. Since that time they have been on friendly relations with England.

The dynasty of Faḥl is of great physiological interest because of its possession of six fingers. The Sulṭān as well as his nearest relatives have a fingerlike girthy growth beside the little finger of each hand and the little toe of each foot, which is regarded as a sign of extraordinary strength among the Southern Africans as among the Semites generally.

FAĞFUR (avestan bagha-puthra “son of God”) an expression brought to Persia through Fargān (P. Horn, Aṣʿādi’s Lughat-i Furi, p. 56) is the designation of the Emperor of China and the translation of the Chinese tién-tṣu “Son of heaven” (Ibn al-ʿAthir, vii. 221, ult.). The Arabs have preserved the form baghūr, which is more a western form, but fağfur is also found notably in the Arabic inscription in the cemetery at Zaʿīt (Ts’üan-chou), of the year 723 (1323) which has been discussed by M. van Berchem; in Marco Polo (ed. Yule and Cordier, ii. 145) the name is applied to the last Sung Emperor; and as the Mongol Emperors bore the title fağfur (shāhkan) it is probable that the title fağfur refers to Chinese sovereigns of native dynasties before the conquest of the country by foreigners.

FAHIL or FÄHIL, among the Jews Fëhel, called Pella by the Greeks in allusion to the name of the Macedonian town, at the present day the ruins of Faḥl lie on the western slopes of the land east of Jordan. It belonged to the Decapolis and is particularly celebrated because the Christians went thither on leaving Jerusalem before its destruction; it afterwards belonged to Palaestina Secunda and was the see of a bishop. About six months after the battle of Adnādān in Dūn l-ʿQāda of the year 13 (January 635) the Muslims attacked the Byzantines who had assembled in the land east of Jordan, at Faḥl. The Byzantines had broken the dams at Bāṣān and turned the plain into a marsh but the Arabs crossed the Jordan without mishap and put the enemy to flight whereupon the town surrendered. The battle is also called “the Day of the Swamps”.

The geographers mention Faḥl among the towns of the province of Udunum. According to Yaʿkub l the population as usual in this part of the world was half Arab and half Greek.

Fr. Buhl.)

FÄFIL. By this word Muslim scholars in general understand all things which may be taken from the unbelievers “without fighting” and further very often the lands in conquered territories. The name fafīl is explained from the peculiar expression in the Korān, verses 6 and 7. "What God has allowed to return to his apostle (mā ofāʾa lāhu ʿala rasūlīhī). The possessions of the unbelievers which are “returned” to the Muslims form the fafīl.

Verses lix, 6, 8 and 10 of the Korān were revealed, according to Muslim tradition, when Muhammad had resolved not to divide the fields and orchards left by the Banū l-ʿNaḍlr, who had been driven out of the country, as booty of war among those who had taken part in the siege, but to give them to the Muhājiṁrs exclusively. He justified this action by arguing that these were really obtained not by fighting but in a peaceful fashion, by surrender.

After the conquest of Khālar and Fadak also the lands of the Jews there were not wholly divided among the troops as booty but in part placed at the Prophet’s disposal. It was probably on this occasion that Korān lxx. 7 was revealed:
"What God hath granted his apostle as fa'il from the people of the towns, belongs to God — to his apostle, to his family, to the orphan, to the poor, and to the traveller; what the apostle of God gives you, accept, but what be fords you, abstain from!" What could not properly be regarded as booty, was to be managed by the Prophet himself as state property and the proceeds therefrom as the fifth of the Ghanima (q.v.) were to be applied to the general good.

At a later period 'Umar ibn al-Khattab, in accordance with the view of his advisers of the Sufi school, thought that this principle should be applied to the newly conquered territories also. He ordered that only movable property captured should be divided among the Arab conquerors but not the land. The land was to be applied not for the advantage of the generation then living but as fa'il belonging for all time to the whole community for the benefit of all future generations of Muslims also. It was also feared at that time that if the Arabs devoted themselves to agriculture they would become less capable fighters. As a rule therefore, only the native population was assigned the land and the emigration of the Arab army on condition that they were allowed to retain possession of their lands.

In such districts (the so-called Durr al-Sulh q.v. i. 919) the land did not belong to the fa'il.

When in the course of the first century, the people of the conquered lands adopted Islam, they began, in spite of all measures of the Muslim authorities, to avoid the payment of kharāj and only gave the zakāt of the yield of their fields like the Arab Muslims. The land in the conquered provinces thus gradually ceased to be regarded as fa'il.

The views of later Muslim scholars on this point differ; the lands and estates in recently conquered provinces, according to the Ṣūfis, always to be divided among the conquerors as ghanima, according to the Malikis on the other hand, they are to be considered the property of all Muslims, i.e. as fa'il, while the Hanafis would place them at the imām's disposal so that he may administer them either as fa'il for the common good or divide them as ghanima among the troops according to the cause of Islam may be best advanced.

Besides the land, the kharāj, the dijizya and all other tribute to be paid by unbelievers, as for example the duties they have to pay on their goods in order to be allowed to trade in Muslim countries, are included in fa'il. According to Ṣūfī teaching the fifth part of the ghanima; the other four fifths of the fa'il are, according to the same school, to be used for the payment of the regular troops, the maintenance of mosques, roads and bridges and for other objects of general utility to Muslims. On the other hand the other Fāh school hold that the Imām should always apply the fa'il in its entirety for the good of the Muslim community as circumstances require it.

(Th. W. Juynboll.)

FAIL. (A. properly "agent"), a technical term in Arabic grammar == the subject of the verbal sentence, but only of the active verb (like Zaidun in the sentence jibrilu Zaidun = Zaid came), while that of the passive (like Zaidun in durība Zaidun) is called the fa'il of allāduhu lān yuwāsam fa'ilun, == the "patient" whose agent is not mentioned" (in Sībawaih, Ch. 8 et seq., other expressions are also given).

The fa'il can be a word only, not a sentence (this is given as a teaching of Sībawaih's in al-Mubarrad, Kāmil, i. 289, 12-13). It must follow its fā'il (verb) and is placed by it in the nominative.

In the older grammarians, as, for example, several times in Sībawaih and Kāmil (I. 634, 9) fa'il also means the active participle, which is later called in al-fā'il.

Bibliography: al-Zamakhshari, Mufassal, p. 10 et seq.; Muḥammad al-Aʿzā, Dictionary of Technical Terms (ed. Spranger etc.), ii. 1148 et seq.; Fleischer, Kleinere Schriften, i. 80.

FAILASŪF, philosopher: he who studies falsaṣa [q.v. p. 48 et seq.]; thence frequently used as a epithet for deep thinkers. The Arab philologists know the literal meaning of this word as muḥibb al-ḥikma (lover of wisdom). Al-Kindi [q.v.] was preferably known as the falsāfī al-ʿArab (philosopher of the Arabs), presumably because he was a philosopher of genuine Arab origin in contrast to most Muslim philosophers who belonged to non-Arab nations. (Cf. the correct explanation of this name given to al-Kindi by T. de Boer in the Archiv. für Gesch. der Philos. [1893], xiii. 154, et seq.), al-Dījahīn in quoting a wise saying of "Ali b. Abī Tālib describes him as Failasūf al-ʿArab (in Māwardi, Muntūḥ al-Ḥikam, ms. Landberg, now in the Yale University, fol. 45"; Dījahīn's work from which the quotation is taken is not named). This is quite in keeping with the character which his devotees give "Ali in philosophical (or rather kalām) matters (Zeitschr. d. Deutsch. Morgenl. Ge., liii. 382). The accuracy of Māwardi's quotation is rendered suspicious because in it Dījahīn speaks of himself as keeper of Harūn al-Rashīd's library.

In modern times the Turks have given the name Falsafī Rūṣūm to the contemporary Stambul scholar Rūṣūm Tewfik who has published a study of the Harūfī Sect (Gīhī Memorial Series, Vol. ix.), on account of his work on philosophical literature. In popular language failasūf is applied in
an uncomplimentary sense to free thinkers or unbelievers. Even the Jewish king Jero boam is called falsifus in this sense (Brevia des Interpolat Actuatorum ult.). An idea of contempt is associated with the forms finals, fulsfas (also falsifum, Syr.), plur. fulsfas, current in the popular language; this is applied to frivolous, imprudent people, good-for-nothings and charlatans (examples in Zeitschr. d. Deutsch. Vorgest. Get., xxxviii. 681); Vollers, (ibid. li. 300, 3) gives ful fus. — The verbal form yufsfas (Basis le for geron, ed. Landberg, 38, 3) is also connected with this: he could not wriggle out.

(I. Golzih.)

FAISAL. [See IBN SA'UD.]

AL-FAIYUM. The district of Faiyum is a depression on the eastern borders of the Libyan desert in the form of an irregular triangle with the apex to the south. It measures about 35 miles from N. to S. and about 49 from E. to W. The depression slopes from S. to N. and N. W., at first gradually to the railway line from Abouka to Sanûres (30 feet above sea-level), then very rapidly to the Birket Kârûn (140 feet below sea-level).

This hollow was formed in the Tertiary period through collapses in the earth's crust (as did the Nile valley also). Traces of human activity in the pre-historic period, such as have been found in the diluvial strata of the Nile valley, have not been discovered in the Faiyum, although neolithic flint workings have been unearthed on the northern margin.

In the diluvial period, when the Nile first appeared in its bed, an arm branched off from it in the neighbourhood of Aṣṣūt, the modern Baḥr Yūsuf, which entered the Faiyum basin after a course of 272 miles along the western border of the valley through a breach which it possibly made itself in the edge of the Libyan plateau. In course of time it filled the basin so that a great freshwater lake arose which in the north and West of the Faiyum stretched further than the present cultivated land. Kharaq Amenshamat and his successors of the xixth dynasty, built a dam or sluice at the place where the arm of the Nile entered the Faiyum with a view to stopping further influx of water and gaining arable land. The shallower stretches in the S. and E. were laid bare through the great evaporation and seepage by dykes. A small strip of land which ran out to the middle of this area, with the modern towns of Medine, Ahamayn and Elbghawia formed the "lake-province", tērēh, later phūmē of the ancient Egyptians, whose capital was Shetet, the Crocodilopolis of the Greeks.

The dams and sluices at Illahūn, which in course of time were made more and more efficient, made it possible for the lake (Egypt. Muwaṣṣir, whence the Maus of the Greeks) to be dammed when the Nile was in flood and afterwards run off; the lake thus became of great importance for the irrigation of the Nile valley. There can be no shadow of doubt that the Lake Moiris of the Greeks must have been the lake covering the whole of the Faiyum with the exception of the strip already mentioned. It used to be located in the southern extremity of the district where the village of Shedūm strong walls several miles long are still standing, which can only have been the embankment of an immense reservoir.

When in later centuries the influx of water to the lake began to diminish for unknown reasons and with the increasing dessication its shore retreated farther to the north, it had finally to cease to act as a regulator of the water-supply. When this took place has not yet been ascertained, possibly in the Persian or perhaps not till the beginning of the Ptolemaic period (Flin ders Petrie, Hanura, Bihunu and Aranuo). At this period the dry land had extended as far as the railway line from Abouka to Sanûres. A further contraction in the lake took place in the Greek period under Ptolemy Philadelphus in the middle of the third century B.C. Whether it reached its present dimensions as early as this must be doubted, for in the deepest parts (140 feet below seal level) no traces of buildings of the Greek period are found; Kārûn is at a depth of only 65 feet.

It is not absolutely impossible that the deepest parts at least did not emerge from the water till after the beginning of the Christian era; an investigation of the tombs on the south side of the island in the lake might possibly throw light on this point. It was not till then that the lake assumed the form and dimensions that it has at present, a length of 25 miles with a maximum breadth of about 6 miles and an area of 100 square miles. Its greatest known depth which is in the center is barely 16 feet but there are said to be deeper places in the western part. Its transformation from a freshwater lake to a salt has likewise most probably only taken place in the last period of its formation. In spite of the strong and in recent years increased influx of water no permanent rise in the level may be noticed although there is a slight fluctuation. The great evaporation of the surface on account of its low-lying position is, however, not sufficient to explain the disappearance of such vast quantities of water. It is not improbable the water escapes by one or more subterranean passages, naturally to the N. and not to the S. into the Wādī Kairīyān. The currents which are sometimes apparent in it would be thus explained. Besides, this has been suggested before: Maxey, Ekhun i. 249 suggests that the lake was drained underground to Sīwā (Sanatary). The great wealth in fishes, notably in the two kinds būtūni and lēṣṭēkh with eels and large sheat-fish in smaller numbers, which the lake possessed in ancient times, still remains, although it will soon diminish with the vast amount of fishing in which some hundreds of boats are engaged.

When the channel that fed the Faiyum ceased to act as an aqueduct when Lake Moiris ceased to be a reservoir, it was divided into a number (8) of canals at its end near the capital Crocodilopolis, which spread over the country principally to the N. W., after three had been led off to the N. and two to the S. before it reached the capital. In addition three other canals were led off from the aqueduct immediately after its entrance into the Faiyum, probably even in ancient times, one to the S. to irrigate the basin of Qurak (al-Sultān) and two to the north, that of Sulū (or Salū, written siyū Salū or sayūlā or sulā in Arabic) and that of Baṣḥ (originally perhaps Baṣāḥ); the latter, which is cut through the limestone for a considerable stretch in rising ground underground 100 yards broad and 40 feet deep, shows the scientific skill of the engineers of those days.
The superfluous water not required for irrigation, from these canals flowed into the lake. It was this irrigation of the ancient lake-bed, which of course was not equally productive all over, which gained the Faiyum the prosperity for which it was at all times celebrated, which, combined with the climate, made the district the most valuable province in Egypt.

The waterworks of the Faiyum were at quite an early period ascribed by Muslim tradition, probably under Jewish influence, to the Joseph of the Bible, but only at a later period called after him. When vizier of king Khunf, he caused the channel which brought the water to the Faiyum to be dug; the Faiyum which had previously been called Al-Djaula, was a basin into which were drained the superfluous waters of the Nile from Upper Egypt. Throughout the whole mediaeval period the stream was called Al-Bahr al-munkh (not munkh); it is only in modern times (first in Djabarti?) that the name Bahr Yusuf appears. The sluices of Illahun, which tradition also credits to him, were called Al-Hashur al-Lahluni in the middle ages, and only towards their close do we find the name Al-Hashur Al-Yusufi. Smaller sluices were called Al-Bahr Al-Yusufi, canals Madjiriy Khatimiyah, canals Madjiriy Khatimiyah (Makrizi). It is also dug the canals of Wardan and Gharak and finally, founded the town of Faiyum in which there was a Djami Yusufi in the viith century A. H.

A further personage in the Koran, the fabulously wealthy Karrun (Surah xxviii. 76) was likewise immortalised by tradition in the Faiyum and held to be the builder of the temple in the late Greek town of Dionsias at the western end of the lake. As early as the xiiith century these ruins were called Ksar Karrun and were highly esteemed by treasure-seekers (Kitab Al-Durr al-mahbuz by Ahmed Kamal p. 285—286). The name Karrun was only transferred from them to the lake in recent times, for as late as the end of the middle ages it was still called simply Al-Birka or Al-Birka Al-Ctouna (Makrizi, Khitat, i. 249).

The Faiyum has never played any great roll in the political history of Egypt. The transition from the old Oriental rule, Egyptian or Persian, to the European of the Greeks and Romans brought the land the greatest material and intellectual prosperity that it ever attained in antiquity. The capital of the district had then over 100,000 inhabitants, the modern town has nothing like half that number. In 639 followed the Muslim invasion and a decline set in, which lasted over a thousand years and reached its lowest level under Turkish rule. The causes of this decline are on the whole the same as in other Muslim lands, notably in the very similar country of Babylonia. It is true that the Faiyum was less afflicted by the civil wars that ruined Babylonia, but the religious fanaticism of the new rulers which increased as time went on and the oppression of the Christian populace, of which the papyri give a detailed account for the early centuries and which is testified to by the wholesale destruction of Christian churches and monasteries by the Muhammadan mob for the later period (viiith—xiiith centuries A. H.) — there were still 2 monasteries in the Faiyum in 1210 (Abu Salih, Faiyum, p. 53), and only 13 in 1244 (Othman, Faiyum, p. 22) were always worse in Egypt than in other countries. But particularly it was the incapability of all the Muslim dynasties to manage the internal affairs of the country in an orderly fashion, notably the finance, or where attempts were made in this direction the incapability of maintaining good government for any length of time. Lastly as in Babylonia there was the immigration of Bedouin tribes, a plague which the rulers of Egypt had been striving to ward off for thousands of years, but to which the gates were now opened. The entrance and passage through of Arab, afterwards also of Berber tribes and the fighting with them lasted down to the Fatimid period (Al-Kindi, K. al-Walid see 'I-Kandil, ed. Guest) which favoured the immigration of the Berbers. One Berber tribe, the Lawata, settled in the Faiyum. In the xith—xiiith century its population was predominantly Bedouin; the remnants of the ancient agricultural population had to place themselves under the protection of the immigrants. According to the account of Emir Othman (p. 12—14) these Bedouins belonged to three great tribes:

1. The largest in numbers of genuine Arab descent the "sons of the dog", Banu Kilab, held the largest portion of the land, the north-west and centre to Taizan (also written Taizin, the Greek Teptanus) in the xith century.

2. The Banu 'Edjlan, likewise Arabs, inhabited the eastern part as far as Santres; the modern place-name Hava'ret Edjlan near Illahun shows that they settled there also.

3. The Berber Lawata in the S. E. as far as the province of Bahnas (Makrizi).

These Bedouin tribes in course of time became settled and have amalgamated with the remnants of the ancient population. But to the present day the inhabitants of many villages still call themselves Bedouains although they may have been peasants or fishermen for generations, possibly only to escape military service.

The decline of the Faiyum in the Muslim period may be best illustrated by the rapid diminution in the yield from taxation. It seems that the land was still tolerably prosperous in the 'Umayyad and early 'Abbasid period in spite of the maladministration which began in the second century A. H., although we have no definite figures at our disposal. Our earliest figures date from the ivth century A. H., in the time of Kafir Al-Zaheid (355 Abu Salih, 356 Makrizi, following Ibn Zulik): Ibn Takhirhan who was governor then was still able to raise 620,000 dinars in taxes. Under the Fatimids, however, probably especially in the reign of Al-Mustansir which unfortunately for the country lasted half a century, it must have rapidly declined. At the end of the Fatimid period the revenue had sunk to 145,162 dinars in the year 576 (Abu Salih); for 585 152,703 is given (Makrizi, following Kadi Al-Fadil's K. Mutadiyad-dat Al-Hawadith). Saladin's granting of the villages of the Faiyum in fief to his Turkish and Kurdish officers scarcely contributed to the prosperity of the district. How the administration of the provinces was conducted under him may be judged from the following example: When the Emir Sharim al-Din Khutlaboga was sent as governor to the Faiyum in 577, he could find remaining better to equip the army than to allocate all the harvest of the country. He was then recalled and the Faiyum placed under the Minister of Marine [Diiwan al-Ustuf] (Makrizi, Histoire de l'Egypte
ed. Blochet, p. 142, 144, where Khoutontschu should be read for Khoutontcha. Two years later Saladin granted the Faiyum with Būhi and al-'Ayāt (not 'Anāt : Blochet) to his nephew Taḫī al-Dīn 'Umar Shāhāngāh, who usually resided in Hamā. In the last quarter of this century severe famine raged several times on account of the lowness of the Nile, and in each of these there was great loss of life, one lasted for three years, 596–598. We have a touching lament on the decline of the land in the Tāyiṣābīd period in the book of Emīr 'Othmān, who was appointed governor in 641 A. D. In consequence of the sitting up of the Bahr al-Munḥā water could only flow into the Faiyūm during four months of the year when the Nile was at its height. The smaller canals in the country were also neglected so that parts of it became swamps and infested with miasma. The population was indolent without any intellectual interest; even the upper classes had dubious notions of cleanliness.

At first it was to become much worse. As long as Egypt had rulers, who lived in the country itself, they still took some interest in the maintenance of the irrigation works. Thus we are told of al-Malik al-Nāṣir in 741 that he built a Gīr (dam or sluices). Māqrīzī is able even in his time (beginning of the ixth = xth century) to give a detailed account of the canals and their work in the different months of the agricultural year. Sulṭān Karā Vāl (end of this century) visited the Faiyūm no less than three times and built a mosque in the capital; in his reign the revenues even rose a trifle, to 164,050 dinārs (Ibn Dījān, Taḥfīz, p. 5) but many places had fallen into ruins or become swamps (ibid. p. 150—158). His successor al-Nāṣir Muḥammad in 903 built a mosque (Ibn Iyās, III, 342). Sulṭān Ṭūmān Bāi found time during the few months he reigned to take a personal interest in the restoration of a gīr destroyed by the flood and to complete the work in spite of the great expense (30,000 dinārs) (ibid. iv, 6, 9, 13, 14, 32, 37).

But with the fall of the Mamluks and the transition to Turkish rule the fortunes of the Faiyūm sank to their lowest ebb. As the Ottoman governors were changed on principle almost every year and their powers were very limited, they could do nothing themselves even with the best intentions; their activities were mainly confined to extorting as much as possible out of the more and more impoverished land; as a matter of fact it was no longer “much”. An account of the year 1634 (Mémorial de l’Estat d’Egypte in Recue d’Égypte, ed. Gaillardot Bey, iii, 1896) tells us that the Faiyūm could at that time still yield 200 purses to the Sulṭān and 30 (in all about 12,000 dinārs) to his representatives in Cairo. By the beginning of the xviiith century the whole tribute of Egypt to the Porte had sunk to 1200 purses = about 300,000 dinārs. In September 1806 the town of Faiyūm was occupied and destroyed by the Mamlūk Bey Yāsīn and its inhabitants almost all massacred as they had taken Muḥammad ‘Ali Pasha’s side; the latter was not able to regain the town till July 1810 (Djuḥārī).

The Faiyūm was long in sharing the revival of Egypt’s prosperity in the xith century. It is true that under Muḥammad ‘Ali the Bahr Yūsuf, the life-giving artery of the land, was cleaned out and the ancient sluices of Iltābān pulled down and rebuilt by French engineers. But modern means of transit did not come to open up the land until quite late for it was only in 1874 that the railway reached it. In the same year the area of the province was estimated at 235,908 fedān and the number of inhabitants at 146,588 (Muḥammad Amin Fiktī, Geogr. von Ägypten, 1290 A. H., p. 117). It was only under English rule that a steady revival in prosperity became marked. The irrigation works were first of all put into good order and then good roads and railways were made. To the lines to Abūksra and Sanā’īs already in existence there have been added since 1902 a series of private light railways, which radiate from the capital across the country in all directions. It is only with the introduction of this means of transport that it has been possible to extend the cultivation of cotton, which has brought the land its present great prosperity. The modern province of Faiyūm comprises 642,828 fedān and is the third largest in Upper-Egypt; Miṣr has 463,579 Asyūt 473,864) or roughly 7000 square miles, of which 800 are under cultivation (Bendell, The Topography... of the Faiyum Province, p. 11). In spite of the advance made by agriculture in the last 20 years, however, the area under cultivation is not yet as large as in the Greek and Roman periods. Large stretches of land in the west and notably in the north are still covered with sand but it is only a question of time till they are regained for the plough.

According to the last census (1907), not very reliable it must be confessed, the population was 371,000; the capital had 33,069 inhabitants but has probably 40,000 by now, among them the Greek element is beginning to play an important part. There were 85 towns and large villages and 1031 small villages (kuftār and ‘ezāb).

Very few memorials, and least of all buildings, have survived from the long history of the Faiyūm. The most celebrated work of antiquity, which however lay only on the edge of the district, the Labyrinths, has utterly disappeared. From the ancient Egyptian period there have only survived a small pyramid and the S. E., a round “obelisk” of Badrijī (in the middle ages 45 ft. long, and the pedestals, now also demolished, of the two colossal statues of Amenemhat at Bihaṭm, which were in existence with their inscriptions in the xiiiith century. From the Greek period there have survived the ruins of the towns and temples on the borders of the district, Ka[a]rūn, Dīmē, Ka[s]r-al-Sāgī etc., but nothing in the lowlying parts. Practically nothing has survived from the Arab period. The mosque of Kaṭīr Bāi in Medīn which dates from the end of the middle ages has been absolutely rebuilt in the usual process of conservation. The few churches and monasteries that survive have not yet been investigated; it is hoped that valuable finds, particularly of manuscripts may be found in them; but many have unfortunately been destroyed for ever with the increase in the area under agriculture.

Manuscript records of the past have, however, come to light in much greater quantities with the finds of papyri, which were first made in the winter of 1877-1878 and next from 1884 on in the ruined mounds several miles wide of the ancient capital, and later in other parts of the country. As these cover a period of almost 3000 years
and are written in about ten different alphabets and almost as many languages, they form a handsome compensation to the study of antiquity for the monuments that have disappeared. The Arabic papyri, which have come principally to Vienna but also to Heidelberg and Cairo, are especially valuable because a considerable number of them date from the period of the Arab conquest and these, apart from their historical value, are the oldest documents of the Arabic language and alphabet. It is safe to suppose that these treasures are not yet by any means exhausted and further finds may be expected with certainty.

**FAIZÂBÂD** (FAIZÂBÂD), properly FAÏZÂBAKH, the name of two modern towns in Central Asia; on Faizabad in Bukhâra cf. the article Amu-Darvâa, i. 340, and on Faizabad in Badakhshan see this article i. 552 et seq. (where it is erroneously called Faidhâbâd). Faizabad in Bukhâra, lying in a fertile valley with green pastures throughout the year, is now a town with about 3000 inhabitants. The existence of the tax-collector (amâldâr) of the Beg of Hisâar of Buddhism, Faizabad in Badakhshan lies on the right bank of the Kokôla, which is here crossed by a wooden bridge; the town is a mile or two long and only a quarter of mile broad. Cf. I. Kostenko, Turkestanischen kraj, ii. 149, 204 et seq.; D. Logofet, Bukharskoe khanstvo, i. 186 and 248; J. Minajew, Smiejdenija o strannom po cerekhovam Amu-Darvâr (St. Petersburg 1879), Index. Faizabad is also the name of a village near Bukhâra, at the tomb of Khâdja Bahâr Al-Din Naṣârbând. (W. BARTHOLD)

**FAIZÂBÂD (FYÂZÂBÂD), a town, division and district in Oudh (British India). The town of Faizabad lies on the left bank of the river Gogara near Ayodhya, the ancient capital of Oudh, and with this town has a population of 75,085 of whom 17,674 are Muslims (1901). The town was founded by Saʿādat Khân and first received its name Faizabad in the reign of Šâddar Djang, but the early Nawâbs only rarely resided in the capital; Šuddî al-Dawla, son of Šâddar Djang (1753—1775), was the first to make it his headquarters after his defeat by the English at Buxar in 1764 and erected a number of buildings there. His tomb still stands there as well as the larger and more beautiful one which was his widow Bahâr Begam. The division of Faizabad comprises the districts of Faizabad, Bahraich, Gonda, Sâljâpur Partâbâr, and Bāra Bankî and has an area of 12,113 square miles and a population of 6,855,991 inhabitants of whom 14% are Muhammadan.

**Bibliography:** Imperial Gazetteer XII, 108 et seq.

**AL-FAIZÂBAKH ʿABD ALLAH, a Fatimid Caliph.** Born in 544 (1149), he was the son of the Caliph al-Zâfr and his real name was Abu l-ʿAsim ʿIsâ. After the assassination of his father (23rd Muḥarram 549 = 16th April 1154) he was carried by the vizier ʿAbdâs out on his shoulders and placed on the throne, being then only five years old. The gruesome scenes of those days, particularly the sight of his uncle Yûsuf and Djašîr slain by the orders of ʿAbdâs, are said to have so worked on the mind of the unfortunate boy that he was constantly afflicted with fits till his early death. During the six years of his Caliphate the government was in the hands of Taḥâr b. Razzâq [q. v.]. Within this period fell the death of ʿAbdâs and the execution of his son ʿAsrâf, the actual assassin of al-Zâfr, and the visitation of Damietta, Tinûs, Rosetta and Alexandria by a Sicilian fleet (Diwândât II 550 = August 1155). Al-Faizâ die in the 17th Radjab 555 = 23rd July 1160 at the age of 11½.

**Bibliography:** Ibn al-Athîr (ed. Tornberg), xi. 127 et seq., 168; Mašrûf, Khatîf, i. 214, 357; H. 30; Wustenfeld, *Geschichte der Fäti-midenchâfen*, p. 321 et seq. [on a commentary on the Korân, in which he is said to have used no dotted letters. (Badâmûni, Lowe's translation, p. 407). In 1579 he was appointed tutor to Akbar's second son Prince Murâd. In his verses inserted in the Akharrûnâmâ, (Bib. Ind., ed. i. 311), Faïz describes himself as having been tutor to all the three princes. See translation, p. 459. In the same poem he refers to his having become one of Akbar's disciples, that is, a member of the "Divine Faith" body. In 1591 he went as ambassador to the Dakhân, and returned in the following year. He was a kind and charitable man and less set upon self-aggrandizement than a younger brother. He however was also a flatterer, and was accused by the Muhammadans of having seduced Akbar from the true Faith. When Badâmûni was ill and in disgrace, Faïz wrote a very kind letter about him to Akbar. This letter has been preserved by Badâmûni, Bib. Ind. ed., iii. 603, and in the same work will be found a very able, but very cautious criticism of Faïz's character and genius. Badâmûni says, Faïz's technique is admirable, but his poetry wants grit and of his many thousand lines, none is cherished in the memory. This criticism seems correct. His verses are full of conceits and strained expressions, and it is only occasionally, as in his elegy on his friend Faṭḥ Allâh that he shows real feeling. (See Blochmann's translation of the ʿAin-i Akbâr, p. 33, note and p. 490 and 548). According to Badâmûni he composed a palinode in the year before his death in which he uttered praises of Muhammad. In the same poem, l. c. 307, he explains why he changed his pen-name from Faïz to Faïzâ. He died of asthma in Agra on 5th October 1595, (Badâmûni,
Lowe's translation, p. 420). There is a long notice of him in the Darāy-Akbari, (Lahore 1898), p. 359, and another in the Mu'āthhir-iUmarr, ii. 584. He was a voluminous writer and is said to have written 101 books. He formed an extensive library which was taken possession of by Akbar.

**Bibliography:** Faiz's Letters are in MS. in the British Museum: Rieu, Cat. pp. 792 and 984. His version of Bihšarān, Liqāvīt was published at Calcutta in 1828, where also the Sanskrit original was published in 1832. An English translation of the Sanskrit was published at Bombay in 1816 by John Taylor. There is also one by Colebrooke. (One of these translations is quoted by Longfellow in his Kavanaghal). Faiz's best known poem, the Nat Daman, was published at Calcutta in 1831, and there is a later edition by the Newal Kishore Press, Lucknow. For notices of Faiz's poems, see Hammer, Redeihnste, Vienna, 1818; Ouseley, Biograph. Notices; Blochmann, Amin-Akbari; Āga Ahmad, Hoft Asmān (Calcutta 1873, the Markaz Adwar only); Bacle, Or. Dict. and the Catalogues of Rieu and Ethé. (BEVERIDGE).

**FAIZULLAH ENFENDI (AL-SALYD MEHMED),** son of Shaikh Mehemmed, Mufit of Erzerum, came to Constantinople on the completion of his theological studies, where he married a daughter of the celebrated Shaikh al-Islam Wani Enfendi. Introduce by his father-in-law to the court of Sultan Mehemmed IV, he was appointed tutor to Prince Mustafa in 1080 and to Prince Ahmed in 1089 and filed this office till 1097. On the deposition of Mehemmed IV he became Shaikh al-Islam under his successor Suleiman II. On the 13th Rabī' I. 1099 (14th January 1689) but was deposed on the 28th Djiyādā I. (30th April) and banished to Erzerum. When Mustafa II. came to the throne he recalled his former tutor from exile and appointed him Shaikh al-Islam on the 11th Shawwal 1106 (15th May 1695); in this capacity he completely ruled the weak Sultan, and amongst other things saw to it that the offices of Nasib al-Ashraf and the Kāfzāraker of Rumelih and of Anatoliah were given to his sons and further that the eldest of them was designated his successor. He became universally hated for his love of power and as a Kisīd he was driven from Shams al-Din Tahtbour — and finally fell a victim to the rising against the Sultan in 1115 A.H. (1703 A.D.); he was deposed on the 13th Rabī' I. (27th July) and afterwards handed over to the rebels who tortured him for several days before putting him to death (10th Rabī' I. = 23rd Aug.); his corpse was dragged through the streets of Adrianople, where these events took place, and thrown into the Tûdja; a Greek priest was forced to officiate in full canonicals as part of the proceedings.

**FAIKH,** the name of a wāldī not far from Mecca, where Husain b. Ali b. al-Hasan with many other 'Alids met their death on the 8th Dhu 'l-Hijja 169 (11th June 756), wherefore the day of Fakkh, like that of Kerbelā was observed by the Shi'is as a day of mourning and it was the custom among them to talk of the martyrs of Fakkh. Husain had homage paid to him a short time before in Medina, collected a few followers and set out for Mecca. In Fakkh he met the 'Abbasīd troops, who scattered his little body of followers and slew him. The place where he and his men fell and were buried, now called al-Shahādā, is regarded as sacred by the people of Mecca, who hold an annual festival there on the 14th Safar. Among those who escaped the massacre was the 'Alid Idrīs b. 'Abd Allāh b. Hasan, who fled to the Maghrīb and became the ancestor of the Idrīsids.

**Bibliography:** Yaḥyā, Muṣjām, iii. 554; Tabari (ed. de Goeje), iii. 552 et seq.; al-Ya'qūbī (ed. Houtsma), ii. 488; Wetzfeld, Chroniken d. Stadts Mecka, iii. 212; Snouck Hurgronje, Mecka, i. 41; ii. 55 et seq.

**FAIKH (A) "glory," a frequent component of titles of honour:** Fakhr al-Dawla "glory of the dynasty," the name of a Buyyid (see below) of the house of Dārāy b. Ṣawm (q.v.); Fakhr al-Din "glory of the faith," a name of al-Rażī (q.v.) and of the Druze chieftain mentioned below; Fakhr al-Mulk "glory of the kingdom," a name of Ibn ʿAlī Ṣamīr (q.v.), of Muhammad b. ʿAlī (q.v.) and of Tūṣūsh viżer (see below p. 45).

**FAIKH AL-DAWLA** Abu l-Ḥasan ʿAlī b. Rukn al-Dawla, a Buyyid governor. After the death of his father in Muharram 366 (September 976), Fakhr al-Dawla, who was then about 25 years old, received the governorship of Media under the sanctity of his elder brother ʿAḍūd al-Dawla with the exception of Isfahān and all that went with it, which went to a third brother Mu'ayyad al-Dawla. But while the latter was following out terms of his father's will, Fakhr al-Dawla wanted to set himself up as an independent ruler and allowed himself to be tempted by his cousin Bakhtiyar b. Mu'izz to intrigue against ʿAḍūd al-Dawla. Bakhitiyar was slain however and in 369 (979-980) ʿAḍūd al-Dawla sent several bodies of troops against his brother. When they entered Hamadhān, the latter had to take flight and seek help in Dūrjān from his father-in-law ʿAlī b. Waghmur, while the whole of his province fell into the hands of Mu'ayyad al-Dawla. The latter was appointed governor of them and prosecuted the war with great success. In 371 (981-982) he defeated Kābus at Astārarābād, whereupon Kābus and Fakhr al-Dawla fled to Ḥusān al-Dawla, the Sāmūid governor of Khorāsān. An expedition against Dūrjān, undertaken by the Khorāsānians under Ḥusān al-Dawla, Kābus and Fakhr al-Dawla, was unsuccessful. Mu'ayyad al-Dawla was, it is true, surrounded; but when he had fought a way through the enemy, one section of the Khorāsān army, which he had previously won over to his side, took to flight and the allies had to return to Khorāsān without accomplishing their object. On the death of Mu'ayyad al-Dawla in 373 (983-984) Fakhr al-Dawla was recalled from Nīshābūr and remained in possession of the provinces of Media, Tabaristan and Dūrjān till his death. ʿAḍūd al-Dawla had died in 372 (983) and after his death hostilities broke out among his sons. From the war that ensued Bahā al-Dawla b. ʿAḍūd al-Dawla emerged victorious; but when in 379 (989-990) he was recognised as Amīr al-Umār,
his uncle Fakhr al-Dawla attempted to seize the whole of the ʿAlī b. ʿAli, but managed the government business for the latter, notably military affairs. He fought fierce wars with the Banū Sīfa (Saifs), governors of Tripolis; his followers captured Muḥammad Pāsha, then governor of Damascus, but he was soon set free again by Fakhr al-Din as he did not wish to bring about an open breach with the Porte; on the contrary he endeavoured to influence the government in his favour by bribing influential Turks. He did this successfully for a period but finally the eyes of the Turkish authorities were opened and they sent ʿAbd Allāh Cażwini, with numerous troops to Damascus to put an end to the power of Fakhr al-Din. ʿAli met his death shortly after his return to Tripoli and Fakhr al-Din, after some unsuccessful fighting in the neighbourhood of Joppa had to take flight. He went first to Saʿad, thence to Bairit, but he could not remain there owing to the presence of a Turkish fleet. He therefore retired to the mountains, but was captured in Đjezin (Casale di Gezina), and brought to Constantinople in chains. There he died in 1635 by the hand of the executioner. His sons and his brother Ūnūs were taken prisoner and put to death with the exception of a son of Fakhr al-Din and a son of Ūnūs, who escaped by flight. The latter, named Čemem, afterwards became Emir of the Druzes.

When the growing power of the Druze Emir began to arouse the Porte's suspicions, Ahmed Pasha ʿAbdu'llah, governor of Damascus, was ordered to bring him to terms. The latter could do little in these almost inaccessible mountains with their numerous fortresses but when in 1623 (1643) a Turkish fleet appeared on the Syrian coast, Fakhr al-Din escaped to Livorno in a ship and was received by the Grand Duke Cosmo II with great honour. But his hope of soon returning reinforced by Christian troops and putting an end to Turkish rule in Syria was not fulfilled. Not even his claim that the Druzes were descended from a Christian Comte de Dreux and that he himself was a descendant of Godfrey de Bouillon, moved the Christians to a new Crusade. In the meanwhile Fakhr al-Din's son, ʿAli, whom he left as his representative in Syria and the other members of his family had been successfully beseiged, Ahmed Pasha submitted to the Porte and it was not till 1627 (1618), when Ahmed Pasha was recalled from Damascus, that Fakhr al-Din dared return to Syria. But he did not return as Emir, for this rank had passed to ʿAli, as he did not wish to bring about an open breach with the Porte; on the contrary he endeavoured to influence the government in his favour by bribing influential Turks. He did this successfully for a period but finally the eyes of the Turkish authorities were opened and they sent ʿAbd Allāh Cażwini, with numerous troops to Damascus to put an end to the power of Fakhr al-Din. ʿAli met his death shortly after his return to Tripoli and Fakhr al-Din, after some unsuccessful fighting in the neighbourhood of Joppa had to take flight. He went first to Saʿad, thence to Bairit, but he could not remain there owing to the presence of a Turkish fleet. He therefore retired to the mountains, but was captured in Đjezin (Casale di Gezina), and brought to Constantinople in chains. There he died in 1635 by the hand of the executioner. His sons and his brother Ūnūs were taken prisoner and put to death with the exception of a son of Fakhr al-Din and a son of Ūnūs, who escaped by flight. The latter, named Čemem, afterwards became Emir of the Druzes.

When the growing power of the Druze Emir began to arouse the Porte's suspicions, Ahmed Pasha ʿAbdu'llah, governor of Damascus, was ordered to bring him to terms. The latter, named Čemem, afterwards became Emir of the Druzes.
FAKHĪR, the title of an Arabic historical work, composed by Ibn al-Tūkānī [q. v.].

FAKHĪR, Shams al-Dīn Muḥammad Ḥasan, a Persian philologist. His great work the 4th part of which was published in 1857 by C. Saloman (Shams li Fakhīrī Ispahanīs lexicon Persicum id est libri Myār ī Gandārīs. quarta quarta pars, editīt C. Saloman, Fasc. prior texta et indicia continens, Casanī 1887) is entitled Myār al-Dīnājālāl, because it was dedicated to the last ruler of the Indu dynasty [q. v.], Dīnāl ī Dinār Abū Isḥāq Muhammad Shah, who ruled in Fars and 'Irāk from 742-754 (1341-1353). According to Saloman he is also the author of a mystical poem Margābī-k ī Kaltūb. Nothing else is known of him.

FAKHĪR a native of Brusa, the most celebrated silhoutte-cutter in Turkey. This art was brought from Persia to Turkey in the xvith century and to the west in the xviiith century, while at first, as in the east, light paper on dark ground was always used. There are specimens of Burse-i Fakhīr's work he cut principally specimens of calligraphy, flowers and gardens in the album prepared for Murād IV, now in the Vienna Hofbibliothek; for Abūmed I he cut out a Gulistān which did not however survive his criticism; Murād IV on the other hand thought very highly of the artist. He died about 1618 and is buried in Constantinople near the Adrianople gate. Cf. Belig, Güldeste (Brusa 1313 H.), p. 332-334; Hābīb, Khāṭf u-Khāfītān (Constantinople 1305), p. 261; J. von Karmase, Zur orientalischen Altertumskunde, iv. p. 46 et seq., in Sitzsber. d. k. k. Akadem. d. Wiss. Wien, Bd. 172; C. Jacob, Die Herkunft der Silhouettekunst aus Persien (Berlin 1913). (G. Jacob.)

FAKHĪ. A fāṣīh is, in the first instance, one who possesses knowledge of or understanding about a thing (syn. ātīm, fāṣīkm). Then as fāṣīh [q. v.] passed from being synonymous with ātīm (as in fāṣīh al-luqā) and became limited to religious knowledge (ātīm al-luqān) then to the religious law al-shāri'a and finally to the derivative details of the last (al-farrā'), so fāṣīh passed from meaning an intelligent, understanding person to meaning a theologian, then a canon lawyer and finally a custos (Litān, vol. xvii. p. 418). The book ascribed to Abū Jannā, al-fāṣīh al-shārī, ("the master of fāṣīh," i.e. "īm al-Kalām") is on the border line of the development, and in it (ed. Allāhābādī, p. 2) fāṣīh is used in a purely general sense. This restriction of meaning was gradually brought about by the employment of the word to translate the (jurī) prudēnse or Roman law (cf. Fīgh and Goldziger in Kultur der Gerichtwirt, i. 3, p. 102). On the distinction between fāṣīh and mudājahid see the latter and Dict. of tech. terms, p. 30 et seq., 198 et seq., 1157. In Egypt the word, in the corrupted form fāṣī, has come to mean a schoolmaster or a professional reciter of the Kurān, just as khatīb in Syria now means a schoolmaster (Lane, Modern Egyptian, chap. ii.).

(D. B. Macdonald.)

FAKHĪ. 1. Abū ʿAbd Allāh Muḥammad R. Iṣḥāq R. al-Aḥbāb, an Arab historian, wrote at Mecca in 272 = 855 a chronicle of the city, extracts from which are given by Wustenfeld in the second volume of his Chroniken der Stadt Mecca (Leipzig 1859).

(G. Brockelmann.)

FAKHĪR. One who is in need, either physical or spiritual. Thus opposed to ghanī, one who is independent, rich; and commonly contrasted with muṣīmūn, one who is in a miserable state. A beggar is zālīl, an asker. Thus in Kur. xxxvi. 16. "Ye are the needers (jihārū) of Allāh; but Allāh is the Self-sufficient (ghānī)." Fakhr in consequence come to indicate need in relation to Allāh and dependence (tawakkul) of every kind upon Allāh, and is used in Arabic-speaking countries for a mendicant derisive (q. v.; cf. also Goldziger, Vorlesungen, p. 154). The saying ascribed to Muḥammad, "Abā ʿAbbās fakhrī. "Poverty is my pride," the saying ascribed to this. In western languages the term has been extended to cover Indian ascetics and yogis. The coincidence with the English fakir is curious and sometimes misleading. See New English Dictionary and Century Dictionary.

(D. B. Macdonald.)

FAKHĪ, the akhūllus of Muḥammad Khān Bahādur, an Indian scholar who composed an Urdu translation of the Anwār-i Suhail (lith. Lakhnow 1261 = 1845). Cf. the article Khāna wa Dinna. This translation was entitled Anwār-i-Fīlmāt.

Bibliography: Garcin de Tassy, Histoire de la Litt. Hindoue et Hindoust, second ed. i. 443.

FA-L (omen) is not mentioned in the Kurān, perhaps by accident; there the root ʿtār takes its place. Its derivation and original meaning are obscure, as also is its relationship to the root Fāt, e. g. to mufāfīl in Tarafa Muʿallaqa, v. 5 (Litān xiv. p. 51; C. J. Lyall's Ten Poems (Ti-brīl's commentary), p. 31; Seligsohn's Dinārā dar Tarafa (Alam's commentary), p. v.; contrast ʿā lay under FA-L). But in apparently authentic traditions from Muḥammad fa-l and fiyyār both occur, meaning "omen," although somewhat contradictorily. It is plain that Muḥammad believed in omens and was on the watch for them. He drew one from the unsheathing of a sword on an expedition (Aṣ'ārkhī, xiv. 14, 23) and on another occasion avoided a trap by reliance on comfort of omens connected with it (Ibn Hishām, p. 434). But he naturally preferred good omens and advised his followers to pay attention to these only. The word fa-l he retained for such a good omen, and explained it as any good word which one hears accidentally. It should be accepted. But he rejected fiyyār, bird-augury, possibly for heathen associations. Other traditions, however, represent him as bringing fa-l under the genus fiyyār. This was later explained as advice to cultivate always a spirit of hope and confidence in Allāh, which may easily be a true explanation (Kasīlī's akbarkh on ʿāfās of Bukhārī, ed. of 1305, vol vii. p. 396-398). The result is that while bird-augury is formally denied and forbidden, all other ways of seeking and accepting omens are
open to Muslims. Fat, in consequence, has good associational, though it may be used of an evil one, while ḥujjat is always bad (Litw. siv. p. 27 et seq.; Diet. of Arch. Isma'il, p. 907). But modern usage is confused. Thus Marçus (Volhde Feit- schoff, i. p. 432) gives the usage in the Maghrib and Redhouse (Turkish Levant) in Turkish as of a happy pre-age; but Wetsen (Zeitschr. d. Deutsch. Oriental. Ges., xxii. 154) of the Syrian Desert, and Spio (Arabic-English Lexicon) of Egypt, as the opposite. Further, fat has developed from meaning an omen which comes of itself unsought, to cover the custom of seeking the omen in various artificial ways. Even the most pious Muslims appear to have abandoned the second meaning, but the custom of consulting the fortune-teller, of taking the Horoscope of the Caliph on the obverse, on the reverse at first the mark of value M, later the cross with steps while Arab legends became more and more common.

The oldest Muhammadan copper coin which is also the oldest dated coin of Islam, is a fals of Damascus with the date Anno xvii (=638), 'Abd al-Malik's mint reforms (completed in 77 = 696) do not seem to have been concerned with the fals but only to have made the use of the Arabic language on the copper coins also compulsory. The fals was not considered by the Arabs as a standard coin but as a tax coin, and its use as a token of sovereignty was a prerogative of the sovereign but was left entirely to the discretion of governors and local authorities. The fals thus varies between great extremes from town to town in weight and value and also in type, and could not therefore like the dinar and dirhem be current throughout the caliphate.

It seems that no legal relationship between silver and copper coins ever existed although there are some grounds for thinking that 48 fulûs were to be current to a legal dirhem; the relationship between the two metals must have been to be re-adjusted from time to time. The Egyptian glass weights for copper coins clearly show that the fals could be any conceivable size; we have glass weights of 1, 2, 3, 4 up to 30 kharruba (kirf) and above, which were used for weighing a certain number of Fulûs.

The fals underwent a peculiar development in Persia; since the beginning of the xth century A.H. the striking of copper coins has been a privilege of the larger towns; these so-called autonomous coins usually have on the obverse a figure (an animal, a plant or an astrological sign), on the reverse the name of the town but not that of the ruler. These civic coins circulated down to quite recent times in Transcaucasia, Persia, Afghânistan, Balûqistan and in the Fândâb. (Cf. R.S. Poole, Catalogue of Coins of the Shahs of Persia in the British Museum, London 1887; W.H. Valentine, Copper coins of Modern Muhammadan States, London 1911.)

(E. V. Zambrău.)
FALSIFA. Falsafa is the term applied to the Muslim philosophy as developed under Greek influence. In addition to it other tendencies have to be considered, which construct a conception of the universe according to the views on scientific methods prevailing in their time or at least concern themselves with general views of the universe and therefore must be considered as philosophical. This is primarily true of the current of speculative theology. Its aim is to raise to a higher intellectual level the dogmas of Islam (which present a naive puerile view of life), and bring them into agreement with the demands of contemporary knowledge. The latter are naturally broadminded as regards new ideas, i.e. adopt them in a liberal fashion, the former narrow-minded, rejecting them, the orthodox. The former hastily adopt at random and without thorough mental training the new faith, Greek, Persian, Indian and even Christian and Jewish doctrines, so that they frequently throw aside their Islamic premises almost entirely. The so-called Nāsīrī Society c. 845 (Zeitschr. d. D. Morgenl. Ges., ixii., 774 et seq.) constructs for himself a very mixed system which in the main recalls Anaxagoras, Mu'ammar c. 850 (Archiv. f. Systematische Philos., xv. 469 et seq.) follows Indian ideas. Alā al-Hāshimī, died 933 (Zeitschr. d. D. Morgenl. Ges., ixxi., 303 et seq.) develops his theory of modes, possibly likewise after Indian ideas (cf. Vierteljahrschrift für wissenschaftl. Philosoph., xxxvi. 510 et seq.). The Sumānīya (Arch. f. Geschichte d. Philosoph., xxiv. 141 et seq.) spread the knowledge of Indian speculations and of Indian scepticism in Persia. The channel of heterodox doctrines was imperceptibly followed until about 900, when the apostacy of Raywānī (died 915) threw a glaring light on the situation, like a flash of lightning from a cloudless sky. The cry now was: "Back to Orthodoxy!" Ḡuṣn (died 935) dissociated himself from the already more prudent Lūṭbā. He again assumed real qualities in addition to being in God, and further a direct activity and creation by God in regard to what is not God (denial of natural causation as it limits the being of God), even human action (predestination, denial of human freedom). A creature can effect nothing real (occasionalism). This tendency, still too liberal in the eyes of the old orthodox school, became in course of time identified with orthodoxy. It produced Bāyānī (died 1012), Ḡiṣarī (died 1027), Dūrwānī (died 1085) and Ḥāzālī. Later scholars like Ḥāfīz (died 1355), Ḥārūnī etc. considered that they belonged to it. — Baṣra defended the homogeneity of things (Horten, Die Philosophie des Abu Khālid und Die Erweiterttheorie des Abu Khālid in the Archiv f. Geschichte d. Philosoph., xxiv. 453 et seq.), against Baghdad, where Khānī taught the diversity of things, an Indian thesis. The influences of these schools were at work for a considerable time after (Goldziher in Der Islam, iii. 213 et seq; Horten, Die Philosophische Probleme, 1910; do. Die Philosophische Systeme der spekulativen Theologen im Islam, 1912).

To appreciate the importance of Muslim philosophy we must set out from the defects of the Aristotelian system. The Stagirite is unequalled in the precision of his concepts. But he did not succeed in giving a comprehensive view of the whole universe under some monistic concept. The universe is not traced to a single origin. Matter is eternal and opposed to God in a dualistic system. There are attempts at a critical theory of knowledge, which are, however, interpenetrated by strong realistic tendencies and put forward in a lAME fashion. Whence does form come? God is pure intelligence. He has no voluntary activity. He moves the whole universe as an object of love, not as causa efficiens. He further takes no notice of individual things — an unphilosophical deism. It is here that Muslim philosophy begins, following the Neoplatonic model. The great notion of contingency brings into a unity the total of the actual. It is the light that explains the individual problems and allows them to be examined under the widest points of view. In the things of the world being and existence are quite different. The two are not internally and necessarily connected. Existence must thus be imported to things by a self-existent Being and must be permanently maintained in them. The universe is a stream of being which emanates from an inexhaustible source, extends to all that is not God. This idea, which runs through the whole history of Muslim philosophy down to modern times, is again and again formulated anew more clearly and developed. Only one has not understood it: Averroes.

Another aspect of Muslim philosophy is given by the religious beliefs of its representatives. These are stubbornly convinced that Islam is the most perfect revelation of God. The Prophet in supernatural enlightenment and vision perceives divine truths unattainable by the natural intelligence (mysteries) and communicates them to man. The philosopher recognizes a part of these truths with his weak natural intelligence and that is in perfect harmony with the Korānic revelation. Philosophers thus appear as apologists of Islam.

The way for Greek influence within Muslim philosophy was prepared by the translators of the original authorities in question (notably Ḥunayn b. Išāk and his son Isḥāq b. Ḥunayn c. 870—910) and a beginning was made by al-Kindī (died c. 873) and Fārābī (died 950). Both represent an encyclopaedic knowledge but are mainly celebrated as logicians. In Fīrād we already find the main lines on which Avicenna (died 1037) afterwards built up his great system. The fundamental conception which runs through the whole of Muslim philosophy and suggests the reduction of the totality of the actual under one all-embracing idea, the notion of contingency i.e. in all things which are not God, being is substantially distinct from existence (distinctio reals inter essentiam et existentiam; cf. Horten, Königsteine Fārābī, 1906, p. 10 et passim). If they are thus to attain to being they must receive existence, or reality and that too from such an agent as possesses it by reason of his very being (per se et a se). God is thus the self-existent and necessary being, the source of being for the universe, from which the empirical world flows like a stream of being. How important this conception was may be seen from the fact that mystical intuition was developed from it. It conceives the whole reality of the world in pantheistic exaggeration as modifications of the one substantial being, God. (Horten, Mystische Texte aus dem Islam, Bonn 1912, p. 5). The doctrine of the momentariness of accidental being (the accidents lose their existence each moment to receive it at once again from God, the source of being) which originated under Indian influence and dominates the whole of Muslim theology.
and of the "restitutability" or "non-restitutability" (an idea in liberal theology) of beings, is further connected with this. These form the second case of an independent magnitude, which receives existence from the source of the free will in the universe. There runs a law of causation which dominates every thing and has no exceptions; it determines every potency when it becomes an actuality, including the so-called free will of man. Everything is thus necessary, the divine a se, the contingent or created a priori. The human mind develops from a purely material to a habitus primorium principiorum, actually thinking and possessing knowledge (intellectus acquisitus), which receives notions from the per se active mind, which controls the spheres of the moon. In this there is already contained the doctrine of the universe ante rem (in the heavenly world), in re, (in things of sense) and post rem (in our mind) which Avicenna further developed. The human mind attains the level of the prophet's mind, which is attainable by natural faculties, through a special divine inspiration and connection with the higher world of the angels and the book of fate. The prophet's mind perceives mysteries which surpass the intelligence of man and recognises them, being free from error, although he communicates them to men in the Korân in forms intelligible to the senses. The Korân thus contains the highest all-inclusive wisdom in a material form. The domains of the natural are not only distinct in degree but in their essence and accordance to the order of being. Faith and reason are in the most perfect harmony, while fallible human knowledge is subordinate to the divine knowledge contained in the Korân (philosophia est ancilla theologiae). — The Ikhwân al-Safa of Bara (c. 970) form a school of popular philosophy which deviates in many points from these lines in favour of Pythagorean speculations.

After Avicenna had placed the sum total of Greek wisdom at the disposal of the educated Muslim world in a readily intelligible fashion with his own ingenious developments of it, it was possible for it to develop this system in details and to make it as a whole capable of being incorporated into Islam. To understand this further development we must keep in mind the faults of Avicenna's system viz.;

1. There is a lack of clearness in the most essential fundamental idea in it. The contingency of things is conceived as something substantial, distinct from being and existence. Existence is said to advance to being "from outside". But being without existence is not real and thus cannot serve as the bearer or basal principle of a real. These speculations which create clearness here and bridge over the dualism without dropping the idea of contingency are regarded as mere inventions, and according to Avicenna's system are concerned with the very heart of it. (Suhravardi, Shirazi, died 1640).

2. The God of Avicenna works with almost physical necessity and without freedom. The God of the Korân on the other hand creates with unlimited freedom and indeed arbitrarily. A serious collision might thus be expected between the two systems. Averroes also took a serious step backwards. He frequently describes God as possessing free choice but without attaching to him any of the imperfections of human choice. If a philosopher could succeed in defending God's free will in unassailable logic, he would have made an important advance in the philosophic conception of the universe. This task was reserved for al-Ghazâlî and later theologians. 3. The theory that space is free of causation points are not proved. 4. There was a serious gap in the theory of knowledge. He did not succeed in reconciling Aristotelian abstraction with Platonic intuition and emanation. A content, which we have already obtained from the active intellect by the emanation of the form of knowledge, is to be again acquired by abstraction. The middle course, that the abstraction prepared the mind for the reception of the forms, is rather impracticable. There is still another great problem, — how properly to fit together the functions of secondary causes in the all-embracing activity of the primary (God) and so avoid the occasionalism of Ash'ari on the one hand and the excessive independence of the powers of nature in reference to God, i.e. Deism and Naturalism, on the other (as in Avicenna).

The attacks of the opponents of the system in the first place al-Ghazâlî (died 1111) gave the natural stimulus to the further development of the problems still to be settled. — In his youth he had gone through the school of the philosophers and adopted their teachings in the form given by Averroes. Such a view of the universe, however, could only satisfy an intellectualist. But al-Ghazâlî was a voluntarist and sentimentalist. The struggle that was thus arise continued with him himself as rest. It drove him to attack his former friends, the philosophers, and ultimately to seek peace in mysticism. He propounded twenty theses against the philosophers: some seek to prove that the teachings of philosophy are wrong — here we have an attempt at a further development — others to show that the correct teachings belong to the domain of faith, i.e. as mysteries, which cannot penetrate the natural intelligence. The former are mainly concerned with 1. the eternal creatiblity of the world, which is denied. 2. God's knowledge which cannot be called universal, otherwise the knowledge of separate or individual things on God's part cannot be understood. 3. as prime cause as well as the only cause, which is treated as a prime cause operating through necessity — God's free will must be recognised; 4. the resurrection of the body — a purely spiritual recompense in the next world does not satisfy the words in the Korân; 5. the law of causation: this should not be understood as a combination of creative powers and acts, as internally necessary and independent of God. Such a combination cannot be proved to exist on critical investigation. Empiricism points only to the contemporaneity of a series of facts. But no essential dependence of the one on the other can be deduced (cf. Hume). Averroes gives way to al-Ghazâlî in these points. Thus, with the exception of the last, the fourth, with regard to the fourth, goes so far as to teach that it is a very acceptable doctrine that man receives a transfigured body after death.

The Spanish branch of philosophy became especially well known to the Christian philosophers of the middle ages and for this reason is emphasised in European works as being particularly important, although it remained without influence on the development of philosophy within Islam. Ibn Bâdî (died 1138) teaches that the gradual perfection of the human spirit to union with the
divine is the object of philosophy. Ibn Tūsī's (died 1155) "Philosophus autodidactus" became a world-classic. He shows that the knowledge obtained by natural means is in the most perfect harmony with the supernatural revelation of the Koran. This conviction is formulated even more energetically by Averroes (died 1198). He had a critical mind, with an insight for details, and was therefore pre-eminently qualified to be a commentator on Aristotle. He lacked the great gift of speculation and the ability to think constructively bearing all aspects of the question in mind. His cry is "back to Aristotle", a demand as reactionary as if some one were to say at the present day "back to Kant". Averroes himself fortunately did not follow this strictly, although by reason of it he rejects the idea of an absolute contingency of things; he can only imagine a relative one (cf. Hertin, Die Hauptthemen des Averros, p. 67 etc.). In order to fit in with this, he maintains the idea of a creation in the sense that God transfers the world from a pure potentiality, non-being, to existence. This notion of actualisation provides Averroes with a monistic principle of the universe (cf. Hertin, Die Metaphysik des A., preface). In every category of being there exists a per se, which actually possesses the content of that category and can therefore communicate it to all other things, which only possess it potentially and per accidens. God perceives all individual things in himself. He is the totality of things eminientiori modo. Pantheistic ideas are more than once acquiesced in. — The substance of soul is one for all men. Recompense in the next world is not thereby made impossible. It is a spiritual recompense in that substance.

Averroes tried above all to mitigate certain crudities in Avicenna's teaching. 1. In the thesis of the eternity of the world he points out to the theologians that he is at bottom in agreement with them: God created the world out of nothing. He is the all-knowing and all-powerful lord of creation. Whether this creative activity had a beginning in time (theological thesis) or not (philosophical doctrine), is a matter of indifference for the Muslim faith. Besides there was no real time before the world. 2. God does not work with physical necessity nor with man's imperfect kind of freedom, which can also do evil. God can only do what is best (optimism, cf. Leibniz), and this "must" is not an imperfection, for the capability of evil is not a virtue. God's action is above the designation of free or not free. 3. God perceives all individual things as the common teaching of the philosophers shows. Nevertheless His perception cannot be called universal (Avicenna): for the idea of imperfection might be associated with this. His knowledge, which guides all worldly things in union with the divine will in the wisest providence, is raised above the predicates of the universal and particular. 4. The philosophical principle ex uno non fit nisi unum, which makes untenable a direct creation of the plurality of things by God the One (doctrine of creation through the intermediary of the spirits of the spheres) is dropped by Averroes: God directly creates the plurality of things. — The exaggeration of the importance of Averroes, who was called the "most important" philosopher of Islam, and the erroneous opinion that he was an enemy of religion is a fabrication of the European middle ages and is probably based in part at least on errors in translation in the Latin versions of his works and on the circumstance that the other philosophers of Islam were not known. Averroes is of no importance for the further development of philosophic thought in the East.

The fruitful stimulus to speculation given by Ghaḍīlī was eagerly followed up in his period following him. The great stream of philosophic activity begins after Ghaḍīlī and is due to him, as he made philosophy palatable to Islam and the orthodox school of theologians. It was no longer possible for any one to discuss science and even speculative theology, who had not had a thorough education in Greek philosophy. The two great protagonists were Rāzī (died 1209) and Ţūsī (died 1273). The former moves entirely in a world of Greek ideas, which he developed principally in his "mystic investigations" (al-Mukhtār al-Muṣāfaram, ishrāf here means Platonic intuition and thus is a hit at Avicenna) with vigorous attacks on the separate Neoplatonic elements and in the development of the Greek logic, is also developed by him in an elaborate fashion and almost becomes a model. This is particularly apparent in the technical use of objection — he was known as al-Muṣāfārib, the "objec- tors". Ţūsī followed up the questions posed by Rāzī, to which were added those of Ibn Kamānah (died 1277). The struggle centred round the theses (al-ḍarāf) of Avicenna and lasted down to the xivth century; Tustā (c. 1300), Iṣfahānī (died 1348) and Rāzī (Kūth al-Dīn, died 1364) joined in it defending the doctrines of Avicenna and going more deeply into them. Ţūsī victoriously pushed off an important attack by Shahrastānī 1153 ("the slayer of the Greek philosophers", al-Muṣāfarī in his "The slayer of the slayer", Muṣafir al-Muṣafarī).

Under the invigorating influence of such attacks and discussions, philosophy was able to develop to a greater height. Ibn Makkā (Abū 'l-Barakāt, died 1155) wrote his oft-quoted and highly esteemed work "The worthy of consideration" (al-Muṭāfan). Zamakhshāri (died 1143) was at the same time discussing many questions of philosophy with great acuteness. Suhrawardi (died 1191) builds up an entirely new system and forms an independent focus for the development. His development begins where Avicenna had left off at questions of great difficulty. Being cannot advance to existence from outside, but is identical with it. The dualism, which according to Avicenna divides the innermost state of things, is thus overcome. Things are units of reality, in conscious allusion to the ancient Persian doctrine of light: different forms of the light, which emanating from God lose their perfection and approach matter of darkness. Light is identical with spiritual substance. In the theory of knowledge also he does away with the well-known dilemma in Avicenna. Knowledge is, as Plato teaches, a perception, in which the true essences of things which exist for themselves in the heavenly world, illuminate our understanding. He therefore called his philosophy, the philosophy of illumination (cf. Hertin, Die Philosophie der Erscheinung nach Suhrawardi, Halle 1920). The best known of the later philosophers were also inspired by these ideas and wrote commentaries on Suhrawardi's teaching, e.g. Shahrarzā (c. 1250), Shīrāzī (c. 1311), Harawī (Niṣām al-Dīn, c. 1300), Ibn Kamānah (died 1277), Dawānihā (c. 1501) and Shīrāzī (died 1640).
A very important work in philosophy is Ṭūsfī’s (died 1233). "First-fruits of Thoughts" (Akbār al-Afkar), an authority of the first rank in Idī’s circle (died 1355). After Avicenna’s great works on logic men became eager to compress the total of this knowledge in compendiums, not without developing it in various directions. Zarnūjī’s handbook of logic, c. 1203, Khawjīnī’s (died 1248) compendium, Abhārī’s Isagoge (died 1264) — he also compiled an encyclopaedia of philosophy which became celebrated under the title "The Guide to Wisdom" — Kātībī’s logic 1276 (Sahāsīya) — it survived to see over a score of commentaries from the pens of philosophers of the first rank — the "Rising-places of Luminaries", a work by Urnawī (died 1283), Nasafī’s (died 1288) Dialectics and Samarqandī’s (died 1291) authoritative work, which was very frequently commented on, may be mentioned here. The "Leaves" of Samarqandī and "The Philosophy of the Individual" of Kātībī and his commentary on Rāzī, the epitome Sharḥ al-Muḥakākhās exercised a great influence.

Ṭūsfī (died 1273) forms an important centre for further development. In his dogmatic (Tawḍīḥīn), he brought Greek philosophy into the theological speculations of Islam. The fundamental questions of philosophy were lucidly discussed by him. The problem of being and existence was further developed and acutely discussed particularly by his numerous commentators. With Ḥillī (died 1326), Isfahānī (died 1348) we may here give Kūshdī (died 1474) the place of honour; he discussed the most fundamental questions of philosophy in the most thorough fashion and advanced the problems connected with Avicenna’s teachings. It is clear from his exceedingly well developed terminology that the systematic study of philosophy was in a flourishing condition in his time. The scruples once raised by Ghaţāzī against philosophers have for him been long overcome and become negligible. He is particularly attached to Avicenna but quotes also the liberal theologians from ‘Allāf (died 849) to ‘Abd al-Dājbābī (died 1024) and also Khāyāmī (died 1121) ("The Philosophy of Being") Ḥikmat al-Kawn, Suhrwardī, Ldī, etc. He attempts to utilise the most divergent views for his conception of the universe.

Apart from the works of Maḥbūbī (died 1346) and Buḫṣānī (c. 1350) (commentary on Kātībī), those of Idī (died 1355), especially his "Stations" (Manawāṣīf) and his Dialectic form a new and important centre of philosophical discussion. In the former work Idī intended to write a speculative theology and the result was an encyclopaedia of philosophy. So thoroughly had Greek science penetrated the ideas of educated Muslims that they had imperceptibly identified it with theology. We do not mean to say that they approved all the doctrines of Avicenna. It was rather the development after Avicenna’s time that was made most use of, by his teaching was universally defended against his opponents notably by Al-Ghazālī in the background. Idī’s concise and acute formulations stimulated great activity among the commentators — in the same way as Ṭūsfī’s Dogmatic. The problems discussed range from logic to the fundamental questions of metaphysics, touching natural sciences on the way. Dījrādī (died 1413) was the most important at this period. Besides problems of philosophy he discus-

sed the theological questions of the school of ‘Aṣhārī, of which he professed himself a member. Aṣhindī (died 1359) had appeared and vigorously criticised Avicenna’s system in his commentary on Ghazālī’s "The Intentions of the Philosopher", Idī’s circle took up the cudgel on behalf of the old master. We thus find Idī’s commentators thoroughly discussing Taftāzānī’s objections and deriving advantage from them, e.g. Abhārī (Saīd al-Dīn, c. 1300), Fanārī (died 1451), Ṭūsfī (died 1482) and notably the extremely well-read Siyālūkī (died 1659). He is well acquainted with the vast philosophical literature of the Muslims, quotes from hundreds of works, is perfectly at home and gives an independent judgment in all philosophical questions.

Rāzī (Kūtb al-Dīn, died 1364) displayed a great literary activity which considerably advanced the development of philosophy. Although he belonged to none of the above mentioned groups he is quoted by them and regarded as an authority of the first rank. The form which literary activity took was frequently that of commentaries. It must not be inferred from the form of a commentary, which was attached to some standard work, that his thoughts were confined in its scope. Entirely new ideas are frequently developed in these commentaries and acute criticism exercised; this is true for example of Dījrādī’s numerous works, of which the glosses on Ṭūsfī’s Dogmatic at once became a centre of new development. In Logic Taftāzānī’s work "The Elaboration of Logic" built up a great school with which the greatest names in philosophy are associated. We have now come down to the time of Dawwānī, the "glory of the true investigators", (died 1501); he approached this school from the most diverse directions while he wrote commentaries on the original works. His commentary on Suhrwardī’s, "The Temple of Light" is as highly esteemed as the numerous glosses on Ṭūsfī in which he discusses and develops philosophical problems with the greatest acuteness. His peculiar position may be compared with that of his contemporary Caietanus among scholastics. Fārābī, the commentator on Fārābī (cf. Horten, "Das Buch der Ringsteine" Parabis, 1906) was one of his pupils. Ibn Khālīn (died 1406) propounded questions of the theory of knowledge in a critical fashion. Sanātī (died 1486), Shāhānī (died 1565) left their mark particularly in the field of logic, Akhbārī (died 1534) attained fame through his "Stepladder" which had commentaries frequently written down on it to last century.

Shīrāzī (Ṣadr al-Dīn, died 1523) seems to have been an outstanding thinker of this period. He is quoted by later writers as the "great scholar". Ghivaṭ al-Dīn Shīrāzī (died 1542) is also mentioned along with him as an authority; like the preceding he wrote a commentary on Ṭūsfī’s Tashkīrīzāde (died 1554) was a comprehensive writer on philosophical subjects. Shīrāzī (Ṣadr al-Dīn) (died 1643) developed quite a new theory of the universe. Stimulated by Suhrwardī he explained the notion of contingency not as a dualism between being and existence but as a participation in being. Individual things are monistic indivi
dua of being, which develop step by step to more and more perfect beings. His proof of the existence of God is a combination of the proof of contingency with the Platonic from the stages
of perfection (Horton, *Die Gottesbeweise bei Śīrāzī*). Lahādī (c. 1670) likewise is entirely under the influence of Greek thought (cf. Der Islam, ii. 91—131). Harawī (1695), Munāwī (died 1622), Dāstādī (died c. 1659) were also regarded as great teachers. (Husaini) Bihārī, died 1703, composed the *Stepladder of the Sciences*, which was frequently annotated. Fārābī (died 1745) incorporated a vast amount of philosophical knowledge in his terminological dictionary, *Sūtrakālīzāde* (died 1737) was an encyclopaedist.

FANĀ΄ (A'), an important technical term of Sūfism, meaning, "annihilation, dissolution". The Sūfī who attains perfection must be in a kind of state of annihilation.

The authors of treatises on Muslim mysticism have often compared the "annihilation" of Sūfīsm with the Buddhist nirvāṇa; but this comparison is not a particularly fitting one. We now know that the Muslim writers had only a very slight knowledge of Indian philosophy and could not comprehend the notion of nirvāṇa which presumes a fairly intimate acquaintance with that philosophy. Besides, the Buddhist idea of annihilation is independent of the idea of God and includes the idea of the transmigration of souls, to which nirvāṇa, puts an end. To attain this, the desire for existence must be suppressed in the individual; it is only after this desire has been extinguished that one no longer has to return to the cycle of existence. In Muslim mysticism on the other hand there is no question of metempsychosis and the notion of a personal and all-present God is throughout predominant.

The origin of the Muslim conception of fanā΄ has rather to be sought in Christianity from which it seems to be borrowed. This conception simply means the annihilation of the individual human will before the will of God, an idea which forms the centre of all Christian mysticism. The conception thus belongs to the domain of ethics and not in the slightest degree to that of metaphysics like the nirvāṇa of the Hindu.

The oldest systematic exposition of pantheistic Sūfism is the *Kašif al-Maḥdūb* ("Revelation of concealed Matters") gives all the explanation that could be desired of fanā΄.

The virtue of poverty understood in the mystic sense consists in averting the gaze from all created things, and, in complete annihilation, seeing only the All-One, he hastens towards the fullness of eternal life" (p. 20). — Mystic poverty, we are farther told, consists in the annihilation of the human attribute (ṣifāt), which dwells in the ego, so that one is now only rich in God and through God. — "The Sūfī is he that has nothing in his possession nor is himself possessed by anything. This denotes the essence of annihilation (fanā΄)"...

When this feeling has attained its perfection it is called fanā΄-i kadd "absolute annihilation".

The expression fanā΄ is often interchanged with safā ("purity"); this word means that the Sūfī should keep his soul pure from all attachment to any creature. Fanā΄ is further often associated with baṣā ("subsistence"): the man, who has destroyed his own will, henceforth lives in God; the human will is transitory while God's will is eternal.

The author of the *Kašif al-Maḥdūb* expressly states (p. 243) that fanā΄ does not mean loss of essence and destruction of personality as some ignorant Sūfīs think. It is not the essence but the human attributes, which are a danger to the perfection of being, that are destroyed (p. 28). "In India", says the author, "I had a dispute with a man who claimed to be versed in Kūfānī exegesis and theology. When I examined his pretensions, I found that he knew nothing of annihilation..." (p. 243) i.e. he had understood the word fanā΄ in a metaphysical sense.

(B. Carra de Vaux.)

FANAM, a South Indian coin. [See Yule and Burnell, Hobson-Jobson, p. 348.]

FANAR, the name of the Greek quarter of Stamboul in which the Oecumenian Patriarch took up his residence after the conquest of the town by Meḥmed II. Down to 1587 the patriarchate was in the ancient Byzantine church of the Pamukkarios; when this was transformed into a mosque (Fethiye) in that year, the Patriarch moved his see to the little church of St. George. At quite an early period there settled round the see, in addition to the ecclesiastical and secular officials of the patriarchate, the few old Byzantine families that had remained in Constantinople and other distinguished and prosperous members of the community (the so-called ṣaḥāba) in the Patriarchal school (ō ṣaḥāba fī ṣaḥāba). Conducted by the clergy, which is still flourishing, the ancient classical studies were cultivated and the Fanariots exalted their claim to be in this respect also the noblest of the nation. It was from their circles that the Porte used to choose its Christian officials (Dragomans of the Sublime Porte, and of the Arsenal, Hospodars of Moldavia and Wallachia, contractors for the supply of furs and meat to the Serai, etc.). The better known families are the Kantakuzen, Skarlasto, Maurogordato, Ghika, Karada, Sanzio, Handjeri, Maurojeni, Ipsilanti, Muruzi, Kalimachi, Mussuro, Aristarchi et al. In the second half of the xviiith century many Fanariots went to Kura-česhme on the Bosporos. Since the beginning of the Greek War of Liberation the old Fanariot families have been gradually disappearing from public life; many of them migrated
to Greece. According to tradition Mehemmed II granted the Fanariots a number of privileges, but the Greek noble families have never enjoyed any special privileges as such.

Fánus (Φάνος), a folding lantern, made of wire rings surrounded by waxed cloth with the upper and lower ends of tin-covered copper. It is carried by night in the hand to light the way for a body of men on the march, a wedding procession or a personage of high rank in the dark streets.

Far. (See Fûru.)

Fârâb, also written Bârâb (e.g. in I斯塔hri, Muñaddas and most Persian authorities) and Fârâb (e.g. in the Hudâd al-‘Alâm, cod. Turmanik, f. 9); the latter seems to be the original pronunciation, a district (in I斯塔hri and Ibn Hâwâl håhiya, in Muñaddas rûstâgh, in Yâqût esvîyâ) in the valley of the Sir-Daryâ, lying on both sides of the main stream, which here receives the waters of the Aris on its right bank. According to Ibn Hâwâl (p. 391) the district measured less than a day’s journey in length and breadth; the soil was in places marshy and contained salt. According to Mas‘ûd (Tanbih, p. 66) a stretch of land more than 50 farsakhs broad was inundated during the Daryâ in Fârâb and adjoining districts annually (in the beginning of January, Kinnin aIhâhâ; as a matter of fact the river at this season is usually covered with ice); at such times intercourse between the villages and farms all of which were on little hills was only possible by boat. The capital (kîsîf) was called Kadar and according to I斯塔hri (p. 346) lay east of the Sir-Daryâ half a farsakh from the river; it is therefore to be located to the west of the ruins of the later Otrar; the distance between the ruins and the river is about 7 miles on the Russian maps and according to the Zafar Namah also Indian edition ii. 668 it was two farsakhs from Otrar to the Sir-Daryâ. On the western bank of the Sir-Daryâ, 2 farsakhs below Kadar, lay Wâshid which Ibn Hâwâl said was the native town of the philosopher Abu ‘Naṣr al-Fârâbî [q. v.]. According to Muñaddas (p. 273) the capital bore the same name as the district; this town of Fârâb is described as a large town with a male population of about 70,000, a Friday-Mosque, a citadel and a market; only a few booths of the latter were within the walls of the town, the majority being in the suburbs (rabâh). Muñaddas says that Wâshid was a small fortified town where a “powerful Emir” lived, with a chief mosque on the market-place, Kadar a recently founded town with an able-bodied population, where Shatt is predominated; it was only after “wars” (probably after the suppression of opposition by the capital) that a minbar was erected. There is probably an error here and Fârâb, which is not mentioned by I斯塔hri and Ibn Hâwâl, is to be regarded as the new and Kadar the old town; the later Otrar also is correctly identified with the town of Fârâb (mentioned by Sam‘ânî also, MS. of the Asiatic Museum, 543, f. 314v) and not with Kadar.

In the historians Fârâb is seldom mentioned, only once in Tabari (ii. 1694 at the foot) for example: in 1217 (739) the ruler of Shâsh (Taşkent) at the command of the governor Naṣr b. Sâyi‘r had to expel Hârîr b. Suraâq who had sought refuge at his court and send him to Fârâb. ‘Alî was apparently only brought to Fârâb for the first time in the Samâdî period, after the subjection of Asbihdî (or Ispîdî) by Nâbî b. Asad in 225 = 839–840 (cf. Baladhuri, ed. de Goeje, p. 422; Sam‘ânî in Barthold, Turkestân etc., i. 58 below). Wâshid is again mentioned by Sam‘ânî as a fortress (in Barthold, op. cit., i. 69); ‘Abû Muhammad ‘Abd al-Sâyi‘î b. Muhammad al-Nasîfî said that Sâ’d al-Mülî died there in exile “in the land of the Turks” in Mu‘arrâm 514 = April 1120. For the later history of the district cf. the article OTRAR.

Al-Fârâbî, Muhammad b. Muhammad b. Tarhân Abu Naṣr, the greatest philosopher of Islam before Avicenna, was born in a Turkish family towards the end of the 9th century A.D. at Washid, a small fortified town in the district of Fârâb (Otrar) in Transoxiana. His father is said to have been a general. He studied in Baghdad under the Christian physician Yoûmann b. Hâlîn and also worked with ‘Abû Bîr Mârkat, a Nestorian Christian, celebrated as a translator of Greek works. He then went to Hâlîb to the court of the Hamânî Sa‘îl al-Dawla, under whose protection he lived the life of a Sufi. He died in 339 (950) at the age of about 80, in Damascus, whether he had accompanied his king on a campaign.

Fârâbî is particularly celebrated as a commentator on Aristotle. His works on this field have won him the name al-mu‘allim al-ghânî, “the second teacher” i.e. successor to the first teacher, Aristotle. He commented on the Categories, Hermetic, the First and Second Analytics, the Sophist, Rhetoric and Poetics i.e. the whole group of treatises which form branches of logic in the widest sense. To this collection of the Organon he prefaced a commentary on the Iliad of Porphry.

He wrote commentaries on the following Greek works on ethics, psychology and science, the Nicomachian Ethics, Alexander of Aphrodisias On the Soul, Aristotle’s Physics, Meteorology and his writings on the Heavens and the Universe and lastly on the Almagest of Ptolemy.

His literary activity was by no means confined to the exposition of Greek texts; on the contrary he wrote a large number of original works. Among the latter are his psychological and metaphysical treatises, on the Intelligence (â‘lî) and the Intelligible, on the Soul (nafs); the Faculties of the
Soul, the One and the Unity, Substance, Time, Empty Space, Space and Measure.

Fāرابī professed the view, which now seems strange and even absurd, but which is explained by the leaning of Oriental philosophers towards syncretism, that ancient philosophy must form a unity, at least that its two great representatives Plato and Aristotle should not contradict one another; their systems ought not to be more than different forms of expressions of one truth. According to this conception the great philosophers of antiquity appear as real prophets and are given the title imām like religious teachers, and their teaching is a kind of revelation which ought not to contain any contradiction or error. Fāрабī wrote several treatises on the basis of this view. The Agreement between Plato and Aristotle, The Intermediary between Aristotle and Galenus (Kitāb al-qāmām baina ra'ayi al-ḥakimain Aṭṭalān al-šāri'a wa Arisṭaṭa), The Intentions of Plato and Aristotle. It should be noted that our philosopher believed in the authenticity of the work entitled Theology of Aristotle (Oṯāḥālīḏīṯ Aḥrīṣṭālīḥ), an apocryphal neo-Platonic treatise based on the Enumades of Plotinus. This error was such as to falsify in a remarkable fashion the idea that was formed of the Peripatetic system.

Dieterici has edited nine small treatises by Fāрабī of which the most celebrated is the epistle entitled The Gems of the Sciences (Risāla fi ṣuqūṭ al-ḥikam); this work, which contains many ideas in a very concise form, passed into use in all the schools of the East; there is a commentary on it by Ismā'īl al-Husaini al-Fāрабī, a writer of the 7th century which has been printed at the al-Amira press (1291 H. H.) and made the subject of a study by M. Horten. Besides this group of treatises, Dieterici has published Fāрабī’s “Model City” (Risāla fi arād al-Madinah al-fāḏila) an important work in 34 chapters in which the Muslim philosopher, inspired by Plato, explains his conception of the organisation of the perfect city. It should be governed by its wise men; its aim should be to imitate here below the perfection of the heavenly city and to prepare its members to obtain felicity in the latter. This theory is of little practical interest, but is of some importance for metaphysics, Fāрабī’s intention like that of the other philosophers of the same school was to embrace the whole cycle of the sciences. He seems to have been quite a good mathematician and a fair physician; he wrote on occult sciences and was also a distinguished musician; it is to his pen that we owe the most important treatise on the theory of Oriental music. He was himself a virtuoso and composer; his talent excited the admiration of Saif al-Dawla and the Mawlawī dervishes still use ancient chants that are attributed to him.

Fāрабī’s system is that of the school of Philosophers in the proper sense of the word (fi-laṣṭif) i.e. Muslim Neo-Platonic philosophy. It is the system which al-Kindī had begun to organise before him and which after him found the most complete expression in the works of Avicenna (q.v. sub Ibn SīnĀ). It is fairly probable that Fāрабī differs from al-Kindī and Avicenna on some points; but it is difficult to define these points as it is better to be reserved, if not sceptical, in interpreting the details of his system. Indeed we do not possess his work in its entirety; we are only acquainted with a small part of it; Fāрабī’s style also is somewhat obscure; several of the treatises that have survived are composed in the form of very brief aphorisms placed one after the other in no sort of order. Lastly it is impossible to be certain that there is no contradiction in a work so vast, in which the influence of Plato, Aristotle or Plotinus alternately predominates. The root idea of the system, which is to make a synthesis on one side of Aristotle and Plato and on the other hand of the syneretic philosophy thus obtained with the religious faith of Islam, cannot but be somewhat contradictory in itself.

T. J. de Boer believes he can see a very marked opposition between Fāрабī and the other members of the school of “Philosophers” notably the celebrated Rāzī (Razes); Fāрабī sometimes polemics against Rāzī who was his contemporary. According to de Boer this opposition consists in that, while Fāрабī’s system is deductive, rational and built up entirely on abstract logic, Rāzī’s philosophy is experimental, inductive and is more especially concerned with the concrete. But I do not think that there are really two systems opposed to one another; they are two sides or two aspects of a more general system: Rāzī, who was a physician and distinguished naturalist, emphasises the concrete aspects of the system while Fāрабī, who had a more inclination for logic, mathematics and mystic speculation, presents the abstract side of it. In Avicenna we find the two aspects reunited. I have pointed to a difference between Fāрабī and Avicenna as regards the position of Mysticism; in Avicenna mysticism appears only at the end of the system to crown his work, as it were; it is quite distinct from the other parts of it and Avicenna treats mysticism — and very artificially — as a chapter in philosophy which he would study in an objective fashion. On the contrary in Fāрабī mysticism penetrates everything; the terms of Sufism are scattered throughout his works and one clearly feels that with him mysticism is not a theory but rather a subjective state. This point of view further contributes to make his system somewhat obscure.

It has been said that Avicenna is clearer, better arranged and more methodical than Fāрабī; Muslim scholasticism has clearly a more finished form in Avicenna. On one important point, the question of the personal immortality of the soul, this difference in lucidity between the two philosophers makes itself felt. The rational soul or reason, illuminated by the world of the mind, the world of ideas, or active intellect, is the real man; it is also what remains of man after death. But does the reason of the individual man lose itself in the active intellect or does it preserve its own consciousness and individuality? Certain passages in Fāрабī are written in such a way as to make it credible that he admits the first view. There is, however, no room for doubt that Fāрабī believed in the personal immortality of the soul; in his treatise on the Model City there is a passage, where he shows the good souls arriving in the celestial city and each of them enjoying a pleasure as great as the number of the souls. Ibn Tufail, who seems to have had no love for Fāрабī, also says that he had doubts on the personal immortality of the soul (see S. Munk, article Fāрабī in the Dictionnaire des Sciences Philosophiques); this charge must refer to passages, the language of which is obscure or which are incomplete.
T. J. de Boer has also pointed out as a difference between Fārābī and the other philosophers of his school that Avicenna does not, like him, derive matter from God. According to this writer, Fārābī conceived matter as having emanated from God by passing through several spiritual intermediaries. I do not think that this statement is quite correct. It is in the treatise on "the principles of beings" of which we possess a Hebrew translation by Moses Ibn Tibbon (אשת תבון), ed. by Weiss, Leipzig 1850-1851) that Fārābī gives the chain of principles in a way which makes it resemble an emanation: the primary intelligence or first cause comes from God; from it come in their order the intelligences of the spheres; the last is the active intelligence; above it are placed the universal soul, then form and lastly matter. Avicenna's metaphysics are really quite comparable to this system.

The matter which is in question here is the substratum of the world which contains its possibility. The world is produced by coming from the primary matter created directly from God. The celestial spheres, animated by their respective souls, are put into motion by the prime mover; the latter is not God himself but rather the primary intelligence which emanates from him.

Fārābī attempts to reconcile Aristotle and Plato on the question of the eternity of the world. In his treatise on the Agreement of the Philosophy of Plato and Aristotle, he claims that Aristotle did not believe in an eternal world. The creator made it spring into existence at once without time, the prime mover then put it into motion and from the motion of the spheres the time was produced. In other words time is logically posterior to the actual creation of the world. The school of the philosophers has however admitted the possibility of the infinite series retroacting into the past: according to Avicenna a real infinite series is impossible but an infinite series, the terms of which do not actually exist together, is possible. It may be admitted that the celestial spheres have accomplished an infinite number of revolutions in the past and that time accordingly is eternal. One difficulty against this view arises from the fact that the souls of men who have lived in the past continue to exist in reality as they are immortal; there would thus be an infinite number of souls actually co-existing. In his treatise on the "Model City," Fārābī however speaks of the souls in the other world as if they were finite in number. We cannot really be quite certain that these philosophers do not sometimes contradict one another; they comment with equal confidence on teachers whose doctrines often disagree and there necessarily results a certain amount of hesitation and uncertainty in their systems.

Horten, Das Buch der Ringstehne Farabis mit dem Kommentar des Emir Isma'il el-Hossein el-Farani übersetzt und erläutert in Beiträge zur Gesch. der Philosophie des Mittelalters, Vol. v. (Münster 1906); with a bibliography of Fārābī, p. xvii-(xxviii); M. Steinschneider, Al-Farabi des arabischen Philosophen Leben und Schriften in den Mémoires de l'Acad. impériale des Sciences de St. Petersbourg, Vol. xiii. N° 4 (St. Petersburg, 1869); Dieterici, Al-Farabīs Philosophische Abhandlungen (Leiden 1890; Arab. text of nine smaller works);
the town surrendered and was given over to plunder by the soldiers; the citadel, however, only fell after a siege of a month. Timur left Damascus in the spring of 804 = 1402 to make war on the Ottoman Sultan Bayazid. — The remainder of Faradż's reign is occupied with the struggles of the Emirs for influence with the Sultan. The Emirs, who were overthrown in the course of these feuds, were usually imprisoned in Alexandria and executed if they did not succeed in escaping to Syria and collect new followers there. In 808 = 1405 the discontent among the Mamliks reached such a height that Faradż abdicated the throne and went into retirement for a period. The Emirs raised his brother Abd al-Asif to the throne under the name al-Malik al-Manṣūr. A few months later, however, Faradż won back the citadel of Cairo, threw his brother into prison and ascended the throne again. Although his position in Egypt was now secure, he never again exercised authority in Syria for any length of time. Diakam, the governor of Aleppo, proclaimed himself Sultan there under the name al-Malik al-Adil, fortified Aleppo and defended Syria against foreign foes. He went to war with Karâ Velek, the chief of the white Sheep Turkomans, and fell in battle. The most faithful adherent of the Sultan was the above-mentioned Emir Taghrîbî, his bitterest opponent, Shahâr al-Mahmûd [q. v.], who afterwards became Sultan under the name al-Malik al-Mu'ayyad. The war dragged on in Syria with varying success until in 815 A.H. Faradż went there for the seventh time. Against the advice of the dying Emir Taghrîbî, governor of Damascus, he went to meet the foe, regardless of the exhausting condition of his troops. He was defeated and retired to Damascus. As the Emirs there gave him a hostile reception, the Sultan had to submit; he was dethroned, imprisoned and put to death in prison. His lands had been terribly devastated during his reign by Timur's invasions and the constant civil wars, while famine and plague ravaged the country. He constantly required vast sums for his extravagant and luxurious mode of life and these he extorted from his subjects in Cairo.

**Biography:**: Weil, Geschichte der Chafien, v. 72—105 and 108—125; his biography is given in detail in the Mamlûk al-Šâfî, Cairo MS. 1113, Part iii. (M. SOKHN.)

**AL-FARĀFRA (AL-FARĀFIRA)**, an oasis in the Libyan desert, belonging to the Egyptian province of Minaî. It lies between the Wâbîût Bahriye and the Wâbîût Kilîyye [see the article BAHRÎYEH, i. 596 et seq.] and is about 8 days journey by camel from Minaî. Among the earlier Arab geographers the name al-Farâfarö appears, for example in al-Bakr, who mentions its great wealth in date-palms and the numerous villages inhabited by Christian Copts; he also knows of the slum and virirol found there and mentions the hot springs of the oasis. We have no other direct notices of al-Farâfra, probably because it was usually reckoned with Dâkhîle [q. v., i. 899 et seq.] as is clear from Ya'îûbi (p. 332), for example. It was not till Châliaud and Letorcer's journey in 1820 that new light was thrown on the oasis and later by G. Rohîf's expedition in 1873-1874. Farâfra was then only very loosely connected with Egypt; the only bond was the annual tribute of 10,000 piastres. The land was exceedingly fertile and rich in palms, olives, fruits of all kinds, vegetables and cereals; there was also some cotton, but only oil and dates were exported. Nevertheless the inhabitants were in great poverty as they lost the greater portion of their harvests as in ancient times, through the constant raids of the Egyptian and Barât Beduins as well as of the Arabs of the Nile valley. Besides this the finest estates were in the possession of members of the Sanûsiya, who sent the produce to Djarablûs, which was then their headquarters. They had been acquiring a firm footing in the oasis since 1860 and it is to their influence that the great fanaticism of the population is ascribed. The number of inhabitants was still small at that date but it has been continuously increasing since then; Boinet-Bey estimates the population at 542 and the latest figures at 652. The only village is Ksar Farâfra.

(E. GAEFF.)

**FARAIH, a town of Afghanîstân in the Herât province situated on the bank of the Farâh-rûd river which flows in a south-westerly direction into the Sîsân Hâmûn. Farâh, although decayed, is still a place of some importance, and is the meeting place of several caravan routes and the centre of a fertile district. It was formerly the capital of Drangiana, and was included in the medieavel province of Sidjistan, but is not included in modern Sîsân. It has never quite recovered from its devastation by the Mongols under Chingiz Khân.

The Farâh-rûd is one of the rivers mentioned in the Vendidad (Frâdadha) and is the 0 frûdês of Pliny, and the town is the Prophethias of Alexander's historians and Srao (Prophethias being a Greek rendering of frâdadha or 'progress') also no doubt the Phra of Isidore of Charax. Alexander here detected the plot of Philotas, and from here, Holchich considers, he made his way up the valley of the Farâh-rûd to the Bâmiyân pass. In modern times it has been described by Ferrer and Holdich.

**Biography:** A. Stein in The Academy, May 16th 1885; Holdich, The Gates of India, (London 1910); Ferrer, Caravan Journeys, (London 1857), Ch. 26; Strabo, Book xv. Ch. 2, 8. (M. LONGWORTH DAMES.)

**FARAH, ABU NSA'R MAṢŪD B. AḥB BAKR B. HUSAIN B. DI'AFAR, born at Farâh in Sidjistan, a Persian philologist, who flourished in the beginning of the xiith century A.H. He is the author of a versified Arabic-Persian glossary, called Nîqûṭ al-Shîbîn, which was much used in the east and is found in almost every library in Europe in several copies. Commentaries have frequently been written on this little book. Cf. Cat. Boll. (Pertsch), No. 156, 157 (1); Kien, Cat. Pers. Ms. Brit. Mus., p. 504; Elze, Cat. Oxford, col. 980—983.

He also versified in Arabic in 617 the celebrated compendium of law al-Djûrûs al-Sâghrûn, written by al-Shahîbîn [q. v.]. Cf. Hâdîjî Khâlîfa, ed. Flugel, ii. 559.

**FARÀDÏ** is the name given to the expressly called fixed shares in an estate (1/4, 1/6, 1/6).
2/3, 1/3 and 1/6) in the verses dealing with the law of inheritance in the Korān (iv. 12—15 and 175) which fall to the twelve so-called "people of fixed inheritance" (dawwn 'urfarīd or aḥsāb al-furarīd). As the accurate knowledge of these fixed legacies was the most important part of the law of inheritance, the latter was called 'ilm al-furarīd.

Although the Korān only recognises fixed portions for the daughter, the two parents, the husband and wife, and the brothers and sisters, Muslim scholars have extended the laws applicable to the daughters of a deceased person to the daughters of his son and in the same way those applicable to his parents to the grand-parents; a distinction has further been made in sisters between full and half-sister on the father's side and on the mother's. The total number of these so-called "Korānic" heirs has thus been raised to twelve, viz., in descending order: 1. the daughters of the deceased and those of his sons; 2. in ascending order: father, mother and grandfather on the father's side, grandmother on both sides (and further all other female relatives of the deceased, in ascending line, in so far as they are not related to him through a male relative in ascending line who is not legally qualified to inherit); 3. in the collateral line: the full sister, the half-sister on the father's side and the half-brother and half-sister on the mother's side; 4. widower and widow.

The daughter of the deceased is entitled to half his estate; if there are two or more daughters, they receive together 2/3 of the estate. The son's daughters, full sisters and half-sisters on the father's side are subject to the same rules. (Korān, iv. 12 and 175). Each of the heirs in ascending line may claim 1/6 of the estate; the mother, however, only receives this share if there are children, son's children, or two or more brother's and sisters of the deceased; otherwise she gets 1/3 of the estate (Korān, iv. 15). Each of the half-sisters and half-brothers on the maternal side has also 1/6 of the estate; if two or more inherit together, they receive 1/3 in all (Korān, iv. 15). The widower receives 1/2 of the estate except when a child or son's child inherits with him in which case his share is only 1/6 (Korān, iv. 15). The widow has (Korān, iv. 14) only a claim to half of what a widower would receive in the same circumstances, i.e. 1/4 or 1/8 of the estate, according as she inherits with children (or son's children) or not.

If there are several dawwn 'urfarīd either together or with other relatives of the deceased, they in many cases excluded from their fixed shares. They then according to circumstances either receive nothing at all or the residue of the estate, after the other heirs have received what they are entitled to. The dawwn 'urfarīd can never inherit at the same time. On the diminution of the fixed inheritances in some cases in which several dawwn 'urfarīd inherit at the same time, cf. the article 'AWL. [i. 517b et seq.].

'BIBLIOGRAPHY: Besides the chapter on inheritance in the collections on Tradition and the Fikh books, the literature quoted is the author of this article's Handbuch des Islamischen Gheber, 3rd. London, 1910), p. 150. E. Sachau in the Zeitschrift der Berliner Akademie der Wissenschaften, 1894, i. 159—210; L. W. (T. W. JUYNBOOM.)

FARĀĪDī SECT. This sect was founded in Eastern Bengal about the year 1804 by Haddi Ḥāfiz al-Shārīf Allāh. He was an innkeeper and resided in a village, Bahādūrpur, in the district of Farīdpūr. When eighteen years of age he went on a pilgrimage to Mecca, but instead of returning, as usual, he remained a disciple of al-Shaikh Tahir al-Sulṭān al-Makki, the head of the Ḥāfizī sect there in those days. About 1802, after an absence of twenty years, he came back to India, a skilful disputier, and a good Arabic scholar. On his way home he fell into the hands of Dacoits (handed robbers) who plundered him of everything, including many relics of his residence in Arabia. Finding life insupportable without books or relics, he joined the gang, and shared their many wanderings. The simplicity of his character and the sincerity of his religious convictions struck these wicked men, who ultimately became his most zealous followers. Such is the story told at the present day of the first step taken towards prove-lytism by this remarkable man. For several years Shārīf Allāh quietly promulgated his newly framed doctrines in the villages of his native districts, encountering much opposition and abuse, but attaining a band of devoted adherents, he by degrees acquired the reputation of a holy man.

The chief innovation introduced by him was the non-observance of the Friday prayers and of the two great 'Ids, on the ground that India under British rule was Dar al-farāb [q. v.]. He also ordered that the titles of ustādī (teacher) and bağīrd (pupil), terms which did not imply complete submission, should in future be used in the place of pīr (priest) and muṭābī (disciple), which had for ages been the respective designa-ions of the religious preceptor and his pupil. He further prohibited the usual ceremony of joining hands, which in his eyes only constituted the initiatory at the initiation of a disciple, but required from every one of his would-be disciples tabūq, or repentance for past sins, and a solemn determination to lead a more righ-teous and godly life in future. It is a curious fact that none of these ideas excited much opposition, but on his promulgating a dogma that to allow a mid-wife to cut the navel cord of a new born babe was a deadly sin borrowed from the Hindus, and his insisting that it was the duty of the father to do this, he roused a spirit of opposition which caused many of his adherents to fall away. The zamun-dār (landlords) were alarmed at the spread of the new creed, which bound the Muhammadan peasantry together as one man. Disputes and quarrels soon arose, and Shārīf Allāh was driven away from Navībārī, in the Dāhā district, where he had settled, and was compelled to return to his birthplace. There he resumed his holy office as a minister of the faith, and in a short time en-listed the sympathies and support of a vast major-ity of the uneducated and the most excitable classes of the Muhammadan population. His in-fluence became unbounded, and no one seemed to carry out his orders. He acted with great prudence and discretion, rarely assuming any other character than that of a religious reformer. The movement set on foot by this man attracted little attention during his lifetime, and his name is rarely met with in the annals of those days. On
looking back, however, at his career there is much which amply repays an inquiry. That he came of obscure parentage amid the swamps of Eastern Bengal, and should be the first preacher to denounce the superstitious and corrupt beliefs, which long contact with Hindu polytheism had developed, is remarkable enough; but that the apathetic and careless Bengali peasant should be roused into enthusiasm is still more so. To effect this required a sincere and sympathetic preacher, and no one ever appealed more strongly to the sympathies of a people than Shari'at Allah whose blameless and exemplary life was admired by his countrymen, who venerated him as a father able to advise them in times of adversity, and give consolation in cases of affliction.

He is described as a man of middle height, of fair complexion, and with a long, shapely beard. A very different person was his son, Muhammad Muhsin, better known as Duddhi Miyan, who, though of ordinary abilities, exerted an influence far surpassing that of his father. His name is a household word throughout the districts of Faridpur, Purna, Bakhigunj, Dhang and Nonkhal, and the number of his followers at the present day testifies to the thoroughness of the method with which he and his father fulfilled their mission.

Duddhi Miyan was born in 1819, and, while still young, visited Mecca, where, as he asserted and made his followers believe, visions and revelations of a nature tending to his future greatness, were vouchsafed to him. On his return he devoted himself to the spread of his father’s doctrines, as well as many more which he himself introduced afresh. For instance, he insisted upon his disciples eating the common grasshopper (phanga) which they detested, because the locust (tiddi) was used as food in Arabia, and vigorously contended that there was no greater difference between the two insects than between a goat of their villages and one from the banks of the Lijumna.

The most remarkable advance made during Duddhi Miyan’s lifetime was the organisation of the society. Following the example of the Vaishnavas, he divided Eastern Bengal into circles, and appointed a khilafa, or agent, to each, with power to collect contributions for the furtherance of the objects of the central association. They further kept Duddhi Miyan, usually styled the Pir, or simply Mawlawi, acquainted with everything occurring within their jurisdiction, and whenever a zamindar tried to enforce his legal rights against any one member of the sect, funds were provided to sue him in the court, or, if it could be safely done, men with clubs were sent to plunder his property and to thrust his servants. During his father’s lifetime the sect was never opposed to, nor collided with, the law of the land; but the measures adopted by the son united the zamindars and the indigo planters against him. He tried to make all Muhammadan ryots join his sect on refusal caused them to be beaten, and excommunicated from the society of the faithful, and destroyed their crops. The zamindars once more endeavoured to prevent their tenants from joining, and, it is said, often punished and tortured the disobedient. A mode of torture intensely painful, which left no marks to implicate any one, is said to have been adopted on both sides. The beards of recalcitrant ryots were tied together and red chili powder given as snuff.

Coercion, however, failed, and the landholders did little to check the further spread of a similar disturbance.

It was among the cultivators and village workman that Duddhi Miyan made the largest number of converts. He asserted the equality of mankind, and taught that the welfare of the lowly and poor was as much an object of interest as that of the high and the rich. When a brother fell in distress it must be he taught, the duty of his neighbours to assist him, and nothing, he affirmed, was criminal, or unjustifiable, which might be used as a means to that end. Their enemies, however, alleged, that witnesses were paid for out of the funds of the association.

Duddhi Miyan and the Hadjis, as his followers were originally called, became objects of dread to the Hindu, old Muhammadans, and European landholders. Evidence to convict a prisoner could not be got. It was, however, against the levying of illegal cesses by landlords that Duddhi Miyan made his most determined stand. That a Muhammadan ryot should be obliged to contribute towards the decoration of the image of Durgā, or towards the support of any of the rites of his Hindu landlord, were regarded as intolerable acts of oppression. In this he was certainly right, as the only apology for their continuance was their antiquity, and adaptation to the feelings of the people. But, he advanced a step further when he proclaimed that the earth is God’s, and that no one has a right to occupy it as an inheritance, or levy taxes upon it. The peasantry were, therefore, persuaded to settle on Khāss Mahall lands, managed directly by the Government, and thus escape the payment of any taxes, but that of the land revenue, claimed by the State. His rapid success, however excited the jealousy of the contemporary landlords and many false suits were brought against him. In 1838 he was charged with abetting the plunder of several houses; in 1841 he was committed to the sessions on a charge of murder but was acquitted; in 1844 he was tried for trespass and forming an unlawful assembly; and in 1846 for abduction and plunder. The riot of 1838 assumed at one time a very threatening aspect, and a detachment of Sepoys was sent from Digha to check any disturbance. It was, however, impossible to induce witnesses to give evidence, and on each occasion he was acquitted. At Bahādurpur, where he generally resided, every Muhammadan stranger was fed, while Eastern Bengal was frequented by his spies, and the interests of the whole neighbourhood were in his keeping. He settled disputes, administered summary justice, and punished any Hindu, Muhammadan or Christian who without first referring matters to him dared to bring suits, as for recovery of debt, in the adjoining munsif’s court. Emissaries carried his orders to distant villages, and his letters, signed Ahmad nam na ma’lam, (Ahmad of unknown name) often had the ordinary Hindu superscription to allay suspicion. He taught that there was no sin in persecuting those who refused to embrace his doctrines, or who appealed to Government courts against the orders of the society and its acknowledged leaders. Duddhi Miyan is described as having been a tall handsome man, with a dark flowing beard, and a large turban wound round his head. He died at Bahādurpur 24th September, 1860, and was buried there, but
the Aral Khan river has, within the last few years, washed away every trace of his house and tomb.

Three sons survive, of whom none have as yet exhibited any of the energy, or abilities, of their father and hence the sect is consequently diminishing in number.

The sect of which he was the leader is generally known as the Farānid Sect; and those who profess his doctrines have been enjoined to say the Zuhur (mid-day) Farād (compulsory prayer) on Fridays instead of the usual Djumā or Friday prayer, which is customary with the majority of the Muhammadans.

(A. M. HOAYMET HOSEINI.)

AL-FARAS, the horse, whether stallion (faht) or mare; as a collective al-khal. The horse is considered the most beautiful and nobler creature next to man. The fine proportions of its limbs, the purity of its colour, its swiftness, its obedience to the rider, whether in battle, in pursuit or in flight, its courage and strength, its intelligence and standard of good manners are renowned. A sign of the latter is the fact that a well-bred horse discharges neither urine or excrement while its rider is on its back. It knows its rider so well that no one else is allowed to mount it. It watches beside him when he is asleep, and wakes him with its foot when danger threatens from the enemy or wild beasts. The horses used in the game of polo (dawakān from the Pers. tawgān), watch the ball with the eye and follow it without the rider's needing to guide them. One of the most noteworthy habits of the horse is that it will only drink turbid water; it is afraid of its reflection in clear still water and makes it turbid and frothy with its hoofs.

The following story is told of the creation of the horse: When God wished to create the horse, he said to the south wind: I will make a living being out of thee, collect thyself! He then caused Gabriel to take a handful of wind and from this he created a reddish-brown (kumust) horse. God said to it: I have created thee and made thee for the Arabs and distinguished thee about all other beasts by swiftness for the gaining of food and booty; thou shalt be ridden on the back and may fortune be attached to thy headway. Thereupon he dismissed it and it neighed. Then God said: Blessed be thy neighing; terrify the worshippers of idols, fill their ears and make their feet tremble. He then marked it with spots on the forehead and legs. After the creation of Adam it was led before him and preferred by him to Burūk [q.v., l. 793].

According to another tradition the first to ride a horse was Ismā'il, the son of Abraham. Others again say that the Arab horses are descended from those of Solomon. The latter inherited 1000 horses from David; when they were being led before him, he forgot the afternoon prayer: enraged at this omission he had them all hamstring except a few that he spared because they had not yet been brought before him. When after this people of the tribe of 'Azd came to visit Solomon and asked for a present on taking leave of him, he gave them one of the steeds to which they gave the name sad al-rākīb; from it are descended all the Arab horses.

The wealth of manuscript literature on the horse (cf. e.g. the Catalogues of Berlin and Vienna) has as yet hardly been touched, apart from Perron's work

cited below. Von Hammer-Purgstall gave a preliminary survey of the material in his essay, Das Pferd bei den Arabern [Bibliography, philology: names of horses, references to the Korān, hadiths, proverbs, poems, notably the description of the horse by Khalāf b. Ḥajīyān al-Māzīn]. Masūdī's Muṣāfī al-Dhakab contains a great deal of information about horse-racing and there are many notices in Ibn al-Mundhir [q. v.]. Valuable observations are made by the modern travellers quoted below.

The name al-Faras al-Fārum, the great horse, is given to a constellation Pegasus, Kīfāt al-Faras to the constellation of the foal, al-Faras al-Tā'īm or “complete horse” to a group of stars near Pegasus. "It is not quite clear how the Arab astronomers, who have elsewhere retained the Greek constellations so completely, ... have come to add a third and complete one to the two incomplete horses" (Ideler, Sternnamen, p. 190).

FARĀSĀN (Farāṣān), a group of islands in the S. W. of Cape Lījān, opposite the harbour of Abū 'Arīsh in Tiḥāma. The largest of these islands are Farāṣān Kūbr with the harbour of Khār Farāṣān and Farāṣān Saghir. Mūhrāk and Ṣeydān are other places worthy of mention besides Khār. The inhabitants fish for pearls and catch turtles, which brings them great wealth. Ehrenberg, who discovered the islands, saw many date-groves and fields growing durra and melons, Arab antelopes, numerous gazelles and goats there.

Hamdānī was acquainted with these islands. Their inhabitants, who take their name from the island, are, according to him descended from the great North Arabian tribe of Taghlib [q. v.]. Like the latter they were once Christians and, besides, had many churches on their islands, which had already been destroyed by Hamdānī's time. They carried on a busy trade with the Abyssinians. According to South Arabian genealogists they are Ḥimyarīs.

Al-Farazdák (the "lump of dough": Aghānī, xix. 2), whose real name was Hammām b. Ghiylīb b. Sā'a'a, was one of the three greatest Arab satirists of the Arab period [cf. Dāir and al-Akhṭal]. He belonged to the Tamīmi Mudżāfī b. Dārim. He was probably born about the year 20 (640-641) (cf. Nadār, ed. Bevan, p. xviii.). We know nothing certain about his early life. It may, however, be true that his father sent him to 'Ali after the "Battle of the Camel" (Aghānī, xix. 40, 48), although tradition gives this incident an exaggerated importance in the life of the poet (cf. Nadār, op. cit., in opposition to Hell, Farazdak's Loghadehêc, etc., Munich dissertation, 1900, p. 7 et seq.). There is more foundation for the statement that he (presumably when about 30 years of age) induced the Caliph Mu'āwiya by threatening poems to deliver up the inheritance of Hūtāy, a fellow tribesman of Farazdák, which he had illegally confiscated (Nadār, p. 608, 609, 610, 611; further references are given there notably to Tābarī, ii. 96—108). This incident is said to have provoked the enmity of Ziyād, Mu'āwiya's extremely energetic half-brother, against him. Ziyād was governor in the 'Irāq from 45 to 53 (660-668) and spent six months of each year in Baṣra where Farazdák lived. The latter made himself so unpopular with this firm ruler, that he had to fly from Baṣra about 50 (670). After many adventures he found an asylum with Sa'd b. al-Šāhīd, who had been appointed governor of Medina in 49 (669) (Nadār, p. 63, commentary on verse 46; p. 608 et seq.). He did not stand in such high favour with Sa'd's successor, Marwān b. al-Hakam, who ultimately banished him from the city (Aghānī, xix. 21, 43 et seq.). But Ziyād's death soon allowed him to return to his native city of Baṣra as his son 'Ubaid Allāh was well disposed towards him. It is possible that Ziyād's threats against Farazdák were really not to be taken very seriously (cf. Nadār, p. 611, 617). In any case the poet was in mortal terror. This is clear not only from the numerous laudatory verses on tribes and persons who had supported him in his exile but notably also from his verses of jubilation on the death of the dreaded Ziyād (Nadār, p. 619) and the subsequent lampoons on him.

Farazdák's further life was in part occupied with his feuds with Dāir and al-Akhṭal [q. v.] and by his unfortunate marriage with his cousin al-Nawār, whom he won as his wife by a stratagem but had ultimately to set free again (for details see Hell, op. cit., and Brockelmann, Gesch. d. Arab. Litte., i. 53 et seq.). The exploits of al-Farazdák and Dāir under the Zabūridor governor al-Hārīth b. 'Abd Allāh are narrated in the article Dāirī. The rule of the Omeyyad prince Bishār b. Marwān was favourable to al-Farazdák's activity but fortunately did not last long. He had to keep fairly quiet under the firm rule of al-Hājadīdājī. Driven by necessity, he dedicated himself to and his brother-in-law al-Hakam b. Ayūb (Dīwān, ed. Boucher, No. 91) a number of panegyrics; he even dared to offer consolation to Hājadīdājī when he learned of the death of his brother and his son in one day (Kānit, ed. Wright, l. 291 et seq.). On the death of this powerful governor (in 95 = 714) he composed an official lament (Boucher, No. 225); but in reality he rejoiced at heart and after Sulaimān, Ḥādjīdīdī's enemy, had become Caliph (96 = 715) he was able to give unrestrained expression to his joy.

Even before his acquaintance with al-Hājadīdājī al-Farazdák had begun to irritate another of the great men of the period, Muḥalla b. Abī Šūfrah [q. v.]. He jeered at the latter as an Azīfī and a descendant of fire-worshippers (Boucher, N. 73). Muḥalla b. 'Abd Allāh b. Yazīd had also to put up with all sorts of insults during his first governorship in Khorasan (82—85 = 701—704). But when Yazīd and his brothers escaped from Ḥājadīdājī to prince Sulaimān, he began to moderate his language and after some hesitation went completely over to Yazīd's side when the latter became governor of Khorasan for the second time (end of 97 = 716). This did not, however, prevent him from again lampooning the Muḥallasids after their tragic end and singing the praises of their victors, notably Maslama b. 'Abd al-Malik, governor of 'Irāq. Maslama's successor in the 'Irāq, 'Omar b. Ḫubairah imprisoned Farazdák on one occasion (Aghānī, xvii. 141 et seq.; Hell, Farazdák's Loghadehêc, p. 31 et seq.) and was lampooned by him as long as he remained governor. But when 'Omar was relieved of office in favour of 'Khalīd b. 'Abd Allāh al-Kāsī and badly treated, the poet dedicated laudatory verses to him (Aghānī, xix. 17). Al-Farazdák is said to have already been on bad terms with 'Khalīd owing to a previous incident (Aghānī, xix. 60 et seq.) He satirised him as a South Arabian and son of a Christian woman and ridiculed also all his administrative measures. How this affected him has already been told in the article Dāirī.

Al-Farazdák's relations with the 'Umayyads were, as we have seen, not good at first. The first Caliph on whom he wrote panegyrics was 'Abd al-Malik. It was not till Sulaimān's reign (Boucher, N. 21), that he came to court and he seems to have been in particular favour with the latter. He also dedicated laudatory verses to the other Caliphs from 'Abd al-Malik to Yazid II, as far as opportunity arose. This was no longer the case with 'Omar II (for details see Hell, Farazdák's Loghadehêc, p. 29). He hurled most bitter lampoons against Ḥishām b. 'Abd al-Malik, the last Caliph, whom he lived to see, and jeered at him for his avarice and also for his physical infirmities (Boucher, N. 63 and 113; Nadār, p. 984, commentary on verse 20); quite a number of panegyrics on Ḥishām have, however, also survived from al-Farazdák's pen.

Al-Farazdák seems to have died in 114 (732-733) of pleurisy, and was buried in Baṣra in the cemetery of the Tamīm (Aghānī, xix. 44 et seq.; cf. the article Dāirī).

After what has been said above there is little need to add much on the character of Farazdák. His most prominent qualities were unbridled lewdness, cowardice, cruelty and ostentation. The latter seems towards the end of his life to have overcome even his cowardice; cf. his provocative attitude against 'Khalīd b. 'Abd Allāh al-Kāsī (Aghānī, xix. 29 et seq.). Apparently chivalrous actions also such as his intercession on behalf of a widow (Aghānī, xix. 36, 50) or the numerous cases in which he took the blood guilt of a stranger upon himself are really to be explained from his unbounded vanity. His cruelty was proved at the massacre of Greek prisoners.
which Sulaimān once ordered in Medina [cf. Ṣaḥīḥ]. Some of the stories of his cowardice are most scathing (Aḥāni, xix. 25 and particularly 29) as well as those of his lasciviousness. He plays a role in obscene stories in Arab literature similar to that of Abū Nu'wās at a later period. Aḥāni, xix. 35 et seq. is peculiarly characteristic of his lack of scruple in sexual matters. This defect in his character gave his rival Djiar many an opportunity for well-merited scorn (Naḍafī, p. 394 et seq.). In his favour it has been urged that he was all his life a faithful supporter of the house of 'Alī. But he really only showed this on one occasion, with regard to the contested throne of Hishām (for details see Aḥāni, xiv. 78 and Brockelmann, op. cit.). He was usually content with showing his sympathy in a rather non-committal fashion (Aḥāni, xix. 34, 47 et seq.; Ibn Khallikān, iii. 620). Nor must it be forgotten that on other occasions he shows sympathies which seem to be Khāridji (cf. Hell in the Zeitschr. d. Deutsch. Morgenl. Gesell., lix. 593), and which certainly can hardly be reconciled with real attachment to the ʿAlīid cause. How deeply he really was still sunk in Bedouin paganism may be seen from the fact that he hurled at Muhallab the reproach that his ancestors had never worshipped Yaghūb and other gods of their ancestors. In pagan fire (Zeitschr. d. Deutsch. Morgenl. Gesell., lix. 600). Similarly he had little hesitation in weaving passages from the Korān into an obscene passage (cf. Boucher, N°, 188, p. 539 = text, p. 180, from below). — The only verses that really came from his heart are those in which he expresses his terror of Ziyād. In Aḥāni, xix. 12 et seq., he gives a touching elegy on the death of one of his sons and afterwards says that the deceased was not worth his ʿAbūyā. That he appropriated verses by other poets (Aḥāni, xix. 22) without hesitation may be excused from the practice of the times. — The Arabs make him die a kind of Antichrist (Aḥāni, xix. 24), although he had fits of piety towards the end of his life and expressed lively fear of the next world in certain verses (Kāmil, p. 70, 61-65).

Although al-Farazdāk particularly cultivated the satire and its opposite the panegyric and begging-poem, other kinds of poem are also found from his pen: Kāmil, p. 208 and Boucher, N°, 119 as well as Hell (Divān), N°, 306 (Tabarī, ii. 103, 11-20) are epic fragments while Boucher, N°. 47 is a song on wine; the verses given in Aḥāni, xix. 9-7 from below are simply obscure without personal reference; his laments have already been mentioned.

Al-Farazdāk was particularly fond of making short poems as these were more effective and more readily preserved (Aḥāni, xix. 35).

We may further add as regards the appreciation of Farazdāk's poems by the Arabs that he was particularly esteemed by the Tamīm, while the Kais preferred Djiar. His opponents do not seem to have ever seriously attempted his life, although they often treated him badly. Philologists in later times esteemed him on account of his immense vocabulary (Aḥāni, xix. 48, 5 from below). A large number of his verses have become proverbial (Aḥāni, xix. 15 et seq.).

FARUD (A.; plur. of fārid) = single, unique, without an equal etc. The word is a technical term in various branches of knowledge.

In theology it designates God as the One, whom there is none like. In the Korān and in the sayings of Muḥammad that have been transmitted in tradition al-fard does not appear as an attribute of God. Al-Azhari on this account disapproves of the application of the word to Allāh. But it is possibly simply a paraphrase of the Korānic (huwa Allāh) ʾāḥad, which has the meaning "unique" in this passage only if at all.

In poetry fard means an isolated verse.

In Tradition fard is synonymous with gharīb musfād. This is the term applied to a tradition, whose chain of transmitters is known only to the second link only by one of the Tabīʿīn (members of the first generation after Muḥammad).

In Arabic grammar fard (with musfād and wāḥid) is a name for singular.

Bibliography: Muḥammad Alī, Dictionary of Technical Terms, ii. 1087, 1107; Lane, s. v.

(A. Schade).

FARD means that which is strictly prescribed and obligatory, the omission of which will be punished while the execution will be rewarded. According to the Ḥanafi school fard means that which is regarded as duty on the basis of cogent arguments; wāḥid (i.e. necessary) on the other hand is that which is considered a duty by the fākhs on grounds of probability only. According to the Shāfīʿīs and other Fikh-schools fard and wāḥid are synonyms. The law distinguishes fard al-ʿānak, to which every one is bound and fard al-kifāya (or: ala l-kifāya), in which it is only demanded that a sufficient number of Muslims should fulfill the religious duties concerned (as, for example, the performance of the common ʿaṭā in the mosque and the waging of the holy war). Cf. also the article Fīrād.

(Th. W. Juvyboll).

FARGHĀNA, Russ. Farganskaya oblast', a territory in Russian Turkestan, in the valley of the Sir-Darya. The name strictly is only that of the valley itself, bounded in the north by the Çotkal range, in the east by the mountains of Farghāna, in the south by the Alai range; in the west the boundary is less sharply defined by the approach of the mountain chains to the river bank, which causes the river to alter its course, which in Farghāna is predominantly southwesterly, first to a western then to a north-
western direction. Between the mountains and the stream there is here, particularly on the south bank, an open space. It is only on this side that the Farghāna valley is connected by a natural road with other lands, and therefore, as Bābur notes, only accessible to hostile attacks all the year round at this point. On the sources of the river and their junction in Farghāna cf. the article SIR-DĀRKĂ. Under Russian rule, the mountain valleys of the north, northeast and south, inhabited almost exclusively by nomads, have been united with the Farghāna valley to form one administrative district, just as in the ivth = xth century when the Arab geographers reckoned the Čotkal valley (Arab. Džudgīhī) as belonging to Farghāna. The administrative district of Farghāna has an area of 40,800 square miles of which only 10,200 belong to the valley proper and of these again only 4000 belong to the land irrigated by the river. In 1897, the population was 1,525,136 (now nearly two million) of whom by far the greater number live on the land irrigated by the river. Unlike all other lands of Russian Central Asia, Farghāna suffers on this account from want of land and over-population; there are only about 1.8 acres of irrigated land to 40 inhabitants and about 10 acres to each landowner.

Our oldest notices of Farghāna are due to the Chinese envoy Čang-k’ien (c. 128 B.C.). In these and the other early Chinese accounts the country is usually called Ta-yiian; the name Farghāna (the oldest Chinese transliteration is P’o-lon’a, later Pa-han-na, P’o-han and Pei-han), only appears in the fifth century A. D. Even the Chinese found an agricultural population here; it numbered only about 60,000 families (about 300,000 people); there were 70 “towns” (apparently villages). The Chinese claim to have brought their iron industry, as well as the art of making articles of gold and silver, to Farghāna; as Hirth suggests, the sēricum ferrum mentioned by Pline was possibly exported from Farghāna. On the other hand the Chinese first became acquainted with the vine and the lucerne (as horse-fodder) in Farghāna. It has been suggested by several Sinologists, including Hirth, that the cultivation of the vine was first introduced into Central Asia by the Greeks and that the Chinese p’u-t’ao is derived from the Greek βυτρός. The name, however, could only have reached China through the intermediary of Persia, which seems out of the question, as no similar Iranian word has yet been shown to exist and besides Strabo (Chap. 73) expressly says that the Greeks had found the vine cultivated everywhere in Central Asia from Hyrcania eastwards. Farghāna was little affected by Graeco-Bactrian culture, which is evident from the fact that the use of coins was still unknown there in the second century B.C.; whether a different state of affairs existed later and whether coins were struck at all in Farghāna in the pre-Muhammadan period as they were in Samaḵand, Bukhārā and Khvāārizm, is not yet definitely known. Central Asia owed to the Graeco-Roman West, apart from the undeniable influence of Greek art, its glass industry which was still fairly important in the early centuries of the Ilīḍrā; the progress of this industry from the west through Iran and Central Asia may also be traced in the language (Greek βύτρας, Pers. bītār and bītār, Chin. pō-lo’i and pō-li’); no mention is made of the development of this industry in Farghāna in the authorities, but its product at least were common in Farghāna also at a later period as the excavations conducted in Akhsikāt in 1885 have shown. Farghāna is not mentioned by the classical geographers; very little of what they tell us about the upper course of the Jaxartes can be reconciled with the later and more accurate accounts of the Arabs; the name Arestis of the people mentioned by Piolemy seems, for example, to correspond to the name of the river and district of Ṣū in Osh (cf. below) (W. Tomasek, Seydiuns, p. 48).

As early as 104 and 103 B.C. the Chinese undertook campaigns against Farghāna, but it is only the history of the centuries immediately preceding Islama that is known with some certainty from Chinese sources. According to the Pei-iščı, the statements in which refer mainly to the viith century A.D., the capital of the country had a circumference of only 4 li (about a mile); the king’s throne was in the shape of a golden ram; his army was several thousands strong. According to the T’ang-shu (which comes down to 754 A. D.) there were 6 large and about 100 small “towns” in the country; the same authority says that the same dynasty had ruled the country without interruption from the third to the viith century A.D. The king of the country was slain between 627 and 649 in a battle with the Turks whereupon a Turkish dynasty seized Farghāna a brother of the late king was only able to hold out in a portion of the country. The town of Kāsān (Chin. K’o-sai) is mentioned as the residence of the Turkish ruler; the native ruler lived in the town of Ḥu-Men(?) When after the collapse of the great Western Turkish empire (658) the country was organised as a Chinese province for a brief period, Kāsān was the capital of the whole country; at a later period the native dynasty seems to have been utterly uprooted by the Turks, for a Turkish ruler (Ahrān Tārkhan) is mentioned in 739 as ruler of all Farghāna. The native dynasty seems to have lost its importance long before this for in 630 Huan-Čang found no single ruler of Farghāna who desired to be fighting with another; the land had been for some decades previously in the condition in which this traveller found it. In the latest Chinese source, the T’ang-shu, Akhsikath (Chin. Si-Kiin) appears as the capital of Farghāna as in Baladur (ed. de Goeje, p. 420); on the other hand the majority of the accounts of the Arab campaigns of siege against Kāsān as the capital (Ya’qūbī, Geogr., p. 294; do., Hist., ii. 478; Ṭabarī, ii. 1257, 11). At the present day the name Kāsān is borne by two towns adjacent to one another, Yukari-Kāsān (Upper Kāsān) with about 4700 inhabitants and Karasu-Kāsān with about 8000; somewhat to the north of Yukari-Kāsān lie the ruins of an old fortress (only about 6’/acres in area) which are called Mugh-Kūrghan (“the fortress of the fire-worshippers”) by the natives (on these ruins cf. A. Briano in the Protes- ti Turk,布鲁河, пход. археологи, iv. 142 et seq.).

The Arabs found practically the same conditions existing in Farghāna as in the other parts of Mā warā ‘al-Nahr. The landowners or knights (dikhān, Arab. plur. dakhā’in) formed the ruling class; the king was no more than the first knight in his country and was called like them dikhān (Ḥudād al-Allām, Cod. Tumanskij, f. 23b); he also bore the Iranian regal title Ḳahkḥid (cf. particularly Ṭabarī, ii. 2142, N. d.).
The rulers of Farghana offered a stubborn resistance to the Arab conquerors; more than a century was to pass between the first campaign under Kutaibah b. Muslim (94 = 712-713) and the final subjugation of the country. In the year 96 = 715 Kutaibah rebelled in Farghana against the Caliph Sulaiman and was slain by his own soldiers; according to Nar-bakhi (ed. Schefer, p. 57) his tomb was in the village of Kakh, according to Djamal al-Kurashi (in Barthold, Turkest an etc., i. 148) in the village of Kultagh (the two names seem to be identical and the difference to be due to corruption in the manuscripts). At the present day the tomb of the "Imam Shaikh Kutaibah" is pointed out in "Shah-Kuduk" (now in the community (violet)) now belonging to the circle of Andijan, and formerly to that of Osh (Protokoli Turk. Kurd. etc., iii, 4); but as far as is known it has never been described or reproduced. According to the opinion of the Arabs this district was "in China" (cf. the verses by the poet Ibn Djumana al-Bahili in Baladachri, p. 204).

Kutaibah had (probably in 94 A.H.) left Islam b. 'Abd Allah al-Balili behind in Farghana (Tabari, ii. 1440, 17): a ravine was called after this "Isam" it lay on the road from Farghana to Khash (Tabari, ii. 1276, 9) or in the modern road (redil) of Isfa (Tabari, ii. 1440, 15). After Kutaibah's death the Arabs seem to have been driven out of Farghana, for the ruler of Farghana was able in 103 = 722 to offer the "ravine of Islam" to immigrants from Sogd (Tabari, ii. 1440); but no mention is made in the historians of the defeat and expulsion of the Arabs. According to a later story (first given by al-Kurashi, in Barthold, Turk estan etc., i. 148) Muhammad b. Djair fell in the head of 2700 "companions and their followers" (yastaba va iiftabin) in battle against the unbelievers at Safid-Bulun or Isfa-Bulun in Farghana (in the neighbourhood of Kasak) under the Caliph Othman; the same story is told with some alterations in a work popular throughout Central Asia, presumably translated from the Arabic into Persian and thence into Turkish (Protokoli Turk. etc., iv. 149 et seq.).

Naas b. Saiyir was the first to be able to send a governor to Farghana again (121 = 739, cf. Tabari, ii. 1694, 9); but on this occasion again Arab rule did not last long. From Yaqubii (ii. 465) it may be assumed that the ruler of Farghana had retired to Khash; but even there he was defeated in the reign of Mansur (136 = 754—775), had to sue for peace and pay a large sum. His envoy was thrown into prison for his firm refusal to adopt Islam and only released in the reign of al-Mahdi (158—169 = 775—785). An army was sent by al-Mahdi against Farghana under Ahmad b. Asad; Kasan is again mentioned in connection with this expedition as the residence of the king, who apparently had won back his country in the interval (Yaquobi, ii. 478). In the time of Harun al-Rashid, during the partitioning of Ghur, b. Asf (175—176 = 792—793), 'Amr b. Djair was ordered to destroy the Djabghu (probably the king of the Turkish Karluk) out of Farghana (Gardaz in Barthold, Turk estan etc., ii. 207). Under al-Ma'mun (198—218 = 813—833) an army had once more to be sent against the rebellious inhabitants of Farghana; at the command of this Caliph the administration of certain parts of Mawar-i-Nahr, including Far- 

ghana, was entrusted by the governor Ghassan b. 'Abbad (203—205 = 819—821) to the Samanid family. The Samanid Nish b. Asad (died 227 = 842) was the last Muslim governor of Farghana (Kasun and Erast) had to be reconquered on account of the apostasy of their inhabitants from Islam (Baladachri, p. 420). When the native dynasty was finally overthrown it is not related. In the reign of Mu'tasim (218—227 = 833—842) there were men from Farghana (Faraghina) in the Caliph's bodyguard (Baladachri, p. 431). In 224 = 838—839 Farghana was visited by a severe earthquake (Gardaz in Barthold, Turk estan etc., i, 3).

The Farghana of the Samanid period is described in great detail by the Arab geographers. The focus of the industrial and commercial life of the country seems at this time to have been transferred to the lands south of the Sir-Darya. The oldest Arab geographers, like Ibn Khurdadbeh (ed. de Goeje, p. 30), make the road from Western Asia to the eastern boundaries of the Caliph's dominions cross the Sir-Darya at khodjan, thence follow the right bank as far as Akhsikath, thence on across the river to Kubah, Osh and Uzgand. On the other hand 'Isbakhi regards the road through the lands lying south of the Sir-Darya as the main road; this led the Kudah (in Bubur, ed. Beveridge, f. 42, Kand-Bada, the modern Kain-i Badaim), Sogh (the modern Sari-Kurgan; Sogh is now the name of a mountain village on the same river but considerably farther south); Rightan (still bears the same name), Zandaramish and Kubah (the modern Kuvaj). There was only a bye-road from Sogh via Khokand (the later capital) to Akhsikath. Akhsikath was still considered the capital (qasaba), Kubah only the second town ('Isbakhi, p. 333); but Muqaddasi (p. 278), says that Kubah is larger and more beautiful than Akhsikath and ought really to be considered the capital. The third town in importance was Osh on the frontier; there was a large ribat (fortified military station) there, into which warriors of the faith poured from all sides (Muqaddasi, loc. cit.); the movements of the Turks were watched from the hill near Osh. Uzgand was about 1/3 smaller than Osh; it is called the "town of the Dihkan Djur-Tegin" (this is the proper reading) by Ibn Khurdadbeh (p. 30) and Kudama (p. 208), so that it was probably the residence of a Turkish prince; Cuir-Tegin is the modern name of a district east of the Yazi pass (Petrovski in Zapiski vost. etd. Arakh. Oghii., vol. 357). The towns of Biskand and Salat were also regarded as "gateways to the Turks" by which one came through the district of Miyân-Rdbah (between the Narin and the Kaha-Darya; the modern Iskak-arasa); the district was called Haft-Dih "seven villages") and had, as Ibn Hawkal (p. 396) says, been taken from the Turks only a short time before; it is apparently the same district as was later called Yitikand (or Litikand) (Tarikh-i Rashidi, transl. E. D. Ross, p. 180).

The land was divided into several districts (kira, pl. kwarar); generally Biskand, Biskand and Salat, Ibn Hawkal (p. 395 et seq.) mentions the following districts, Upper Nasya with Sogh, Khokand and Rightan, Lower Nasya (to the east) with Marghian, Zandaramish and Andukhan (the modern Andijan), Asbara (Isfara) in the plain and in the mountains, Na§kh in the mountains, with the town of Miskan (7 farsakh from Kuba,).
Djiddih (in the valley of Çotçal, with the town of Ardülünkâth and Ürast (near Ösh); several smaller districts are also mentioned. Muqaddasî, who uses the word kūra in another sense and makes the whole of Farghāna one kūra, divides the country into three parts, viz., the land between the Narin and the Kara-Daryâ, the land south of the Sir-Daryâ and the land to the north of the latter river; it is apparent on this that the division of all the towns of Farghāna into Miyânârâdîya, Nasûây (from Nasûy) and Wâghîzya is based, although some towns south of the Sir-Daryâ are erroneously reckoned by Muqaddasî among the Miyânârâdîya (e.g. Zandarûmish) or among the Wâghîzya (e.g. Aşwell and Miskân). Khālitâm (in the Hûdūł al-ʿĀlam, f. 26, Khatlâm, in Muqaddasî, Khâriqlâm) was the chief town in Miyân Rûdīnā, it lay on the Narin (the river itself is called Rûdī Khatlâm in the Hûdūł al-ʿĀlam), and was the birthplace of the Sâmânî Abu l-Ḥasan Naṣr, the eldest son of Aḥmad b. Asad (Iṣṭâkhîrî, p. 334); according to Muqaddasî (p. 272) perhaps the same Aḥmad b. Asad built the town of Naṣr in this district for his son Naṣr. Of the larger towns of the present day only Marghânâ (in Muqaddasî, p. 272) is mentioned as a small town; nothing more than the names of Khâkand and Andukân are given. According to Muqaddasî there were in all 40 places in Farghāna with Friday mosques. As Iṣṭâkhîrî (p. 333) notes the villages in Mâ warâ al-Nahr were nowhere so large as in Farghāna; it sometimes happened that a village stretched for a whole day's journey on account of the number of its inhabitants and the extent of their fields and pastures.

The mountains of Farghāna yielded gold, silver, mercury (according to Muqaddasî, p. 326, no. at Kubâ), petroleum, turquoises (at Khojand, cf. Muhammad Bakrânî in Barthold, Turkestan, i. 81), iron, copper, lead and sal-ammoniac (at Uzgând, cf. iūdâ). Ibn Ḫawkâl (p. 398, 1) mentions tarragon as a special feature of Farghāna, the seed of which was exported to all countries and an article called kîlân or kîlân (cf. Ribl. Geogr. Arâbâ, iv. 344; according to the passage there quoted from Vullers' Lexicon it was a black wood, which was used as a remedy for certain diseases, notably wounds in the intestines). There were deposits of coal at Isfârâ; the price of coal which even in those days was used as fuel, was (Iṣṭâkhîrî, p. 334) 1 dirhem for three assloads (aksi, plus avkâr); as an assload contained at least 60 kg., this was very cheap; at the time of the Russian conquest one pud (16.35 kg.) was being sold at 32 kopecks (about 1½ dirhems) and even today the price of coal is immeasurably higher than in the Sâmânî period. The manufacture of iron, which had been introduced by the Chinese, no longer existed; according to Muqaddasî (p. 325, 12) Turkish slaves, white clothstuffs, curasses and swords, copper and iron were exported from Farghāna and Isfîdîgâb; the last four articles must refer not to Isfîdîgâb but to Farghāna only. Under Sâmânî rule the land developed considerably; according to Ibn Khâriqlâmî (p. 38, 12) the revenue from taxes in Farghāna was only 280,000 dirhems, in Ibn Ḫawkâl's (p. 343, 5) time it had risen to a million. Islam seems by this time to have held undisputed sway; whether there were Christians, Manicheans and fire-worshippers here, as in Sâmânî, at this time is not related. As everywhere in Mâ warâ al-Nahr Ḥanafîs predominated; there were also monasteries (khwârînî) of the Karâmîya (Muqaddasî, p. 313, 12). A few Biblical legends had been located as early as this time in Farghāna; the "tomb of Job" was shown (Muqaddasî, p. 46, 14); this apparently refers to the medicinal spring (about 55 miles east of An-dûjân) still known by the name Ḥâṣrât-Ayîyûb.

No buildings of the Sâmânî period seem to have survived. Nevertheless, Čevelovski however discovered an Arabic inscription of the year 329 = 940-941 at Ösh in 1885 (Ocet Imperatorskoi Arheologicheskoj Kommissii za 1882-1888 god. p. lxiii.).

Like all other parts of Mâ warâ al-Nahr, Farghāna was conquered towards the end of the ivth = xth century by the Turkish Hâk-Khâns or Karâkhanîds. Rulers of this dynasty struck coins in Uzgând (particularly common), Aḥskisâh, Hafîtâdî, Kâsân and Marghânân; the land (Farghāna) is frequently mentioned on the coins in place of the mint-town, as was also the case with the Sâmânî coins. In the historical sources of this period Uzgând is mentioned with particular frequency as the residence of the king of all Mâ warâ al-Nahr (cf. Barthold, Turkistan, ii. 282 et seq.) and later as the residence of a local chief. As the coins show, Farghāna during this period, when it had no king of its own, belonged sometimes to Mâ warâ al-Nahr and sometimes to Kâshghar. In the years 482 = 1089 and 483 = 1090 Sultan Malik-Şâh penetrated to Uzgând. After the battle of 536 = 1141 Farghāna, like the other lands of Mâ warâ al-Nahr, had to submit to the Gûrkhân of the Kara-Khâlitâ; but following their usual custom these conquerors left the earlier dynasty and institutions unchanged. In the second half of the xth = xiiith century Sâmânî seems to have been conquered by a king of Uzgând; coins of Ibrâhîm b. Ḥusain were struck in Uzgând from 560 = 1165 but in Sâmânî only after 574 = 1178-1179. After the death of this ruler his son ʿOthâm ruled in Sâmânî only; Uzgând belonged to another ruler Djalâl al-Dîn Kâdăr-Khân. Soon after 609 = 1212 the southern part of Farghāna was conquered by Muhammad Khaṭîrîmshâh with the other parts of Mâ warâ al-Nahr; the northern part with Kâsân and Aḥskisâh had to be left by the Khaṭîrîmshâh for his rival Kûlîk, king of the Kânîmân. In the Chinese annals Ho-sî-mi-li (probably = İsmâʿîl) is mentioned as the king of Aḥskisâh and Kâsân, who submitted to the Mongols in 1218. During Mongol supremacy Farghāna was one of the possessions of the house of Câghatâtî [p. 1 i. 1 i. 2 t. seq.], but, like many other districts in Mâ warâ al-Nahr, had also a local dynasty which, like its predecessors, had its capital in Uzgând; this town had been granted by the Great Khan Mongke to Arslân-Khân, king of the Kûrâk (Djuwâwînî in Barthold, Turkistan, i. 108). Djalâm al-Kûrašît (ibid., p. 149) mentions İllî-Malik as Wâlî of Farghāna; the tomb of his son Kuṭb al-Dîn Satîmîsh Malik Şâh, who died in 665 = 1266, still stands in Uzgând. In spite of its local dynasty Uzgând was of some importance to the central government under the Kara-Khâlitâ and Mongols; Djuwâwînî says that the treasures (ẓâbânâkâh) of the Gûrkhân were there; according to Wâṣîf (Indian edition, p. 67 at the foot) it was there also that Burâk-Khân [q. v., i. 794 et seq.] ascended the throne and
appropriated the treasures (khasiyān) of Algha and Urgūnā (cf. Caghātāz, i. 812 et seq.).

Several buildings, in addition to a considerable number of tombstones have survived in Uzung from the period viih—viiith = xiiih—xivh centuries; among them is the gateway of a beautiful sepulchral mosque with an inscription where the date of the death of the individual buried there is given as 585 = 1192; beside it there is a second mausoleum and a minaret about 60 feet high; legends only have survived among the present day inhabitants regarding the origin of these tombs; according to some the saint Burāhān al-Dīn Kūlīji was buried here with his steed which is also mentioned by Djamāl al-Kurashī in Barthold, Turkestan, i. 149 others say these are the tombs of "two brothers", the kings Ilīk-i Māḏi and Sāndjār-i Māḏi; in reality the latter’s (died 552 = 1157) tomb is in Merw; "Ilīk-i Māḏi" was Nasr b. ‘Ali (died 403 = 1012-1013) the conqueror of Mā warā al-Nahr who according to the historians was actually buried in Uzung, although his tomb has not survived.

Kūba is not mentioned after the 1vth = xih century; why the prosperity of the town was of such short duration is not known; the story of the “five brothers of Kūba” and their fight with Mūbasīrīn (2v, 193) with which this story is also mentioned by Djamāl al-Kurashī in Barthold, Turkestan, i. 149 et seq.) is legendary. Besides Uzung, Marghānān had attained considerable importance by this time; to Yākūt (iv. 500, from Sam‘ānī) Marghānān is “one of the most famous of cities”; Rīshān, which was of incomparably greater importance in the ivth = xih century, now appears as a mere village in the district of Marghānān (Yākūt, i. 781); the author of the Hidayā, for example, (died 593 = 1197) called himself Margūnimt although he really was born in Rīshān. Towards the end of the viih = xiiih century Farghānā was given a new capital, Andākān founded by Kādżī (7th century), which corresponds to the Andakān of the Arab geographers; the new form appears first in Djamāl al-Kurashī (in Barthold, Turkestan, i. 149 et seq.), although the old is still found in the Zafar-Nāma, (Ind. ed., i. 263 et seq.); in Sultān ‘Omar Shaikh’s Ughur document of the year 873 = 1469 (published by Melloranski in the Zapiski Vost. Otd. Arkh. Ohb., xvi. 101 et seq.) the town is called Andākān.

An Arabic Inscription of the Karakhanid period dated 29th December 1041 in three eras, the Muḥarram, Ṣaḥānīn of Persia and the Greek (Rūm), etc., Syriac-Christian, still exists in the southern part of Farghānā in the ravine of Warak, (south of Isfara) (Protokoli Turk. Kručko Ljub. Arkh., viii. 46 et seq.).

Timūr and the Timūrids had often to fight for the possession of Farghānā with the rulers of the modern Chinese Turkestan; it is evidence of the close connection between Farghānā and Chinese Turkestan that amongst other things in both countries the smallest division for purposes of taxation (which as communities corresponded roughly to the rūṣūk of the older period) was called Armenia (Bakur-Nāma, ed. Beveridge, f. 313), while in the other parts of Mā warā al-Nahr the word Armenia was used in Persia. ‘Omar Shaikh, a descendant of Timūr, ruled Farghānā as an independent kingdom from 873—899 = 1469—1494.

On his successor and the conquest of Farghānā by the Uzbekcs cf. Barber (i. 547 et seq.).

In Bābur’s time there were eight cities in Farghānā (exclusive of Khūdānjān, which Bābur also includes in Farghānā); of these two (Akhsī — the form Akhsī-khāth was only known to Bābur from books — and Khādān) north of the Sir-Daryā and six to the south of it; of the latter he describes Andidjān, Ösh, Marghānān and Isfara; Khōkand is nowhere mentioned by Bābur as a town although Djamāl al-Kurashī (in Barthold, Turkestan, i. 148 et seq.) says that the tomb of a Muslim saint, the Imam ‘Abd Allāh b. ‘Ali, a brother of the Imam Muhammad Khādār, was there. The name itself is written Khūkand by Bābur (f. 105 and 103v) as the name of a district (qūnān); in the xvih century (e.g. in the Tuhfet al-Khānī of Muhammad Wafā’ī Kāmīnegī, Ms. of the Asiatic Museum c 581, f. 500) the form Khūkan appears and in the older Russian notices Kukan; the form Khōkand, Russian Kokand was only restored in the xixh century through literary tradition. In the capital Andijān the Turki language was already predominant in Bābur’s time; there was no one in the city or in the marketplace who did not understand it; Bābur even says that the dialect of Andijān is identical with the Eastern Turkish spoken by the Bāburīs (f. 105r) and by Mīr ‘Alī Shīr Nawātī. On the other hand “Sartish” was still spoken in Marghānān, i.e., according to the idiom of the time, Persian. Of the products of Farghānā Bābur particularly esteems various kinds of fruits; besides orchards there were flower gardens, which stretched along both sides of the river from Andijān up to Ösh. The Takhir-Sulaimān mountain at Ösh is mentioned by Djamāl al-Kurashī under the name Barakā, by Bābur (f. 26b) as Barakūh; Bābur makes no mention of the localisation here of Solomon’s legends (he only mentions that there were many hidūsh on the advantages of Ösh), but this localisation must have taken place by his time, for Djamāl al-Kurashī says that the tomb of the vizier ‘Asfāh b. Barakhyā (q.v., i. 476v) was not far from the mountain. During the last years of the reign of ‘Omar Shaikh a rock of a red and white colour was discovered on this mountain, from which knife-handles and other articles were made; a tree called Ṛbūlghān (Spirola Cretacea) also grew in the mountains which Bābur (f. 55) thought was found nowhere else (in reality it also grows in South Russia), the wood of which was used for making bird-cages, quivers etc. As to the mines and mining we are only told that turquoise and iron are found in the mountains; no mention is now made of the manufacture of arms in the mines. As a result of the trade-venue of the country “with good government” was sufficient to maintain an army of 3000—4000 men.

Farghānā from the xih = xvih century belonged to the Uzbek kingdom. Andijān is sometimes mentioned as the residence of one of the many minor rulers of the Shaibanid dynasty; in the xvih = xviiih century the land was for the most part in the possession of Khīghiz Sultān. Farghānā “had even been replaced by Andijān” as the name of the country in the Bahr al-Iṣār of Mahmūd b. Wali (Cod. India Office, 575, f. 102v) the following note is made regarding Farghānā, ki aytam bā Andijān mashhūr ast. Towards the end of this century, after the collapse
of the Uzbek kingdom, authority in Farghāna, as in Chinese Turkestan and at a later period in Tashkent, passed to a number of Khojās who lived in Ĉadāk north of the Sir-Dāryā: this place is mentioned as early as the 19th century (Muṣaffādāt, p. 262, where Ĉarāk must be a mistake for Ĉadāk). The power of these Khojās was destroyed by Shāhriyār Bī who succeeded in founding an independent Uzbek kingdom in Farghāna, with Khōjānd as capital: according to Mulla 'Abd al-Muẓaffar Muḥammad (Tārīḵ-i Shāhriyār, ed. Pantusow, p. 21) this took place in 1121 = 1700-710. On this kingdom, which lasted till its overthrow by the Russians in 1876, cf. the article Khojānd. During this period also the name Farghāna seems only to have been known to people with a literary education; ʻAbd al-Karim Būhārī (ed. Scheher, p. 43 et seq.) for example says that the kingdom of Khōjānd in earlier times (dar awāzū) was called "Farghāna". The same historian mentions "Farghāna and Taḵt-i Sulaimān" as the seventh town in the kingdom (after Khōjānd, Tashkent, Khiva, Anārkī, Marghīlan, and Merv) which shows that the name Farghāna was chiefly applied to the town of Osh. Since the establishment of Russian rule a complete transformation in the economic conditions has been effected in Farghāna, particularly through the rapid development of the cultivation of cotton. Previously the land was only exported a very small quantity of raw material after supplying its own wares; since the introduction of American varieties this article has become of importance for the Russian market; about 115 million kg. are annually exported, which supply one third of the amount required by the Russian cotton industry. The cultivation of cotton now brings the country an income of about 40 million roubles; this influx of money was naturally followed by a rise in all prices and a severe economic crisis, which has not been without evil results to the morale of the people; the rising in 1898 was unmistakably influenced by this crisis. The silk-trade is next in importance; it is not mentioned by the geographers of the middle ages and seems only to have developed in Farghāna in the 18th century under the influence of China, as in Samarqand under the influence of Persia. In 1889 about 245,000 kg. of raw silk were exported, valued at 3 million roubles; the amount produced is now about 225,400 kg., but prices have sunk so that this industry now yields only about 2 million roubles. The growth of cereals has declined with the development of cotton so that the country can now only meet its requirements by imports from the district of Samarqand. Little has yet been done to develop other branches of industry or the mines and the deposits of coal. Means of communication are still very unsatisfactory, although since 1899 the country has been traversed by a railway as far as Andiţān; in 1912 a branch line from Khōjānd to Namangān was also opened; there is an almost entire lack of good roads and strong bridges are particularly wanted. The former capital Khōjānd still forms the focus of the industrial and commercial life of the country; it is now a city with about 115,000 inhabitants; Namangān, first mentioned as a village in the 18th century, is now the second town in the country with over 70,000 inhabitants. The town of "New Margelān" now called Skobelew, founded by the Russians, the residence of the military governor, has a population of only 12,000. This relatively thickly populated territory is of less consideration for purposes of colonisation than the other parts of Russian Turkestan; 17 Russian villages of which six are in the Farghāna valley proper, have been founded in Farghāna. F. Petrovskij, Ocherki drevnosti i dejatelnosti v Sred. V. Evropy (St. Petersburg 1874); Materiali dlia statisticheskogo opisanija Ferganskoi oblasti (5 parts, 1897-1910); Sbornik narodenikh mest Ferganskoi oblasti (Skobelew 1909). A lecture by Prof. A. Wojtkow to the Imperial Russian Geographical Society on the 15th = 28th November and 27th November = 10th December 1912. (W. Barthold.)

Al-FARGHĀNĪ is the astronomer Alfraganus of the middle ages. His full name was Abu ʿl-ʿAbbās Ahmad b. Muḥammad b. Kaṭīr al-Farghānī, i.e. born in Farghāna in Tiansooxan but there is no general agreement as to his name. The Phāhrīs has only Muḥammad b. Kaṭīr, Abu ʿl-Faradj only Ahmad b. Kaṭīr, Ibn al-Khīṭī distinguishes two persons, Muḥammad and Ahmad b. Muḥammad, father and son, but it is very probable that all refer to one and the same individual, an astronomer who lived in the reign of the Caliph ʿAlī b. Abī Ṭālib. He was said to have been sent to Fāsurāt by the Caliph ʿAlī b. Abī Ṭālib. He was said to have been sent to Fāsurāt by the Caliph ʿAlī b. Abī Ṭālib. FARIDPURA district of India in eastern Bengal, lying in the delta of the Ganges. Pop. (1911), 2,121,914, of whom 62.9% are Mohammedans. Here was the birthplace of Haji Sha‘ri Atallah, the founder of the reformating sect of Farabiyya [q.v.] or Faraizi and of his son Duda Miya, who caused some trouble to the British Government in the middle of the 19th century. The sect is still numerous in Faridpur. The town (pop. 11,649) takes its name from a saint, Farid Shah, who is buried there.

FARIS, in Arabic, a "large body of men" also a "section of a caravan"; whence in Turkish, since the reforms (Tanzimat), the general of a division in the army and vice-admiral in the fleet. This rank corresponds to that of Istanbullis in the hierarchy of the 'Ulema', Ruth-i ilah (Sinfra evvel) in the civil service and beylerbey or Kamil in the ancient administrative organization; there are also Birindji Farkh (of the first class), whose rank is equal to that of the Bâta (civil). The latter have the right to be called 'Opfet-i (gracious) while the former have to be content with the title 'Se'det-i (fortunate); both titles are followed by the expression 'Hagretleri' which is translated "His Excellency" in the Turkish diplomatic service. (Cl. Huart.)

FARIS AL-SHIDYAK AHMAD B. YUSUF, an Arabic journalist and author, born in Bairut of Maronite parents, was educated at a Maronite school in Cairo and then for some time collaborated with Shihat al-Din on the Egyptian official gazette al-‘Azhari in 1288 = 1871. — Faris is also the name of a recent Persian poet, Mīrīzā Farhang (Abū ‘l-Kāsim) who lived at Shiraz and died about 1892; he was the fourth son of Wīsāl (Mīrāz Kākā) and was 31 years old in 1295 (1878). He was made poet-laureate to Mu‘ayyid al-Dawla ‘Ābānas Mirzâ, governor of Fars.

FARID AL-DIN, an epithet of Ḍār al-Farid (q.v., i. 513 et seq.) and of Shahar Gandj (q.v.)
Paris where he composed his *Grammaire Française à l'Usage des Arabes de l'Afrique*, de l'Égypte et de la Syrie (Paris 1854) with G. Dugat, and to London. He gave an account of his journey, which suggested to him many critical observations on the Arabs and other peoples, in his Kitâb al-Sâq 'ala 'l-Sâq fîmâ hurâwah 'l-Fâryâq 'an Aqâyam wa Şâhirâh wa 'l-Awâm fî 'l-Čidm al-'lârb wa 'l-'Aqâyam, Paris 1855. His *Practical Arabic Grammar* (2nd ed. by H. G. Williams, London 1866) appeared at the same time. From London he went to Stamboul and there became a convert to Islam.

At the end of July 1860 he founded the Arabic weekly *al-Djâmâ'îb* there, which, subsidised by the Turkish government, took up the cause of Islam but also gave Muslims a knowledge of Europe. At the beginning of the eighties his paper enjoyed the greatest prestige throughout the whole Muslim world, but his son Salih, who undertook the editorship on the death of his father in 1305 = 1884, was unable to maintain the same level. He published selections from this newspaper in seven volumes (Stamboul 1288—1298) entitled *Kanz al-Čiğâb bi Minâshkhat al-Djâmâ'îb*, containing essays on literary subjects, a history of the Franco-Iranian war, poems by and panegyrics on himself and in the last three volumes a history of the Ottoman Empire to 1298. He also found time for serious philological studies. Besides an Arabic primer he published studies in Arabic etymology entitled *Sirr al-Layâil 'ala 'l-Kâbah wa 'l-Abâdîb*, Stamboul 1284; a grammar, *Ghyarat al-Činâb wa Minyât al-Čiğâb n-l-Nâzâwâw wa 'l-Sârîf wa Huûf al-Mâsîn*, Stamboul 1288, 1306; a Pers.-Turk.-Arab. Dictionary, *Kanz al-Lughât*, Bairût 1876 and critical contributions to Arabic lexicography *al-Djâmî* 'ala 'l-Kâmîs, Stamboul 1399.

(C. Brockelmann.)

**Fâris b. Muḥammad Ḥusam al-Dawla, Abū 'l-Shawk,** as he is usually called, lord of Holwân and other places in the neighbourhood 401—437 (1010—1046). He inherited his power from his father, Abū 'l-Fath Muḥammad b. Ḥanîzâ, who had held sway for about twenty years in Dâşıkâ, Holwân, etc. Abū 'l-Shawk was at war during almost the whole period of his rule with neighbouring rulers and with his own family. His first fight was with al-Maṣāfi al-Hilla, but it ended in peace by a marriage between Dubais son of al-Maṣāfi and a sister (or daughter) of Abū 'l-Shawk. His next quarrel, with Ṭâhir b. Ḥilāl, a descendant of Bâdri b. Ḥasan waḥīd [q.v.] was at first less auspicious, as his brother Su'dî was slain by Ṭâhir and he himself had to take to flight in spite of the help given him by al-Maṣâfi, who was now his ally, but it also ended with a marriage. When peace had actually been concluded, Abū 'l-Shawk killed Ṭâhir to revenge his brother (406 = 1015-1016). In 421 (1030) he regained possession of Dâşıkâ which had been held in the interval by the Ūkâlid Mâlik b. Bâdîn; he won Kamîsîn and Khulandîn in 430 = 1039. In the following year, however, a war broke out between his son Abū 'l-Fath, who governed Dinawar for him, and his brother Muḥalîl, to whom he had ceded Shahzûr. The uncle was victorious and took his nephew prisoner and gave him a sound thrashing. Abū 'l-Shawk felt himself thereby forced to besiege his brother in Shahzûr but did not attain his object because Muḥalîl intited 'Allâ al-Dawla b. Ḥâkîmû (see the article Muḥammad b. Ḥâkîmû; another brother called Sûhûb also seized the opportunity to take the field against Abu 'l-Shawk. Although he succeeded in forcing 'Allâ al-Dawla to retreat, he had to cede Dinawar to him. He did not dispose of his brother so readily; it was only when a much more dangerous enemy, the Sâldjûk İbrâhim Inâl, appeared against him, soon deprived him of a considerable portion of his territory and even plundered and burned the capital Holwân in 437 (1046), that he made peace with his brother, the more readily as his son had in the meanwhile died in prison. But his day was done, for he died a few weeks later. His brother Muḥalîl took possession of Kamîsîn and Dinawar and his son Su'dî, whom the Kurds treacherously left in the lurch, sought and found refuge with İbrâhim Inâl. The conflict with Muḥalîl thereupon broke out again but, although even the measures of the Sâldjûk Togrûlbeg (442 = 1050) brought no lasting peace, the further course of this family feud is not of sufficient historical interest to be detailed here.

**Fârân.** [See Fârân.]

**Fârmül** a mountainous district in Afghanistan lying to the west of Kâbul, inhabited by a race of Tadjik origin known as Fârmûl. [M. Longworth Dames.]**

**Farrukhābad.** The name of a district and town in the United Provinces of British India. It is one of the districts of the Allahâbâd division and is situated in the Eastern part of the Dôâb between the Ganges and Djamâa between 26° 46' and 27° 43' N. and 78° 8' and 80° 1' E. The area is 1685 sq. m., and the population (in 1901) 925,812. The proportion of Muḥammadans is larger than in most of the neighbouring districts, chiefly owing to the extensive Afghan immigration in the xixth and xvith cent. The principal town is Farrukhâbad which is joined as a municipality with the civil and military station at Fathgâh close by. Pop. 67,338. Another important town is Kanaundj. Pop. 18,552.

There are several ancient sites of importance in the district, the principal of which are Sannika, which is mentioned by the Chinese pilgrim Hiouen Thsang, Cannipla the capital of the kingdom of Panâla, and Kanaundj which plays a great part in early Indian history. It was Harâha Vardhana's capital in the viii cent. A.D., and afterwards the centre of the powerful empire of the Prathirâha Râjdîpûs. It was plundered by Mahâmûd Ghaznâvi, but endured till Muhammad b. Sâm's invasion
in 589 (1193). The conqueror himself struck coins there in the Indian style, and it was afterwards a temporary capital of Muhammad III b. Tughlaq. In the xviii th century a semi-independent state was founded by Muhammad Khan Bangash, a member of the Afghan colony which had settled in the neighbourhood during the reign of Avrangzeb. He founded a new town on the banks of the Ganges which he named Farrukhabad after the Emperor Farrukh-Siyar after the Emperor Farrukh-Siyar in 1126 (1714), and it soon attained great prosperity, and became an Imperial mint. Muhammad Khan died in 1156 (1743) and was succeeded by his son Kaim Khan who was killed in 1161 (1748) in a battle against the Rohillas. A large part of the territories of the Nawabs of Farrukhabad was lost, and the state seemed to have come to an end, the Emperor (Almud Shah) being hostile to the Bangash family. But its fortunes were revived by Almud Khan, a younger brother of Kaim Khan, who defeated the Wazir Safdar Djang and recovered Farrukhabad 1163 (1750). From him the town derived its second name of Almudnagar Farrukhabad, which appears on the coins of 'Alamgir II, Shaik Djabhan III. and Shaik Alim II. the earliest being dated 1170. After many vicissitudes and the temporary loss of his dominions Almud Khan finally succeeded in recovering a great part of them and lived till 1185 (1771); the state however remained subordinate to Oudh. The first British occupation of Farrukhabad took place in 1777 when a body of troops and a Resident were posted there by Warren Hastings, but the Nawabs continued to hold it till 1802 when it was incorporated in the British Dominions, Nusr Djang being then Nawab. In 1804 the Maharattas were defeated close to Farrukhabad in 1804 by Lord Lake. The Nawabs retained their private estates, but the last of them, Tahsul Husain, joined the mutinous Bengal army in 1857 and obtained possession of Farrukhabad which he held till Jan. 1858. He was exiled and went to Mecca in 1859. After the British occupation Farrukhabad, which had been one of the Alm's principal mints, became a mint of the East India Company who continued to issue coins bearing the name of Shaik Alim and the regnal year 45 up to 1835, although Shaik Alim had died in 1221 (1806). These rupees were in Persian and followed Shaik Alim's inscriptions. They were known as the Farrukhabadi Sicca rupee, from the word 'sikka' with which the Persian legend commences.

(M. Longworth Dames.)

FARRUKHÁN Gilân-Shaîb, an Isb pâbeh of Tabristân (709-722) called the Great (huqûq) and the Virtuous (âhu 'l-manâhîb), son of Dâhu, conquered Mazandaran and restored himself to the frontiers of his kingdom. Defeated by a rebel Dailamites he fled to Amul, entrenched himself in Firdâbâd and finally rid himself of the besiegers by causing them to believe that he had enormous supplies of bread. He gave asylum to the Khârijis persecuted by al-Hâjîâb, but afterwards made war on them and executed their chiefs, when 'Usâyâ b. Âli al-Bakrî advanced against him with an army. Yâzîd b. al-Mu'âlib, governor of Khorasan under Sulaymân b. 'Abî al-Malkî (96-99 = 715-717), unsuccessfully attempted to conquer Firdâbâd, found himself lucky to be able to get out of the country on payment of compensation for the devastation he had wrought. Farrukhán died in 722; he was the maternal grandfather of al-Mansûr, son of the Caliph al-Mahdi. His capital was Sîrî, which he had rebuilt and improved; he was succeeded by his son Dâd-hurz-mîr.

(F. Huart.)

FARRUKHÎ, Âbu 'l-İsâ'ân Âli b. Dâhîî, a Pârsiân poet born in Sîstan, a pupil of 'Unûrî. Rashid Wolîî has compared him with the Arabic poet Mutahhâb, on account of the simplicity of his style combined with the originality of his genius. He was the panegyrist of Sulţân Mahâm of Ghazna and of the Emir Âbu'l-Mugâflar Tâhir b. Na'cî Câhînî, governor of Balkh. He wrote a treatise on the art of poetry entitled Târîfân al-Âlîâh. The Divân of his poems enjoyed a certain fame in Transoxiana but he was forgotten in Khorasan. He died in 429 (1038). His Divân was lithographed in Tehran in 1301-1302.

(F. Huart.)

FARRUKHÎSIYÂR, Muhammâm, fourteenth emperor of Dîhil of the house of Timûr, was born in 1686-1687, and was the second son of Muhammad 'Azîm ('Azîm al-Shâ'n), third son of Shaîb Alâm Bahâdûr Shaîb. His early life was spent in Bengal, where his father was governor, but when Djâhândar ascended the throne he was summoned to Dîhil, doubtful in order that he might share the fate of his father and elder brother. He fled from Dhakâ and took refuge in Patna and owing to the general discontent怀被由的 by Djâhândar's misconduct, found little difficulty in persuading the two Saiyid brothers of Bhirha, Husain 'Ali Khan, governor of Bhirâ, and 'Abdallah Khan, governor of Isâbâbâd, to espouse his cause. Having proclaimed Farrukhîsiyâr emperor they marched with him towards Dîhil, defeating Djâhândar at Samûgâr, near Agra. Djâhândar was strangled and his son was blinded, and on Febr. 10, 1713, Farrukhîsiyâr ascended the throne in Dîhil. Quarrels broke out almost at once between the emperor and the two Saiyids. There were faults on both sides. The Saiyids were ambitious grasping, and overhearing, and Farrukhîsiyâr was weak, treacherous, and cowardly, and the history
of his reign is largely a record of his abortive plots against the brothers. In 1719 Hasain 'Ali Khan hastened from the Dakhan, his viceroyalty, to support his brother at court and on March 1 the emperor was dragged from the women's apartments of his palace, where he had taken refuge, and thrown into prison, the Saiyids raising to the throne, under the title of Rafi' al-Darajat, a puppet prince, cousin to Farrukhsiyar who was murdered or committed suicide in prison two months later. His reign is memorable in the annals of British India for the famous farānān, exempting the English Company, on payment of a fixed sum annually, from customs duties throughout the empire. This was obtained by the influence of a Scottish surgeon named Hamilton, who had accompanied a mission to Dilli and earned Farrukhsiyar's gratitude by curing him of an obstinate disease.

Bibliography: Siyar al-Muta'ākhkhūrin. (T. W. Harg.)

FāRUKH [arabicised from the Old Persian Pārshu [Achaemenid inscriptions]], the ancient Persis, the ancestral home of the Persians, a province of Persia in the S.E. of the modern Iran with its capital Shīrzād, bounded in the N. by 'Irāk 'A'djamī, in the S. by the Persian Gulf, in the E. by Kirmān, and in the W. by Khūzistān. It was divided into five districts in the middle ages: Istakh, Ardashir-Khurra, Daragjī, Sābūr, and Fīnm-Khursaw besides five ramān or camps of Kurds. — In the caliphate of 'Omar, al-Ála b. al-Ḥādrami, governor of Bahraīn, made an attempt to conquer the land by sending 'Asfandā b. Ḥarbāmān al-Darjikī thither by water; but the latter was recalled soon after his arrival. On the death of al-Ála his successor 'Oṯmān b. Abī l-ʻĀṣ renewed the attempt by sending to Fārs his brother al-Šakam, who seized two islands and the town of Tawwādī. It was only under 'Oṯmān that the complete subjection of the province was attained; the Marzbān Shahrakī conducted the defence against the Muslim invaders but was defeated and slain in the sanguinary conflict at Šahrābād near Tawwādī (664); Baladshīrī, p. 386). Abī Mūsā al-Šahrī, who had set out with an army from Bahriyā, invaded Fars from the west at the same time. After joining forces 'Oṯmān and Abī Mūsā captured Shīrzād and Sinīz; 'Oṯmān alone took Daragjī, Fasa and Sābūr. Soon afterwards 'Abd Allah b. 'Amir, who had been appointed commander-in-chief by the Caliph 'Oṯmān forced Ištakh, which was defended by Māhek to surrender (2 = 648) and in the following year he took Djūr (Fezāl-Abād). — The Ḵūz Ḵūz was fixed at 33 million dirhams and raised to 35 millions under Mutawakkil; the Dījīyā yielded 18 millions. The country was covered with fortresses; the best known are the three citadels, which were built on the three peaks above Ištakh and notably that of Uṣkuwān, the castle of al-Dījā, where a knowledge of Iranian tradition and its archives was preserved (Inostrancev, Etudes Sassanides, p. 8; Ištakhī, p. 118, 2—4).

FĀRSISTAN. [See PERSIA]

Al-FāRŪKH. [See 'OMAR B. AL-KHĀṬĪBL].

Al-FāRŪKH, 'Abd al-Fārūkh, an Arab poet, born at Mawṣil in 1204 (1790), took pride in being a descendant of the Caliph 'Omar I. and therefore bore the nisba al-Fārūkh and al-'Omarī. Little is known of his life; we only know that he accompanied his cousin Ḥaṣim Pasha, when the latter was sent by the Sublime Porte to Baghdad to destroy the power of the Mamluks there, and when this expedition was unsuccessful he went with the next expedition for the same purpose under 'Ali Riṣā Pasha. The latter succeeded in putting an end to the rule of Daʿād Pasha and the Mamluks, and al-Fārūkh remained with him in Baghdad as kethkhoda of the wilayet till his death in 1275 (1852). 'Oṯmān al-Mawsīli published in Cairo in 1316 (1896) al-Tīrāyīq al-Fārūkhī min Mawṣi'at al-Fārūkhī of his poetry. Besides this Divān he composed another entitled Aḥlāl al-Afsār fi Magāni 'Iltikār and a biographical work Nasīlat al-Dahr fi Tarājam Fudātā al-Aṣr. Bibliography: G. Zaidān, Māzākhir al-Sharq, ii. 193 et seq.

Al-FāRŪKH, MūLĀ MAḤMūD B. MUḤAMMAD was born 993 = 1585 at Djawānpūr. He received his early education from his grandfather and Šādād al-Mulk Muhammad Afḍal al-Djawnpūrī and after completing his course at the age of 17, began to deliver lectures to the students who then thronged in Djawnpūr from all parts of India. His literary fame and scholarly attainments soon came known to the Emperor Shāh Djiāhān who asked the Mulk to adorn his court. He accepted the invitation. When he came near Dilli, Šādād Al-Khān, the minister, was sent to receive him and he was brought into Dilli with all the honours due to him. The Emperor gave him a appointment in the Mānṣāb (office) of Šīyāḥ (three hundred per month) and showered royal favours upon him. He was one of the most eminent 'ulamā, not only in India, but in the whole Islamic world of his time. When he went with the Emperor to Lahore and visited Šāh Mir Lāhorī, the saint reproached him for being too much engaged in worldly affairs and advised him to abandon the Emperor's
service. Accordingly he resigned the royal service and went to his native land where he passed his last days in delivering lectures to Muslim students and writing books. As a scholar in philosophy and rhetoric, it may be said that Mahmūd was one of the most distinguished scholars in the Islamic world and his works on these two subjects have been adopted in the final courses in all the Indian Universities, and certificates of competency are awarded only to those students who are found proficient in his works. He died 1062 = 1651.

He is the author of the following works:

II. Al-Farūqī fi Sharḥ al-Fawāʾid, a commentary on ʿAbd al-Rahmān b. ʿAbbās al-Dīrjānī’s work, on rhetoric entitled al-Fawāʾid al-Ghiyābīyya, Printed, Cawnpore.

III. Rūḥān al-Iḥāḥāt al-Hayāliyya, a treatise on the first matter (Hayyāl); Ind. Off. 561.

Farūqī Dynasty. This dynasty was founded by Malik Rājdā, son of Khāndajān Fārūqī, who claimed descent from the second Khalīfa, ʿAlī al-Farūqī (the Discriminator) and was one of the amirs of ʿAlī al-Dīn Khālid b. Muhammad b. Taghkhīr. Fīrūz Tagkhīr gave Malik Rājdā a djāfīrī Khāndajān and afterwards made him governor of that province. On the disruption of the empire after the death of Fīrūz in 1388 he became virtually independent and his eldest son Nasir Khān, who succeeded him on his death (April 9, 1399), formally proclaimed his independence. Having established his authority throughout his small principality by capturing Asirgār from a Hindu chiefman he gave to his dominions the name of Khāndajān, derived from his own title of Khān, and founded, as its capital, the city of Burhānpūr. In 1436-1437 Nasir Khān invaded the dominions of his son-in-law, ʿAlī al-Dīn Afṣād al-Mardūqānī of the Dakhān, but was defeated, and Khāndajān was laid waste. He died on Oct. 1, 1437, and was succeeded by his eldest son, Mirān ʿAdil Khān I. who was murdered on April 30, 1444, and was succeeded by his son Mirān Mubārak Khān I. who died, after a peaceful reign, on June 5, 1457. His son, Malik ʿAinā (or Ghānī) entitled his son ʿAdil II., was one of the most powerful of the Farūkī princes and attempted to free his state from its condition of semi-dependence on Gudjarāt, but was compelled by Mahmūd I to purchase peace by payment of arrears of tribute. He died on Jan. 15, 1492, and was succeeded by his brother, Dāūd Khān, who died on Aug. 28, 1508. After a civil war Dīrūz’s cousin, ʿAdil Khān III. was placed on the throne (April 1, 1509) by his maternal grandfather, Mahmūd I. of Gudjarāt. ʿAdil Khān III. died on Aug. 24, 1520, and was succeeded by Mirān Muhammad Shāh, his son by a princess of Gudjarāt. After an eventful reign in Khāndajān Nūrān Muhammad was raised to the throne of Gudjarāt on the death of his maternal uncle, Bahādur Shāh, but died (May 4, 1536) before he could succeed in Khāndajān by his brother, Mirān Muḥārāk Shāh. On Dec. 19, 1566, Muḥārāk died and was succeeded by his elder son Mirān Muḥammad II. on whose death in 1576 his infant son Ḥasan was proclaimed Shāh, but Muḥammad’s younger brother Rājdā ʿAḥ, who had entered Akbar’s service, hastened from Agra to Khāndajān, deposed his nephew, and ascended the throne as Akbar’s vassal, eschewing the title of Shāh, which had been in use since the elevation of Muḥammad I to the throne of Gudjarāt. His policy of preventing, by means of conciliation, imperial intervention in the Dakhān was frustrated by the dissensions in Ahmadnagar and the appeal of one party to Dihlī. He resisted Akbar’s first act of aggression but was compelled to support the emperor in the campaign which ended in the annexation of Berar and lost his life in the battle of Sonpat (1556) fighting on the imperial side against the eunuch Suḥail Khān, who was attempting to recover Berar for Ahmadnagar. His son and successor Bahādur Khān, a dissolute and feeble ruler, reversed his father’s wise policy and measured his strength with that of the emperor. Asirgrār fell (1599-1600) after a siege of ten months, Khāndajān was annexed and Bahādur died, a state prisoner in Lāhor, in 1623-1624.

Khāndajān never enjoyed complete independence under the Fārūqī dynasty but was always tributary either to Gudjarāt or Māwā, usually to the former, and owed its existence as a separate state to the mutual jealousy of these two Kingdoms and their common fear of the Kingdom of the Dakhān.

Bibliography: Taʾrīkhī Firāshṭa, II. (T. W. Hales).

Farwān or Pārwān, a small town on the Panjshir River north of Kābul and south of a pass bearing the same name which crosses the Hindū-Kush range into Afghān Turkestan at a height of 12,300 ft.

Farwān was a mint of the Ghaznavids, coins having been struck there by Alpīgīn, Sabuktīgīn, Ismāʾīl and Mahmūd. It seems to have been in Alpīgīn’s possession as early as 365 when he struck coins in the name of Muḥammad b. Nūḥ his Sāmānī suzerain. It is mentioned also by Idrīsī (as Karwān), Iṭṭāqī and Abu l-Fīdā. Bābur calls it by its modern name of Parwān, which is used by all recent travellers such as Lord, Masson and Holdich. In 618 Dālāl al-Dīn Mangbānī Khwārizm Shāh inflicted a defeat at Parwān or Farwān on the Mongol forces.

(M. Longworth Dames.)

FARWARDIN (v.) the first month of the Persian solar year, also the name of the 19th day of each month which was observed as a feast.

FAS (Fez) from the old Spanish spelling a town in Morocco and one of the residences of the Sultan, situated in 42° 54' 30" Long W. of Greenwich and 34° 6' 20" N. Lat.; it has about 100,000 inhabitants (Eckermann 50,000, Guillaud 90,000, Lamartiniere 100,000, Budgett Meckin 120,000).

Fas lies at a height of 1155 feet above sea level in the centre of the plain of Saïs, in part on a plateau which lies in front of the outer spur of the Djebel Zelâgha and in part in the hollow through which the waters of the Wadi Fas run to the Sebû which flows about 5 miles to the east of the city. The latter is about 150 miles S.E. of Tangier, 40 N.E. of Meknes, 105 E. of Rabat, 250 N.E. of Marrakûsh. Its geographical situation is a most fortunate one; "Fez," writes A. Bernard, "lies almost in the centre of the depression which separates the mountains of the coast from the Atlas and is on the natural road which runs along the base of the Atlas so that the two great and historical roads in Morocco cross one another there. It commands the road from Morocco and Tafilet by the Innawen the road from the Atlantic by the Sebû, the largest river of Barbary." (A. Bernard, Les Capitales de la Berbérie, Recueil de Mémoires et de Textes publié par l'École des Lettres d'Alger, Algiers 1905, p. 137). We may add that the development of the city has been facilitated by the abundant supplies of water and by the existence in its neighbourhood of building materials (lime and stone, clay etc.).

Fas really consists of two towns differing considerably in situation and population: Fas al-Djadid, the new town, and Fas al-Bâdi, the old town.

Fas al-Djadid is built on the east on a spur of the plateau which bounds the plain of Saïs and dominates the old town. It is surrounded by walls flanked on the south by two small forts called Burdj Twil and Burdj Sidi bu Nafa, which command the valley, at the bottom of which runs the southern arm of the Wadi Fas. In the north rises the kasba of the Isherda, a broad rectangular enclosure the interior of which is covered by huts of clay and reeds, the silces containing the grain supplies of the Makhenz or the enclosures for the sheep. The suburb of Bu Djelid lies in the northeastern part; it is waste land where the troops and caravans encamp. The walls built in the reign of Mûlay Hasan have transformed it into a kind of passage connecting the old town with the new. It includes the palace and gardens of Bu Djelid as well as the Kasba of the same name. In the northeast, at some distance from the walls, is the mazella where on feast-days the Sultan says prayer in the presence of representatives of the tribe.

Fas al-Djadid is a city of government offices. The Dar al-Makhenz alone occupies more than half of it. This is an assemblage of buildings and courtyards where the government of Morocco has its headquarters. It includes the old Meshwar, the Dâr al-Makhenz in the narrower sense, including the benika [q.v., i. 697] or offices of the viziers, a pavilion for the Sultan etc., the palaces which form the Sultan's private residence recognizable by their roofs of green tiles, the pavilion reserved for the reception of foreign envoys, the imperial menagerie, the Arenal, the new Meshwar, the gardens of Lalla Amina and Aguedal. The town itself which is traversed from N. to S. by a street of shops, is rather wretched in appearance. The houses often half in ruins are, as a rule, only of one story and their interiors lack the luxurious adornment which characterises the houses of Fas al-Bâdi. Several mosques rise from among the hovels; the most notable are the "Great Mosque," the "Red Mosque" and the "Green Mosque" so called from the colour of their minarets, all three built by the Marinids, and lastly the mosque of Mûlay 'Abd Allâh built in the xviith century by the ruler of this name which is used as a mausoleum for the Shorfa of the ruling family. The population (membering 6000—7000) consists for the most part of soldiers who live in the town with their families in the intervals of military expeditions so that Fas el-Djadid is half empty when the Sultan and the Makhenz are absent. Finally, separated from the Muslim town and adjoining the Christian quarter or "Mellah" the population of which, numbering perhaps a third more than that of the Muslim town, is crowded together in narrow streets with houses several stories high and forms a striking contrast by its animation to the quiet of the Moorish quarters.

Fas al-Djadid is really only an annexe of Fas el-Bâdi, which the inhabitants call "Medina" ("the city"). Its site is much more irregular and picturesque than that of the new town. The difference in level between highest and lowest points is 600 feet. The town lies along the narrow valley of the Wadi Fas; its houses, mosques and gardens rise up the steep slopes of the hills that enclose the Wadi from its bed to the walls that crown the ridges. A wall, of which the oldest parts date from the Almoahd period, completely surrounds the town; it is flanked at some distance to the north and south by two stone bastions, called Burdj al-Gisa and Burdj Futûh from the names of the adjoining gates. Built in 990 (1581) by 'Ahmad al-Mansûr on the model of European fortifications by Christian slaves, these forts command the whole town. In spite of the dilapidated condition of these defences they suffice to protect the inhabitants from the attacks of the Berbers of the neighbourhood, of which they live in constant fear; they have even on many occasions enabled them to resist the Sultan himself. Access to the town is obtained through the gates into the massive walls. These are in the north, Bâb al-Gisa, in the N.E., Bâb al-Mâhrûk (the "Gate of the Burnt Man") so called in memory of a Berber chief whose body was burned there when the building was completed, and where since then the heads of rebels slain in course of the Sultan's expeditions are exposed; in the S.E., Bâb al-Futûh, in the S. Bâb al-Djadid below which runs the main arm of the river, in the S.E. Bâb el-Djadid.

The space marked out by the walls is divided into three quarters (qasna or ferba): al-Lemtyun, al-Andalus and 'Adwa. The quarter of the Lemtyun takes its name from the Lente Berber tribe of the neighbourhood who people it originally.
It occupies the southern part of Fās and corresponds to the ʿAdwaʿ al-ʿAmmāl of the Idrīsīd period. In it is the Kašā of the Filala, a fortress built by the Almoravid Muhammad al-Nāṣir and allotted by Mūliyy al-Rāshīd in the xviiith century to his compatriots from Tafilet as a residence. The whole of this quarter, which is principally inhabited by members of tribes who have settled in Fās, is well provided with gardens. The Andalus quarter comprises the part of the town that adjoins the river and a zone of gardens stretching between Bāb al-Djasida and Bāb al-Ḥadd. It is the heart of the city and contains the principal mosques (Kārawiyyīn, Mūliyy Idrīsī); it includes the network of alleys of the Kāsariya bazaar, occupied by all kinds of merchants and tradesmen, noisy and animated during the day but deserted and silent at night and the ḫanṭūrī or warehouses of the merchants. Lastly the ʿAdwa quarter which corresponds to the ʿAdwaʿ al-ʿAmmāl of the Idrīsīds lies all along the right bank of the Wādī Fās. It is a quiet and thinly populated district. *Marabouts, Zāwiya and old and peaceful mosques abound* writes Gaillard. "Its quiet and picturesque streets are sought at by *folha* and pious believers who give themselves up to their devout meditations sheltered from the bustle of the age". The streets of the different quarters are as a rule very narrow and shut in by houses which almost meet overhead and shut out the sun. The majority are on slopes and, as they are not paved, after rain become regular sewers. Still narrower alleys branch off from each street.

The abundance of running water is one of the features of Fās. The Wādī Fās never dries up even in summer and the situation of the city enables its water to be used for all domestic purposes. The Wādī, which rises half a day's journey to the west, flows undiminished into Fās al-Djasida; it then sends off on the right a number of arms which fall in cascades into the Wādī al-Zītna to reunite again, flow into Fās al-Bāli under the name Wādī al-Kabīr and feed an artificial channel called the Maṣmūda. The Wādī Fās itself, on leaving Fās al-Djasida, divides into two streams which in their turn break up into an infinite number of brooks which after flowing through the various quarters reunite beyond the walls. Special conduits supply the inhabitants with drinking water; others irrigate the gardens, drive the mills, flush the sewers and clean the streets. This last is a very ancient practice for it is mentioned by Ibn Ḥawkal: "In summer water from the river is allowed to run through the city to clean the ground and refresh the air" (Description de l'Afrique, transl. de Slane, Journal Asiatique, 1842, p. 286). The richness of Fās in running water is one of the themes on which the Arab authors delight to dwell; they even claim that the water of the Wādī has marvellous properties. According to the author of the Kīrīfūs it cures of stone in the bladder, it dispels foul odours; it softens the skin and destroys insects; it makes the pleasures of the senses more agreeable, etc.

Fās is celebrated throughout the Maghrib not only for the beauty of its site but also for the number and importance of its religious monuments. The various dynasties that have succeeded one another there, have devoted great attention to enriching it with monuments of this kind so that there are no less than 850 religious edifices of all orders and of all sizes in the city, mosques, madrasas, oratories, and zāwiya or chapels built on the tomb of some holy person. The mosques all present the same general arrangement; an outer court with a fountain for ablutions, opening on to a central court surrounded by arcades forming one or more naves. They differ in size, in the form of the minarets which flank them and in the details of the ornamentation. The type of minaret, for example, has sensibly changed in the course of centuries. At first squat and without ornament, such as may be seen in the mosque of the Kārawiyyīn, it becomes more elegant in the Almoravid period. In imitation of the Moorish minarets of Spain, it affects a quadrangular form and terminates in a lantern. The sides have majolica borders and the panels are decorated with designs in relief forming trellices. This type was retained under the Almohads and Marinids. From the xviiith century on, the trellices in relief disappear; the borders of minarets of many colours give place to others in green faience; sometimes even the panels are inlaid entirely with enamelled bricks of one colour. At the same time the porches of carved wood which sheltered the doors were abandoned and replaced by plaster mouldings which could be more easily worked. Nevertheless the main principles of architecture (arcades, arches etc.), the processes of construction and decoration which were handed down from generation to generation remained the same as in the middle ages.

The chief mosques in Fās al-Bāli are the mosque of the Madrasa Bū Āināniya, the mosque of the Kašā of the Filala, those of Sidi Ṭāhid al-Shāwi, Sidi Ṭāhid al-Fākīth, of Bāb al-Gūsma and lastly in the Kesdān quarter, the Dājmī al-Nuwarī, the most ancient sanctuary in Fās, also called the mosque of the Shāfī and built near the well where tradition says that Mūliyy Idrīs used to come and sit with his Shaikhīs to watch the building of the city. Three mosques are much more celebrated than any of the others, viz. the mosques of the Andalusians, of Kārawiyyīn and the greatest of all that of Mūliyy Idrīs. At first a simple oratory in the time of the Idrīsīds the mosque of the Andalusians was made a Kārangi mosque in 321 A.H. (933 A.D.) by the Zenāta Emīr Ahmad al-Ḥamānī, provided with a minaret by the Emīr Ahmad b. Bū Bakr, then enlarged by the Almohad al-Nāṣir to its present dimensions. The mosque of al-Kaʿrawīyīn (of the people of Kārwarān) dates like the preceding from the Idrīsīd period. Begun in 248 A.H. (861-862) it was enlarged by the Emīr Ahmad b. Bū Bakr, who built its minaret and finally greatly altered in the reign of Yūsuf b. Tāṣfīn. The author of the Kīrīfūs says that at that time it covered a whole quarter of the city and contained 270 pillars forming 16 naves. Al-Kārawiyyīn is the largest mosque in the whole of the Maghrib. It is also the official mosque, in which the people are summoned to hear the Sultan's proclamations. But if al-Kaʿrawīyīn is the most important mosque in Fās, the Zāwiya of Mūliyy Idrīs is certainly the most venerated, for it is built on the tomb of the founder of Fās. As the original sanctuary had fallen into ruins, it was rebuilt in 1308 A.D. on the same site and restored in 1720 by Mūliyy Isāmī. Finally in 1820 Mūliyy ʿAbd al-Raḥmān built a new mosque beside the old one. The Zāwiya of Mūliyy Idrīs thus comprises the Kūba or tomb of the saint, two mosques, with various
buildings attached to them among them one to lodge persons who seek refuge within the bounds of the Zawiya. Like the majority of the religious edifices of Fas, the Zawiya of Mulay Idris and even the quarter surrounding it are haram or sacred and access to them is forbidden to unbelievers. The Zawiya is besides an inviolable sanctuary where individuals passing by the Makhlzen, debtors fleeing from their creditors find a safe asylum. Muly Idris has a position apart, among all the saints of Fas. As the patron saint of the city, mausole al-bilad, he is the object of a veritable cult on the part of its inhabitants. "He is", says Michaux-Bellaire *the very genius of Fas*, the supernatural power which makes it a city unique in the world and its inhabitants superior to all other men." This cult is relatively modern; it oddly dates from the Marrani period and seems to have been particularly developed by the descendants of the Jews who became converts to Islam at that time. The reputation of the tomb of Idris attracts pilgrims thither from all parts of Morocco and enriches the Idrisid Shorfa who share amongst themselves the gifts, in money and kind brought by the faithful. The Zawiya possesses in addition considerable bethem, the revenues from which are exclusively used for the upkeep of the sanctuary. Other saints also invite the piety of the faithful, who come to visit their sanctuaries on fixed days and often purchase very dearly the privilege of being interred near their tombs. Their Zawiys are scattered up and down the city or in the cemeteries of Bab al-Mahruk, Bab Futuh and Bab al-Gisa. These saints or "Saiyids" are the glory of Fas. Their number is so considerable that entire works like the *LAWAQAT al-ISTIBAH IBN AL-KADI* (18th century A.D.) and in our days the *SAWAT AL-ANFAZ* of Sharif Muhammad al-Kattani are consecrated to recording their names and virtues. Among the most celebrated may be mentioned, Abu Bakr al-"Arab al-Masri (died 533 A.H.), Sidi Mas'ud al-Fikhi, Sidi Abd Allah al-Tawdi, Sidi Muhammad b. al-Haraz (died 395 A.H.), Sidi Bughalem (died 518 A.H.), whose tomb is visited by women and sick persons; Sidi Harazim (Herzhizm), a famous professor in his day whose "barak" drives evil spirits away; Sidi Aymad al-Shawli, Sidi al-Lijdja, Sidi Aymad al-"Arnasi etc., whose tombs are a valuable asset to the Sharif families.

The population of Fas forms, as regards its natives, a typical bai"riyya, i.e. a settled city-population, comprising merchants, scholars, officials, which has long ago attained a fairly advanced level of civilisation. It is composed of various elements which in the long run have mingled with one another to form a new type, the Fasi. In the first place from its geographical situation and secondly by its fame as a city of culture and sanctity, Fas has at all times been a centre of attraction for the Muslims of Morocco and the adjoining countries. "Since its foundation" says the Kifas, "Fas has always been kindiy to the strangers who have settled in it". The companions of its founder were joined by the Berbers of the neighbourhood (Gueraw, Luwatta, Awara and Madaida) whose descendants in time have mingled with those of families who came originally from Cordova and Kairawan. For centuries political, economic and intellectual relations were maintained between the north of Morocco and Spain and contributed to introduce and maintain the civilisation of Andalus at Fas. After the fall of Grenada numbers of Muslims came to settle in the Moroccan capital where they soon attained a prominent position. It was the same with the Jews, who were converted in the times of Yacub b. Sidi al-"Iflak, while the descendants of the Bnei Shaktar, the Cohenes, the Bessis etc. are numbered among the richest citizens at the present day. In the 16th century the outrages by the Turks followed by the French occupation forced numbers of Algerians to move to Fas. The Tlemcenis, for example, form a body of 2500 in Fas at the present day. To these diverse elements must still be added isolated individuals who have come from all parts of Morocco, Filala, Briber, Licedea etc., who form the population of certain suburbs. Finally in a class by themselves are the Shorfa, some belong to various branches of the Idrisid family, others came with the present dynasty from Tafilt ("Alawi Shorfa") and others again came from other countries long ago, like the Skalli and the "Iksi, the former hailing from Sicily originally and the latter from Mesopotamia. These Shorfa are organised in corporations each of which is governed by a chief or meswar. There is nothing to distinguish them from the other inhabitants except the appellation Sidi or Mulay that is usually given them. They may practice all manner of trades but not fill any public offices except those of adil (notaries) or secretaries to the majlis. In addition to the gifts which they are assured of from the piety of the faithful or the generosity of the Sultan they enjoy certain privileges of which the chief is exemption from taxation — even from the market duties on the produce of their lands — when they possess property or estates.

The Fasi are celebrated throughout the Maghrib for their piety and also for their fondness for a life of elegance and self-indulgence. Their religious feelings express themselves not only in the rigorous observance of the ordinances of the Koran but also in countless acts such as visiting the tombs of saints and joining religious orders. Ordinary people prefer to join the "Aissa or Hamdasha; the comfortable middle classes rather adopt the rule of the Dajjays, Faibiyin, Tajjaniya or Kadyia. These religious pre-occupations do not, however, make them neglect more worldly pleasures. The Fasi are fond of luxury in dress and at table, receptions or musala enlivened by recitations of poetry or songs by celebrated artists, known as shair or shaikh. The houses of rich citizens are remarkable for the sumptuousness of their interior decorations, their pavements of enamelled bricks, their panels of plaster moulded in arabesques, their ceilings of carved and gilded wood, their marble fountains sometimes inlaid with mosaics. The houses of merchant princes or of certain officials of the majlis have thus, the appearance of veritable palaces. A much appreciated luxury is that of gardens, planted with orange, citron or banana trees. These gardens are very numerous in the higher parts of the city and sometimes enclose pavilions in which the owner takes up his abode for the summer. In politics the people of Fas frequently show themselves rebels and hostile to authority: the history of their city since the 16th century is a series of rebellions. Public opinion, very often in-pired by the Shorfa or the "Ulama,
is a power with which the Sultan has had to reckon, often at their cost.

The administration of Fas al-Djadjil is distinct from that of Fas al-Djadjil. It differs in certain respects also from that of other towns in Morocco. The amount of power to protect the inhabitants has left the Fes a semi-autonomy. The three fezs which we have already mentioned are themselves subdivided into 18 hawas or quarters, each administered by a chief of a quarter (mujaddam al-hawa), elected by the inhabitants and approved by the makhzen. This personage has numerous functions; he sees to the maintenance of order, the opening and closing of the gates which close the streets, controls the water-supply, has jurisdiction over women of loose living and finnly presides, with four prominent citizens, at recruiting and the levying of taxes. The Sultan's authority is represented by a pasha or governor; two kads, supreme officers of justice, and a mujaddid whose duty is to supervise the markets, fix the market price of food and be the final judge in commercial suits. The multiplicity of his duties enables him to interfere at any moment in the lives of those under him, whereas the name al-fezzi, the intruder, given him by the people. He is all the more feared as he possesses the right of imprisoning those in his jurisdiction and because, as he receives no salary, he is naturally tempted to enrich himself by his exactions. As to the administrative authority in Fas al-Djadjil, it consists of two pashas (of Fas al-Djadjil and of Sharika), a mujaddid and a kadi.

The Jews form quite a considerable body beside the Muslim population (8000 according to Asselin, 10,000 according to the statistics of the Alliance Israélite), but less important than those of Mogador and Marrakush. The origin of this colony of Jews dates back to the foundation of Fas. It was diminished in numbers under the Mamluks by the conversion of a large number of its members to Islam but was reinforced in the 16th and 17th centuries by the arrival of Jews fleeing or expelled from Spain, whose descendants form at the present day so great a majority of the Jewish population that there is no longer a synagogue of the native ritual in the city. As in all the towns of Morocco, the Jews live in a particular quarter or mellah, which has now become too small for them and is periodically ravaged by epidemics. They are obliged to wear a distinctive dress and are subject to various restrictions from which their co-religionists on the coast are beginning to free themselves. The majority are merchants or artisans but, although a number of well-to-do people are to be found among them, large fortunes are rare. They are under the authority of the Pasha of Sherika; but the effective authority is in the hands of the Sheik al-Yahid appointed by the M'annad or assembly of prominent citizens. This council also possesses the right to fix the taxes imposed on the Jews, in particular the abattoir tax, the proceeds of which are devoted to public purposes and the maintenance of schools. Justice, as far as personal statutes are concerned, is administered by the rabbis. These are on the whole ignorant and fanatical. The instruction given in the Talmud Thora is exclusively religious and the efforts made by the Alliance Israélite to introduce a modern system of education into the Mellah have been received with the greatest suspicion.

There are two schools, however, founded by this association which have about 300 pupils.

As to Europeans, they have long been banished from Fas by the fanaticism of the Muslim populace. According to Chenuir (Recherches sur les Moroc., Vol. III, p. 61), it still required in his time the express permission of the makhzen that they were allowed to enter the city. In the course of the last fifty years several Europeans, diplomats or merchants, have made stays of some length in Fas. Some even took up their abode there. American and English religious missions were established there in 1887 and in 1896 but without exercising any influence on the inhabitants. Vice-consulships filled by Europeans were created there by England in 1892, France in 1893, and by Germany in 1902; French and English military instructors were placed at the disposal of the makhzen and a number of Italians commissioned to organise an arsenal. In the reign of Abd al-'Aziz, the European colony comprised about thirty individuals (officers, diplomats, doctors and merchants). The establishment of the French protectorate will probably soon alter this state of affairs.

Fas is not only a holy city, it is also a commercial city where trade is held in no less honour than piety. Goods manufactured in Europe or in Fas itself are here exchanged for the products of the south notably the hides and dates of Taflet. The trade with Europe is carried on via Tânger and the harbours of the Atlantic coast, with Algeria by the road through Tâza and Udja, at least when communication is not cut off by rebel tribes. This traffic is in the hands of the Moroccans and not of Jews as is the case in the towns of the coast. The merchants of Fas are energetic, prudent and enterprising men; they have put themselves in direct communication with Europe; they have offices in Manchester for the purchase of cotton goods; others have founded establishments at Genoa and Marseilles. They are to be found in Orania, Algiers, Tunisia and even on the Senegal. Some are bankers as well as merchants, like the Christian merchants of the middle ages. Some of them make large fortunes and as soon as they do this, hasten to build themselves luxurious houses. This commercial middle class enjoys great influence and forms with the Ulema the controlling class in the state. Local industries also are quite prosperous; besides the articles of every day requirements they furnish several things famous throughout Morocco, which are even exported beyond the limits of the Sharif empire. The most flourishing industries are the manufacture of pottery, of the enamelled squares used in the interior decoration of houses, the weaving of silk and wool, dying, leather-working (dressing of skins, tanning and shoemaking), which occupies over 2000 work people and lastly the mills, which use the waters of the Wâdî Fas and its various branches as motive power. The mills which belong to the abattoir but are let to private industry, number 160. This industry is very old and Gailhard is wrong in its introduction to the Almoravid Vissâb b. Tâshân; as a matter of fact it is already mentioned in Ibn Hâwîl's description of the city in the 9th century A. 11.

A city of sanctity and commerce, Fas is also a city of learning. Its reputation on this score is very old. "Since its foundation" we read in the Kifâr, "Fas has been a great centre where sages,
Jurists, literary men, physicians and other scholars meet in large numbers. Although scholars of repute had taught in Fās under the Almohad dynasty, it was only under the Marinids that the university was constituted, which still exists, although it has fallen from the splendid position it once occupied. It retains the organisation which it had in the middle ages but the instruction given in it, instead of embracing all human knowledge as it did then, is now reduced to strictly religious subjects (zikr). Out of the 20 chairs in the university 10 only are filled at the present day (hadith, jurisprudence, law, theology, grammar, rhetoric, logic, provody, practice of law and belles-lettres). No attempt has been made, as has been done in Egypt, either to introduce modern sciences alongside of the ancient studies or to bring the latter themselves up to date. Sidi Khlâlî's treatise and the works of his commentators still form the basis of the teaching of law, as in the past, and the Aljûrânîyya and Alfiyya in literature. Their aids to study are also defective. The libraries were, however, at one time famous. That of the Madrasa al-Saffârîn once included the Arabic works sent as tribute to the Marinid Ya'qûb b. 'Abd al-Hâkîm by Sancho, king of Castile. These afterwards went to swell the library of the Mosque of al-Kara"wîyn in the xvi\(^{\text{th}}\) century A.D. European scholars used to come to Fâs in the hope of finding ancient works there. But even in the beginning of the xvi\(^{\text{th}}\) century, 'Ali Bey (Bayâqas, Vol. I, Ch. viii.) mentions the confusion in which this library was and now it hardly seems to contain more than 2000 volumes. Some scholars, it is true, possess quite well equipped libraries. A certain number of works, on the other hand, have been lithographed in Fâs itself and thus made accessible to European scholars. The lectures of the professors still form the main elements in the instruction. They succeed one another daily from morning till evening in the arcades of the al-Kara"wîyn mosque. The students (jābûs) begin to attend them on the completion of their elementary studies; i.e. after having obtained the title kāfîn, showing that they can read, write and recite the whole of the Korân. After several years' study, a number of jābûs succeed in gathering hearers around them and thus acquire the title kâfî or savant. It is from the latter that the professors (mudarrisîn) are chosen. The latter were at one time exclusively appointed by the kâfîn, but, since the reign of Mâliy Hâsan, their nomination is subject to the approval of the Makhzen. They are divided into five classes, and receive fixed salaries paid out of the revenues of the qubbâs as well as presents in money or kind given on certain occasions by the Makhzen. The professors of the first class are the only ones who actually have chairs. Scholars, whether professors or simple jāfûs, inîns, preachers in the mosques and Zâwiyas play a preponderating part in the life of Fâs in spite of their scanty means. The majority of the secretaries to the Makhzen and officers of justice have studied under them and are under their influence. They also form a kind of religious council of the empire. “It is to them” says Gailliard “that the Makhzen applies to know if such and such a government measure or manner of levying taxes is contrary to religion or the good of the Muslim community... It is they who after the death of the sovereign ratify the choice of his successor... They should not hesitate, if occasion demands it, to give their views or just protestations.” The moral influence of this small body of some seven or eight hundred scholars, for the most part members of Moorish families in Fâs, is thus considerable and sufficient to form a check on the Sultan's authority.

The students live in “madrasas”, buildings erected to house the jāfûs, somewhat analogous to the colleges of the mediaeval universities. Originally certain courses of instruction were sometimes given in them but this practice has almost entirely disappeared. The poor jāfûs receive a daily allowance of bread furnished by the qubbâs and also benefit from presents sent by persons of importance or pious individuals; if necessary they solicit the charity of the public. The period of their stay in the madrasas, which was at one time ten years, is now reduced to three. The oldest madrasas were built by the Marinids; others were built by the Shârîfî rulers. The madrasas which are still inhabited number 91 (viz. al-Saffârîn, 1323), by Aбу Sa'îd 'Othmân, al-Ăllârîn built by the same ruler, al-Misbâhîyya, built by Abu 'î-Hasan (731—752 A.H.) for a professor called Abu 'î-Diya Misbâh, al-Ăshârî (built in 721 = 1321), Bû 'Ainainîyya (built by Abu 'î-Ainain in 752 = 1351 A.D.), al-Sâla'în; Mulay 'Abî Allah, built in Fâs al-Djadid in the reign of Muhammad al-Âshârî al-Dîlî (1051—1070 A.H.), al-Shârîfîn, built by Mulay al-Rashîd (1061 A.H.) and Bâb al-Gisâ, built by Mulay Muhammad (1171—1205 = 1757—1790). According to the most recent reports they house 350—400 students (Budget Meakin's figure of 1500 jāfûs seems therefore too high). Boisterous distractions break the monotony of study. Every year in the spring the students celebrate a festival in the course of which one of them is proclaimed “Sultan of the jāfûs” and for a week enjoys the honour due to a sovereign. This custom dates back to the reign of Mulay Rashîd. It commemorates, we are told, the capture of Tanza, which was taken from its possessor, the Jew Ibn Masha'âl, by 40 jâfûs, partisans of the Shârîfî. They succeeded in smuggling themselves into the fortresses, hidden in chests, slew Masha'âl and handed the place over to Mulay al-Rashîd who, as a reward for this service, resolved that they should have a sultan of the jâfûs once a year.

The foundation of Fâs coincided with the establishment of the Idrîsî dynasty in Morocco. Abandoning the Berber town of Walli, situated on the S.W. flank of the Djebel Zarhûn, where his father Idrîs I. had settled, Idrîs II. resolved to build a capital. After having examined several sites in the neighbourhood of the Wâdi Sebîl with the help of his vizier Omairî, he finally settled on a valley watered by abundant streams and overhung on the north by the Djebel Zelîg. This territory belonged to two Berber tribes, the Zuwaâgha and Bâna Varghish, from whom Idrîs purchased the land on which the city was to be built. According to tradition, 3500 dirhams were paid to the former and 1500 to the latter. According to the Kibrî, on the first Thursday of Râbi' I. 192 (3rd Febr. 808 A.D.) Idrîs himself, it is said, traced out the line of the city walls and decided on the position of the gates. He built the Mosque of the Sha'âb in the high part and the Mosque of the Shârîfî nearer the Wâdi
at a spot called Karmada; he was buried in the latter. The new town received the name of Fâs, the origin of which is still very uncertain, in spite of the explanations which Arab writers have attempted to give. Some say the word is derived from fâs, a pick, in allusion to the instrument used by Idris to trace the line of the walls; others say that it is the name of an older town Sif inverted, the name of which then existed in the neighbourhood. Another story is that the city took its name from the first person met by Idris. He was called Fâris, a word which, in consequence of a defect in his speech, was understood as Fâs. In any case, Fâs was peopled rapidly. The Arab companions of Idris were joined by Berbers from the neighbouring tribes, Awarra, Huwarâ and Istâa and immigrants came from Spain and Ifriqiya. For example, 309 families from Cordova settled there, as a result of the suppression of a revolt against the Caliph al-Hakam b. Hishân. Three hundred families of Kairawân who had left their native land for similar reasons also settled there. The first families took their right bank of the Wad Fâs, which then took the name of Adinin al-Anfalus (bank, or district of the Andalusians) and the second on the left bank which was henceforth called Adinin al-Karaawiyn. Each of these quarters was endowed with a mosque by Yahyâ b. Muhamma, grandson of Idris II.

The history of Fâs during the early centuries of its existence was a very troubled one. On the death of Idris, Fâs fell to Muhammed his eldest son; then its possession was disputed among the descendants of this prince and the representatives of other Idrisid families. At the beginning of the third century A.D., we find the inhabitants of the city of the Andalusians expelling Yahyâ II. and placing 'Ali b. Idris b. 'Omar, ruler of the Rif, in his stead, while the people of 'Adwat al-Karaawiyn proclaimed Yahyâ b. Kâsim b. Idris who in the end was victorious. In the next century Fâs suffered much from the rivalry of the Idrisids and Fâtîmids. In 308 = 920 Yahyâ b. Idris b. 'Omar, successor of Yahyâ b. al-Kâsim, besieged by Meşâlî, chief of the Mihkânas, found himself forced to recognise the suzerainty of 'Ubayd Allah al-Mahdi; in 309 = 921, Fâs was definitely occupied by the Fâtîmid army, Yahyâ exiled to Arzila and a Kâtimi governor placed on his throne. The people of the Andalusian quarter, however, remained faithful to the Idrisids. One of them, al-Husain regained (313 = 925) possession of this part of the town for a period and remained there till 314 = 926, when an ally of the Fâtîmids, Musâ b. Abi 'l-'Alîya, succeeded in taking it. Musâ's revolt in favour of the Omayyads brought the Kâtâmî armies to Fâs once more; Musâ was expelled and authority in the city again passed to an Idrisid; this ruler having then recognised the suzerainty of the Omayyad Caliph, a Spanish governor was set over the city (335 = 949). Ten years later the Fâtîmids took the offensive; their general Dâwâr seized Fâs (347 = 958) and sent the Omayyad governor prisoner to Kairawân. The triumph of the Fâtîmids was not of long duration, for in 362 = 973, Fâs was replaced under Omayyad rule by Ghalib b. 'Abd al-Rahman the Caliph al-Hakam's II. general. Two Spanish officers were appointed to rule the town, one to each quarter.

The rivalry between the Omayyads and Fâtîmids was followed by a struggle between the Omayyads and the Zanata. Zirî b. 'Atîya, chief of the Maghârawa, governor of Fâs on behalf of the Omayyads (since 381 = 991) rose against the regent al-Manṣûr but was defeated at Tangier by the latter's son, 'Abd al-Malik, in 388 (998) and driven from Fâs; Zirî's son al-Mu'tizz was however given the governorship of Fâs by 'Abd al-Malik in 397 (1006) and bequeathed it to his son Hammâmî in 416 (1025). Soon after, the Maghârawa had to defend themselves against another Berber tribe, the Banû Ifren, whose chief Tamim seized Fâs (1033 a. H.). He plundered the town and wrought particular devastation in the Jewish quarter. He was expelled in turn by Hammâmî (1038). Zirî b. 'Atîya's descendants held out in Fâs till the Almoravid invasion, in spite of the brief occupation of the town by the Hammâmî Bulukkîn (1063). After a first attempt in 445 = 1053, which failed, Yûsuf b. Tâshfîn succeeded in taking Fâs in 452 (1069-1070). The city was sacked by the conquerors. The Maghrîbî, Banû Ifran and Zanata commentators say 3000 persons were, we are told, slaughtered in the mosque of the Andalusians and in that of al-Karaawiwn.

In spite of these troubled times, Fâs developed rapidly under the Idrisids and Zanata. At the end of the ivth (xth) century Ibn Hawkal says that "in the abundance of its fruits, vegetables and provisions... in the quantity of merchandise and other articles to be found there and in the considerable revenue, which it yields to the sovereign, Fâs surpasses all other towns of the land of al-Halâj." Al-Bakî, a century later, mentions that it contains 300 mills, which presupposes a considerable population. "The Jews", he adds, "are more numerous there than in any town of the Maghrib." The two quarters of the Andalusians and the Kairawânis formed at that time two separate towns each surrounded by a wall: their inhabitants were often at daggers drawn with one another. On the death of the Zanata prince Dumas we find, for example, the Andalusians proclaiming one of his sons, al-Fatâh, Sultan, while another son al-'Alîja reigned over 'Adwat al-Karaawiwn. The people of the two towns moreover had different customs and occupations. The people of 'Adwat al-Anfalus, writes the author of the Kifâs, were very brave and for the most part engaged in various trades and agriculture, those of 'Adwat al-Karaawiwn, on the contrary, loved luxury and ostentation in their houses, in their dress and at table; they were occupied only with commerce and the arts.

Under the Almoravids, the aspect of Fâs began to be modified. Yûsuf b. Tâshfîn built the walls which separate the two 'Adwa (462 = 1070) and the space between gradually became filled up with buildings. The mosque al-Karaawiwn was enlarged and a fortress built on the site of the present kaşba of Bit Djelât. This transformation continued under the Almohads whose leader 'Abd al-Mu'min had captured Fâs after a very arduous siege (540 = 1145-1146). To overcome the resistance of the inhabitants he was forced to build a dam across the Wad Fâs which enabled him to deflect the waters and flood the town. When master of the town, 'Abd al-Mu'min's first task was to destroy the kaşba of the Almoravids as well as a portion of the ramparts. Fâs could not, however, remain without defences; Ya'qûb al-Manṣûr ordered the walls which his grandfather had destroyed to be
rebuilt, a work which was finished in the reign of his son al-Nāṣir b. al-Mansûr in 600 = 1204. Al-Nāṣir also rebuilt the citadel. The period of the Almohads seems on the whole to have been a prosperous one for Fas. According to the Kifārār there were at that time 785 mosques or chapels, 93 public baths and 472 mills in the city. In the reign of al-Nāṣir there were 99,235 houses, 908 shops, 2 bazars and 3064 workshops. Houses covered with white plaster, the streams and gardens disappeared to make room for buildings. Industries flourished, copper and leather were the chief manufactures and paper was also made. The population probably numbered more than it does at the present day.

The succession of the Marinids to the Almohads made no alteration in this state of affairs. It was in 640 = 1243 that the Marinid Abū Yaḥyā took possession of Fas and received the oath of fealty from its inhabitants. The latter, however, were not long in rising against him and were so successful that he had to lay siege to the town for seven months before he could enter it again. The execution of six of his slaves had been the immediate cause of this rebellion. The people of Fas of any desire to offer further resistance to their new master. For the three centuries that the Marinid dynasty lasted, Fas had a less troubled history than in the previous period. Fas was for a few days in 1309 however in the power of the Christian militia whose chief Gonzalvez rose against the Sultan; in 1316 Abū 'Ali won it for a time from his father Abū Sa'īd. After a period the death of Abū Aīmān, the pretender al-Mansūr succeeded in taking Fas al-Bālī and shut al-Sa'īd b. Abū Aīmān and the regent al-Hasan closely up in Fas al-Djādir. They were able to hold it long enough for Abū Salīm, brother of the late Sultan, to come and relieve them. In 1334 the pretender Abū l-Abbās Ahmad was put in Fas al-Balī with the help of the king of Granada occupied Fas. He was driven out of it in 1384 by another pretender, Māsā, but entered into permanent possession of it again in 1387.

The period of the Marinids is none the less the most brilliant in history of Fas. The city then regained the position of capital, which it had lost under the Almohads and Almoravids in favour of Marrākush. It was further embellished with new buildings of all kinds, which have perpetuated among the people the memory of the rulers who built them. They built a new town, Fas al-Djādir to house their soldiers and government officials. The first stone was laid on the 3rd Shawwāl 674 = 1276 by Ya'qūb b. Abū al-Hājj. He built a mosque there, a palace, mint and an aqueduct; he allotted a special quarter to the Jews who were forced to leave the ancient city where they had hitherto lived unless they would become Muslims. The new town, was first called Madīnat al-Ba'īlā, the "white city", because of the colour of its buildings, but afterwards received the name of Fas al-Djādir in opposition to Fas al-Balī. The ancient town was not, however, neglected by the Marinids, who delighted in endowing it with religious buildings. Six of the madrasas at present existing date from this period and five of them are in Fas al-Balī. The immigration of Andalusian Moors also helped to increase the prosperity of Fas.

We may obtain a good idea of it from the description given in the beginning of the xvith century by Leo Africanus. According to him the population was 125,000 including 10,000 Jews. Among the sights of the city were "700 temple or churches, of which 50 were very beautifully built, ornamented with columns of marble and fountains in mosaic", 600 public fountains, 100 baths, 200 schools for children, 200 hostleries, of which many were disorderly houses, an asylum for lunatics which is still carried on practically as Leo describes it. Private houses attracted attention by their decoration of "mosaics and bricks of ancient type diapered and variegated in colours". Commerce and industry flourished if we may judge by the innumerable lists of workshops and shops which filled the fifteen sections of the Kāsarsiya and the environs of the mosque of al-Kāraviyin. Industry on a large scale was represented by the textile factories, employing 10,000 hands, the tanneries, bleaching works for the spun wool, mills etc. Among the merchants frequenting the city of Fas, there must certainly have been Christians: Marmol says a special quarter was reserved for them in Fas al-Djādir. Around the city were suburbs that have now disappeared, such as al-Mansūrīn, not far from the Bāb al-Gisa, near grottos in which lepers used to be interned by order of Abū al-Hājj; such are in the west the suburb of Bājlād, of Mars l-Khīm and of al-Qātān, peopled by potters. In the north, on the spur now called Kollā, rose the Ksar or castle of the Banū Merin, of which traces still remain with the tombs of four princes of this dynasty, Abū al-'Azīz b. Abū 'l-Hasan (died 794 = 1392), Abū 'l-Abbāb b. Abū Salīm (796 = 1394), Abū al-'Azīz b. Abū l-'Abbāb (799 = 1397) and Abū al-Hājj b. Abū Sa'īd. Gardens, where the rich people spent the summer from April to September, occupied large areas in the south of the town and beyond the walls stretched other orchards which formed a public park for the citizens. Whatever Leo Africanus may have exaggerated, Fas none the less appears to have been in the xvith century the metropolis of western Maures and the heir to the civilisation of the Moors of Spain.

Decadence set in with the coming of the Sa'di Sharifs. In 1550 Muhammad al-Mahdi took Fas from the Marinids. The city had been valiantly defended by Bā Ḥassān, brother of Sulṭān Ahmad; but a section of the Shaikhīs were won over by the Sharīf by bribery and persuaded the inhabitants to capitulate. Bā Ḥassān having succeeded in inducing the Turks of Algeria in his cause, attempted to regain Fas. Sāliḥ Ra'ís's army defeated Muhammad al-Mahdi at Ta'am on the banks of the Sebīb and again under the very walls of Fas. On the 6th January 1554 Bā Ḥassān re-entered Fas which the Sharīf did not even attempt to defend. The Turks sacked the city and then withdrew leaving Bā Ḥassān with his own troops only. The Marinid restoration was thus of short duration. On the 25th August 1554, Muhammad al-Mahdi regained possession of Fas after a battle in which the Marinid prince was slain. The Sharīf rid himself of the partisans of Bā Ḥassān by wholesale executions, then abandoned the city, contenting himself with leaving his son Mūlāy 'Abd Allāh as governor there.

The people of Fas bore this change of government with a bad grace and their discontent found vent in their participation in the disorders which in the first half of the xvith century ruined the
Sa’d power. We find them alternately proclaiming and disowning Zul‘an, next recognising him, then fighting against his son al-Ma’man. Two competitors Siman and Shihab al-Marbihi disputed the power until Siman was assassinated by his rival. In the meanwhile ʿAbd Allāh b. al-Ma’man had entrenched himself in Fās al-Djaddīd and was blockading Fās al-Bilāt. In the end the Fāsīs opened their gates to ʿAbd Allāh. Al-Marbihi, who with the help of his fellow tribesmen, the Lemeš, had tried to foment renewed disorder, was put to death. ʿAbd Allāh, however, could not long hold out in Fās al-Bilāt; he was driven from it and held Fās al-Djaddīd till his death in 1624. In the same year, ʿAbd al-Malik, another son of Zul‘an, set himself up in Fās al-Bilāt but was dislodged by his brother Abu T’Abbaḥ Abīyād.

Soon Fās itself passed completely from the Sa’dis. Muhammad al-Ḥajjāj, the mameluk of Dīlaḥ, succeeded in making himself master of it and placed a governor in it in his name. Humiliated by this situation, the Fāsīs rebelled (1649) and called in the help of Mūlay Muhammad, Sharif of Sūs. But the latter was defeated by Muhammad al-Ḥajjāj and had to evacuate Fās, the inhabitants of which found themselves again forced to recognize the authority of Dīlaḥ. On receiving news of this rebellion, al-Malik ordered his soldiers to sack the Zawiya of Mūlay Idrīs and scatter the remains of the Sa’dī Sharifs who were buried in the tombs of the Idrīsids.

He remained master of the town undisturbed till 1662, when a certain Dīrīḍ succeeded in taking it for a time. Victorious over this rival, Mūlay Muhammad was however forced soon after to retire to Fās al-Djaddīd, while Fās al-Bilāt acknowledged B. Salāb, chief of the Andalusian quarter and B. Ṣagḥir, chief of the Lemeš quarter.

The occupation of Fās by Mūlay al-Rashīd put an end to these disorders. He had previously tried in 1666 to gain the city, but it was not till 1667 that after two months’ siege he took Fās al-Djaddīd. The two chiefs of Fās al-Bilāt fled; the people opened the gates to the Sharifs and swore fealty to him. Al-Rashīd built the Ḷaṣba of Khemis (now the Ǧaṣba al-Sharardā) for his troops. To him also the city owes the Madrasa al-Sharrātīn and the bridge over the Ǧelū, which facilitates access to Fās to caravans coming from the Tāẓī district. The inhabitants did not yet resign themselves to submit to the rule of the ʿAlawi Sharifs and never missed an opportunity to show their discontent. Thus, on the death of al-Rashīd, they refused to recognise Mūlay Ismā’il as his successor and proclaimed his nephew ʿAbd al-Malik b. Mahrez. Ismā’il was put to death and the frontier was once more invaded by the Sa’dis.

The operations, conducted by the Spanish renegade Pinto, lasted a year. At the end of their resources, the Fāsīs opened their gates while the pretender fled to the south. Mūlay Ismā’il retained a grudge to the end of his life against the Fāsī for their hostile attitude and, while adorning his favourite residence Meknes with magnificent buildings, all that he did in Fās was to restore the Zawiya of Mūlay Idris. Restricted in the path of duty by the energy of the Sultan, the Fāsī lost no time after his death in satisfying their instincts for independence and opposition. They refused homage to ʿAbd al-Dhaḥabī and recognised as chief another son of the late Sultan, ʿAbd al-Malik, as their sovereign. ʿAbd al-Malik was only able to force an entrance to Fās after five months’ bombardment (1728). Ahmad’s successor, Mūlay ʿAbd Allāh, was not more fortunate and had to entrust Riyyīda with the task of besieging Fās from May to October 1729. While these operations were going on, he established his camp at a place called Dar Dubabibīgh (“the house of the little Tanner”). He afterwards built a palace surrounded by gardens here and made it his usual residence till his death there in 1757. The rebellion of Fās was severely punished; the fortifications were dismantled and the citizens suffered a great deal from the extortion and cruelties of the governors appointed by the Sultan. Many of them emigrated to Algeria, Tunisia, Egypt, and even to the Sa’dis. It is therefore not surprising that they rose again in 1735 and that in 1756 they proclaimed a brother of the Sultan, Mūlay al-Malik b. Arība, at the tomb of Idrīs then deserted by him in favour of another son of Mūlay Ismā’il, al-Mustaṣīf. Tired of the latter they drove him out and restored Mūlay ʿAbd Allāh, Al-Mustaṣīf. In revenge laid siege to Fās, at the head of an army furnished by the Beber tribes of the neighbourhood and was repulsed in 1746. As to ʿAbd Allāh, the people of Fās al-Bilāt refused to receive him and even supported his son, Mūlay Muhammad, in his rebellion against the Sultan. While the latter rebelled with the support of the Sultan. The reconciliation of father and son brought peace to Fās again. Mūlay Muhammad restored order by expelling the Ǧudīya, who had made themselves notorious by their turbulence and replaced them by the ʿAbdis.

Mūlay Muhammad’s reign was peaceful but renewed troubles broke out in the reign of Mūlay Simān. In 1234 A.H., the people rose in rebellion to obtain the dismissal of the governor; in 1235 the Ǧudīya took advantage of the absence of the Sultan in Marrakūš to rise and sack the Mollās; in 1256, dissatisfied with the recall of the Mufti, the Fāsīs took up arms once more and proclaimed two pretenders in succession. Mūlay Simān was forced to besiege Fās al-Bilāt for ten months before he could reduce them. The beginning of the reign of ʿAbd al-Ṛaḥmān (cf. this article l. 54 et seq.) was marked by the rebellion of the Ǧudīya who held Fās al-Djaddīd for ten months (1247 = 1831). In the second half of the xixth century a rebellion not less serious broke out on the accession of Mūlay Hasan (1260 = 1873). The people of Fās al-Bilāt led by the Ǧudīya and the prophecies of a blind Sharif refused to take the oath of obedience to the new Sultan and closed the city gates against him. Old Fās was once more besieged but Mūlay Hasan did not dare to proceed to bombard the capital for fear of injuring the mosque of Mūlay Idrīs and thus rousing the fanaticism of the citizens to boiling-point. The blockade dragged on till the imperial troops succeeded in making a breach in the Ǧaṣba of the Filala and thus entering the town. After Mūlay Hasan had regained his capital he carried out considerable improvements there (erection of the palaces of Bā Djeсуд and Laila Amina and the new Ǧeshwār, connection of New with Old Fās etc.; cf. ii. p. 72).

The improvements attempted by Mūlay Hasan’s successor, ʿAbd al-ʿAzīz, aroused great excitement among the people of Fās. In December 1907 troubles again broke out while the Sultan was away to Kabīt on a journey. As Mūlay Ǧhīz.
had risen in rebellion against his brother soon afterwards, the Fāṣ at once decided to take his side. On the 4th January 1908 the 'Ulamā and notables declared that 'Abd al-'Azīz had forfeited his authority by selling himself to the unbelievers who had led him astray; they then proclaimed the Fāṣīr who, after the defeat of 'Abd al-'Azīz at Sidr, had seized on the 15th August 1908, became undisputed ruler of the kingdom. But the triumph of Ḥāfiz was to have quite unforeseen results. The extortion of the ministers and agents of the new Sultan provoked a general rising of the tribes around Fāṣ in February 1911. The herbers of the neighbourhood (Bāt Mār, Ait Yūsī, Bāt Warānīn etc.) laid siege to the town in March and the Shaīfī Mahalla was unable to raise it. At the end of his resources the Sultan called on the help of France, whose troops had occupied the Shāwīya district since 1907 [cf. 194 A.D.-195 A.M., p. 915]. A column under General Moi- nier reached Fāṣ on 21st May 1911 after two fierce encounters on the 5th and 11th May and scattered the rebels. Thus the holy city of Mūlīy Idris was entered by Christian troops for the first time.

**FASĀ**, known in earlier times as BAṢ-SIṣ, a town in Fāṣ, 4 days' journey S.E. of Shīrāz, was the most important town in the district of Darābdīr (Iṣṭākhṛ, p. 97, 127); it was a well built town, with houses of clay and cypress wood, surrounded by a wall outside which lay a suburb in which the markets were. In the centre of the town was a mound formed of the ruins of an ancient tower of unbaked bricks, the mound was still exists. It had at one time flourishing industries (the manufacture of various cloth stuffs which were exported in large quantities, notably brocades, fīrāz al-wusqy and al-ṣukar and shān-ṣīrīf for the use of kings, Iṣṭākhṛ, p. 153, Muḥaddas, p. 442). In Muḥaddas's time it was attached to Shīrāz (p. 52) and had a chief mosque of brick built after the plan of that in Baghdād (p. 431). It was taken by Othmān b. Ali 1-A by the same circumstances as Darābdīr in 23 (644). It was laid waste by the Shaībānīs and rebuilt by the Aṭībīs Khaṭīb. **Biography:** Yākūt, Geogr. Worterb., iii. 891; Karalaczek, Die persische Nadelmaterie Samtendcher, p. 107; Hāfizī Miḥrān Ḥasan Fāṣī, Fāṣ-Nāme (Irbī, 1313 Teherān), ii. 228 et seq.; Barbier de Meynard, Dict. géogr. de la Perse, 422-423; P. **FAṢĀḤA (Ar.), properly, "clarity, purity," abstract noun from ḡāṣ, clear, pure. In Arabic rhetoric ḡāṣ means: 1. a single word, when it is not difficult to pronounce, is not a foreign or rare word and its form is not an exception to the usual; 2. a whole sentence, when it does not contain an objectionable construction, discord, obscenity (through a confusion in the enunciation of the words) or a metaphor too far fetched and therefore incomprehensible. The first kind of ḍaṣāḥ is called ḍaṣāḥat al-munfīl, the latter ḍaṣāḥat al-ḥalām. There is also a ḍaṣāḥat al-mutaballim. This is peculiar to a person whose style conforms to the above conditions. The adjective ḍaṣāḥ denotes a word or a sentence only when free from objection in itself and is distinguished from bādī', which also implies...
that expression is relevant in the passage in question.

(A. SCHAULE)

FĀŠHODA, the former name of a large province and its capital on the west bank of the White Nile in the Anglo-Egyptian Sūdān, in 32° 30’ E. Long and 10° N. Lat., 469 miles from Khartūm.

The district of Fāshoda had been reached as early as the third decade of last century by Sūdān expeditions of the Khedive Muhammad ‘Ali Pāša but it is only since the period of the great explorers of the Nile, from about 1856 onwards, that our more accurate knowledge of it dates.

Fāshoda was then, as it still is, the centre of the great Shilluk people, who inhabit the banks of the White Nile for a stretch of 200 miles from Kaka in the N. to the mouth of the Bahr al-Ghazāl and Sobat in the S.; their territory measures 5-6 hours’ journey in breadth. Their subjection to Egyptian rule took place in the “sixties” but although it cost no battles of importance could hardly be said to be completed till 1871. The number of their villages was estimated at 3000 with a population of 1,200,000. To secure the possession of the conquered territory the fortified station of Fāshoda was built at the time of Th. v. Heuglin’s visit in March 1864 and made the administrative centre of the newly constituted province (mutāriye). The name Fāshoda is believed to have been given by the Arabs while the Shilluk called the new town Dānā while their last king. The new province was divided into four large districts: Dānā, N. of Fāshoda with 14 ‘nāhiyā’; 2. Fāshoda itself with 31, 3. Bādār, the south on both banks of the Nile, with 15 4. al-Dānīka on the east bank of the river with 5 ‘nāhiyā’.

After the expansion of Egyptian power southwards, the importance of Fāshoda lay mainly in its position, as it formed the only connecting link between the Sūdān proper and its capital Khartūm with the Equatorial Province and Bahr al-Ghazāl. When Fāshoda was left to the hands of the Mahdis in 1884 these two provinces were cut off from Egypt and lost. In the Mahdist period Fāshoda was of great importance for the provisioning of Omdurarman (Umm弥rman) as the agricultural population was almost entirely exterminated in other parts of the Sūdān; it was, however, only in 1891 that the Mahdists succeeded in completely subjugating the Shilluk.

After Egypt had officially and formally given up all claim to the Sūdān provinces, Fāshoda was occupied as res nullius on the 10th July 1898 by a French expedition which had reached it from the west under Major Marchand; a number of attempts by the Mahdists to dislodge them were easily repulsed. On the 19th September Kitchener appeared before Fāshoda after his victory over the Mahdists. The ultimate possession of the place was only decided after long diplomatic negotiations in Europe; on the 11th December 1898 the French had to vacate Fāshoda which now became a province again, this time of the new Anglo-Egyptian Sūdān. After Kitchener had left the Sūdān and the entente had been concluded between England and France, the name of the town of Fāshoda was changed to Kolda which had previously been the name of a group of Shilluk villages in the north. Since 1904 the name Fāshoda, officially at least, has ceased to exist.

The modern town lies about 100 yards from the Nile; its chief building is the Mullitya. A bazaar has been built in the Egyptian fortress, which was restored by Major Marchand. The town is hardly destined to a great future, on account of its low situation within the area of high water. On the other hand, when agriculture has been further developed, the province may attain considerable prosperity, if the Shilluk can be persuaded to work regularly; but this has not been brought about by the order to wear clothes.

(B. MORITZ)

AL-FĀSĪ. [See Iṣr aṣ ṣābā’i.]

AL-FĀSĪ, MUHAMMAD B. AḤMAD B. ‘ALI ABUʾL-TAYYIB TAṢĪ AL-DIN AL-MAKKI AL-MĀLĪKI AL-HĀDRAMĪ, an Arab historian born on the 10th Rabi’ I 775 = 31st August 1373 at Mecca, where his early life, with the exception of six years in Madīna, was spent. In 797 = 1395, he began to travel for purposes of study and visited Cairo, Damascus, Jerusalem, Alexandria and Yemen. In 807 = 1405 he became šāfi of Mecca and in 814 = 1412 received a Maliki chair in addition. He was twice deprived of these offices for brief periods in 817 = 1414 and 819 = 1417 and had to resign the judicial office in 828 = 1425 through blindness, but the Maliki Mufti in Cairo at his personal request granted him a certificate that he was capable of exercising his judicial duties. Nevertheless, two years later he was deserted and died on Wednesday 3rd Shawwal 832 = 7th July 1429. His literary activity was almost entirely devoted to the history of his native city. His first work on this subject was the Kitāb al-‘Id al-Thamin fi Tu’dūra al-Balad al-‘Arabī with special reference to toponomy and biography, printed Mecca, 1314 a.h.; on the margin is his Kitāb al-Riḍā wa l-‘Aṣr al-Dīn al-‘Imām a‘lā Muhammad, printed Cairo 1321. He made two epitomes of it. Of the second edition of the second epitome entitled Shīfa’ al-Gharām bi Aḥhār al-Balad al-Ḥaram several chapters are given by Wüstenfeld in his Chronique de la Stadt Mecca, ii. 55 et seq. He made five further abridgments of the Shīfa’.

(C. BROCKELMANN)

FĀṢĪK (i.e. slander) means not only one who has committed a great sin but also one who has been guilty of everyday trifling offences against the law. In the latter respect, in the unanimous opinion of the faṣik almost every Muslim is to be considered a faṣīk.

The testimony of a faṣīk has no legal weight; only the irreproachable Muslim (‘adil) is a credible witness. This is the origin of the custom of having certain persons of good reputation to act as professional witnesses at the conclusion of all contracts (of marriage also). Such persons are often called ‘adil or šāḥid; cf. the literature quoted by
Marriage is also invalid, according to the Shāfī‘ī (and some Ḥanbalī) schools, if the nearest relative (waalī), who gives the bride in marriage, is faṣīk at the conclusion of the marriage contract; it is therefore the custom in some Shāfī‘ī districts to precede the conclusion of the contract by the "conversion" of a waalī; for one who is converted from his sins to a better way of life is again considered 'adil. Cf. Snouck Hurgronje in De Indische Gids, 1884, i. 770.

(Th. W. Juyndoll.)

FāṣILA (a), "interval", a term in prosody, applied to a group of three or four vocalised consonants following by a quiescent consonant. There are two kinds of fāṣila, the kubrā, the greater and qubrā, the lesser. The former is composed of five consonants, four of which are vocalised and the fifth quiescent e.g. samatātun (a fish), bātālumun (with a quill), ḥuṣayna Aḥmadun min halabihii (Aḥmad went out of his town). The latter consists of four consonants, of which the three first are vocalised and the fourth is quiescent, e.g. Kuratun sarabat biwāsala. (a ball was thrown with bent sticks).

(Moh. Ren Chener.)

FASKH means in general the annulling of a contract, e.g. of sale on the ground of hidden defects which the buyer discovers in the article, after he has bought it, or of a political treaty which is declared void by one or both parties. In the first case one speaks of faskh, in the second case of musafakhah. Cf. Ibn Fādil Aḥmad al-Umari, al-Taʾrīf bi l-Muṣafal al-Shafik, p. 170 et seq. A marriage contract in particular can be declared null and void, if after the completion of the ceremony it transpires that one or other of the parties does not fulfil certain conditions. Legal grounds for faskh in the latter case (notably in large part of the Dutch East Indies) which makes the man pronounced a certain faṣih (repudiation) over his wife immediately after the marriage contract is signed. He must, for example, say: "If I do not maintain my wife" (or: "if I beat her") etc. "She is repudiated by me".

FATH (a), literally "opening", a term in Arabic grammar for the pronunciation of a consonant with the vowel a; the sign is therefore called faṭḥa. In Sībawayhī (e.g. ed. Betzenberg, ii. 281, etc.) faṭḥa is still occasionally applied to the pronunciation of the faṭha without "umlaut", i.e. the opposite of imāda (q.v.) — In Arithmetic faṭḥa means the square of a number — There are other technical uses of the word for which see Muhammad Aḥmad Aṭlī, Dict. of Techn. Terms, ed. Sprenger etc., ii. 1104 et seq. v. (A. Schaaede.)

AL-FATH (a), "victory", title of Sūra xviii. and one of the titles of Sūra cx. usually called al-Nasr.

AL-FATH, ĀBŪ NASR B. MUḤAMMAD B. ʿU₇AD ALLĀH B. KHAḤAḤ B. MUḤAMMAD B. ḤABALLAH AL-KAṢĪ, better known as al-FATH IBN KHAḤAḤ, for the biographers do not agree as to his genealogy, was born at Sakhrah al-Walad, a village near Alkalī al-ʿIṣrā (Kalaf Yāḥyā), a district in Granada.

Among his teachers are mentioned Aḥī ʾAbḥāṣ (Abū al-Sarrādī, Abū ʾAbṭayyib b. Zarkūn, Abū ʾAbd Allāh Muḥammad b. Abū Ḥāfan, Ibn Durād al-Kītīb, the celebrated scholar Abu Muḥammad Abū Allāh b. Muḥammad b. Al-Sīd al-Bāṭalaywāsī, etc.

In his youth he was a shameless vagabond, almost always half tipsy till he obtained a position as secretary to the governor of Granada, Abū Yūsuf Tāṣhīfīn b. ʿAlī. He went to Marrākush and was assassinated there in a funduq on the 29th Ramāḏān 528 (24th July 1134?) or Sunday 22nd Muḥarram 529 = 13th November 1134 or according to others again, in 535 (17th August 1141—17th August 1142) by order, it seems, of Sultan Abū ʾAbḥāṣ (Abī b. Yūsuf b. Tāṣhīfīn, brother of Abū ʾAbṣīr ʾIbāḥāyīn b. Yūsuf b. Ḥaballāh, to whom he had dedicated his "Vaselut". He was buried in the cemetery of Ṣabāl al-Dabāṭīnī. He composed the following works: I. Kālid al-ʾIṣbān (or fi Maḥsīn al-Aʾzān, a kind of biographical anthology of those who had lived some time before him and particularly of his contemporaries who had sheltered him or who had quarrelled with him (notably Ibn Bāḍājī whom he placed at the end of the work), divided into four parts: a. kings and princes, b. viziers, c. ʾāʾāsh and scholars, d. men of letters and poets (publ. at Paris in 1277 by Sulaimān al-Ḥarīnī in the journal al-Bīrūjī, at Būlāk in 1283, 1284. A commentary was written on the Kālidī by Muḥammad b. Kāsim Ibn Zākir (died 20th Muḥarram 1120) entitled Tafsīr Kālid al-ʾIṣbān (there is a copy in a private library in Algiers; the French translation announced by l’Abbé E. Bourdage in 1865 has never appeared, in spite of the statements by Denenberg, Brockelmann and Huart. — 2. Maṭnaḥ al-Inṣār wa Maṣraḥ al-Tawwaṇnīs fi Muḥāṣ Abī al-ʾAṣīla, a kind of appendix to the preceding work; there were, it seems, two or three editions or rather recensions of it, a large and a small or a large, a medium and a small, of which the
small was published at Constantinople in 1305 (al-Dzu'wâlî press) and at Cairo in 1325. — 3. A biography of his teacher, 'Abd Allâh b. Muhammâd b. al-Sid al-Bâtalyawî (different from that dedicated to him in the third part of his Kalâlî' preserved in the Escorial (Derenbourg, Les Mss. ar. de l’Escorial, 448?); this biography is followed by a kind of anthology containing letters and poems by Ibn al-Sid and other scholars, the majority his contemporaries. — 4. Makâmûna on Ibn al-Sid al-Bâtalyawî, preserved in the Escorial (Derenbourg, Les Mss. ar. de l’Escorial, 539?). — 5. Bîdâyât al-Majlîsîn wa Ghâyâyat al-Mi‘tâsîn, thought to be lost. — 6. Mûjûmî ‘Rasîlîtki, also thought lost.

Al-Fath Ibn Khâqân more often wrote in rhymed prose, in which he is usually excellent, and also in verse which is mediocre. He seems to have plagiarised his contemporaries or even appropriated their works bodily; they did not dare accuse the thesaurus of plagiarism. He showed himself as much in his everyday life as in his literary doings. In any case, we need not look in his Kalâlî' or Majmû'a for historical facts; the working of the life does rather in the elegance of its style.

(Moh. Ben Chenel.)

AL-FATH B. KHÂQÂN, a favourite of al-Mutawakkil, Al-Fath and the vizier 'Ubad Allâh b. Yahâyâ, exercised an extraordinary influence over this cruel and frivolous Caliph, particularly in the latter years of his reign. Both were ardent supporters of his second son al-Mu'azzz, and exerted all their efforts to exclude the Caliph's eldest son, al-Muntasîr, from the succession. The latter was publicly insulted and had to put up with all sorts of nicknames like al-Mustâdâjîl (the "premature"), al-Muntasîr (the anxious one, i.e. for the throne). On one occasion he was even ill-treated by al-Fath by his father's orders. Other influential men were also thrust aside by al-Fath till the Caliph himself by his lack of foresight prepared his fall. When he ordered al-Fath to have the property of the Turkish general Wa'isî in Isphahân and Mâdâ, confiscated, the latter learned of the Caliph's intentions, and with him allied himself with al-Muntasîr and several others to get rid of the Commander of the Faithful. Al-Mutawakkil was assassinated in Shawwal 247 (December 861); al-Fath attempted to defend him but was defeated by superior forces and shared his master's fate.

(K. V. Zettersten.)

FATH-ALÎ AKHTUNDA (Russ. Akhundov), an Azârî-Turkî dramatist, was the son of a village schoolmaster, took service in the Russian army and attained the rank of captain. When the governor-general, Varansoff, of the Caucasian territory built a theatre in Tiflis 1256 = 1850, the Turkî officer wrote 6 comedies for it, besides a historical dialogue in the Turkî dialect of 'Alavî-lai’dânâm, which he dedicated to Field-Marshall Baturin and which were printed in 1256 = 1859 at Tiflis under the title Tavâlahîât. They have been translated into Persian by Muhammâd Djalâr Munshî.

The following is a list of them:
1. Mollâ İbrâhîm Khalîl Kiiîyâ-ger (1267), transl. into French by Barbier de Meynard (L’Alchimiste, Journ., 1886);
2. Mousîque Journâl, Hékîmî-nilbâlût (1267), transl. into German from the Persian version by A. Wahrmand, Vienna 1889, and into French from the Turkî text by Baois 1906 (Bibl. Orient. Electrisée de Leroux, t. 81);
3. Khîrî Khalî-dîbân, transl. into French by Barbier de Meynard (L’Ours et le Voleur, extract from the Recueil de textes et de Traductions, Paris 1889);
4. Wîzîn Khâ’î Sîrah (presented at Tiflis, for the first time on the 13th November 1903);

6. Murâsîdî askâlî (1272), Les Procureurs, transl. into French from the Persian by M. Cillièrè;
7. L’histoire de Yusuf-şâh (1273), published and translated in French by L. Bouvat (Journ. 1903).

(Cl. Huart.)

FATH-ALÎ-SHÀH, a Persian Shî‘ah of the Kâfîrî dynasty, was born in 1185 (1771), succeeded his uncle Aţâ Muhammad-Shâh in 1212 (1797) on the throne and died in 1250 (1834) after a reign of 38 years and five months (which won him the title Shî‘î-kirîn) and was buried in Kumm. He was at first known as Bâbî-Khân. The murder of Aţâ Muhammad had thrown the army into the greatest confusion; Mirzâ Muhammad Kâfarî closed the gates of Tehêrun till the arrival of Bâbî-Khân who was then in Shirz; he was at once proclaimed king but only enronched at the beginning of the following year. After his victory over his brother Husain-Kuli-Khân, Muhammad-Khan Zand and 'Adlî-khan Sha’kâbî he succeeded in winning recognition from the chiefs of Khorasân. After a long war with the Russians he lost Georgia, which was finally ceded by the peace of Guliştân in Oct. 1813. He had sought the support of Napoleon I. who sent Romieux and Faubert on a mission to him and later General Gardane with the title Ambassador (1806); but thinking that France could not be of any help to him at that time he sought the friendship of England, who sent Sir John Malcolm, Sir Harford Jones Bridges and Sir Gore Ouseley to his court. The rebellion in Khorâsân, fomented by Muhammâd-Shâh of Afghanistân, gave Fath ‘Ali an opportunity to seize Herât (1813), but he could not keep it. A war with the Porte (1821—1823)
was ended by a treaty advantageous to Persia. In 1826, seeking to take advantage of the death of Alexander I, it reconquered Georgia and invaded by his eldest son Abbās-Mīrzā. Fatḥ-ālī Shah declared war on Russia; his son was defeated near Gandja by General Paskivitch (25th Sept.), and again before Abbās-ābād (July 1827), the Shah was forced to abandon Armenia (treaty of Turkman-çı 22nd February 1828), Erivan and Nakhchewan. He died at Ispahan a few months after the death of his son Abbās-Mīrzā and left the throne to his grandson Muḥammad Shah. His keen and deeply sunk eyes were overhung by very thick bushy eyebrows; he wore a long, bushy beard dyed with ʿinnā. The Biblieography: o. Abd al-Razzaḥ b. Nadjaf-ḵuli, Maṭḥīḵ-i Ṣulṭānīyā, Tabriz 1241 and Tehran 1245 (translated by H. T. Brydges, The Dynasty of the Rajaş (London 1853); Mīrzā Taḵī Sipīhr, Tāriḵīḵ-i Kāḏūrā, extract from the Nāʾīḵī al-Tawārīḵ, Tehran 1273; Amédeé Jaubert, Voyage en Arménie, p. 238 et seq.; Fonton, La Kaszlie dans l’Asie Mineure, p. 251 et seq.; L. Duleux, Persie, p. 376 et seq. (portrait, pl. 58 and pls. 84; Grundr. d. Iran. Phil., ii. p. 590 et seq. (Cl. Huart.)

FATḤ-PUR ŚIKRī, a deserted city, 23 miles from Agra, situated in 27° 5’ N. and 77° 40’ E., on a ridge of sandstone rocks near the ancient village of Sikri. In 1550 when Akbar visited Shaikh Salmān Čishti, who was living in a cave on the Sikri ridge, the saint foretold the birth of a son to the childless monarch, and in 1570 Sulṭān Salmān, afterwards known as the Emperor Dji-hānḡir (q. v.), was born there. Akbar then commenced building a city, covering an area of about 37/4 sq. m. and enclosed by a wall (still standing) 37/4 m. long. On his return from his campaign in Gujarat in 1574, he found his new capital ready for occupation and named it Fatḥpur (the City of Victory); he resided here until 1586, when he abandoned it, possibly on account of the brackish nature of the water obtainable there, and shortly after his death, began to fall into ruin. Many of the buildings, however, still remain in an excellent state of preservation; among these may be mentioned the official buildings, such as the mint, the treasury, the record office, and the hall of public audience, and the royal palace, including the private apartments of the Emperor and the residences of several of his wives. The house of the Turki Sulṭāna is remarkable for the elaborate carving with which it is covered, both within and without; the interior is decorated with dado, 4 ft. high, divided into eight oblong panels, richly decorated with carvings representing forest and garden scenes. The two-storeyed building, known as Bihārd’s house, (though it was undoubtedly the palace of one of Akbar’s queens), is similarly covered with carving exhibiting a profuse variety of patterns executed in minute detail. In close proximity to the royal apartments are some curious buildings, of a unique design, e. g. the Panč Mahāl, a five-storeyed pavilion, each storey of which is smaller than the one on which it rests, and the so-called Diwān-i-Ḵāṣ (or private audience hall), a building consisting of one room only, in the centre of which rises an octagonal column surmounted by an enormous circular capital, from the top of which radiate four narrow causeways, each about 10 ft. long, to the corners of the building: the top of this capital is thus connected with a gallery, running round the upper part of the room and communicating by staircases (made in the thickness of the wall) both with the roof and the courtyard below. It is not possible to enumerate here the many other buildings connected with the emperor and his court, but special mention must be made of the great mosque, which is one of the finest monuments of Mughal architecture. It covers an area of 438 ft. by 542 ft., having a central court (360 ft. by 439 ft.) enclosed by cloisters, except at the three gateways, of which the Bāland Darwāza (facing the South), erected by Akbar in 1602 to commemorate his victories in the Dākkān, ranked as one of the noblest gateways in India. In the court of the mosque stands the tomb of Shaikh Salmān Čishti, a single-storeyed building, encased in white marble and surmounted by a dome: the marble lattice screens which enclose the veranda of this building are of extraordinary delicacy and intricacy of geometrical pattern; over the cenotaph is a wooden canopy inlaid with mother-of-pearl arranged in beautiful geometrical designs.

FATĪḤA, the first and most popular Sūra in the Ḥorān). Its name means the “opener” (i.e. of the Ḥorān). This short Sūra which only contains seven verses has a certain number of peculiar features; it is at the beginning of the book, while all the other short Sūras are at the end; it is in the form of a prayer while the others are in the form of a sermon or lecture; in reciting the word amīn (amen) is added to it, which is not done in any of the others.

In Sūra xv. 87 there is an allusion to the Fatīḥa under the name of the seven (i.e. verses) which ought to be constantly repeated (sāḥān min al-Majāzūh); and these seven verses occupy a special position with reference to the portion of the Ḥorān revealed at that time. “We have already given thee the seven verses which ought to be constantly repeated as well as the great Ḥorān”. At the period then, when Sūra xv., which is Meccan, was revealed, the Fatīḥa was already the favourite prayer of the little community of believers.

It has been said that this Sūra is the oldest or one of the oldest in the Ḥorān. Noldeke has urged against this view that it contains expressions which are not found in the Sūras of the first period; notably certain epithets of Allāh, “the merciful, the compassionate, al-Raḥmān, al-Raḥīm” appear there for the first time. Nevertheless the Fatīḥa is relatively old and should be placed at the end of the first Meccan period. It is, as we have just mentioned, quoted in Sūra xv. which belongs to the second period; and its first verse “glory be to God, the lord of the worlds.”
is repeated at the end of Sūra xxxvii. (verse 182) which also belongs to the second period.

The words al-Maghīlūs alaḥum “those against whom God is enraged”, and al-Dālīn, those who err, in verse 7 of the Fāṭiḥa, refer respectively to the Jews and Christians.

The Fāṭiḥa forms part of the daily prayer (Namāz) of the Muslim; its recitation is a divine order according to Shāhī, while Abū Ḥanīfa says it is only obligatory by canon. Various pious scholars combine the isolated view with this Sūra.

Bibliography: Th. Nöldeke, Geschichte der Qorān, 2, p. 110 et seq.; d’Ohsson, Tableau général de l’Empire Othman, ii. 79, 85; the annotated translations of and commentaries on the Ḵūrān.

(B. CARRA DE Vaux.)

AL-FĀTIK, the name of three rulers of the Nādījī dynasty [q. v.]

FĀṬIMA, the daughter of Muḥammad and the aged Khādijā, born in Mecca. Unlike the other children of the Prophet, we have solid grounds for believing in her existence, not so much in reliable documents as in her descendants. She possessed a biographical literature of her own, which however, historical facts are rather scarce, a slight but appreciable advantage over her sisters, notably Rukayyā and Umm Kūlūb, always associated as sisters and confused even in the most trifling incidents of their lives. The poetry of the first century A. H., however, entirely omits to mention her. The date of her birth still remains to be settled. This question implies another, also still unsolved,—the place in order among the four daughters of the Prophet occupied by Fāṭima? All except Umm Kūlūb have been claimed to be the eldest. In this controversy the compilers of the Sūra and of Tradition thought that the advanced age of Khādijā ought to be taken into account. On the other hand, they wished to avoid too great an age for Fāṭima at the time of her marriage with ‘Alī. According to the degree of importance accorded to these two considerations, so difficult to reconcile, the various writers have sometimes brought forward and sometimes set back the date of her birth. It is principally among the Shī‘ites, who endow Fāṭima with all physical graces and all mental gifts and virtues, that it has been found more suitable to make her the youngest. Her sisters are supposed by the Sūra to have been married before Fāṭima, for “as a good pater familias”, so they reason “the Prophet must have settled the elder daughters first”. This insistence on the youth of Fāṭima is quite natural; otherwise it would have to be admitted that Muḥammad was indifferent to his daughter, that the companions showed a shocking lack of enthusiasm to enter the Prophet’s family and finally that Fāṭima was a nonentity if she remained unmarried for a period far beyond the ordinary period of celibacy, so dreaded by Arab women.

In this chronological discussion, in the absence of any direct information — it is useless to suppose with Sprenger that traditions have been lost — the starting-point is furnished by the death of Fāṭima, which all agree in placing in the year 11 A. H. Thus 11 years thus obtained are added the three separating the Ḵūrān from the death of Khādijā. Above this figure 14 there is no agreement among our authors. If some of them have represented Fāṭima as the eldest or one of the eldest of her sisters, it is because they wished to avoid the objection arising from the advanced years of her mother. Others, thinking only of the lateness of her marriage to ‘Alī, have sought to place the birth of Fāṭima about the period of the “prophetic calling” of her father, shortly before or shortly after. The boldest supporters of this view are the writers devoted to the house of ‘Alī. Mas‘ūd places the birth of Fāṭima “eight years before the Ḥijrā” i.e. at a date when her mother must have been at least 60 years of age. This isolated view, which is inspired by the statement in the Sūra that ‘Ā‘ishah was married at an age of nine, is an attempt to give Fāṭima the same advantage. In more than one respect Fāṭima is the Shi‘ite counterpart of the very prominent figure of ‘Ā‘ishah.

The oldest historians and the early Sūras such as that of Ibn Ḥishām devote relatively little attention to Fāṭima. In Ibn Ḥanbal’s compilation, the Musnad of Fāṭima only occupies a page against the 250 devoted to ‘Ā‘ishah. The Tabakht of Ibn Sa‘d manages to give an account of ‘Alī without ever even mentioning the name of his wife. She hardly appears in the Khidr al-Dī‘lahi in spite of the pronounced ‘Alī tendentiousness of this compilation. We know nothing of Fāṭima for the pre-Ḥijrā period except her kunya “Umm Abīhā” and her grief at the death of Khādijā. No one among the persons in the Sūra weeps as much as Fāṭima except perhaps Abū Bakr: tears are a manifestation of physical pain in the daughter of the Prophet and of religious fervour, a veritable ẓawār, in the rough Kurāshī trader. Fāṭima seems to have had a melancholy temperament always wrapped as it were in gloom. Physically she was no better endowed; her weak constitution, her thinness, her frequent illnesses made her unfit for the hard tasks allotted to Arab women. Unlike her sister Rukayyā, there is rarely any allusion to Fāṭima’s beauty and nowhere does Muḥammad declare, as he does for Zainab, that she is “the most capable (affal) of his daughters”. All this explains why she waited so long before finding a husband. One asks, without being able to explain, why this heiress of “the wealthy merchant Khādijā” had no dowry. Tradition would attribute all the delay not to the absence but to the number and exceptional qualities of her suitors, Abū Bakr, ‘Omar etc. Muḥammad, in expectation of a divine command, decided on ‘Alī. She is usually said to have been 15 years of age then; others speak of “18 years or more”. As a matter of fact this last figure must have been exceeded if she was about thirty at her death, but it is a very probable mean. As a rule writers avoid dwelling on this point, for girls in Arabia usually married between 9 and 12. Here again there is an allusion to ‘Ā‘ishah who was married at the age of nine.

After the Ḥijrā, ‘Alī or rather Zaid b. Ḥārīrā undertook to bring her to Medina, while her sister Zainab remained in Mecca. As to her marriage, it is as rule not placed before the battle of Badr; others place it after Uḥud. If Abū l-Kāsim settled his daughters in the order of seniority. Fāṭima, supposed to be the youngest, could not marry before her sister Umm Kūlūb who was married to ‘Omar in the period between the two battles.

Other authors claim to reconcile all discrepancies by distinguishing, as in the case of ‘Ā‘ishah, between the conclusion of the marriage before Badr and its consummation after Uḥud but this is again
an artifice to tone down the lack of eagerness for the marriage on both sides. Ali at first declined the match on the ground of his poverty. Muhammad had to remind him of the beautiful curass, won at Badr; this has been made an argument for placing the marriage immediately after this victory. Fatima on her side showed no more enthusiasm. Although a brave soldier Ali was poor and was even said not to be particularly intelligent.

A union concluded under such auspices could hardly promise to be a happy one. Discord soon found a place beside poverty in the home. Muhammad settled the newly married pair near him. Her quarrels with Ali caused him a great deal of pain. Muhammad had continually to intervene without succeeding in restoring peace. The birth of Hasan and Husain, one born a year after the other, probably in 4 and 5 A.H., did not mark any turn for the better. Their mother did not feel strong enough to nourish her children herself and Tradition has turned this fact to the advantage of the Caliphs of Bagdad, by saying they were nursed by one of the wives of Abbas, who had remained in Mecca with all his family till the surrender of the town. The existence of a third son, Mu'assas, who died young, is problematical; it is affirmed principally by the Shiites. There were also two daughters, Zainab and Umm Kuhlum, the latter born in the last year of Fatima's life.

No outstanding event interrupts the course of this monotonous and obscure life. Fatima had little influence with her father and was thrown into the background far behind the enterprise and formidable Aisha and even the other female members of the Prophet's household. Her relations with the former were particularly strained. For the sake of peace, Muhammad found himself forced to close up the door leading to the adjoining house of Fatima. After Uthman she is depicted as tending her father's wounds. On the deaths of Hamzah and Dja'far she resumes her lachrymose role. She tried to intervene, but without success, in the intrigues that divided the "mothers of the believers" and had to retire before Aisha. Tired of monogamy and the trying temperament of Fatima, Ali meditated doing her the grave wrong of marrying a Makhmante and a daughter of Abu Lahab. Muhammad was very indignant and offered his own law the choice between Fatima or divorce; "she is", he added "a portion of my flesh". Other details given by Tradition and obviously biased show us the poverty and weak health of Fatima, forced to do the hardest tasks without her father or husband offering to assist her. Cruel and harsh to his wife and exasperated by her constant reprimandations, Ali is said to have so far forgotten himself as to maltreat his invalid wife, forcing her to take refuge with her father. On his part he began to avoid the conjugal domicile preferring to sleep in the mosque.

The period of the greatest foreign activity in the Prophet, now head of the state, begins with the fifth year A.H. In the interval between the defeat at Uthman and the siege of Medina by the Arab confederates or Jaffa. The period coincides with the married life of Fatima. Absorbed in his wars, and his great schemes of political organisation, he began to neglect his daughter, so poorly endowed by nature and constantly worrying him with her troubles and appeals to his generosity. Not having the help expected from her husband, a brave soldier, but un distinguished for intelligence, he turned to the circle of Abu Bakr and Omna; this was to put himself completely under Aisha's influence, openly hostile to Ali and Fatima. The Jaffa and the Masmud do then begin to close away this unfavourable impression. Thus we are told that the Prophet when he used to go to announce the hour of prayer at Fatima's door. These collections are fond of insinuating the affection shown by him to his grandsons. A whole cycle of traditions of the Prophet's family life has put around the pair near Muhammad, who in his day displayed even at prayer with the "two Hasans". The Sayyids on the other hand emphasizes the marks of tenderness lavished by Abu Talib on his children Zainab, on those on Zaid b. Jarihah, of Dja'far and even of Zuhair ibn Awam, not to mention the little Alabids: orthodox tactics to neutralise the dangerous exaggerations of the Shi'a. The sons of Fatima do seem nevertheless to have won back: their grandfather's affection, particularly when he saw all his children taken from him one by one. These repeated blows may well have extracted from him the disconsolating words "Ali shall perpetuate my line!".

A passage in the Koran (vi. 60) has furnished the framework of an anecdote which has been cleverly exploited; it is Muhammad's interview with the Christian envoy from Najran. Wishing to test the effect of his imprecations (nabala) against them, he arrived, surrounded by Fatima and her family. This scene has inspired another, still more celebrated in Shiiite literature, that of the Jaffa al-Kusai ("privileged ones of the cloak"). He is said to have called out one day while covering Ali and Fatima and the "two Hasans" under his cloak: "These are the members of my family". Since then that group of five persons has been known to Tradition as the "people of the cloak". We can see the object of this, to associate the "Ali" with the Prophet, vindicate for them the privilege of forming, to exclusion of all others, the "people of the house" (ahl al-bait), and the sole possession of the special purity, as announced in the Koran (xxiii. 33): "Ali will cleanse you, people of the house, and purify you", a verse that is directly addressed to the wives of Muhammad, and not to the "Alids and Fatima who are nowhere mentioned in the Koran.

When he became owner of the rich oasis of the northern Hijaz, Muhammad decided to allot to Fatima the annual allowance of 85 loads of wheat, as he had done for his wives. Abu Sulaym arrived in Mecca to renew the treaty of Hudaybiya. Fatima is mentioned among the people whom the Omayyad chief sought to interest in the conclusion of this treaty: the first act of a comedy which was to end in the fath, the surrender of Mecca. She accompanied her father on the military outing, in which, without striking a blow, he became master of the Kuran capital. She is also said to have been present at the farewell pilgrimage. Towards the end of 11 A.H. the Prophet was overtaken by his last illness. Fatima made her way to the bedside of her dying father over whom Aisha was jealously watching, to hear the prediction that she would be the first of the family to rejoin him.
New trials were to mark the last months of Fatima’s life. Fervently at being set aside by the triumvirates, ‘Ali shut himself up in his house with his partisans. Their adversaries led by ‘Umar came to use force against them. Fatima came out, threatening to uncover her hair, the greatest sign of distress among Arab women. A dispute followed regarding the division of her father’s estate, who had, it appears, died intestate. Among the numerous estates of the Prophet, she had particular claims to the oasis of Fadak, which had been her father’s private property in the strictest sense of the word. All this landed property had been declared state land by Abû Bakr. He answered Fatima’s request with the words of the Prophet: “Prophets do not leave heirs.” To this decisive refusal Fátima, after quoting Koran xxviii. 16: “Solomon received Davíd’s inheritance,” is said to have added this obvious distinction: “Prophets and the exalted gifts, attached to this dignity are not heritable, agreed! But the estate remains.” Overruled by Abû Bakr, she swore never again to speak to him and refused even to see him on her deathbed.

Her death is unanimously placed in the year 11 as “six or eight months” after that of her father, a variation that ought to be noted. Not knowing the exact date, the ancient annalists adopted that of the year 11 in conformity to the prophecy quoted above. They must also have argued from the impossibility of granting that Fátima could have survived beyond the year 11, after the behaviour of ‘Ali, who hastened to make peace with Abû Bakr and to collect a complete harem for himself: these were gratuitous insults to the memory of Fátima and could not (they thought) be decently laid to her husband’s charge. We always find the same a priori reasoning: the whole chronology of Fátima’s life has been obtained by this method. Fátima died of exhaustion, perhaps of consumption; this disease was later to carry off her eldest son Hasan, whom some allege to have been poisoned by Mu‘awiyah. By a strange coincidence, ‘Ali, who was away from home, was not present at her deathbed, but he was summoned back to prepare for the funeral which was carried out at night and with the greatest haste. The estimates of her age vary between 25 and 35 years: it depends on the terminus a quo, the date of her birth. The lowest figures owe their origin to authorities chiefly concerned with making her as young as possible at her marriage. The exact site of her tomb was soon forgotten as was to be the fate of those of her husband and the martyrs of Uhud also.

In the eyes of Shī’ites, Fátima represents “the embodiment of all that is divine in womanhood,—the noblest ideal of human conception.” (Syed Ameer Ali) Her birth was miraculous; her union with ‘Ali decided by a divine decree. After having been the poison most dear to the Prophet, she could not survive the grief caused by his death. Without going as far as this, the Sunnís do not reject the hadiths, in which she is declared “the queen of the women of Paradise next Maryam, the daughter of ‘Imrán”; they give her the enigmatical title of babîl, virgin. The ancient orthodox school was inclined to accord the pre-eminence to ‘Ali in choosing between her and Fátima. But the farther we come down the series of collections of Tradition, the larger becomes the list of her faḍā‘il (virtues) and khâlîfîs (privileges).

The number of her devotees increases as Islam begins to feel the need of a hagiology for the use of the weaker sex. Her story, being vague, lent itself much better to edifying amplification than the too well-known story of the romantic daughter of Abû Bakr. On the day of the resurrection Fátima will be on the same level as her father and the two will form a group. When she passes, an angel will cry: “Lower your eyes, ye mortal.” “The Mahdi will be born from her posterity. The above is a modest glimpse into the fontelegium of the specifically Fátimid literature, cultivated by later orthodox writers; it will give an idea of the rest. The real and only importance of Fátima consists entirely in the fact that through her Muhammad’s line has been perpetuated. She participates in the reverence accorded by Islam to its founder. Veneration for Fátima cannot be earlier than the tragedy at Karbala (61 = 680). This cult developed laboriously. Ancient orthodoxy rightly detected in it a danger to the unity of Islam and the Arab empire: the Caliphs of Bagdâd, after having exploited it, endeavoured to turn the veneration for the Mahdi aside to the descendants of ‘Abbás. It is difficult to explain why the descendants of Muhammad’s other daughters did not participate in this veneration to the same degree as the Fátimids, a name frequently given to the descendants of Fátima.

Fatima is a name that covers a real personality but one that eludes the investigations of the critic. Around this inconstant figure the struggle between Shi‘í and Sunnís has centred; it has been an irregular battle with underhand stratagems and parallel tactics, in which the details conceal and distort our view of the whole conflict. This strife, lacking in sincerity and grandeur, a regular guerrilla warfare of partisans, a war fertile in surprises, utterly distracts the eye of the historian, who desires to fix his attention on this fleeting figure, the lightly painted portrait of the heroine, the cause of and the stake in the struggle. When the two great Muslim parties had taken the field, the dispute was further complicated by the quarrels of the schools, or by particular tendencies, each claiming to be authorised by the example of this daughter of the Prophet, to make a doctrine, a rule of conduct, or moral or ritual prescriptions prevail. Under pressure of the Shî‘a, the school of Kûfâ, the rival to that of Medina, developed the exaltation of Fátima, in opposition to the glorification of ‘Âishah, elaborated in the Hijâz, just as it transformed the brief history of her husband ‘Ali into an answer to the Medina legend of Abû Bakr. Relying on the precautions, which it believed itself to be secured by, orthodoxy seems to have set its mind at rest by thinking of the honour which would be reflected from the cult on the Prophet and his family. While filling up a lacuna in the Sîra, they at the same time freed him from the reproach of indifference to his family. Even the ‘Abbásids found it opportune to abandon their hostile neutrality: this was not a disinterested change of attitude but one in which their easy policy is quite apparent. They must henceforth have tolerated the glorification of Fátima and Fátima among the authors, who worked under their supervision, but on condition that they emphasised the obligations of the ‘Alids to their powerful ‘Askimî cousins, and depicted them as
having always lived under their protection on the
cremains that fell from their tables. Posteriority thought
that this edifying antithesis should be taken se-
riously, in which the personality of Fátima is
used as a pretext, a basis for further developments,
a pious make-believe, destined to further recog-
nition of the cult. From these elements has arisen
a vast biographical literature, a heterogeneous
mixture of elements, for the most part spurious
and frequently contradictory. Fâtima was not the
idea dreamed up by Ali and his circle; perhaps
she did not play such a humble part: she may
have been a less insignificant individual than her
adversaries make out. This last impression is the
one obtained from an impartial study of the an-
cient documents, which are more sober and contain
less fabulous additions. One can understand why
the piety of later ages has sought to embellish
the figure of the Prophet's daughter, but it is less
easy to understand why Tradition should have
deliberately sought to misrepresent it, if it did not
believe in doing so it was doubtless the result
of the fabrications of partisans.

FĀTIMIDS. The origin of the Fātimid move-
ment is to be sought among the ʿIsāmīs, whose
centre was from about the middle of the third
century A.H. the small town of Salamīyah between
Ḥamāt and Ḥims. Among the ḍāris [i. v., i, 895b
et seq.], who went forth from here to the various
Muslim countries, particularly to Mesopotamia,
Persia and the Yemen, to engage in very success-
ful missionary work, Abu ʿAbd Allāh [i. v., i,
74], who became famous under the name al-Shīrī
was the first to gain a firm footing in the
Magrib at the Berber tribe of Ṛta in (from
the end of 272 = 895) and gradually under-
mined the power of the Aghlabīs. This induced
the then head of the Ismāʿīlī sect, ʿUbaydallāh
(who seems originally to have been called Saʿīd)
to go first to Egypt about 289 = 902, and thence
to the west when he found him-self
subject to constant persecution instigated by the
Aḥlabīs; but, however, he was thrown into prison
in Sīdīmānī by order of Ziyādat Allāh. Al-Shīrī's
brilliant and victorious campaign, which after
the capture of Tāberh and Raḵkkāda, made an end
of Aghlabī rule, led to his rise, and, on the 29th
Rabi' II, 297 (15th January 910), he was able to
make his ceremonial entry into Raḵkkāda and
take the name al-Mahdī and the title Amīr al-
Muʾinnin. They at once set to work in the most
earnest fashion with the introduction of the Shiʿi
creed but they never succeeded in overcoming
the Malikītism of the natives for more than a
brief period. Al-Mahdīya (on the coast not far from
Raḵkkāda), which received its name from that of
the Caliph, was made the capital in 306 = 920.
The next generation of Umayyads were the
residences of their own — Abu ʿl-Kāʾim (Muḥam-
dad) al-Kāʾim, while still a prince, built al-Mu-
hammadīya, while al-Manṣūr built al-Manṣūrīya —
but these never attained any particular importance.

Such was the origin of the Fātimids. Their
name refers to the descent, which they claimed
from ʿAlī and Fátima, a claim the justice of which
cannot even now be decided with certainty, al-
though there are undoubtedly grave rea-ons against
it, so that ʿUbaydallāh's descent from Māṁṣān, a
Persian occultist, which is upheld by the other
side, is not improbable. In any case, it appears
that suspicion of the dynasty only appears at a
comparatively late period in literature: the unre-
liability of certain important authorities like Akhū
Muḥasṣin (see C. H. Becker, Die age zur Geschichte
Egyptiens, p. 4 et seq.) is likewise demonstrable:
It is obvious also that any means must have seemed
legitimate to the Aḥlabīs for overthrowing their
dangerous and superior rivals but, if it was upheld
by the defenders of the legitimacy of the Fātimids,
among whom Maṣrīqī and Ibn Kūhānī are pre-
eminent, that ʿUbaydallāh would never have had
to suffer from the plots and persecution of the
Caliph of Baghḍād already referred to, if the latter
had not feared him as an ʿAlī, it can be said
in reply to this argument that ʿUbaydallāh was at
that time no obscure or utterly unknown per-
sonality, but well known as the grand-master of
the Ismāʿīlīs and that this might be the reason
why he was suspected. Nor is the objection quite
convincing that, with the great number and wide
dispersion of the ʿAlīds at this time, it would have
been impossible for their adherents to attach
themselves to the descendants of a Magian (the
occult Māṁṣān) or Jew. This latter assertion, that
ʿUbaydallāh was of Jewish descent, is certainly to
be traced to the hatred of his enemies (cf. J. Gold-
zieher, Muḥammadische Studien, i, 205), but it
must not be forgotten that the ʿAlīds themselves have
repeatedly attacked the genuineness of the Fātimid
pedigree with great vigour and have also taken
up a directly hostile attitude to them. What is particu-
larly surprising, however, is the absolute un-
certainty of tradition everywhere regarding the
genealogy of the Fātimids (cf. Wustenfeld, p. 12
et seq.). August Müller (i, 597) has already shown
how their genuineness is shaken by the contradiction with the view of the Druse, who simply make Manṣūr an ally. The energies of the new ruling house were for the next two generations constantly occupied with an unending series of domestic troubles. Ubaidallah’s treacherous murder only a year after his accession of the strongest supporter of his rule, al-Shīfi, who was threatening to obtain by force the recognition hitherto denied him, was severely avenged. The principal trouble was the rebellion of the Zenāta and of the Kitāma with them. The wars with the former were only brought to an end with the conquest of their city Tāhert by Maṣāla in 299 = 911; the latter then conquered the Idrīsids but Fāṣ was left to a prince of this house; soon afterwards he conquered Sīdjīmās also. His power thus formed a bulwark of the Fāṭimid interests in the west till his death in 312 = 924. But his successor, Ibn Abī l-ʿAfiya, although at first able to win more brilliant successes by subduing the whole of the Maghrib as far as Cæuta where a few Idrīsids still held out, thought it better to submit to ʿAbd al-Raḥmān III., who had occupied Cæuta, in view of his threatening proximity. It was only in the reign of ʿUbadal-laḥ’s son al-Kaʿīm (322–334 = 934–946) that the deserter was conquered, his territory restored to the Idrīsids and rebellion in Tāhert put down. But these troubles passed into insurrection before the rebellion of Abī Yaqzīd [q. v., i. 113 et seq.], which broke out in 322 = 934–944 and threatened to be the greatest danger to which Fāṭimid power had yet been exposed. He was able to win considerable support, particularly among the Ḫarījītī elements in the Awrās and the greatest cities of the empire fell one by one before the onrush of his Berber hordes. He was so successful that he laid siege to the Caliph in al-Mahdiya. Although he was forced to raise the siege after blockading the city for a year, al-Kaʿīm was again besieged soon afterwards in Sīsa where he succumbed to the hardships he had endured. His son al-Manṣūr (334–353 = 946–965) prepared for the campaign against Mahdiya in the civil war after severe fighting in which Abī Yaʿqūb was slain. The always uncertain attitude of the Idrīsids and Zenāta in the West also became rather more settled about this time so that for once the empire could find a breathing space after a long period of internal convulsions.

These decades of unrest, to which were added earthquake, plague and famine, naturally impeded to a considerable degree the efforts of the early Fāṭimid power to expand their power. From the beginning they devoted most of their energies to advancing eastwards against Egypt, but the attempts to conquer the country in this series all ended in failure. In the reign of ʿUbdallāh his son Abu l-ʿAṣām twice (301–302 = 913–915 and 307–309 = 919–921) invaded the Nile valley, but both times initial successes were followed by severe defeats, in the second campaign again. ʿAbd al-Raḥmān was retained as a permanent conquest. When he became Caliph, Abu l-ʿAṣām sent a third expedition against Egypt in 322 = 935, but this was unable to break down the vigorous resistance of the Ikhsī. Much less attention was devoted to Sicily [q. v.] where a Fāṭimid governor had been installed immediately after the overthrow of the Aḥyābids. Although after his expulsion
977 the new Caliph al-'Azîz (365–386 = 976–996) defeated him, but the city still remained Egyptian in name only. It was only in 378 = 988 that it was finally won for the Fāţimids by the enunç Mu'nîr. Tripolis then remained the most northern point in their Syrian possessions. Repeated attempts to capture Aleppo failed however, as it was energetically supported in its defence by the Byzantines; in the great siege of 383–384 = 993–994 it was relieved by the Emperor Basil II in person. It may be said that the empire attained its greatest extent towards the end of the reign of 'Azîz. In 382 = 992 even the Uqailîd Abu l-Dhâwâb b. al-Musayyib had prayed in the name of 'Azîz, although for but a brief period. But in North Africa even with Bulukkin's successor the bonds that bound the empire began to loosen till in 347 = 1054–1056 Mu'izz b. Bâdis finally broke off from the Fāţimids and had prayers pronounced in the name of the Caliph of Baghûḏ. The Egyptian authorities thereupon induced the tribe of the Banû Hilal to invade the Maghrib and although they advanced victoriously as far as Kairûnâ, the land remained irrevocably lost to the Fāţimids. Nor did further developments of affairs in Syria ever lead to the latter regaining a secure possession of the Egyptian Caliph; on the contrary we have a long series of great and small risings, sometimes of the Syrian emirs themselves, sometimes also of the governors and generals sent from Cairo besides wars against foreign powers; the cause was the lack of one powerful controlling will at the head of the central government. The Byzantines were at first disposed of with comparative ease; after they had suffered two defeats at Tyre by sea, and at Apamea by land, a ten years' truce was entered into in the early years of the Caliph Hâkim (386–411 = 996–1021). Temporary successes were marked by the homage of the Uqailîd Kûrîsh b. Ma'allûk in 401 = 1010–1011 and the transitory occupation of Aleppo (402 = 1011). On the other hand the rising of the Banû Djarraḥ, who set up an anti-Caliph in the person of the Shâfiʿ of Mecca, Abu l-Futûḥ, into whose hands the greater part of Syria soon fell, caused a good deal of anxiety. The Egyptian troops were defeated and it was only by bribery that the trouble was finally settled and the Shâfiʿ allowed to resume his position in Mecca. The utter weakness of Egyptian rule came to light under Hâkim's successor al-Zâhir (411–427 = 1021–1036). Three enemies threatened it at the same time: Hâsân b. Daghâlî, one of the main figures in the above mentioned rebellion, took in Palestine, Sinan besieged Damascus, while the Mirdâsî and Šâliḥ captured Aleppo from the Egyptians, which they had held for the last few years: (definitely probably since the end of 417 = 1027, cf. Becker, Beitrag, p. 45 et seq.). Then an officer of exceptional ability, al-Dîrizî, took command and his vigorous measures were crowned with success. Hâsân and Šâliḥ were defeated by him at Uqîwânâ (420 = 1029) and the latter fell in the battle; he regained Damascas and by a further victory over the Banû Mirdâs on the Orontes (429 = 1038) entered into possession of Aleppo. He devoted himself to the restoration of law and order. A ten years' peace was again concluded with the Byzantines and al-Dîrizî even succeeded in having the Fāţimî Caliph recognised in Hârsân, Sarıqâ and Raʾka. This distinguished soldier fell all too soon a victim to the intrigues of the vizier al-Djurjûrâ and the rapid downfall of Fāţimî power could no longer be averted. Palestine rebelled again under Hâsân, Aleppo at once fell to the Mirdâsî Muʿizz. The Egyptian twice, in 440 = 1048 and 441 = 1049, sought in vain to regain it; although the prince above mentioned submitted again in 449 = 1057, the town was lost to Fāţimids, — this time for ever, in 452 = 1060. The apparent success, which will be recoded elsewhere, such as the submission of Baṣîrî in Baghûḏ (450 = 1068), the surrender of al-Šulâîlî, who was able to enforce the recognition of their Caliphate in the Hijâz and Yemen from Mecca to Hadrâmawt, went but a little way to balance the loss of their power in Syria; for a new danger was already steadily advancing from the east in the rising might of the Sâmûlîs. In 463 = 1071 Jerusalem fell to them, in 468 = 1076 Damascus, and after this date it is impossible to speak of Fāţimî power in Syria, although there was no lack of attempts to restore it and numerous battles on Syrian soil, of which more will be said below.

Egypt was therefore the only land left of which the Fāţimîs could really maintain a permanent hold, in which they impressed the stamp of their characteristics, and which formed the basis of their rule in the Nile valley which will only be dealt with in its main outlines here; for the details the reader is referred to the separate articles and to the article EGYPT [ii. 4th ed.]. Their power was placed on a sound basis by the cautious and deliberate policy of the two first Egyptian Caliphs al-Muʿizz and al-'Azîz as well as by the careful organisation of the mechanism of administration and finance in which they found a most valuable adviser in Ibn Killîs in spite of many faults. Under the second of these rulers he received the rank of vizier, an office which in course of further developments became of the highest importance. He was a Jew by descent, although a convert to Islam; one of his immediate successors, Isâ b. Nestorius, was a Christian; the Jew Masmush was appointed to govern Syria, so that an early and marked sign of the oscillating favouring of the Abî al-Ktâb, particularly the Christians, which is characteristic of the Fāţimîs. By the time of 'Azîz, however, we find a rather strong reaction from the Muslim side, but even under his successor al-Hâkim, the son of a Christian mother, whose tyrannical moods repeatedly found expression in rigorous oppression of Christians and Jews, we find Christians in the highest offices. The reign of this Caliph forms in other points also a marked contrast to those of his two predecessors. Although many meritorious institutions and important foundations such as the "House of Sciences" are due to him, his cruel despotism caused on the whole a great misfortune for the land and led to the utter disintegration in the country. This showed itself in the rebellion of the Spanish Umayyad Abu Rakwa, which was only suppressed with difficulty. The danger formed by the mercenary troops of Turks and negroes now became visible; they had first been employed in addition to the Berber troops by al-`Azîz, and their insubordination and constant quarrelling among themselves became the chief reason for the gradual collapse of the kingdom. After the ruler, following up the extreme development of the Ismâ‘îli system had claimed to be a deity, and conditions in the capital had become unbearable, he disappeared in the night of the 27th Shawwâl 411
(13th February 1021) in a mysterious fashion. Henceforth it became almost without exception the rule, for children and unripe youths to be placed on the throne while viziers and generals held the actual reins of government in their hands. At first, however, it was a clever and energetic woman, Hâkim’s sister, the so-called Sitt al-Mulik, who took over the regency for her sixteen-year-old nephew al-Zâhir and soon brought order out of chaos. But she cannot long have remained at the helm of state, for her name is no longer mentioned during the severe famine of 415 = 1025, which led to countless riots in Cairo and threw a lurid light on the lack of discipline among the mercenary bands in which bloody battles were constantly being fought between the negroes on the one side and the Turks and Berbers on the other, and the utter helplessness of Mustanîr, whose rich treasures were ruthlessly plundered by the barbarous soldiery, gradually led to events, which revealed the lowest abasement of the Fatimid Caliphate and the political and economic fortunes of the land at their lowest level. The land was severely ravaged for seven years by a terrible famine, which was in the first place the result of the low level of the Nile in 457 = 1065 and secondly of the devastation of the Delta and the prevention of any importation of provisions by the rebellious commander-in-chief Nâzîr al-Dowla. In the midst of the crusades and the Crusader crusades the country suffered an irreparable loss by the brutal destruction of the unique library of the Caliph by the Turkish mercenaries. It was not till 465 = 1072-1073 that there was at last a good harvest and at the same time the country found a saviour in Badr al-Djamalî [q. v., i. 560 et seq.], a general of Armenian descent, who had hitherto been employed in Syria and was raised to the highest military and civil offices in 466 = 1073 by the vacillating Caliph. He restored order throughout the country with a strong arm, the power of the Turkish emirs was broken, and prestige of the Fatimids once more assured as far as Asuan. Under his two regents quelled the decadence of the whole government, restored peace and order, but he was no longer able to save Syria. In 468 = 1076 Damascus, as above mentioned, had fallen and all attempts to regain it were in vain. In the end only a few towns in the south remained in Egyptian hands. When the great vizier died in 487 = 1094, his son Shâhânshâh took over administration of the country with equal energy, and was likewise able to assure its material prosperity. The name al-Mulik al-Afjal given him clearly shows the powerful position he held. After al-Mustanîr’s death in the same year he had appointed his youngest son, al-Mustâ’îz, Caliph, who during the few years of his Caliphate (he died in 495 = 1001) remained a powerless puppet in the hands of the all-powerful vizier. The rebellion of his elder brother, Nâzîr, was suppressed. Al-Afjal resumed his father’s attempts to regain Syria, but now there was a further enemy to be faced, the Crusaders, whose importance he does not seem to have recognised in time, till the capture of Jerusalem (492 = 1099), which he had won from the Urtujids only a short time before, by the Christian knights opened his eyes to this new danger. The next two decades were filled with battles with varying results between the Egyptians and the Crusaders, but finally only Tyre and Ascalon remained in the hands of the Fatimids, when the vizir was murdered in 515 = 1121 at the instigation of the Caliph al-Azîz (495-534 = 1101-1139) who wished to escape from his tutelage. His by no means incapable successor, Ibn al-Batâ’îli, was not able to replace him; al-Amîr, a malignant despot, then sought to govern alone, to the country’s misfortune till he perished at the hands of the Assassins in 524 = 1130. After a brief interregnum by a son of al-Afjal, who had prayers said in name of the “expected Imam”, his cousin al-Hâfîz, a man of mature years, ascended the throne, for the first time by a break in the direct line of succession, as the murdered Caliph had left no son. He also attempted to govern independently and to maintain his brilliant vizier Yânis. Revolts of the troops and constant humiliations of the powerless ruler mark the beginning of the end and the atrocities, which history relates of the brief reign of his young son al-Zâhir (544-548 = 1149-1154), make it clear how far the degeneration and decline of the dynasty had proceeded by this time. Once more, however, a strong personality took over the reins of government in the courtly Ta’lî ‘b. Ruzzîk, whom the panic-stricken women of the palace called upon after al-Zâhir’s tragic end. The country had need of such a man. Al-Ta’lî, a sickly child of five, chosen Caliph by his father’s murderers, sat on the throne; in Palestine Ascalon, the last bulwark against the Franks, had fallen in 548 = 1153; the Egyptian coast-towns were burned in 550 = 1155 by a Sicilian fleet. The new dictator first of all saw that law and order were successfully restored in the land and his general Dirghâm [q. v., i. 978] won a great victory over the Franks at Ghazza in 553 = 1158. Shortly after the accession of the last Fatimid, al-Afîd, Ta’lî also was all too soon treacherously murdered, his son and successor soon afterwards met the same fate and Egypt now became a pawn in the game between the two great Syrian powers, Damascus, where the Zangîs now reigned, and Jerusalem, where the Franks were in a strong position of aggression the quarrel developing between the two most powerful races in the declining state, Shâwar and Dirghâm, coincided. The young Caliph, one of the few figures among the later Fatimids that awaken sympathy, was too weak to avert the approaching downfall of his house and the appointment of the Damascene general Shirkhû as vizier, with which the independence of the dynasty practically ceased, put an end to all these protracted wars and turmoil. Shirkhû’s successor, Saladin, formally put an end to the dynasty when, in the beginning of 567 = September 1171, he reintroduced the prayer for the ‘Abdâds. A few days later the unfortunate al-Afîd died and with him the Fatimid family disappears from history.
'Ubaḍallāh’s successors, although not very successful in their foreign policy after their conquest of Egypt, nevertheless were able for long to maintain a position of splendor and power. This they owed not, as Lane-Poole supposes, to their foreign guards, who on the contrary very soon showed themselves a source of danger, but to their extraordinary ability of the two first great Caliphs in Cairo, to the mild rule of most of their successors, as well as to the energy of great viziers and generals, of whom more than one raised the kingdom to a new prosperity after grave periods of depression. Traces of the Shī‘ite fanaticism of the early decades are only rarely noticed in the Egyptian period. The great endeavour of the dynasty, whose legitimacy was always disputed, was, after it settled in Cairo, to create a punctiliously regulated ceremonial and carefully graduated categories of officers and officials, as well as to develop an unwontedly luxurious way of living and an extraordinary splendour at court. In this respect, as William of Tyre’s accounts of two days of al-‘Aḍīd show, they have been equalled by few Muslim rulers, and to this day the Azhar, Ḥākim, Aḵmar and Djiyūḏīs Mosque, as well as the great gates, Bāb al-Naṣr, Bāb al-Futūḥ and Bāb Zuwarail testify to the grandeur of the buildings erected by them.

(Ε. Gαβεέν.)

FATĪN EFDŅI, a minor official (kādī) at the sublime Porte, died at the end of the “fifties” of last century, wrote the biographies of Ottoman poets and versifiers from 1135 to his own time under the title Tərekčee khāsīmat ālaḥār as a continuation of the Tekeere of Muṣṭafā Saftā (ends at 1132 A.H.) and of Mirzāzādeh Sālim (ends at 1134 A.H.) at the request of several patrons of high rank. The work, which the author completed in 1269, was lithographed in 1271 (1854-1855) in Constantinople and deserves notice for its biographical data concerning contemporary writers.

(J. H. Morydman.)

FATRA (Α.) latitudine, feebleness or Luke-warmness; the interval of time between the disappearance of a prophet and the appearance of another; also the period between Jesus and Muhammad; and more generally, a relapse in religious feeling. In the life of Muḥammad it signifies the interval between the revelation of Sūrā 96 and 74 of the Korān. Feeling that inspiration had forsaken him, the Prophet suffered great mental depression. He began to wonder whether, after all he was not possessed” (majdhūba), and meditated suicide by casting himself from mount Hira. But a mysterious power is said to have restrained him and the suspense of length was ended by the revelation of the Sūra entitled “The Enwrapped”. This period of “intermission” lasted 2½ or 3 years.

(A. S. Fulton.)

AL-FATṬĀH (Α.), the “Opener”, one of the names of God [cf. i. 304].

FATTAH, YāḥYĀ SIYĀKH, a Persian poet of Nishāpūr, died 852 (1448-1449) or 853 (1449-1450), had at first the name Ṭūfakkāh (in allusion to Siyāk a “little apple”); he also took the names Khayārāt and Arzārāt. He wrote a prose work entitled Ḥasan u Dil “Beauty and Heart”, a romance for which many allusions to local expressions, transl. into English by A. Browne (Dublin 1801) and W. Price (London 1828), into German by R. Drofak (Vienna 1880), and imitated in Turkish by Lāmī, Aḥī and Wālī; his Shabīs-tān Khayāl (in the London and Paris Ms.: Nikāt “Abode of Fancy”, is a collection of tales, stories and jeux d’esprit in rhyme and prose, of which the first chapter has been published and translated by H. Ethé (Leipzig 1868).

(C. Huart.)

FATWĀ. A fatwā is a formal legal opinion given by a mufti or cano lawyer of standing, in answer to a question submitted to him either by a judge or by a private individual. On the basis of such an “opinion” a judge may decide a case, or an individual may regulate his personal life. It must be rendered in precise accordance with fixed precedent; a mufti cannot now follow his own judgment. But inasmuch as these opinions deal with actual cases, as opposed to the abstractions of text-books of canon law, published collections of which are numerous, are valuable as exhibitions of real situations. In the ideal Muslim state, where cano law would rule absolutely, all these decisions would be equally backed by state authority, and would be the law of the land. But as the case is, in practically all Muslim states, a distinction has entered and the cano law, expressed in these fatwas, rules only in such matters as marriage, inheritance and divorce. All other legal questions are decided by other codes or by the will of the sovereign. And fatwas on the side of cano law, which regulates the details of the personal religious life, have validity only for the pious. Further, there is a tendency in some Muslim states to favour some one or other of the four legal schools. Thus Turkey everywhere upholds the Hanafi school and appoints Hanafite judges only. It may appoint muftis of all four schools; but only the fatwas of Hanafite muftis are admitted in the law courts. The others are purely for the private convenience of the followers of the other schools.
FAWŻI (£.) "troop" is the name given since the reorganisation of the Persian army to the tactical unit of infantry, the battalion, which is commanded by a colonel (sarkār) and sometimes by a brigadier-general of the third class sañi-o- ðalih). Each battalion should contain 800 men but in practice is much below this figure. It is not denoted by a number but by the name of the city or tribe of its origin.

(CL. HUART.)

FAWŻIDĀR was the title of the chief military and police officer of a sarkār (revenue district) under Muḥammadan rule in India. His duties were the maintenance of order, the punishment of rebels and rioters, and, frequently, the collection of the revenue. Though subordinate to the provincial authorities, the fawżidār enjoyed the privilege of direct correspondence with the imperial court and the appointment was often a stepping-stone to the highest offices.

The title of fawżidār was also given, under the house of Timūr, to subordinate officers in the elephant stable.

(TE. HAIR.)

Among places which belonged to the Fazāra, there are mentioned: 'Adama, al-Akādir, Qādir, Baldah, Parāq, Djiṣhī A'yr, al-Dul, Djiṣāna, al-Dji'nā (between Medina and Faid), Dārā Djiṭhr, Yarā'a, Kunaib, al-Luṣṭa, Kinn, Sināb (on Mount 'Urfa, a place of some size), Shu'ā'ab, Ural and Urainā. Among mountains: Abān al-Aṣwad and Abān al-Abyad (between them the Wādi l-Rumma), al-Ahūd, al-Akāwī, Dha' Ur (in Wustenfeld Register, p. 167 wrongly Dha' Waral), Dha' Ghārid (in common with the B. Muḥbarī), al-Mudajmar and 'Urfa l-Adjshāl with the hill of Djišt al-Ālun, among watering-places: Abākārī, Arwa, Bāṭin al-Liwa (only the lower part), Djiṭhr, al-Duṭhāna, Dīghāna, al-Ḥas, Kharza, al-Rima, Rās, Shijarī, Urāwā, Uraïnāt and Ur-Ṭaimīn.

History: —The Fazara under Ḥudaybīya b. Badr and his son Ḥiṣn played a prominent part in the war which lasted for decades between the 'Abs and the Dhubyān, the so-called Djiṭhr war. They took part in the battles of the Dha' l-Muraqbilīb, Yam'ṭariya, Ḥabībā, Rakm etc. In the early years of Islam they gave a good deal of trouble to the Prophet, who, according to tradition, bought his first horse, which he rode at Ḥudaydah, from one of the Fazara. In the year 5 (= 626) under 'Uyainā b. Ḥiṣn they besieged Medina in alliance with other tribes of the Ghatafān and the Jews of Qhaibār (the so-called "Battle of the Ditch"). In the following year a number of the Fazara raided a herd of camels belonging to the Prophet at al-Qaibā, a few miles from Medina, plundered a caravan from Medina and wounded its leader Zaid b. Ḥiṣn, whereupon the latter in revenge took prisoner Mālik b. Ḥudaybīya's widow, Umm Kirfa Fajja, and put her to a cruel death. In 8 (629) they were about to help the Jews of Khaibār against the Prophet but were prevented by the latter. In the so-called "Year of the Deputations" (9 = 630) they appeared before Muhammad under Kharidja b. Ḥiṣn to tender their submission. After the Prophet's death they, like the 'Abs and other tribes, renounced Islam, but were conquered by Abū Bakr.

FĀZĪ ĤUSEIN BAY, a Turkish poet, celebrated for his erotic works, also called Enderûn Fāzī. He was a grandson of Tāhir Ḫūrshīf Akkā, who rebelled against the Porte in the seventies of the eighteenth century; after his grandfather in 1775 and his father Tāhir Ėli in 1776 had been slain in battle against the Kapudanpasha Ḥāzī Ėsna, he was taken to the capital by the latter and brought up in the royal serai (endem.) On leaving the serai, he filled various posts in the Office of the Treasury, and in 1790 was banished to Rhodes. There he became blind; after he returned to Constantinople, where he died at the age of 1225 (beginning of 1811). His poems Ženâhim (Book of Women) and Khabâhanâme (Book of Beauties) were lithographed in Constantinople in 1835 [v. Hammer, Osma. Dichtkunst, iv. 603; Zunker, p. 596; Flügel, Handschr. d. Hofbibl. zu Wien, i. 422 et seq.; Fazil-Bay, Le Livre des Femmes (Zenan-Nauch)], trad. du turc par l. Decourdemanche etc. (Paris 1879); but Mustafa Rashid, the Minister of the Exterior of the day, had the whole edition confiscated on account of the offensive subject-matter, so that only a few copies got into circulation. A new edition with various other similar works of the author was published in 1826.

FĀZĪL (FAZIL), MUHAMMAD, known as Kâra Fāzīl (Faţîli the Black) or Fāzīl Ėlif, an
Ottoman poet. The son of a saddler, born in Constantinople, he devoted himself to the study of mysticism as a pupil of Zanfî and, according to 'Ahî, entered the Khalwati order. He soon showed himself a poet of talent. His teacher, Zâtî, himself celebrated as a poet, succeeded in drawing Sulṭân Sulaimân's attention to him in 1550, at the festival on the circumcision of Princes Mehemmed, Muştafa and Selim. The Sulṭân liked him and appointed him secretary of the daiwân to his son Mehemmed who was going off as governor of Magnesia. He remained in this office after Mehemmed's death, with Prince Muştafa till the latter's execution in 1552, when prince Selim, afterwards Sulṭân, took him into his service as secretary of the daiwân. Fażîli died in 970 (1562-1563). Unpretentious and ascetic in his life, he displayed a glowing passion as a poet. Fażîli is one of the more important poets of the reign of Sulṭân Sulaimân, not unjustly called the golden age of Ottoman poetry. He wrote a Divân, as seems to be the unwritten law with all Ottoman poets, with ghazals, kazâdas and quatrains (rubâţî) and a nâbdîstân (passion-grove), a mixture of prose and verse, modelled on Ṣâ'dî's Mathnâvî; he gives his great importance as a poet lies in his Mevlevî's: the history of love-affairs in 5,000 verses entitled, Hûnûn u Hüsûnîyân, in the style of Khusraw u Shârîn, is probably an imitation or reproduction of the poem of the same name by the Persian poet, Khwâja of Kûrmân. Fażîli's most celebrated work is the romantic allegorical Mesnawi, Gûl u Bûblû (the Rose and the Nightingale), in the style of the Gûl u Nûrînâ, the allegorical story of the love of the nightingale for the rose. Written in 960 (1552-1553) the poem is dedicated to Prince Muştafa. Its language is one of the most beautiful of its kind, although Fažîli cannot entirely be credited with originality in the subject. It is ingeniously treated and its language is particularly brilliant. It has become known in Europe also through Hammer's text and translation. But he no longer suits the modern taste with his fondness for subtle allegory.

FÂZULULLAH. Turkish pronunciation of Fażîl Allâm.

FAZOĞLÎ. A mountainous district in the Anglo-Egyptian Sudan situated between lat. 10 and 11 N. and extending from the Blue Nile to the Abyssinian frontier and beyond. The chief places are Fazogli and Fämaka on the Blue Nile. The district is inhabited by backward Negroid tribes among whom Islam and the Arabic language have spread to a certain extent since the time of the Fung conquest; their ethnological position has not yet been determined, the principal tribes are Burûm, Barta, Hamadî (Hameg) and Mignello. The Fung who once ruled the country have now almost completely died out. There are also a certain number of Arabs who migrated into the district from other parts of the Sudan.

Since an early period Fazogli was famous for its export of slaves and gold. A certain quantity of the latter is still obtained, but the principal gold-producing district, that of Banî Shankûl (Shangûl) is in Abyssinian territory.

In the time prior to the Egyptian conquest Fazogli was a vassal state of the Fung kingdom of Sennâr. The Fung are stated to have conquered it under their king Unsa, the son of Nâṣir who reigned at the close of the 17th century. The traveller Bruce who visited Sennâr and Abyssinia in the 18th century states that the Fung left the old ruling family in possession, only forcing them to acknowledge their sovereignty and to pay tribute. This is contradicted by the French traveller Cailliaud (quoted by Shukair) according to whom the kings of Fazogli belonged to a branch of the royal family of the Fung. A list of the kings extending over 215 years prior to the Egyptian conquest is given by Cailliaud (quoted by Naʿûm Shukair).

Fazogli was occupied by the Egyptians under Ismâʿîl Pâshâ in 1822. Ismâʿîl visited the gold district of Banî Shankûl, which disappointed his expectations. Since then the district shared in the history of the Egyptian Sudan, but during the time of the Mahdi and his successor Fazogli was independent of the Omdurman government and part of it became subject to Abyssinia.

Under the present administration the greater part of Fazogli belongs to the Sennâr province of the Anglo-Egyptian Sudan.

FEĐÜ. [See F&B.]

FEHIM, an Ottoman poet and scholar; his full name was FEHİM SULAIMÂN EVENDI and he is also known as KHOĐJA FEHİM. Born in 1203 (1787-1788) in Constantinople, he first of all became an official in the Divân, then in the Mint and Customs service, and ultimately a ġâ'immašûn in Rumelia. He retired from office and obtained a reputation as a teacher of Persian in Constantinople. He died in 1262 (1845-1846). Fehim principally composed ghazals and his Divân has been printed. He wrote a commentary (Saḥîh) on selected ghazals of the Persian poet Śâh's Saḥîh and translated the 'Biographies of Poets' (Tercer-i) of Dawlat-Shâh under the title Safiâz-ı Şanâ'î into Turkish (also printed).

Bibliography: M. Nâdji, Mejmûa-i Meşîlîn (Constantinople 1304), No. 40; Mehemmed Thuriyya, Siyâsî Othmânî (1308-1315), iv. 30; Şâmi, Kamûn-i A'îâm (1306-1315), v. 3456. (Th. Menzel.)

FEHİM UNUZ-LADE MUŞTAFA ÇELEBI, known in literature as Fehim of Constantinople, an Ottoman poet of the late classical period (under Murad IV. and Ibrahim 1623-1648), and one of the few more important representatives of
the period. A simple scholar, without any proper calling, he attached himself to men of note. He came to Cairo in the train of Eyyub Pasha who had been appointed governor of Egypt. But he could not accustom himself to life here, as the bitter verses, veritable Trisitia, which he wrote there against Egypt, show. When he lost the favour of the Pasha, absolutely penniless, he had to appeal to a prominent citizen of Cairo who sent him home with the annual caravan bearing the Egyptian tribute. But he was doomed never to see it again, for he died at Ilghun near Konya of the plague, it is said, in 1054 (1644) or 1058 (1648); the statements on this point vary.

Feihm's works are throughout lyrical. He compiled his Divan at the early age of 18. The spirit of the new school is already active in Feihm, who lived at the beginning of the struggle between the Persian and Turkish schools. He sought the subjects of his ghazals in the trivial events of everyday life. His influence down to the most recent times is undisputed. Kemal, for example, began his career as a poet with verses in imitation of Feihm's.

(TH. MENZEL.)

**FELEKE,** properly falaqa, an instrument of torture, consisting of a wooden pole to the two extremities of which a cord is attached to form a bow; the legs of the victim are passed between the pole and the cord; the instrument is then turned round several times to bind them tightly and make criminal motionless. In this position he is beaten with a stick on the soles of the feet. Schoolmasters and heads of workshops use it to punish children and apprentices. In Turkey, when the Agha of Janissaries used to make his tour of inspection in the capital, he was always accompanied by soldiers carrying the falaqa, called falakits; every week, one of the latter was at the service of the Porte in the retinue of the grand vizier. He had to see to the execution of the punishments ordered by this minister.

**FELLANI. [See Pub.]**

**FELLATA. [See Kult.]**

**FERHAD II SHIRI. [See Farhad Ushirin.]**

**FERDUN AHMED BEY, Nishândji (Keeper of the Great Seal) and Keeper of the State Archives. We know nothing of his birthplace or his ancestors. He was educated in the house of the Defterdar Çiwaâde 'Abd Allah Çelebi and entered the service of Mehmed Sokollu Pasha as Secretary in 960 = 1552-1553. He afterwards became Secretary to the Privy Council (Divan Kâtipçî), took part in the campaign against Kâkbejewân (1554) and particularly distinguished himself at the siege of Sziget (1566). On the 8th Muharram 978 (12th June 1570) he became Ra's al-Kuttâb, and Nishândji on the 3rd Ramadân 981 (27th Dec. 1573). When, after Selim II's death, his successor Murad III. was hastening from Manissa to the capital, he crossed from Mudania to Constantinople on a galley belonging to Ferdün, which happened to be lying ready to sail in Mudania. (7th Ramadân 982 = 21st Dec. 1574). A month later on the 9th Shawwâl (22nd Jan. 1575) Ferdün laid his life's work, the Münâ'ahât al-Salâtîn before the Sultan.

Only a year later he lost the Sultan's favour and was dismissed on the 10th April 1576 (Gerlach, Tagebuch, p. 175). In August 1577 he went as sanjakbeg to Semendria where he arrived at the end of the year (Gerlach, p. 375; Schweiger, Reisebesch., p. 39); from there he was transferred to Kostendil about 1580, see von Hammer, Gesch. der Osm. Reiches, iv. 82 note c). In Muharram 989 (February 1581) the Sultan recalled him to the capital and restored him the office of Nishândji. On the 12th Rabî' 1. 990 (6th April 1582), he married 'Aïshe Sultan, daughter of Rustem Pasha and the princess Mihrimâh; he died on the 21st Safar 991 (16th March 1583).

The Münâ'ahât al-Salâtîn (chronogram for the year of its completion, 982 A. H.), according to Selânîksi (p. 137), contained 1880 historical documents in 11 volumes from the foundation of the Ottoman Empire to the accession of Murâd III. The work has been twice printed in Constantinople in 1824 (1848-1849; cf. Zeitscr. d. Deutsch. Morgenl. Ges., vii. 469) and 1274-1275 (1858). The first edition contains 735 documents, including 41 from the beginnings of Islam, the second a number of translations of Arabic and Persian documents, 100 more than the first edition. If Selânîksi's figures are correct, the two editions contain much less than the original work; on the other hand they contain a large number of documents of a later period, which have apparently been added by later writers in continuation of the work. The book is prefixed by an ethical treatise Miftâhi Lâmmât (chronogram for the year 982 A. H.); as an appendix there is a long essay on agrarian affairs in Egypt, written by the scribe of Murad III. Ferdün mentions a historical essay, Nuchat al-Abkâr, in his preface; the translation of a work on the history of France, which Ferdün ordered to be prepared while Ra's al-Kuttâb, exists in manuscript in Dresden.

**Bibliography:** Our chief authorities are Ferdün himself in the preface to the Münâ'ahât and Selânîksi; they are the authorities used by the bibliographers 'Atâ'i, i. 336 et seq. and Ahmed Resmi, Sefînet al-Rûtsâ, p. 12 et seq.; v. Hammer, Gesch. d. Osm. Reiches, iv. passim; on the Münâ'ahât-i Salâtîn and its MSS. cf. Langles in Not. et Extraits etc., v. 663 et seq.; v. Hammer, op. cit., i. xlii. 586 et seq.; ii. viii. iv. 16; ix. 197 et seq.; Flügel, Hstscr. Hofbibl., i. 282 et seq., 293 et seq.; Krafft, Or. Ac., no. 83; Rieu, Cat. Brit. Mus., p. 80 et seq.

(J. H. MORDTMANN.)

**FERMÂN** ([p.]; Old Pers. fra'mân, Pahl. fra'mân), properly a command thence "written order," "letters patent" or "diploma"; the word has passed from Turkish into French and English with the pronunciation fermân. Such documents were always written in the chancellories in a special hand and to this day the nasta'lit is used in Persia for this purpose and the divanî in Turkey.

Several princes of the Persian Royal Family,
e.g. Fath 'Ali Shāh's eldest son who was governor of Fārs for 40 years, beautified Shīrāz with the garden Bāgh-i Naw and wrote several works, have borne the title Fer'ān-farmā ("issuing orders").

FERÖZKH. [See FERÖZKH.]

FERÖZPUR. [See FERÖZPUR.]

FERÖSZHAH. [See FERÖSZHAH.]

FES (written Fez in Spain), a red cap worn by the Turks, takes its name from the city of Fes (Fās) where it was first manufactured. The introduction of reforms (tankišār) in Turkey was marked in dress by the abolition of the turban, which was only retained by the 'Ulamā. All civil and military officers and private individuals in the capital now wear the fez; in the provinces, however, the turban has to a great extent survived, so that a distinction is made between feḏli (wearer of a fez) and şarīķi (wearer of a turban). In 1247 (1832) a decree of Şulfān Mahsūd II. declared the former to be the Turkish national head-dress, which was to be worn by all religious communities alike to abolish all external distinction between Muslims and non-Muslims. These caps came from Tunis and France, although Austriá carried on the greater part of the import trade. To put a stop to this foreign competition Mahsūd II. founded a factory, called fez-ḵāné, which still exists in combination with a cotton-mill, and with the latter is under the supervision of the Minister of War.

FEZWA. [See FATWA.]

FEZ. [See FAS and FES.]

FEZZĀN is the name of the largest group of oases in the Central Sahara. While Tripoli is the name given to the country that slopes from the Sahara to the Gulf of Syrtes, Fezzān is a part of the Sahara plateau itself; it has an average height of 600—1500 feet above sea-level. It is bounded on the north by the tablelands of Djebeł al-Sūdā, Djebeł Shakhīya and Hfarūd al-Aswād, in the south by the eastern arm of the Tassili of the Adīr Ṭuāreg and by the Tūmūr or War mountains. The eastern and western frontiers are undefined, but may be said to be approximately delineated by the Acacus range in the southwest, in the northwest by the source of the Wādi 'l-Shātī, and the east by Wādī 'l-Saḡhir (area 186,000 sq. miles). The country consists almost entirely of horizontal deposits of palaeozoic sandstone and limestone, which are in part bare stony deserts (hāmmāda), but in other districts (south and northwest of Murzūk) covered by extensive areas of sandhills. In many places there are deep fissures or cauldronlike hollows in the ground, which form ditches and depressions in which the surface water can collect and form soft crumby earth (hīţa), saliferous alluvial sand. It is here that agriculture is pursued as in these places alone there is any possibility of a permanent settlement being made. But Fezzān is almost entirely (c. 95% of the area) bare desert which does not even yield enough vegetation for the inhabitants who have to send their cattle to Tripoli to pasture there. — The climate is only known in its main outlines, for meteorological observations have not yet been systematically made. On account of its central position in the midst of the Sahara its cool winters are followed by long hot summers, the nights in which are sometimes quite cold however. Great drought characterises both seasons (there are no floods or bogs,) and the annual rainfall must be under four inches. There is therefore practically no wild vegetation. At the same time the wild fauna is exceedingly scanty and is limited to a few lizards, snakes, scorpions and the varanus niloticus.

The inhabitants of Fezzān first appear under the name Garamantes and the land as Phasania with the capital Garama (the modern Djerma in the Wādī 'l-Charbī), which Cornelius Balbus won for Rome in 19 B.C. About 100 A.D. Fezzān utterly disappears from our knowledge and does not re-appear till 643 A.D., when 'Uqba Ibn Nāfi' al-Ṣifri won it for Islam on an expedition from Basra, so that Arab blood was thus introduced among the Garamantes. In the beginning of the xiith century the power of the al-Khaṭṭāb family of the tribe of Huwārā was in the ascendancy, they made Zawīla (east of Murzūk) their capital and reigned till the end of the xiiith century, when a Turkish adventurer Shāfīr al-Dīn Kārakōsh came from Egypt and overthrew the dynasty. Only a few decades later the kings of Kāmān extended their sway over Fezzān, which was governed for them by a governor who lived in Trāghēn and afterwards became very independent. It is probably since then that there has been a large infusion of negro blood. The family of Kārmān, who also chose Zawīla as their capital, next (when is unknown) ruled Fezzān. In the beginning of the xvith century they were followed by the Awlād Muḥammad dynasty, whose capital was Murzūk and in the seventies of the xvith century history sheds a brighter light on Fezzān, for it sought to defend its independence in battle with the rulers of Tripoli. Peace reigned after the first invasion from Tripoli (1570-1577) as long as the rulers of Fezzān paid their tribute regularly, but invasion always followed their refusal which happened regularly every few years. It was not till 1744 that the suzerainty of Tripoli was definitely recognised and peace reigned for half a century. But in 1804 the rule of the Awlād Muḥammad came to a violent end at the hands of al-Mukni. During his rule he led many campaigns against the lands of Tubu and as far as Bagirmi [q.v., i. 570b et seq.] and also destroyed the prosperity of the Arab Bedouin tribe of Awlād Sollānī. A member of the latter, Ḍabd al-Djallāl, seized Fezzān about 1831 and fought bitterly against the Turks who had occupied Tripoli and were trying to conquer Fezzān also. In 1842, he, the last ruler of Fezzān fell in the disastrous battle of al-Bagha. Henceforth till 1912, Fezzān was a Turkish Muṭeṣārīflik until it was ceded to the Italians at the end of that year. — These events have strongly influenced the constitution of the present population of Fezzān. In the south there are pure black Tedda, in the west light coloured Ṭuareg and pure Libu Berbers in the north and east with negroes from the central Südān. In the larger oases it is almost only these readily recognisable races that are to be seen side by side with types which are the results of intermarriage among them. In consequence of its situation which commands the caravan route from Tripoli to Lake Chad so important only twenty years ago, the population of
Fezzan is readily exposed to modification by immigrants and people passing through the country. Nevertheless, remnants of the ancient Garamantes seem to be preserved in many remote oases (e.g. of Wadi 'I-Shiit), the inhabitants of which are large-boned, black-brown and fairly honest (cf. the similar Batfira of Nubia). Their mother-tongue is Arabic, they call themselves Fezelsius (sing. Fezelsius). The population of Fezzan is about 40,000 of whom about a fifth are nomads. The average density of population is thus about 1 per square mile.

The scarcity of soil (only 2% of the whole surface) and of pasture (3.6%), as well as its remoteness in desert wastes, prevents any considerable development of agriculture. Cultivation is still carried on entirely by the spade (without the plough) and is limited to the oases and is only possible by artificial irrigation. The chief wealth of Fezzan is in date-palms among which grow wheat, barley, durra, dukka, vegetables, lucerne, clover and fig-trees. The only domestic animals are the indigenous camel, poultry and pigeons, while cattle and a few horses have been imported from Tripolitania and sheep from the Tuareg and Tedda countries. Industries are very few, in keeping with lamentably low level of civilization generally. Trade with the Mediterranean lands and the Sudan gave Fezzan quite an important position from ancient times to the beginning of the last decade of the 19th century, while the traffic in goatskins, ostrich feathers, ivory, cotton goods, indigo, civet, tamarinds, horn and negro-slaves passed through it from the Sudan to the north. Since the opening of new waterways and railroads in the Sudan, however, by far the greater part of this trade has been diverted to the Guinea coast and the roads across the Sahara, always very insecure, are now deserted. — None of the settlements has attained to any size on account of the way in which the small patches of arable land are scattered. Mururuk [q.v.] in the centre of a series of oases running from east to west has become the capital with a population of 20,000 as it lies at the intersection of the roads from Tripoli to Lake Chad and to Ghad and Cyrenaica. The only villages with 1,500 inhabitants are Semau and Djalid in the north and Katri in the south, which all lie on the main line of traffic from north to south.

The Encyclopaedia of Islam, II.
dirt and verdigris are contained in silver seems to be a late addition to Aristotle's *Petroleia*.

Mas'udī, on the authority of a Copt, says that in consequence of the heat and drought in Ḥabash the silver in the land is transformed into gold. Numerous silver-mines are mentioned by the geographers and cosmographers. The medical application of silver in the form of filings, which are mixed with drugs, is based on the belief that it dries up all, so that the plural of aqīfah is also said to be of use against palpitation of the heart.

**Bibliography:** Ikhwan al-Safa' (ed. Bombay), ii. 79; Steinhöfel des Arabisten (ed. Ruska), p. 58; Kazwini (ed. Wustenfeld), i. 206; Mas'udī, Murūj al-Dhahab, ii. 378 etc.; Dimishki, *Cosmographic* (ed. Mehren), cf. the Index s. v. (J. Ruska.)

**FIDJĀR.** The Fidjar days, which are said to be so called because they fell in the holy months during which war could not be waged (wherefore the participants said faqarna, "we have sinned"), are discussed in the literature of the *Siyāsa al-ʿArab* [see above i. 218 et seq.]. There were 4 fidjar days a year, so that the plural of aqīfah is also used. The last of these days was fought between the Koraishis (and their allies, the Kināna) and the Ḥawazin [q. v.]. Tradition varies as to the date; according to some Muḥammad, who is said to have been present, was 14, according to others, 20 years of age at the time. Cf. Ibn Sa'd, *Ṭabaqāt*, ed. Mitwacho, i. 80 et seq.; Yāqūt, *Muḡālan*, in. 579.

**Bibliography:** See under the article AYĀM AL-ʿARAB and also Causin de Perceval, i. 296—318.

**FIDYA (A.),** "ransom". Sūra ii. 180, 192, demands a fidya on the omission of certain religious duties (fast, pilgrimage). The same passage indicates of what it should consist and further details are given in the commentaries. Cf. Juynboll, *Handbuch des Islam*, Gesetze, p. 122; on the fidya (= fidya) in Java and Sumatra, for šalāts omitted in a lifetime, cf. Snouck Hurgronje, *The Atheneum*, i. 435 et seq. — See also the article KAFFARA.

The people of Syria and the country east of Jordan give the name fidye or fidde to a bloody sacrifice, by which it is hoped to protect children or property (house or cattle) from misfortune or destruction, or which is offered for (to) the dead, cf. S. I. Curtis, *Ursemitische Religion*, Index s. v., fidye; Jansen, *Comtines des Arabes*, p. 357 et seq. and 361 et seq.; Mission arch. en Arabie, i. 472.

In Morocco fidya is the name of a peculiar ceremony, also performed in several parts of Algeria under the name fiqayat, at which a man, in the hope of securing freedom from punishment in the next world, has all the preparations for his burial made, after which a number of fidya recite the sections of the Qur'ān used at burials, cf. W. Marçais, *Textes arabes de Tangier* (Bibl. de l’École des Langues Orient. Vinc., Vol. iv.), p. 409 (glossary).

**FIGHĀNĪ (Βαφά), a Persian poet; the son of a cutler in Shīrāz, whence his first pen-name Sabkāt, the creator of a new style, which was imitated by his successors, but did not meet the taste of his contemporaries. He left Ierat and the court of his Sultan Hūsin to go to Tabrīz, to enter the service of Sultan Yāḵūb of the Aḵ-Ḵuyunlū dynasty (883—896 = 1478—1491), who gave him the title Fīḥā-i Ṣḥārār, "father of poets." After the death of the Sultan he went to Abiward in Khorsān and died in 922 (1516) or 925 (1519) at Meṣḥed. His *Dīwān* contains ghazals of which ten have been published by Bland in his *Century* (p. 34—37), rubātī and fardāyī (quatrans and distichs).**

Fīghānī is also the pen-name of a Turkish poet Rāmaḍān of Trabzon, who began by studying medicine and then devoted himself to literature. An epigram composed by him on the grand vizier İbrahim Paşa on the transporting of three statues from Buda-Pest brought about his execution by the bowsstring (932 = 1526). Cf. von Karabacek, *Zur Orient. Altertumskunde*, 98 (Sieber, d. K. Akad. d. Wiss. u. Wien, Vol. 172). He left ghazals and ḵaṣiṣās.

Fīghānī was further the pen-name of an older poet, Fīghānī of Karaman, secretary to prince Ābd-Allāh, son of Bāyāzīd II, who composed an *Iskandar-Name* among other works.

**FIGUIG (Figg), an oasis in Morocco, 76 miles S. of Ain Sefra and 3 miles W. of the French station of Beni Uuf (32° 18' 54" N. Lat. and 10° 26' 54" W. Long., Greenwich). For long closed to Europeans, it was visited only by the two travellers, Rohlf and Schaudt; the district was practically only known from information collected by the Service des Affaires Indigènes and remained somewhat mysterious down to the beginning of the xxi century. Since then the progress of the French occupation of the Sahara, the conclusion of the Moroccan agreements and lastly the building of a railway have dissipated this mystery and rendered access to Figuig possible even to tourists.

The group of oases known by the general name of Figuig, lies at a height of about 3000 feet in a mountainous hollow surrounded by serrated peaks separated from one another by rather narrow passes. On the north rise the Djebl Cruz, the Djebl Haimer and the Djebl Djermān Tāḥūnī. On the south the hollow is bounded by the Djebl Melias and the Djebl Muḥjāhidīn, between which runs the Teniyet (pass) Muḥjāhidīn, then, above the Pass of the Jewess, the Djebl Zenāga (3490 feet), the Djebl Taghla (3730 feet), cut off from the preceding by the Pass of Zenāga and lastly above the Pass of Mazzura, the Djebl Sidi Yūsuf. All this region is, as it were, surrounded by a natural rampart which protects it from the incursions of the tribes of the Sahara or of the high plateaux of Morocco. The bottom of this hollow thus marked out is, with the exception of a deepened zone called the plain of Baghdād (a name given throughout South Morocco in general to flat areas devoid of vegetation), covered with palm-groves which cover a space of about 4 miles by 2 and enclose about 300,000 palms. Their irrigation is secured by two rivers, the Wādī Sheggaret al-ʿAbīd and the Wādī al-ʿArūda and also by a subterranean sheet of water which gives rise to numerous springs. The water is led through the palm-groves by a system of canals, some above ground (ṣākiya, segua) and some subterranean (foggar, plur. foggaʾīr). They also fill reservoirs, the contents of which are used in
the dry season (July to October). As in all the oases the water-supply is administered after an ancient and complicated system of laws. The khurriya or perpetual right of disposing of two-thirds of the water furnished by a spring, twice a month for one hour, costs about 2.4. Disputes over the water supply have on several occasions provoked bloody conflicts between the inhabitants of different oases, who had sought to divert the course of the water to monopolise it to the detriment of their neighbours. The gardens thus watered are planted with fruit trees and vegetables; a few poor patches of barley and wheat are scattered on the plains of Jdeida. The gardens are worked either by the owners with the help of labourers or khammes, who receive one-fourteenth of the produce, or by khammes alone, who in this case receive a seventh of the yield.

The population is distributed among seven villages or kür forming five groups: 1. Udaghirt and Al-Abid in the N.W. — 2. Al-Ma‘iz. — 3. Ulaa Sliman in the N. — 4. Al-Hammam Al-Fugan and Al-Hammam Al-Tahani in the N.E. — 5. Zenaga in the S. All these kür are built around springs, except Zenaga whose inhabitants have recourse to the waters of Ain Tadert, which springs up from the village of that name and which of which the ownership has been the cause of frequent quarrels between the two kür. Each of these towns is surrounded by walls, within which the houses of unbricked brick are huddled together, sometimes several stories high and forming a labyrinth of narrow, tortuous streets often vaulted over by the houses. The most important of these kür is that of Zenaga, which is divided into five quarters, Benti Dafir, Ulaa Mous or Tidir, Ulaa Sliman or Mohammad, Atsamaa and Ulaa Saida. Daghirt is the next in importance to Zenaga. The others are much smaller, that of Al-Abid being almost entirely in ruins. It may be added that the inhabitants of Figuig, notably those of Zenaga, possess a certain number of small races in the neighbourhood, such as Al-Ardja, Taghla, Meaghtr, Tarsa, Meslu, Takruin, Melias, Al-Kheneq and Beni Unif.

The total population of Figuig is about 15,000, the great majority of Berber origin, of whom the Fenaza, a section of the Ulaa Sliman or Mohamad, according to tradition, represent the oldest established element in the country. Among the inhabitants we find many harratun (cf. the art. haka, i. 1074β et seq.) reduced, as in all the Berber regions of Morocco, to a condition of social inferiority. They are particularly numerous in Zenaga, where they live in a separate quarter, called niajdida. The slaves owned by the people of the kür used at one time to come from Twat but since the occupation of this country by French troops, they are now bought in Tafsielt.

Finally may be mentioned various nomadic tribes who come regularly to encamp in the neighbourhood of the kür; such are the Amur, the Ulaa Abdallah, the Benti Guif and the Ulaa Sidi Shaikh Gharaba.

The Jews number about 5000 and live in separate quarters or meluz at Daghirt and Zenaga. They each have a master to whom they pay tribute but their lot is, however, not too hard one, that of their co-religionists in Southern Morocco. They are for the most part engaged in various industries, particularly goldsmith's work in which they have a practical monopoly. The other industries practised by the people of the kür, the weaving of burnouses and carpets ornamented with geometrical designs, the manufacture of pottery, and embroidery on leather, are dying out. On the other hand, from its geographical situation at the intersection of the routes from the High Plateaus to the Sahara oases on the one side and from Tafsielt to the central Maghrub on the other, and also on account of its proximity to the railway, which facilitates the importation of European goods, Figuig is still a commercial centre of considerable importance.

Although the mosque of Udaighirt contains the ashes of three rather celebrated saints, Sidi Aissa (Tsia), Sidi Muhammad or Brabam, Sidi Abd al-Waif and although the instruction given in the mosque of Al-Maiz attracts a certain number of folob, the religious influences that predominate in Figuig are foreign.

Marabouts calling themselves Sharifs, but readily marrying the daughters of the kürins and others less numerous but more exclusive, attached to the Ulaa Sidi Shaikh Gharaba, form a religious aristocracy. The brotherhoods of the Sidiya governed by the Shorfa of Wazzan, of the Kerzaiya, which is under the mukhtar of Kerzaiya, attached to the Zawiya of Kenadsa, and lastly of the Naufiy, attached to the Zawiya of Sidi Ahmad al-Nasir in Tamagraut, number among their members the great majority of the people of the kür. The other brotherhoods, Tidjaniya, Kaidiriya, Deurgawa and Aisawa only find a very few adherents.

The languages in use at Figuig are Berber and Arabic. Besides the learned men, a certain number of men have some knowledge of the latter but practically all the women are ignorant of it. The language in common use is a dialect of Shilha mixed with Zenata elements and with Arabic, sufficiently allied to the dialect of Ain Safra and of Moroccan Sius for the natives of these regions to understand the people of Figuig without difficulty, but on the other hand quite unintelligible to the Berbers. "This language" says Mr. Basset "is very poor. It seems to be a kind of patois strongly mixed with Arabic, but, nevertheless, is one of the most interesting, as under this seeming primitiveness it is the sole relic of the dialect spoken on the high plateaus and in the Sahara of Algeria, Oran and Morocco before the invasion of the Beni Hilal and the emigration of the Ibadis, which was spoken for a time also at Tlemcen at the court of Yaghouar and the Beni Ziyâ, who originally belonged to the Waisinian tribe of Abd al-Wad."

The history of Figuig is very uncertain. For ancient times, the only evidence we have of the existence in these regions of a settled population is contained in rock inscriptions. The country was perhaps peopled by Berbers of the Shanhaiga family. At the time of the Arab conquest, all the land between the Mzaib, the Djeibel Amur and Figuig, was occupied by the Beni Badin, a branch of the Beni Waisin. The name Figuig itself only appears in the sixteenth century A.D., when this district seems to have inherited the commercial depressed of Sidjumasa. It was then governed by the Beni Sid al-Mulak, of the Matghara family, a section of the Beni Faîne. "Figuig" says Ibn Khaldun, to whom we owe this information "consists of several town-
ships quite close to one another and forming a large town into which flow the products of the desert and, owing to its distance from the Tell, it enjoys complete independence (Histoire des Berbères, transl. de Slane, Vol. 1, 240). In the viiith century, Leo Africanus mentions “the three castles of Figuig built in the desert” (Leo Africanus, ed. Schefer, Vol. iii, 240). In the viiiith century the pilgrim al-‘Ayyash, who visited Figuig in 1074 (1663 A.D.), describes the district as prosperous and possessing celebrated libraries (Berbuger, Voyages dans le Sud de l’Algérie et des Etats Barbaryques, Paris, 1846, p. 159). About this time, Figuig fell into the hands of the Saltans of Morocco, who were seeking to extend their power over the oases of the Sahara. According to the Tarjumân (transl. Houdas, p. 32), Mûlay Ismâ’il conquered Figuig in 1679 A.D. and established a negro garrison there. The name al-’Abid borne by one of the qudr to this day is perhaps connected with this event. Moroccan rule, in any case, was established in the oasis in the beginning of the viiiith century A.D., for a Sharif kâïd, named Muhammed al-Saghîr al-Djâshîrî, was in command there in 1101. He died in 1111 and for one year and a half the kâïd was in conflict with those under his rule. The qûsirians succeeded in recovering their independence, however, no doubt favoured by the troubles that followed the death of Mûlay Ismâ’il. They retained it throughout the whole of the viiiith century. A second expedition was sent against them in 1806 by Mûlay Slimân, who had taken up the plans and policy of his ancestors. A third expedition was perhaps sent in 1839. These various attempts had no effect on the country however and Figuig remained independent. Each of the qudr was ruled by a djamanâ or assembly of notables elected for life. This assembly decided matters of general interest, notably the levying of the necessary provisions to constitute the makhzen or storehouse, to supply food in time of war and provide for the expenses of hospitality, etc. The various djamanâ were independent of one another; they could unite however in case of a common danger, but did not elect a chief. The agreement of Lalla Maghnïa (18th March 1845) which divided the qudr of South Orania between France and Morocco granted Figuig, without any real reason, to Morocco. The suzerainty of the Sharifs, however, remained purely nominal. The Makhzen could not instil a permanent representative in the oasis: it did not succeed in obtaining regular payment of tribute: it proved utterly incapable of repressing the excesses of the qûsirians. The latter, indeed, on every opportunity lent their aid to Algerian malcontents (Uld Sidi Shaikh, Bî Amânî) and encouraged the incursions of the Zegdû or marauding bands who, after being organised in Figuig, raided the Algerian tribes and returned to get rid of their booty in the qudr. The French government, although the treaty of Lalla Maghnïa conferred on it the right of pursuit on Moroccan territory, declined on grounds of international policy to punish the people of the qudr. Napoleon III. in 1867 refused to authorise General Deligny to conquer Figuig and, in 1870 at the time of the High-Guir expedition, forbade General de Wimpfen to go near the oasis. Demonstrations alone were tried but without effect. In 1866, for example, Colonel de Colomb’s troops advanced as far as al-Dirja, in 1868, Colonel Colonieu’s encamped at Taghla, a mile from Zenaga. Encouraged by their impunity the qûsirians continued their misdeeds, until the French government and the Sharif Mahâzen decided to come to an agreement to put an end to the state of affairs. By the protocol of Paris of the 30th July 1911, the two governments resolved to take the necessary measures to “establish peace and security on a more solid basis and initiate a commercial scheme destined to render the border regions of Algeria and Morocco richer and more populous. Two commissions, one French and the other Morocco were appointed to find the practical means of obtaining this result. Their labours ended in the agreement of the 20th April 1902 which decided on the installation in Figuig of a Moroccan amîl supported by a Sharifian garrison and of a French commissioner in Beni Ounif, the establishment of outposts to guard the different passes and the method of collecting the customs dues etc. Difficulties still continued however. The amîl did not succeed in enforcing his authority and remained blockaded with his garrison in the kasa of Oudâghir. Finally on the 70th May 1909, the governor-general of Algeria, M. Jonnart having come to examine the situation on the spot and confer with the amîl, was attacked by the qûsirians near the Zenaga pass and lost several of his escort. This attack was severely punished. A French column under General O’Connor appeared before the walls of Zenaga, the kasa was bombarded in June 1903 and the djamanâ sued for peace. They had to hand over to the French the culprits who had taken refuge in the qudr, to deliver hostages and pay an indemnity of 2,400. The memory of this punishment, above all the progress and consolidation of the French occupation in the whole region, and the advantages which the qûsirians themselves have reaped in being able to trade freely with the French established in their neighbourhood, have since then assured perfect tranquillity to Figuig.

PIHL [See FAHIL.]

AL-FIHRI, ABU ISHâKH IBN IBN ABD-EL-HÂSAN AL-ÁHMAD, compiled in 632 = 1234 a selection from the works of Spanish poets and a selection of the witty and witty in the 7th and 8th century A. H. entitled Kanz al-Kuttab wa Muntakhab al-Adab (s. H. Krafft, Die Ar. Pers. und Türk. Hds. der k. Orient. Akademie zu Wien, Vienna 1842, Nr. 147).

(C. Brockelmann.)
FIHRIST (P.) "list", particularly a catalogue of books; hence the title of several bibliographical works, s. AL-NAIMM, TUS.

FIKH ("intelligence, knowledge") is the name given to jurisprudence in Islam. It is, like the jurisprudence of other human law (mu'amalat), it also includes criminal law and procedure and finally constitutional law and laws regulating the administration of the state and the conduct of war.

All aspects of public and private life and business should be regulated by laws recognised by religion; the science of these laws is Fikh.

In older theological language the word had not this comprehensive meaning; it was rather used in opposition to ilm. While the latter denotes, besides the Koran and its exposition, the accurate knowledge of the legal decisions handed down from the Prophet and his companions (Ibn Sa'd, II. ii. 127, v. 121, iliyar yata la'ilm, synonymously), the term fikh is applied to the independent exercise of the intelligence. The decision of legal points by one's own judgment in the absence or ignorance of tradition bearing on the case in question. The result of such independent consideration is ra'y (opinion, opinio prudencæum), with which it is also sometimes used synonymously. In this sense ilm and Fikh are regarded as distinct qualities of the theologian (in Nawawi, Tahdhik, ed. Wüstenfeld, 793, s); fikh va-risqya (Ibn Sa'd, v. 327, 10). The sum total of all wisdom is defined by Muhammad in (explanation of Sura, ii. 27, man ya'lin 'l-hikma) as composed of the following elements: al-furqan wa-la'ilm wa-1-fikhr. Hara`n al-Radih instructs his government Harhama to consult the ufi al-fikhr fi din Allah and the ufi la'ilm bi-kitab Allah in doubtful cases (Tabari, Anwa'is, iii. 717, v). Further passages are quoted in Muh. Stud., ii. 176, note 6.

In this sense the 'alim (plur. 'alamun) is distinguished from the fakhr (plur. 'fakharun) or the combination of both sciences in one individual is expressed by the combination of these two epithets or their synonyms. Ibn `Umar was djiyiyid al-fakhid but not djiyiyid al-Fikhr (Ibn Sa'd, ii. 125); on the other hand Ibn 'Abbâs was 'alamun with reference to decisions handed down by Tradition and at the same time 'afkhun (or 'Afkhun ra'yib) in new cases that arose, for which no precedent could be found in Tradition and in which it was necessary to use one's own judgment (ibid. 124, 4; 124, 8); the same is true of Zaid b. Thabit (ibid. 165, 10). Vgl. fakhr 1-ilm ay la-1-mana (ibid. 110, 22). Sa'd b. al-Musayyab is 1-fikhr al-Fakhr (ibid. ii. 129, 5; 130, 47; 10; v. 90, 5) on the other. Among the Tabarsi there were 'fakharu wa-la'manu i.e. those who were authorities on the chain of evidence of hadith and ijma as well as on fikhr and were competent to give (independent) decisions, fatwâ (ibid. II. i. 128, 14). Abi Thawr was ahad al-imam al-Khanna fikhr va-ilmun (in) Zaid b. Tabarî, al-Tafi, viii. 106).

In the oldest period of the development of Islam the authorities sanctioned with the administration of justice and the conduct of the religious life had in most cases to fall back on the exercise of their own ra'y owing to the scarcity of legislative material in the Koran and the dearth of ancient precedents. This was regarded as a matter of course by every one, although they were naturally very pleased, if the verdict could as far as possible be based on ijma. When 'Aâ'idh b. 'Abî Rabah (died 114 = 732) was giving a judgment, he was asked: "Is this 'ilm or ra'y?" If it was founded on a precedent (arîf), he said it was 'ilm (Ibn Sa'd, v. 345, 26). The ra'y was not, however, thereby discredited. It was considered an equally legitimate factor in the decision of a point of law and was destined in the near future to be regarded as the undoubted opinion of old authorities and in later times to be actually considered an element of the 'ilm. From the very beginning one could have recourse to it as soon as 'ilm failed. According to an old story which certainly reflects the conditions of the 'Umâyid period, although it does not actually date from the time in which its scene is laid, Mu'awiyah finally applied to Zaid b. Thabit on a legal question, on which neither he nor other companions to whom he propounded it, could quote any ancient evidence (jâlam yu'jud 'indahu -- or 'indahu -- 'ilmun); the latter gave a verdict based on his own independent ra'y (Tabari, Tafi, ii. 250, 5). On all the kings of Egypt asked the advice of the Caliph 'Omar II. on a point not provided for in Tradition; the latter wrote to him: Nothing has reached me on this matter, therefore I leave the verdict to you to be given according to your opinion (hirâ'ika). (Kendi, Governans and Judges of Egypt, ed. Guest, 334, 8 = Gottheil's ed., 29, 2) [cf. the article iJmâH].

Correspondingly ra'î is as approved of a source of law are the instructions ascribed to the Prophet and the early Caliphs, which they gave to the officials sent to administer justice in the conquered provinces; the principles to which they gave their approval, in so far as they were actually proposed by the judges sent (Zâhirîn, 8 et seq., cf. il-rid al-Qibla, i. 314, 15; Mubarrad, Kâmîl, p. 9, 10 et seq.; Ibn Khatîb, 'Uyûn al-Akhbâr p. 87), in the digests which were developed from these simple origins we find deduction from decisions in allied cases expressly mentioned (al-ghabîh, al-naqa'ir, cf. 'Uyûn al-Akhbâr, p. 72, 9) i.e. the application of analogy (bihâr) as a methodical adjustment of ra'y (equity). In the investigation of the 'Ilah el-jârî, the motive of law (ratto legis) and the resulting reduction of doubtful cases to a rational point of view, we find this principle given systematic validity. We thus have — there is evidence of it at a very early period — a kind of popular element adopted among the constitutive sources for the deduction of laws. The conception of igma (consecratio) i.e. the general usage of the community which has been established by agreement in the larger circles of believers independent of the written, traditional or inferred law. As in Roman law, the principle was applied,
that: constutudinem aut rerum perpetuo simili
litter judiciarum auctoritatem vim legis obtineri
debit; also: nam diuturni mores consensu utentium
comprehendit legem imitantur.

It was quite natural from the changed condi-
tions after the conquests that the formation of
the law, not only in its special provisions, but
particularly in its formal parts, should not be
their method of deductive operation (Muh. Stud.,
i. 75) as laid down in Fikh, was greatly influ-
ced by what the authorities on the development
of law in Syria and Mesopotamia were able to
learn of Roman law, sometimes of the special
laws for the particular provinces. It was obvi-
sous that a quite uncultured people coming from
a land in a primitive stage of social development into
countries with an ancient civilisation, where they
established themselves as rulers, would adopt from
among their new surroundings as much of the
customary law of the conquered lands as could
be fitted in with the conditions created by the
conquest, and be compatible with the demands of
new religious ideas. The detailed investigation
of this fact in the history of law, which, although
emphasised and established in its main outlines long
ago, has only been sporadically investigated within
a limited field, is one of the most attractive
problems of this branch of the study of Islam. San-
tillana has collected much material for the investi-
gation of this subject in his plan for a Code Civil
e Commercial Tunisia (Tunis 1899). The compara-
tive study of one chapter of private law has yielded
the most conclusive proofs of the thorough-
going adoption of Roman law by the jurists of Islam
(Fried, Friedrich, Die Geschichte im
Islamischen Recht [reprint from Der Islam, I], Stra-
sburg 1910). The present writer had previously in this
connection made the suggestion that even the names
of legal speculation (fikh = intelligence) and of its
students fushāh (intelligent) have been influenced by
the Latin terms (juris) prudencia and (juris) prudens in their special application to the study of
law and teachers of law. An analogous example in
support of the influence of Roman Law is the use of the

Roman Law, however, does not exhaust the sources
drawn upon in the development of Muslim Law. The receptive character that marks the for-
mation and development of Islam also found ex-
pression, naturally first of all in matters of ritual
(Wensinck in Der Islam, i. 107) in borrowings from
Jewish Law (cf. Recue de l'Étude juive, xxvii. 78: xliii. 4; E. Mittwoch, Zur Entstehungs-
geschichte des islamischen Gebets u. Kultus [Ab-
handlung der Kon. Preuss. Akad. d. Wissenschaften],
Berlin 1913). According to Kremer (Culturgesch.
d. Orients, i. 535) even many of the provisions of
Roman Law that have been adopted by Islam only
found a place in Fikh through the inter-
mediary of the Jews. It still remains to be
investigated, however, if and in what degree Persian
influence can be traced in the development of many
details of Muslim Law.

We thus have four "roots" in operation for the
deduction of laws, as methodical principles from
which legal prescriptions may be legitimately laid
'Uṣūrī. With the gradual recognition of the sour-
ces of legal knowledge the terms fikh and fushāh gradually lost their original limitation to deduction
not based on tradition. Fikh next became the
science which co-ordinated and included all the
branches of knowledge derived from the four roots;
similarly those who are masters of this science
were called fushāh, i.e. jurists. - Fikh was also
introduced under the condition from the positive
sources of law, the sum total of the deductions
derived from them, e.g. wa fi khiyā 'l-ruhdh
barāh min al-Fikh (Mubarrad, Kāmil, 529, cf.
Wiener Zeitschr. für die Kunde des Morgenl., iii.
84). In a still wider generalisation fikh was used for
religious science in general (al-Kurūn wa
'l-Fikh in opposition to the study of poetry, Alāmī,
ii. 55, 29; lāsī bihim raghābut fā-l-din wa fā
raghābut fā-l-fikh, Mūsād Aḥmadī, 1155), fushāh
likewise was applied to students of religion,
thecologians (not only students of law) e.g. Ṭa-
barī, Taṣrifī, xii. 73; fushāhuma wa-maṣayyī-
kham; ibid., 112, 9, where Abū 'Ubayd al-Kāсим b.
Ṣallān says with reference to an explanation by Abū
'Ubayd Māhrūqī (fl. 928), whose dictionary to the traditional explanation: al-fushāh
ā'lam bi 'l-tawlī minahu, "the fushāh are more
conversant with exegesis than he" (who is not a
theologian but only a philologist); cf. also Zāhīr-
itūn, p. 19. In eastern and western dialects of
spoken Arabic the word fāsh, fāsh, fāsh (all from
fashīkh) has come to mean an elementary school-
teacher of the lowest rank (W. Marquis, Textes
Arabes de Tanger [Paris 1911], p. 415, where fur-
ther references are given).

The sporadic attempts that were made during
the Omayyad period in the field of Law did not
lead to a systematic codification of the material in existence. It was only with the rise of the
'Abbasīd caliphate that this attempt was made,
favoured and indeed even furthered by the
pronounced religious character of the govern-
ment. From the very beginning of this process of
codification it was always these four "roots"
that were recognised as authoritative by the the-
ologians who made the first endeavour in the
beginning of the second century A.H. in Medina,
Syria and the 'Irāk, to evolve a finished system
of Muslim law. According as they made a limited
or free use of one or other of the "roots" or
selected one in preference to another of the con-
tradictory traditions, they attained different results
on particular points of law. Only names have
survived to us from the literature created by these
early efforts. We learn a good deal in the Arabic
sources about theologians who changed the 'ilm
or sunan in chapters and then deduced the fikh
inferences (Muh. Stud., ii. 214, cf. also Allah
b. al-Mubārak: Dawsaw al-'ilm fā 'l-ahāb
wa fā l-fikh [Dhahabi, Tadhkiran al-Hufūj, i. 250,
71], Abū Thaur: Sanafa al-kutub wa-saraffā
ta'sa l-sunan [ibid., ii. 95, et]). Little value can
be attached to the statement ascribed to Ḥishām
b. 'Urwa that many kutub fikh of his father's
perished in the flames on the day of Ḥarra (Bi-
graphien, ed. Aug. Fischer, p. 41). At that ancient
period ('Urwa died in 94 = 712, the so-called
'Uṣūrī year = 5 years after the death of many
fushāh = Ibn Sa'd, vi 1155, et) there could be
no real kutub fikh existence; the reference must
therefore be to rough notes only. We might also
mention the statement that Zāhīr's Fašānī
were collected in three, Ḥasan Bašri's in seven
books
(asfūr) arranged in the order of the abūzib al-
ākkī (Ibn Kayyim al-Jawziyya, Flām [Cairo 1325], i. 26). E. Griffign has recently discovered among the South Arabian treasures of the Ambrosian library in Milan a compendium of Fikh attributed to the founder of the Shī'ite sect of the Za'diya, entitled the Madīmarta of Zaid b. Ali (died 1221)

[La più antica codicizzazione della giurisprudenza islamica in Recensioni del R. Ist. Loub, di Sc. c. Lette, Ser. ii. Vol. xlv. (Milan 1911), 260 et seq.) This would be the oldest attempt at a codification of Muslim law in existence; in any case it is to be reckoned with in the literature of the older Fikh. If it should be a direct product of the circle of Zaid b. Ali himself, we should have to recognize the priority of the Shī'ite (Zaidi) branch of Islam in Fikh literature among the works that have survived. It has not yet, however, been fully investigated what position this collection holds in the history of Fikh literature.

The oldest corpus juris of the Sunni branch of Islam that has survived from the early period of Fikh is the Musawāta ("paved path") of the Medina teacher Mālik b. Anas (97–179 = 715–795), who easily surpassed all his contemporaries with this work (Muh. Stud., ii. 215 et seq.) and created an organic synthesis of the four roots of jurisprudence in the chapters on private law. His work represents a codification of the Fikh as it developed in the Hijāz in its theocentric legal Medina. Almost at the same time the Fikh was being methodically systematised in other lands of the Muslim empire also. In Syria Abū al-Rāḥmān al-Awzā'ī (died 157 = 774; v. i. 524) was teaching Fikh in Hijāz, which remained in force, even among the Muslims of Spain (al-Dahbāt, ed. Codere, No. 751) till the Medina system was introduced there by disciples of Mālik and became supreme. The most vigorous efforts to create a code of law were made in the Īrāt, where about the same time studies in other branches (philology, philosophy, exact sciences and dogmatics) were being industriously pursued. Although the Hijāz school recognised the validity of ra'y without restriction and made free use of it in establishing legal principles, the Īrāt school excelled them in many ways in their use of this source of law. Hāmād b. Abū Sulaimān (died c. 120 = 738) may here be mentioned as the pioneer who first to gather a circle of scholars around him, to whom he taught a system of Fikh in which ra'y had a predominant influence. To his school belonged Abū Ḫanīfa [q. v., i. 903 et seq.] who is regarded as the patron of the Īrāt school of Fikh, which was placed in a firmer footing by his two great pupils Abū Yusuf (died 182 = 795) and Muḥammad b. Abū Ḫasan al-Shābāni (died 189 = 804), who also distinguished themselves by monographs on important chapters of constitutional law (C. Brockelmann, Gesch. d. Arab. Litt., i. 171 et seq.). The name of the former of these scholars is also associated with the recognition of canon law in the government of a system of a state request of the Caliph Hārūn al-Rashīd, Abū Yusuf compiled his Kīṭāb al-Khurādī, which, however, covers much wider ground than is indicated in its title, for it includes the whole field of administration in consonance with canon law, and was imitated by writers in later reigns. The Caliph al-Muhtadī (869–870 A. D.) entrusted the jurist al-Khāṣṣaf with the compilation of a similar work. The administration of

the state was, theoretically at least, to be brought into absolute harmony with canon law. The starting-point was naturally always the sunna; but in spite of a most generous recognition of apocryphal traditions there was of necessity ample scope left for the use of ra'y. The school of Abū Ḥanīfa laid no restrictions on the use of ra'y. A certain amount of frivolity was even allowed in the pronouncement of an opinion in face of methodological analogy (fiqīr) by allowing practical considerations also to be taken into account. This is expressed in the term istiḥkām (holding for better). The legal authority is justified in deviating from a ruling suggested by the ġayūr, if due consideration showed him that another procedure was more suitable to the conditions in question. (Early examples of istiḥkām are given in Abū Yusuf, Kīṭāb al-Khurādī [Cairo 1302], p. 109, 112, from below, 117, 121; 91 ḍī ġayūr kānā . . . illa inni ṣaḥābatu . . . ; Shābāni, al-Dīnī al-
ṣaghīr [printed on the margin of the Khurādī], p. 17, from below: Abūzīh al-ṣaghīr al-
uḍaylūkūnum ṣa 'istiḥkām; 72, 5; Bukhārī, Kīṭāb al-Khurād, N. 7, ed. Juyonbīl, 338, etc.). In the school of Mālik also a similar subjective element in ra'y has been recognised as legitimate; it is called istiḥkām (consideration of what is beneficial or expedient — muṣālaḥa) — muwrī ṣa 'al-ṣaghīr. This right to set aside the ruling based on methodological analogy in favour of the judgment of a competent jurist, when considerations of expediency suffice, it reminds one of the Roman corrigere jus proper utilitatem publicam (in the Talmudic law: meivpo tīshān ḫāvālan). The Īrāt school of Fikh had another important teacher in a theologian Sayyān al-
Tabwīr (died 161 = 778), whose system remained for long authoritative even among the Muslims of the Maghrib (Abū ʿAl-Mahdānī, ed. Popper, p. 120, etc.); his system has, however, like that of the above mentioned Awzā'ī, not survived in its entirety but is only known in its application to isolated cases, particularly in points where it differed from other schools (īṣāḥālāf).

Although the foundations of Muslim jurisprudence as outlined above met with the approval of authoritative circles in the Muslim world, from the very beginning of its development it had to contest with a hostile minority who refused to recognise ra'y as a proper basis for the deduction of laws. This opposition was largely due to the subtle casuistrys (Ṭuṣamm Abū Yusuf wa-Mu-
ḥammad, Kazwīnī, ed. Wūstenfeld, i. 151–153; 211 at the foot) which the Īrāt jurists exercised in a most sophistical fashion in their use of ra'y (cf. the author's Vorlesungen über den Islam, p. 67 et seq.). Āra'āta . . . (what do you think (i.e. a case propounded in a sophistical fashion)?) is the formula with which such tests of ingenuity were introduced (early examples in the Kīṭāb al-Khurādī, 36; Muṣawāta, ii. 37, 330; iii. 19) and therefore the wrath of those, who regarded this legal skill as idle abuse of the law, was vented against this formula (v. Zḥirītenen, p. 17; cf. Ibn Ṣaddām, vii 68, ṣā ḏū ḏū ḍī ġayūr ʿarā'āta ʿarā'āta) and a host of traditions on the point in the Sunan al-Dirāmī, p. 37; Abū Dāwūd, i. 17). Although the Hijāz school did not entirely decline the use of ra'y, it made a moderate use of it in comparison with the Īrāt school, from which it differs in many ways in its results, and the Hijāz school had many objections to the application of Ḥadīth by

[The text continues...]

[End of transcription]
the jurists of 'Iraq (cf. Muh. Studien, ii. 78–83). This distinction is antedated to a time when it did not yet exist to the prejudice of the 'Iraqi school; even the Caliph 'Abd al-Malik is made to fulminate against the eastern school in favour of Medina (IbnSa'd, v. 160, 487 19 et seq.).

There were also individuals who would not agree to recognise the opinion of any mortal (unless of the Prophet himself) as having the force of legislation. It was not conceivable, they said, that God and the Prophet had not provided legislation for all contingencies that might arise. "We have omitted nothing in the scripture" (Surâ, vi. 38) and if a point is not expressly provided for in the Korân, Muhammad has certainly expounded it in a hadith by God's command. They quoted in this connection the combination al-kîthâb wa l-lukmâna (cf. Zeit. d. Deutsch. Morgenl. Gesellsch., ixi. 286 et seq.), which appear in so many passages in the Korân, which the adherents to this view explained as referring to the Korân and Sunna (in Tabari, Tâfzir, ii. 275, xix. 7). With the vast number of hadiths being heard and the fact that there was quite easy to quote a hadith on any point and thus readily to dispense with ra'y and kifâa. To be able to give a ruling from hadiths on all cases that arose, one had, however, to refrain from the exercise of strict criticism and be ready to use badly authenticated, interrupted and isolated traditions. To be correct, in form at least, an opinion, which was honestly admitted to be ra'y, was clothed in the form of a hadith, given a pompous tinâd and traced back to the Prophet. Thus arose the distinction between Al-Sâ'îd al-Hâfizî and Al-Sâ'îd al-Râ'i; a mediator between the two who appeared in the persons of Muhammad b. Idrîs al-Shâfîî (died 280 = 820).

His great claim to fame is that he systematised the method for the deduction of laws from the sources of law (Uyûn al-Fikr) and laid down the exact limits within which each might be used. In his Kiskala (two editions, Cairo, ed. Kubrìî, 1610; Mâshîa 'Ilmîya, 1912) he created the science of the use, which could be made of speculative deduction without lessening the undisputed prerogatives of Scripture and Tradition; he regulated their application and limited their arbitrary use by strict rules. For example, he did not approve the subjective view (2nd ed., p. 131); on the other hand, with the principle of 'irtifaq (q. v.) he opened up a fruitful source for juristic presumption. His school might be said to belong to the Al-Sâ'îd al-Râ'i or as readily as to the Al-Sâ'îd al-Hâfizî, but out of it, through preponderating attachment to the latter, there again developed a tendency to overemphasise fikr which was based on traditional sources, first of all in the school of A. h. b. Hanbal (died 241 = 855; v. i. 158 et seq.); and this tendency was even more marked in the Zâhiriyâ school founded by Dâwâd b. 'Ali al-Fâhâmî (died 270 = 883; v. i. 928), which set aside speculative elements and carried the regulations for the deduction of law traditional sources to extremes, but had soon to confess that it would soon be at a standstill without a moderate use of kifâa.

Among the opponents of kifâa at this time is mentioned Yahyâ b. Aktham (died 242 = 856), an older contemporary of Dâwâd and celebrated 'Shâfîî and Kâlit of Baghdad under Ma'mûn; he wrote a work (Kitâb al-Tunâth), which is wholly devoted to an attack on the 'Iraqi school; he constantly exchanged ideas with Dâwâd b. 'Ali (Ibn Khallîkân, N., 303 ed. Wustenfeld, x. 24). Such attacks, however, were only of theoretical importance; they were quite without influence on the practical administration of law.

Down to the beginning of the third century then, the historical development of the study of law had produced two divisions of the science of Fikr, viz. 1. the science of the Uyun al-Fikr, i.e. the doctrine of the "roots", the sources of law and the methodology of their application; 2. that of the Furo'î al-Fikr, the doctrine of the branches, i.e. applied Fikr, the systematic elaboration of positive law under its separate heads. The latter can show authoritative works even from the period of the founders of the schools; its important Furo'î works were published by immediate pupils or edited and handed down by them as lectures of their teachers (see the separate articles).

At the present day Fikr has developed in four directions within orthodox Sunni Islam. Each of which goes back to codifications of the law, differing in little details, by the independently developing schools of the above mentioned founders of the second and third centuries A.H., and which in course of time were considerably developed along these lines. These four schools (ma'dhâbîh; sing. ma'dhâb; only utter ignorance can call them sects) which have survived to the present day and prevail in different parts of the Muslim world are called after the Imams on whose teachings they are founded: 1. the Hanâfî, which is followed in by far the greater part of the Muslim world (the Turkish empire, Central Asia and the Indian mainland); 2. the Shâfi'i (Egypt, South Arabia, the Indian Archipelago, East Africa and Syria after it had supplanted the Wa'îfî ma'dhâb there in 284 = 897; cf. Sukkî, 6 tabà 'Abî al-Shâfi'i, ii. 174 at the foot; 214; and the extremely important data given ibid., v. 134 et seq.); 3. the Malîkî (the Maghrib, to a great extent in Upper Egypt also, German and English West Africa) and the 4. Hanbalî, strongly represented (down to the viiiîth = xivth century) in the 'Iraq, Egypt, Syria and Palestine (cf. the article Ahmad b. Hanbal), now limited to Arabia (Nadjî) (cf. the article Wahhâbi). The Hanafî ma'dhâb has become the only authoritative code of law in the public life and official administration of justice in all the provinces of the Ottoman empire. All the other prominent schools of Fikr have disappeared from the field after a brief existence; for example, at a very early period the school of the Wa'îfî (see above), that of Sufyân al-Thawrî (in 405 = 1014 the last muftî taught according to this ma'dhâb, cf. Abu I-Mâshîin, ed. Popper, p. 120, et seq.), that of the Zâhirîs already mentioned and the school founded by the celebrated historian Tabari [q. v.] called Dârâriya, which this scholar ex- pounded in numerous works which no longer exist (Wien. Zeit. d. d. Kunde des Morgenl., ix. 368). The teachings of these obsolete schools are not taken account of in the Ijmâ'a of Sunni Islam: the four ma'dhâbîh above mentioned are considered equally orthodox elements of it; they differ from one another in only details of Furo'î which according to the orthodox conception do not form fundamental differences. In the Azhar mosque [q. v., i. 532 et seq.], the most impor-
tant Muslim university of the present day, all four schools are still represented by teachers and pupils. The teaching of Ottoman supremacy, whereby the Hanafi madhab became supreme, and all four systems were represented in the great centres of Islam by judicial functionaries, who gave their decisions in important cases at a joint conference. Each of these four madhābi has produced an enormous literature of codices, commentaries and commentaries in the schools of the lands in which its adherents are found.

Cases not provided for in such codices, as well as new points of law that crop up, are decided by professional jurists in fatwa's (decisions) of which considerable collections have been and are still being made. Since various European countries have extended their authority over Muslims, in their possessions and protectorates in the east, handbooks of Fikr of the madhāhab prevailing in the respective countries have been published in western languages also, and in this connection editions and translations of the best known works on fiqh have been prepared by European scholars.

The dissenting sects of the Khāridjīs and Shi'as have also developed the legal system along lines parallel to the Fikr of the Sunnis. The most fundamental differences between these systems and that of the Sunnis are naturally to be found in questions of constitutional law (Khilafate). The Shi'as also show differences in their law of marriage (mu'aša; marriage with women of the All al-Kītb) and are more rigid in their laws regulating intercourse with unbelievers. In their liturgy (adilām) triving departures from the usage of the Sunnis may also be noted; in their calendar of feasts also there are certain feast days peculiar to them. Otherwise the differences in law between these sects and the Sunnis are scarcely more considerable than those of the different orthodox madhābi within Sunni Islam from one another (cf. Vorlesungen über den Islam, p. 237—239). Among the Shi'as, besides the Imāmat "Twelvers" the sect of the Hashimīs (particularly strong in South Arabia) has developed a very rich Fikr literature, of which R. Strohmeier has lately given a very thorough account (Der Islam, i. 354—368; ii. 49—78; Das Staatsrecht der Zaiditen (Strassburg 1912); Der Kultur der Zaiditen (Ibid. 1912).

In giving an appreciation of Fikr one must not forget to mention the fact that the codifications from a very early period for the most part represent an academic code of law, a system given ideal validity, a doctrine of duties, as Snouck Hurgrone, the creator of the historical criticism of Fikr, so admirably described it, which the theologians represent as alone corresponding to the ideal demands of religion. History teaches us, that, as is the case at the present day, even so in the oldest period of Islam, the actual practice assumed in many instances a different form from that required by the demands of canon law (Sharī'a), certain parts of Fikr have been quite obsolete for centuries; on the other hand in many districts customary law ('urf, 'aqa), which for the most part can be traced back to pre-Muhammadan times, has retained its validity [cf. the article 'Aqa, i. 121st et seq.]. Modern conditions have also produced many reforms of legal practice in Muslim countries and have produced a system of civil law different from the religious law (Sharī'a) alongside of the latter. This dualism in the administration of justice can be traced back to an earlier period in which it also existed. (Zákirl, pp. 206; an example from Egypt, 8th century A.D.; ibn Kawai al-Djāwīyā, al-Turk al-schikīnī fi 'l-Sīyās al-Sharīya [Cairo 1317], p. 218, dual system of law in Syria; Massignan, Mission en Mesopotamie, ii. [Cairo 1912], p. 30, the Kafāya yarqānīya were in operation in the Irak under Mongol rule alongside of the Kafāya sharīya; ibn Baṭṭūta, (Paris), iii. 11, from Khārizm.)

Islamische literature on Fikr according to the different Madhābi and the European editions see Juynboll, I. c. p. 350—363 and the pertinent sections in Brockelmann, Geschichte der arab. Literatur. (I. Goldiher.)

FIKRI, 'ABD ALLĀH ẒAFHA, Egyptian statesman and man of letters, born in Mecca in 1250 (1834), where his father, Muhammad Bani Baligh, who had entered the profession of arms and reached the rank of sākhāl agasi, was stationed at the time of his son's birth. His grandfather, 'Abd Allah b. Muhammad, however, was professor at the Azhar university at the time of the French occupation and the grandson followed in his steps. As he lost his father in 1261 (1845), when only eleven years of age, he was brought up by a relative, studied at the Azharyya and at the same time studied Turkish industriously to qualify for a place in the Divān. In 1267 (1851) he entered the civil service, held positions in various diwāns and accompanied Ismai'īl Paša to Stamīl in 1279 (1861) when the latter went
the elephant becomes reproductive in its fifth year. Its testicles are inside its body near the kidneys. When the animal has conceived she is no longer covered by the male. After two years the young one is born and one every seven years afterwards. As the female brings forth in a standing position and has no joints, it goes into a river with an abundant flow of water; it drops the young one into it to avoid letting it fall on the hard ground. The male elephant watches by it and protects it and the young one from snakes, which it tramples upon with its feet. It also eats snakes when it is ill. The elephants exported to 'Iraq do not increase their numbers there and soon die out; in India they may live to be several hundred years old.

The elephant cannot bear the rhinoceroses and flees from its neighbourhood; when they fight with one another, both are often killed. But its most deadly enemy is the sahrāb, an animal smaller than the lynx, of reddish-yellow colour with fiery eyes, exceedingly agile in jumping; it skirts its urine on elephants and men so that they fall dead if it touches them. The elephant is also afraid of the cat; it is said that the kings of Persia when fighting with the Indians used to let cats loose on the elephants to put them to flight; a similar stratagem is related by the poet and freedman Hīru bin Mūsā.

Dimishki tells us how wild elephants are caught; a long pit with steep sides is dug, which slopes gradually downwards to a depth equal to the height of the elephant and so narrow that, though it can easily go in, it cannot turn round or come out. Rice and other fodder is then scattered round this pit, most thickly around the entrance and in the pit itself. When a young elephant comes along, it follows the fodder in its greed until it reaches the deep end of the pit and then does not know what to do. The hunters then come dressed in dazzling colours red, blue and yellow and beat it with clubs; the elephant tries to trample those who attack it with its fore feet but cannot get out of the narrow pit. A man dressed in white then comes to its help, drives away its tormentors, brings food and water and remains near it to accustomed the elephant to him. After a time it goes away and the others return and beat the elephant still more unmercifully wherever on the moon in white appears for the second time and repeats the process of driving off the tormentors and feeding the elephant. This alternation is continued till the elephant has such confidence in the watcher that it allows him to touch it and mount it. When the elephant has become sufficiently used to him, the earth in front of the elephant is dug out so that it can come out of the pit. The elephant-driver (fayāl) sits on the elephant's back and has a crooked stick (mithjān) in his hand, with which he touches the elephant's head when he wants it to do anything.

Numerous stories are told of the vindictiveness of elephants; it is said to be as great as that of the camel. For example, a fayāl had beaten an elephant severely; the latter waited till one occasion he was bounded to a tree while the driver lay down to sleep a little distance off. The elephant broke a branch off, twisted it through the driver's bushy hair till it was quite entangled, then pulled him towards itself and crushed him.

Its docility, patience and tractability are, however,
quite as great as its vindictiveness, when it is well treated. In its native country it is a most valuable beast of burden and labourer.

War-elephants are of special importance and the kings of India possessed an astounding number of them. It is related of king Kshatrapa Parvata that he had 1000 white elephants, each 20 feet high. The elephants knelt before him, as soon as they became aware of his presence in the midst of countless troops of cavalry. A war-elephant is a moving fortress; it carries men on its back and its body is protected by a cuirass of iron and horn; a bent sword is fastened to its trunk and with this it cuts horses and camels in two. Around it are 500 men, who protect its rear and on its back are valiant soldiers who break through the ranks of the enemy; one of these elephants is a match for 5000 horsemen. Ibn Battuta gives his experiences as an eyewitness of elephants trained to act as executioners.

African elephants are not tamed but are all wild and only hunted for their ivory. They are particularly numerous in the land of Zanzibar. When the people go to hunt them they throw the leaves, bark and branches of a certain tree into the water and conceal themselves near the elephants are intoxicated by the water, fall down and are slain with a long spear. The tasks are exported to Oman and thence to India and China. Ivory is used most extensively in China, for example for sedan-chairs and for burning before altars; in India it is made into sword and dagger handles, chessmen and draughtsmen. Shields are made of its skin in India and Africa. Kazwin and Ibn al-Baithar discuss the uses in medicine of parts of the elephant.

FIL (Ar.; literally “action”), a technical term in Arabic grammar: the verb. According to al-Zamakhshari, Mufassal, p. 108 (§ 402) it is “that which indicates the association of a hadâth (event) with a time”. Muhammed Âlî adds the “reference to the agent” in his Dictionary of Technical Terms (ed. Sprenger etc., ii. 1142 et seq.). But this addition is only correct for the active verb. On the other hand the emphasis laid on the notion of time, which is found as early as Ibshâwâil (chap. I), shows that the Arabic verb had for long been not so tenseless to the linguistic feeling of these old grammarians as the original Semitic verb perhaps was. — Among the characteristics of the verb are that it is root and stems, and similar particles may be placed before it, that one can affix the allied pronouns etc. The pertinent grammars teach the division of the verb into fi' munganif and qumânî, thułatâh and rahbâh, muta'dâdî and ghair muta'dâdî.

Among the scholars (mutakallîmûn) fi' practically means “realisation, actuality”; among philosophers (bûkûmât) it also means “effect”. (A. Schade.)

FILALI, a line of sheriffs [q. v.] in Morocco. FILÂSTÎN, i.e. PALESTINE, is the name given by the Arabs to the Roman Province of Palaestina Prima, practically Judea and Samaria with Caesarea ad Mare as capital. De Goeje, Wellhausen and Caetani have brought order into the confused accounts of the conquest of this district by the Muslims, notably by disputing and correcting Saif's account, although various details still remain uncertain; for example, the date of the outbreak of hostilities. While the Arab historians do not make Abd Bakr send an army to Western Palestine via Aila under 'Amr b. al-'Asî till the year 13 (began 7th March 634), according to a Syriac authority published by Land, the first conflict between Greek and Muslim arms took place as early as February 634 at a place about three hours east of Ghaza [q. v.]. Although this source is not very reliable otherwise, in favour of its accuracy on this point it may be urged that it gives more time for the operations of the Arabs before the battle of Adînâdash [q. v. i. 111] and that Kâhâlî, who had been summoned from Syria to assist, could thus have actually arrived during Easter in April in Marjî Râhî as Tabarî, Annals, i. 2109,11 (although in contradiction of l. 2) says. The Greeks were defeated in this battle and their leader slain while retreating. Âmîr was now able to take Ghaza and then advanced on Caesarea with his troops and began to besiege it in July 634 (IJumâdâ l. 13). He was, however, forced to retire to 'Arâbâ by the approach of a larger Greek force; here he was joined by the troops coming from the district east of the Jordan and thereupon advanced against the Greeks who were utterly defeated at Adînâdash at the end of July or in August. It was probably immediately after this victory that 'Amr conquered the towns in Filâsten, detailed by Baladhuri, Samaria, Sichem, Lydda, Jahne, 'Amwâs, Bait Djjibrin and Raphia. After joining the main army and taking part in the deciding battles, he was able to return in August 636 after the battle of Yarmûk and proceed to the siege of Jerusalem which finally surrendered in 16 or 17 (637 or 638). Caesarea, which was strongly fortified, now alone remained. 'Amr began the siege of this city, which is called in the Bible Jerusalem, and sailed to Egypt in 640 and had to leave the conduct of the siege in the hands of Yazîd b. Abî Sufaysîm the commander-in-chief in Syria; but it was only after the latter's death that his brother Mu'awîya succeeded in taking the town with the help of a traitor (according to Wâkidî and others in 19, according to Ibn Ishâk not till 20). The conquest of Filâsten was finally completed by Mu'awîya's capture of Asqalân.

The Arabs, as they usually did elsewhere, here retained the organisation they found there and Palaestina Prima remained a separate province under the name Jundus (military district) Filâsten, although its centre was shifted from Caesarea to Lydda. After a later period the place of Lydda was taken by the new foundation of Ramla which is a part of Filâsten. Ishâkî defines its length by the frontier towns of Raphia and Lod-Jîlîn and the breadth by Yâfâ and Jericho, Idnî and, at a later period Khâlî al-Zâhirî, give similar state-
ments, although the latter, like the author of the *Mishir* (middle of the sixteenth century), gives al-Ārīṣ as the extreme southwestern point. ʾIṣṭakhri gives the following dependencies of Fīlāstīn, the southern part of al-Ḡawr [q.v.], al-Djibāl and al-Shārait as far as Aila. In Muḥammad on the other hand al-Šūrā at ʿīrāb as an independent ʿīrāb along- side of Fīlāstīn with Ḫajar as its capital, while in ascertainment, as it were, he reckons Ṣamānā, the capital of al-Balṣa, to Fīlāstīn. ʾIṣṭakhri says that Ramla is the largest town in the province, with Jerusalem second, which in Yāḳūṭ is the capital.

ʾIṣṭakhri describes Fīlāstīn as one of the most fertile parts of Syria and emphasizes the fact that it depends for its irrigation entirely on the rain-fall; there is running water only at Sichem. Yāḳūṭ remarks on the generally mountainous character of the land. Muḥaddasī knows the following exports of Fīlāstīn: olive oil, small figs, raisins, carobs, different sorts of textiles, and soap; of Jerusalem especially: cheese, fine sorts of raisins, apples, pine apples, looking-glasses, lamps and needles, from Jericho indigo (cf. al-Ḡawr). He also mentions the quarries of white stone and the marble quarries at Bait Dījīrīn.

The statements on the public revenues of this province in the ʿAbbāsīd period are of special interest. Ibn Khālidūn gives a list from the second half of the ninth century A.D., according to which the annual revenue of Fīlāstīn was 310,000 dinārs besides a payment in kind, of 300,000 rās of olive oil. In Ḥārūn al-Raṣīd time, 310,000 dinārs with a payment in kind of raisins. In 820, according to al-Ḥārīmī’s Kihāl al-Khawāṣṣ, 195,000 (in another passage 259,000) dinārs. According to Ibn Khudaddīhī in 864, 500,000 dinārs and the same figure is given by Ibn al-Fākīh for 903, while Yaḥyā who flourished in the interval only gives 300,000 dinārs.

The old provincial division was abolished during the Crusades and from the Ayyūbīd period onwards replaced by a division into mamalikā which we find in Diminishī and Khālid al-Zāhirī. The mamalik of Ghazza practically corresponded to the ancient Fīlāstīn.

**Fīrāwī** (from the Arabic ʿārār “flight”) (T.), “deserter.” This word has been recently applied by the partisans of the government to Young Turks who have taken refuge abroad to escape the vigilance of the police. (CL. HuCR.)

**Fīrāsā** is apparently an Aramaic loanword. The lexicon notes no old evidence for it; ʾāris in this sense in Ḥamāṣ (p. 564, v. 5, need not be the old (Wellhausen, Reste, p. 152), nor does it occur in the Kurʾān but it is used by the commentators (in the form tafarrasa) to explain tawwasa in Kur. xv. 75. The general meaning is “insight” and it occurs quite normally in this sense of judges and rulers as to cases before them (Ibn Katīm al-Djauziya, al-lārīḥ al-ḥakimiya, p. 24 et seq. of ed. of Cairo, 1317). (ii) More narrowly of physiognomy as a science (Doutte, Magic et Religion, p. 370) for which the older Arabic is ṣīfāṣa (q.v.). (iii) As a ʾṣūṭi expression for the divinely given intuition of saints. The basis is the tradition, Ḭaṭīrī ṣūṭa al-muʾmin feʾinahu yaṣṣur binārīlāh. “Beware of the intuition of the believer for he beholds in the light of Allah.” To this some forms of the tradition add, Ḫaṭīrī ṣūṭa ʾal-yakīf al-kabīrīlāh; Ḫaṭīrī ṣūṭa ʾal-yakīf al-kabīrīlāh; Ḫaṭīrī ṣūṭa ʾal-yakīf al-kabīrīlāh. “It is a thing which Allah casts into their minds and upon their tongues.” For the different forms of this tradition, see the Ḫaṭīrī-āl-Djauziya with the ʾṣūṭa of the Saiyid Murāda, ed. Cairo, vol. vi. p. 544—545; and on ʾṣūṭa ṣūṭa in general see the Ḫaṭīrī al-Ṣūṭa of al-Balṣ, 1290, with ʾṣūṭa al- Ṣūṭa of al-Anṣārī, vol. iii. p. 174—185. Ibn al- Ṣūṭa (Lūṣūn, viii. p. 40, ll. 7—10) says that the above tradition was understood in two ways: — the first, the literal (ṣūṭa) meaning, that it was something which Allah put into the minds of his saints and so they knew the condition of certain people by a ʾṣūṭa and they righteously judged minor and conjecture; and the second, that ʾṣūṭa is something learned from indications and experiments and make (ʾṣūṭa) and character [evidently physiognomy]; further, that in the addition to the tradition quoted above there is drawn a distinction between the ʾṣūṭa which the saints consciously exercise and a ʾṣūṭa which appears in automatic speech, the saint not knowing, or at least not understanding what he says. An example of the latter is the story of the elephant cub, told in Damirī’s Ḥayawan, vol. ii. p. 188 of ed. of Cairo, 1313; for the same phenomenon in Muḥammad himself, see Macdonald, Religious Attitude in Islam, p. 47 and 99.

(D. B. MacDONALD.)

**Fīrāwīn** (Plur. Fīrāwīn), Pharaoh. The word is explained by the commentaries on Sūra ii. 46 of the Korān as a ʿārār or ʿalum of the Amalakite kings, like Khirāt and Kaṣīr of the Kings of the Persians and Romans. The verb taṣarʿa means “to be arrogant and tyrannous”, hence the Korānic Fīrāwīn is called al-Djauziya “the tyrant” by al-Yaḥyā (ed. Houtsma), i. 31. A number of Fīrāwīns are mentioned in Arabic literature; their number is very differently given. In the Korān, however, Fīrāwīn is always the king with whom Mūsā and Ḫaṭīrī had to deal; the word is here clearly understood as a proper name. The Korānic data concerning Fīrāwīn are on some points fuller than the Biblical. The most important are the following, a. place of his daughter his wife, ʾĀsīya (q.v. v. 487?), is mentioned; a certain Ḥāmān is also mentioned who (Sūra xxvii. 38, xl. 38) is commissioned to build a tower (ṭārib).
which shall reach to heaven, by which Fir'awn will ascend to Mūsā's God. There are obviously several confusions here; Hāmān is an echo of the vizier of this name in the Book of Esther; the tower and its description recall the Tower of Babel. It is probably the Biblical account of the building of the "treasure cities, Raamses and Pitom," that has given rise to the confusion last mentioned.

Another member of Fir'awn's suite who appears in the Korān is not mentioned by name. When Fir'awn wanted to slay Mūsā, "then a believer among Fir'awn's people, who had concealed his faith said: Will ye slay a man because he says: My Lord, when he heard the manifest signs from your Lord? If he be a liar, against him is his lie; but if he speaks the truth, there will befall you something of that with which he threatens you" etc. (Sūra xl. 29 et seq.).

Fir'awn is twice called "he of the pegs" in the Korān (Dhū l-ʿĀrād, Sūra xxxviii. 11, lxxix. 9). This expression is variously explained by the commentators; some say that it means, that his dynasty is firmly established as by tent pegs, while others say that his armies are meant by the pegs. Others again say that he bound people to be punished hand and foot to pegs driven into the ground.

A further addition to the Biblical narrative is the statement, which conjoins three events, with dreadful punishment by Fir'awn when they became converts (Sūra vii. 111 et seq.; xxvi. 45 et seq.). Finally Fir'awn himself is said to have become converted the moment he was being drowned; but God did not accept his conversion and caused his body to be cast upon land as an example for others (Sūra x. 90 et seq.).

It is said of him that he had himself worshipped as a God (Sūra xxviii. 38). On the day of the resurrection he will go into Hell at the head of his people (Sūra xi. 100). The Korān makes no distinction between the Pharoh of the Bondage and of the Exodus. This is clear from the fact that when Mūsā and Hārūn come to him Fir'awn recognises the former (Sūra xxvi. 17).

Muslim Tradition gives the following account of the Fir'awns. In contrast to the Korānic account, Fir'awns are mentioned as early as the stories of Abraham and Joseph and some even tell us that Joseph's first Fir'awn was called al-Ra'ayn b. al-Walid and his successor Kābūs b. Muṣ'ab. According to others Joseph was the vizier of al-Walid (or Dārim) b. al-Ra'ayn. Tradition is not unanimous with regard to the Fir'awns between Joseph and Mūsā. The sources which are less directly influenced by the Bible say that the above mentioned Kābūs b. Muṣ'ab became the first husband of Kāsiya and Mūsā's foster-father. When Mūsā received the divine mission, Kābūs was already dead and his successor was his brother Walid b. Muṣ'ab (Tabarī's Tafṣīr and Baidāwī on Sūra ii. 46; Tabarī ed. de Goeje, i. 443 et seq.).

Ibn Iṣḥāq in Tabarī (ed. de Goeje), i. 444 et seq., closely follows Exodus, i. 8; when Joseph and his Pharaoh, al-Ra'ayn b. al-Walid, had died, the throne was occupied by Amalekite Fir'awns to the time when al-Walid b. Muṣ'ab ascended it; Mūsā was sent to him; he was the most arrogant and cruel of all and reigned for the longest period. — Is there perhaps a reminiscence here of the reign of Rameses III. over Egypt in the thirteenth century? — According to Aḥaṣāb (i. 211) and Muḥṣīdī (ii. 397) there were two kingsbe-

FIRDAWSI is an artificialy formed singular to Firdāsī which was taken by the Arabs from فرداس (is understood by them as a plural (G. Hoffmann in Zeitscr. d. Deutsch. Morgenl. Ges., xxxii. p. 761). The rare measure فرداص (Lumsden, Arabic Grammar, p. 365, 368) was probably chosen to distinguish it from a form (perhaps firdāsī) derived from the genuinely Arabic root fardās (Lišān, viii. p. 45; Lane, s. v.). Firdayus occurs in old Arabian poetry in the sense of a fertile hollown of land (Bekrī, Geogr. Wörterb., ed. Wüstenfeld, p. 514; Yaḳūt, iii. p. 870 et seq., and twice in the Kūrān (xviii. 107; xxiii. 11) and was evidently for Muḥammad a synonym for Gejmā in the ordinary sense, a garden). Firdāsī occurs as a proper name at Hamaceus and Aleppo (Yaḳūt, iii. p. 862 et seq.). It is curious that the fundamental sense of the Zend pairirdira, *a place walled in* survives even in the remotely derivative Arabic, and a firdāsw is defined by the lexicons more narrowly as firdāš. It also suggests grape-vines and palm trees (Baid. on Kūr. xviii. 107). In Ṭabarī (xvi. p. 25–27) are given the guesses of the earliest expositors, only two points having any basis—that it is a rūmān word and indicates a vineyard. Otherwise they say that it is the lordliest, finest, widest and loveliest part of the Garden, the abode of those who in life commanded kindness and forbode disliked actions. To Muḥammad himself tales are told that it is the uppermost story of the Garden, that from it the four rivers of Paradise divide, etc. On this last see more details in the abbreviation by al-Šaḥrānī of the Taḏkira of al-Kūrtubi (Cairo ed. 1324), p. 83, and on al-Firdawsī generally on p. 84 and 86. But the Saiyid Murtaḍā in his commentary on the Ḥiyā (vol. x. p. 525) says that it is the second story of Paradise below the ʿarḍ of Allāh, and that above it comes Djinnaṭ ʿAṣim. Others, again, hold that Ḥiyā was the loveliest; see a long discussion, involving the doctrine of the vision of Allāh and the presence of Muḥammad with his people in the Garden, in the Ibriz of Ṭabarī, p. 277 et seq., ed. of Cairo, 1316.

Bibliography: is given above. (D. B. Macdonald.)

FIRDAWSI (Anūf-ʿL-Kābîm), a Persian poet, whose proper is uncertain (Mansūrī, or Ahmadī, or Hasan), probably born in 320 (932) at Ṭabarān, one of the quarters of the town of Ṭūs (Ḵorāsān). His father had left him a small estate on which he lived in a modest way. He received his education from his compatriot Asādī. A dīkān or landed proprietor, who was a friend of his, gave him a Book of Kings to put into verse; it was this that set him to compose the Shāhānawā (book of kings), an epic of about 60,000 lines, in which this incorporation consideration already versified by Dāvūdī (v., i. 900). The composition of this gigantic work lasted thirty-five years and was completed on the 25th February 1010 (400 A.H.) when the poet was nearly eighty years of age; it must therefore have begun when he had reached a fairly mature age. The poem was dedicated to Sultan Maḥmūd of Ghazna, who had conquered Khorāsān in 389 (999), and presented to him by his minister Ḥasan b. Ṭabarī; the Sultan ordered a present of twenty thousand dirhams to be given to the poet but the latter, who expected a much more munificent reward, gave half of it to a bath attendant and the other half to a seller of ṣulq (a kind of meat). Threatened with being trapped to death by elephants, Firdayus in revenge composed a scathing satire and took refuge with the Ispahbād Shahrīyār b. Sharīn, ruler of Ṭabaristān, after remaining six months in concealment in Herāt. This prince purchased the satire from him for 100,000 dirhams, at the rate of 1000 for each line, and had it destroyed; nevertheless, the text has survived and is usually published with editions of the Shāhānawā.

After writing the poem Ṭuṣuṣ u Zalīqā (publ. by Ethē, Anekdota Orientiensa, Aryan Series II; German transl. by O. Schlechter-Waschek, Vienna 1889) for the Blyth Bahāʾ al-Dawlā or his son Sultan al-Dawlā, he returned to his native town where he died; he was buried near Ṭūs in a piece of ground that belonged to him; as he was looked upon as a heretic, he could not rest in the Muslim cemetery. It is said that, while his funeral cortège was passing through the gate of Pādzān (the name of a neighbouring village) a caravan entered by that of Rūdzār bringing the 60,000 dinars that the poet had hoped for. His daughter refused to accept this sum and the Sultan devoted it to pious works (the viṣāṭ of Čāha). Dowlāt-Shāh gives the date of his death as 411 (1020–21).

The Shāhānawā, which comprises the whole mythical and legendary history of Persia down to the Arab conquest, is a national epic which has rendered its author immortal. Firdayus possessed the epic sense in a high degree; his descriptions of battle show an extraordinary vigour and movement; he felt the heart of his native land beating within him. The poem Ṭuṣuṣ u Zalīqā written to show suspicious Muslims that ancient Persia was not only his love, is no whit inferior to its predecessor in spite of the advanced age at which it was written by the author.

The Shāhānawā has been several times published; Lumsden's edition, The Shah Nameh (Calculta 1811) only contains the first volume; Turner Macan's (Calculta 1829) and Mohil's (Paris 1878) are complete while that of Vullers (Leiden 1877–1884) lacks the fourth volume. There have also been lithographed editions published in the East.

FIRDAWSI — FIRISHTA.

and Rogers, London 1907: German by Von Schick, Berlin 1851—1865 and by F. Ruckert, Berlin 1890—1895. For further bibliography we may refer to the works quoted below.

FIRDAWSI (Firdawesi), an Ottoman poet of Brusa in the time of Sultan Bayazid II (1481—1512), to distinguish him from the great Persian poet Firdawesi, called Firdawesi-i Rumi or more frequently Uzun Firdawesi or Firdawesi-i Taiwil ("Long" Firdawesi), probably in allusion to the length of his chief work. His chronograms (taʾrikh) were celebrated. His masterpiece is the Sulaimân-Nâmâ, composed for Sultan Bayazid by his command, in 360 or 360 volumes, in prose and poetry, a complete encyclopaedia in which he included all the knowledge of his time in philosophy, astrology, genealogy, history etc. The Sulân, however, only choose 80, or, according to others, 99 volumes and had the others burned. Firdawesi was deeply hurt, and like his Persian namesake, is said to have revenged himself by lampoons and went to Persia, where he died.

FIRDE (from farда "to impose", so pronounced in the Egyptian dialect, while in the middle ages far'd and more usually farida was used) is an extraordinary imposition usually levied for some special purpose. Lane in his Manners and Customs (see below) says that Muhammad ʿAli Pasha [q. v.] in the first half of the sixteenth century levied a firde of one twelfth of the income of each subject, without distinction of religion, up to a maximum of 500 piastres to meet the expense of increasing the army and navy. When this expense diminished, the tax was abolished. A similar farida was levied at the same time levied on provincials, the members of the government. As already mentioned, the term farida is almost always used with the sense of firde in the historians and inscriptions of the middle ages.

FIRISHTA. [See Mal'ak.]

FIRISHTA, MOHAMMAD KASIM HINDU SHAH, known as Firishta (born 960 = 1552, died after 1033 = 1625), of Astarabad in northern Persia, as brought to Ahmadnagar as a child in the reign of Husain Nâṣir Shah I and, while yet a youth, entered the service of Murtâzâ Nâṣir Shah I. The persecution of foreigners which followed the murder of Husain II drove him to Bijâpur where, in January 1590, he entered the service of Ibrahim ʿAdil Shah II. Shortly afterwards he wrote Iktizâvârî-ī Fârsi, a work on medicine, and Ibrahim, pleased with its style and aware of Firishtâ's devotion to historical studies, urged him to undertake a comprehensive history of Muhammadan rule in India. Firishtâ at first declined the task as being beyond his powers, but eventually offered to submit for approval a few chapters of such a work as he could undertake. Among the specimens passages thus presented was an account of the disappearance and death of the death of ʿAli ʿAdil Shah I, Ibrahim's father. Ibrahim correctly interpreted the selection of this subject as a hint that the historian demanded unfettered liberty in the relation of facts, and gave him permission to proceed with his work.

Firishta, who was an industrious compiler, mentions in the preface to his history no less than thirty-two books which he had collected and consulted, and adverts to some others in the body of his work. The iṣpiṣina verba of his authorities are so often found in his pages that he has been stigmatised, with scant justice, as a mere copyst. He was, however, uttering the critical faculty and made severe glaring errors even in the annals of the Dakhân, which were his own peculiar province. The value of his work is further impaired by his gross ignorance of geography, and it is unsafe to follow the example of Briggs, his best known translator, in accepting it as a thoroughly satisfactory account of the rise and progress of the Muhammadan power in India. The history, which was begun in 1606 and finished in 1611, consists of an introduction, twelve sections dealing with the Ghaznavid kings of Lâhor, the emperors of Dihlî, the independent Muhammadan dynasties of the Dakhân, Gurgân and Muzafâr, and the Badshâhs (including Qâjârâpûr), Multân, Sind, Kashâr and Malâbar, and the sânts of India, and a conclusion, and embraces the whole history of Muhammadan rule in India, excepting that of the ʿArab conquerors of Sind, to the beginning of the seventeenth century. Firishtâ complained with truth that until his time the only work which pretended to deal comprehensively with the subject was Nizâm al-Dîn Ahmad's Taabarî-ī Akbari, which was too brief and condensed to be of much value to the student of history, and boasted with justice that he had produced a work the like of which had not previously appeared in India. His History (ed. Bombay, 1831; 2 vols., 1831 and 1835) has, despite its many defects, is valuable not only as a summary of known authorities, but also because it embodies fragments of works of which the originals have been lost. A critical translation (those existent in English are enumerated Morley, Cat. R. As. Soc., p. 67; the best is that of Briggs, London 1829), or, at least, a careful and intelligent edition of the text is much to be desired.

FIRISHTE-ZÄDE, 'Abd al-Majid iyy al-Din, in Turkish also called Firịsi̇te-ğahu and in Arabic Ibn Firīṣṭa, one of the principal disciples of Faḍl Allāh q.v., p. 37) the founder of the Hārūnī [q. v.] sect, died in 1474 (1409). In 1535 (1430) he is described in a book on the doctrines of the sect in Turkish, entitled Ishk-nāme (Book of mystic Love), which is placed by the adepts on a level with Faḍl Allāh's Dīwān-i lādī, so that this name is also given to it. There also exists from his pen a Hidāyet-nāme (Book of Conduct) in Turkish and an Akhīrət-nāme (Book of Future Life). The Ishk-nāme has been lithographed at Constantinople (1885 = 1871).

FIRMA, [See FERMAN.]

FIRŌZA, Arab. al-firūzād, the turquoise, a well-known precious stone of a bright green or "mountain green" to sky-blue colour with a gloss like wax; in composition it is a hydrated clay phosphate with a small but essential proportion of copper and iron. The colour is not permanent in all stones, and is said to be particularly affected by perspiration. It is almost always cut as an ornament en cabochon i.e. with a convex upper surface; only stones with an inscription are given a flat upper surface. The provenance of serviceable stones is limited to a few places whose history may be traced back for thousands of years. Turquoise mines were worked by the kings of Egypt in the peninsula of Sinai. Major Macdonald discovered them again in 1845 in the Wādi Maghāra and its neighbourhood and worked them again for a number of years. The hieroglyphic inscriptions at the mines date, according to H. Brugsch, from King Senefu of the third dynasty to Rameses II. Brugsch takes the word mafkat to be the name of the mineral. No mention of the stone or the mines has survived from the Hellenistic period; on the other hand in addition to the wonderful details of the method of procuring the pale green calis of Carmania, Pliny knows a good deal about its properties, which can only refer to our turquoise; for the statement that the calis loses its colour when affected by oil or ointment is found in al-Kindī on the firūzād and in all later mineralogical works. It can hardly be doubted that the turquoise was obtained in the Sānādīd period and even earlier in the mines around Nīshāpur. Tīfāshī says of the kings of Persia that they adorned their hands and necks with turquoises, because they averted danger of death by land or water; but we often meet with the assertion that the turquoise detracts from the majesty of kings. It was considered to contain copper and was formed in the vicinity of copper mines. Different kinds are distinguished according to the different colours (sky-blue, milk-blue, green, spotted); the best kind is considered to be the būqāšī (i.e. Abū Ishāṣī and the finest variety of this is the sky-blue azharti. Large pieces are very rare and are correspondingly costly, small pieces on the other hand are very common. The best specimens retain their colour, apart from the influences detailed below; after 10-12 years many lose their colour entirely and the stone is then said to be dead. All stones, however, show a certain variation in colour. They are brilliant in a clear sky and dim when the sky is clouded; they alter their colour with the state of health of the wearer, and when affected by sweat, oil or musk; fat restores the colour again.

Taken intently it is a poison, but in collyrium it is useful for clearing the sight, also if it is stared at for some time. Gold takes away its beauty (unlike lapis lazuli), i.e. probably, the greenish blue colour does not harmonise as well with the yellow of the gold as the dark blue of the lapis lazuli. Aftānī explains the name firūzā as "stone of victory"; whence it is also called ḥadjar al-ghalāba. The word firūzād is found in many corrupt forms in the Latin translations of the middle ages (Jasæpín, žirogūn, porzāqī etc.), but none of these can be considered the original of the word turquoise: for as early as the 13th century we find the terms turcoys, turques and turqoises, and it may safely be assumed, that this was a new name given to the stone from the land of its origin, the ancient home of the Turks; cf. Arnoldus Saxo: "Turcoys... dicit a regione Turcya in qua nascitur." Certainly the name did not first appear in connection with the trade between Venice and Turkey.

General (now Sir) A. Hountam-Schindler who was governor of the mining area and director of operations at the mines in the "eighties" of last century has given a detailed account of the Persian turquoise mines at Meshhed in Khorāsān, which is quoted in Bauer's Eideckenkunde (2nd ed., p. 190 et seq.). The stones procured are usually roughly cut en cabochon on the spot and brought to Meshhed by the village elders. Thence the turquoise, fastened to pieces of reed with black wax, which are tied in bundles, travels to Nijini Novgorod or Moscow, usually through the intermediary of Bukhārā traders, whence it is distributed all over the world. Many of the "lucky stones" are sold to pilgrims in Meshhed. In Nīshāpur the stone is seldom to be seen. Many are also exported via Yezd to Baghādād and Constantinople. The value of the exports varies from 20,000—15,000 annually, which is believed to be about a third of the total yield.

H. Brugsch states, that, according to present day belief, the alteration in the colour of a stone presented indicates increase or decrease in the friendship of the donor. The large, quadrilateral turquoises polished flat, which were at one time engraved with inscriptions and arabesques in gold and worn on the upper arm, are no longer held in such estimation. Stones for rings are always mounted in silver or tin, never in gold; Brugsch connects this with the Muslim prohibition of the wearing of the most precious metal or with a very ancient notion of the demonic meaning of gold. I am rather inclined to believe that the real reason is good taste, as has been mentioned above, for religious prohibitions are not mentioned by any writer; besides diamonds also are only mounted in silver.

In 750 (1349) he studied under Taḫšīl al-dīn al-Sulṭān in Damascus and accompanied him to Jerusalem. There he acted for ten years as professor and then undertook a series of journeys which took him to Asia Minor and Cairo. The accounts of his travels given by his biographers vary a great deal. According to the best authenticated statements, those of al-N先前, he moved to Mecca in 770 (1368) and remained there about 14 years, which were interrupted by a journey to India and a five years' stay in Diyarbakır. About 794 (1392) he accepted an invitation from Sulṭān Aḥmad b. Uways to Baghdaḍ. From there he went to Persia, and was honourably received by Timur when the latter took Shirāz in 795 (1393). But as his native district had been devastated by the Mongols he could not stay here but took ship in Hormuz to South Arabia, which, owing to its remoteness from the scenes of the great events in history, afforded him the peaceful resting-place required by for a scholar's activity. After his arrival there in Rabī‘ I 796 (Jan. 1394), the Sulṭān al-Malik al-Aṣḥaf invited him to Ta‘izz, where he remained for 14 months. On the 1st Di‘ār 1-Hidajja 797 (12th Sept. 1395) he was appointed Chief Kāfī of al-Yaman and given a daughter of the Sulṭān in marriage; after this he claimed to be a descendant of the Caliph Abū Bakr. In 802 (1400) he again made the pilgrimage and constituted his house in Mecca a Mālikī Madrasa with three lectureships. During his stay in Mecca, his father-in-law died in 804 (1401). He made a second journey to Mecca in 805 (April 1403), but soon returned to Zābīl where he died on Tuesday the 12th (according to others the 20th) Shawwāl 817 (26th Dec. 1414). His great work, the dictionary al-Ḳāmūs, which he had extracted from his (now lost) al-Lāmi‘ al-Ma‘lid al-Qal‘ah al-Jānīs bain al-Muḥakam (of Ibn Ṣdni) wa‘l-Qal‘ah (of Shaghānī) in 60, according to others in 100, volumes, in which however, as Graf Landberg suggests, he perhaps included many words from South Arabian dialects, became a classic throughout the whole Muslim world, in spite of the fact that, although it contains a very large number of words not been critically examined and the explanations are very brief. It has been printed at Calcutta 1817, 1270, Bombay 1884, 1272, Lucknow 1885, Bālūk 1274, 1301–1303, Cairo 1281, 1319. A Persian version by ‘Alī al-Raḥim Muntahā ‘l-ʿArāb fi Lugḥat al-ʿArāb appeared at Calcutta 1841 (another al-Ḳābīs by Muhammad Ḥabīb Allāh, s. Catalogue of the Pers. Ms. in the Brit. Mus., No. 1016–1017). A Turkish translation by ʿAsım Efendi al-ʿUṣaynīs al-Bāṣīr fi Targīmāt al-Ḳāmūs al-Muḥīṣ was printed with the Arab, text, Stamboul 1272 and alone at Bālūk 1250, and several times, last in 1505. Among the commentaries the fullest is the Taṣāfi al-ʿArūs of Sāyidī Murtada al-Zābīdī, died 1205 (1791), 10 Vols., Bālūk 1307-1308. Fāris al-Shidyak [s. v.] published a critique entitled al-Ṭūsīs ala‘l-Ḳāmūs, Stamboul 1299. Of his other works, of which al-Balṣha fi Ta‘īrikh A’mat al-Lugha (s. Ahlwardt, Verzeichnis der ar. Hds. der Kgl. Bibliothek zu Berlin, No. 10060) is probably the most important, there have been printed the Kitāb Taḥīr al-Mawādāhīn fi ‘a‘mal waḥdāt li l-Sīn wa‘l-Shīrīn, Vo- cabulaire des mots arabes s'exprimant indifféremment avec un s ou ch, Alger 1900, and the stories from the life of the Prophet, Ṣīfī al-Sa‘īda, which he

The Encyclopedia of Islam, II.

(C. Brockelmanx.)

FRÎZKÖH (Fîrûzkûh), a mountain fortress in the Country of Ghôr, now the Haźâra highlands of Afghanistan. It was founded by Khêl al-Dîn Muhammad (known as the Malik al-djîbâl or mountain-king), in a territory known as Warshâdahâd and continued by his brother Bahat al-Dîn Sâm who succeeded in 544. It remained the capital of Ghôr as long as that kingdom lasted, and was much embellished during the victorious reign of Mu'izz al-Dîn Muhammad b. Sâm from the spoils of India. The Citadel or Kâshî is described as of great magnificence. It was taken by 'All al-Dîn Khwârizm Shâh in 607, and finally destroyed during the Mongol invasions under Ogotai son of Čingiz Khân in 619-620. The exact position of Fûrûzkûh is doubtful. It was on the bank of a river which may have been the upper Murgâb or the upper Hari-rûd or one of its tributaries. Raverty favours the latter view, but Holdich, who surveyed the country in 1884-1885, could find no site corresponding with it in these valleys, and identifies it with the extensive runs of Taîwâra on an affluent of the Farâh-rûd, still locally known by the name of Ghôr. The tribe bearing the name of Fûrûzkûh now inhabits the Murgâb valley, but it is not known if it is not therefore necessary to suppose that Fûrûzkûh was in that valley. Taîwâra is in the country of the kindred Taimani tribe, and has easy communications with Herât, Farâh and the upper Hari-rûd valley. It may therefore with some confidence be accepted as the actual site of Fûrûzkûh.

(M. Longworth Dames.)

FRÎZPÛR (Fîrûz Pûr). A district in the Panîjûb which takes its name from the principal town. It forms part of the Djalânghar division, lying between 30° 55' and 31° 9' N. and 73° 52' and 75° 26' E. Area 4302 sq. m. Population 958 072 of which 447 015 are Muhammadan. The principal Muhammadan tribes are Râjûpûts, Arajais, Dogars and Wattus; there is also an ascetic tribe known as Boddal, who are believed to possess powers of incantation. The ancient site of Dûrân, supposed to be the Hađînir of Bâlîkâst, was the capital of the Panûr Râjûpût. Soon after the Muhammadan invasion the Bhâjî Râjûpûts adopted Islam and invaded the district from the south. The Gil, Dâhîwâl and other Dîjû tribes entered it later. The Dogars, a wild and predatory tribe, are more recent immigrants. The town of Frûzpûr was founded in the time of Sulîmân Fûrûz Shâh III of Dîhil and named after him. In Akbar's time it was part of the Sûbâh of Multân and not of Sîrînd, and probably lay on the right bank of the river Sâtîl, and not on the left as at present. The Sîhâ Shâîs appear towards the end of Akbar's reign and soon adopted the Sîkhi religion. It was in this tract that Gurû Govind was defeated after a three days fight by Awrangzêb's army; the site is now held sacred and the tank (Mukêtâr = Tank of Salvation) has become a place of pilgrimage, where a 3 days festival is held in January. Round it the important town of Multân has grown up. The Sîks have possession of the country after the retirement of A'mâd Shâh Durrânî, the Dângi Misl under Gûdîj Shâh took the principal part in the conquest. Randjît Singh threatened this country with the minor Sîk states, and this move (1806) led to British intervention. Frûzpûr was occupied, and annexed in 1835, thus interposing between Randjît Singh's kingdom and the minor states, which have been preserved to the present day. The Musulmân Nawâbâs of Kâsâr also found a refuge at their estate of Mâdôt near Frûzpûr in 1807, and were recognized as ruling chiefs. Their territory was annexed owing to mismanagement in 1855, but was afterwards restored and is still held by the Nawâbâs. It is a large and wealthy estate. The present Nawâbâ Shâlâm Khân al-Dîn Khân is a minor.

The first Sîk war between the British and the Khâtûsa army was fought in this tract. The Sîk army crossed the Sâtîl in Dec. 1845. The battles of Mûdki and Pêrûtshah (often wrongly called Frûrîs-šahr or Frûrîs-shâh) were fought soon after. The Sîk army was repulsed but not crushed, and recrossed the Sâtîl, only to invade British territory again higher up the river near Lûdîhânî. The decisive battle of Alîwâl was fought outside the district of Frûzpûr, but the desperate struggle of Subârwâh (Sobârun) which ended the war, was fought within its limits.

In more recent times the district was enlarged by the addition of the Taûlîf of Fazîlîa in the south from the former district of Sirsa (1884). The sandy tracts to the east and south of the district have been rendered fertile by the irrigation from the Sirhind canal, and the inundation canals constructed by Col. Grey in the riverain tract have also added greatly to its productiveness. The Sîk Dîjûs are excellent farmers and take full advantage of these conditions; the Muhammâdan tribes in this part are inferior cultivators. There is at present a large export of wheat from the Frûzpûr district.

(M. Longworth Dames.)

FRÎZ SHÂH KHÎLJÎ (Dîlâmî, al-Dîn), the twelfth Muhammedan emperor of Dîhil, was an Afgân of the Khîlî or Khîlî tribe who first rose to eminence in Balbân's reign and later became governor of Sâmân. When Mu'izz al-Dîn Kaikûbâd fell sick, he was summoned to Dîhil to assume the direction of affairs, but encountered much opposition from the Turki amîr, who, as the emperor grew feebler, proclaimed his infant son, Shâms al-Dîn Kaikûmâr.
Fürüz acknowledged the child but removed him from the custody of the Turks and seized the palace of Kilâghari where, with his connivance, Kâthubâd was assassinated. The child disappeared shortly afterwards and, on 13 June, 1290, Fürüz ascended the throne. His chief difficulties were the disaffection of the people of Dihl, who resented the rule of an Afgân, and a rebellion headed by Malik Châdji, a nephew of Balban, who claimed his uncle’s throne. The prejudices of the citizens were conciliated by mildness and the rebellion was crushed, but the old emperor’s culpable leniency both to rebels and robbers was much resented by his amirs, who refused to accept his plea of conscientious objection to bloodshed. A conspiracy of the disaffected amirs was detected and pardoned, but more severity was shown towards Sidi Mâwilâ, an influential darwîsh suspected of plotting the emperor’s assassination, who was put to death. Fürüz had appointed his nephew and son-in-law, ‘Àlî al-Dîn, governor of Karra, and this adventurous prince, hearing of the great wealth of Dehârî in the Dakhân, led a daring raid into that kingdom and returned laden with plunder, but declined to visit his uncle at Dihl engaged apprehension of punishment for having undertaken such an enterprise without permission. The doting old emperor was at length persuaded, against the advice of his counsellors, to visit his nephew in Karra, and on 19 July, 1296, was stabbed to death on the bank of the Ganges before the eyes and under the orders of ‘Àlî al-Dîn, who immediately caused himself to be proclaimed emperor.

Bibliography: Tâhirî, Fâhîshât, ed. Briggs (Bombay 1832), i. 154 etc. seq.; transl. Briggs (London 1829), i. 285 etc. seq.; Dîya al-Dîn Barâni, Tarîkh-i Fürûz Shahî (Bibl. Ind.) p. 174 etc. seq.; Nîzîm al-Dîn Ahmad, Ta’abârî-î Akbarî. (T.W. HAIG.)

Fürûz Shâh Taghlâk, son of Malik Râdjab, brother of Chîyâhâr al-Dîn Taghlâk, and the last of a long line of the dynasty of Taghlâk, born 1262, was educated and advanced to high rank by his cousin, Muhammad Ibn Taghlâk, on whose death near Thâtha on 20 March, 1351, he was induced to ascend the throne. He extricated the army then encamped at Sind from its difficulties and led it back to Dihl, where in the meantime Ahmad Ayûz Khândârî, whom Muhammad had left in charge of the capital, too hastily crediting a report that Fürûz had been slain in an encounter with the Moghuls, had placed on the throne a supposititious son of Muhammad. Fürûz would have pardoned and reinstated Ahmad, but was overruled by his advisers, who caused the aged minister to be put to death. The wars of Fürûz Shâh’s reign were two expeditions into Bangâl in 1353 and 1359, one into Urjza in the latter year, one against Nargarokh in 1361, and one to Thâtha in 1362. A certain measure of success attended all these campaigns, but Fürûz’s generalship in each was beset by much need, and after the submission of the Dhâm of Thâtha he wisely abandoned the quest of military glory. The rest of his long reign was passed, if the suppression of one or two unimportant rebellions be excepted, in the indulgence of his passion for architecture and the chase. His public works included cities, palaces, tombs, irrigation works, mosques and colleges, but he compounded for his activity in this direction by neglect of all other public business and tolerance of corruption and inefficiency in others. He had so little of the jealousy which is a usual attribute of sovereignty that at different times he associated two of his sons to himself in the imperial dignity. He was applauded by his people by his suppression of many vexatious imposts and by the general lenity of his rule, which contrasted strongly with that of his predecessor, He distrusted, at the age of more than 80 years, in the latter half of September, 1388, and was succeeded by Taghlâk II, the son of his deceased eldest son, Fath Shân. The proximate cause of the ruin of his empire was Timur’s invasion but the inefficiency of his own administration contributed largely to its disruption.

Fîsîk. (See Fâsîk.)

FIÎNET, a Turkish poetess, whose real name was Zubaida, the daughter of the Shâhî al-Islâm Mehmed Esâedd Efendi, died 1194 (1780). Of her life we only know that she made an unfortunate marriage with Derwîsh Efendi, Kâdi’sgar of Rumelî under Selim III. Her Divâns (printed Stambul 1286 = 1869 and often since) consists chiefly of lyric poems, ghazals, shairâs and a few riddles; some poems show a philosophic strain, which according to Gibb, is due to the influence of her friend Râghib Pasha [q. v.]. Her total writings were of small bulk.

Bibliography: Gibb, A History of Ottoman Poetry, iv. 151 et seq. (the Turkish sources are also given there).

FIÎTR. (See ‘Âd al-Fîtr.)

FIÎTRA is a "noun of kind" (Wright, i. 123, v.) to the infinitive fitr and means (an Ethiopic loan-meaning, Schwall in Zeitschr. d. Deutsch. Morgenl. Ges., iii. 199 et seq.; Noldeke, Neue Beiträge, p. 49), "a kind or way of creating or of being created". It occurs in Kûr. xxx. 29 (khâbâh, Bâtîd) and other forms of its verb in the same meaning occur 14 times. But though Muhammad uses derived forms freely, it is singular to hear his hearers. Ibn ‘Abbâs did not understand it until he heard a Bedawi use it of digging a well, and then the Bedawi probably meant the genuinely Arabic sense of shâkh (Lisan, vi. p. 362, l. 20). Its theologically important usage is in the saying of Muhammad, "Every infant is born according to the fitr (câla v-fitrâ; i.e. Allah’s kind or way of creating; “on God’s plan”, cf. Macdonald, Religious Attitude in Islam, p. 243); then his parents make him a Jew or a Christian or a Magian". This is one of several contradictory traditions on the salubrity of the infants of unbelievers. On the whole question the theologians were uncertain and in disagreement. This text evidently means that every child is born naturally a Muslim; but is perverted after birth by his environment. But in this interpretation — that of the Mu’tazilites (cf. Khašâfî, ed. Lees, ii. p. 1094) — there were found serious theological and legal difficulties. (i.) It interferes with the sovereign will (mash’âr) and guidance (hidâyâ) of Allah. Orthodox Islam, therefore, holds that the parents could be only a secondary cause (sabab) and that the guiding aright and leading astray must come from Allah himself. (ii.) This view, and indeed
almost any view of the tradition, would involve that such an infant, if his parents died before he reached years of discretion, could not inherit from them, and that if he died before years of discretion, his parents could not inherit from him. For this presupposes that he is a Muslim up to years of discretion, and canon law lays down that a Muslim cannot inherit from a non-Muslim or vice versa (ḥādiyya of al-Bāḏjrāni on the šārīʿ of Ibn Kāsim on the mawāniʿ of Abu Shujāʿ, ed. Cairo 1307, vol. ii, p. 74 et seq. and Sachau, Muhammedanisches Recht, p. 186, 204, 206 — a favorite subject for hair-splitting). Two attempts have been made to escape this. (i) This statement of Muḥammad is to be regarded as a decision (ḥakīma) and was abrogated by the later decision as to inheritance. But it is pointed out that it is not really a decision, but a narrative (khabar) and that narratives are not abrogated. (ii) The being made a Jew, Christian or Magian is to be regarded as not actual, but figurative, and takes place in this figurative sense from the point of birth; the legal religion of the infant is automatically that of his parents, although he comes actually to embrace that religion only with maturity of mind. Another view was that being created according to the fitra meant only being created in a healthy condition, like a sound animal, with a capacity of either belief or unbelief when the time should come. Another was that fitra meant only “beginning” (badʿa). Still another was that it referred to Allāh’s creating man with a capacity of either belief or unbelief and then laying on them the covenant of the “Day of AlLAST” (Kur., vii. 171). Finally that it was to which Allāh turns round the hearts of men.

**Fomalhaut (also fomalhot and samohol) = fam al-ẓāt (“the fish’s mouth”) is the star α of first second magnitude in the Southern Piscis. Potency and following him al-Battānī, however, reckon it to Aquarius, but add that it lies in the mouth of the Southern Piscis. According to Kayzawi and Ulugh Beg it was called al-Dīdār al-ʿawwat = the first frog, according to Arab nomenclature, to distinguish it from a second in the Whale. It is also called al-ʿalim = the ostrich by Kayzawi.

(H. Suter.)

**Fuʿād Pasha (Muḥammad Kāmil-ˇZâde) = an Ottoman statesman, born in 1230 = 1815 in Constantinople, the son of the poet ʿAziz Molla [q.v.], who mentions him in his Muhit-kelebi, studied medicine after leaving the school of Galata-Serai and entered the army medical service with the rank of yazbāshī (captain) and was sent to Tripoli in North Africa. Returning in 1253 = 1857 to Constantinople, he entered the service of the Porte as interpreter, was sent to London in 1256 = 1850 as first secretary to the Embassy and in 1261 = 1854 attended the coronation of Queen Isabella of Spain as Envoy Extraordinary. In 1265 = 1847 he became Dragoman of the Imperial Dwan, in 1265 = 1849 referendum, then was sent on a special mission to Wallachia and Moldavia and finally appointed ambassador in St. Petersburg. In 1266 = 1850 he was under-secretary of state to the Grand Vizier, in 1268 = 1852 he went on a mission to Egypt and on his return from there became Minister of Foreign affairs, but in the following year resigned in consequence of the intrigues of Mentchkoff. In 1270 = 1854 he was entrusted with the task of suppressing the unrest provoked by Greek bandits in Janina and Venice-Shehr, and succeeded in restoring order. As a member of the Grand Council for Reforms he drew up a series of laws and regulations and on his appointment for the second time to the Ministry of Foreign affairs, became at the same time President of this body. He was deprived of both offices in 1273 = 1856, but was given them again in the following year. He attended the Paris congress as the delegate of Turkey and after the massacres of Christians in Lebanon (1276 = 1860) he was sent to Syria as commissioner extraordinary with civil and military powers. In this capacity he had Māḥṣīr Ahmed Pascha shot to remove any pretext for General Beaufort d’Hautpoul to march on Damascus with the troops under his command. After the accession of Sultan ‘Abd al-ʿAzīz (1278 = 1861) he became President of the High Court of Justice (mudīl-i aḵbār-i adīlī), Minister of Foreign Affairs for the fourth time and Grand Vizier in the same year. After filling this office for fourteen months he was dismissed in 1279 = 1862, but soon afterwards appointed Seraskier and Adjutant-general and, retaining this title, Grand Vizier for the second time 1283 = 1867. He retained this position for nearly three years and introduced reforms during his tenure of office. On his dismissal he retired to his palace on the Bosporus (yəht). He accompanied the Sultan on his journey to the Paris Exhibition of (1867 = 1284), remained in Europe for his health and died at Nice in Shawwal 1285 (Febr. 1869) at the age of 55. His remains were interred in Constantinople in a mausoleum beside the small mosque built by him in the Gedik-Pasha quarter. Fuʿād played an important part in the history of modern Turkey; with ʿAlī Pascha he is held to be among those who were eager for reform, with Djeweder Efendi (afterwards Pasha) he compiled the first grammar of Ottoman Turkish that was ever printed (Kaʾūuni es’hāmiya, 1851; trans. into German by H. Kellgren, Helsingfors, 1855). The political testament (wasiyyet nāme-i siyiṣ) addressed to Sultan ʿAbd al-ʿAzīz, ascribed to him is a literary skit probably from the pen of the Persian envoy Malcom-Khān.

(C. L. HART.)

AL-FUDAIL b. IVĀD ABD AL-MUNTAZIM TARIKHAN, one of the most celebrated Sāfīs of the older period, a contemporary of Hārīn al-Raḥīd, died 187 = 803. His nisba shows that he was born in Khorassān, which agrees with the story that he began his career as a member of a robber band which rendered the roads between Abīward and Sarakhs insecure. He happened on one occasion to hear some one reciting Sūra lvi. 1:5: "Is it not time for those that believe, to humble their hearts before God's warning" and in consequence became converted. He then went to Kūta, where he studied Tradition, and afterwards to Mecca, where he remained till his death. From the anecdotes related of him, it is clear that he was one of those pious ascetics to whom worldly greatness and pleasures are as nothing; no original opinions and views ascribed to him have been handed down, but he is considered one of the most reliable and prolific transmitters of Tradition.

FUḌŪLĪ. [See Fuḍūlī.]

FULBE. [See FUL.]

FULK, the usual name for ship in the Korān (ṣafīna is only found four times). Navigation seems to have made a profound impression on Muḥammad's mind; numerous passages in the Korān (xiv. 37; xvi. 14; xvii. 68; xxxiii. 30; xxxv. 13; xxxvi. 41 etc.) the fact that God has given man power over the waters (ṣakīhkarā), so that they bear ships, is quoted by Muḥammad as a special proof of God's grace.

Fulk is more particularly Noah's Ark. The Korān does to some extent but it is rather the histories of the Prophets that give all sorts of interesting details of the building and equipment of the ark. By God's command Nūḥ had first of all to plant the trees necessary for the building of the ark and he planted plane-trees (ṣāgī). During the forty years that these were growing no children were born on earth. Being asked what form the ark was to assume, God answered that the upper part and the back were to be like that of a cock and the hull also to be like the body of a bird, and that it was to have three stories (ṭaḥāfūtī). The dimensions are variously given; according to the "possessors of a scripture" it was 80 (sic) ells long, 50 broad and 30 high; according to other statements the dimensions were 660, 330 and 33 ells. The ark was nailed in the ordinary way (dīḥat duṣārī, Sūra liv. 13) and covered with pitch internally and externally; God caused a spring of pitch to well forth for this special purpose. — On one occasion the disciples of Jesus asked their master to raise a man from the dead who would tell them what the ark was like. Jesus raised up Sām (according to Tābari, i. 197 it was Šāhīm), the son of Nūḥ, from a piece of earth, and told them that the ark was 1200 ells long, 600 broad and had three stories, one for quadrupeds, one for birds and the third for human beings. When the accumulation of excrements became a nuisance, Nūḥ seized the tail of an elephant and from it was produced a pair of swine which devoured the excrement; the mice became a plague, so he struck the lion on the forehead and a pair of cats came forth from its nose and destroyed the mice. — According to the Korān (Sūra xli. 46), the landing place of the Ark was the mountain Ṣūr. (Cf. this article i. 1059 et seq.)

FÜMĀNī. [See 'ABD AL-FAṬTAḤ.]

FUNDUK, "hazel-nut." The fundūk is the fruit of a tree, round like a nut, enclosing a kernel like the pistachio-nut (Liāna). Also (in the dialect of Syria and Morocco) a house at which travellers alight, by the way side or in a town; an inn or hostel, corresponding to the Persian ḥām. The derivation is probably from the Greek πανδοκείον. (A. S. FULTON.)

FUNDUKĻ or FUNDUKĻY, the name of the old gold coin of Turkey, said to be derived from the pearl border, which was likened to grains of corn (funduk) (Isma'il Ġalībī, Tağīmī, p. 274). This name only came into general use when two different gold coins began to be struck. The Turkish gold coin that had been in use till then, usually called simply altyn based its weight on that of the ducat. Down to the conquest of Constantinople, European ducats, usually of Venetian origin and later Hungarian and Dutch ducats, circulated almost exclusively in the Ottoman dominions. To make them pass current in Turkey they were countermarked ṣebb by the authorities. The oldest native gold coin dates from 883 (1478) and was struck in Constantinople. These gold coins were to be of the same value as European ducats and are therefore of about 231/2 carat fine, and weigh 3.49 grammes (Hungarian ducat 3.491 grammes, Dutch, 3.494), but well preserved specimens run from 3.43 downwards. This coin bore the most different names: Altyň, Zekin (Zecchino), Flīnī or Flīnī (Florenus), Ṣebb (in the provinces bordering on Persia), Aghrafī (in 'Aqṣyah), Sūfīnī (in the Barbary States), Fudhrahī, Zendjīrī, from the ornamentation etc. A second gold coin was introduced alongside of the ducat in the reign of Sulṭān Ahmad III. (1115-1143 = 1703-1730), of the weight of 2.6 grammes, and was called ser-mahbūb [q. v.], and the old gold coin received the name funduklī. The latter has not been struck since the reign of Mahmut III.

FUNG (FENDY), a tribe or mixture of tribes in the Anglo-Egyptian Sudan. The name is said to be derived from a Shilluk word denoting "stranger" and is originally applied to a negroid race related to or identical with the Shilluks on the White Nile. They became prominent at the end of the 19th century A.D. by conquering an extensive portion of the eastern Sudan where they founded the famous kingdom of Sennar. At the time of the conquest and subsequently to it their kings and notables intermarried with Sudan Arabs and ultimately Arab descent which they or their court genealogists traced back to the Ibazun Dia. It is noteworthy that all the names borne by their kings a considerable proportion are non-Arabic and non-Muslim.

The Fung dynasty of Sennar was founded by 'Amara Dunkas (Amara, the son of Dunkas) who reigned from A.D. 1505 to 1534. In alliance with 'Abd Allah Djamna, the chief of the Abdalati tribe, he conquered the country between the White and Blue Niles and established himself at Sennar, while 'Abd Allah founded a semi-independent dynasty at Kiri, north of Khartum. The Fung dynasty lasted down to 1789 in which year the throne was usurped by the Hamdali tribe who held possession of the time of the Egyptian conquest. Lists of the Fung kings are given by Shukur (see below) and the French traveller Calliaud. The two differ in details while agreeing on the main features. During its most flourishing period in the 18th century the Fung kingdom extended from the third Cataract in the north to Fazoghi on the Blue Nile in the south, and from the Red Sea on the east to the White Nile and Kordofan in the west. Only the country between the White and Blue Niles was directly governed by the Chinese kings, while Fazogli and the Northern Sudan had their own tribal rulers who were tributary to the Fung.

The Fung seem to have embraced Islam at the time of their rise to power, but, even in the days of Bruce (see below), many pagan practices survived among them. The use of Arabic was general only among the upper classes.

The present Fung are a Negro people in the Sennar province. Their district, called Dar Fung, extends south of North Lat. 12, from the Abyssinian frontier to the White Nile. Their head (shaihk) is a direct descendant of the old Fung dynasty, but the tribe is small in numbers and unimportant.

Even in their most flourishing period they seem to have made little advance in civilization, and their kings cultivated Muslim sciences only to the extent of occasionally attracting Arab scholars to their court.

Bibliography: There are several MSS. histories of the Fung kingdom, e.g. the Br. Mus. Ms. Or. 2945; others were used by Na'Am Shukair, but their mutual relationship has not been studied.

(S. Hillelson.)

AL-FURAT is the Arabic name of the Eufrates, called in Sumnerian BUR-NA-NU, Assyry Par-ruitu, Hebrew תימ, Syrian شن. On the name and the notices by authors in antiquity cf. Weissbach's article Eufrates in Pauly-Wissowa, vi. 1195 et seq.; we need only note here that, according to modern travellers, it does not seem absolutely certain that the names Karasu and Muradislu are applied respectively to the northern arm, the "Western Eufrates" and the southern, the "Eastern Eufrates"; Muradislu, like Frat, is rather applied to both tributary streams (cf. Geogr. Journ., viii. 1896, p. 333 note), and perhaps Belké's (Beiträge zur Alten Geographie, i. 45) supposition, that Murad is only a popular etymology for Parat [cf. also the name Djebel Marad in Pseudo-Wâkidî (see Tomaseck, Sâli, p. 17), which is to be located in the district in which the "Eastern" Eufrates rises), is not to be dismissed offhand.

The Arab geographers, to whose notices this article is limited, regard the northern tributary arm as the true upper course of the river. It rises in the district of Kâlikâla (cf. Lasserem, ii. 31) in a mountain called Tibrîkh or some such name, in which we may probably recognise the Pâmuâbis, ëros of Ptolemy, and the Moss Parmurder of the Tabula Peutingeriana. For the upper course of the river we have the very important description by Ibn Serapion, whose text has been published with translation by G. Le Strange in the Journ. R. As. Soc., 1895 and more recently his statements have been discussed by Tomaseck in a valuable paper in the Pesti-schrift für H. Kiepert (1893), p. 137-149.

The Eufrates receives from the west below Kamkab the waters of the Nahr Lûtîya (probably the modern Armûdan-Caï), the Nahr Abrikîr (the Caila-Imaâk flowing from Abrikiâb = Diwirîgî) and the Nahr Ånû (the modern Angû-Caï, the lower course of the river, that is known above (Ibn Serapion wrongly says above) the mouth of the last named river the Western joins the Eastern Eufrates, the Nahr Arsanân rising in Tarâm (Tarunis), which not far from Shimsâh (Arasmosata, cf. R. Kiepert, Formae orbis antiqui, text to sheet 5, p. 84) is augmented by the Nahr ad-Dhibîb and the Nahr Salâît (according to Tomaseck, the rivers Peri-Sû and Sângüt). The united stream now flows past Hûn al-Mînâqîr (the modern Mûshêr-Dagh: Khâbî al-Zahirî, Zubû, p. 125: Mûghârî), receives on the west bank the Nahr Djarqarîya (probably the Kûru-Caî) which flows from the neighbourhood of Khârzhana, further the Nahr Kûbûbîb i.e. the Toikhâm-Sû. The latter, into
which flow the Nahrl Kūrākīs = Sulṭān-Ṣū and the Nahrl al-Zurālīs, which irrigates by a branch Malatya, is crossed by the celebrated Ḑantār Kūhadī, the modern Kūrgoskopor (see Yorke in the Geyg. Fourn., viii. 1890, p. 238 et seq.; Lehmann-Haupt, Armenien, i. 486). On the east bank the Euphrates receives the Nahrl Henzī (Boyūl-Caik) which still preserves the name of the capital of the old district of Anzitene and then enters the cataract district, which it does not leave till it reaches Gerger (see von Moltke, Briefe über Zustände..., in der Türkei, p. 305—310; E. Huntington in Zeitschr. für Ethnol., 1901, p. 183—204).

Leaving the mountainous country the Euphrates divides the flat tableland into two, and forms the boundary between Syria and al-Djazīra below Sūmaṣṣī. At first the river continues as before to receive important tributaries from the west only. Of these the most important is the Nahrl Sandja or Nahrl al-Az̃aḳ crossed by the famous Ḑantār Sandja, which, like the Singas of the ancients (cf. R. Kiepert, Formae Orbis Antiqui, text to sheet 5, p. 15), is certainly to be identified with the Gök-Su and not with the Būlam-Su, on account of the Roman bridge that still survives in the latter (see Humann and Puchstein, Reisen, p. 393 et seq.). Below the rocky citadel of Kaft al-Rūm and the crossing of al-Bтра, of particular importance since the Crusading period (cf. Heydik, i. 723 et seq.), there is still the Nahrl Sāḍur to be mentioned. In the early middle ages Dīsr Manbīd, the later Kaft al-Nadīm, and al-Raḥṣa were the main places where the Euphrates could be crossed. Below the last named place the al-Balîgh, rising in the neighbourhood of Harrān, joins the al-Raḥṣa al-Sawda, the modern ruins of al-Sanbr (see Sarre and Herzfeld, Archäol. Reise im Ueuphrat- und Tigris-Gebiet, i. 160). It is true that the modern very important crossing at Dīr al-Za’r [q.v., i. 346] seems to have had a predecessor in an ancient Birta [see above i. 724 infra seq.] and is probably mentioned by Yaḳū, ii. 662 as Dair Rumman, but it has only become of any considerable importance in modern times. The place of Dīr al-Za’r at the present day was held in ancient times by Circesium, the Karkisiya of the Arabs at the mouth of the Ḑahrūr, which flowing from Ra’s al-Ain, according to the repeated statements of the Arab authors, formed with its tributary the Hirman from Tūr ʿAbdin, a navigable connection between the Euphrates and the Tigris in the Nahrl al-Thahrīr, but, according to the recent investigations of Sarre and Herzfeld, op. cit., i. 193, this must be regarded as more than doubtful. The place of the ancient Circesium, the modern Dīr al-Za’r, was filled, particularly in the later middle ages, by the double village of Raḥṣa, or the Daliya of Malh b. Ṭawṣ, a little south of the former, the lands of which were watered by the Nahrl Sāḍ, which began before Karkisiya, and was called after Sa’td b. ʿAbd Malh b. Marwān (see Peters, Nippur, i. 127 and 129 et seq.; A. Musil, In Nordwestarabien und Südsyrienausgrabungen, p. 10 of the reprint from the Anziger der phil.-hist. Kl. der Wiener Akad. 1913, Dux). While modern geographers make Minn Murmantoa and Minn Mešopotamia begin at Ḍana [q.v., i. 344 et seq.], already cultivated in the middle ages for its palms, the valley begins, the writers of the middle ages as a rule place the boundary between al-Djazīra and al-

Träf much farther south on the Euphrates. The Čert Sa’d, which was led out of the Euphrates downwards from Hiṭ, the course of which can be traced almost as far as Neqef (see Peters, Nippur, i. 166 and 312; ii. 327; Meissner, Von Babylon nach den Ruinen von Šurra und Šauram, p. 13), has unfortunately not yet been sufficiently explored for its real importance and relation to Khandāk Šābūr (see Noldeke, Sasaniden, p. 57; G. Le Strange, Eastern Caliphat, p. 65) and to the Wādī ‘Ain al-Tamr (see Musil, op. cit., i. 11), which, according to Ibn Serapion, flowed into the Euphrates at Hiṭ. According to Ibn Serapion a canal, called Nahr Dūdjael, flowed from the Euphrates at al-Rabb (7 farsakh from al-Anbār, 12 from Hiṭ; possibly the Umm al-Ru’ūs in Peters, Nippur, ii. 45) to the Tigris near ʿUkbarār (see Streck, Die alte Land eschaft Babylonien, p. 24), but it seems soon to have been silted up, as the later geographers give this name only to a Tigris-canal perhaps originally connected with the ancient Dūdjael (see Streck, op. cit., p. 33 and 220 et seq.).

Only a little farther down, at al-Anbār [q.v., i. 348], begins the great network of the Babylonian canal system which dates back to remote antiquity, although only the remains survive to day. The usual identification of the four main canals, Nahr Ṭār, Nahr Šarṣar, Nahr al-Malik and Nahr Kūthā, led from the Euphrates, is given in the article Dīlā, i. 969 et seq. (for details see Streck, op. cit., p. 25 et seq.), but in the present state of our knowledge of the country it can only be regarded as highly hypothetical. Shortly after they branch off, the Euphrates divides into two arms, the western arm according to the main stream of the river proper, which flows past Kūfa and is finally lost in the Baṭāla [q.v., i. 673 et seq.] west of Wāsīt, is also called al-ʿAlkamī, which Musil (op. cit., i. 13) has found E. N. E. of Kerbelū as the name of an ancient canal, perhaps forming the northern continuation of the modern Hindīye arm. The eastern arm of the Euphrates, which even in Ibn Serapion’s time held a greater stream of water, for the first part of it corresponded to the bed of the modern Euphrates proper, until since about 1889 the river began to pour the greater part of its waters into the Hindīye arm (see Peters, Nippur, ii. 335; Sachau, Am Euphrat und Tigris, p. 38 and 57), again divides near Bābil. Its eastern arm, which flows to the Tigris under the name Nahr Sūrā al-ʿAṣra, Sarāt al-Kabīra, Nahr al-Nil, or Nahr Šabūs via the town of al-Nil, the modern Nīlīye, has been thoroughly explored by Sarre and Herzfeld (Arch. Reise, i. 234—247) except for its eastern extremity. How far the western branch, the Nahr Sūrā al-Asfāl, corresponds to the modern course of the Euphrates or the canals Ṣaḥṭ al-Nil, Ṣaḥṭ al-Kār which flow to the southeast, cannot yet be exactly determined. This arm likewise ends in the great swampy area of the Baṭāla, the outflow from which, Nahr Abī ʿAsad, which runs into the Dīlāl al-ʿAwra, may in a way be described as the lower course of the Euphrates.

This is in its main outlines the picture drawn by the Arab geographers, particularly Ibn Serapion. By the details which they give us, we are always intelligible, is not remarkable considering the deficiencies in our knowledge of the country; that contradictions seem to be found in them, need not cause surprise, when we consider how much the river has changed its course, of which the
shifting to the south in quite recent times of its confluence with the Tigris is a striking example (see Geogr. Journ., xxxv. ii with map). The Arabs themselves knew of considerable changes in the course of the Euphrates; for example, Mas'ūdī (Marāj̣ī, i. 216), says, that in the period of Hira's prosperity sea-going ships came up as far as Nadsif in the old riverbed (al-Adhaim). A detailed account has already been given [i. 675 et seq.] of the Arabs' knowledge of the history of the Raṭīfa. It is perhaps evidence of the gradual alteration in this area of swamps that, according to certain authors (see Ptol. Geogr. Inv., iii. 20, note 1; cf. also Vajih, iii. 860 et seq.), an arm of the Euphrates — it can probably only be the Nahr Sūra al-Asfal — entered the Tigris at Wāsaj. Not only is the history of the Euphrates in antiquity and the middle ages still very obscure, but we have only very meagre information regarding the changes in its course in recent times. For what is known on this subject we can only refer the reader to the general textbooks on geography and the encyclopaedias as well as for the economic importance of the river.

Bibliography: The Arab geographers and the more important western works are given under 'Alī, and the same account as a cartographical aid R. Kiepert's excellent Karte von Kleinasien (1:400,000). Important monographs are mentioned in the text. For further details cf. the separate articles.

(R. Hartmann.)

Fūrkān (A.), Discrimination, revelation, salvation. The word is found in Arabic literature as an original Arabic word and also as one borrowed from the Aramaic. The meaning of the word in various passages in the Korān cannot always be exactly determined; Muhammad made a wide use of it; he was fond of words with a long vowel in the last syllable on account of their solemn sound.

1. The Arabic word means separation, distinction, proof. Probably, however, this meaning is not found in the Korān, although the commentators constantly expound it as having the theological shade of meaning of "discrimination between true and false". It is not impossible that Muhammad came by this means to use it in the meaning of

2. Revelation, as this meaning of the word is not found in Aramaic. Thus it is applied in the Korān to pre-Mohammadan revelations, e.g. Sūra vii, 49, iii. 2, where, according to Zamakhshari, it is a name for the whole class of heavenly books. But it is used of the Korān in Sūra xxvi. 1, where it is said: "Blessed is he that hath sent down the Furū' to his servant, that he might be a warner to the creatures"; and among later writers it has become a synonym for Korān.

3. In the meaning "salvation" the word is certainly an Aramaic loanword. Thus in Sūra viii. 42 and what we have revealed to our servant on the day of the Furū', on the day when the two hosts met". Here the battle of Badr is called the "day of the Furū'". Some of the commentators on this passage give the meaning al-nagr "victory". But this is the Aramaic tarīghī, synonymous with the Hebrew yēsha' "salvation".

(A. J. Wensinck.)

Fūrū'. [See the art. Fīrū' in ii. 104.]

Fūrūḍ. [See Farūd and Ferūde, ii. 614 and 1116.]

Fūrūgh (Abū'l-Kāsim Khān), a Persian poet, born in Kāshān, descendant of Fath 'Ali Kāshān, the prince of poets, lived for long in Khorāsan, then settled in Tehrān, where he lived a retired life only associating with mysteries. He lived in the sixteenth century; we do not know the dates of his birth or death. Among his poems he wrote verses on the death of Muhammad Shah and the accession of Nasir-Ad-Din.

(C. Hart.)

Fūrūgh al-Dīn (Muhammad Mahdi), a Persian poet, born in Tabriz in 1223 (1808); an ardent student from the age of seven, he entered the service of various individuals of high rank, among them Ferīdūn Mirzā, a prince of the royal family, who had written poems under the name Farrūkh (a name of the hero Ferīdūn being Firdawsi's Shāhnamah, from whom he took the name Farrūgh-i Farrūkhī). In Tehrān he held a high position in the offices of the chancellery. He collected his Arabic and Persian poems in his Tadkhirat al-Shāhāb ("Memoirs of Youth"), which forms a kind of autobiography.

(C. Hart.)

Fūrūghī. i. Surname of the Persian poet Muhammad of Isfahān, who had studied the Almagest of Pтолем in and became poet laureate to Timūr Shāh Durrānī after spending his youth in travel.

2. The surname of a janissary of Avlona in the time of Sultan Sulaimān, skilled in music and the composition of riddles.

3. The surname of Mirzā Muhammad Husain Ḥāfżīn Zākā al-Mulk, a Persian poet and editor of the Tarbiya, who died in 1908.

(C. Hart.)

Fūstāt. [See Cairo, i. 816 et seq.]

Futā Djallon, a district in West Africa, in the N.W. of French Guinea, to which it is politically attached. It consists of a mountainous area, the most important in West Africa with an average height of 3000, 3500 feet. These highlands border in the E. on the mountains of the Mandingo territory; in the S. they slope in a series of shelving spurs to the level of the Atlantic Ocean, while in the N. they gradually slope down to Bondo. The geographical and orographical conditions of the land are only slightly known at present. The most recent journeys of exploration have merely established, that the south and west borders are formed of sandstone plateaus, while the older kinds of stone, granite and gneiss, occupy the centre. The structure of the mountains is rather irregular; the general picture is of a plateau from which rise peaks 600 to 1000 feet high, bordered by a sandstone range deeply cut by erosion.
The average elevation of Futā assures the land a more moderate and healthy climate than the coast lands. The temperature is lower than on the coast and the thermometer shows considerable variations at all seasons of the year. During the dry season (December to June) differences of 25, 30 and 32° C. may be noticed in the course of a single day; during the winter or rainy season (May to November) the nights are always fresh. Nor does rain ever entirely stop during the dry season, but falls very heavily in winter, and reaches its maximum in spring when the south winds laden with moisture from the Atlantic Ocean set in. Although Futā D żallon has a smaller rainfall than the coast, it has a better supply than the neighbouring lands on the Upper Senegal and the Upper Niger.

Futā D żallon is one of the most important hydrographic centres of Africa. We may distinguish two great watersheds, one in the S. in the district of Timbo, where the Baleo (Bafing), the Tene, the Kinkissó, a tributary of the Niger, and the Konkoure, which flows into the Atlantic Ocean, rise, and another in the N., in the neighbourhood of Labe, from which flow the Gambia, the Salla (Kossa) and the Komba (Rio Grande). To get beyond the boundaries of Futā the rivers with a S. or S.W. course have to cross the mountain wall, which they do in numerous falls, rapid and deep ravines, usually running from N.E. to S.W. Although the slope of the country is much more gradual to the N., the valleys here are quite as narrow and often overhung by steep cliffs.

Futā has long been regarded as a country with a rich and luxurious vegetation, but it does not seem to deserve this reputation, at least not everywhere. The most frequent feature in the structure of the country is the "bowal"; a rocky plateau covered with ferrierous boulders, sometimes overgrown with thin scrub, but sometimes so bare and stony that some travellers compare it with the hamadas of the Sahara. During the rainy season the ground becomes covered with grass and vegetation which varies in thickness with the nature of the country and lasts for longer or shorter periods. Trees are lacking except in the immediate neighbourhood of the water-courses; nevertheless, the valleys are very well wooded; on the slopes and in the cavities which collect the necessary soil, little wooded islands (dantare) are formed which, where they are found in large numbers, seem to form an extensive continuous forest. The villages are surrounded by orchards of orange, melon, kola and mango trees. The karité or butter tree and various kinds of bamboo are widely diffused, but the palms are small and few in number. Finally in some granite districts we find meadows, cultivated fields and plantations beside one another which give the country a certain similarity to parts of Switzerland and the Auvergne. But this is the exception.

The fauna is not so rich as in the Soudan; it is represented by antelopes, gazelles and especially monkeys, the latter being so numerous that the inhabitants have to institute "drives" to protect their crops from being ruined by them. The scarcity of large carnivora has favoured the development of cattle-rearing so that at the present day there are three kinds of sheep and four of cattle in Futā, of which one, the buffalo, used as a beast of burden, was introduced into the country by the pastoral Fulbe.

The number of inhabitants is unknown; it is tentatively estimated at 600,000-700,000. The principal settlements are Timbo, the residence of the Almamy (9000 inhabitants?); Labe (5000?), Medina, Kate and Fugumba (10,000), the holy city, where the rulers are consecrated. The population is composed of various elements, among which the Mande predominate. We find representatives of the different branches of this race here, Dialonne, Susu, Soninke and half-breeds like the Khassonne and notably the Fulā, who are the result of a mixture of the Mande and Fulbe and during the last 150 years have become supreme over the other groups. There are also Peuhl or Fulbe, but they are less numerous in Futā than in the surrounding territories and follow the pastoral life of their forefathers, although there is a marked tendency among them to exchange a nomadic for a settled life.

The social divisions of the people correspond to some extent to this diversity of origin. The highest class consists of an ecclesiastical and military aristocracy, the former composed of marabouts, the latter of prominent Fulā, the descendants of Muslim immigrants or native chiefs who have become Muslim. To these nobles who have special titles (alpha, shiekhu etc.) are grouped in families like the Roman "gozere" and take an active part in the political life of the country; they have seats in the assemblies and supply the Almamys with their civil and military officers. Next to them are the negroes and the Muslim Fulbe; they attend the assemblies as vassals of the nobles but as a rule take no part in their deliberations; they live in villages which are called gor. A third class comprises the non-Muslim freemen. These are usually artisans (weavers, carpenters, shoemakers) and live in separate groups in the gor or near them. They are endogamous and are excluded from any share in political life. Lastly slaves are very numerous, because the conquerors of the Soudan, e.g. al-Hadjij Omar and Samory used to exchange their kind in exchange for the spoils of Futā. These slaves fall into two classes: domestics, whose position is fairly comfortable and who enjoy a relative independence, and agricultural labourers, whose lot is a much harder one. The latter are settled in special villages (runde), are supervised by overseers and severely punished if they attempt to escape. Since the establishment of the French protectorate, however, slavery is no longer legal.

As to religion the population of Futā is divided into Muslims and fetish worshippers. A few negro tribes have remained idolaters, for example, a section of the Fulbe which has retained its original beliefs. The predominant religion, however, is Islam which the Fulbe brought into the land and whose progress coincided with the political victory of this race. The Islam of Futā Dżallon is fairly orthodox and less penetrated by heathen customs than among the Mande. Hecqgard describes it as Maliki; according to Lechatelier, it is a "kind of national church formed from the mixture of Kâdrinya and Tidjâniya doctrines". Although Futā was and still is a centre of proselytising activity, the inhabitants are not at all fanatical. This lukewarmness is attributed to the predominance of the Kâdrinya whom the Tidjâniya, the representatives of Muslim intolerance in the Soudan, have not been able to supplant in spite of all their efforts. The marabouts hold a very im-
important social position. They form a kind of hierarchy; at the top are the fédé who have often studied among the Moors of Tagant, next come the taufir or heads of mosques, then the sérin and the jab, who have charge of the schools.

The government is a kind of aristocratic republic with an elected sovereign. The executive power is in the hands of an almamy (al-imān) who is at once head of the army, judge and high priest. Before the establishment of the protectorate the almamy was chosen by the Council of Elders, acclaimed by the assembly of freemen, and received the turban of investiture in the town of Fugumbra. He was chosen from among the descendants of the two founders of the Fulé state, the Alfayas (descendants of Karamoko Alfa) and the Soryas (descendants of Ibrahim Sory). In principle the elected sovereign ruled for two years, after which he retired for two years in favour of a representative of the rival family. Devised to prevent rivalry and civil war, this rule of alternation was not always regularly observed. The Council of the Elders which chose the sovereign, could also on occasion depose him; in normal times it decided, under the presidency of the almamy, all questions of any importance of politics, law and religion.

Futé was divided into provinces or diwal (9 in the xviith century, 13 in 188f, 17 in 1887), to which tributary regions were attached, whose number varied with the success or failure of Fulé arms. Each diwal was administered by a governor (lamhab), appointed by the almamy and assisted by a council of notables. The villages obeyed the authority of chiefs who likewise were assisted by a council. In this organisation, which some European travellers have compared to that of the Carolingian Empire, the central power was very weak. Some governors, those of Babé for example, were masters of territory more extensive than that of the sovereign and had at their disposal resources greater than his. Ruined by the largesse necessary to secure his election, impoverished by the necessity of keeping open table for his adherents, the almamy was very often incapable of maintaining his authority respected.

The history of Futé Djallon down to the xviith century is obscure. About this time we find the Djallonke in the land, who had driven out the original inhabitants, besides them a body of Fulbe attracted by the extensive pastures, and finally the Fulé already in such numbers that their name was applied by Europeans to this part of Africa (the name "Fouta Guialon, land of the Fulé", is found in a map by d'Anville of the year 1717). Among the Fulé were many Muhammadans, who undertook the conversion of the fetish-worshipping tribes to Islam under the leadership of marabouts. They overcame and formed small communities of them whose chiefs recognised the authority of the Djallonke. In the second half of the xviith century the Fulé succeeded in librating themselves and founding an independent state. This transformation was the work of two men, the marabout Ibrahim Sambeco, who claimed to be of Arab and Sherif origin, and his cousin Sory celebrated for his energy and bravery. A holy war was proclaimed against the infidels and the lands to be conquered promised as spoil to all the chiefs who took part. The Fulbe adopted Islam en masse, but the Djallonke resisted and were conquered. Their lives were respected, but a third of their lands and cattle divided among the conquerors. An assembly at Timbo then chose Ibrahima as almamy, and he took the name Karamoko Alfa. The new sovereign received the turban of investiture at Fugumbra from the hands of Alfa Othman Serianke, governor of the town; he made the Fulé chiefs swear fealty to him and gave Sory command of the army. The conquered country was divided into provinces or diwal to the number of 9 in memory of the companions of the Prophet.

Karamoko became insane in 1791 and was replaced by Sory as almamy. But the victories and riches of the new ruler aroused the fears and jealousies of the chiefs, who deposed him and appointed in his stead Alfa Salifu, son of Karamoko (1801). This youth of fifteen proved incapable of securing order in the interior and could not prevent the invasion of Futé by the Wassoulonke. Sory had to be recalled; he drove out the enemy and ruled the country without opposition till his death (1814). Power passed to his son Sadu but Alfa Salifu protested and was supported by a party of nobles. Two rival soft's were thus formed, the Alfayas and the Soryas, whose rivalry deepened Futé in blood for fifteen years. An agreement was finally reached between Abdalaye Badumba, chief of the Alfayas and Abd al-Gaderi (Abd al-Kadir), chief of the Soryas, it was decided that each of the two chiefs should govern alternately for periods of two years each. This arrangement was violated almost as soon as it was concluded. Abdalgaderi had his colleague assassinated and remained sole master of Futé for 15 years.

On his death (1847) disorder again broke out. The Soryas and Alfayas each chose an almamy and flew to arms. Al-Haddji 'Omar attempted without great success to bring about a truce between the two parties and it was only after 1856 that peace was finally established in the country. For 26 years, Alfayas and Soryas lived on good terms and furnished almamys by turns. This was the most brilliant epoch in the history of Futé. The almamys succeeded in restraining the turbulent spirits of the nobles and subjected the lands and joining Futé to their authority. The people of Dinguiray, the fetishworshippers of the upper Casamance, the Gambia and the Rio Nuñez had to become tributary to Futé.

Europeans had for long been trying to enter into relations with Futé. During the first half of the xixth century French and English travellers setting out from the "factories" of Gambia and Sierra Leone penetrated into the interior. Such were the Frenchmen Mollien (1819) and René Caillié (1827), and the Englishman Cooper Thomson as well as various missionaries. In 1850 Hecquard spent a year there and collected valuable information on the history and civilisation of the country. Lambert explored it in 1859. From 1880 on French missions began to increase in number. Olivier de Sanderval, Gaborit-Chabrard and Anseladi endeavoured to find accessible routes to Futé, entered into commercial relations with the natives and made preliminary surveys for the building of a railway into the interior. In 1881 Doctor Bayol signed a treaty with the almamy giving the French the exclusive right of establishing commercial depots in Futé and its dependencies.

The disorders that again broke out about this time facilitated the task of the French agents.
The almanach Ibrahim Sory, having to give up his powers after his two years of office, was abandoned by every one, but, arming his slaves, he overcame his adversaries and reigned alone till 1887. On his death two Sory rivals, Alfa Mamadu Paté and Bokar Biro disputed the title of almanach. Bokar won and, feeling the need of support against his enemies, fell back on the French. He gave a good reception to the mission under Plat and Fras and concluded with them a treaty which placed Futa Djallon under the protection of France. For several years he remained faithful to his agreement, but then adopted a hostile attitude and tried to impede the passage of caravans through his country. Wishing to get rid of the Council of Elders, he aroused the discontent of the nobles, who deposed him and proclaimed his brother Abdulaye in his stead. Bokar triumphed over the rebels, took Abdulaye prisoner and put him to death; but some of the partisans of this claimant appealed to the French who, having already cause to complain of Bokar’s misdeeds, invaded Futa. Bokar tried without success to repel their resistance; he was conquered and slain (November 1896). The French chose a new almanach, the provinces of Timbo, Baria and Kalen were left to him while the other “diwal” were declared independent. A French resident was installed in Timbo. Since then the geographical and economic survey of the country has been pursued by several expeditions of which the most important have been those of Dr. Maclaud (1888-1889), while a railway, which has now reached Timbo, was begun to connect the Upper Niger and French Guinea through Futa.

FUTUWA. (A.). In ordinary usage this word means all the honourable qualities that distinguish a noble youth (fati), particularly generosity (karam, zakat).

The members of the family of the Prophet regarded themselves as the true representatives of futuwa, which they inherited from their ancestor and in course of time received the meaning of chivalry, knightly rank; they based this claim on an alleged saying of the Prophet’s “futuwa illa Ali (awwa la saif illa Dhu ’l-Faqih)” ; cf. Chronique de Tabari, trad. Zotenberg, ii. 27: according to another tradition it was called from heaven by an angel on the day of Badr, Muḥibb al-Dīn al-Muhammad (al-Riʿād al-nadira [Cairo 1327], ii. 190 infra. — On the use of this saying cf. Reinaud, Monuments, ii. 153, 307; Tijdschrift voor Nederlandse Indië, 1873, ii. 333 et seq.). It is related of the Caliph al-Nāṣir (575—662 = 1180—1225), who according to the Kit. al-Faḍārī was an Imāmi, that he granted several princes and nobles the rank of futuwa, with which he associated the privilege of rāmiy al-bunduk. Installation consisted in the ceremonial putting on of a pair of trousers, called sarwāl al-futuwa or libīs al-futuwa, and drinking the knight’s cup (ka’s al-futuwa). The knight, whose rank was hereditary, had the right to depict the cup or trousers or both on his arms. — According to the Kitāb Um- dad al-Tālib, the ‘Alī family of the Al-Mu’āwya had from the time of al-Nāṣir the right to grant futuwa. The Naṣīb, Tāj al-Dīn Muhammad, who belonged to this family, also granted the khirka al-talqawwam.

Ibn Djibair (2nd ed., p. 280, where on l. 11 the reading جُوْدَمْ). The Miss. is to be retained.

It mentions a brotherhood in Syria who proved their futuwa by ruthlessly attacking the Rāfidīs; an oath sworn by them at the futuwa was kept in all circumstances.

In Asia Minor Ibn Baṭṭuta found brotherhoods whose members (fīyān) had for the most part the same trade and lived together in a monastery (zāwiya) under a superior called aṭīl on the earnings of the work which they did outside. After dining together they spent the evening in song and dance. Their dress consisted of a cloak (kabā), a white woolen cap (jalansawa), to the upper of which was fastened a strip of cloth an ell long, and shoes (ādja): in the girdle they wore a knife two ells long. They were hospitable to strangers and were ruthless in their opposition to tyrannical governors and their followers (ed. Paris, ii. 260 et seq.). — In Kōniya the same traveller stayed in the zāwiya of the ḫāṭ ḫīn Kālam Shāh, whose inmates (fīyān) wore sarwāl and traced their futuwa rule to ‘Ali. They were distinguished for their hospitality (ed. Paris, ii. 281 et seq.). — During his travels Ibn Baṭṭuta frequently found hospitality in such fīyān monasteries [cf. ibid., 270—268 passim].

In the language of the Sūfis futuwa is the expression for a disposition which is manifested in dif-
different ways and therefore cannot be expressed by a single word. In general futūwa is described as "placing others above himself" ʾīṯār al-ʿālā najšūhā, which, according to al-Ghazzālī, Iṣṭīḥāl iii. 213 (Cairo 1282), is the highest stage of šākhah. This finds expression in liberality, selflessness, self-denial, self-effacement, superiority to disappointment, indulgence to the faults of others etc. Al-Kughālī gives some idea of the scope of the notion in a series of illustrations and anecdotes.

For further information on futūwa and its relation to the guild-system the reader may be referred to H. Thurneysen’s work in the xviith volume of the Türkische Bibliothek.

FUGZULI, MUHAMMAD B. SULAIMAN, a Turkish poet of Kurdish origin, born in Bagdad (date unknown), died 963 (1556) or 970 (1562).

After the capture of Bagdad by Ibrahim Pasha, Sultan Sulaiman’s grand vizier (941=1534), he offered the vizier and the Sultan his congratulations, whereupon the latter granted him an annual allowance at the expense of the town. His Divān is written in Adharbaidjānī Turki; the style is original and lacks the artificiality which characterises Turkish literature of the period in imitation of Persian, although in passages the influence of Persian rhetoric cannot be mistaken; the expression is passionate. Among his contemporaries he found little favour; it is only modern Turks that have begun to appreciate his merits. He also wrote a Persian Divān (lith. Tabriz). His Turkish Divān was printed in Balik (1545=1538), and his Latinus et Martynus in Constantinople (1524=1548); a collected edition of his works also appeared in the latter town in 1591=1874. He also composed a Sāḥānānā in Persian and a Beng u bide (Hemp and Wine) in Turkish, which is dedicated to Ismail Shāh and must therefore have been composed between 907 (1501) and 930 (1524). Under the title Mutāṣhal al-Shahādah ("Garden of the Blessed") he translated from the Persian Ḥusain b. al-Wafa’al-Kašfi’s legendary description of the martyrdom of ‘Ali and his family (Rawdat al-Shahādah, "Garden of Martyrs"). We also possess from his pen a Turkish work in prose entitled Shiṣḥet-Subbānī, which contains a complaint addressed to the Porte on the holding back of his year’s allowance by the civic authorities. A well at Kerbelā bears a metrical inscription composed by him.

(C. V. ARENDONK.)

GABAN, properly GINNOPERT (cf. Abu ’l-Faradj, Chron. Syr., ed. Bruns, p. 329 and Kastner, ʿIswān, Cinnamus, i. 8), an Armenian mountain stronghold on the Tekir-Su, a tributary of the Dijahān, now called Geben and belonging to the ʿArab of Anderin in the sandjak of Marash. Here the kings of Armenia kept their treasures and retired in the case of need; the last king Levon VI. of Lamian entrenched himself here in 1374, for example, but had to surrender after a siege of nine months to the Mamlik Sultan al-Malik al-Ashraf Shahānī.

GABES (Kānis), a town in Southern Tunisia, in 33° 52′ 58″ N. Lat., 10° 4′ 6″ E. Long. (Greenw.), 80 miles south of Sfax and 250 south of Tunis, on the west coast of the Gulf of Gades or Lesser Syrtis, on the side of a rocky isthmus, which separates the sea from Djerid al-Fedjedjī. It is the capital of the district of Arad.

Gabes includes three settlements: the town of Gabes, a European suburb with 1200 inhabitants of whom 500 are French, and the native villages of Djar (4000 inh.), Chenini (1000) and Menzel (1500). The European town lies on the right bank of the Wādī Gabes about half a mile from the sea. The mouth of the river has been made into a harbour which ships of small draught can enter. Larger ships have to anchor in the open sea in an insecure roadstead, full of shallows where the tide rises 9 feet. The traffic in the harbour is not very considerable as the total exports and imports scarcely exceed 25,000 tons. The native settlements lie in groups up the river along the Wādī Gabes. This stream, which rises about 8 miles from the sea, sustains the vegetation of a beautiful oasis the verdure of which forms a striking contrast to the barrenness of the surrounding country. The gardens which contain about 10,000 palms and about 200,000 other trees, cover an area of 7000 acres of which 3000 are watered by the Wādī itself. This area is about 4 miles long by 1/2 to 1 broad. The distribution of the water is regulated by mechanical means, some ancient and some modern. The palms are of very fine quality but the dates are only mediocre. Fruit-trees on the other hand grow in a marvellous fashion, whence the oasis of Gabes has always been the admiration of visitors. "It has been said with reason," writes the Shaikh al-Tidjānī in the xviith century, "that Gabes is an earthly paradise and a little Damascus." The oasis, it is true, is extremely unhealthy and the dwellinghouses have had to be built outside the gardens in which only a few negroes live regularly. Beyond the palm-groves lie areas which are at present practically desert but might be fertilised by irrigation works. Gabes deserves the description "a town which is both maritime and Saharan" given it by al-Tidjānī, from its geographical situation and appearance.

In ancient times the town of Tacape stood on the site of Gabes. Founded by the Phoenicians this town was one of the most flourishing emporia
of the “Syrte.” It passed to the Carthaginians, then to the Romans and under the empire was raised to the status of a colony. Nothing else is known of the town however; some of its ruins were still standing in Shaw’s time (Travels, Ch. iv.), and were used in the building of Gabes. We are equally ignorant of the circumstances under which Gabes fell into the power of the Arabs. After the triumph of the Fatimids the town was placed under the governorship of the Kettâni Lomân, whose descendants still exercised their authority in al-Bakri’s time. Under the rule of the Fatimids and Zirids Gabes seems to have enjoyed great prosperity. Ibn Hawkal extols the fertility of the oasis, the excellence of the silk and wool manufactured in it, the activity of its trade and the number of the merchants who frequented the port. A century later al-Bakri adds a few details to this picture, the main outlines of which are unchanged. “The town”, he says, “surrounded by a wall of large stone’s from ancient débris, possesses a magnificent mosque, and numerous bazaars and caravanserais”. The gardens included, besides innumerable fruit-trees, mulberries and also plantations of sugar-cane which is no longer found there. The population was composed of Arabs and Afişat, i.e. the descendants of Latinised Berbers. The envoys of the town were occupied by sections of the great Berber tribes of Uwaṣṭa, Lëmâya, Nejissa, Zughâ etc. These natives, who were rude and uncultured, had most probably retained Abâdî doctrines. Ibn Hawkal indeed describes them as “people, inclined to evil and professing a religion which is corrupted by an admixture of heresy”.

The Hilâlî invasion introduced new Arab elements to Gabes and its neighbourhood. According to Ibn Khalûd (Berbères, transl. de Slane, i. 33, 34 and ii. 21) the Caliph al-Mustânṣîr granted the district of Gabes to the tribe of Zoghla when he sent the Hilâlîs against the Zirid Sulâîn. Whatever be the truth of this statement, it is a fact that the Zoghla, after inflicting a severe defeat with the help of the Râyâ, ʿAbî and Djasheh on the Zirid Mu’izz on the plateau of Haiderîn, settled in Gabes. One of the Zoghla, Ibn Djamîn, organised a little state there, which remained independent down to the middle of the xiith century A.D. After the capture of Mahdiyya by the Sicilian fleet Gabes recognised the authority of the king of Sicily for several years (1148—1150 A.D.) until in 553 (1159-1160) it was taken by ʿAbîd al-Mu’îmin, who exiled the last representative of the Beï Djamî in Morocco.

The Almohads, however, had great difficulty in enforcing their sovereignty on the people of Gabes. From the end of the xiith century they constantly tried to throw off the yoke and took an active part in the struggle of the Banû Ghâniya against ʿAbîd al-Mu’îmin’s successors. ʿAli b. Ghâniya and his ally Kârâqîsh became masters of the town (581 = 1185 A.D.). The defeat of this adventurer and the Almoravid pretender al-Hamdam enabled the Almohad Caliph al-Mansûr to regain possession of Gabes (584 = 1187 A.D.), but Kârâqîsh was not long in re-entering it again. He was again driven out in 591 (1195); but Yâḥîyâ b. Ghâniya installed himself there in his turn and it was only in 601 (1204-1205) that the Almohad al-Nâṣîr definitely recovered the town. The allegiance of the people of Gabes nevertheless remained very uncertain: throughout the xiith and xivth centuries they showed themselves as independent of the Ḥâfsîd as they had been of the Almohads. From 1282—1344 the Beni Mekkî who ruled at Gabes freed themselves of their allegiance to the sovereign of Tunis. Ḥâfsîd authority had hardly been re-established when the Marinid expeditions into Ifriqiyâ gave the people of Gabes an opportunity to rebel once more. Revolts again broke out in 1379 and 1387, stirred up by a certain ʿAbî al-Wâhâb, a descendant of the Beni Mekkî. To put an end to this state of affairs Abu l-ʿAbbâs had to lay waste the oasis and cut down the palm-trees, but a century later in 1490 a rebellion once more gave evidence of the turbulent spirit of the inhabitants.

The constant turmoil seriously affected the prosperity of Gabes without however destroying it. The Hilâlî invasion does not seem, however, to have produced in Gabes the disastrous results that it did in the rest of Tunisia. Idrisi is still able to describe Gabes as a considerable town with a large quantity of merchandise in its bazaars. He notes, however, the disappearance of the silk industry; but trade by sea was still active and remained so throughout the middle ages. It attracted to Gabes merchants from all parts of the Muslim world and even Christians such as the Pisans were allowed to trade there. The tomb of one of the companions of the Prophet, Abu l-Bâhâ al-Ansârî, was also a much frequented place of pilgrimage. Nevertheless, from the beginning of the xivth century A.D. manifest signs of decline may be noted in Sheikh al-Titdîn’s account. A number of buildings had fallen into ruins, for example the palace al-ʿArûsîn, built in the Kaṣba by Rashîd b. Djamî, and the al-Menâra tower mentioned by al-Bakri. In the xviith century it was still worse. “This city”, writes Leo Africanus, “has much diminished in honesty and good manners since it was sacked by the Arabs . . . . The inhabitants are negroes, poor labourers and fishermen who are much oppressed by the kings of Tunis and of the Arabs”.

The lot of Gabes hardly changed under Turkish rule, although the harbour continued to export the products of the ʿArûsîn which were brought thither in caravans.

Gabes was occupied by the French in 1881. After the conclusion of the treaty of Kaṣr Saâd, great unrest was manifested in the south of Tunisia. Immediately after the bombardment of Sfax, therefore, French troops were sent to Gabes, the inhabitants of which had taken of arms. Dîara and Menzel surrendered almost without resistance on the 23rd July. A camp was pitched at Râs al-Wâl to command the river on whose waters the existence of the oasis depended. When peace was established a European town arose between the oasis and the sea. Since then Gabes has become the headquarters of a military command which extends over the whole of Southern Tunisia and is the residence of a civil command. But the attempts made to bring back to this part the caravans which, since the French occupation, have been deflected to Tripoli and thus to restore the town its former economic importance have as yet only produced insignificant results.

(G. YVER.)

GAFSA (KAFSA), a town in Tunisia, 146 miles S. of Kairouân, 26 miles from Tunis and 130 from Sfax, with which it is connected by a railroad built to serve the phosphate deposits of Medenî, 26 miles E. of Gafsa; it lies in 36° 24' 32" N. Lat. and 8° 46' E. Long. (Greenw.). It has a population of about 5000 including 360 Europeans and 370 Jews.

Gafsa occupies a remarkable geometrical and strategic position. The town, built on a rounded eminence 1150 feet high, commands the ravine of the Wâdî Bâchîsh between the mountainous massif of the Djebel Orbata in the S.E., the Djebel 'Assala and Djebel Yunes in the N.E., and therefore the route between the steppes of Central Tunisia and the Djèrid and Shott country. An oasis watted by the cypress drawn from the Wâdî lies at the foot of the town covering an area of about 2500 acres. This oasis includes 75,000 palm-trees, numerous fruit-trees notably apricots and figs as well as a number of fields of cereals. The town itself offers little of interest. The only notable buildings are the kasba built in the middle ages on Byzantine foundations, the Chief Mosque with pillars crowned by ancient capitals and finally the baths or _fornida_, watted by hot springs used even by the Romans. The native population speaks Arabic only. The Berber language has almost entirely disappeared and is only represented by the dialect of Sened, a village 32 miles E. of Gafsa. (Cf. Provostelle, _Étude sur la Tamazhit ou Zemaitia de Qalâdî es-Sened_ (Paris, 1911, _Publications de la Faculté des Lettres d'Alger_, T. xlvii.).

Gafsa occupies the site of the ancient town of Capsa. The latter was one of the strongest places in the kingdom of Numidia and was destroyed by Marius in the course of the war against Jugurtha (106 A.D.). Rebuilt under the empire it became municipia, then a colonia. The Byzantines made it one of their strongholds to protect Byzacene from the inroads of the nomads. The Arabs ravaged its surroundings after the defeat of the Patricius Gregory, and took it at the time of 'Okbâ's invasion in 49 = 669 A.D. Down to the Hillaï invasion, Gafsa passed through the same vicissitudes as the rest of Irikiya. Al-Bakri describes it as a prosperous town, still retaining remarkable relics of an earlier epoch. It was surrounded by a wall, certainly built by the Byzantines, but which legent attributed to "Shentiyân, slave of Nimrûd"; the houses were built over marble porticoes, the intervals between the pillars of which were filled with light masonry. The oasis produced pistachios in abundance which were exported to Egypt and Sidjîmâsa, and fruits of all kinds which served to provision Kairawân. The surrounding country was dotted with equally prosperous villages. Over 200 could be counted which were called the "K-âr of Gafsa." The general wealth was attested by the amount of taxation which annually reached 50,000 dinars (€25,000); al-Bakri confirms al-Bakri's account.

"The inhabitants" he adds "have become Berbers, the majority of them speak African Latin." Many of them had still remained faithful to Abâdî doctrines. Al-Bakri in fact mentions their custom of fattening dogs for food, as was the custom in various regions, particularly Sidjîmâsa. Cynophobia is still practised by the Abâdîs of Djerba.

The Hillaï invasion introduced a new element into the population of the country round Gafsa. The Abîbadî tribe settled near the town. With the help of these nomads, who after devastating the country remained and entered the service of local chiefs to be enabled to live, a certain 'Abd Allâh b. Muhammed b. al-Rend founded a kingdom in 1449 (1053–1054) which comprised in addition to Gafsa the greater part of Kaštiya and lasted for over a century. The dynasty of the Banû Rend, although overthrown by 'Abd al-Mâ'min in 554 = 1159 and restored only by his death, did not finally disappear till 576 (1180). The rule of the Almohads and Hâfsida was, however, never solidly established in Gafsa. The inhabitants of the town, like those of the Djèrid, were distinguished for their turberulence and their rebellions. In the course of the wars between the Banû Ghâniya and the Almohads 'Acarîshî installed a garrison there under the Kurî Karyatin. The Almohad Caliph after retaking the town destroyed its walls, but they soon rose again. In 1282 Gafsa fell into the power of the pretender Ibn Abî Amara; in 1328 a new rebellion broke out under Abû Bekr b. Yemîlî. During al-Hasan's invasion of Irikiya, the people of Gafsa hastened to recognise the authority of the Marinid sovereign. At a later period the Hâfsîd Abu 'l-'Abbâs had to suppress several rebellions but he only put an end to them by cutting down the palm-trees. During the second half of the 14th century Gafsa finally made itself independent under princes of the Banû Khalef family. The town suffered considerably from these disorders. "The town", says Leo Africanus at the beginning of the 15th century, "is for the moment inhabited but the buildings are ugly except the temple and some other small mosques... The inhabitants are courteous but very poor because they are much oppressed by the king of Tunis." Turkish rule was not of such a nature as to restore Gafsa its former prosperity; it was a very wretched little town when it was occupied by French troops under the command of General Forgemont on the 20th November 1881.

GAGAUSES, a people of Turkish origin speaking a pure Turkish language but professing the orthodox faith; their numbers are small. They live in isolated colonies and at the present day are found chiefly scattered over Bessarabia (mainly within the triangle formed by lines joining Ismafil-Bolgrad-Kagul, in the district of Trajan’s wall and also at Bender and Alckenman), on the west coast of the Black Sea from the mouth of the Danube and Siliistra to Cape Emine, in the Dobrudja in Roumania (Nioitiol and Taita) and in Bulgaria, also in the wilayah of Adrianople particularly in the keza of Hawsa, in the sandjak of Seres (Sihna and Selhovo) and in keza Karafere. In the Balkan Peninsula they seem to call themselves Surjak or Surjak in preference to “Gagauze” which is, however, also used there.

The origin and early history of the Gagauz are somewhat obscure. As in the East it is not linguistic or ethnological features that are considered essential but religion alone, they were classed by the Ottomans as Christians with the Christian Bulgars. It seems remarkable that in Russia also, even in Bessarabia, where the great mass of the Gagauzes now reside, their proper name is little known and it is only at a comparatively late period that the name Gagauzes appears in Russian authors. They were officially and usually still are simply identified with the Bulgars and in all statistics classed with them. In consequence of this confusion accurate figures cannot be obtained. In popular language on the other hand they are correctly called pravoslavniye Turki (Orthodox Turks).

The Gagauzes are certainly Turks and probably the descendants of the so-called Kara Kalpak and therefore, like the Ottomans, descended from the Oghuzes or Uzes, as is already suggested by their name Gogaus, in which arc is a contraction for oghu while gac (probably equal to gak or gok) is a distinguishing mark of the clan. The Oghuz hordes while still heathen separated on their westward migration. While one section, the Saldjaks and later after them the Kangly, the present Ottomans, went through Persia to Asia Minor and adopted Islam, other sections went to the steppes of South Russia where they led a nomadic life: first the Pećenegs who were next pressed westwards by the Uzes or Torks, who were related to the Turks till finally the Kumas or Polowzes, who came last in the middle of the xiiith century, forced the main body of the Pećenegs and Uzes over the Danube, where they settled in Byzantine territory, the majority in the Balkan Peninsula. One section, however, which settled in Russian territory, was conquered by the Russians and at the same time, it seems, converted to Christianity, and served like the Cossacks as frontier guards against the Pećenegs, Torks, Kuyer and Berendeyer under the collective name of Kara Kalpak (Černije Klobuki “Black-caps”). But before the Slavifying process which began with the conversion to Christianity had been completed, the great Mongol invasion took place in the xiiiith century, which forced the tribes already Christian to migrate to the Balkan Peninsula, Hungary, the Caucasus and even to Asia Minor (Phrygia) and Egypt. The remnants that settled in the Balkans retained their language and religion even under Ottoman rule, while their relatives who had settled there as pagans in the xith century became Muslims and were merged in the Ottomans; the other branches that had broken off also lost their identity.

From 1750 to 1846 an interesting migration took place of the Gagauzes of the Balkans — along with a similar movement among the Bulgars — back to Russia over the Danube (till 1769) into the New Russian district, 1787–1791 (and in largest numbers in 1801–1812 to Bessarabia), this seems to have taken place without the co-operation of the Russian government, which did not till a later period begin to allot lands and provide for their administration systematically. The reason for this emigration was presumably the persecutions, still commemorated in Gagauz songs by the robber bands (the Daghly and Kyrdjaly) of Fazvanofghi (Hasan ogluh "Othman") the notorious Pasha of Siliistra, Widdin and Kara Feji.

In the sixth decade of last century there were 24 Gagauz colonies in Bessarabia numbering over 26,000 souls (34¾% of the total population), which has now grown to over 70,000 according to Moshkov’s estimate, but this is certainly exaggerated. Roumania contains about 3600 Gagauz to which may now be added 3,377 Gagauzes in the recently ceded district of Siliistra. The figures for Bulgaria and Turkey are unknown to me. In any case the total number of Gagauzes including the Surjak does not exceed 100,000. As they live in isolated groups and have no common intellectual bond they are destined to be slowly but certainly merged in the peoples amongst whom they dwell.

The administration of the Gagauzes of Bessarabia still enjoys certain colonial privileges (according to the colonial statute of 1819) and certain liberal institutions which date from the period of Roumanian rule in Bessarabia.

On the whole they are comparatively poor and are almost entirely engaged in cultivating vegetables and the vine. At an earlier period they were also shepherds and cattle-rearers. They are no longer distinguished in dress or manner of life from their neighbours. The position of women among them is a relatively low one.

The most striking features in the character of the Gagauzes are frugality, an extraordinary avarice and want of hospitality. To these are added cunning and a certain pride and independence of spirit, which prevents even the poorest from entering a position of servitude among the neighbouring peoples. They seem to have displayed very little intellectual activity. They are scorned as stupid and among the Roumanians “Gagauz” is used as a synonym for “blockhead” and it is said to be used as an epithet of contempt among the Albanians, like türk among the Ottomans. The Russian Gagauzes therefore are fond of calling themselves Bulgars after the official example. The Gagauzes have a great contempt for the Ottomans. Numerous popular etymologies attempt to explain the remarkable phenomenon of the combination of the Christian religion and Turkish language by former despotic measures on the part of the Ottomans.

The language employed in the home is exclusively Turkish. The women as a rule under-
stand no other language, while the men are forced to know several languages. The divine service of the Gagauzes who live in Turkey is after the Greek rite and that of those in Russia Slavonic. The priest often can only communicate with his congregation through the medium of Russian which is unintelligible to the majority of them. The Russifying process has, however, made great progress by the foundation of the school in Ismail, the compulsory use of Russian as the language to be used in all church and country schools and above all by military service.

The language of the Bessarabian Gagauzes as well as that of those across the Danube is, apart from Christian elements, practically identical with primitive Ottoman Turkish, which is explained by their common origin. The vowel harmony is very strictly carried out except in loanwords. One peculiarity is the tendency to weakening. With weak vowels all consonants are weakened, even when the latter are weak already. The numerous peculiarities of pronunciation and the different colonies are explained by their isolation from one another. The language is not a rich one: a certain laconicism and a certain poverty, particularly in synonyms, is noticeable in it. There appears to be no written literature, although there is no lack of tales and songs handed down by oral tradition.

**GAIKHATU.** A Mongol prince (ilkhan) of Persia (690—694 = 1291—1295), brother and successor of Arghun (q.v., i. 430; entry), he received the name Irangin Turjat (in Wusaf Turjat) "most precious jewel", which he bears on his coins, after his accession from his Buddhist priests (according to Wusaf from Chinese); the same name was, according to Wusaf also placed on the currency notes issued in Gaihath's reign. Before his accession he was governor of Asia Minor. Muslims were particularly favoured in his reign unlike that of his predecessor: Sadr al-Din Ahmad al-Khulidi (also called al-Zanjani from his birthplace, and al-Çwî after his unfortunate experiment with paper money), he was appointed minister (Sâhib-Diwân) on the 6th Dhu l-Hijja 691 = 18th November 1292, received the title Sadr-Diwân and the military rank of a commander of 10,000. His brother Kûb al-Din Ahmad as chief Kât bör the title Kûb-Diwân. The Mongol Emirs were completely excluded from any share in the administration of the empire by Sâdr-Diwân; no distinction was made between the revenues of the royal estates (injûj) and the state revenues proper (dâli). All attempts of the Emirs to overthrow the minister failed; the malcontents were delivered into the hands of the minister by Gaihath's orders, and pardoned by him; it was strictly forbidden to bring such complaints in future. Unlike all other rulers of this dynasty, particularly his predecessor Arghun, Gaihath did not stain his brief reign by any atrocities; on the other hand he plunged the land into a critical condition by his extravagances and excesses; matters were made worse by a severe murrain (yât); the treasury had to borrow large sums to meet the expenses of the court and was not in a position to repay them. In these circumstances the first and last attempt in Western Asia was made to force a paper currency (lûw) after the Chinese model into circulation (693 = 1294), but the crisis was only intensified by this measure and the prestige of the ruler and his minister undermined. After only two months the notes had to be withdrawn; as Dorn (Grußdr. d. Iran. Phil., ii. 575) has pointed out not even the word lûw has survived in Persian; European paper money is always known by the Arabic name kâma; but lûw is still found in Persian literature of Central Asia in the thirteenth century with the meaning "debased coin" (F. Teufel, *Quellenstudien zur neueren Geschichte der Chânate,* p. 74).

On the deposition and murder of Gaihath cf. *KIOE,* i. 591.

**GAKHAR.** The Gakhar tribe occupies parts of the districts of Rawalpindi, Atal and Djehlam in the Pandžab and of Hazará in the north-west Frontier Province of India, also in Djamón Territory, West of the Činâb. They are all Muhammadans and have a high social position among the agricultural tribes of North-west India in the mountainous and sub-mountainous tract, and are generally considered to stand apart from the practices of Râdîpût descent. Some of them call themselves Mushkâhs but the late Râdîa Djâhândâd Khân (Chief of the Gakhars of Hazará) claimed descent from Naughirwân and Yazdigird and claimed the title of Kâyânî, stating that after being driven from Persia they ruled Tibet under the Chinese, adopted Islâm and returned to Kâbul, ultimately entering India with Mahâmîd Ghasnâvi. This account is evidently unhistorical, but points to a tradition among the Gakhars of Central-Asian origin. It is most probable that the Gakhars represent one of the invading races from the period of the Kushâns to that of the Epiphilates, but evidence is not forthcoming for any exact identification. Cunningham held them to be Kushâns. In later times they have been supposed by most historians to be the tribe called Gakkurs in Briggs's translation of Firûsta's history i. 46 and 182, who joined the Indian confederacy against Mahâmîd Ghasnâvi in 399 (1008) and fought against Muhammad b. Sâm in 602 (1205) and were charged by Firûsta with his assassination. There is good reason however for reading the name of the tribe in question Ḳoḳar (for Khôḳhar) instead of Gakhar; the whole ques-
tion as regard the events of 602 is discussed fully by Raverty ("Ṭabašt-i Naṣīrān" trans., Vol. I, p. 485 and notes). As regard the events of 399 in Māḥmūd’s time, however, it seems possible that the brave band who stormed his camp near Pešmahwar were Gakhar rather than Khōķhars as the locality is close to Gakhar territory and the Khōķhars belong rather to the central Panjāb. There is, however, no mention of the tribe in the early historians such as the Tārīḵ-i Yamānī or the Ṭabašt-i Naṣīrān, the only authority is Fīrishta who spells the name Khakar (فیشریها). Balbān’s expedition against the tribes of the Djūd Mts. may have been directed against them. The Gakhar s again emerge from obscurity in the time of the Emperor Bābur who in 925 (1519) intervened in a dispute between two Gakhar chiefs in the Salt range (Koh-i Djūd). Bābur took their fort Parhāla, and Hātī Khān Gakhar submitted to him, but afterwards again revolted. The chiefship seems to have remained in the family of the rival chief Tātār Khān who was supported by Bābur, as in Akbar’s time we find from the A’in-i Akbarī that his sons Sulṭān Sārang and Sulṭān Ādam ruled the tribe, and Nazar Khān, grandson of Sārang Khān, was a commander of five hundred (afterwards one thousand in the year 1900). Dājarānī in his memoirs describes his journey through the Gakhar country in 1816, and was himself married to a daughter of Sāyiḏ Khān father of Nazar Khān. Dājarānī described the territory of the Gakhar s as ending at the Margalāh pass between Rawalpindi and Ḥasan Aḥ)dāl, and alludes to them as a troublesome and turbulent race. Under later Mughal sovereigns several Gakhar s attained distinction. They suffered a good deal under the rule of the Sikhs, but have since recovered, and now hold a good position. They are especially given to military service under the British Government.

The Gakhar s mainly belong to the Shi’a sect. They are divided into five clans, the Bugtāl, Iskandarī, Fīrishta, Ṭabarqan and Sārang; these are the patronymics, the last two being derived from Adām and Sārang the chiefs in Akbar’s time. The Sārang s are found in Ḥazāra Aṭakh, the Adāmats in Rawalpindi and Dājarānī. The chiefs formerly bore the title of Sulṭān, but since Sikh rule of Rājād. The late Rājā Dājarānī Khān C. I. E. was one of the leading men of his day, and has been succeeded (in 1906) as chief of the Ḥazār Gakhar s by his son Rājā ‘Ali Ḥaidar Khān.

GALATA, a suburb of Constantinople [q.v., i. 574b et seq.].

GAMRON, also written Gomron etc., see above i. 604 infra seq., a seaport on the Persian Gulf, called Bender ‘Abbās since the reign of ‘Abbās I. To the Bibliography given above i. 605 may be added, Yule and Burnell, Heath-Johnson, s.v. Gombroon.

GANDĀPUR, the name of an Afghan tribe living in the Dāmān of the Derā Ismā’īl Khān District [see Art. DāMĀN]. The tribe is said to be of Sayyid descent, and like the Bākhtiyārīs who also claim the same origin, was originally attached to the Usturān tribe. In the time of the Durrānī kings they descended into the plains and settled in the Dāmān. Their country extends from Darāb in the south to Pāhārūp in the north. Kulār is the principal town, and the residence of the Chief. The country is barren but receives some irrigation from mountain torrents, especially from branches of the Gumāl River. The name Gandāpur is accounted for by a legend that Tarai son of Solor (eponymous founder of the Usturān tribe) married without his father’s consent a girl of the Shērānī tribe, and hence was called by him Gandā pār or ‘evil son’. This story no doubt points to the fact that the tribe is of mixed descent. The Gandāpur, though formerly turbulent, are now a peaceful tribe living entirely in British territory. Their language is the Kandahāri variety of Pashto.

(M. Longworth Dames.)

GANDJA, Arab. Dājana, Russian Jelisawetpol, since 1804, (the old name alone is still used by the native population), a town in the Caucasus. The town was first founded under Arab rule, according to the Armenian Moses Kalankatoug (transl. by Patkani, p. 270; cf. J. Marquart, Ostrobothnische und ostasiatische Streifzüge, p. 462) about 845, according to Ḥaṭam Allah Każmīn (in Schefer, Sittet Namh, supplement, p. 227) in the year 393 (probably for 839–850). It is not mentioned by the oldest Arab geographers like Ibn Khordāḏbih and Yaqūt; it seems to have taken its name from the pre-Muhammadan capital of Adharbaḏājān (now the ruins of Tahk-i Sulaimānī, cf. i. 134 infra seq.). Istakhri (ed. de Goeje), p. 187 and 193, only mentions Gandja as a small town on the road from Bardža’a to Tiffah; according to him the distance between Bardža’a and Gandja was 9 far-sakh, according to Yaqūt (ii. 132) 16 far-sakh. After the decline of Bardža’a (cf. i. 461 and 656) Gandja became the capital of Ar-rān; the Shaddāḍī dynasty ruled here from about 340 = 951–952; after it had been overthrown by Sulṭān Malik Shāh (405–408 = 1057–1092) Muhammad, son of the Sulṭān, was granted Gandja in fief. In 533 = 1133–1134 (so correctly in Imād al-Din Iskandār, Recherches du Textes etc.), ed. Houtsma, ii. 190; according to Ibn al-Ṭabīr (ed. Tornh.), xi. 51, in 534 = 1139–1140) the town was destroyed by an earthquake in which, according to Imād al-Din, about 300,000 people, to Ibn al-Ṭabīr about 130,000, perished including the wife and children of Kārā-Sonḵor, Emir of Adharbaḏājān and Ar-rān, who was absent at the time.

(M. Longworth Dames.)
Demetrius, king of Georgia, sacked the ruined town and carried off one of its gates. 'Imād al-Dīn says that the Georgians built a new town in their country, gave it the name Djaza and set up the gate they had carried off there; soon afterwards Karā-Sonkor destroyed the new town and brought the gate back to Gandja. The latter statement does not agree with the facts; the gate that was carried off still exists in the Gelati monastery in Kutais; a Georgian inscription gives an account of its removal; and there has also survived on the gate itself an Arabic inscription of the year 455 = 1063 (the year of its erection) which has been deciphered by Früh (Mitt. d. Akad., xvii. Ser., Science politiques, iii., 1836, p. 531 et seq.).

Karā-Sonkor died in 535 = 1140-1141, his successor Dschw in Dschumādār I, 541 (9th Oct.— 9th Nov. 1146); Rawdhī is now mentioned as ruler of Ahrān (Receuil, etc., ii., 252); but a few years later we find Ahrān again united with Adharbai-джan under the rule of the Pahlawans. The town of Gandja is said to have been rebuilt by Karā-Sonkor "in all its splendour" (ابن الفدائی); in the viii. = viii. century it was considered one of the most beautiful cities of Western Asia (cf. the verses in Hamd Allah Kazwīnī (c.); the poet Ni'āmi Gandjāvi belongs to this period: Ibn al-'Arīf (xl., 251) calls Gandja "mother of the cities of Ahrān" (امام البلد ابران). When the Mongols appeared before Gandja in 618 = 1221, they dared not attack the strongly fortified town, the inhabitants of which had proved their courage in frequent battles with the Georgians; but the retreat of the enemy had to be purchased with money and cloth. In 622 = 1225 Gandja, whither the last Pahlawan, Uzbek, had fled from Tabriz, was taken by Djalal al-Dīn Khārīzūshā; a few years later all the Khārizūs were massacred in a rebellion of the inhabitants; nevertheless, after suppressing this rising Djalal al-Dīn refused to allow his troops to sack the town and only had the ringleaders, 30 in all, executed (628 = 1231). Four years later (1235) the town was captured and burned by the Mongols. On this occasion again the town was soon rebuilt, since it does not seem to have ever attained great importance again. After the foundation of a Mongol empire in Persia, Ahrān with Gandja as capital became one of the provinces in it; the land afterwards usually shared the lot of Adharbai-джan and from Itsamīl Shāh Safawī's reign formed part of the Persian kingdom; under Persian rule the governor of Gandja bore the title Khânī. In 1583 Khân Imām Kuhī was defeated by the Turks, the town itself taken in 1588 by them; invested in Jūmāwīl 1014 (19th Febr. — 9th March 1605) by Shâh Abbas I. It was won for the Persians again after a six months' siege. Shâh Abbas transferred the town to another site about 1 farsakh "higher," i.e. to the southwest. The new Gandja had to surrender to the Turks in 1723; was taken by Nadir Shāh in 1733; remained after his death under the rule of Khānī who were practically independent, passed into the power of the Kājarīs towards the end of the 18th century, was stormed on the 3rd (15th) January 1804 by the Russians under Prince Gjūrjan and definitely ceded to Russia by the Peace of Galiánin (p. vi.).

On the 13th (25th) Sept. 1826 Paskevič defeated a Persian army under 'Abbās Mirā in the neighbourhood of Gandja (about 5 miles from it). As a Russian town Jelisawetpol had, according to Ritter's Geographisch-statistisches Lexicon (5th ed. 1864), only 13,169 inhabitants, in 1891 20,794, while, according to the census of 1807, the number had risen to 33,190.

The modern town (the writer visited it in 1908) lies on both banks of the Gandja Čai, a tributary of the Kur (called by the Russians Gandžinka), which is connected by a bridge. The western part of the town is inhabited by "Tatars," (Adharbai-джanis) and Persians, the eastern mainly by Russians and Armenians; there are government offices and the gymnasium are in the latter; in the former remains of fortifications (illustrated in Jackson, Persia Past and Present, p. 3) and the so-called "Tatar" mosque have survived from the time of Shāh 'Abbās; the "Persian" mosque belongs to a later period. The ruins remain (2-3 miles east of the town; illustrated in Zap. Tost. Otd. Arkh. Obšč., xxi., 634 et seq.) of the mausoleum (turbe) of the poet Ni'āmi, mentioned by Isakhan Munshi (Tārīkh-i 'Alam Ārāb-Abbās, Pers. ed., p. 496 et seq.). South of the town (456 miles) lies the right bank of the Gandja-Čai, which has the flourishing German colony of Helendorf. The climate of Jelisawetpol is regarded as unhealthy and malarial; on the other hand the climatic conditions favour the development of vegetation, particularly the horticulture; the town garden (near the ancient fortress) is one of the best in South Russia; wine, tobacco and silk are also produced. (W. Barthold.)

GANDO, the kingdom of the Fulbe in the Western Sudan (cf. the article MILK.

GAO. [See Gogo.]

GARDIŢI, Abū Sa'īd Abū al-Hayy B. al-Abbāb b. Māmūn, a Persian historian. Nothing is known of his life. As his nāma shows he was born in Gardiz (usually written Kardiz in Arabic, e. g. Yāqūt, iv. 258; but sometimes also Dżardż as throughout al-Uthīb's Tārīkh Vamīd), which confirms the spelling with ج, a day's journey from Ghaza on the road to India (Mukaddasī, ed. de Goeje, p. 349). His work (Zain al-Abhārī) was written in the reign of 'Abd al-Rasidl the Ghaznavīd (440–444 = 1049–1053). It contains a detailed history of the kings of Persia, of Muhammad and the Caliphs to the year 423 = 1032 a detailed history of Khoršān from the Arab conquest to 432 = 1041; included are essays on Greek sciences (Dun Mārīfāt-i Rūmīyān), on chronology and the religious festivals of various peoples. The final chapters deal with genealogy (anāba) and sciences (wīdāfī); it also includes a chapter on the Turks of great value for the geography of Central Asia and one on India. No historical sources are quoted by Gardizī in the chapter on the Turks he relies on Ibn Khudrīzīb, Džištānī and Ibn Mūkhassīn. He says he received information about Indian festivals from Albirūnī so that he is regarded as a pupil of the latter. Gardizī exercised little influence on historical tradition in the east and is seldom quoted (cf. Rieu, Catalogue, p. 220); the manuscript in the Bodleian (Ouseley 240) of the year 1196–1222 is the one that has been generally used by European scholars and is frequently (even in the Grundr. d. frasi, ii., 356) described as unique; from this MS the chapter on the Turks has twice been edited (W. Barthold, Östl. o persetka v Srednyym Azym, St. Petersburg 1897, p. 78 et seq.; Gča Kuun, Kellet Kütçif,
The history of the Muhammadan kings of Bengal, and some account of Gaur will be found in Ghiyāth Husain Salām’s A’lā-qi S̱alāf̱īn, translated, by Abd us-Salam, Calcutta, 1902, and in Stewart’s History of Bengal.

(B. Beveridge)

GAYOS, a tribe in Atīch [q.v., i. 566).

GAZA. [See GHVAZA.]

GAZULI. [See IGZULI.]

GEBER. [See JADAR, i. 987 et seq.]

GEBER (t.), the name of the Persian Zo- rumstani, the origin of which is not quite certain. The word is usually considered to be an Arabic کیار (unbeliever; Turk. gani). For other etymologies see the Grundr. d. Iran. Phil., ii. 697. Cf. art. FARS.

GEGA, an Albanian tribe, i. p. 453b.

GEORGIA (Russ. GRUZIIA, Pers.-Turk. GURDUSTAN, GURJISTAN, GEORG. SAKHRATHEVLO), in the wider sense an area in Western and Central Transcaucasia, inhabited by people who speak Kharthwelian languages, stretching from the Black Sea to somewhat over 60 miles N.E. of Tiflis, in the narrower sense practically the government of Tiflis. From the point of view of historical geography, which is still to some extent valid, it comprises the provinces and districts of Kakheti with the mountain districts of Tushetia, Papazia and Khosvuria, Karthia, Imeretia, Swanetia, Guria, Mingrelia and Meskhia. The Kharthwelian languages include the Georgian, Mingrel, Lasi (the latter only spoken in the extreme southwest corner on the Turkish frontier while the majority of the Lases, also called Tā’ans, live in Turkey) and Swanetian; the latter spoken in Swanetia and Mingrel in Mingrelia. Georgian is spoken in all the other provinces. The greater proportion of the Kharthwel peoples profess Christianity in the Greek Orthodox form, only in a few places have they adopted Islam, namely in the extreme east, in the district of Sakathal, the Engloes (Georgian language), also entirely in the southwest, in the Batum circle, the Adjars (the Lases are likewise Muslims). Georgian has lost a considerable number of adherents in the Coroch district and on the upper course of the Kura, i.e. in the Ardagis district and in the districts of Akhalekh (q.v., i. 230) and Aghkhalakh, where Georgians was still spoken two hundred years ago and has now been supplanted by Turkish. The people have forgotten their language and origin and call themselves Turks.

The beginnings of Georgian history are wrapped in obscurity. Kartlia and Kakhetia formed the nucleus for the formation of a new state. The western Kharthwel country had an early period passed under Byzantine rule and from it Christianity in its Eastern Roman form spread over the Western Transcaucasia. Saint Nino is regarded as the bringer of Christianity. She is said to have converted King Mirian in the beginning of the fourth century (the dates given vary). The Georgian church was granted its independence at the sixth council in 680 at Constantinople.

As Georgia lay in the centre of a circle on the circumference of which powerful states had grown up, it suffered terrible vicissitudes till it became Russian territory in 1801. Down to the seventh century Byzantium and Persia were fighting for its possession; soon after 627 (Heracleus’s victory over the Sasanians) the Arabs advanced on Georgia. From the end of the viii century
the power of the Bagratids began to increase with Byzantine help in the 11th century. George, in the 12th century, the Seljukids conquered the land. It was only after the Crusaders had entered Jerusalem in 1100 that David the Renovator drove out the Turks in 1109. Under this king (1080—1125) a period of prosperity for Georgia began which lasted till the death of Thamar (1184—1212). A great decline in the fortunes of the land set in from the 12th—13th centuries, the Mongol invasion (Timur alone was six times in the country between 1387 and 1405) had most disastrous consequences. Scarcely had the country been united under the Bagratids, when it broke up in the 13th century into three kingdoms, Kartli, Kakhetia, Imeretia and three principalities and eventually its history is not that of a single country. After the fall of the Byzantine empire Georgia was left without a protector and the inroads of the Tatare, Turks, Persians and Georgians became more frequent. Persian influence in particular became very strong and in the 15th century the king of Kartli and Kakhetia became a mere governor for the Shah of Persia.

Russia was the only hope and to it Georgia had turned at quite an early period. In 1558 Lewan II. of Kakhetia besought the Czar Ivan IV. to send help against the Persians; in the time of the terrible Shah 'Abbâs Alexander turned to Boris Feodorovich Godunow, in 1619 Teimuraz sent an embassy to the first Czar of Moscow, Michail Feodorowitch. But Georgia was not yet within the sphere of Russian interests and the old state of affairs continued. It was only in the 18th century that Georgia regained strength once more under King Wakh-tang VI. Heraclius II. (1702—1705) was once more able to stem the tide of Persian-Turkish-Georgian invasion, temporarily at least, but when he died the country had been weakened by domestic troubles, the plague (1770), the destruction of Tiflis by Agha Muhammad Khan of Persia (1755) and other causes, that George XII., the successor of Heraclius resolved to place his kingdom under Russian protection (1801). A few years later (1804) Imeretia also became a Russian province; a year previously Mingrelia had also become a Russian possession and after the last Russo-Turkish war, the Muslim south-western districts of the Khat-khais, Kaghizinian, Aragvan, Olyt, Artinian, Batum and Kars also passed under Russian rule. [Cf. "Bibliogr.," 443.]

Germiafoglu, or Germiafogli, or Germainshgh, is the name given to thehot coasts region of Fars and Kirman in opposition to the cooler highlands (Sardest). These words have been arabized by the Arab geographers in the forms Germian and Sarit or Sarid.

GEMIANOGHUL, the name of a Turkomans dynasty, which made itself independent on the fall of the Seljuk empire in Asia Minor and made Koutaia, the ancient Ctyeum, its capital; Germian was originally the name of a tribe and afterwards was applied to the dynasty (cf. Houtsma, "Romil", iv. 229, 326 et seq.; and the expression Läwir, or Læwir, of Kâutâsia in Pachymeres, ii. 421, as well as the title: Suliân al-Germâniyâ in Suleiman-shâh's inscription). The pronunciation—Germân or Ger- miân—is doubtful; the Byzantines write Këmmiâ, Këmmiâvî, or Këmmiâvî (through confusion with Kâmmân); Schultberger (ed. Langmuart), 54; Küm- miân; on the other hand Ahmad Welfi, Lebâe 1046, writes Germiân, (_GRmn), and Leunclavius (xv. Jahrb.) transcribes Germîn throughout; the form Germian, given by Ibn Batuta, ii. 271, also seems to be in favour of Germân. At the end of the xivth century or the beginning of the xvth Alâshîr (written "Lwirî, Lwirîvî, Lwirîvî for the Byzantines), "the satrap of Ctyeum" (Kantakuzenos, ii. 82), is mentioned by Osman, Surâshân, Menteşeh etc. as one of the invaders of Byzantine lands in Asia Minor; amongst other places he had seized Kula and Tripolis on the Maeander and attempted to take Philadelphia (Alâshîh) but was severely defeated in battle with the Katalans and Almugavars (1304; 1306 according to Murad) (see Pachymeres, ii. 421 et seq.; Münchner, c. 205). According to Turkish sources, in the time of Erteşhrul "Alishîr, father of Germiân" was reigning over aifan Karahisâr (Neshîr and his copyists). Shihâb al-Dîn, a contemporary of Ibn Batûta, draws out from Germiân, son of Alâshîr, a grandson of Koutaia, and Ibn es-Seûb, the son-in-law and vassal of Germiân as lord of Karahisâr. This agrees with a coin of Germiân Khân of the year 797 (1307), struck at Shahr Germiân (unique, described by Ismaîlghalib in the Catalogue of his collection of Saltûn coins, No. 175).

Our knowledge of the history of the dynasty of Germiân to the end of the xivth century is lamentably small. Menejîddimbashî, iii. 34 et seq. gives the following list of rulers: Germiânâb, Alâshîhêb, "Alemshîb, "Ali, Yaşûb; this cannot be reconciled with other statements of contemporary historians and manuscripts. We learn from an inscription of Koutaia of the year 779 (1377) that Suleimanshah, son of Mohamed, grandson of Yaşûb, ruled over Germiân about this time. According to Haiil Edhem this Yaşûb is identical with the "great Emir" Yaşûb. "Alişhir, who is mentioned in an inscription of Angora of the year 699 = 1200. Yaşûb's father, "Alişhir, might thus be the lord of Germiân of this name mentioned by the Byzantine and Ottoman historians but can hardly be identified with Karim al-Dîn Alâshîr (Houtsma, "Romil", iv. 299) who was slain in the reign of Kêlitl Arslân IV (655—665). According to the waif document of his grandson Yaşûb II, Mohamed conquered Koutaia and Simonâr; in his reign or that of his successor Suleimanshah the districts of Karahisâr and Denizlî were incorporated in the kingdom of Germiân. Suleimanshah (in the Turkish historians simply called Germiânoglu) married his daughter Khâtun Sultan in 783 (1381) to Prince Bayazid, son of Murad I, and granted her as dowry the most important towns in his land, including the capital. His son, Yaşûb (II), who succeeded him about 790 (1388), was taken prisoner by Bayazid in 793 (1391), interned in Ipsala in Roumelia, and his lands confiscated in 795 (1393). Yaşûb escaped from Ipsala to Timur and after the battle
of Angora was restored by Timur like the other petty rulers who had been dispossessed by Bâyâzîd. When Timur left Anatolia, he gave Yağûb the task of guarding the corpse of Bâyâzîd I, and his captives son, Mîhr Câlebi; Yağûb then handed both over to Mehmedmed Câlebi. He was on friendly terms with the latter and with Murâd II, and remained in undisturbed possession of his lands till his death. When he died without male heirs in 832 (1428-1429) the land of Germân was confiscated by Murâd II. A Pretender, who rose in rebellion in 1453 on the accession of Mehmedmed II, supported by the Karâmanoghlu, was quickly disposed of. The Germân country has since then been divided into two sângâjâs, Germân and Karahîzârî Şâhîb; Kutahia in 1455 became the seat of the Béglerbeg of Anadolu. The following dynasty table is based on the material available:

'Alişhr (about 700 A.H.)

Germân Khân (about 707-730 A.H.) = Yağûb (1)

Mehmedmed

Suleimânşâh (about 779 A.H.)

Yağûb II. (790-793; 805-832 A.H.)

The chief critical authority is Halîl Edhem in the Revue Historique publié par l'Institut d'Histoire Ottoman, I., p. 112 et seq.: the exceeding rare copy of Suleimânşâh and Yağûb II, are described by Ahmed Tewhîdî in the fourth part of the Catalogue of the Mok. Coins in the Ottoman Museum, p. 204 et seq., 529. (J. H. MORDMANN.)

GHÂDAMES, a town and oasis in the Sahara, 300 miles S.W. of Tripoli and 280 miles S.S.W. of Gades, in 30° 7' 48'' N. Lat. and 8° 28' E. Long. (Greenw.), with 5000-6000 inhabitants.

The town occupies the south-western part of the oasis. It forms a ksr of about 1500 houses surrounded by a dilapidated wall and intersected by narrow streets which are vaulted over almost their whole length. The only architectural monuments are the mosques (14 in number) of unpretending exterior. According to al-Hasâshîî the tombs of two companions of the Prophet, Sidi al-Badrî and Sidi ʿUţba b. 'Amr are honoured there. The oasis, which is protected by a wall around it with only one gate, is about 4 miles in circumference, 3/4, - 1 mile broad and has an area of 400 acres of which not more than 190 are planted with palms. Water procured from an artesian well and two warm and seven or eight ordinary springs assure the irrigation of the gardens, each of which contains five or six palms. The total number of trees estimated by Duveyrier in 1860 at 63,000 seems in reality not to exceed 25,000.

The free inhabitants fall into four groups: a. the Berber Beni Wâsit and Beni Ullî, who consider themselves the descendents of the founders of the town; b. the Arab Ulad Bellî; c. the Atriya, i.e. negroes or mulattoes descended from manumitted slaves; d. ʿUţreg Ifoghas, who are permanently encamped round the town as caravan leaders or bandits and "protectors" of the traders.

The predominant language in Ghâdames are: Arabic as the language of commerce, second Hausa spoken by a number of slaves and lastly a Berber dialect, the language of everyday life, which is between the dialect of the Djebel Nefusa and the Tamâshk, but is more closely connected with the former. The women only know the last of these.

The indigenous industries are of little importance although Ghâdames has always been celebrated for its leather work (Spanish Ghândamei). The situation of the town however between the sandhills of the Eastern Erg (cf. A.-S., p. 428) and those of Edeyen has made it a great centre of exchange for the traffic of the Sahara; but its importance from this point of view has considerably decreased since the abolition of the slave trade and the estimates of Duveyrier and Largeau, who put the annual value of the business done in Ghâdames at 12 million francs (£ 48,000), are much exaggerated. According to more recent investigations the annual value of the goods sold in the city hardly reaches £ 4000. The inhabitants nevertheless are very busy and clever tradesmen. We find them not only in Tripoli and Tunis, where the young men serve their apprenticeship, but in all the trading centres of the Sûdân from the shores of Lake Chad to the banks of the Niger.

Ghâdames is the Cydamus of the ancients. Native legends ascribe its foundation sometimes to Nimrâd and sometimes to Dhu 'l-Karnân (Alexander). According to Pliny (Hist. Nat., v. 5) Cydamus was inhabited by Egyptians from Libya. Possibly it is to these original inhabitants that we owe the buildings called al-Ayûn (the idols) by the natives, which Duveyrier regards as evidence of a civilization which he calls Carthaginian. In the year 19 B.C. Cydamus was occupied by Cornelius Balbus, under the empire it was garrisoned by a detachment of the Legio Augusta, stationed in Lambaesis, and under the Byzantine it was the see of a bishop. Ibn Khaldûn is therefore wrong when (Hist. des Berbères, transl. de Saine, iii. p. 303) he ascribes the foundation of the town to the Banû Wîssâ, a branch of the Beni Merin, who built Ghâdames in the early days of Islam.

In the year 46 (666-667) 'Uthma b. ʿÂfi sent a detachment from his army to occupy Ghâdames. In the following century, however, the inhabitants eagerly adopted the Abâdi doctrines introduced by their countrymen Abu ʿIyâd Ta'ârar. This Ismâ'il was one of the five "transmitters of knowledge" who spread heretical doctrines in Africa. When Ghâdames returned to orthodoxy it is not known, but the Abâdi heresy seems to have disappeared by al-Bakri's time as this author describes the inhabitants of Ghâdames as Muslim Berbers (De la, de l'Afrique Septentr., trans. de Saine, p. 397).

During the centuries that followed, Ghâdames seems to have retained its independence, as the few historical statements, that we possess of this period concerning the town refer to attempts made by the rulers of Ifrîqiyâ to take the town. For example in 609 (1213-14) Ibn ʿUâm Idrîs occupied Ghâdames for a brief period and in 809 (1406-1407) the Hafsîd Abû Fâris forced the inhabitants to pay him tribute. The latter seem soon to have freed themselves of this burden, as in the second half of the nth century we find the princes of Tunis undertaking three campaigns against Ghâdames. Leo Africannus (ed. Schefer, Vol. iii. p. 265) in the beginning of the xvi th century mentions that the people of Ghâdames were independent. The Turks of Tunis in spite of several campaigns undertaken by Derwis Bey
(1592) and Ramadan Bey (1609) were, like the Haçısids before them, not able to enforce their authority on Ghadames. During the xvii\textsuperscript{th} and early xix\textsuperscript{th} centuries Ghadames was an independent republic, but in 1830 the inhabitants had to recognize the suzerainty of Yüsuf the last Karamanlı Bey of Tripoli. After the expulsion of the Karamanlı, Ghadames passed into the possession of the Turks and a vâdi who was afterwards (1862) replaced by a gădamaş was appointed to govern it and a small garrison was stationed there.

The commercial importance of the place attracted the attention of Europeans to it in the xix\textsuperscript{th} century. The following travellers visited it, Lévi (1823), Richardson (1845), Dickson (1852), Captaine de Bonne main (1856) and Duveyrier; in 1862, a French mission (Mircher, Vatonne and Polignac) concluded a commercial treaty with the Tuaregs; they were followed by the travellers Kohlfra (1864-1865), Dournaux-Duperc, Joubert, Largue (1876) and Yater Richard (1878); since then, however, Ghadames has remained closed to Europeans owing to the jealousy of the Turks. The French have vigorously disputed their claim to the town since the establishment of the protectorate in Tunisia. The Anglo-French treaty of 1899 decided that Ghadames must be considered outside French territory and the Franco-Turkish agreement of 10\textsuperscript{th} May 1910 regarding the delimitation of the frontier between Tunisia and Tripolitania laid it down that the frontier should pass 10 miles west of Ghadames. The cession of Tripolitania to Italy, made Ghadames an Italian possession.

Schefer), iii. 265; Larton, \textit{Note sur l'oisivé de Ghadames et ses antiques} in \textit{Rev. archéologique}, iv. 301.

\textit{Al-Ghadanfar} ("the lion"). A name of the Hamdanid \textit{Ubayt al-Dawla Abú Taghlib ibn Allah b. Nāsim al-Dawla} ruler of al-Mawāli (511 358-369) (968-979), Abū Taghlib, who was born in 328 (939-940), quarrelled with his father and afterwards with his brothers, when on the death of the Būyālī Mu‘izz al-Dawla in 356 (967) they attempted to attack Mu‘izz al-Dawla’s successor Bakhšīyār [q.v. i. 602] against their father’s wish and therefore threw their father into prison. On the latter’s death in 358 (970) two of the brothers, Hamdan and Ibrāhim, took Bakhšīyār’s side while a third, al-Husain, stood by Abū Taghlib. The latter conquered Harrān in 359 and made peace with Bakhšīyār, whose daughter he married; he also took Murās from his brother Hamdan. Unfortunately for him, a powerful enemy of his father-in-law entered the field in the Būyālī ‘Aṣāl al-Dawla, who took Baghdad in 364 (975) and finally, on the death of his father Rukan al-Dawla, forced Bakhšīyār to surrender the ‘Iraq. Hamdan thought he would seize the opportunity to drive his brother Abū Taghlib out of al-Mawāli with Bakhšīyār’s help but only succeeded in getting himself imprisoned by Bakhšīyār as soon as Abū Taghlib had promised him his help in recovering Baghdad. In the war with ‘Aṣāl al-Dawla that followed, Bakhšīyār was taken prisoner and put to death while Abū Taghlib had to take refuge in flight. The victor soon appeared before al-Mawāli and the ‘Alamān and the Hamdanids sought in vain to treat with him: he was not inclined to restore this important city to the Hamdanids, so that Abū Taghlib, pursued by Būyālī troops, sought refuge with Bardas Skleros, to whom he was related by marriage and bound by ties of friendship. But just then the latter was engaged in a struggle with the Byzantine general Bardas Phocas, in which he came off second in 368 (979), so that Abū Taghlib, who was awaiting the result of the war in Hēn Ziyād (Khartbeh), as in the meanwhile ‘Aṣāl al-Dawla had occupied Masyaf and Amid, went to Damascus and sought the help of the Fātimid al-‘Aṣirī b. Bishār. The latter pretended to take his part and made him the most generous promises through his general al-Faqi b. Ṣalih. But while Abū Taghlib was looking in vain to Egypt for troops to help him, he fell out with Mafarrīb d. Daghbal b. al-Djarrīb, who ruled over Raml and South Palestine while nominally recognizing the suzerainty of the Fātimids and was seeking to drive out the Bani ‘Uqail who were settled there. The latter thereupon turned to Abū Taghlib, who was taken prisoner in a battle near Raml by his rival and put to death in 369 (979).

\textbf{Bibliography:} Besides the sources mentioned in the article \textit{Hamdanī} the following deal particularly with Ghafarī: Yahya b. Nāsim al-‘Antūkī in \textit{von Rosen Imperator Pustīlī Bulgakrostes}, p. 10 et seq. and Ibn Kathīrīn, \textit{Wafayāt} at the end of the article \textit{Nāṣir al-Dawla}.

\textbf{Ghadir al-Khum} is a pond or marsh formed by a spring in a wādi on the left of the road from Medina to Mecca, three (according to others one or two) Arab miles from Dhu‘afa. The Arab geographers mention the thick trees that surround it and the mosque of the Prophet lying between it and the spring; the few inhabitants belonged in Yūsuf’s time to the Khuzā‘ and Kishā‘. Near it was al-Khārijār, to which Sa‘d b. Abī Waqqas was sent in the year 1 A.H. with a few followers by the Prophet.

The place has become famous through a tradition which had its origin among the \textit{Shī‘a} but
is also found among Sunnis, viz., the Prophet on journey back from Hudaybiyya (according to others from the farewell pilgrimage) here said of Allah: "Whosoever I am lord of, his lord is. Allah also."

In memory of this in later times a feast was observed by the Shi'is.

**GAFFAR (A.),** "Pardoning," one of the beautiful names of Allah, cf. i. 304.

**GAFFAR (A. M. MUHAMMAD),** a Persian man of letters, a descendant of the Shahīt jurist Jāmān al-Nādir 'Abbād al-Gaffar al-Kazwī, who died in 666 = 1268. His father, who was a Khātūn of Rāy, wrote poetry under the pseudonym Wāsālī and died in 932 = 1527. Ahmad al-Gaffarī was likewise a Khātūn and died in 975 = 1567 at Dābul (Sīnd) on the return journey from the pilgrimage to Mecca. He dedicated his Niẓāmī, ("picture-gallery"), completed in 959 = 1552, to Tahmāsp 1: it is a collection of anecdotes collected from works of different periods (lith. Bombay 1245 and 1275 and also Calcutta): he also wrote a history of the world in two books entitled Nashīkhī Dīvān-Ṭūr (972 = 1664).

**Bibliography:** Hammer, Gesch. der schonen Künste Persiens, p. 307; Elliot, Hist. of India, ii. 504; Krafft, Catalogue, p. 87; Rieu, Catal. Pers. Mis. Brit. Mus., i. 106, 111; Grundriss der iran. Philologie, ii. 267, 333 et seq. (CL. HUART.)

**GAHIR (A.).** One of the titles of xl. Sūra. **GAFUR (A.),** "Pardoning," one of the beautiful names of Allah, cf. GHAIB.

**GAIB** is generally used with the same sense as ghāib, *what is absent or hidden*, and al-ghāib has come to mean the unseen spiritual world; thus ʿAllam al-ghāib is opposed to ʿAllam al-ghāida, the world perceived by the senses. This sense is normal in the Korān (Mufradāt of al-Rāghib, ed. of Cairo, 1324, pp. 372 et seq.) and it is explained by the commentaries (e. g. Baidawī on Kor. ii. 2, ed. Fleischer, p. 10, ii. 6 et seq.) that al-ghāib is what is not reached by the senses or required by intuition: it is of two kinds, one made known to man by the prophets and one known only to Allah with whom are the treasuries or "its keys"; according as Kor. vi. 59 is real. It thus came to be used in the broadest way as "the Unseen" by occultists among us. Al-Rāzī found the Korānic phrase Mafāṭīḥ al-ghāib a possible name for a commentary on the Korān, Ibn al-Arabi for a Sūfī work and Ahmad al-Zarkāwī, a modern Egyptian writer, for a collection of treatises on magic and divination (Cairo, 1327). Kifāl al-ghāib means the saintly hierarchy presided over by the Khātūn (Lane, Arabian Nights, chap. xxx, note 17) and Ibn al-ghāib can mean a youth conceived without father and gifted with mysterious powers of insight (C. Wells, Mehnem der Kurf, p. 129). In

Sūnism ghāib al-ḥāwinya and ghāib al-muṭṭak means the essence of the real, *qua* unconditioned (al-latī, ḫāyī).

**Bibliography:** To the references above add Tafsīr of al-Jirijjānī, ed. Cairo, 1321, pp. 109, 177; Dict. of tech. terms, pp. 1053 et seq. (sub 'āleem), 1090, 1539 et seq. (sub ʿāleem); Hirtzen, Theologie des Islam, p. 239 et seq. (D. B. MACDONALD).

**GAIBA** is used as infinitive in its root, ghāib having come to equal ghāib. It thus means "absence," often "absence of mind." This latter force was developed by the Sufis into absence of the heart from all except Allah, expressed, on the other side, by ḫāyī, "presence in a mystery." It is a stage on the passage to ḫāyī, complete "ceasing" or passing away of self. For details of the development of this idea see Nicholson's translation of the Khāf al-Mahjūb of al-Hujwīrī, pp. 248 et seq. and index. Also the Risāla of al-Khāshānī with the commentaries of Zakarīyā al-Anṣārī and al-ʿArūf, ed. Billāg 1290, vol. i. pp. 66 et seq. and the Saiyid al-Murtada's commentary on the Ḥāfī of al-Ghazzālī, vol. vii. p. 248 and Macdonald, Religious Attitude and Life in Islam, pp. 260, 262.

Another common use of the word is to describe the condition of any one who has been withdrawn by Allah from the eyes of men and whose life during that period (called his ghāib) has been miraculously prolonged. Of this the outstanding example is the Hidden Imam, or Mahdi, of the Shi'ite Twelve. And this, though kept generally invisible, still lives on earth (cf. al-Khādīr), has from time to time been seen by some and been in correspondence with others and maintains a control over the fortunes of his people (Goldziher, Vorlesungen, pp. 252 et seq., 269 et seq. and Arabische Philologie, ii. pp. 121 et seq.). (D. B. MACDONALD.)

**GAHILAN B. KHIJA, see ABU 'L-KUMMA.**

**GAHIN,** the nineteenth letter of the Arabic alphabet (numerical value 1000; cf. the article AKIBAT); the character ʿāin, in most modern dialects, it is pronounced as a voiced v lar aspirate. The old Arab writers on phonetics describe it as a guttural; but it seems very doubtful if it ever really was pronounced as a post-avular. ʿAin has become ʿain in many modern dialects (for details see the article ARABIA, ARABIC DIALECTS, i. p. 396). Cf. A. Schade, Sibirwolte's Lautlehre, particularly p. 19, No. 3 and note 48; and the index. (A. SCHADE.)

**GAHITA (GAHITA, GHAITA),** an Arab musical instrument, very popular in North Africa and some districts of Southern Europe, a kind of cylindrical bagpipe with a movable wooden mouth-piece (qanūn) and rather wide bell-mouth. The cylindrical portion has seven holes on the upper side. The first hole below the mouth-piece is called yahwīd, the second yaĥhīka, the third bandujab, the fourth dhashīka, the fifth sīka, the sixth dīka and the seventh yka. On the lower side about midway between the yahwdwa and the yaĥhīka there is a hole called kofabā, the names of these holes are used by native musicians to denote the finger required in playing the instrument and also to denote the key of a piece or a scale. In playing, the player puts the mouth-piece in his mouth as far as a kind of a catch (arrabā) in the form of a disc 1/4 inches across. The compass of the instrument is about an octave.
The ghaita is used by the Arabs particularly as a military musical instrument. It is almost always accompanied by the qam, a kind of drum, which is beaten with two sticks and the jambur, a kind of large drum, which is beaten with the bone of an animal.

The ghaita is often called zemedra; in the south of Tunisia and the province of Constantine it is also called zemala, whence the Turkish word zemedra, ghaita-player. Ibn Khaldün describes it under the name zemaled, perhaps a metathesis of zemedra. (Prol., ii, 533; ed. Quintempec, Paris 1834). But the name ghaita was well known to the writers of the middle ages, as well as to those of Muslim Spain (cf. Des. Suppl. aux Dict. Arabe, ii, 235; Simonet, Glosario de vocab. Mus. Madrid 1888, p. 239).

This instrument still exists in modern Spain under the name gaita or vihia. In lands where Turkish is spoken it is fairly common and is called ghaita (cf. Barbier de Meynard, Dict. Turc-français, ii, 392).

GHALAFIKA (Ghalafka, Alafaka, the Ditto Sabaeorum of Pliny), at one time a flourishing seaport in Yemen, near Bait al-Falih [q.v., i, 507 et seq.]. It was an important emporium and was known as the harbour of Zebid. About a century before Niebuhr's journey in Yemen the harbour of Ghalafika became inaccessible through coral reefs, whereupon the rich traders of this coast-town moved to Bait al-Falih, which rapidly became a flourishing commercial town. During his stay in Yemen, Niebuhr saw on one or a few walls, a mosque and several tombs, remains of this once prosperous town.

GHALCA. The name Ghalka is applied by the Turki-speaking population to the group of tribes of Iranian origin inhabiting the country near the sources of the Oums, the Pamir, and even (in the case of the Sarikol) the upper Varkand, and (in the case of the Yudkh) the southern slope of the Hindú-Kush. These races belong to a type differing from that of the ordinary Tadiks of Badakhshan etc.; they are closed by anthropologists as a branch of the iranophelic Alpine race and known as Highlnd Tadiks (cf. Afghanistăn, i, 154). The word Ghalka is Persian, and according to Vullers means a nomad or uncivilized peasant, and the form Ghara or Ghara suggests a possible connection with the old form of the name Ghardjšan. Geiger suggests that the original meaning may be 'mountaineer' from the word ghara 'mountain' used in these languages, and also in Fāsāt. They are Shīrāh by creed and therefore sharply separated from their orthodox neighbours, and speak a number of distinct dialects of an Iranian language, each valley having its own speech. These districts are as follows: Wahlahn on the upper Pāndj river, under Afghan rule. The language and people are called Wakhār. A distinct dialect of Wakh is that spoken in Tishāshūn lower down the Pāndj river, known as Ishkāshīmī.

The valleys of the Warōḏ and its tributaries the Koka are occupied by the people of Sanglī, speaking Sanglī and of Mindjān speaking Mindjān. These territories are under Afghan rule. The upper Warōḏ valley leads to the Dōrāh Pass the principal route through the Hindū-Kush into Čitāl, and on the southern side of this pass dwells the Yādhk tribe, speaking the Yudghā language which comes within the British sphere. Where the Pāndj joins with the main stream of the Oums are the territories of Shīghnān and Roshān (in the Russian sphere) in which the Shīghnī language in spoken, and nearly related to it is the Sarikol spoken by the Sarikol people on the Eastern slope of the Pamir. Still farther north, lies the valley of Yaghmāh on one of the upper affluents of the Zarakshān, where the Yaghmāh language is spoken (cf. Afghanistan, i, 156).

Little is known of the history of this inaccessible region or its inhabitants. It is probable that they formerly extended farther into Badakhshan, and gradually retreated from the open country at the time of the Muslim conquest. Islam spread among them in its Shīrāh form at a later date. Idrīs mentions Wahlahn as the country which supplied Badakhshan with musk. Lapis lazuli was also found in the neighbourhood, and this no doubt refers to the mines still worked at Dārm in Mindjan (cf. Badakshan, i, 554). Wahlahn also produced gold and silver and slaves. In modern times the travels of Wood, Forsyth, Gordon, Bonvalot and Sven Hedin and the visits of English and Russian officers, especially Holdich, employed in boundary demarcation have thrown much light upon this region, and the researches of Shaw, Ulfyvly, Biddulp, Tomashchek and Geiger have elucidated the ethnicity and languages of the whole Pamir tract.

bibliography on the Ghalia languages see Geiger, supra.)

(M. Longworth Dames.)

GHALI (a.), plur. ghalî̄, “one who exaggerates or goes beyond all bounds,” particularly in reverence for certain individuals, notably Ali and the ʿAlî̄s, and connotes them incarnations of the Deity. What heads of sects are to be called ghalî̄ depends on the point of the writer, but as a rule those who have adopted such notions, originally foreign to Islam as incarnation (khuṭa), metempsychosis (tā-ānâk), etc., are considered to be ghalî̄. Cf. Friedlander in the Journal of the Amer. Orient., Sec., XXIX, 12.

GHALI, the poetical name of Nâzî̄-ul-Dawla Dâhir al-Mulk Mirzâ Asâd Allah Khân, a distinguished Persian and Urdu scholar and poet, famous for his excellent and polished style of composition. In his Persian Dwarin he has occasionally taken the taḥallūl, Asad, and is also called Mirzâ Noshâ.

Ghalî was of Turanian descent. His grandfather left his ancestral home and came to Dîhil during the reign of Shah ʿAlam. His father, ʿAbd Allah Beg Khân, lived for some time at Lucknow, and went thence to Hyderabad in the service of Nauwâb Nâzî̄m ʿAlî̄ Khân. After a time he went to Alwar and served under Râdâ Bahâkhtâwar Singh, where he was killed in battle. His son, Asâd Allah Khân, then only 5 years of age, was adopted by his uncle Nâzî̄ Allah Beg Khân, Sâbedar of Agra. In A. D. 1806, when the district of Agra was made into a Commissionership under General Lake, his uncle was pensioned off, and, on his death, Ghalî, then 9 years old, received an allowance of Rs. 50 per month from the Emperor of Dîhil. After the accession to the throne of Wâdjid ʿAlî̄ Shâh in A. D. 1847, Ghalî received a yearly allowance of Rs. 500 in recognition of his poetical abilities. The Nauwâb of Rampur, hearing of his fame as a poet, sent his own poetical compositions to Ghalî for correction, and in A. D. 1859 assigned him an allowance of Rs. 100 a month. After living some time at Rampur, Ghalî returned to Dîhil, where he died in A. D. 1869, at the age of 73.

(J. F. Blumenhârâd.)

GHALI DEDE, after Fuyûlî, ʿNîfî̄ and Nedîm, the last of the four great poets of the old school of Ottoman literature; his real name was Shaikh Muhammad Esâf, but he is best known by his pen-name Shaikh Ghalî or Ghalî Deâde. Born in 1171 = 1757-1758 he was the son of the secretary, Muṣṭâfa Reshid Efendi in Constantinople and early became connected with the Mevlevi order in whose monastery, in Yeâni Kapu, his father is also said to have acted as kettle-drummer. Following his father’s example he first entered the service of the state but soon left it to devote himself wholly to the order. He began his novitiate in the parent monastery of the order in Konîya. Home-sickness drove him back, however, to Constantinople, where he remained in the Yeâni Kapu monastery till in 1205 (1790-1791) he was appointed Shaikh of the Mevlevi monastery in Galata, which is probably the best known to Europeans of all the monasteries of the “dancing dervishes”. The favour in which he was held by Sultan Selim III., the Sultan-Mother and other high personages, greatly benefited this monastery, which was entirely rebuilt at his request in 1210 (1796). Ghalî died at the early age of 42 on the 26th Radjab 1213 (3rd Jan. 1799). He is buried in the Galata monastery in a separate tomb.

Ghalî, who numbered among the excellent scholars, who were his tutors, Khodja Neshîy, who was himself not unknown as a poet, composed the work which has given him an abiding place among the poets of first rank in his nation, at the early age of 26 (in 1197) — the figure 21 seems to be wrong; this is the romantic and allegorical Mesnewi, Ḥasan u ʿAṭâk (the pronunciation ʿAtâk is foreign to Turkish). “Beauty and Love”. It was written as a kind of protest against Nâbi’s Mesnewi Khwârîjâbâd which was extravagantly Persian in style, and stands alone on a level never attained before or after in an Ottoman Mesnewi through its originality of thought so rare in Ottoman poets, its inspiration which recalls the Divina Commedia and the loftiness of its fancy, the beauty and relative simplicity of its language. In the struggle between the Persian and the Nationalist schools Ghalî unhastenly took the side of the latter and developed a simple yet dignified language more fitting the Ottoman spirit in the happiest way than the artificial language which was then so much in vogue. The influence of this Mesnewi on Turkish literature to the present day has been enormous; the number of Ghalî’s admirers is still large; according to them the Ḥasan u ʿAṭâk is the noblest work not only of the romantic school but of all that Ottoman poetry which draws its inspiration from Asia.

Ghalî’s Divâns which contains a large number of ghazals, ḍaṣās and rubâîs is on the other hand, relatively unimportant, that is to say, it is both better and no worse than the numerous Divâns of his time; it has, however, a certain historical value on account of its rûs d’occasion.

Prose writings also exist from Ghalî’s pen; he translated and wrote a commentary on Shaikh Kose Ahmed Ded’s (who is buried in Konia) work, al-Tâhfa al-manâkib fī ʿl-Tarīḥ al-Muʿaṣṣa, entitled al-Sûhâb al-Sâfîya. He also wrote a commentary on the Divvân al-Mathnawî of Yusuf Sînevâl, and a collection of biographies (Tâkîvâ) of Mevlevi poets, which was continued by al-Sâyiid. His Divân with the ḍaṣās, terqîbân and ṣarkîs and the Ḥasan u ʿAṭâk was printed at Balkî in three parts in 1252; the Mesnewi has often been printed in Constantinople e. g. in 1304, the greater part of which is also given in Fuzûl Pasha’s anthology of Mesnewîs, Khwârîjâbâd Turki-Mesnewî, 1292. A biography of Ghalî is given by his contemporary Khâlid Nâbi Rey, the poet and historian, in his history.

GHALI, Ismâ’îl, son of the celebrated Ottoman statesman Edhem Pasha, born in Constantinople on the 2nd Rabi‘I‘ 1263 (11th November 1847), entered the service of the Sublime Porte early in his career, became a member of the Privy Council and ultimately became nâṣîḥ-i vaṣîh (counselor) for the province of Crete; he died in Constantinople on the 15th December 1895. Ghalî
Bey was the founder of the scientific study of numismatics among the Ottomans and enormously advanced this science by his standard works on the coins of the Ottomans (Taşcemî Mevkûkâtî Osmanlı, Constantinople 1307) and of the Seljuks (Taşcemî Mevkûkâtî Selçuklu, ibid. 1309); also in French under the title Études de Numismatique Selçuklîe, Constantinople 1892). Of equal importance are his catalogues of the Cretan coins and the Caliphate in the Ottoman Museum (Mevkükat Türkmanîe Kataloqü, Constantinople 1311, also in French, Catalogue des monnaies Turcoman, Constantinople 1894, and Mevkûkâtî Kadımi-i İslâmîe, ibid. 1312); finally several smaller treatises may be mentioned (Quelques mots sur les monnaies musulmanes à monogrammas hampurtas, Constantinople 1894; Sur une monnaie Mengendlische, Constantinople 1894: Une monnaie d’Ilâ eddîn Qâhîhîd III in the Recue numism. belge, 1895). Ghali Bey’s collections were purchased by the government after his death for the Imperial Mint Collection (sarbghânî-ı sÎrî). (J. H. MÜHLMANN)

GHALÎB PASHA, Muhammad (b. 1768), the son of Ahmed Efendi, Grand Vizier of Turkey under Muhammad II, 13th Dec. 1822—16th Sept. 1824. Ghali was born in Constantinople in 1777 (1763-1764) and entered the service of the state in 1802 (1785-1788). In 1816 (1801) he went to Paris to conduct the peace negotiations with France; he also conducted the negotiations with Russia which ended in the Peace of Bucharest, 25th May 1812. Soon afterwards he was dismissed and banished to Asia. He met the same fate some years later when he was deprived of the grand vizierate, but he afterwards acted as governor of Erzerum and commander of the garrison troops. In 1841 (1828-1829) Ghali died at Bâleân. Bibliography: Lifeglet Efendi, Tahâ, vii. 228 f. sqq.; v. 96 f. sqq.; Sani Bey, Kâmir el-‘Alî, v. 3245.

GHALZAI, a large and important Afghan tribe with numerous subdivisions which occupies the country near Ghaznî and eastward as far as Khost and Waziristan, also the upper valleys of the Tamak, Arghandab and Arghand i.e. Afghanistan, t. 153]. They are largely nomadic, and migrate in enormous numbers annually at the commencement of the cold weather mainly via the Gojal Pass. There they camp in the plains of the Indus valley while their traders spread throughout India. At the commencement of the hot weather they march back to their upland homes. These nomadic trading communities are known by the name of Pashas. The most numerous section is the Sulaiman Khel. The origin of the Ghalsiz is doubtful. They are at the present day one of the most important elements in the Afghan race, and speak the Pashto language, but there is good ground for believing that they are of mixed blood, and have absorbed both Tajik and Turkic elements. Attempts have been made to identify them with the Khalidi Turks who entered Afghanistan and took service with the Ghaznavid monarchs, solely on the similarity of the name Khalid (sometimes written Khalid) with Chalzai (sometimes written Chalzai or Khalid). But there is no evidence of this, though the appearance of the Ghalsiz favors the idea that there is a Turkish element in the race, which is historically probable, considering the large bodies of Chah, Khabdi and other tribes which entered their country from the 11th to the 14th centuries, many of whom fought as mercenaries under the Ghaznavid and Ghurid kings. According to the legends in the Mehdî-î Îfshâhî the Ghalsiz are descended from Mato daughter of Batan who had an illicit connection, afterwards legalized by marriage, with Shâh Husain a refugee prince of Ghur. Owing to the clandestine nature of his birth the son who was born was called Chalzai the thief’s son, whence the name Chalzai. The great Lodi tribe (including the Suri and Ishâhî) was of the same descent [cf. Khânî-î Khânî, l. 153]. This legend does not conceal the mixed Afghan and Tajik origin of these tribes. The Ghalsiz proper do not emerge from obscurity until after the Lâdis and Súns who founded dynasties in India in the 15th and 16th centuries. They come into notice during the 17th century when their power and influence in zamindâwar increased owing to the transportation of a large section of the Abdâtî to the Herât province by Shâh ‘Abbas I, and at the commencement of the 18th century under their chief Mir Wais they began to intrigue with Shâh ‘Alî I, the Emperor of Dihî. Mir Wais was arrested and taken prisoner to Isfahân, while the Ghalsiz were severely treated by the Persian governor general Gurgin Khan. Mir Wais, however, obtained the confidence of Shâh Husain, and was allowed to go on a pilgrimage to Mecca. On his return he obtained permission to return to Kandhar. Gurgin Khan, to humble him, demanded his daughter from him. Mir Wais pretended to submit and substituted another woman for his daughter, but murdered Gurgin Khan and his followers at a banquet to which he had invited him. The Ghalsiz now openly rebelled, drove out the Persian garrison and took possession of Kandhar. Mir Wais became master of the province, but died shortly in 1127 (1715). His brother ‘Abd al-‘Azîz succeeded but was soon murdered by Mahmûd, eldest son of Mir Wais, who became ruler himself, and gathered strength during the next few years. He was encouraged by the weakness of the Persian government and the success of the Abdâtîs of Hazârâ who rebelled successfully in 1129 (1717). In 1132 (1720) Mahmûd ventured to invade Persia itself, and occupied Karmân almost without opposition, but was soon expelled by Lutfi ‘Ali Khan, and retired to Kandhar. Next year, however, he again invaded Persia, assisted by large bodies of Abdâtîs and Balûsîs, took Karman and Yezd and arrived before Isfahân in 1134 (March 1722) and overthrew the Persian army at the battle of Gulâmî. He did not obtain possession of Isfahân, however, till October, when Shâh Husain abdicated and Mahmûd became Shâh of Persia being invested by Shâh Husain himself in 1135 (1722). The Ghalsiz rule in Persia lasted for some years, 1135 to 1142, (1722 to 1729). Tahmâsib II. maintained his claims to the throne throughout this period, and was ultimately restored through Nadir Shâh’s help. Mahmûd began his rule well, but soon showed himself a saugnâgin tyrant. The invasions of the Turks and Russians apparently deprived him of all self-control, and wholesale massacres in Isfahân followed. He seems to have lost his reason and died (or was killed) while insane. He was succeeded by Ashraf, son of his uncle ‘Abd Allah, during whose reign the wars with Turkey and Russia continued. Persia losing many provinces. Ashraf made peace with the Turks by appealing
to their sympathies as a Sunni who was restoring the true faith among the Persian Shi'ahs. Kandahār had meanwhile fallen into the possession of Mahmūd's brother, which caused a division among the Ghailais in their own country and weakened them in Persia. Nādir's victory at Dāngān in 1135 (1729) and at Marāza-khur the same year put an end to the Ghailai rule. Ashraf fled; his army melted away and was attacked everywhere by the local tribes, and finally Ashraf himself was slain by 'Abd Allah Khān Bāsā. He was a brave warrior but unsuited by nature for the rule of a great country. Very few of the Ghailais ever found their way back to their native land. The tribe relapsed into obscurity and has never since produced a ruler with the exception of Aḥmad Khān, a Sultanān Khān of Ghailai who obtained ephemeral power at Tabriz between 1166 and 1169 (1753 to 1756) and disputed the supremacy with Karim Khān Zand, by whom he was defeated and captured, but well treated. In Afghanistan, after the time of Nādir Shah, the power fell into the hands of the Durrānis and the Ghailais have been obliged to submit to their rule from the time of Ahmad Shah to the present day. Nādir Shah took the Durrānis into favour and expelled the Ghailais from the lands which they had occupied near Kandahār. They were nominally banished to the Herāt country, but soon in reality to have returned to their old homes near Ghuristan, and were settled in the Kābul province, still part of the Moghul Empire of India. It was this settlement which led to Nādir Shah's invasion of Kābul, which was followed by that of India itself. In the disputes which took place between the members of the Sadžāi family after Timūr Shah's death the Ghailais took the side of Shah Shujā against Mahmūd and assisted him to take Kābul in 1218 (1803). The celebrated Bārakzai chief Pānda Khān, father of Dost Muhammad, married a Ghailai wife among others, and her sons Khandil, Pārdī, Sherdil and Mīrādī long held possession of Kīna nr. Kandahār and had great influence with the Ghailai tribe. In more modern times the principal incidents in their history are the battle of Ahmad Khel (1850) when a Ghailai force attacked and was defeated by the British force under Stewart which was marching from Kandahār to Kābul, and the rebellion against the Emir 'Abd al-Rahman in 1856 (see Art. ABD AL-RAMAN KHAN, i. 60).

The Ghailais have a very democratic constitution and pay little obedience to their nominal chiefs. They are divided into two main sections known as Turān and Burhān (or Ibrāhīmzai). (Possibly some of them are of Turkish origin as implied by the name Turān). Each of these sections comprises several important clans: among the Turān the principal are Hūt (from which the Persian invaders sprang) and the Tōkhi. The Nāsir and Khārtū are sometimes included, but they are generally considered not to be Ghailais at all. Among the Burhān the principal are the Sulaiman-khel (now the most important of all Ghailai clans) the Tarakki, the Andar, the Išāık, and others of minor importance.

**GHĀNA, an ancient town in the Western part of Persia which has now disappeared. According to Barth it lay in 18° N. Lat. and 7° 8' W. Long. (Greenw.) not far from Wajīna. M. Delafose however, relying on certain statements by Arab geographers, notably al-Bakri, places Ghāna in the Awsār district within the triangle Wajīna, Nema, Baskūšī, i.e. about 240 miles north of the Niger on the middle of Sun-sanding; Martin Hartmann (and this is also Dusborough-Coleby's opinion) thinks that Ghāna must have been nearer the Niger, not far from Timbuktu. [Cf. in addition J. Marquet, *Die Perso-Sammarke des Nieders. Reichsmus., J. Volker, Kunde (Leiden 1912, where this question is fully discussed, particularly pp. exx et seq. and cxlv et seq.; Editors].

Barth and Delafose agree in placing the foundation of Ghāna about 300 A.D. and ascribe it to men of some white race, Barth suggests that Fulbe. Delafose on the other hand makes the bold suggestion that immigrant Jewish-Syrian tribes, from Cyrenaica were founders. One of the leaders of these immigrants named Karrar established himself in Kāna and founded a state there which remained under the rule of his descendants till about the end of the viii. century. This dynasty was succeeded by another of Soninke negroes whose first ruler was called Kaya-Maghān. His successors, the Sissou-Tankara extended their kingdom in the east as far as the Niger, in the west to the Atlantic Ocean, in the south to Tekār and in the north to the Sahara. In the x. century these kings had to wage long wars with the Berbers who had settled in Tagant, notably the Lemptane, the lords of Awdghošt (q.v., i. 516). But they finally won the upper hand, took the town of Awdghošt in 900 A.D. and elevated a negro as governor there. During the next fifty years the kingdom of Ghāna was the most powerful state in the Sudan.

According to al-Bakri's description (written in 1065-1068) Ghāna consisted of two townships in a plain. One of these was inhabited by Muslims and contained twelve mosques and numbered jurists and other scholars among its inhabitants. The other town six miles distant was the royal residence. The king's abode consisted of a palace and a number of huts with round roofs; a wall enclosed the whole. Near the royal court of justice was a mosque allotted to Muslims who appeared as witnesses. The houses were built of stone, probably the only ones of their kind in the Sudan, or of the wood of the gum tree. The royal residence had received the name ghāba (the wood) from the woods around it. In these woods were the dwellings of the magicians and priests, whose duty it was to guard the idols. There also were the royal tombs and the prisons. The people like their rulers were both worshipers, but the latter thought highly of Muslims and therefore chose his interpreters, his treasurer, and the majority of his ministers from among them.

Its situation between the Sudan and Sahara made Ghāna an important trading centre at an early period. Copper and clothstuffs were imported from
the Maghrib, while caravans laden with salt came from the Sahara. The most important article of commerce however was the gold obtained in the mines of Wangara (the area drained by the Upper Senegal and the Falémé), which the merchants obtained in Ghirâr, eighteen days' journey from Ghâna.

In spite of its wealth and power and although al-Bakr says that the king commanded 200,000 soldiers, including 40,000 archers, Ghâna could not resist the attacks of the Almoravids. 'Abd Allah b. Yasîn [q.v., i, 32b-33a] seized the town of Awadghin in 446 (1054-1055). While one section of the Almoravids were conquering the Maghrib, other troops invaded the Sûdân under Abû Bakr. After fifteen years of war Abû Bakr finally succeeded in taking Ghâna in 1076. The inhabitants in part were forced to adopt Islam and in part massacred. The king had to pay tribute. The death of Abû Bakr gained the kings of Ghâna their independence once more but did not restore their former power. The tributary lands regained their independence one by one, so that at the end of the 12th century A.D., the state of Ghâna only consisted of Awkâr and Basakâmû. It led a bare existence for a century more until, in the year 1203, Sumangûrû-Kante, chief of the Sûsî conquered Ghâna and incorporated it in his dominions. Soon afterwards a number of the inhabitants, led by a Shaikh named Ismâ'iî, left the town and founded Wâlata at some distance to the northwest. Finally in the year 1240 the Malinké chief Sundjata overthrew the kingdom of the Sûsî and levelled Ghâna to the ground.

**GHÂNI (v.),** "the self-sufficing", one of the beautiful names of God. Cf. ALÎ, i, 304.

**GHÂNI b. Âwâr, a tribe in North Arabia**, a branch of the Kais b. 'Âilân and related to the Ghaţâfân [q.v., i, 144b-145a]. They lived around Himâ Darîa in Nadjî and were neighbours of the Taîy with whom they were constantly at feud. In the time of the Gâshânîya they wor-shipped the idols al-Lat, Manat and al-‘Uzâ, all of whom are mentioned in the Korân (Sûra II, i, 2). The great pre-Islamic poet Tufâlî b. Âwâr, called Tufâlî al-Khail (on account of his skill in depicting the horse) belonged to the Ghâni.

Among the settlements of the Ghâni were: Ayyâb, Awâlî, Adhûrûtâ. Banû Dhî-‘Adî, Amîd Ghiyâfat, Duqâyîr, Ghâma, Huç (a fairly large tract in the W. of Himâ Darîa), Kiunless, Ma’dîn al-Awadîn, Mi’nâ, Mûsîhî, Sâ’d, al-Shâbî (between A’brak al-‘Azâf and Medina), Tûrân. Among the mountains, that belonged to them, are mentioned: Ufâkh (a large mountain), Kabîd, Kabîsh La-

---

**GHÂNI,** Takhallûs of the Persian poet Muhâmmad Tâhir at Kashfîr, who died in 1079 (1668-1669). His *Dîwân* was printed in 1261 (1845) and 1887 at Lakhmâr (photographed).

**GHIJÂNA,** spoils of war, by *zahîma* Muslim scholars mean the weapons, horses and all other movable possessions taken in battle from conquered unbelievers (cf. Fât. ii, 38b et seq.). Four-fifths of the booty were to be divided among the troopers, who were present at the battle whether they actually fought in it or not. Horsemen could claim a share three times as large (according to Abû Hanîfa's view only twice) as that of a foot-soldier; one who had slain an enemy in battle also received his equipment (*Sâlik*).

The remaining fifth belongs to Allah: “Know that a fifth of what ye have won belongs to Allah — to his apostle, his family, to the orphans, the needy, and the traveller — if ye believe in Allah”. This verse in the Korân (Sûra viii, 42), was revealed shortly after the battle of Badr. From ancient times Arab chiefs had been accustomed to receive a certain portion of the booty and it was thus nothing new when the Prophet had one fifth of the *zahîma* granted him in God's name in this verse of the Korân to defray the expenses of the state.

After Muhammad's death the Imam was at first considered qualified to apply the fifth of the spoils, in the way that seemed to him best to further the general interest of the Muslims. This was also the teaching of Malik Ibn Anas. But most of the later Muslim scholars have interpreted Korân viii, 42 literally. In their view the fifth allotted to Allah must be divided into five equal portions among the five categories expressly mentioned (in Abû Hanîfa's view however only among three of the categories mentioned in Korân viii, 42: the orphan, the needy and the traveller); the portion originally allotted to the Prophet himself is, according to the Shaîth school, to be applied to the general good of the Muslim community. Prisoners of war are also included in the *zahîma*.
GHAJINA -- GHARDJISTAN.

Unbelievers, who are taken prisoners of war by Muslims — women and children as well as men — are divided as slaves among the troops who are entitled to the booty. The Imam may, however, dispose of freeborn, male, adult prisoners of war in other ways. He can, as the good of the Muslims demands it, also set them free on payment of 400 dinars or surrender of any amount of property. He can exchange them for captured Muslims, or on the other hand he may put them to death: according to Abu Hanifa, however, he may not set them free.

The rules regulating the division of gharnā, in the view of most Muslim scholars, do not apply to the division of lands in the conquered countries (cf. FAY, ii. 39).

(Th. W. Juyonoll.)

GHANĪMĀT, MUHAMMAD AKRAM, a Persian poet, who was governor of Lahore from 1106—1108 (1695—1697). He is the author of a Mathnawī, very popular in India called Naṣīr-i Ṭabād or Shāhīd-ā ‘Āzī (lithographed at Lucknow).

GHRĀB and Magribī, i.e. v. are synonymous, and the opposites of “Shārqiyy” and “Mashriqiyy.” Gharāb is a modern gharāb, Magribī being derived from the same verb in the sense of “to set,” used of the sun or of a star. Then both come to mean the place of setting, the West. The dual, as used in the Korān, 45, v. 17, in the expression “the Lord of the Mashriq and the Lord of the Magribī” means the two extreme points at which the sun appears to set, the most northern in summer (26° N. in Central Arabia) and the most southern in winter (26° S. in Central Arabia). The plural, on the other hand, as used in the Korān, 70, v. 40, “the Lord of the Mashriq and the Magribī” denotes the daily points of setting of the sun between these extreme points. There are, therefore, one hundred and eighty of these.

Geographically, Gharāb is used as a name of Morocco or of the northern part thereof. It survives in the name of the southern province of Portugal, Algarve, which occurs also in the plural, Algarves for the province just named together with the north-western part of Morocco.

The district south of Bāiyūr in Syria is also named al-Gharāb.

(Th. H. Weir.)

GIBRIYA, A PROVINCE IN THE DELTA OF EGYPT, lying between the Rosetta and Damietta arms of the Nile, bounded by the north by the sea, in the south by the Menāfiya (q.v.). It has existed since the division of Egypt into dīmāl (cf. Becker in the article EGYPT, section 2 et seq.). According to Abu Šālah it was divided into 149 districts, included 15 villages and yielded a revenue of 470,955 dinars. When the administrative and financial were increased in size, the Ḥusayn ibn Samad and Dandijā (q.v.) were incorporated in the Gbriya province, so that Ibn Dīfān about 250 years later mentions 471 villages and a revenue of 1,844,080 dinars. Kalkashtani praises the great fertility and flourishing condition of the province. At the present day (according to Poinet Bey, 1899) it has 1,297,656 inhabitants, 515 towns and villages and is divided into the following 11 circles (mahārik): 1. Burāli; 2. Sīrāt; 3. Deblāk; 4. Fīlān; 5. Kāf al-Shāb; 6. Kāf al-Zayāt; 7. Mājjala al-Kubār; 8. Sūr; 9. Tāltāk; 10. Taqta; 11. Zafarī (q.v.).

GHADEER, a town in Algeria, s. Ait. Smar.

GHRĪB (q.v.), strange, rare, foreign”, whence a technical term in lexicography for rare words, in the Korān and Hadith; in the science of Tradition for such traditions as are isolated, but not from one another. From the latter, for the modern custom ofimitation. Cf. the dictionaries.

GHRĀM or GHRIM, i.e. debtor. The ghārāb is formally claim a share of the yield of the zākāt if he has brought the debt upon himself for a legitimate purpose and especially if he has voluntarily taken upon himself to pay it off “for God’s sake.” Cf. Korān ix. 60.

In some districts of Sumatra people who leave their homes to study law, are regarded as ghārīm; they receive something from the zākāt. See Snouck Hurgronje, Die Acheh, 1. 269.

(Th. H. Weir.)

GHAJISTAN (GHAJISTAN, GHAJISTAN), a tract on the upper valley of the Murghab in Afghan Turkestan, it seems to have corresponded with the country now occupied by the Fīrōzkūhīs, although a passage in the Masālik wa Manālik speaks of the town of Bāamūnā being on a mountain from which flows the river which passes through Ghajistān, which if correct would locate Ghajistān on the Surkhab River; Bāamūnā however seems to have been rather the name of a country than a town, and Ghajistān was undoubtedly further west, north of Ghur and close to the Ghirī capital Fīrōzkuh, from which the modern Fīrōzkūhīs probably derive their name. When Khāsraw Malik the last of the Ghaznavids was taken prisoner, he was taken to Fīrōzkuh and imprisoned in the fort of Balkarw in Ghajistān, and we learn that Fīrōz son of Yezdijird fled from Surjistan to Turkistan by way of Ghajistān.

Ghajistān was a separate state under its own rulers who bore the title of Shāh i.e. king (from Old-Iranian Ḥāshāhrīya, cf. Marquart, o. e. and see BUMVAN i. 634). They were under the suzerainty of the Sāmaidīs, and afterwards of the Ghaznavides. Mahmūd received the submission of the Shāh in 389 H. and was again at war there in 401 when his son Māstūd took part in the expedition. The Tādīq leader Warmēch or Warmēsh-bat (apparently not yet converted to Islam) had had to surrender the castles he had taken in Ghajistān. The Shāh is stated to have sold his rights to Mahmūd and died in imprisonment in 406. The dynasty however seems to have continued, for Bāhi al-Dīn Sām, who
began to reign at Firuzkoh in 544, made an alliance with the Shans of Ghurdistan; he built the forts of Bīndār and Bīrār in that country, and it afterwards formed part of the Ghūr kingdom. When 'Ali al-Dīn Dājahānīzād attacked Ghazni, he assembled the forces of Ghūr and Ghurdistant. He afterwards made over the kingdom of Khwārizm to his half-brother Fakhr al-Dīn, and it remained separate from Ghūr until the invasion of 'Ali al-Dīn Khwārizmī. After the disappearance of the Ghūrs, Ghurdistant no longer formed a separate province, and its name does not appear to be known to modern travellers.

**Ghashb**, i.e. usurpation. By this term the law in general understands the illegal taking possession and illegitimate exercise of the rights of another (e.g. when some one rides on a horse without the owner's permission). The purloining of a thing in secret is not called ghōby but akrih (theft).

In learned discussions (ādab al-khath) ghāshb, means to seize suddenly upon some one's words and contest his opinion without giving him time to explain himself fully.

**Bibliography:** Lādurān, Tarīfet (ed. Flugel), p. 108: E. Sachau, Mūhammad, Recht nach Schiitener Lehr, p. 475 et seq. (W. Jevonolle.)

**Ghashiya** (Ar.), "the covering," particularly a covering over a saddle. Among the Saljūqs, the royal ghashiya was one of the insignia of royal rank and was carried before the ruler in public processions. C. C. H. Becker, La Ghashia comme emblème de la royauté in the Centenaire de M. Amsar, II, 148 et seq. — Ghashiya is also used metaphorically of a great misfortune that overthrows some one: in this sense it is found in Sūrā lxxxviii. 1 for the day of the last judgment or for the fires of hell and from this the feel has received the name Ghashiyā.

**Ghashān** (Ghashānī), an Arab dynasty in Syria, of Yamani origin. They were monophysite Christians and were under the suzerainty of the Byzantine Emperors, whose frontiers they had to defend against the Persians and their vassals, the Lamhids of Hira. Their rule extended approximately over the province of Arabia (roughly the Ḥawrān district and Rābā'), Phoenicia ad Libanum, Palestina Prima and Secunda. In contrast to their relatives and natural enemies, the Lamhids, to whom they were far superior in culture from their contact with Greek civilization, the "Ghashānī" had no fixed residence. Dājahān [q. v., 1. 1039 et seq.] with the town of Dājahān [q. v., q. v., 986 et seq.] in Palestina Secunda is sometimes mentioned by the Arab poets as their capital, and sometimes Dīklīk [q. v., ii. 1035] et seq.] near Damascus.

The history of this dynasty is one of the most obscure portions of Arab history. The statements of the Arab historians Ḥanẓa Ḥabshānī, Ibn Ku-taibah, Ibn al-Kalbī, Mas'ūdī, Abū 'l-Fidāh (Tabari hardly mentions them) concerning them are limited to a few lists of rulers and brief accounts which are full of contradictions; e.g. Ḥanẓa and Abū 'l-Fidāh give thirty-one rulers of this dynasty, while Ibn Ku-taibah and Mas'ūdī only give ten of them: Ḥanẓa makes king Ḥārīth b. Ḥabshānī [q. v.] about whom we are fairly well informed by the contemporary Byzantine chronicler Nābālūs, Procopius, Theophanes etc., reign only ten years, while as a matter of fact he reigned forty years. According to the usual Arab tradition the Ghashānī were descended from the South Arabian tribe of Aṣz. The latter is said to have left the Yamani after the breaking of the dam at Mārib and to have gone to Mecca (Bāṭn Mārib near Mecca). At a later period one section of the Aṣz led by 'Amr b. 'Amir Murawaiya went to Syria; they are said to have received the name Ghassān from a stay of some considerable time at the pond of Ghassān in the Syrian desert (this name however had already been borne by Māzīd son of Aṣz). According to Ḥanẓa and Ibn Ku-taibah, it was Šaḥlāb b. 'Amr, a great grandson of 'Amr b. 'Amir, who led them to Syria. Dījahān (Greek Ɗαψάνης, a son of Dījahān) was considered the founder of the dynasty. In Syria they had to pay an annual tribute to the Roman phylarchs there, the Ḫādżima of the tribe of Salḥ, probably descendants of the Syrian phylarch Ṭāḥās, mentioned by the ecclesiastical historian Sozomenus. Ultimately they refused to pay this, conquered the Ḫādżima and took their place, in which they were recognized by the Byzantine emperor Anastasius (probably about the end of the fifth century A.D.), who made use of them as frontier guards against the Lakhmids of Ḥira.

The most important and the first ruler of this dynasty, whose existence is certain, was al-Ḥārīth b. Dījahān (Greek Ɗάψανης τοῦ γιάρας), an enthusiastic patron and protector of the monophysite church. His genealogy is al-Ḥārīth b. Dījahān b. al-Ḥārīth b. Ṭaḥlāb b. 'Amr b. Dījahān. His father Dījahān may be identified with the Ṭeḥlās mentioned by the chronicler Theophanes as making raids into Palestine about the end of the fifth century A.D. In 529 A.D. he was appointed lord over all the Arab tribes in Syria by the Emperor Justinian and received the titles Phylarch and Patrician, the highest rank next to the Emperor in Byzantium at that time. In the same year he took part in the suppression of the rebellion of the Samaritans on the side of the Byzantines. The greater part of his reign was occupied with wars with al-Mundhir III. of Ḥira. In 548 he was victorious over his opponent. About ten years later he again quarrelled with al-Mundhir over the so-called "Strata," the land on both sides of the military road from Damascus to Palmyra as far as Serjopolis, to which both laid claim. In 541 al-Ḥārīth fought in the Byzantine army under Belisarius in Mesopotamia. But when he returned home to Syria by a different route from the Byzantine army without having won any successes worthy of mention, he was accused of treachery to the imperial cause. In a later war between al-Ḥārīth and al-Mundhir (about 544) the latter took prisoner a son of the former and sacrificed him to the goddess al-Ġ-Za, the Arab Aphrodite. In June 554 al-Ḥārīth won a decisive victory over al-Mundhir, who fell in battle in the district of Kimmēsēr (Chaléis), probably at al-Ḥiyyān. This battle is perhaps identical with that celebrated by the Arabs.
as the “Day of Halima” (according to the common Arab tradition, so called because Halima, daughter of al-Harith, anointed the warriors with her own hands with khaâls, a perfume containing saffron; but it is very probably a place-name). His son and successor afterwards sought to avenge al-Mundhir’s death and made a raid into Syria. In 563 al-Harith went to Constantinople to give an account of these doings to the Emperor and to advise what measures should be taken. He also took advantage of his stay there to discuss the appointment of his successor with the Emperor. He died in 569 or 570. We may here mention the Arab tradition according to which al-Harith besieged the Jew al-Samawal b. ʿAdîy in his citadel of Abkal in Taima and slew his son because al-Samawal would not over the cucumbers left with him by the poet ImruʾIʾ ʿIšâq [q.v.] before his journey to Constantinople.

Al-Harith was succeeded by his son al-Mundhir (Greek Ἀλλάμονδηρ) who, after his accession the Persian Arabs invaded the Ghassanid territory. Al-Mundhir defeated their king Kabbū, apparently in the battle of ʿAin Uthāgh so often celebrated by Arab poets. The Emperor Justinus was not well disposed to al-Mundhir, who, like his father, was an ardent protector of the Monophysites, and tried to have him assassinated by underhand means. After the attempt on him had failed, al-Mundhir rebelled and refused allegiance to the Emperor for three years. On account of the renewed inroads of Persian Arabs into Byzantine territory, the Byzantines were forced to make peace with al-Mundhir and供应e by several unsuccessful overtures at the tomb of St. Servias in Raṣāṭ (Sergiopolis) by a special envoy from Constantinople. Two years after Justin’s death (568) al-Mundhir came with two of his sons to Constantinople and was received with great honour by Tiberius from whom he received the actual crown (tâbû) in place of the previous diadem (kīlūd). In Constantinople he also held an assembly of his co-religionists and endeavoured to smooth over the disputes among them. In the same year al-Mundhir raid Hira, burnt the town and brought back rich booty. This success did not serve to dissipate the general mistrust of him or the suspicion that he had a treacherous understanding with the enemy. He was sent away into Persian territory, undertook with Mauricius, Comes of Anatolia, and the Syrian Magnus was commissioned to make him prisoner. Magnus was early able to attain his end at the dedication of a church in the village of Huwwâr (between Damasacus and Palmyra), to which al-Mundhir had come as a guest, and he was taken prisoner to Constantinople (581). The incarceration of al-Mundhir and the suspension of the payment of subsidies (anomone) at the same time to his family provoked his four sons under the leadership of the eldest, al-Nuʿmân (Greek Νουμέναν, who after a raid Byzantine territory which they laid waste in a terrible fashion. The Emperor Tiberius therefore equipped an expedition under the leadership of the above-mentioned Syrian Magnus. The latter succeeded in capturing al-Nuʿmân who was likewise brought to Constantinople.

After the capture of al-Mundhir and al-Nuʿmân anarchy broke out in the Syrian desert, the various tribes chose their own chiefs and some went over to the Persians. With the capture of Jerusalem and Damasacus (613-614) by the Sassanian Khosrow Parviz, the power of the Ghassanids seems also to have collapsed. Whether the phylarchate was restored on the reconquest of Syria by the Byzantines (629) is uncertain. According to the usual Arab tradition Djabala b. Ayham was the last king of the house of Ghassân. In the battle of the Yanmâm (655) he fought on the right side of the emperor Heraclius against the Muslims. When the defeated Emperor then retired to Constantinople, Djabala is said to have submitted to the Caliph ʿUmar and adopted Islam but to have afterwards taken revenge with the Byzantines in Constantinople and adopted Christianity again.

**GHÂT, a town in the Sahara of Tripolitania, belonging to the sanjak of Fezzân, 400 miles S.S.E. of Ghadames and 280 W.S.W. of Murzûk in 24° 57’ N. lat. and 10° 17’ 30” E. Long. (Greenw.), at the intersection of the caravan routes which lead to the Südän via Fezzân and Ghadames. This exceptional position at the intersection of important commercial routes has caused it to become one of the busiest trade centres in the Sahara. It is one of the starting points for trade with Central Africa.

Its toponymy is a mix of Arabic and Berber words. The town is well described accurately from the accounts of the European explorers who have visited it, notably Duveyrier and Erwin von Bary. There is nothing remarkable in it. Like all towns in the Sahara it is surrounded by a wall with six gates which wind around it; three of these bear the name Tamelghat in common, a fourth is the gate of Tagelghat, a fifth Bâb Kelala and the sixth is Bâb al-Khair. The streets are narrow,
tortuous and full of sand. The houses are very primitive. Among the public buildings are a school and a mosque with a minaret. In the centre of the town is a little square called Idrisi, from which radiate six streets to the six gates, cutting the town into six sections.

Ghâât owes its importance entirely to the caravan traffic. The town itself has barely 600 houses and 4000 inhabitants. Its suburbs are the two little villages al-Tâdarmât and Tûn, about half a mile beyond the town wall.

The ground between these villages and Ghâât is a scene of great animation when the caravans arrive from the Sudân. Dates, skins, cotton-stuffs, salt and natron are the principal articles traded here. Industry is limited to local needs. The chief manufactures are furs, wooden vessels, trappings and cases for weapons.

The population of Ghâât consists of about equal elements of Berbers, Arabs and Sudânis. It includes: a. The Kil Ghâât or Ghââtans proper, grouped into 8 sections: Inmekammazen, Kil Khifa, Yadjenen, Kil Talâq, Kil Yanan, Kil Tarâmghit, Kil Turirt, Kil Tata; b. Colonies of foreign traders, chiefly from Ghââmâse; c. Transitory bodies of Tuareg, who are caravan leaders and lastly; d. Harrâtânine, negroes who till the soil.

The Ghââtains speak Arabic and Hausa in their business transactions with foreigners. Among themselves they use a peculiar Berber dialect called Tumagh, which is not connected with the groups of Tuareg dialects.

For the history of Ghâât there is an absolute dearth of documents. Its origins are obscure. Duveyrier (Touareg du Nord, p. 267) proposes to identify it with the oppidum of Rapas mentioned by Pline the Elder among the centres conquered by the Roman general Cornelius Ballbus about the year 19 a. d., but his hypothesis, which is not based on any certain facts, has still to be verified. Nor can any more be made of the local legends which attribute the foundation of the town to the Berber tribe of Yadjenen with the help of the Kil Khifa, the Kil Tata, the Kil Talâq and the Inmekammazen. There are no historical texts to support this tradition.

Ghâât in fact only began to play a part in the history of the Sahara about the middle of the sixteenth century, at the time of the great expeditions of exploration in the Sahara. The majority of the travellers who have attempted to reach Central Africa from Tripoli have chosen it as the centre of their negotiations with the Tuaregs, from whom it was necessary to obtain permission to traverse the Sudân.

From 1845 to 1876 it was successively visited by Richardson (1845), Barth, Richardson and Overweg (1850), Jactat Bî Delâ (1858), Duveyrier (1860) and Edwin von Bary (1876-1877). Before it was ceded to the Turks by Italy, it was ruled by a Berber chief whose power was hereditary, according to the Tuareg custom.

In 1875 the Turks took advantage of a war which broke out between the Alger and Hoggar, two Tuareg tribes, to instal their authority in Ghâât. It passed from them for a brief period in 1886 as a result of a rebellion of the Algiers, fomented by a sheik named Al Farâk. Ghâât fell into the hands of the Tuareg and a portion of the garrison was massacred. In the end the Alger made peace with the Turks and the town was again occupied by Ottoman troops. It was governed by a Kâîmâkchân for civil matters and by a Nâzîrî for military affairs.

On the Berber dialect spoken at Ghâât, cf. Stanhope Freeman, A Grammatical Sketch of the Tamahug language (London, 1862); Rene Basset, Notes de lexicographie berbere, 1er serie (Paris, 1887); Krause, Sprache von Ghât in der Sahara (Leipzig, 1884); Nehill, Einude sur le dialecte de Ghât (Paris, 1909).

(NEILL.)

GHÂÂTÂFÂN, thought by Reiske to denote a kind of bird, apparently in error (Lane), the name of two Arab tribes, Ghââtâfân b. Sa‘d b. Malik b. Hanâm b. Dhuqâm, a south Arabian tribe, and Ghââtâfân b. Sa‘d b. Kâ‘îm ‘Alîan. The latter alone is important. The pasturing-grounds of the Ka‘îsam Ghââtâfân extended eastwards from Khaiabar and the borders of the Hijâţ to Adhân and Salâm Mountains of the Banû ‘Asî. (For their camping-places see Wustenfeld, Genealog. Tabellen. Register, p. 171.) Ghââtâfân was divided into two large branches, ‘Ashqâja, which inhabited the country in the neighbourhood of Yathrib, and Bahshl, subdivided into ‘Abs and Dhubyân, whose territory lay round about Sharabba and Rabaghâ. Their neighbours were branches of Khâsâfân b. Kâ‘îm ‘Alîan, the most important being Sulaim on their south border, and further south Hâwâzân, brother-tribe to Sulaim.

History: The history of the tribes of Khâsâfân and Ghââtâfân commences from the middle of the sixth century, when the dominion of the Yemen over the Ma‘add tribes came to an end. The chief of all Ghââtâfân at this time was Zuhair b. Dja’dhrama of ‘Abs [q. v., i. 73]. He held the title of king (makk), and received tribute from Hâwâzân also. He was assassinated by a Hâwâzân, who became independent chief of that tribe. Zuhair was succeeded by his son Kâ‘îm, as chief of ‘Abs only. Dhubyân, choosing Hadhâsha b. Badr of Fâzâra, who was much the more powerful and influential of the two. The endeavours of Kâ‘îm to avenge the death of his father were interrupted by the famous war of the Horse-race between the tribes of ‘Abs and Dhubyân (see art. ‘ABS). During the war Kâ‘îm, who had killed
Zuhair was himself slain by Ḥārith b. Zālim al-Ḏubyānī, whilst both of them were guests of the Lakhmid prince. Ḥārith took refuge with Ḥaṭafān who refused him protection, but after some wanderings he returned secretly to them, but brought upon them the vengeance of ‘Umayr b. ‘Abd al-Wadha, whose son he had unwittingly killed. Owing to the slaughter of Ḥujāfā and other chiefs by ‘Abs, all the remaining clans of Ḥaṭafān became united against ‘Abs, who migrated and after many wanderings became guests of ‘Amîr b. Sa‘āda who were at war with Tamim. Ḍhubyān joined Tamim. Thus two tribal wars became merged in one and the situation may have been further complicated by the outbreak of a third war between Ḥawāzin and Kināna (see art. FIJKĀ). ‘Abs having quarrelled with each of their hosts in turn became reconciled to the rest of Ḥaṭafān.

No sooner had Ḥaṭafān become re-united than they were involved in a war with Khaṣfa (Ḥawāzin and Sulaim), which consisted largely of skirmishes and assassinations rather than pitched battles and was ended only with the rise of the power of Muḥammad. A principal figure in the early stages of this war is that of Darād b. al-Ṣimma [q.v., i. 1082] of Ḥawāzin [q.v.]. At that time the opponents of Ḥaṭafān were chiefly Ḥawāzin, but in the later stages, Darād growing old, Sulaim took the lead under Mu‘awiyah and Ṣakhir, the brothers of the poetess al-Khansa‘ [q.v.].

When this war had burned itself out Ḥaṭafān joined with Sulaim against the rising power of Muḥammad. Year after year mutual raiding took place between these two opposing powers. In the second year of the Ḥidrja Ḥaṭafān and Sulaim joined in an attack upon Madina, but Muḥammad marching out to Ka‘barat al-Ku‘dār dispersed them. In the following year occurred the expedition to Ḥubi Ḍār which had a similar result, Ḥaṭafān again retiring into their mountains. And again in the fourth or beginning of the fifth year the raid of Ḍhāt al-Rikā produced the same result. In the fifth year also Ḥaṭafān was amongst the tribes which took part in the investment of Madina known as the battle of the Trench. In the following year ‘Uyayna, the chieftain of Fazāra, raided the camels of Muḥammad close to the city. Muḥammad pursued the robbers as far as Ḍhū Karad. In the seventh year Ḥaṭafān set out to the relief of Khābaṣ but finding Muḥammad stationed between them and the town they fell back. Muḥammad's guide in this expedition was an Asṭādī who also divulged the whereabouts of a party of Ḥaṭafān against whom Bashir b. Sa‘d was sent. At last in the year viii. Sulaim threw in their lot with the Muslims and was followed by Ḥaṭafān, and the wisdom of their action was shown by the conquest of Mecca shortly afterwards.

That their faith was not very deep is also shown by the celerity with which they fell away upon the death of Muḥammad, and the leading part played by ‘Uyayna b. Ḥiṣn, the Fazāran chief, together with ‘Abs and Ḏubysān in threatening Madina, the Asṭādī ‘branch alone holding back. Their attack on the city was twice repulsed by Abū Bakr. In retaliation they put to death those of their number who were Muslims. As soon as reinforcements had reached Abū Bakr (through the reduction of Tripolī), he again attacked them and drove them out of the district of Ra‘adān, in which they had congregated. They took themselves to Ṭula‘a, the prophet of the Asad tribe, and, when the latter was defeated by Kha‘lid b. al-Walid in the battle of Burāq, Ḥaṭafān, and especially Fazāra under ‘Uyayna, bore the brunt of the fighting. Ḥaṭafān then once more became Musliμ, and those who had put to death the faithful believers of their tribe having been executed, were pardoned.

In the year 14 a.H. we find the tribesmen of Ḥaṭafān swelling the forces of Sa‘d b. Abī Wālī. They took part in the battle of the Camel in the year 56, and sided with the Umayyads against the ‘Abbasids, being present at the battle of the Zab in 132.

**Ghawāzī** (N.), Plur. of Ghawāzī [q.v.].

**Al-Ghawār** is, "depression", "low lying ground among hills", is often found as an Arab geographical term.

1. The best known is Ghaww in Palestine, the Ḥadīk of the Greeks, i.e. the deep hollow through which the Jordan flows, the south end of which forms the Dead Sea. The Arab geographers define its boundaries as Tiberias in the north and Zughar in the south. The portion north of Baisān belonged to the province of al-‘Urdum, the remainder to Filastīn [q.v., ii. 107 et seq.]

It is described as a very hot, unhealthy district with bad water, but there were a number of springs, rivers, palm-groves and villages in it. Ya‘qūb says that its principal product was sugar-cane, Idrīs indigo. Besides Jericho, the capital, the following towns are mentioned, Tiberias, Baisān, Amātā and Zughar. Al-‘Arabāt in the Ghaww of Filastīn, where, according to Ibn Ishaq (Ṭabarī, i. 2125; 6; on the other hand 2107, 10 Ghaww al-‘Arabāt). Amr b. al-‘Āasi joined the army which came from east of Jordan before the battle of Adjarān, is probably to be sought for at the south end of the Dead Sea.

2. Another Ghaww is Ghaww Tihāmat al-Yaman or Ghaww Tihāma (Faradaq, ed. Boucher, p. 20, 143; also as a dual: Ghawr Tihāmah (Ṭabarī, ii. 210, 11)). The statements by the geographers regarding it are very vague, for it is sometimes identified with Tihāma and sometimes described as a district adjoining it; for example, according to Kūdām b. Ḍafar it stretched from Najjād to the extreme borders of Tihāma; according to a passage in al-Rasīl it lay between Tihāma (the district from Ḍhāt ‘Irk to two days’ journey beyond Mecca) and al-Sarāṭ.

**Ghwath** (succeur, deliverance) is an epithet of the Kūth [q.v.], the head of the Shi‘ī hierarchy of saints. It is used of him only when he is thought of as one whose help is sought; but that, from the nature of the Kūth, is practically always. Thus it is a normal sequent to Kūth. Others say that the Ghwath is immediately before the Kūth in the hierarchy.

**The Encyclopaedia of Islam, II.**

GHAZAL (A), a short poem of more than four but less than fifteen lines. The first two have the same rhyme, which is repeated at the end of the fourth, sixth etc. lines; the poet usually mentions his own name (takhallus) in the last line. The matter is usually erotic, but other subjects, wine, spring, fate etc. are not excluded. The form should be the most perfect possible, especially from the point of view of language; vulgar and kakophonous words are to be most rigidly avoided. The ghazal is the kind of poem most favoured in Persian and the Indian and Turkish literature influenced by it.

AL-GHAZALI. (For the evidence at present available on this name see the Journal of the Royal As. Soc., 1902, pp. 18–22. Apparently Ibn al-Samani preferred the double Z). ARAB HAMID MUHAMMAD IBN MUHAMMAD AL-TUSI AL-SHAFI'I was the most original thinker that Islam has produced and its greatest theologian.

1. Life. He was born at Tus in A.H. 450 (A.D. 1058) and was educated there and at Najafabur, especially under the Imam al-Haramain with whom he remained until the Imam's death in 478. A sceptical attitude showed itself in him from the first. Although in a Sufi environment and practicing the Sufi exercises, no impression was made on him by these, and he preferred rather to investigate theological and legal subtleties. This began when he was under twenty; with salat (acceptance of religious dogma on authority) he had broken from his earliest youth. From Najafabur he went to the court of Nizam al-Mulk, the Seljuk waizir, and formed part of his regime of canonicalists and theologians until 484 when he was appointed to teach in the Nizamite madrasa at Bagdad. During this time he became an absolute sceptic, not only as to religion but also as to the possibility of any certain knowledge. This scepticism he never overcame so far as philosophy was concerned. At Bagdad he taught and wrote on canon law; he wrote also controversial books against the Talibuntes (Rämiya, Imamiya, Isma'iliya) Nizam al-Mulk and Malik Shah were assassinated by them in 485. For himself he laboured to recover a posilic intellectual and theological position and from 485 to 487 studied diligently the different schools of thought around him, especially philosophy. Finally he turned seriously to Sunnism. Intellectualism had failed him; what of religious experience? He had returned to belief in God, prophecy and the last judgment — or, as he put it, God had restored to him these beliefs — and fear of that Day of Wrath seized him. From Raddjab to Dhu l-Ka'da 488, he was in the throes of a conversion wrought by terror, and under it he collapsed physically and mentally. Finally, in Dhu l-ka'da he put behind him his brilliant position and worldly ambitions and fled from Bagdad as a wandering dervish. By giving himself to the ascetic and contemplative life he sought peace for his soul and certainty for his mind. And these he gained. From that time his position was pragmatic and he taught that the intellect should only be used to destroy trust in itself and that the only trustworthy knowledge was that gained through experience. A purely philosophical structure could have no base. On that his dialectic was as inexorable as that of a flame. Even the systems of the speculative theologians had no intellectual certainty, although their doctrines were correct. By speculative methods they could not be proved; but only by the direct knowledge with which God floods the heart of the believer. By that personal experience (ma'rifah) the fact of prophetic revelation is established and the truth of the theological structure assured. Yet there can be no question that his thinking had been indefinitely clarified by his philosophical studies and that with him the forms of Greek dialectic made their final entry into Muslim thought. What al-Ash'ari had consciously begun, al-Ghazali wittingly finished. Further, that he used the forms of Greek dialectic to found a pragmatic system is his originality and distinction. The later theologians did not always understand or follow him in this, but modern Islam seems to be recovering his method. That the account which he himself gives of all this in the Munjihin min al-falâd is true cannot be doubted; the philosophical necessity, both for al-Ghazali as an individual and for the development of Muslim thought, both of which had got into a cul-de-sac, is plain. As in al-Ash'ari's case only a great emotional experience can break the fetters of tradition and give the personal force needed to turn the current of the age. Political complications may have helped to bring on his nervous breakdown. Barkiyaruq became Great Seljuk and killed his uncle Tutush immediately before the flight of al-Ghazali, and the Khalifa at whose court al-Ghazali held important place declared for Tutush. Similarly his return to active life in 499 followed the death of Barkiyaruq in 498. About two years he passed in strict retirement in Syria, finally pilgrimaging at the end of 499. Then came nine years of wandering, places, with, from time to time, periods of return to his family and the world. The Ihyā and other books were written, and he preached at Bagdad and taught the Ihyā there and at Damascus. Finally "the Sultan of the time" (Munkid, ed. of 1303, p. 42) compelled him to become a teacher in the Nizamite madrasa at Naisabur, and he consented in Dhu l-Ka'da 499. The times called for some strong re-ordering influence. That he had himself recognized and also that there was need of a powerful and religious-minded ruler who would crush heresy and unbelief. Such a ruler was apparently found in Muhammad, the brother of Barkiyaruq, who became Great Seljuk in 498, and to whom he addressed the original Persian form of his Tihb al-maslah, a manual of ethical guidance for kings. The immediate influence in his recall was, however, Fakhr al-Mulk, the son of his old patron, Nizam al-Mulk, who was waizir at Naisabur to Sandjar, the governor of Khurasan. But he did not long stay in public life. His yearnings to quiet and contemplation continually drew him and there are stories, too, of friction. He returned to Tus and lived there in retirement with some personal disciples, having charge of a madrasa and a Shankh or Sufi monastery.
There he died on the 14th of Djamādž II 505 (Dec. 19th 1111).

2. Doctrine and influence. Although a formative canon lawyer of a rank short only of the first, he yet deposed Fikhr from the position it had usurped, lashed its casuistry and refused it a place as a part of religion. He dealt similarly with the intellectual subtleties of Ḫalīm and especially denounced the tendency to make the faith of the masses a structure of logically demonstrated articles (ḥalilīf). In this he followed the founder of his madhab, al-Shāfīʾī. He opposed the Muta-kallimīn also in the interest of the faith they had developed. All, he taught, who agreed in the broad principles of Islam were believers. This he lays down in his Taḥfīṣa, but he taught also in the Ilāhīm (ed. of 1303, pp. 31, 32, 51, 62) and the Minūzhīs (ed. of 1303, p. 42) that the religion of the unlearned should be protected by the secular arm of the state. These reforms his high rank as a scholar and popularity as a preacher carried through. They have been accepted by the Agreement of the Muslim people (al-Īṣfahānī) and he himself is reckoned as not only the mutu-ṣbhd (renewer) of his century, but as the great restorer of the faith. Of course both canon lawyers and speculative theologians and still continue to spin their systems and to try to enforce them. He also brought philosophy into the open and dissipated the glamour of mystery which had surrounded it. It was simply "thinking", and the philosophers and their systems could be understood by any intelligent man. Further, by philosophy the ultimate and unconditioned could not be reached; there could be no metaphysics on a basis of pure thought. This agnosticism was a development into more perfect form of the system of the later Ashʿarītes. On the positive side he continued the work of al-Kushāfī and gave Sāfīism a firm standing in Muslim orthodoxy. In this al-Ghazzālī marked the second great epoch of development as al-Ašʿarī with his applying of logical argument to the defence of orthodoxy had marked the first. Thus for al-Ghazzālī the basis of all religious certainty was ecstatic experience. By it he and all ṣaḥifīs (those who have direct experiential knowledge, perhaps a translation of "gnostic", v. Bauer, Dogmatik al-Ghazali's, p. 35) learn that the theological positions of the Fathers (al-talaf) are true, and how these should be interpreted. To that age of simple faith he looked back with longing. This led him to what might be called a Biblical theological-study of the Kurʾān and of the record of the teachings of Muhammad. Practically he endeavoured to assimilate men's thought and lead them back to the old ways by preaching the Wrath to come at the Judgment. His own conversion had been under the pressure of fear. Strongly contrasted and forming the paradox of his position is the emphasis which he laid on the love of Allāh. It is part of the contrast between the emotional life of the saints with Allāh which he had known and the inhuman dogmatism of the theological system which he felt compelled to accept. In spite of the curiously intolerant passage as to the faith of the masses referred to above, his influence has been and is for charity, the stimulation of free enquiry and inductive life. His indirect influence on European thought, even the most modern, has also been marked. It flowed through the Pugio Fidei of Ramón Marfí and affected, first, Thomas Aquinas and, later, Pascal. For his alleged relationship to the "Ālids and to the book Ḳaṣfī, see Ṭabārī above (vol. i. p. 9958) and references there and for his real relationship to magic, see Ṭabārī above (vol. i. p. 7708) and Descr. of Ar. and Turk. MSS. in Newberry Library, Chicago, pp. 6 et seq.

3. Sincerity. Even by his contemporaries the reality of his conversion was doubted; the change, it was felt, was so great from the pugnacious, sceptical canonist to the ecstatic saint with his sermons on the fear of God. Later, the philosophers others, hard hit by the dialectic, would be unable to believe that a man who knew philosophy so well should not be, at least secretly, a philosopher, sought in his writings proofs of an esoteric teaching. Two things aided them in that. 1. He had openly preached an economy of teaching and had written a book with that publicly as its title, al-Maṣnūn biʿli al-ghāṭir aḥlāhī — "That which is to be concealed from those who are not worthy of it" — a book, however, in which there is no heretical doctrine. In his Ṭabārī, an answer to attacks on his Ḳaṣfī, he formally defends, with the example of the Prophet and the Companions, the practice of keeping the contents and developments secret from those who are not in a position to understand them and who might thereby be led astray either in faith or in practice (ed. on margin of Ḳāf al-aṣīdā, Cairo 1311, pp. 45, 159-164, 279 et seq.), and Ṭabārī (ed. of 1339, pp. 25 et seq., esp. 30 et seq.) all very important passages on the order in which his books were written; the Miṣḥat (ed. of 1322, pp. 54 et seq.) and the Minūzhīs (ed. of 1328, pp. 21 et seq.) on which the Asbāb of al-Ṣābīn and what a man has a right to keep to himself. And this had really been the practice of Islam from the beginning. Even al-Shāfīʾī, while denouncing kalām, had admitted that some should study it for the defence of the faith. The position of Ibn Khaldūn, at the extreme end of the development, was similar, only in his day the need had passed (ed. Quar., i. 43; de Slan, i. 63). It was always a fard kifaya and not a fard 'ain and had a similar origin with the bi'a kif'a of al-Āṣhārī. Thus the advanced doctrine did not contradict, but only developed, based and deepened the simpler faith, and knowledge of it was open to all who would fit themselves for it. In the end, this led most ironically to the Averroistic doctrine of the two-fold truth. That was only a special case of the multiform truth which Islam has always admitted. 2. Those direct perceptions of religious truths which al-Ghazzālī had reached in ecstasy he was compelled to express in language by means of metaphor and symbol. He teaches consistently that there are ideas which language cannot render in exact terms and the content of which can be suggested only by pictures. When, then, such expressions were examined and held to account as intellectually exact statements, misunderstanding was certain to follow. Thus Ibn Rushd was led by the metaphor of the sun in the Miṣḥat (p. 55) to believe that al-Ghazzālī was there teaching the Neoplatonic doctrine of emanation (ju'ūr). But the context is in the teeth of such an explanation, and the metaphor is one frequently used by al-Ghazzālī to suggest the relationship
between God and the world. On this point and on the *Majātī* generally I would refer to a paper by W. H. T. Gairdner of Cairo, shortly to be published. I am indebted to him also for several chronological and bibliographical suggestions.

4. Works. Our knowledge of al-Ghazâlî's works is still incomplete both as to extent and relative order, not to speak of dating. For lists approximately complete reference can be made to the introduction by the Saiyid al-Murtâda (based on al-Subkî) prefixed to his *Iṣâf al-ṣādā*; a commentary on the *Iṣâf* (ed. Cairo 1341, vol. i. pp. 41–421), and to the Brocklission, *Gesten d. arab. Litt.*, i. pp. 421–426. The following is an attempt at a classified list of the works which have been printed and are accessible. The *Iṣâf* 'ulûm al-ṣin (the title expresses al-Ghazâlî's consciousness of the part the book was to play, cf. Bauer in *Der Islam*, iv. 159 et seq.) as a compendium of his whole system stands by itself, although it does not go into the ultimate details, either on philosophy, kalâm or Şûfîsm. On its date see above. It divides into two parts, each consisting of two quarters (*rubûb*); the first is on external acts of devotion and religious usage, the second upon the inner side. The first is an exhortation of good and evil. The four quarters are *Rubûb al-tahdhîb* (Acts of a creature towards his Lord); *Rubûb al-tahdîd* (uses of life); *Rubûb al-mukâlah* (Destructive matters in life); *Rubûb al-munfîqiyyah* (Saving matters). Each contains ten Books; the first of the forty is on *ṭilm*, the second on kalâm and the last on eschatology. Otherwise all is experiential, traditional and practical. The present writer has translated Book viii. in *Rubû* ii. on the relation of music and singing (*zâni") to the Şûfî ecstasy, in the *Journal of the Royal As. Soc.* for 1901–1902; he has analyzed with extracts Book ii. *Rubû* iii. on the marvels of the human heart, in *Lectures*, x. of his *Religious Attitude*, and Book vi. of *Rubû* iv. on the love of Allâh, in *Hasting's Dict. of Religions*, vol. ii. pp. 677–680. A great part of the *Iṣâf* is also analyzed by Miguel Asin in his *Al-Ghazal*; a translation of the whole work is being prepared by H. Bauer. Another compend of introduction on *ṭilm* in general is his *Fâṭiḥat al-tahdîm*; it resembles the first book of the *Iṣâf*. His remaining printed works may be classified as follows.

1. Canon Law: *Khatâb al-wažîd*, the smallest of his general treatises on fiqh; *Muṭâṣarât min 'ilm al-wâji'f*, written after his return (ed. of 1322, i. pp. 5 et seq.). 2. Logic and Books against the philosophers: *Mi'yar al-ʿilm*, an elaborate treatise on logic; *Muṣâhak al-wâjir*, a smaller book; *Maṣâṣid al-falāṣīfâ*, statement of their teachings on all subjects absolutely demonstrable, projections to be a *ḥikâya* only partly ed. by G. Beer, diss. 1888; *Taḥṣif al-talâṣīfâ*, demonstration that they could not by reason prove their system (cf. de Boer, *Widerspruche der Philosophie*; there are translations also in Asin's *Al-Gazal*, pp. 735–880; also a translation begun by Carra de Vaux in Mainz, vol. xvii.). 3. Contra ʿAtîniyya: *al-Kūṣīs al-muṭâṣām*. 4. Speculative theoy: *Risâla al-budâyah*, incorporated in *Iṣâf* as *Kawād al-ṣâdîd*; an abridged translation of it in H. Bauer, *Die Dogmatik des Ghazalis*, (Halle a. S., 1912); *al-Ikhwâs al-tâbîâ*, an expansion of the preceding and his most elaborate treat- ment of kalâm. 5. Books to be kept from those unfitted for them: *Muṣânât bîhi' al-
GHAZĀLĪ, Muhammad b. Kāli, called GHAZĀLĪ (probably after the gazelle's skin, peculiar to the Shaikhs of many orders), usually quoted as Deli Birāder (crazy brother), an Ottoman poet of the early Sulaimānian age. Born in Brusa he became a professor (muḥādīr) in a Madrasa there, on the completion of his studies, but his bright nature, full of the joy of life, his love of pleasure, his skill as a conversationalist, a ready wit, his extraordinary imperceptibility, an inexhaustible fund of anecdote and a great readiness in versatility marked him out for a life at court as an entertainer and companion to a prince almost without a rival. He therefore soon gave up his academic position and went to Magnesia, the residence of Bāyāzīd II's ill-fated son Korkud. He soon succeeded in becoming the prince's secretary and inseparable companion which he remained till Korkud's execution. After the death of his patron he retired deeply affected to Brusa to the monastery (Gowyā) of Geikli Baba (also called Ahuly Baba). But he did not long adhere to a life of meditation. He became muḥādīr in a number of Anatolian towns, till he finally had the good fortune to receive a pension (1000 aspers monthly) from the Sultan. He now settled in Būshkāsh in the Bosphorus where with the help of several patrons he built a mosque, which still exists, a hermitage and a bath with a marble basin and laid out a garden. The bath soon became the rendezvous of all the dissolute youth, so that finally the grand vizier Ibrāhīm Pāsha had it levelled to the ground by his Adjemi-Oghlans. Ghażālī then found it advisable to escape to Mecca in 938 (1434-1435). There also he laid out a garden and built a mosque. He died over 70 years of age in 941 (1437-1438), according to others in 942 (1438-1439) and was buried beside his masjid.

Ghażālī enjoyed a not unusual fame as a poet in his lifetime but it was for the most part due rather to his winning personality than to his verses. His chronogram (tāriḵ) were particularly celebrated. He wrote a book called Din al-Ghawām wa khuṭā al-Ḥumāma (Dispeller of sorrows and dissipator of troubles), also known as Mālaḵt-i Ghażālī (Anecdotes of Ghażālī), and Hikayāt-i Birāder (Tales of the crazy brother), according to Lattifi a version of Azaṅi's: Afsīya wa-Shalīfya with additions of his own, in which all sexual pleasures and excesses are discussed in the greatest detail. Later prudish biographers say that Korkud therefore would not accept the dedication and dismissed Ghażālī from his court, but this is rather improbable. Ghażālī's poems were not collected till after his death by his friends into a Divān, which is rather rare.

Bibliography:

GHAZĀN MAHMūD, a Mongol ruler (Ilkhan) of Persia (694‑703 = 1295‑1304) born in the year 670 = 1271. On the accession of his father Arghān (q.v., i. 430) he was appointed govern­or of Khorāsān, Māzandarān and Raz; he administered these provinces in the reign of Gai­khaṭū also (cf. above p. 128). Ghażān had been brought up as a Buddhist and, while governor, ordered a Buddhist temple to be built in the town of Kūsān; shortly before his accession, during the war with Ikrīdū (q.v., i. 591), his general Nāw­rūz persuaded him to adopt Islam. In his reign Islam was recognised as the State religion, the Mongol empire organised on a basis of Muslim culture, splendid buildings erected in and around the new capital Tabrīz, notably charitable endow­ments, mosques, theological schools etc., the descend­ants of the Prophet sometimes mentioned in the first place in the state records before the princes and princesses of the ruling house, and lastly the turban introduced as the court headgear. But Ghażān was more a Mongol than a Muslim; as a ruler and law-giver he displayed great activity entirely free from biased piety, of which his physician and actual minister Rashīd al-Dīn (the vizier Sa'd al-Dīn al-Sāwī filled this office in name only and had in reality no say in the government) gives a detailed account. Particular attention was devoted to the finances of the country, the currency etc.; Ghażān no longer appears on his coins (the inscriptions on which are in three languages Arabic, Mongol and Tibetan), like his predecessors, as representative of the Great Kūsān who lived in Pekin, but as ruler "by the grace of God" (Mong. Tengri Kulanurd = the ruler of heaven). Ghażān carried out his plans with vigour and bloodshed in the teeth of the opposition of the Mongol Emirs and even against the princes of the ruling house; every one whom he believed to be dangerous to the peace of the country or to his autocratic rule, was dis-
posed of with ruthless cruelty; among these was the Emir Nawruz himself, to whom he owed his throne. On the other hand Ghāzān's measures increased the prosperity of the country and in particular protected the country people from oppression and extortion. The revenues of the state rose and in Ghāzān's reign amounted to 2100 tūmāns (before only 1700), i.e. about £2,500,000.

Like other Mongol rulers Ghāzān particularly esteemed these arts and sciences which might be useful to the State; he is himself said to have been conversant with natural history, medicine, astronomy, chemistry and even with several trades; an observatory was built by his orders in Tabriz with a school for secular sciences (kilmāy) in connection with it. Ghāzān is said to have known several languages in addition to Mongol, his mother-tongue, and to have been acquainted with the history of many lands and peoples. He devoted particular attention to the history of his own people and had all that could be learned about it collected by Rashid al-Din in a great work to which the name Tūrīk-i Ghāzānī was given; the author says that he received much of the information embodied in the work from his royal master. Ghāzān's activity abroad was less successful; he did not succeed in effectively defending the eastern frontier from invasion by Central Asian tribes invading Syria.

**Bibliography:** O'Bohoo, Histoire des Mongols, iv. 143 et seq.; Hammer-Purgstall, Geschichte der Khânate, ii. 1 et seq.; Howorth, History of the Mongols, iii. 393 et seq. The section of the Tūrīk-i Ghāzānī dealing with Ghāzān's activities as a ruler and law-giver has not yet been published in the original; in the Grundzüge der Iranischen Philologie, ii. 376, Ghāzān's legal code is quoted according to the extract from Köhenderlir translated by G. Kirkpatrick (New Asiatic Miscell., i. p. 149 et seq., Calcutta 1789). On Persia under Ghāzān Khān cf. also W. Barthold, Persische madrasa nasta'īvī Amīrī-bāyī mizāli Mīnsū, St. Petersburg 1911 (Amīrī-bāyī serīya, No. 5) and in Mīr Islāmī, i. 76 et seq. (W. Barthold).

**GHAZĀT or GHAZWA (A.).** Razzia against unbelievers.

GHAZĀ (A.), plur. ghażā, one who undertakes a ghazwa, particularly the leader of one; hence an honorary title for one who distinguishes himself in war against the unbelievers. For other meanings of the word cf. Dozy, Supplément, s. v. GHAZĀ, Saif al-Dīn, son of Zangi, born 500 (1106-1107), an atabeg of Māsūl (al-Mawṣil) 541-544 (1146-1149). When the Atabeg Zangi was murdered by his own men in 541 (1146), the most prominent of his followers, including the vizier al-Qarawī al-Jahānī (q. v., i. 1025), attempted to persuade the troops to recognise the authority of the Saľāji Aḥrār b. Maḥmūd. But they were only successful with a section of them; another section went to Syria with Nūr al-Dīn (q. v.) the son of Zangi, afterwards so famous. Those who paid homage to Aḥrār took the road to al-Mawṣil where Zain al-Dīn 'Ali Kaṭīb was in command as Zangi's representative. But because

and henceforth ruled over this town and Dijār Raḥifa. There is not much to be told of his short reign — he died in 544 (1149). — The inhabitants of Damascus besieged by the Crusaders called him to their help and he went thither with his brother Nūr al-Dīn, but no fighting resulted as in the meanwhile the people of Damascus had succeeded in forcing the Crusaders to retire. Ghāzā is further celebrated because he was a friend to learning and founded a madrasa in al-Mawṣil, which was called al-Atiḳa and became his last resting-place. Among his panegyrist was the poet Haḳa-바ḳa. He was succeeded as Atabeg of al-Mawṣil not by his son, who was brought up by his uncle Nūr al-Dīn and died young, but by his brother Kūb al-Dīn Mawdād [q. v.]

**Bibliography:** Ibn al-Asbīr, Hist. des Atabes de M continué in Recueil des historiens des croisades, Historiens orientaux, T. ii. 2e partie, 116, 152-168; do., al-Kāmil (ed. Tornberg), xi. 74 et seq.; Ibn Khallīkān, Wafa'yī, s. v. Ghāzā; Abū Shāma, Kitāb al-Kawdātān (ed. Cairo), i. 40 et seq.; Well, Geschichte der Chafīen, iii. 290 et seq.

GHAZĀ, Saif al-Dīn, son of Kūb al-Dīn Mawdād [q. v.], Atabeg of al-Mawṣil 556-576 (1170-1176). On Mawdād's death it was not his eldest son 'Imād al-Dīn that was recognised as his successor, but Ghāzā, through the influence of his mother, a daughter of Timurtasch, who had the powerful support of Fakhr al-Dīn 'Abd al-Masch who held the reins of government in Mawdād's reign. 'Imād al-Dīn had spent almost all his life with his uncle Nūr al-Dīn and married the latter's daughter and for this very reason was hated by 'Abd al-Masch, apparently a Christian by birth. But 'Imād al-Dīn appealed to the powerful Nūr al-Dīn and the latter at once marched against al-Mawṣil, conquered Raḳḳa, Nisibin and Singjar, but made peace with Ghāzā, when he reached al-Mawṣil, by the terms of which Ghāzā was left in power and Singjar alone given to 'Imād al-Dīn. When Nūr al-Dīn died in 569 (1174), Ghāzā seized the towns of Harrān, Nisibin, Raḳḳa, Edessa, Khabūr and Sarūd, but had to come into conflict with Šālāh al-Dīn as a result. The latter came to Syria in the following year and as soon as he had dealt with the Syrians and the Christians, he put the Mōgušans to flight near Ğamāt (19th Ramadān 570 = 13th April 1175). Ghāzā had in the meanwhile besieged his brother 'Imād al-Dīn, who naturally had not taken part in the campaign against Šālāh al-Dīn, in Sintjar, but, when he heard of the defeat at Ğamāt, he raised the siege and retired to al-Mawṣil. In the following year (571) he again set out against Nisibin to fight Šālāh al-Dīn again in company with the Syrian rulers who were his allies, but he had again to take refuge in al-Mawṣil after the battle of Tell al-Sulṭān (between Ğamāt and Ḥalab). He held out here till his death on the 3rd Šafār 572 = 11th July 1176. His brother ʻizz al-Dīn Mawdūd [q. v.] succeeded him.
GHÂZÎ GÎRAY, name of three Khâns of the Crimea. Ghâzî Gîray I. reigned only about six months in the year 929 = 1523. Ghâzî Gîray II. twenty years (996–1016 = 1588–1608), Ghâzî Gîray III. three years (1116–1119 = 1704–1707). Only the reign of the (Ghâzî Gîray II.) is of importance; he was known as Borz = storm from his impetuous bravery and was the son of Dewlet Gîray I. and reigned after his brothers Muhammed Gîray and Islam Gîray. Before his accession he had taken part with the Turkish army in the campaigns against Persia and spent seven years as a prisoner in the Persian fortress of Kahkaha; he afterwards came to Constantinople and enjoyed the favour of Sultan Murad III. (982–1003 = 1574–1595). As Khan he undertook a campaign in 1591 against Moscow, was defeated and wounded; in the following year he sent his brother, the heir-apparent (Farzand) Fath Gîray, to lay waste the Russian frontiers and on this occasion a larger number of prisoners were taken than had even been taken before. At a later period Ghâzî Gîray took part in the campaigns against Hungary. About 1005 = 1596–1597 he lost the favour of Sultan Mehmed III. (1003–1012 = 1595–1603) for a short time, was deposed in favour of Fath Gîray, went to Sinope, where there received a grant of confirmation from the Sultan, returned to the Crimea and was recognised as Khan again without opposition; his brother had to pay a large bribe in order that he might be reinstated. Ghâzî Gîray took advantage of the decline of the Turkish empire under Mehmed III. to adopt a more independent attitude to the Porte than before; he is said to have meditated founding an independent kingdom and introducing transmission of the throne from father to son into the Crimea. He was actually succeeded by his son Tozkamish, but the latter was not confirmed by the Porte and could hold out against his uncle Saîfat Gîray. In Ghâzî Gîray II.'s reign Gozlew (the modern Eupatoria) was made capital for a short time in place of Taghe-Serai (q. v., i. 562 et seq.). Cf. V. Smirnow, Die Kriege des Peter des Großen, p. 444 et seq.; O. Rotowski, Die Münzen der Gîray, Moscow 1905, p. 100 et seq. (W. Barthold.)

GHÂZÎ AL-DIN HAIDAR was second son of NAWWÂB Saîdat 'Ali, nominally Wazir of the Mughul Empire, in reality ruler of Audh. Saîdat 'Ali died in 1229 (1814) and the children of his eldest son were set aside as mughalî al-îthth. In 1234 (1819) he took the title of Padghâh or king of Audh with the consent of the Governor General of British India, the East India Company having now become de facto suzerain of Northern India. His government was not successful. The king, although of an honest character, was dissipated and very much under the influence of unscrupulous ministers, especially Aghâ Mir (MUSTAMAD al-Dawla), and the administration of the land-revenue led to much discontent. He died in 1244 (1827), and was succeeded by his son Nasir al-dîn Haidar. His coinage, struck at Lakhna, commences in 1235 and continues till 1242. Lakhna is alluded to as Dâr al-saltanat or Dâr al-imârat, and the coins are stated to have been struck in the Șîbâ of Audh. They bear a coat of arms in imitation of European heraldry; two fishes (the badge of Lakhna) supported by tigers bearing banners. A fine silver medal (weighing 1125 grains, 72.9 grammes), bearing the king's portrait crowned, full faced, wearing a moustache but no beard, was issued also in the first year of his reign.

Ghâzî al-dîn Haidar was a man of considerable literary attainments and learning. He was the author of a valuable Persian Dictionary and Grammar called the Hafez Kalamu or "Seven Seas", published at Lakhna in 1822; cf. Persch, Grammatik, Poetik und Rhetorik der Perser. According to H. Ethé, Grundr. d. iran. Philol., ii. 265, 348 infra, the real author is Kâbul Aḩmad.

GHÂZÎ L-DIN KHAN was the title bestowed by AWRANGZÎB on Mir Sîhab al-Din, elder son of 'Abîd Khan, entitled Khîljî Khan, who rose to the rank of commander of 5,000 horse and held more than one provincial government under Shâhshâhîn. Sîhab al-Din came from Turkistan to AWRANGZÎB's court in 1669, and was appointed commander of 300 horse. During AWRANGZÎB's reign he served with distinction in the suppression of Prince Akbar's rebellion and in the long campaign in the Dakhan, especially at the sieges of Bajjâpur, Golkonda, and Adhwani. He received the title of Ghâzî L-Din Khan in 1759 and that of Firuz Djang in 1685, and died in 1709, in the reign of Bahâdur Shâh, being at the time of his death, the governor of the province of Gudjarât. He left a son, Mir Kamar al-Din, entitled Cin Khîljî Khan and, later, Nizâm al-Mulk and Âsaf Dîjâh, who became, in the reign of Farrukhsâiyâr, viceregal of the Dakhan, and founded the line of the Nizâms of Haidarâbâd.

Bibliography: MA'UZIR-AL-Âlamirî, Muntakab al-Luthbî. (T. W. HAIG.)

GHÂZÎ KHAN was one of the sons of MA'LÎK SÛRÂB KHAN DÔDAI BALOÇI who emigrated from Mekrân to Multân in the time of Shâh Husain Langâtî, King of Multân from 974 to 988 = 1502 [cf. BALOÇÎSTAN, i. 628, 630]. He obtained dîjâs (positions) in exchange for military service in the country below the junction of the Indus and the Çinâb, although owing to a change in the course of the Indus a large part of this tract, formerly west of the Indus, now lies between that river and the Çinâb. Another Baloçî leader Mir Çâkur Rind, who also came with his followers to Multân, was on bad terms with Sûrâbî and his sons, who perhaps were forced to move further north. Bâbar met Balocës as far north as Bêhra in 925 (1519) and twenty seven years later Shêr Shâh in his pursuit of Humaîn was met at Khûshab by Ismâ'îl Khan, Fath Khan and Ghâzî Khan, sons of Sûrâbî who were confirmed by him in their possessions along the Indus. The towns of DêRâ Ismâ'îl Khan, DêRâ Fath Khan and DêRâ Ghâzî Khan were founded by these three sons, and Ghâzî Khan became founder of a line of Nawwâbîs of the Mirfânî branch of the Dôdâs, who ruled there till the middle of the 18th century. They bore the names of Ghâzî Khan and Hâjîjjî Khan [cf. BALOÇÎSTAN, i. 629, 630] alternately. Ghâzî Khan was buried at Curâtta near DêRâ Ghâzî Khan where his tomb still exists bearing an inscription of Akbar's time but undated. The tomb is octagonal with towers at the angles and is decorated with fine glazed tiles. Ghâzî Khan II. built a tomb in memory of the
saint Pir 'Ādil which still exists a few miles north of Dēra Ghāzī Khān and is a place of pilgrimage. His own tomb is near it.

(M. Longworth Dames.)

**GHĀZĪ MIYĀN.** This celebrated personage is venerated by both Hindus and Muhammadans, and his gūbdā, or his wedding, is a popular institution among the Untouchables throughout Hindustan. In the northwestern parts of India he is identified with Sālār Ma'sūdī, the nephew of Māhūd of Ghazni, who was born at Ādījmīr, A.H. 405 (1014) and after performing prodigies of valour in battle against the infidels, and capturing Diliā and Ayedhā, settled at Bahārīā in Oudh. Here he was attacked by the Hindus under Rāi Sahār Deo and Har Deo, and in the battle that ensued he was killed and his army destroyed. This occurred in the 13th Rajab, A.H. 424 (1033).

Around this warrior's name many marvelous stories have accumulated. It is believed in Oudh that only the bones of the hero were discovered in the 14th century, and that, whilst being exhumed, many miraculous events occurred; but a native historian informs us that Sikandar Lōdi in the 15th century abolished throughout his dominions the annual procession of the banner of Sālār Ma'sūdī because of its being contrary to orthodox belief. No legislation, however, could stop such a popular festival as this has always been.

It is perhaps impossible to explain the meaning of the ritual performed by persons while celebrating the gūbdā of Ghāzī Miyān.

At Gāsāyān in the Bandā district, a fair is annually held in the month of Baisakh (April—May) in honour of Ghāzī Miyān, at which Daffālī faqīrīs (mendicant beggars who sing and dance to the accompaniment of a drum) tied coloured rags and horseshow about the top of a large bamboo, round which they sing and often burn incense.

In some parts of India Ghāzī Miyān is described as the son of a famous general who served under the King of Diliā, and subsequently adopted the garb of a faqīr (mendicant), retired from the world, and shortly afterwards died, whereupon the son, Mādar, joined the troops of a Pathān leader, and distinguished himself by his bravery and hatred for the Hindus. Hence his name has come to be regarded as a symbol of warlike prowess, and is used up to present times as a battle-cry by Hindustānī soldiers. While his nuptial ceremonies were being celebrated, the enemy appeared, and in his attempt to drive them back he was himself slain. The present day celebrations in honour of Ghāzī Miyān are hence supposed to represent the incident of his untimely death and the capture of his nuptial banners and emblems by the enemy.

On the first Sunday of Djāīth (May—June), a great fair is held at the tomb of Sālār Ma'sūdī, at Bahārīā when crowds of pilgrims make liberal offerings at the shrine; at Monār also, near the junction of the Son and the Ganges, the anniversary of the death of Ghāzī Miyān is celebrated. The history of this fair is interesting as showing how legends about one holy man come to be ascribed to another quite different from him.

Van Graaf, sailing up the Ganges in 1669, stopped at "Monir." The inhabitants were poor cultivators, and the country was formerly a desert until a very holy man, "Hīa Munera" (Yahya Muniari, a famous sufi who is the author of the Sharaf Nāma and died A.H. 782, see Rieu, *Cat. of Persian Ms. Br. Mus.*, p. 492) struck by the general features of the place, fixed his abode there, and after having exterminated the wild beasts, erected a small chapel where he performed many miracles. At his death he left much money, with which, his followers built a mosque and a tank, frequented by fakirs, who pretended to work miracles. The mosque still stands, but the fakirs, finding the worship of Ghāzī Miyān more profitable, established a fair in his honour instead.

The festival of Ghāzī Miyān is not popular in Eastern Bengal, but few villages are without a shrine dedicated to Ghāzī Śāhīb. This spot is usually a diminutive Darzāsī (shrine), with a raised mound of earth in the middle, before which every Muhammadan and Hindu makes obeisance as he passes, and, whenever his family is attacked with any malady, the villager makes votive offerings of flowers, fruits and sweetmeats. Along the banks of the Jalīkha, on the outside of villages, a mound of earth, stands beneath a grass turtha. This mound has generally two knobs on the tops, said to represent the tombs of Ghāzī Miyān and his younger brother Kālū. On the 22nd day after a cow has calved, the first milk drawn is poured over the mound as a libation, and in time of sickness rice, plantains, and sweetmeats are offered.

**GHĀZĪ MUḤAMMAD,** called Kaži-Mulla by the Russians, a Muslim leader in the war of liberation in the Caucasus. [See the article DAGHES-TAN, i. 801.]

**GHĀZIPUR,** district of India in the United Provinces, lying on both sides of the Ganges below Benares. Pop. (1911), 383,725, of whom 10% are Muslims. It includes the site of the battle field where Shōr Shāh decisively defeated Humāyūn in 1539. The city of Ghāzipur stands on the N. bank of the Ganges. Pop. (1901), 93,429. Before the opening of railways, it was a considerable centre for river traffic. It contains the Government opium factory for all the poppy products of the United Provinces, and is also famous for rose water and ottu of roses, made from roses grown in the neighbourhood. The name is traditionally derived from a Saiyid named Ma'sūd Malik al-Sadāt Ghāzī, who is said to have founded the Hindu Rajā and founded the city about 1330. The only notable buildings are the tomb and tank of Pahār Khān, governor in 1580, and the Chihī Suttān, or "House of forty pillars", the palace of 'Abd Allāh Khān, governor in the 18th cent., which is still owned by his descendants.

(J. S. Cotton.)
GHĀZIYA (A.), plur. ghawālī, a name given to the caste of dancing-girls in Egypt, who call themselves Bārāmīka. The origin of these two names is not quite certain; cf. Krone du Monde Mitas, Vol. xx. 110, 125. According to Lane, the Ghawālī only keep themselves distinct from other classes and marry only within their tribe; the men are household servants or sometimes also follow a trade when they do not accompany the women as musicians; one of the latter is called ghawālī. They used to perform in the public streets, but this was prohibited in 1834 because they were notorious as prostitutes.

GHANZA (otherwise known as GHAZAN, GHANZI), is an ancient town in Afghanistan situated in lat. 8° 18' E. long. 35° 44' N. on lofty ground 7280 ft. above sea-level on the watershed of the Arghandāb and Tanaak rivers. It is now an insignificant town, its place as the northern capital of the country having been taken by Kabul, but has some importance still as a centre of the Ghilzai traders who work annually between India and the Indus and Gomal routes. It is still fortified and the ruins and tombs are to the north-east testify to its former importance.

Its early history is obscure. Suggestions have been made of its identity with Ptolemies' Gacara and with the Greek Gazae, but there is little to support these conjectures. On the other hand the He-si-na of Hiuen Thsang (which V. de St. Martin first identified with Ghazna), seems to correspond with it accurately. He approached it from India either by the Gomal via Wano or by the Toon via Peshawar. The tombs and Gencs might represent Varana, which is designated by the Chinese Fa-la-na. According to the Buddhist pilgrim it was the capital of the kingdom of Tso-in-ko and of great extent. Buddhism still flourished there at that period (the 7th cent. A. D.). It is not however till the rise of the Ghaznavid dynasty which took its name from the town that Ghazna became famous. It is doubtful whether Ghazna was included in the Sāmārāni dominions. It was certainly not one of their mint-towns. Alp-tigin conquered it from India and transferred the mint to Lawik in 904 (998). After his death his son Ishaq was driven out of Ghazna by Lawik, but recovered it with the aid of Mansur b. Nuh Sāmāni. Balkātgin his slave succeeded him in Ghazna, and was himself succeeded by Piri who allied himself with Lawik and the Hindū Shāh of Kābul, but Subuktigin another servant of Alp-tigin attacked them and became master of Ghazna in 366 (976). It was the head quarters of Subuktigin in his Indian expeditions. In 380 (990) he imprisoned his son Mahmūd for some time. After Mahmūd had become an independent sovereign in 389 (998), Ghazna rose in importance owing to its commanding position towards India, although the actual capital of his empire was Balkh. It was to Ghazna he brought the idol from the Somnath temple, part of it being thrown in from the great mosque and part in front of his palace. It was one of his mints, although the coinages of Nushāpūr, Herat and Balkh are more important. Farwān, his father's only mint, was quite given up. Mahmūd does not seem to have coined at Ghazna, but after his time the Ghaznavids were confined by the rise of the Saljūq monarchy and the growing strength of the Ghūrī Chiefs to the eastern part of Afghanistan, and Ghazna became the actual capital and the principal mint-town. During the reign of the later kings of this dynasty the town underwent a series of misfortunes. In the time of Arslān there was a destructive fire said to have been caused by lightning, and in the same reign it was taken by Sultan Sandjar Saldijāk and made over to Bahram Shah. In the wars between Bahram Shah and the Ghūrī chiefs it was more than once taken, and in 544 (1149) Alā al-Dīn Husain sacked and destroyed the town, thereby earning the name of Djahān-sūz. It is stated by chroniclers to have been utterly destroyed, nevertheless it continued to be an important capital under the Ghūrīs Muizz al-Dīn Muhammad b. Ṣām became governor here under his brother in 569 (1173), and began his expeditions into India. It was to Ghazna he brought the last Ghaznavīd king Khusraw Malik before sending him to Firuz-Kuh, and here in later years he accumulated the treasure obtained from his Indian conquests of which fabulous accounts are given. After Muhammad b. Sams death in 602 (1205) Ghazna again became an object of dispute, Yalduz held it for several years and after his death in 612 it fell into the hands of Alā al-Dīn Khwārizm Shah, who in his turn was driven out by the Mongols. All these events are marked in the coinage of the Ghūrīs, Yalduz and Alā al-Dīn at the Ghazna mint, but after their time it relapses into obscurity. Djalāl al-Dīn Mangubarti held it till driven out by Cingiz Khān. The great conqueror sent his son Ogotai who took the city, massacred the greater part of its inhabitants and carried the remainder away as prisoners, and names might represent Varana, which is designated by the Chinese Fa-la-na. According to the Buddhist pilgrim it was the capital of the kingdom of Tso-in-ko and of great extent. Buddhism still flourished there at that period (the 7th cent. A. D.). It is not however till the rise of the Ghaznavid dynasty which took its name from the town that Ghazna became famous. It is doubtful whether Ghazna was included in the Sāmārāni dominions. It was certainly not one of their mint-towns. Alp-tigin conquered it from India and transferred the mint to Lawik in 904 (998). After his death his son Ishaq was driven out of Ghazna by Lawik, but recovered it with the aid of Mansur b. Nuh Sāmāni. Balkātgin his slave succeeded him in Ghazna, and was himself succeeded by Piri who allied himself with Lawik and the Hindū Shāh of Kābul, but Subuktigin another servant of Alp-tigin attacked them and became master of Ghazna in 366 (976). It was the head quarters of Subuktigin in his Indian expeditions. In 380 (990) he imprisoned his son Mahmūd for some time. After Mahmūd had become an independent sovereign in 389 (998), Ghazna rose in importance owing to its commanding position towards India, although the actual capital of his empire was Balkh. It was to Ghazna he brought the idol from the Somnath temple, part of it being thrown in from the great mosque and part in front of his palace. It was one of his mints, although the coinages of Nushāpūr, Herat and Balkh are more important. Farwān, his father's only mint, was quite given up. Mahmūd does not seem to have coined at Ghazna, but after his time the Ghaznavids were confined by
since Forster in 1783 described it as maintained only by a few traders. Vigne’s description in 1836 was more favourable. It was garrisoned by a small force of sepoys under British officers and was besieged from Nov. 1841 to March 1842 when it was taken by a Bázárak force. Nott re-took it in September of the same year, and returning to India brought away, by Lord Ellenborough’s orders, the supposed gates of Súmánáh. In more recent times Ghazna was the scene of the imprisonment of Aftád Khan by Sírh ʿAlí and his rescue by ʿAbd al-Rájmání after defeating Sírh ʿAlí at Saidúbdú close by. In 1868 however Ghazna was again the scene of the fighting when Aẓam and ʿAbd al-Rájmání were defeated by Sírh ʿAlí’s forces. In 1850-51 Ghazna was traversed by Stewart’s force marching from Kandahár to Kábul and by Roberts from Kábul to Kandahór.

The name Ghazna is found on coins and in Arabic chronicles. The form Ghazznín is used in the Taḥáfaṭí-Šírí and other Persian chronicles such as Fírúža up to modern times. The final ān has been dropped and the form Ghazna is now generally used.

(M. LONGWORTH DAMES.)

**GHAZNAVIDS.** The rise of the dynasty known as Ghaznavid or Ghaznaví (from the capital Ghazna) is connected with the struggle between the Iranian and Turkish races for the mastery of the borderland of Islam in the 4th century. The Samánids, an Iranian or Tátkíjk stock from Sughd, had risen to power at the commencement of the 9th century, becoming practically independent of the authority of the Khalífs. After the year 300 however, Turkish names begin to appear among their governors and generals; these were the so-called Turkish slaves, who distinguished themselves in war, and, gradually rising to positions of importance, paved the way for the Turkish and Mongolian invasions which swept away the independence of the Iranian races of Persia, Mú varáž al-Nárí, Tuṟ̌hárístán and the regions included in Afghanistan. The most important of these was Alp-tígn [q.v., l. 321], who became Ẓáhrún al-Šírí, and in 344 (955) governor of Herát. At the accession of Mansúr b. Núh he fell out of favour and betook himself to the eastern border of the kingdom, where he not only resisted all attempts to subdue him but himself conquered Ghazna, where he died in 352 (963). There is no evidence that Ghazna had previously formed part of the Samání kingdom. It had been overrun, with the whole of Zábúlístán and Kábul, by the Sádáfírs by 260 (875), but it is doubtful how far their power was permanent, and even when the Samánídes became paramount there is no evidence that Kábul and Ghazna were under them. The ruler of Ghazna is described as Pádsháh and was allied to the Hindú Sháhí of Kábul. These titles were not as yet used by Muhammadan rulers. The Pádsháh Lawík was probably a Hindú Chief, even though some Miss. of the Taḥáfaṭí-Šírí give him the name of Abú Bakr or Abú ‘Alí. Alp-tígn was succeeded by his son Išhák, but the power fell into the hands of other Turkish slaves Bálá-tígn and Subúktígn. Bálá-tígn was the first to obtain the power. He was an old servant of the Samánídes, and had struck coins in his own name under their suzerainty at Kábul as far back as 935 (very possibly 933). His coinage of 359 (966) at Ghazná is that town’s first appearance as a mint-town. The mountain-fort of Farwán in the Hindu-kúsh was also used as a mint by Alp-tígn and Bálákítín. Bálákítín was succeeded by Pírí, who was perhaps a local man, as he allied himself with Lawík, the former ruler of Ghazna, and with the Hindú Sháhí, Subúktígn, who had perhaps remained at Farwán, attacked the allies and routed them, obtaining possession of Ghazna in 357 (967). He continued to issue coins (which are still abundant) at Farwán in his own name with that of Núh b. Mansúr. Subúktígn rapidly spread his power through Tuṟ̌hárístán, Zábúlístán, Zamín-dávar and Ghor, and even Kábúr (now in Baločistán), and then turned his arms against the Hindú Sháhí Djiáálpál who is described as Pádsháh of Hind. This title may be due to confusion of Hind (India) with his capital Ohind or Wáhínd on the Indus, still locally known as Hind or Hund. This expedition against Djiáálpál marks the commencement of the wars which ended in the destruction of the powerful Hindú kingdom of the Sháhís, commonly spoken of as the Hindú kings of Kábul. Kábul, however, had at this time passed out of their possession, though they still held the lower Kábul valley and the territory between the Indus and Díjhlám. Their dominions in India extended far beyond these bounds to the east, along the line of the Himálaya as far as Kóngra, and through the northern and central Pandůb to Báhtínda on the Hákrá river (now day owing to the diversion of the Sátáhd to join the Báb). It has been held by some writers (see Ravery Notes on Afghanistan, p. 370, followed by V. Smith, Early Hindus, 3rd Ed.) that the kingdom of the Central Pandúb, with its capital at Báhtínda, was distinct from that of the Sháhís, and that Elliot and Dowson were mistaken in treating them as one. Nevertheless there seems to be no good evidence in support of this theory, which involves the supposition that there were two Djiáálpálės reigning side by side, both of whom were simultaneously at war with the Ghaznavids, and both of whom were succeeded by sons named Anampé Párálv. Ravery himself says that Djiáálpál of Báhtínda lost both Langhán and Nangáñáh to Subúktígn, yet these territories were an integral part of the Sháhí kingdom, the last part of the Kábul valley held by them after the loss of Kábul itself. It seems most probable that the first Hindú kingdom of Kábul was distinct from that of the central Pandúb, but that the earlier kings whose names end in dēva had been replaced (by succession or conquest) by the Rájdúp dynasty of the central Pandúb who adopted the ancient Kushán title of Sháhí. Their names all end in pál like those of other Rájdúp sovereigns of the time. Djiáálpál appears to have succeeded to Bhíma Dēva and to have been allied to the kings o Kashmír who had married into Bhíma Dēva’s family and afterwards assisted Tíločán Pá́l (Djiáálpál’s grandson) in his war with Mahmúd. It is evident therefore that the wars of Subúktígn and Mahmúd with Djiáálpá
and his successors were directed against the most powerful kingdom of northwestern India. In 369 (979) Subuktigin defeated Djiapal and plundered Laghnaf, and there was war again in 378 (988) when Djiapal seems to have been the aggressor. He was defeated, probably in the Kura valley, and forced to surrender some forts in the neighbourhood of Ghazna. Mahmud first came prominently forward during these wars, and was more inclined to extreme measures than his father. There was some disagreement between them, and Mahmud was imprisoned for some time in 350 (990) in the fort of Ghazna. During this period Subuktigin, although practically independent, admitted the suzerainty of the Samanid kings and fought their battles for them, especially in 382 (992) and 385 (995) against Abi ‘Ali Simjdir. He was made governor of Khorasan with the title of Nāṣir al-Din, and Mahmud was at the same time given the military command with the title of Sāf al-Dawla, which is commemorated in a coin struck by him at Nishāpūr in 385 (995). Subuktigin died in 387 (997) having by his conquests and firm character laid the foundation for the wider empire of his son Mahmud.

Ismail I. Subuktigin was succeeded by his younger son Isma’il who, however, was speedily put aside by his energetic brother. Mahmud, Mahmud succeeded in 389 (999) at the time when the Samanid king had been dethroned by a rebellion. Mahmud ostensibly sided with his suzerain, but utilized the opportunity to assume the title of Amir and to obtain investiture from the Khilafah al-Kadîr billah as Yamin al-dawla and Amīn al-mulâ, and these titles henceforth appear on his coins. Mahmud finding himself now an independent ruler, and the once powerful Samanid monarchy having vanished, proceeded to consolidate his authority over the greater part of the dominions of that monarchy, and in addition to carry out a systematic series of invasions of India which had been beyond its scope. The position of his new and rising capital of Ghazna on the crest of the high plateau overlooking the plains of Northern India with which it possessed easy communications by the valleys of the Kabul, Kura, Tochi and Ghinal rivers, gave him a natural advantage for such expeditions. Nevertheless he did not at first make Ghazna his capital. He chose rather the ancient centre of Turkistan, Balkh, and issued his coinage there, as well as at Walawis in the same province, and Herat and Nishapur in Khorasan. Expeditions against Ilak Khân in Turkistan, who had captured the last Samanid prince, and also against the Malik of Sijistan and Ghur consolidated his home power and left him free for his almost annual cold weather raids into India. For further details of these expeditions which occupied the greater part of his reign see art. MAHMUD.

At the end of his life a danger which was soon to threaten the security of his successors made its first appearance. The Sâljuq Turks over the Buysids, till then the dominant family and masters of the caliphate, and Shâhs by creed. After layouting Persian ‘Irâk Mahmud re-established the Sunni faith and made his son Ma‘mûd governor over Ifshân and Rayy. He returned to Balkh and afterwards to Ghazna but was attacked by a severe illness and died soon after his arrival in 421 (1030).

Mahmud’s dominions at the end of his reign comprised the whole of Khorasan and Persian ‘Irâk in the west, Turkistan and part of Mawjûd al-Nahr in the north, Sijistan, Zaminâwar and Kûsdar in the south, and the Pandjâb, Multân and part of Sindh in the east, with an admitted suzerainty over the Hindu kingdoms of the Ganges valley and the south coast. His authority was admitted too by the chiefs of Ghor and Ghardjistan and the mountain Afghans. From the time of his accession he had recognized the nominal authority of the Khilafah al-Kadîr billah instead of the deposed Khilafah al-Rasûl whom the Samanids and Subuktigin had acknowledged. The only part of his Indian conquests which was permanent was the establishment of a strong kingdom with its capital at Lahore, which now first becomes known in history as a centre of government. The Ghaznavid rule in the Pandjâb outlasted that in the northern and western provinces of the empire, which fell into the hands of the Khâns of Turkistan or the Great Saljuqs of Persia, or in the centre, where the growing power of the Chiefs of Ghor gradually overshadowed that of Mahmud’s descendants; and Lahore was the last refuge of the kings of the dynasty. Mahmud’s fame is mainly based on his Indian conquests, and beyond the actual realization of his projects they had the effect of showing that, in spite of the bravery of the Râdjahs, Indi lay open to a resolute invader from the northwest, who, himself screened by an impenetrable mountain barrier, was able to strike the disunited tribes of the plains with such devastating speed and force, that they led to the final overthrow of the Hindu states of northern India by Mu‘izz al-Din two hundred years later. The weakness of the Ghaznavid monarchs was the want of a strong central body of supporters of their own race. They were themselves intruders, and were obliged to recruit their armies from various sources, wild Ghôrî and Afghàn tribesmen, Khoaj Turks, and even Indians from the new Pandjâb dominions. Such a rule could only be held together by strong personal influence, and no king after Mahmud was able to exercise such authority. In religion Mahmud was a strong Sunni. He admitted the authority and sought the recognition of the Khilafah al-Kadîr billah, even when he was a powerless tool in the hands of the Shî‘ah Buysids, and when he himself occupied the Bâyid territory in Persian ‘Irâk he put down the Shî‘ah creed with severity. In the same way he acted towards the Karâmî, whom he found still powerful in Mâltân and Manjura. In the eyes of his contemporaries his greatest glory was the spreading of the faith of Islam in pagan India and the destruction and plunder of celebrated shrines like Mathurâ and Sâmânthâ. His name is a household word in the east to the present day, and innumerable tales of a folklore type are told about him and his faithful servant Ayâz, some of which began to find their way at an early period into chronicles like the Djamî al-Ilâhâyât. His ill-treatment of the poet Firdausi is not mentioned by early writers, but some probability is lent to the story by Firdausi’s fierce denunciation of Mahmud in his ode.

Mu‘ammad On Mahommed’s death the process of disintegration soon began. Muhammad was ab-
sent in his government of Diwājdžan and Mas‘ūd (his twin brother) in his government of Ifshān. The supporters of the former called him to Ghazna and he was declared Amir, but he was rejected by the army, with whom Mas‘ūd as a bold leader was popular. Mas‘ūd on receiving an invitation to return proceeded towards Ghazna; a deputation went to meet him and Muhammad sent a force to stop them headed by a Hindū commander named Siwān (Siūn Nād?) but he failed to do so. The deputation met Mas‘ūd at Herāt and offered him the crown. Muḥammad was soon de-throned, blinded and imprisoned.

Mas‘ūd I. Mas‘ūd was declared king in Shawwal 421 (1030). His history is related in considerable detail by al-Balḥakī. He was of a bold and generous but rash disposition, a brave warrior but given to excess in drinking. He attempted to rival his father’s fame both to the east and west, but was more successful in India than in Mā wara al-Nahr where he was opposed by the rising power of the Sāljuqs under Ṭughrīl Beg. For details of his Indian wars see art. Mas‘ūd. Mas‘ūd engaged in various warlike adventures in the west in the intervals of his Indian expeditions. He took Kar- mān from the Bīyids in 424 (1032) but lost it again soon afterwards. In 428 (1036) he had visited Mā wara al-Nahr with a force containing a large Indian element, but without effecting much. Near the Sāljuq invasion was in greater force and Mas‘ūd made a desperate effort to arrest it. He met Ṭughrīl Beg at Dandānākān 431 (1040) and, after a hard-fought battle which lasted three days, met with a disastrous defeat. He retired on Ghazna through the hill country of Ghardjān, and immediately collecting his family and treasures marched into India, leaving his son Mawdūd to defend Balkh, while Madjdūd was sent to Lahore. His blinded brother Muḥammad accompanied the march, and a conspiracy was formed to dethrone Mas‘ūd in favour of Muḥammad. On reaching the Mārgala Pass between the Indus and the Dzhadhād, Mas‘ūd was seized and bound. [See art. Mas‘ūd.]

Muḥammad (2nd reign). Muhammad became Amir a second time, and his son Ajmad killed Mas‘ūd in prison at Ghala in 433 (1041). Mawdūd on hearing the news marched from Balkh to Ghazna and thence by the Kābul valley where he met Muḥammad’s army and defeated it at Nagrāhar in 434 (1042), and afterwards took vengeance on all his father’s murderers, “both Turk and Tadjīk”. Fathjābād, near Djalalābād, was founded by Mawdūd in honour of this victory.

Mawdūd. 433—441 (1041—1048). Mawdūd now succeeded to the throne, but displayed no qualities calculated to delay the disruption of his kingdom. His brother Madjdūd immediately rebelled and seized on the Sawārak province, lately annexed by Mas‘ūd, but he died suddenly not under suspicion of poison. The Hindūs were not slow to take advantage of the discord, and the Rājdā of Diḥī (a town recently founded) took not only Hānsi and Thānēsar, but recovered the Four and One code of Nagrad, Kānrā, and then advanced on Lahore, which was saved with difficulty. Three Rājdās are said to have joined in this attack. Mawdūd made no move to assist his harassed servants. On the western side the Sāljuq invasions continued. Mawdūd sent one general after another against them, but did not take the field himself. In 434 (1042)  Ṭukhrānī was invaded and the Ḥājbī Ṭariqīn who was sent against the enemy failed to save Balkh, and was disgraced and beheaded. In 436 (1044) we hear of the Sāljuqs as far south as Bāsī, and the next year they plundered both Bust and Kū- bāḏi Amir in Zanindawar, and advanced towards Ghazna. The general sent against them was named Ṭughrīl Beg. He inflicted a defeat upon them, but himself joined in traitorous plots and fled. The Ghōrī Maliks now took advantage of the Sāljuq invasion to throw off the Ghaznavide yoke. The general who succeeded Ṭughrīl Beg was named Bāsī-tīgīn. He obtained the alliance of one of the Ghōrī Maliks named Yāhā and attacked the other, ʿAbī ʿAli, who possessed a strong mountain fort. After this fort was taken Yāhā was executed as well as ʿAbī ʿAli. The Sāljuqs under Bahram Nīyā were defeated by Bāsī-tīgin near Bust, and he also put down a rising in Kūdār. The check to the Sāljuqs was only temporary and Mawdūd at length marched against them in person, but was taken ill after starting and returned to Ghazna where he died in 441 (1049).

Mas‘ūd II. An infant son of Mawdūd named Mas‘ūd was enthroned through a palace intrigue, but quickly deposed by ʿAbī ʿAli, a son of Mas‘ūd I.

ʿAbī ʿAli only reigned for two years, during which the process of decay continued, and the mountain Afghans, regarding whom we hear nothing since their punishment by Muḥammad, now began to take part in the internal discord. In 443 (1051) a successful rebellion was headed by ʿAbī al-Raṣīd.

ʿAbī al-Raṣīd. He was a son of Muḥammad and was with Mas‘ūd I at the battle of Dandānākān. He was declared Amir with the assistance of Nosh- tīgin Karkhi who became one of his generals and recovered the fort of Nagarkot from the Hindūs who had taken it in Mawdūd’s reign. Ṭughrīl Beg in spite of his treacherous conduct under Mawdūd is found still in command of the western army. As the former occasion he inflicted a fruitless defeat on the Sāljuqs and put down a rebellion in Sidjāstān, but immediately put his treacherous plot into execution, took possession of Ghazna, murdered ʿAbī al-Raṣīd and declared himself Amir.

Usūrpation of Ṭughrīl. Nosh-tīgin on hearing of these events marched from India towards Ghazna. Ṭughrīl was killed before his arrival, and he installed Farrukhzād, a son of Mas‘ūd I, who with his brother Ibrāhīm had long been imprisoned.

Farrukhzād. This prince relied mainly on Nosh-tīgin who successfully repelled an invasion of Cağhrī Beg (Dīwād) Sāljuq and his son Alp- Arslān. (The Ţaḥākārī Nāṣīr says nothing of this invasion which is recorded by Fīrāṣṭa). Farrukh- zād is also said to have earned popularity by remitting the taxes of Zabulistān ruined by frequent invasions. Farrukh- zād died in 451 (1059), like Mawdūd from a disease which seems to have been cholera.

Ibrāhīm. Ibrāhīm, his brother, succeeded to the throne peacefully. About the same time Alp-Arslān succeeded his father Cağhrī Beg (Dīwād) as governor of Khorasan, and, in 455 (1063), he succeeded Ṭughrīl as sultān of the whole Sāljuq empire. Khorāsān and Ţukhrāstān were now permanently lost to the Ghaznavide kingdom, which seemed on the point of extinction. Ibrāhīm’s long reign however restored some measure of prosperity. He
made peace with the Saldjûks, and married his son Masûd (afterwards Masûd III) to a daughter of Malik Shâh who succeeded Alp-Arsân in 405 (1072). This marriage had a great influence on subsequent history. He pursued the arts of peace with success and also strengthened his position in the Pandjab. He took the fort of Adshân on the Beas, now known as Pak-pattan and celebrated for the shrine of Bâba Farid (Shakarganj). Firishta mentions two other strong places which he took, Rûdpâl and Dêra. The latter was situated in a mountainous country, and may be Dêra Dîn. Ibârânîn is the first Ghaznavid monarch to use the title Sulţân on his coins in imitation of Tughrîl Saldjûk. He died in 492 (1099) after a reign of forty-one years.

Masûd III. His son Masûd succeeded and reigned for sixteen of those years. The conditions of his reign were similar to those of the preceding one. He enjoyed peace at home, and sent expeditions into India, one of which under Tughlîg-îrgân Hâdîjî of Lahore penetrated beyond the Ganges and brought back great spoil. The rise of the Ghûrî Malikis becomes noticeable in this reign. Izz al-Dîn Husain received the government of Ghûr in 499 (1099). Masûd III died in 508 (1113).

Shârîzîd. His son Shârîzîd who succeeded him was killed next year by his brother Asrânî. Asrânî assumed the crown in the Garmâr of Zamândâvar in 509 (1116) and the remaining brother Bahram Shâh fled to the court of the Saldjûk monarch Sandjâr who took up his cause. Asrânî insulted his father's widow, the sister of Sandjâr, the alliance with the Saldjûks was broken, and the temporary prosperity of the Ghaznavids came to an end. Sandjâr invaded Zâbulstân and advanced on Ghûr. Asrânî was defeated and retired on his Indian dominions. Bahram Shâh was set up in Ghûzna, but Asrânî returned and drove him out as soon as the Saldjûks had departed. Sandjâr returned and again took Ghûzna. This time Asrânî was captured, and appears to have been put to death. Cf. i. 463.

Bahram Shâh. [q. v., i. 580-1] Bahram Shâh's reign began in 511 (1117) and lasted till 547 (1153) but the independent monarchy of Ghûzna was now at an end. Sandjâr was his suzerain, and his name was placed on Bahram Shâh's coins below that of the Khalîfa (except on the coins of Indian type struck at Lahore). The Indian dominions were in fact the only part of the monarchy free from the Saldjûk power. Bahram Shâh's downfall was however due not to his Saldjûk suzerain but to the rapid rise of the chieftains of Ghûr. In the beginning of his reign he had to deal with the rebellion of Muhammad Bâhîm who had been governor of the Indian dominions. He attempted to assert his independence and built a fort at Nigor in the most remote part of Sâlta, a province which had been conquered by Masûd I, lost by Mawdûd, and apparently reoccupied afterwards, although of this there is no record. (For the importance of Nigor see Cunningham, Epithalites, in Transactions of Oriental Congress, 5th Oriental Congress, p. 241 and Thomas, Chronicles of Fathân Kings of Delhi, p. 47. Bahram Shâh encountered Bâhîm near Mulk and defeated him, returning to Ghûzna in 523 (1128). The rebellion of the Ghûr Chiefs was due to the murder of Kûb al-Dîn who was a refugee at Ghûzna by Bahram Kham's orders. His brother Sûrî, the principal malik, after driving Bahram Shâh out of Ghûzna for a time, was himself driven out by the latter who collected a force of Afgân and Khaljî Turks in the Kugûl valley. Sûrî was himself captured and executed with great ignominy, 543 (1148). Then Sûrî's successor Sâm with his brother Husain advanced towards Ghûzna, and Sâm having died, Husain ('Alî al-Dîn Husain, nicknamed Dzhâr-i-Dîn-sâzâ) took Ghûzna and ravaged it in a merciless manner, hence earning his nickname. Bahram Shâh probably recovered possession of Ghûzna for a short time after his departure, but accounts are contradictory. Husain, on his return march through Zamândâvar, destroyed the celebrated city of Bust, capital of that province. It has lain in ruins ever since, and Kandahâr soon took its place as the capital. Bahram Shâh died in 547 (1151).

Khusraw Shâh. His son Khusraw Shâh succeeded and would no doubt have received the support of his suzerain Sandjâr who had been at war with Husain, had not Sandjâr himself been defeated and taken prisoner by the Ghûz zôrd in 548 (1153). He died soon after his release four years later. The Ghûz rapidly overran the whole country, the Ghûris in their mountains alone being untouched. Khusraw Shâh was not in a position to resist them. He abandoned Ghûzna for the last time and the Ghaznavid kings henceforward held only the Indian territory. Khusraw Shâh died at Lahore in 555 (1160).

Khusraw Malik. He was succeeded by his son Khusraw Malik. (There is a good deal of discrepancy as to dates in the chronicles but the date 555 is fixed as being the year of the death of the Khalîfa al-Muktafî whose name appears on the coins of both Khusraw Shâh and Khusraw Malik). He was the last of the Ghaznavid Sulţân, and ruled the Pandjab till 583 (1187). The Ghûr Sulţân Mu'izz al-Dîn b. Sâm, who recovered Ghûzna from the Ghûz in 569 (1173), almost immediately began his invasions of India, but did not attack the Lahore kingdom till after his expeditions to the south. After the campaigns of Mûldâr, Nährwâla and Dêshâl he made his first attack on Pe-sâwar which belonged to Khusraw Malik, and threatened Lahore. He occupied and strengthened the fort of Sûyûkht in the country of the Khûkhârs, a powerful tribe, and made it an outpost of his rule. Khusraw Malik tried to retake it with the help of the Khûkhârs, and the Râdji of Djamân, who considered the Khûkhârs his own subjects, turned against Khusraw Malik and took the side of Mu'izz al-Dîn. The latter finally entraped Khusraw Malik by pretended negotiations, surrounded him and took him prisoner. Lahore and the Pandjab fell into the hands of the conqueror. The unfortunate Ghaznavid king was sent first to Ghûzna, then to Ghîyâs at Firishta and lastly to the fort of Balârwâm in Ghârdjistân, where he and his son Bahram Shâh were put to death in 587 (1191).

Thus the great Ghaznavid empire came to an inglorious end. Had it not perished when it did, it must inevitably have been swept away, like its successors, by the Mughâl flood, for it had no stability. It was a purely military rule with no national force behind it, and in absence of such a force must be fatal. Its fame is due to its having commenced the Muḥammandan conquest of Northern India, and established a firm foothold in the Pandjab which made Mu'izz al-Dîn's later conquests possible.
The coinage of the Ghaznavids is full, and affords a numismatic record of the principal events from Alp-tigin's rise to Khusraw Malik's fall. Particularly noteworthy are the small issues of Sabuk-tigin at Farwân, imitating in size and weight the coinage of the Hindu Shâhis, followed later by Muhammad and Mas'ûd I who adopted the horseman type used by the same kings, with their own names above the horseman in Kufic letters. Later kings assigned the half-bull from the same coinage and even borrowed the title 'Sâmanat Pêwa in Nâgâri letters from the Shâh coinage. Very remarkable also is Mahmûd's bilingual tânka in Arabic and Sanskrit struck at Mahmûdîpurg (Labore). Side by side with these Indian coins the regular issue of dinârs and dirhams, following the models of the 'Abbasid Caliphs, went on. Mahmûd's early assumption (during his father's life) of the title of Saif al-Dawla under the Sâmanids is illustrated by a dirham struck at Na'Hâpûr in 185, which bears the figure of a sword and the title Saif al-Dawla Mahommed b. Sabuk-tigin. The extensive coinage of Khurshûd and Tughârîstân issued from the mints of Herât, Na'hâpûr, Balkh and Walwaîz comes to an end in the reign of Mas'ûd I, as these places fell into the hands of the Saljûqs. The title Awdâr was the only one used at first. The chroniclers give Mahommed and his immediate successors the title of Saifân, but it does not appear on the coins till Ibrahim's reign.

(M. LONGWORTH DAME.

GHAZZA, the ancient 'Azza, Greek Ταζα, an important commercial town in southwestern Judæa, near the coast at the intersection of the chief route to Egypt and several caravan routes from Arabia. The town belonged to the Phœnicians and was not taken by the Jews till the time of Alexander Jannaeus who had it destroyed. It was rebuilt by Gabinius somewhat farther south than the ancient town the ruins of which were still visible in the fifth century. The harbour of Maiuma (cf. Mitteilungen u. Nach- richten des Deutsch. Pal. Vereins, 1901, p. 62) was 2-3 miles away. Under Roman rule it belonged to the province of Syria Palestina and later to Palestine Prima. In Mahmûd's time it is described by Antoninus Martyr as a splendid and luxurious city, whose inhabitants gave a kindly welcome to foreign visitors. The town was of very great importance to the merchants of Mecca who sent their great caravan to Syria every year. According to Tradition the Prophet's great grandfather Hâshîm [1. v.] died in Ghazza and is buried there, which gave “Hâshîm's Ghazza”, as it was called, a particular sanctity in the eyes of Mus- lims; 'Omar also is said to have won his wealth there. When 'Abî Bakr sent a section of the Arabian troops to Palestine, the Patriarch of Ghazza was defeated at Dakhîn (Dâlîkhûrî, p. 169; cf. 'Abîrî, Amâulas, where this battle is confused with one in al-Ôrâbi or Tâdûn (Eutychius, Amâulas, ed. Pococke, ii. 258), about three hours east of Ghazza (cf. the article Dakhîn, which was soon afterwards taken by 'Amîr b. al-Ôsîy). Whether Sa'd's account of the siege of Ghazza by 'Allamûn b. Mudjahîzir has any historical value, remains to be proved; at any rate its details are a repetition of what is related of 'Amr himself. In 767 the celebrated jurist al-Shâhî was born in Ghazza. Towards the end of the viiiith century the town, like several others in the neighbourhood, was devastated by the bloody feuds of several Arab tribes. It recovered, however, for in the viiith century Ibn Hawîk al-Mukaddasî describe it as a large and wealthy city with a beautiful chief mosque. It must, however, have been laid waste again for, when the Crusaders came there, it was in ruins. In 1152 it was rebuilt by the Christians and a fortress built in it, which was granted to the Templars and garrisoned by them. It is from this period that Idrîs's brief mention of the city dates. The unfortified part of the town had been sacked with great cruelty by Salîh al-Dîn in 1170 but it was only after the battle of Hattin in 1187 that the citadel fell into his hands. Richard I. Coeur de Lion succeeded for a while in holding it again, but it was finally taken by the Muslims again who held it henceforth. On the division of country into mamlûkî Ghazza became the capital of one of them. In the xivith century Abu l-Fîdâ describes it as a town of medium size with a small fort and flourishing orchards which were separated by sandhills from the sea; Ibn Battûta on the other hand calls it a large, thickly populated town without a wall and with many mosques, including one newly built by Amir Džîwâlî, which had taken the place of the old chief mosque (perhaps the modern chief mosque, which it may be added, was originally a Johanne church of the xiiith century). In the xvith century Khalîf al-Ôzâhîrî speaks of Ghazza as the capital of an extensive mamlûkî and calls it a beautiful town in a flat country, rich in fruits and having mosques, schools and other fine buildings worthy of admiration.

At the present day Ghazza is very prosperous (about 40,000 inhabitants); the surrounding orchards yield a rich harvest and the market is a very busy one. Many pieces of marble from the ancient buildings are built into the houses but otherwise the town is not rich in relics of antiquity. The above mentioned harbour of Maiumas is certainly mentioned by Mukaddasî, al-Bakri and Idrîs as Mâmus or some such name. The last named, however, says that the harbour of Ghazza is Tela, which al-Bakri merely mentions along with Maimûs; it is the ancient Anthedon, the site of whichGatt has discovered an hour's journey N.W. of the town.

GHÉBA. A MUSLIM tribe of Râjdâ'it origin associated with the Dājjāl tribe, and occupying a considerable part of the Pindi Ghēb Tābiṣ of the Aṭār District, Pandājāb. Though not a large tribe they have a good social position. They are a branch of the Puwar Râjdâ'it and related to the Tiwâna and Siyâl tribes. Legend provides them with three founders, sons of Râj Shâqar Puwar, named Taqī, Muhammad and Ghōs; the first ancestor of the Tiwânas, the second of the Siyâls and the third of the Ghēbās. The Ghēbās were nearly independent till subdued by Randjī Singh. The period of their conversion to Islam is not known.

(M. LONGWORTH DAME) GHIJĀR, an Arab tribe, belonging to the Mādâ'ī (lám̄a'dī) group. Their genealogy is: Ghijar b. Mulāqī b. Daṣīr b. Bakr b. 'Abd Manṣūr b. Kīnāna; they were closely allied to the Hughail.

They lived in the Hidjâz. The following places belonged to them: Âdīnā (near Mecca), Baṭn (near Usfān, also given as a hill), Shadakh (in common with the Uslam), Ghika, Wadān (both the latter between Mecca and Medina), al-Tanāšāb and the hill of Muslih.

In the year 6 (629) the Ghījar adopted Islam. In the same year they took part in the conquest of Mecca by Ommāna, Ihwâna, Dhu'lainīn, Sa'la'nain, Asad, Kâis and other tribes under Khaṣīd b. al-Walid. After the death of the Prophet, they recognised the Caliph Abī Bakr and fought for his party against the rebel tribes.

from Dihīl and persuaded his father to take up arms against the outcast. Khusraw was defeated on Sept. 5th 1320, and on the following day Taghlāk was proclaimed emperor. The restoration of order in the capital occupied him but one week, and, after modifying the harsh laws of the Khālidī and founding his new capital of Taghlakābād, he dispatched his son, now styled Ulugh Khān, into the Darakhan. Details of Ulugh Khān’s campaigns cannot be given here but he carried his arms to the extreme south of the Indian Peninsula. The defeat of an expedition against Warangal has been variously attributed by historians to a military mutiny and to the failure of Ulugh Khān to persuade the whole army to join him in a rebellion against his father, but he had no difficulty in convincing Taghlāk of his innocence, and in 1324 was summoned from Telingān to act as regent during the absence of Taghlāk, who had resolved to lead an expedition into Bangāl, where two brothers, Shihāb al-Dīn Bughrā and Ghiyāth al-Dīn Bahādur, were contending for sovereignty. The former submitted and the latter was captured, and on his return towards Dihīl Taghlāk was received with great pomp in a temporary pavilion which had been erected by his son at Aghānpūr, six miles from Taghlakābād. The building fell and crushed its occupants, and Ulugh Khān has been accused by some historians of having contrived the disaster, but many circumstances, besides the clumsiness of the structure, combine to render his guilt doubtful. Taghlāk died in February or March 1325.

**GHIYĀTH AL-DĪN TAGHLĀK II.** Fourth emperor of Dihīl of the Taghlāk dynasty, was the son of Fath Khān, eldest son of Firuz Shāh Taghlāk. On the death of Firuz in Sept. 1388, his second son, Muhammad, was in rebellion, and Taghlāk was placed on the throne in accordance with his grandfather’s will. He attempted, without success, to crush his uncle’s rebellion, and, after he had reigned five months, he and his minister Malik Firuz Khāndžāhān were put to death (Feb. 19th 1389) by Malik Rukn al-Dīn Canda, and his cousin Abū Bakr was raised to the throne.

**GHMĀRĀ.** (Gumera in Leo Africanus.), a Berber tribe in the western Maghrib. Ibn Khaldūn says it lived along the Maṣṣātīn coast and traces it back to Gomār, a son of Maṣṣātī, or, according to another tradition, son of Meṣṭāl b. Mellī b. Maṣṣātī. The Ghomārā are divided into a large number of clans (Beni Hamid, Mettwa, Beni Nal, Aqīshāwa, Beni Wazzawāl, Medjikassa etc.), which are still to be found at the present day among a number of Rif tribes. It is rather difficult to define exactly the territory occupied by the Ghomārā. According to Ibn Khaldūn, it was five days’ journey in length (from the “plains of Maghrib” to Tangier) and about the same in breadth (from Ḫsanām to the Wādf Wergais). It ran down the coast between Aṣṣāl and Aqsa and here adjoined the lands of the Berghawāṭa. Al-Bakrī no longer reckons the district of Tangier and Ceuta to the Ghomārā and gives Nukrū in the east and Karūšā in the west as their boundaries.

The Ghomārā were settled in this part of the Maghrib long before Isām was introduced into these regions. Conquered by Mūsā b. Nuṣair, they became converts to the new religion, but in the second century A.D., they adopted Khaṭṭāridi doctrines and took part in the rebellion of the Mārās. Even after the defeat of the Khaṭṭārids they still showed themselves disposed to heretical doctrines however. “Their rudeness and lack of culture”, writes Ibn Khaldūn, “prevent them recognising the truth in matters of religion.” It therefore followed that they attached themselves in great numbers to the false prophet ʿAbd al-Muṭṭāfīr “the forger” (cf. the art. Ṣaḥāmī). He belonged to the tribe of the Meṣākka, appeared in the district of Tetuā in 913 (915) and fell in 915 (927-928) in a battle against the Maṣṣātī. Ḥamīm gave his followers civil and religious laws, limited the fast of Ramāḍān to three days, abolished the command to make the pilgrimage and composed a ʿĀrān in the Berber language, from which al-Bakrī and Ibn Khaldūn quote a few passages. At a later period another prophet named ʿĀsim b. Ṣafī al-Yazadjūnī appeared; in 1285 (1288) a rebellion broke out instigated by a certain Abū ʿIṣāwādžīn, who claimed to be a prophet and magician. The Ghomārā have always had a particular fondness for magic. Al-Bakrī makes a number of references to it and Ibn Khaldūn says that the black art was particularly practised by young women.

As to the political history of the Ghomārā, they have undergone many changes. From the iiith-ivth (viith-xith) centuries the eastern part of their lands belonged to the kingdom of Nukrū. One of their chiefs named ʿAbd al-Muṭṭīn attempted in 971 (761) to seize the reins of government there held by the Beni Ṣāḥīb, the descendants of the founder of the Nukrū kingdom, but failed. On the division of the Idrisid kingdom, the eastern tribes passed under the Idrisids and their descendants. They remained loyal to them even after the Idrisids had been driven from Fāris by the Fāṭimids and stood by them to the last in their wars with the Spanish Umayyads. After the disappearance of the Idrisids from the scene (264 = 974) the Ghomārā first recognised the suzerainty of the Umayyads, then that of the Ṣaḥmādīs of Ceuta until the coming of the Almoravids. On the rise of the Almohads the Ghomārā hastened to adopt the new teaching and assisted ʿAbd al-Muṣūmin in his expedition against Ceuta (541 = 1146). But this loyalty to the Almohads the particular city of the Caliph, did not last long. Abū Yaḥṣīb in 562 (1166-1167) had to take the field in person to suppress a rising led by a Ghomārā chief named Ṣebā b. Manṣūrāḥ. The rebel was defeated and slain and Abū Yaḥṣīb appointed his brother to govern Ceuta and watch the Rif.

The Marinids also found it difficult to conquer the unruly Ghomārā. They only succeeded in subduing them by taking advantage of the feuds between the various ʿAṣiffs. But this conquest was by no means permanent. “At the present day”, writes Ibn Khaldūn (trans. de Lane, ii. 157 et seq.), “the Ghomārā have become powerful tribes; they are numerous; they pay homage and tribute however to the Marinid government as far as the latter
can extort it from them; but as soon as the government once shows itself weak, it has to order troops from the capital to bring the tribes back to their allegiance. Protected by inaccessible mountains, they do not hesitate to offer an asylum to members of the royal family and to all rebels who seek refuge with them. From the xvth century onwards details of the history of the Ghomāra are entirely lacking; their name is still mentioned by Leo Africanus, however, in the xviith century and it is still borne by a powerful tribe of Djebala.

Schefer), i. 19 et seq.; E. Fagnan, L'Afrique septentrionale au xixe siècle de notre ère (Kīṭāb al-lahshī), Constantin 1900, p. 45 et seq., 144-147; Moullères, Maroc inconnu, ii. 291-355. (G. Yver.)

GHÔR a mountainous country now included in Afghanistan [q.v. i. 149] occupying the block between the Helmand valley and Herat, and corresponding roughly with the modern Hazarastan, occupied by the Hazara and Căhār Aimaq tribes. The country gave its name to the Ghōrīs [q.v.] who succeeded the Ghaznavids in power. Ghōr formed part of the kingdoms of the Sāmānids and Ghaznavids. The Ghōrīs themselves were conquered by the Shāhs of Khārizm and shortly afterwards, in the early part of the viiith = xiiiith century, the country came under Mongol rule, and Firūz-kōh the capital was destroyed. The population, formerly Iranian, became from that time largely Mongolian, as it still remains, [see under art. AFGHANISTĀN i. 151, 154]. The name Ghōr gradually disappears from history, and has not been in use in modern times.

Bibliography: For authorities see under art. FIRUZKHÔ, p. 142 and GHÔRIDS. (M. Longworth Dames.)

GHÔRIDS. The family of the Maliks of Ghōr claimed an illustrious Iranian descent, and took the name of Shansabānī from Shansab a supposed descendant of Zuhāk, but nothing is known of their actual history before the time of the Safāfīs, when Yaqūb b. Laith invaded Zamīndāvar and Būst. At that time the mountain region of Ghōr (sometimes called Mandēsh) was under a Malik named Sūrī, and the population were not yet converted to Islam. His son Muḥammad who was attacked by Muḥammad Ghaznavī was also stated in the Rawat al-Safā'ī to have been still a pagan, in spite of his name, and al-ʿOtbi calls him a Hindū. Muḥammad took his stronghold in the year 400 (1009) and carried the chief into captivity, where he is said to have poisoned himself. His son Abū ʿAlī, who was put in his place by Muḥammad, no doubt had embraced Islam, and is said to have built Masjdids. Nevertheless he was seized and imprisoned by his nephew Abū bābās after Masjd had succeeded to the throne of Ghazna. ʿAbd Allāh seems to have been built himself a strong castle in the mountains of Mandēsh. Masjdids himself is stated by Bāyhaḵī to have conducted warlike operations in the Ghōr country against chiefstains named Abu l-Ḥasan and Warmāsh, but all alliance is made to Muḥammad, Abū ʿAlī or ʿAbdābā. It is probably that there were at that period several tribes in Ghōr under separate chiefs, and that there was no central government. ʿAbbās seems to have continued in power under Ghazna suzerainty until he was dethroned by Sulṭān Ibrāhīm who put his son Muhammad in his place. Through this comparatively peaceful period, when the raids of the Saljūqs were suspended, the power of the Ghaznavid monarchy was evidently sufficient to exact obedience from the hill chieftains. The maliks who succeeded Muḥammad were Kūṭ b al-Dīn Ḥasan and ʿĪzīz al-Dīn Ḥūsain. The latter came into collision with Sulṭān Sandjar the Saljūq ruler in 501 (1007), and was taken prisoner but released after two years (strange to say a similar story is told of ʿAlī al-Dīn Masjīdīs, and as both were called Ḥūsain it is probable there has been some confusion). After this his allegiance appears to have been divided between the Saljūqs on the west and the Ghaznavids on the east. Maṣūd III confirmed him as chief in 493 (1099). After his time the family divided into the two branches of Ghōr and Bāmiyān. ʿĪzz al-Dīn is said by Ṣafṣī to have died in 545 (1150), but this is evidently too late a date. His son, Saʿīf al-Dīn Sūrī, succeeded as principal chief, being the eldest of the sons by a mother of high status. They had another brother, however, named Ṣafīr al-Dīn Maṣūd, the son of a Turkish woman, and another, the son of a serving woman, named Kūṭ b al-Dīn Muḥammad. Sūrī made a division of his father's dominions awarding a part of the mountain tract of Ghōr called Warṣāhā (perhaps corresponding to the Taimani country of to-day) to Kūṭ b al-Dīn, who founded there the fortress of Firūzkōh and was known as Malik al-Dībāl. Fakhr al-Dīn received the northern territory of Bāmiyān with Ṭūkhrāstān and, according to the Ṭābrīzī Naṭrī, even Shāhān, and the country up to the boundary of Wāskh and Badakhshān, but it is clear that his authority over the more remote parts of this region must have been very slight. The later history of the Maliks of Bāmiyān may be here briefly given before continuing that of the main Ghōrid family. Fakhr al-Dīn was succeeded by Shams al-Dīn Muḥammad who is said to have extended his power to Balkh and Badakhshān, and to have subdued Ṭūkhrāstān, which evidently had not been really subdued before. He took the title of Sulṭān with the consent of his uncles of Ghazna who had, by this time risen to great power as will be seen. His son Bahāʾ al-Dīn Sām succeeded him in 588 (1192) and reigned till 602 (1205) when he died (soon after the murder of Muʿizz al-Dīn Muḥammad b. Sām). His son Djalāl al-Dīn ʿAlī who held power after him, assisted his brother ʿAlī al-Dīn to seize the throne of Ghazna, and himself obtained greatbooty. ʿAlī al-Dīn having been expelled from Ghazna by Valduz, Djalāl al-Dīn again assembled a force said to consist of Ghōrī, Ghuz and Beghū (or Eastern Turks), but met with no success. He was himself taken prisoner by Valdūz, but was released and recovered possession of Bāmiyān which he had meanwhile been usurped by his uncle ʿAlī al-Dīn Maṣūd. Djalāl al-Dīn continued to reign till the invasion of ʿAlī al-Dīn Khwārizm-Shāh, when he was defeated and put to death 612 (1215). Bahāʾ al-Dīn and Djalāl al-Dīn were rulers of great importance and the last of the Shansabānī race to enjoy real power. Coins of both of them are known. It is necessary now to return to Saʿīf al-Dīn Sūrī and carry on the story of the main line. The origin of the insurrection of the Ghōrī
Maliks is not very clear, but apparently the Malik al-Djibâl quarrelled with his half-brothers and took refuge with Bahram Shâh in Ghazna. It is probable that this was connected with the enmity between Bahram Shâh and Sultan Sanjar who had been making overtures to the Ghûrî Maliks. Whatever the cause, Bahram Shâh became suspicious of the Malik al-Djibâl and put him to death by poison 54 (1140). Sûrî, who had marched on Ghazna which he took, Bahram Shâh retired into Kâram and there assembled an army of Afghans and Khâlîjî. Meanwhile Sûrî had declared himself Sultan at Ghazna and made over Ghûr to his brother Bâhâ al-Dîn Sâm, but on the approach of Bahram Shâh the leading men of Ghazna rose against him. He attempted to retreat to Ghûr, but was surrounded, captured and executed.

His brother Bâhâ al-Dîn Sâm who succeeded him in 544 (1149) had already taken charge of Ghûr in his absence and completed the unfinished town and fort of Fûrûzkoh abandoned by the Malik al-Djibâl when he went to Ghazna. On learning of the death of Sûrî he collected an army and marched towards Ghazna, but died at Kidān on the way in the year of his accession. His brother 'Alî al-Dîn Hûsain succeeded him, and took up the work of avenging his brothers. Bahram Shâh's army met him near Tughnaibâd in the province of Zamindawar but was defeated, Daulat Shâh, son of Bahram Shâh, being killed. The chroniclers enlighten upon the valiant deeds of two champions in 'Alî al-Dîn's army both named Kharmis, who fought with Bahram Shâh's war-elephants. Nearer to Ghazna Bahram Shâh's troops twice attempted resistance, but 'Alî al-Dîn defeated them and took Ghazna by storm. His revenge was terrible. The city was laid waste and its inhabitants slaughtered; and the remains of the later Ghaznavi monarchs were dug up and burned. The name of Djalâh-soz was given to 'Alî al-Dîn on account of this terrible event. He did not attempt to hold Ghazna, being threatened on the west of his kingdom by Sultan Sanjar Schîlût. Some chroniclers assert that Bahram Shâh was dead and had been succeeded by Khusrâw Shâh before the fall of Ghazna but this is improbable. The author of the Tabakât-i Nâṣîrî states that he recovered Ghazna after 'Alî al-Dîn's departure. The latter, after leaving Ghazna, marched by way of Hâst, which he utterly destroyed so that it has been a ruin ever since, and then spent some time in his capital Fûrûzkoh till roused by Sanjar's advance. The armies met at Nâb in the valley of the Hari-rûd. 'Alî al-Dîn was deserted by his Turkish and Khâlîjî Ghuzz troops. The Ghûrîs were defeated and 'Alî al-Dîn taken prisoner. After a time he found favour with Sanjar who restored him to the throne of Ghûr. He re-established his power and extended it northwards, getting possession of the Murqijbâb valley (Ghârdjîstân) and the plain of Tâlûk. The retreat and capture of Sanjar by the Ghuzz probably made this development possible, and 'Alî al-Dîn was himself at Herât at the time of his death in 551 (1156). His son Saif al-Dîn Muhammâd succeeded at Fûrûzkoh. The two sons of Sâm, Ghiyât al-Dîn and Mu'izz al-Dîn, who had been imprisoned by his father he set at liberty, and also began a persecution of the Malâhidâ who had obtained influence in 'Alî al-Dîn's time. He was soon recalled by the incursions of the Ghuzz who were rapidly increasing in power, and was defeated and killed in a battle with them near Marv in 558 (1162). It is said his death was due to the treachery of his general Abu'l-Abbâs in revenge for his brother Warmâsh whom Saif al-Dîn had killed through jealousy, Ghiyât al-Dîn b. Sâm was with him at the time, and was brought back and raised to the throne by the army at Fûrûzkoh. Mu'izz al-Dîn who had been at Bâmâyâm with Fakhr al-Dîn joined his brother and became his principal support. They soon killed Abu'l-Abbâs, and then had to meet an attack from their uncle Fakhr al-Dîn assisted by Tâdž al-Dîn Yâlûz of Herât. Fâkhr al-Dîn considered that the Ghûr territories should belong to him and not to his nephew, and obtained the support of the rulers of Herât (Yılduz) and Balkh (Kimûdî), no doubt Turkish chiefs. The Ghûrî chiefs met their army at Râgh-i Zarîs in the Hari-rûd valley and defeated them. Both Yûlûz and Kimûdî were killed and the latter's head was sent to Fâkhr al-Dîn. The defeated uncle was received with ironical courtesy by his nephews, who however released him and restored him to his own territory of Bâmâyâm. Ghiyât al-Dîn then proceeded to liberate other parts of his territory from the intruding Ghuzz, who had taken possession of Ghazna after the death of Saif al-Dîn Muhammâd the year before, and retained it till 569 (1173) when Mu'izz al-Dîn conquered them and got possession of the old Ghaznavî capital. The last Ghaznavide kings had abandoned it and made Lahore their capital. Ghiyât al-Dîn then installed his brother Mu'izz al-Dîn as Sultan at Ghazna, himself retaining the suzerainty over that kingdom and the actual rule over Ghûr, as may be seen from the coins, on which Ghiyât al-Dîn appears as al-Sultan al-zâ'im and Mu'izz al-Dîn as al-Sultan al-mu'âsa'dam. Ghiyât al-Dîn himself operated against Herât which had fallen into the possession of one of Sultan Sanjar's descendants named Tughril, and obtained possession of the city in 571 (1175); but no doubt it was recovered by Tughril who was not finally disposed of till 588 (1192). Ghiyât al-Dîn also received the admission of Tâdž al-Dîn Harîb, Malik of Sîdjiştân, who accepted his suzerainty, though it is not the case as stated by Râverty in a note on p. 192 of his translation of the Tabakât-i Nâṣîrî that the name of Sultan Ghiyât al-Dîn was put on the coins (see B. M. Cat. Oriental Coins, Additions, vols. i. to iv. p. 268). Mu'izz al-Dîn after consolidating his authority at Ghazna began to conduct expeditions into India where the Ghaznavi king Khusrâw Malik was still reigning at Lahore, while Mûlûtân had fallen back into the hands of the Karmâtians who had been expelled by Ahmed. He took Multân in 570 (1174) and Ueth soon after. The latter place was held by a Râdž of the Bâstî tribe, and according to Fîrîstâ Mu'izz al-Dîn obtained possession of it through an intrigue with the Râdž's wife. In 574 he marched to attack Bihm Dîv king of Nahâvûl (Ahnahûla on the Gwârjîstân coast), but was defeated and forced to retreat. In 575 (1179) he took Peshâwar and threatened Khusrâw Malik at Lahore, and in 578 (1182) he turned south again and took Dûbûl on the sea-coast of Sind. In 582 (1186) or perhaps the following year he defeated Khusrâw Malik and obtained possession of Lahore (see under Ghaznvîs), and from that time onwards the Ghûrî kings,
having destroyed the last remnants of the dynasty of Mâhmûd, considered themselves heirs to all his conquests. In 588 (1192) Mu'izz al-Din joined his brother in repelling an attack of Sultan Shâh, a son of the Khwârizm Shâh, who was finally defeated at Râdâbâr on the Murgâb River. Tughril of Herât who had joined Sultan Shâh was killed in this battle, and the unfortunate Khwârazm Shâh was put to death the same year. Nâşâpur was taken from the Khwârizm Shâhīs in 596 (1199) or perhaps the year after, but was not held for long, and the rising power of 'Alâ' al-Din b. Takash, the Khwârizm Shâhī, soon became predominant in Khurâsân, although Ghîyâth al-Din and Mu'izz al-Din were able to hold him at bay as long as they lived, and Mu'izz al-Din was able to prosecute his Indian conquests.

Ghîyâth al-Din died in 599 (1202) at Herât leaving a very wide-spread empire. His brother Mu'izz al-Din was at that time in Khurâsân. On succeeding to the throne he bestowed the government of Ghôr on his cousin Ziyâ' al-Din, who took the name of 'Alâ' al-Din Muhammad. Mu'izz al-Din during his brother's life had been pursuing his schemes of Indian empire since his conquest of the great state of Ghaznâvids. Immediately after his occupation of Lâhore, in 597 (1191), he took the strong fort of Bhâjinda on the Hârârâ and leaving Ziyâ' al-Din in charge advanced towards the Jâmmâ to attack the Râdâj of Dihîlî. (It may be noted that in many histories of this period Mu'izz al-Din is alluded to by his earlier name Shâhâb al-Din).

Since Mâhmûd's invasions the great kingdom of Kânâdûj had recovered some of its former prosperity under the Ghahârwâr dynasty which had succeeded to the Pratihâtras. Dihîlî, a recent foundation, had been taken a short time before from the Tomara or Tuwar tribe by the Çauhâns whose capital was at Adîmîr. The Çauhâns Râdâj at the time of Mu'izz al-Din's invasion was Prithvi Râdâj, popularly called Rai Pithûrâ, who was married to the daughter of the Râdâj of Kânâdûj with whom he had eloped. He was a bold and successful warrior, and is still famous in folklore. The kingdom of Adîmîr and Dihîlî stood in the way of a conquest from the northwest, and must first be subdued before Lâhore. In 597 (1191) he took the strong fort of Lâhore, in 598 (1192) he attacked the Râdâj of Dihîlî. It was therefore against this kingdom that Mu'izz al-Din's efforts were directed, and in Prithvi Râdâj he met a worthy antagonist. Prithvi Râdâj met him at Tirîrât, accompanied by his brother Gobind Râi (or Khandi Râi), governor of Dihîlî. A desperate battle ensued in which Mu'izz al-Din was wounded by Gobind Râi, and saved with difficulty by one of his Kâhdûj followers. His army met with a defeat and was forced to retire on Lâhore.

Prithvi Râdâj advanced on Bhâjinda to which he laid siege, but Mu'izz al-Din appeared in the field again in 598 (1192): Prithvi Râdâj who had just gained possession of Bhâjinda thereupon fell back to his former position at Tirîrât. (The name is given as Tarân by some chroniclers and Tallâwari by others, but Tirîrât is the actual name and was so in Firîsha's time. It is situated between Kurnâ and Thânêshar). Here he was again attacked by Mu'izz al-Din, this time with complete success. Gobind Râi was killed in the battle and Prithvi Râdâj in the pursuit. This last battle restored the power of resistance. The whole territory of Sâwâlakh southwards to Adîmîr, including Hânsi and Saisût (now Sirsâ) fell into the conqueror's hands. The Sultan returned to Ghaznâ leaving his general Kûb al-Din Aibâk to prosecute his conquests, Mîrâj was soon taken by this commander and Dihîlî the next year. In 590 (1193) Mu'izz al-Din again took the field and advanced against Kânâdûj. He was met by the Râdâj Djaîê-ând at Chandwâr near Ištâwa not far from Kânâdûj and on the banks of the Djaîâmâ. Djaîê-ând was killed in the battle and over 300 elephants taken. Next year he took Thânêshâ (now Bîhâna); and Gwâîfîyâr soon followed. Kûb al-Din carried on the conquests south of the Adîmîr kingdom into Ujîjâjâin and Anîllîwârâ (Nahrâwâ) where Bhîm Dîr who had once repulsed Mu'izz al-Din was now defeated. Another Khwârazm Shâhî, Kâhîlîîîî called the war into Bûhâr, which he subdued, destroying Hindu and Buddhists shrines in great numbers. He also took Nadîa (Nadia) and drove out its king Râi Lakhmania, who took refuge in Bâng (Bengal). Lakhnauti now became the Muhammadan seat of government. Kallândâr was also taken by Kûb al-Din in 599 (1202) and succeeded to the supreme government. In 601 (1204) he organized a powerful army to invade Khwârizm and put an end to 'Alâ' al-Din Muhammad's depredations, but was unsuccessful and had to retire followed by the enemy. He was defeated by Izz al-Din Husain, one of his principal maliks, and was for a time in great danger. He escaped to Ghaznâ with the wreck of his army. An outbreak then took place among some of the Pandjâb tribes, especially the Khokhars near Lahore; the same tribe that had turned against Khwârazm Shâhî in favour of Mu'izz al-Din. The Sultan marched into the Pandjâb and punished this tribe. On his return march while encamped at Damyâk on the bank of the Indus he was assassinated by a fanatic of the Malàhîda, whom he had persecuted at an earlier period. The Khokhars have also been accused of the actual assassination by confusion of names, but responsibility has been placed on the Gakhars; but the Tâbâkî-kî Nâjîrî, by far the best authority, supports the account here given.

The death of Mu'izz al-Din broke up the Ghôrîde empire. The power in India passed to the Turkish slaves and generals. Kûb al-Din remained at Dihîlî and Tâdâj al-Din Yâldûz who was in Kûrmân (the Kûrm valley) took possession of Ghanâ, defeating the Ghôrîde maliks of Bûmîyân. Ghîyâth al-Din Mâhmûd, son of Ghîyâth al-Din Muhammad succeeded to the chiefship of Ghîyâth and was replaced to something like its original importance, and deposed and imprisoned 'Alâ' al-Din Muhammad who had been installed by Mu'izz al-Din. Sultan Mâhmûd continued to rule at Firîshkîh, and at the request of the Khwârizm Shâhî imprisoned there the latter's brother 'Ali Shâh. He was assassinated by 'Ali Shâh's followers in 609 (1212). His son Bâhâ al-Din succeeded and 'Ali Shâh was set at liberty, apparently as a defiance to the Khwârizmî monarch. The latter then turned on the attack and took Firîshkîh and added to the whole of Ghôr to his kingdoms. 'Alâ' al-Din Utmuz, a son of Djaîê-ând, became nominal Sultan under Khwârizmî suzer-
aignty; he was attacked by the Ghaznavi forces by order of Valdzu in 611 (1214) and killed. Ala’ al-Din Muhammad who had been imprisoned in 602 was again made nominal sultan by Yaldzu, but after the latter’s death next year he surrendered to the Khwarizm-Shah and was taken in 612 (1215) to Khwarizm where he died some time after. In the same year, as already related, the last of the Bâkap Khan branch of the Ghorid family were swept away by the Khwarizm-Shah, and the dynasty was now extinct.

The territories in Ghur, Ghazna and Khorasan now formed part of the Khwarizm kingdom, soon to disappear before the advancing Mughals. The Indian conquests although they passed away from the family were still more permanent. The Turkish slave generals continued its traditions, and took from Mu’izz al-Din their title of Mu’izz Sultan. The most faithful of these slaves Tadj al-Din Yaldzu who reigned in Ghazna, Kâramân and Banîyân (Banû) till 612 (1215) continued to put Mu’izz al-Din’s name on his coins as suzerain, and called himself ‘his servant’ (âhrâm). Kutb al-Din never even struck coins in his own name, but called himself “Mu’izz al-Din Nâsir of Minhâj-Dî Siradj” (Raverty’s trans., London 1881); see also Thomas, Chronicles of Pathân kings of Delhi, London 1871; Depréry, Histoire des Sultan ghorides, extrait de Mirkhor, Paris 1844; Hamd Allah Mustawfi, Ta’rikh-i Gucida (ed. Browne), 1, 406–413; Elliot and Dowson, Hist. of India, London, 1869; Firîsta’s History (text of Lucknow). For coins, see B. M. Catalogues (Oriental coins, Additional Vol. i. to iv. and Sultan’s of Delhi); Elphinstone, Hist, of India, London 1866; Raverty, Notes on Afghanistan, London 1880 (M. Longworth Dames).

GHORI DYNASTY, the, of Mâliva, was founded by Husain, entitled Dilawar Khan, an amir of Firuz Shah Taghlab of Dihli claiming descent from Shihâb al-Din Muhammad b. Sâm, Dilawar Khan, having been appointed governor of Mâliva by Muhammad Shâh, son of Firuz, became independent in 1401, after the overthrow of the empire of Dihli by Timur. He died in A.D. 1405–1406, and was succeeded by his son Husâh, who was suspected of having poisoned him. Husâh, who built the fortress of Mâlûd, was chiefly occupied during his reign in unsuccessful warfare with Gadjurât. In 1420 he reduced the Gond kingdom of Kherla to the condition of a tributary state, and in 1422 led a raid into the distant Hindu kingdom of Djânjâd and returned with much plunder. In 1423 he besieged Gâlvâsî without result, and in 1428, having forced Ahmad Shâh Bahmanî I to raise the siege of Kherla, pursued him, but was defeated. In 1433 he captured Kâlpî. The last years of his reign were embittered by disputes between his sons, the eldest of whom, Ghazân Khan, was, not without opposition, raised to the throne under the title of Muhammad Shâh on Hûshân’s death in July 1435. Muhammad Shâh’s debauchery and his cruelty towards his brothers and their sons alienated the affections of his subjects, and he foolishly quarrelled with his powerful cousin and brother-in-law, Ma’mûd Khan Khâlaâd, to whom he owed his throne. Ma’mûd Khan caused him to be poisoned and the amir’s proclaimed Muhammad’s elder son, Ma’sûd, a boy of thirteen years of age, king, but Ma’sûd and his brother ‘Umar Khan fled the throne, after having been declined by Malik Mughîth. Ma’mûd’s father, was usurped by Ma’mûd, and the kingdom of the Ghorids, passed in A.D. 1436, to the Khâlaâds.

GHRUSH (T.), ghirsh or birâh (L.), the name of the heavy silver coin of Turkey, translated by piastre in European languages. The Oriental nations borrowed this name from the Slavonic-German form of the word grossus (gros, gros, groot, Groshen). The national coin of the early Ottoman empire was the âkâs, a small silver piece, which had evolved from the half and third dirhem of Western Asia and weighed about 15 grains at the time of the foundation of the Ottoman empire but fell in weight very rapidly. The last âkâs’s, which were struck at the end of the xviii century, weighed only 2 grains. So small a coin, the only piece intermediate in value between the gold and copper coins, could not serve the purposes of commerce, so that silver coins of all the countries of Europe also circulated in Turkey. Soon after the appearance of the great in Europe (the earliest was the gros tournois of Louis IX., struck in 1250, weighing 60 grains = 12 deniers) it must have found its way to Turkey also, for we find the word ghrush officially mentioned as early as a berât of Sultan Bayazîd I. of the year 795 (1392). The same must have been the case with this talar, but it has not yet been clearly explained why the Ottomans never gave the same name ghrush to the talar as they had formerly given to the given. Perhaps the transition of the name was facilitated by the “Guldengroschen” (uncliess) struck in South Germany at the end of the xv century or by the “Dickgroschen”, the immediate predecessor of the talar. In any case it is certain that the word ghrush had already undergone this change of meaning as early as the reign of Selim I. (918–926 = 1512–1520). Sulimân II. (1099–1102 = 1689–1691) was the first to take the final step of striking this large silver piece in his own mint, at least no Turkish piastre of an earlier reign has as yet been found. This national ghrush was struck on a standard of 6 (Constantinople) dirhems (296 grains), i.e. considerably lighter than the Austrian taler (valued at 9 dirhems) which was then the pre-dominant coin in Turkey. (This Austrian taler was struck at the rate of 9.75 to the Vienna mark of 4380 grains and therefore weighed 442 grains, from which weight divided by 9 we actually get the Constantinople dirhem weight of 49.4 grains). After the âkâs had been finally supplanted by the new small silver coin, the pâra (q. v.) the relationship between the ghrush and the pâra was fixed at 40 : 1, which still holds. The fractions of the piastre were the sozola (q. v.) of 30 pâras, the sirmilık or half piastre, onbâšík, onbaşik and bešlik; its multiples were the altinshyk, ıskılık.
in the reigns of Mahmud I. and Opthan III. (1143–1171 = 1730–1757) the weight (although not the value) was temporarily raised and the ghirsh approximated to the Austrian taler (c. 475 grains) with the accession of Selim III. (1503 = 1789) a rapid depreciation of the weight and value of the alloy began, which lasted till the currency was definitely reformed by Sulthan Abul-Majid in 1250 (1843). This last reform transformed the piastre to a small coin weighing 19 grains of .83 fine silver and worth about two pence.

Ghirsh were struck not only in Constantinople but in the North African vassal states of Turkey also, in inconsiderable numbers however and only after the reign of Mustafa III. (began in 1171 = 1757). The first ghirsh were issued in Egypt under Ali Bey in 1183 (according to the inscriptions but probably not till 1185), on a standard of c. 5 drachms = 2.4888 grains and halves of c. 2.52 drachms = 1.24 grains; they were to contain .5 fine silver but hardly attain V/4. They were worth 40 and 20 pâras (called medina [q. v.] in Egypt) respectively. The same coins but still more reduced in weight and value were also struck at the mint in Cairo during the French occupation.

(G. E. ZAMBAI.)

GHUBAR (A.), "dust," an exceedingly fine kind of writing, the lines of which are finer than hairs and which requires to be read with the aid of a glass. It may be used in any of the various calligraphies. — It also is the name of a kind of decimal figures, which are very similar to the Hindu-Arabic numerals.

**Bibliography:** Cf. Huart, Calligraphes et Miniaturistes, p. 53; S. de Sacy, Grammaire Arabe, i. 91 and vii. (C. Huart.)

GHUDDUWAN, a large "village like a town" (according to the Rakhâtât Ain al-Hayât of 'Ali b. Husain al-Kâshî, MS. of the University of St. Petersburg, Or. 293, f. 123) six farsakh from Bukhârâ, the birthplace of the saint ‘Abd al-Kâhlîk Ghudduwânî (viţ = xiiî century) is mentioned at an early date by Nâshrâhid (ed. Schefer, p. 56) and in his account of Muhammedan Bukhârâ (second = viiiî century) and probably dates from the pre-Muslm period. In the viţ = xiiî century there was a much frequented weekly market there (cf. the text of Samânî in Barthold, Turkestân ve epokhu mongolskogo muzhestviya, i. 123, note 6).

In the xîî = xviî century Ghudduwânî appears as a strong fortress and the key to Bukhârâ (‘Abd Allah Bâkhrî in Barthold, Zapiski vest. otd. arkh. obsh., xv. 202); Bâbur was defeated here by the Uzbeks in 918 = 1512 and this ended the rule of the Mirzâs in Mâwarî al-Nahr. At a later period Ghudduwân is mentioned as one of the seven tâmen in the neighbourhood of Bukhârâ (‘Abd al-Karim Bâkhrî, ed. Schefer, p. 77) and there is still a tax-collector (Amâlkâtî) stationed there.

(W. BARTHOLOD.)

GHUDDUWÂNI, KHWÂJÂ ‘ABD AL-KÂHLÎK, a famous Sufî, born in the village of Ghuđduwân (see preceding article); almost nothing is known of his life except that he studied under Shaikh Abû Yaḵtîb Yûsuf Hamâshânî in Bukhârâ and died in 575 (1179–1180). Hâjî Khâlâf, vi. 444 mentions his waqâyî (admonitions) and some of them are given in Dîmâni, Naṣrâhî al-‘Unî, ed. Lees, p. 431, and in Cod. Leid. 1051 (2). The Nakshbandis hold him in particular reverence, whence his name appears in the sanad of this order. Further material for his biography may perhaps be found in the manuscripts described by Peri eddine, (which exist elsewhere however also but are not accessible for publication): Cod. Gothanus, Cat., p. 123 and Cod. Berol., Cat., no. 260. Cf. also Rieu, Cat. of Persian MSS. (Brit. Museum), 862a and Heribet, Bibliothèque orient., s. v. Aqduani.

GHUFRÂN (A.), pardon (of sins).

GHUL. For the ancient Arabs the ghlû (fem. pl. ghulûn and aghwal) was a peculiarly bestial, diabolic and hostile variety of the mûrids of the dîjîn which allured men from their path by assuming different forms, then fell upon them unawares, destroyed and devoured them. In the root seem to lie two ideas: 1. changing into different appearances and 2. treacherously assailing and destroying. There are many references to them in the early poets. According to the Aghânî (vol. xvii. 209 et seq.). Ta’áb-baţa-Sharran spoke frequently in his verses of them; see especially his description of one (ibid., p. 212 foot) and his boasting of his companionship with them as a wanderer of deserts (ibid., p. 210 top). It was said to be the same as the sâli (pl. sâliûn) which had a similar power of transforming itself and which was called on that account the sorceress (râhîa) of the djîn. The masculine of the ghlû was said to be the kûfrûk. It is plain that the word ghlû is a descriptive, for it can be used, and not apparently as a metaphor, of any destruction which comes upon a man; so even of spiritual things in the Tîrâq ‘alî, ed. Dâjûghânî, sub voce and Horton, Theologie des Islîm, p. 335. Otherwise a man could hardly have been called Abu ‘l-Ghul (Hamâsa ed. Freytag), p. 12) and Ka‘b b. Zuhair in his Burdu-poem could not have compared Su‘âd, even in her changeableness, to a ghlû. For some reason Muhammed disliked the word, and only one derivative from the root occurs in the Kurân (xxvii. 46) ghlûn, "insidious destruction," used of the effects of wine (cf. Mufradât of al-Kâhî, p. 375). In a tradition also, he declares that there is no such thing as ghlû (Isâ, xix. p. 21, il. 10 et seq.). This has justified Muslims, especially Mu‘tazilites in denying the existence of the ghlû altogether, e.g. Zamakhshari on Kur. xxxvi. 46 (ed. Calcutta, p. 1205). But others held that it was only the changing of appearance (taqâhwawil) which the Prophet denied, and they quoted traditions from him telling how to drive away the ghlû by reciting the alâhân. For the mediaeval system in which the ghlû is fully accepted, see Damiri sub voce, also under sâliût and kûfrûk; Jâyakar’s transl., vol. ii. 47 et seq. Kazvîni classifies the ghlû among the diabolic (mutsakhâjâna) djîn (ed. Wüstefeld, i. 370) and that is overwhelmingly the later attitude. In the popular mind ghlû (also ghulâ; similarly kûfrûk) was an ordinary word for cannibal, whether human or demon, and thus became equivalent to the European ogre, and the standard ‘Mîrînî’ told elsewhere of ogres are connected with them. For Persia see Sir John Malcolm’s Sketches of Persia, chap. xvi.; for Egypt, Spitta’s Contes arabes, by vocab. under ghul; for North Africa, Stumm, Miräch en Triopolis, passim; for Turkey, Kuno, Türkische Volksmärchen, by index under Dew and Dohîn and passim. See also in Arabian
Bengal. This work, entitled Riqāḍ al-Salājīn, was completed in 1788, and is the fullest account in Persian of the Muhammadan history of Bengal. It was published in the Bibliotheca Indica, (1890-1891). Ġulám Husain died in 1233 A.H. (=1817).

**ĠUMDĀN, a castle in Śaṅcā, in the Yaman, famous for its size and splendour. Hamdān and other contemporary geographers give very full descriptions of it, but by that time it had long been merely a gigantic ruin. It is said to have been already destroyed when the Abyssinians conquered the Yaman in 325 A.D. It was then rebuilt, however, for, according to an oft quoted verse, which is ascribed by some to the father of the celebrated Aμaiya b. Al-Salīl, it was the abode of Da’h Yāzān’s son, after the Persians had conquered South Arabia about 570. Several authors say that it was the Caliph Othmān who finally destroyed it, but D. H. Müller considers this to be probably a malicious invention. In any case its destruction was connected with the Muslim conquest of the country. From several poems, whose South Arabian origin is confirmed in an interesting way by a number of technical expressions which are also found in Sa’abi inscriptions, we learn that the castle was built on a rock and that the lower part was built of freestone and the upper part of polished marble. According to Hamdān, the ruins lay opposite the two first east doors of the chief mosque; he was still able to see a stronghold on the top, where the Karmatians had encamped in 908. E. Glaser has actually discovered, northeast of the chief mosque, a large mound of ruins in the lower part of which were many beautiful freestone blocks; the large mosque has been built of the debris of the ancient castle as the style and size of the stones show.

AL-GHURAB (A.), "raven", the name of a constellation in the southern sky (corvus), cf. Karwint, Kosmogronie (ed. Wustenfeld), i. 420.

GHURABIYA, a branch of the Shī'ıi "exaggerators" (ghalāt q. v.). Its adherents believe that 'Ali and Muhammad were so like in physical features as to be confused, as alike as one raven (ghurāb) is to another. (A proverbial expression, cf. Ziteckher, f. Ayyub., xvii. 55), so that the Angel Gabriel when commissioned by God to bring the revelation to 'Ali gave it in mistake to Muhammad. 'Ali was, they say, appointed by God to be a Prophet and Muhammad only became one through a mistake. It is related that in the fourth century A.H. the holders of this view in Kūm raised a serious revolt against the decision of the judge Abu Sa'id al-Jaṣārī (died 328 = 940) when he divined an inheritance equally between two claimants, one of whom was the daughter and the other the uncle of the deceased. The Ghurabiyā demanded that the whole estate should go to the daughter and the uncle be quite excluded; as our authority rightly observes, this was the result of their political creed, according to which the succession to Muhammad was only legitimate in the line of his only daughter Fātima and not in that of his uncle ("Abbas") (Subki, Tabāsir al-Ghurabiyīn, ii. 194). Cf. the regulations made by the Caliph al-Muzāz regarding the inheritance of daughters in Ibn Hādjar, Ras' al-Isrā', ed. Guest (in the appendix to al-Kindi, Governors and Judges of Egypt, Gibb-Memorial, xiv.), p. 587, 3 from below. Ibn Dji-bair, who visited Damascus in 580 = 1184, mentions the Ghurabiyā among the minor sects to be found in Syria.

GHARAMA. [See GHARIM.]

GHURSH. [See GRUSH.]

GHUSL is the so-called "major" ritual ablution, which the law ordains for a ghunbat, i.e. a man who is in a state of major ritual impurity (cf. the article DAINABA, i. 1012). The ghusl consists in washing the whole body. The formulation previous to the niyya (intention) is indispensable for this and the believer has to be careful that not only is every impurity removed from his body but also that the water moistens every part of his body and his hair.

Bibliography: The chapter on purity (tabaqu) contains much tradition and the Fiḳh books, R. Strothmann, Krönitz der Zaiditen (Strassburg 1912), p. 21 et seq.; A. J. Wensinck in Der Islam, i. 101 et seq.; iv. 219 et seq. (TH. W. JUNGBOLL.)

GHUTA is the name given to the girdle of gardens that surrounds Damascus; it is the intensively cultivated area, watered by the delta and the canals of the Baradã (q. v., i. 652b), extending from the exit of this river from the gorges of the Anti-Lebanon to its disappearance in the Lake of 'Ataba, the ancient "Sea of Damascus", a number of lakebeds only intermittently filled with water. The Ghūta is protected by this network of ponds with their reedbeds from the advance of the desert. The area reclaimed on the east looks like a green mountain spur thrust boldly into the sea of sand" (Maspéro). The name Ghūta is found in the Umayyad poets, Ibn Kās al-Ruṣayfī and in Ḥādhīḵ, where it is designated by the Prophet as the scene of a future great battle (Mardzā Kāhī, i. 313). It is the rich oasis that Damascus [q. v., i. 902b et seq.] owes the glory of ranking as one of the four "paradises on earth." Tradition said that Abraham was born here and points out the hill which served Iṣkā and his mother as a refuge (kūrān, xxiii. 52). Its greatest diameter is from west to east. The statements of the authorities on its area vary: 18 square miles or 2 days' journey (masūha) in length and one in breadth. It is entirely covered with gardens and plantations — particularly orchards, from which come the celebrated fruits of Damascus, notably apricots, which are exported great distances — with villages buried among them, quite recalling the "dībāt al-ghūṭa wa l-'ilām" of Ibn Kās al-Ruṣayfī (ed. Rhodokanakis, p. 209). Several of these villages, says Sāliḥ, possess the importance of towns, such as al-Mizza, Dāraya, Ḥarasta and Dūmnā. Others have disappeared like Dair Mūrān (q. v., i. 587), Bait Lāḥīja, which Sāliḥ proposes to identify with a quarter to Damascus. The same writer also mentions the Druzes, Tāyūnīna (i.e. those who come from the Wadi 'l-Ta'm, on the western slope of Hermon) as already here. According to the old geographers, the Ghūta was occupied chiefly by the Banū Ghassān (cf. GHASANIDS), then by the Banū Khāl and various groups of the Kās, Sāliḥ counted 5345 bots or estates and 530 vineyards in his day (5th century A.H.); cf. the interesting monograph which he has devoted to the Ghūta: Dar al-faqqā, favourablely distinguished from the mass of these books by its contents. He deals with the house and its parts, with all the pleasures of life and sport and the accessories required for these. He illustrates these subjects by anecdotes and verses from the later poetry, thereby giving us a very rich wealth of material, which is still far from being exhausted, for the study of the history of Muslim culture, similar to the Kitāb al-Mawāridhī, to which it is superior.
however in the greater area covered by its subject matter. The book was printed in two volumes in Cairo in 1299-1300 A.D. (C. Brockmann).

GUZZ, the Arabic name for the Oghuz branch of the Turkish people. This seems to have been the name of the great people who united all the tribes from China to the Black Sea into one nomad empire in the viiith century A.D.; in the Orkhan inscriptions of the viiiith century they are also called Torkuz-Oghuz (“the nine Oghuz”) so that they were divided into nine tribes. On the linguistic and ethological relationship of the Oghuz to other Turkish peoples opinions differ; Kamber is in favor of the Sogdian-Turkic etymology C. P. Petrona, Zaşski Imp. Kuzuk Gogr. Okul., po otdeleniym etnografii, Vol. xxxiv. p. 547 et seq.) to prove that Oghuz is to be identified with the Mongol oirat (properly oyirat) has found no support, any more than the equation to Ughor and Uighur proposed on the same philological grounds by different scholars (B. Munkacić et al.). The Torkuz-Oghuz (called Tughuz-guzh by the Arabs) are mentioned for the last time in the west in 930 = 820-821, when they are said to have invaded the land of Qara-Turkestan (Tabari, iii. 1044). The geographers of the viiith century and later call the people living in the west Guzhu alone without the addition of a numeral. These Guzhu were the immediate neighbours of the Där al-Islām from Djarlān on the Caspian Sea to Fāraib and Asbīdāb in the Sir-Darya territory; in the west their territory was bounded by the lands of the Khazars and Bulghar, in the east by the lands of the Khūrāsh, in the north by the lands of the Kaimak (in Turkm. Kirgiz), cf. Ištakhi, ed. de Goeje, p. 9; on the other hand they reached the land of the Taghughuz from the Där al-Islām, who had to traverse the whole of the broad territory of the Khūrāsh, more than 30 days’ journey, setting out from the eastern frontier of Farghāna (Ibn Hawkal, p. 11). The boundary between the Guzhu and the Kaimak was formed by the upper course of the river Ilī, i.e. the Kama (Ištakhi, p. 222); in the same century a section of the Guzhu had separated from their fellow-tribesmen and migrated to the previously uninhabited peninsula of Siyāılak (Manqhaš) (ibid., p. 219). The headquarters of this people were on the lower course of the Sir Darya (Ibn Hawkal, p. 393). According to Ibn al-Athir (ed. Tornberg, xi. 177), these Guzhu had separated from the Tughughu in the time of the Caliph al-Mahdi 158-169 = 775-785 and even at this early period adopted Islam; in reality Islam only began to spread among the Guzhu in the viith = viith century; one section of them had adopted Christianity perhaps even earlier (Aṣifinar, ed. Wüstenfeld, ii. 394). The Muslim Guzhu were also called Turkmān (Turkman): this name (of uncertain origin), which was later to supplant the name Güzhu utterly, first appears in Muğaddas (ed. de Goeje, p. 274 et seq.). The migration of the Guzhu to Muslim Turkistan began towards the end of the viiiith = viith century; they first settled at Nūr in Būkharā; at an even earlier period Constantine Porphyrogenetos mentions the advance of another branch of the Güzhu (Oguz), called Torki in the Russian annals) westwards over the Volga against the Pečenegs. In the viith = viith century considerable bodies migrated in both directions; in Western Turkistan the Güzhu or Turkomans, sometimes as robber bands and sometimes under the leadership of their chiefs, penetrated all the civilised lands up to the Mediterranean sea; in the west the Uz crossed the Danube in 1065 and ravaged the Balkan peninsula as far as Thessalonica and Hellas but were soon afterwards almost exterminated by the Pečenegs and Bulghars; the remainder entered Byzantine service and seem afterwards to have become merged in other peoples. The campaigns of conquest of the Güzhu had nevertheless great influence on the ethnographic conditions of Western Asia. The Saljūq dynasty which arose from among the Güzhu gradually succeeded in subduing all the land from Chinese Turkistan to the frontiers of Egypt and the Byzantine empire. The Saljūqs seem to have been fond of settling their unruly relatives on the western frontier of their empire and thus Asim Minor and the northern provinces of Iran received their Turkish population. Only one movement of the Güzhu in the east of any importance is mentioned; in 548 = 1153 the tribes settled around Balkh rose against Sultan Sanjar, a rising which resulted in the taking prisoner of the Sultan and the devastation of Khwarasan and several other provinces, but these events only affected periodical conditions for a brief period and ethnographic not at all, as far as can be seen. The lands abandoned by the Güzhu on the Sir-Darya and north of the Caspian Sea and Sea of Aral were occupied by the Kipchak (also written Khīfchak), a branch of the Kaimak (40 Gardizi in Barthold, Oetc. v Poljedke v Srednymi Aziyu, p. 82). As early as 421 = 1030 we find the Kipchak mentioned as neighbours of Khwārizm (Baihaqi, ed. Morley, p. 91 at the foot); Najīr-i Khwāsaw (in Browne, A Literary History of Persia, ii. 227) already uses the term “desert (daghat) of the Kipchak” afterwards adopted by the Muslim geographers, in the same sense as Ištakhi (p. 217 et seq.) at an earlier period uses the term “desert of the Güzhu” (mazfisat al-Güzziyā). Ibn al-Athir (xi. 54) mentions the division of the Güzhu into two groups of tribes, the Usuk and the Bukuz; we do not learn further details of this division, or of the 24 tribes of the Güzhu and their common ancestor, the eponym hero Güzhu Khān till the Tu’rrikhi Ghusāni of Rašid al-Dīn (cf. the article GHAZAN, ii. 149b et seq.); the same authority gives the totem (onghūr) and seal (lamgha) of each tribe. Oghuz Khan appears as early as this as a Muslim hero; geographically also the saga is for the most part localised in Western Asia, Egypt and Europe (even the Franks are subdued by Oghuz Khān). Another version of the same saga, still free from Muslim colouring, in the Uighur script, but composed in a dialect differing from Uighur (such Persian words as dōst and dūshman are also found in it), has been published by W. Radloff; nothing is known of the origin of this version or the date of its composition. The geographical proper names mentioned in it refer mostly to Eastern Asia and suit the Mongol period; a similar saga was utilised by Rashid al-Dinn in another section of his work (in the section on the Turks; cf. Baran Rosen in Collections Scientifiques, iii. 99 et seq.) and by Abu-l-?khāzī. All that is given by later Muslim writers on the last-mentioned Khan and the 24 tribes of the Oghuz may be traced to the Tu’rrikhi Ghusāni; this is particularly true of the Tu’rrikhi Alī-i Saljūq, whose author has taken the alleged claims of Chingiz Khan from the Tu’rrikhi Ghusāni and simply substituted Oghuz
GHUZZ — GIBRALTAR.

Khan for Çingiz Khan. Led astray by this falsification, a Turkish scholar has recently propounded the thesis that we have the foundations of the celebrated fātā of Çingiz Khan in the book of laws of the Oghuz Turks (cf. M. Hartmann, Der Islamische Orient, iii. 37 et seq.). As late as the xiiith century the Turkmans of the Caspian Sea still considered Uz Khan (for Oghuz Khan) as the ancestor of their people (Galkin, Etnografiske i istoriske materiali po srednii Asii i Orenburgskomu krayu, St. Petersburg 1865, p. 5); popular legends of his life and deeds are not yet known.

In Asia Minor even in the Ottoman period the "times of the Oghuz" (Oğuz-namâ) were for long remembered: every sanga handed down by the hards (ażain) about the past was called an Oğuz-nâmâ; a collection of such legends is preserved in the Kitâb-i Dede Korkud which is preserved in a unique manuscript in Dresden (Fleischer, N°. 86). The Korkud or Korkut, who appears in this book, is also known on the Sir-Daryâ (the erstwhile abode of the Oghuz) and in the Turkoman steppes as a saint, bard and sage; similar legends were also current at one time in Ağhar-dağlıjan, at Derbend (cf. i. 943, 2601 et seq.) and in Asia Minor.

The view propounded by Inostrezzew (Zapiski vost. отд. archh., xx. 040 et seq.) that this Korkud may be identical with the Korkud b. 'Abd al-Hamîd, mentioned by 'Imâd al-Dîn Işfâhânî (ed. Houtsma, p. 281 et seq.) and by Ibn al-Athîr (xi. 54), will hardly hold; the sanga must certainly be older and have been known to the Oghuz even at the beginning of their wanderings; its wide dissemination cannot be otherwise explained.

G'aur Dagh, the Turkish name for the Amanus mountains, to be more accurate, for the northern part of the range [cf. i. 312].

GIBRALTAR, a rocky limestone peninsula belonging to Great Britain in the S.E. of the Spanish province of Cádiz [q. v., i. 810] almost the most southerly point in Spain (3 miles from N. to S., greatest breadth one mile with an area of 2 square miles and greatest height 1439 feet) with a town and harbour of the same name lying along the gentler western slope, with 28,000 Spanish, English, Jewish and Moroccan inhabitants (including a garrison of 7000 men). Being the key of the Mediterranean it is very strongly fortified and honeycombed with batteries; in the Bay of Gibraltar or Algeciras (q.v., opposite it in the west) there was in ancient times the European pillar of Hercules (Herakles = Phoenician-Punic Melqart from Malkart = king of the city), also called Calpe or Alyba Mons, opposite (15 miles) the African Columna Abyla or Abenna, the modern Ceuta [q. v., i. 836 et seq.] with Castillo and Monte del Acho (600 feet high) and Punta de la Almina (but not along the strait like the whole chain of the Sierra Bullones [as Haedonis still has it] or of the Djebel Müssî [called after Müssî b. Nuṣair]. The very ancient Carteia (Calathes) on the most northerly point of the Bay of Gibraltar, east of the mouth of the Guadarranque, seems to have been of Iberian origin in spite of the Phoenician name, and played a part in history under the Carthaginians as a seaport; in 171 B.C. it received the first Roman colony on the peninsula and under the Arabs was called Karşadîne or Cartagena, Nova, in the xviith century by Inostrezzew (Zapiski vost. отд. archh., obh., xx. 040 et seq.) that this Korkud may be identical with the Korkud b. 'Abd al-Hamîd, mentioned by 'Imâd al-Dîn Işfâhânî (ed. Houtsma, p. 281 et seq.) and by Ibn al-Athîr (xi. 54), will hardly hold; the sanga must certainly be older and have been known to the Oghuz even at the beginning of their wanderings; its wide dissemination cannot be otherwise explained.

G'aur Dagh, the Turkish name for the Amanus mountains, to be more accurate, for the northern part of the range [cf. i. 312].
the Guzmans de Medina Sidonia till 1502, when it lapsed to the crown. In 1540 Gibraltar was plundered by the Algerian corsair Khaïr al-Ajdâr, but strongly fortified by Charles V till 1552; after this it was from here in 1610 that Admiral Don Juan de Mendoza shipped the banished Moors back to Africa. During the war of the Spanish Succession Gibraltar was taken over by the English in 1704 and had subsequently to suffer severe sieges, notably in 1779–1783 under General Elliot against the French and Spanish.

Cádiz); Baederker, Spanien und Portugal 4 (with plan); Gayangos, History of the Muhammadan Dynasties in Spain, ii. 355 “Gibraltar was afterwards taken from the Bení Merin by Muhammad, surnamed al-Ghântal-bilâh” and Index s.v. Jâhal-Târik, “recovered by Mohammed 11” has misunderstood Ma’kûrat’s text i. 295; it is rather the conquest of Algeciras in 1369 by Muhammad V (not IV) that is referred to (G. F. Seybold).”

**GILÂN** (properly land of the Gils, Gilâr, 1824), a province of Persia, south of the Caspian Sea and north of the Elburz chain. It is bounded in the east by Tabarestân or Mazandaran, and its northern limit is marked by the junction of the Kur and the Araxes; its political boundary with Russia, however, is marked by the Astara stream. The chief town is Resht. The interior is swampy (whence the popular etymology of the name from gîl “mud”) and covered with woods and mulberry groves; the mountainous part bears the name Dâlîlam; the natives call themselves Gilanîk. The Safíd Rûd flows into the sea near Lâhijân. The silk industry and the cultivation of rice flourish in it. The perpetual moisture of the climate has a relaxing effect; the mild and wet winter is broken by the bîdî garm (warm wind). Seen from the above, the forests have the appearance of a vast sea of green; in them a kind of tiger, resembling that of India, is found.

According to the recent reforms Gilân forms an independent wilyâyat of the first class with Resht as capital and its seaport Enzelî [q.v., ii. 28] ranks as a village. The population numbers about 250,000 and revenues amount to 20,278 tûmanî. The province is divided into 4 bâlis: Tawâlis (chief town Kergâne-rûd), Lâhijân, Lenge-rûd (with Rûdar and Râhîk) and Mandjîl with (Râmestâbâd). It was formerly divided into five districts: Râneku, Lâhijân, Resht, Fûmen and Gesker. Fûmen was once considered the capital and the most important places were Tûlem, Lâhijân, Bimashar, Kütûm, Salûs and Dëjsâm. The natives, however, only recognise the geographical division of the province into two districts by the Safíd-rûd: Biye-pâ (district of Resht) and Biye-pâchi (district of Lâhijân); in the dialect of the country riverine, a river (Ahmed Rûst, Haft Iklâm, quoted by Scheler, Ghazân, Pers., ii. 104; cf. Melgunof, p. 230, note: Dorn, Caspia, p. 45). After remaining for long independent Gilân was conquered by Hâlûqî, who raised the fortifications of Shamîrân to the ground in 1227, and was finally incorporated in Persia by the Safawids; under

**ʿAbbas I the capital was Resht. Ṭâlîsh in the north was separated from it and the greater part ceded to Russia by the Treaty of Gulistân (1813).**

Vâdît mentions a tribe named Djilân, which emigrated from İstâkhr to Bahrain; according to a verse by İmrû’ al-İkás they entered the service of the rulers as miners and masons (Van Vloten, Wien. Zeitschr. f. d. Kunde d. Morgenl., viii. 1894, p. 62); it is probably Gils that are referred to.

**AL-GILDâRÎ** (DîlÎdâkî) ʿAllî b. Aidâmîr b. Ṭâlî, according to other authorities, ʿIzz al-Dîn Aidâmîr b. ʿAllî, author of a number of works dealing with occult sciences, notably alchemy which are detailed by Brockelmann, Gesch. der arab. Litterat., ii. 139, who gives the following as printed: al-Miṣlîhî fî Arrâr ʿIbn al-Miṣfût, Bombay 1812, and Nâṣîrûdî al-Fîkîr fî Awâl al-Haǧrûr, Bûlât n. d. Almost nothing is known of his life; all that is certain is that he composed one of his works in 740 (1339) in Damascus and another in 743 (1342) in Cairo. 743 (1342) is usually given as the date of his death; Brockelmann, however, also gives 762 (1361). **Bibliography:** See Brockelmann, op. cit.

**GILGIT.** A province in the extreme N.-W. of the Indian empire, the capital of which is the small town of Gilgit, situated in a valley 4800 feet above sea-level on the Gilgit R. which is a tributary of the Indus. It is surrounded by great mountain ranges, and is opposite to the gap leading to Hazna, beyond which the northeastern Hindî Kush separates it from Wakhân and the Murâgh from Chinese territory. The population belongs to the Sinh race, and the Sinh language, one of the Pâkštâ group, is spoken. This race is probably mainly Hindu, the people are good cultivators and fond of sport, light-hearted and cheerful, but with a reputation for treachery. The routes by which Gilgit is approached from India lead down the Gilgit R. to its junction with the Indus near Bundji, and hence to Kâshmîr by the Trâgbal and Burzil passes or to Abbottâbâd by Cîlás, the Bûbasar pass and the Kâhglân valley. In Gilgit the whole population is Muhammadan, mainly Şî‘â, and not fanatic. Little is known of the earlier history. In Pârânúúa lists the Cînas (or Sinhs) are classed with the Dardas. Al-Bîrûnî mentions Gîlût, and says that the people speak Turkish and their king is called Bhatta Šâh. It is improbable that Turkish was actually spoken, but the Sinh still claim relationship with the
Mughals of India. Till recently Gilgit was under kings of the Trakhán family, from a former king Trakhán who reigned in the 14th cent. and established the Muhammadan faith. The title of the kings before that period was Šah, but since then it has been Šāh-rah. The country is also said to have been formerly called Sârgin, and afterwards Gilût.

In 1841 the last of the legitimate rulers Karim Khân was expelled by Gauhar Khânum (or Gauhar Aman) a member of the Khânghâwti family of Yâsin who made himself master of the country, and proved to be a cruel tyrant. The expelled ruler took refuge with the Sikh governor of Kashmîr, who invaded Gilgit and set up Karim Khân again in 1842. He ruled under Sikh suzerainty, and when Gulâb Singh Dôgra became Mahârâjâ of Kashmîr in 1846, Gilgit passed to him and the other Sikh possessions. In 1852 however, Gauhar Khânum attacked and routed the Dôgras while they were invading Hanza, and Karim Khân was killed. The Dôgras recovered possession in 1860, and shortly afterwards Ala'dâd Khân, an infant, was installed by them as Khán. He was a son of the ruler of Nâgra, but was considered to be a representative of the Trakhân family. The Gilgit agency under Biddâlpur was first established in 1877, and renewed afterwards under Durand in 1889. In 1895, at the time of the Citrâl war, Gilgit was occupied by a small force which advanced on Citrâl via the Shândur Pass. (See art. Citrâl.) The country has continued to form part of the Kashmir kingdom, but the relations with the local chiefs are controlled by the British agent at Gilgit. Bibliography: Biddâlpur, Tribes of the Hindu Koosh (Calcutta 1880); Hollich, The Indian Frontierland, London, 1901; Capt. W. R. Robertson, The Citrâl Expedition, Calcutta 1898; Grierson, The Piarâ language, London 1906. (M. Longworth Dames.)

Gîmbrî, Gînîbî. [See Çinbûr.]

Gîrây, a Tâtar dynasty, which ruled the Crimean peninsula for three centuries (ixth—xiiith — xvth—xvith). The accounts of the beginnings of the dynasty and the deeds of its founder Hâddjî Gîrây b. Ghîyâth al-Dîn b. Tagh-Timûr, a prince of the kingdom of the Golden Horde are very meagre and contradictory. His earliest coins are of the years 845 (1441-1442) and 846 (1441-1442). He laid the foundations of his power at a considerably earlier period with the help of the rulers of Lithuania and Poland, on whom he afterwards continued to rely till his death (871 = 1466). We have no reliable information on the origin of the name Gîrây. According to local tradition the tutor (âtâdî) of the prince is said to have belonged to the tribe of Gîrây (this tribal name is still known in Central Asia where it is pronounced “Kirîy”). Ahmed Waffik Pasha says in his Dictionary (p. 1043), without giving authorities, that Gîrây is a Mongol word, pronounced “Garîy” in Mongol and used with the meaning “meritorious, worthy, qualified” (mustâhâkah, ﮒﯿﮐﯿﭘ, ﮒﯿﭘ). Hâddjî does not seem to have intended to transmit this name to his descendants; only one of his sons, Mengli, and he not the eldest nor the immediate successor of his father, bore the name Gîrây; on the other hand this name was given to every prince of the ruling house from Mengli’s time onwards. After the conquest of Kaffa by the Turks (880 = 1475) the Crimea nominally belonged to the Ottoman empire. The southern coast passed directly under Turkish rule while the Gîrây retained possession of the remainder as vasals of the Porte; but neither the relations of the Pasha stationed in Kaffa to the Khân nor the relations of the Khân himself to the Porte were accurately defined. It was only after the reign of Isâm Gîrây II (992—996 = 1584—1588) that the Sulîk’s name was mentioned before the Khân’s name in the Friday service; the coins were afterwards struck in the name of the Khân only. The earliest Khân (Hâddjî Gîrây, Nûr Dawlat and Mengli-Gîrây before the Turkish conquest) bore the title “Sulîk” on their coins; they afterwards contented themselves with the title Khân; the word “Sulîk” denoted, as among the Uzbek and Kızâk, a prince of the reigning house, who was not actually ruling. The seal (tamgâ) is characteristic of the coins and documents of the Gîrây. Several Khâns extended their power far beyond the bounds of the peninsula, sometimes independently and sometimes by authority of the Sulîks of Turkey: northwards to Moscow, eastwards to the Volga and the Caspian Sea. In 1736 the peninsula was occupied temporarily for the first time by Russia, in 1771 it was permanently conquered and has not been vacated since then, although, according to the terms of the peace of Kucîk-Kainardje (1774) and of the treaty of Ainali-Kawa (1779), the Khân was to be chosen freely by the Tatar population and was to rule his land as an independent prince, free of the Porte and Russia alike. In 1793 the Crimea was incorporated in the Russian empire whereupon the rule of the Gîrây came to an end; the last: Gîrây to bear the title Khân, Bakhtir-Gîrây died in Bôdamân 1215 = January 1801 on the island of Mytilene. Cf. also article Kâghî’sarî (i. 562 et seq. where Bibliography is given).

Gîrâ, a province (mu‘ilmîya), district (markaz) and town in Upper Egypt. The etymology is uncertain. The name of Saint Girgis (George) is presumably concealed in Gîrây. All Mubarak connects it with a Dagîr or Dîgîr known in the same district (the latter place is also mentioned by Ibn Dîrîn, p. 189 and Ibn Dûkmâk, v. 27). The older Egyptians say that Dûkmâk quailed with Gîrây so that it is not mentioned in Kûdà’s list of kûrâ’s; it is given by Vàghût however. The name first appears as that of a province in the Description de l‘Egypce (1212 = 1798); it is not yet found in the Rûk Nâṣîrî of 715 = 1315. The province of Gîrây therefore probably first arose in the Ottoman period. In the Ködîval period Sûhâg became capital of the province of Gîrây, while Gîrây itself declined to the level of the chief town of a district. The town was celebrated for its industries in wood and leather, which, like all Egyptian industries, were in the hands of Christians. Its large Christian population is evidence of its age. The town flourished as long as the pilgrims’ caravans went via Khursî, as its inhabitants provided the pilgrims with provisions, particularly bâkûndî (mâznîydîn “biscuit”). With the alteration in the route Gîrây began to decline; cf. the similar fate of Aîdab [q.v., i. 2109]. Under Muhammad “All the town, which was well built, suffered from the inundations of the Nile, but it was saved from destruction by protective works under Isma’il. At the present day
the population of the town is 19,893, of whom
5443 are Copts, and that of the province about
3/4 of a million. Bibliography: 'Ali Mubarak, Khatat ja-
dida, x. 53; Yakut, Mu'jam, ii. 48; Boinet

GIZEH (Djizada), town in Egypt [s. i. 821* in-
fra seq.].

GO-G and MAGOG. [See Yadvilj].

GO-G, a town in the Sudan, on the left bank
of the Niger, about 250 miles east of Timbuktu in 16° 12' 4" N. Lat. and 42° 53' E.
(Greenw.). The name Gogo (گوگو) has been writ-
ten in various ways by the European translators of
the Arab geographers; we find the following forms,
Kaoqua, Caucau, Kaokao, Kao, and Gogo in Leo Africanus. Barth writes Gao or Gogo.
The etymology of the name moreover is obscure. Al-
Basir (Description de L'Afrique, transl. de Saine,
p. 39) gives a fantastic explanation of it. "The inhabitants say that the name Kao Kao has been
given to their town because their drums make this sound very distinctly." According to Houdas,
(Tarikh es-Soudan, transl., p. 6, Note 3), these various forms are corruptions of Koky Korya
"the king's town", the first of these two names having been taken for a place-name.

Gogo was the capital of the Songhai empire
(cf. the articles Soudan, Songhaï). It was founded in the 9th century A.D. When Dia (Za) al-Aimân
had settled at Gugia (Kukiya of the Arab authors),
on the right bank of the Niger, a section of the Songhai, the Sorko-Faran, who lived in these regions,
had to go northward and build a new town,
Gogo, about 100 miles up the river on its left bank. About 890, according to Barth, the sovereigns
or Dia of Gogia seized Gogo. Even at this time Gogo was an important commercial centre to which
the caravans from Tripolitania and Haratika flocked. This is how (according to Ibn Khaldûn, Hist. des
Berberes, transl. de Saine, iii. 201), Abû Yazid,
the adversary of the Fâtimids, came to be born in this town during a business journey which his
father had taken into the Soudan. The presence of these merchants from the north made Gogo a
centre of Muslim propaganda. The fifteenth prince
of the dynasty of the Dia, Dia Kossio, became a
convert to Islam, perhaps during a journey to
Gogo, about 400 = 1009-1010 and moved his capital to the latter town. M. Delafosse thinks that
this change of residence was brought about at
the request of Arab and Berber merchants,
whose caravans ran the risk of being pillaged be-
tween Gogo and Gugia by the Sorko or by the
Tuaregs of Awelmenen, and for whom the pres-
ence of the sovereign was a guarantee of security.

In any case, we find Gogo one of the most
prosperous cities in the Soudan in al-Bakir's time.
It consisted of two parts, the native town inhabited
by inidels in the midst of which rose the royal
palace and the merchants' quarter occupied by
Muslim traders. The population consisted of negroes,
Berbers, and Arabs. The Arabs called the natives
Bwargan, a word which Slane (L.C.) connects with
the Persian words bwargan (the great) or bârgân (merchants). Although the rulers had
adopted Islam, the mass of the people had re-
mained pagan and never abandoned their ancient
beliefs. Commerce was active but money was un-
known; its place was taken by salt, which came
from the mines of Taotek in the middle of the
Sahara, 6 days' journey beyond Tadmekka (es-
Sîkîh). Idrisi likewise emphasizes the economic
importance of Gogo and describes the part taken
by the natives in the trade. "Personnage of

importance and the notables (transl., p. 13) far from keeping
apart from the merchant class, visit them, associate
on equal terms with them and supply them with
means for their commercial undertakings by entrus-
ing them with merchandise and receiving from
them in return a share of the trade. In Baten, Ba-
Bâtûa, who spent some time at Gogo in 752 (1355) says that it is "one of the fairest and largest cities of
the land of the negroes and the best supplied with
provisions".

About 1325 A.D., the king Dia Assilai had to
acknowledge himself a vassal of the empire of
Mall (Melle), but by 1339 his son, 'Ali Kolen,
escaping from the court of Malli where he had
been kept as a hostage, recaptured Gogo and restored its independence. 'Ali Kolen was the founder of the Sonni dynasty, of which 19 sove-
ereigns ruled from 1335-1493. Limited in size under the early rulers of this dynasty, the terri-

About 1325 A.D., the king Dia Assilai had to

been kept as a hostage, recaptured Gogo and restored its independence. 'Ali Kolen was the founder of the Sonni dynasty, of which 19 sove-
ereigns ruled from 1335-1493. Limited in size under the early rulers of this dynasty, the terri-

Gogo's reputation for wealth attracted the atten-
tion and covetousness of the Sherifs of Morocco.
Profiting by the disensions in the second half of
the xvi th century, which were enfeebling the power
of the Aska, Almâd al-Manṣûr al-Dhahabi appointed
Djâder Pasha to conquer the Soudan. The Aska
Isâbakh II's army was routed on the 12th April
1591 at Tangier-ibós, about 35 miles N. of Gogo.
By their ruler's orders, the inhabitants then evac-
uated the town and retired to the opposite bank of
the Niger. The Moroccan troops entered the town
without resistance and only found in it an
aged khatib, several students and foreign merchants.
Djâder Pasha was then able to confirm how exag-
gerated was the reputation of the Soudanese capital.
"The palace of the Askia" he wrote to the Sherif "is not equal to the house of the chief muleteer of Marrakush".

Djedder's expedition put an end to the Gogo empire. The Askia of the north who continued to reside in this town till the xviiith century were now subordinated to the Moroccan pashas of Timbuktu. A garrison was installed in the town to protect it from the pirates of the south, who had succeeded in maintaining their independence in the region of Say and against the incursions of the Tuaregs. The Tuaregs ultimately however succeeded in taking Gogo from which they expelled the Moorish garrison in 1680. The Paşa Mansûr Senîber retook the town in 1688 but did not leave a garrison in it. After 1770 (according to Barth) all trace of Moorish domination disappeared and the Awellimden were henceforth masters of Gogo.

The town continued to decline more and more. When Barth passed through it in 1854 it was only a village of 300–400 huts, built on the edge of a dry arm of the Niger and inhabited by Songhai, Tuareg and Ruma, degraded descendants of the Moorish conquerors. Of the monuments of architecture praised by I. O. Africanus there only survived a tower about 60 feet high and some traces of the great mosque (Djingereber) where Muhammad Askia was buried. Barth, however, claims to have recognized the site of the ancient town, the circumference of which must have been about 4 miles. At the present day Gogo is "a collection of large villages of straw huts" (Hourst). As a result of the occupation of the Timbuktu region by the French, a station was established at Gogo (1898) which has become the centre of a region and of a military circle in the Sudan.

**Bibliography:**

Hartmann considers Bakri's كوبو to be Gogo and the Kûçî (كونو) of the other geographers to be the land of Wadai.

Marquart, Bein-Sammlung, p. cxi, observes that no fewer than seven places in the Sûdan are to be distinguished which have names written in the same or similar ways and proceeds to discuss them in detail.

**Gökçai,** Turkish Gökçe-tengiz ("blue sea"), Armenian Sewanga (Sew-Wank = "Black cloister"), a freshwater lake in Russian Armenia (governmental name, the Askia, 700 feet above sea level, covering an area of 62 square miles and drained by one stream, the Zanga, which flows into the Araxes. As Le Strange (The Lands of the Eastern Caliphate, p. 183) points out, the name first appears in Ḩamd Allâh Kazwîni; in the Muhammedan sources of the pre-Mongol period the lake is not mentioned at all. The monastery from which the lake has received its Armenian name lies on an island near the north-western shore. At the present day the Gökçai is best known for its wealth in fishes (trout, Turk. ishkan, Armen. eggarbani). Cf. F. E. Weidenbaum, Pateroditul po Kavacho, p. 31.

(W. Barthold)

**Göklân,** a Turkoman tribe who dwell in the mountains between the upper course of the Görge and Atrek [q. v., i. 512th et seq.]. I.e. in Persian territory; but some are said to live on Russian territory in Khiwa, Karakalpa, and Candir. They are divided into the following clans, Çakur, Kirik, Bayandir, Kayi, Yangak, Saghri, Kara, Balkhan, Ay-derewish, Arkakli and Shaikh Köjdja. The total number of the Göklân cannot be accurately ascertained; Schuyler gives 3000 köbita = 15,000 souls, with which Vambéry agrees, while Yate gives only 2000 köbita (10,000); in other accounts quoted by Vambéry higher figures are given, which is perhaps explained by the fact that these records date from an earlier period and the numbers have meanwhile decreased. The Göklân are not nomads but follow agriculture and grow silk. They are fairly prosperous and pay the Shah a fixed annual tribute. It cannot be ascertained how long they have been in these lands, but probably they were there as early as the Saljuq period. They often come to blows with their neighbours on the west, the Yomuts, and with the Kurds of Badjurd. The Göklân seem to be rather lax Muslims but they hold their religious leaders (khodjas) in great respect.

**Göksu,** the "blue river", a name given to several rivers by the Turks. The best known is the river of Seljuk, also called Cremenek, i.e. the Caledonius of the ancients, the Saleph of the mediaeval authors in which the Emperor Frederick was drowned on the 16th June 1190.

**Göksun** (the ancient Cucusus), a village in Turkey in Asia, the capital of a nahiya of the kaâr of Andrin in the sandjak of Marash in the province of Aleppo. It lies in a low, swampy plain, surrounded by argillaceous hills and consists only of huts built of tree-trunks. On the heights there still stand the ruins of several Armenian castles; the land around is almost entirely desert. St. Chrysostom spent some time here in...
who cultivate the gardens of the oasis. A subterrestrial water supply fed by the Weds Segger, Zergun, Mehaiggen and Lii assumes the irrigation of the palmyros containing about 7000 date-palms. It would also suffice to put a valley 7 miles long and 2 broad under cultivation. The water brought to the surface by wells, springs and wells, give rise to a small lake called Bel Aïd, the neighbourhood of which renders the oasis very unhealthy. The Shaiba Moudj lead a nomadic life around al-Goléa and are divided into five sections.

Little is known of the history of al-Goléa. This kasr seems to have been first occupied by Zenâta Berbers, and to have enjoyed a fair amount of prosperity, owing no doubt, to its situation between the eastern and western Erg on the road leading from the Mzab to Tnatt and Tisselt. In the eighteenth century, according to the traveller al-'Aiyash, al-Goléa belonged to the Sultan of Warnak who maintained a governor there. In the sixteenth century the kasr was visited for the first time by a European, Duveyrier, in 1859. In 1873 a French column reached it under General de Gallifet and a permanent garrison was established in 1891. With its outpost, Foiz Miribel and Fort MacMahon (Hassi Shebaba), al-Goléa was the most advanced French station in the Sahara till the occupation of the Saharan oases in 1900.

GOLETTA, the harbour of Tunis [q.v.]

GOLKONDA, a city and fortress in the Dakhân, formerly the capital of the Muhammadan kingdom of Telengana. Its site was originally occupied by a mud fort built by the Hindû rulers of the country and the primitive structure was strengthened and improved by the Bahman kings of the Dakhân. Sultán Kirk Kâlid al-Mulk, who was appointed governor of western Telengana in 1495 by Mahmûd Shâh Bakhshani, made Golconda the headquarters of his administration, rebuilt the fortifications with stone, and called his city Muhammadnagar, a name which never replaced the older appellation. In 1512 he became independent and made Golconda his capital. It remained the capital of the Kûtû Shâhì kings until 1591, when Muhammad Kâlid Shâh, fifth king of the dynasty, built Dhâmgâhar, afterwards named Hâdarâbâd, at a distance of seven miles from the old fortress, and moved his court thereto. Golconda remained, however, the citadel, and the court moved thither when danger threatened. 'Abd Allâh Kûtû Shâh, seventh king of the dynasty, was besieged there in 1656 by Awrangzib, when viceroy of the Mughal province of the Dakhân, but the
prince was obliged by his father’s orders to raise the siege. Awarangreb, after his accession to the throne, set himself in due course to extinguish the two remaining independent dynasties of the Dakhkan and, having captured Bighapour, in 1687 besieged Abu ’l-Hasan Kuch-Shah, eighth and last king of the Kuch-Shah dynasty in Golkonda. The fortress fell after a siege of eight months and the king was sent captive to Daulatkhâbâd, where he ended his days twelve years later.

Golkonda was famous as the diamond mart of southern India, most of the mines being situated in the kingdom of which it was the capital.

GÖRDÖS, the capital of the kâza of the same name in the sandjak of Şirakhan, in the wilayet of Aïdin, important for its manufactures of carpets (particularly seğêde, the socalled prayer-carpets) originally belonged to the territory of the Karasioglu and passed with the rest under Ottoman rule in 1340; the modern town has about 5000 inhabitants of whom 4000 are Muhammadans and 1000 Greeks (Münecezdîbâshî, iii. 36; Lâhikân-nümâ, p. 635; Câinet, Turquie d’Asie, iii. 556 et seq.).

GOUM (in written Arabic KAWM), the form and pronunciation usual in the Arab lands of North Africa of the name given to the body of armed horsemen or of fighting men of a tribe. Its derivative gouma means “a levy of goum or troops” or “a bold raid, rebellion, or revolt.” The written Arabic form kawam is also found in the dialects of North Africa with the meaning of “people, nation, tribe” etc. (Beaussier, Dict. pract. arabo-français des dialectes parlés en Algérie et en Tunisie). It should, however, be noted that kawam in written Arabic may also mean “enemies” or a “body of men going out to plunder” (Dozy, Supplément, ii. 443). The Goum of the old Barbary states of Algiers and Tunis received their official position in the army from the Turks, who based on them their system of military occupation of the country. All the tribes were divided by them into mahzen or auxiliaries, exempted from most of the taxes and qa‘iya, who were subject to all taxation. When one or more tribes of the latter class refused to pay taxes or for any cause rose in rebellion the Turkish army speedily moved to the territory of the rebels. This army supplemented its small numbers by exceedingly mobile bodies of horsemen of the goumes. As soon as the enemy was sighted, the goumes of the mahzen tribes, under the leadership of the chiefs of the tribe or kâids, charged straight upon those in front of them and continued the pursuit till they had overtaken them. The regular army followed as quickly as possible in the direction of the goumes to assist to form a position where these horsemen could reform if they were driven back by the rebels; as a rule, however, the little body of Turkish regular troops only arrived in time to be present at the triumph of the goumes of the mahzen.

Soon after the occupation of the regency of Algiers the French saw the advantage to be derived from these goumes. But once the country was pacified the mahzen or auxiliary troops disappeared. The organisation of goumes was then extended to all tribes without exception. The goumes under the command of chiefs, kâids or aghas invested with authority by France, had to co-operate with the military police in the maintenance of security in the country, to protect nomad tribes on their migrations and the passage of trading caravans. In military territory the number of goumiers or members of a goum varies with the requirements of the district from time to time. The goumiers draw a monthly allowance and encamp on the state lands, which are at their disposal, but they must pay the cost of maintenance of their equipment and horses. On service they have also a claim on the mûna, a special allowance for rations.

In civil territory the goumiers equip and mount themselves at their own expense. They receive no pay but when they are called up for service they receive the special allowance for rations. The goumes of civil territory are only called up in case of rebellion or a European war. It is a regular territorial militia under the command of the chiefs of the tribes and receiving its orders from the government. The goum of each mixed or native commune contains 120 horsemen. The goumiers have the right to carry arms. Their distinctive badge is a green and red cord rolled round the tibtan. The goumier’s horse is exempt from the war-tax and the goumier himself is exempted from the sakât or cattle-tax. The natives consider it an honour to be a member of a goum and any condemnation for a serious crime or habitual evil living causes their exclusion from the body.

The French government has been encouraged by the warlike valore of the goumes to use their services in case of war on the Algerian frontier or in Moroccan territory. It was the goumiers of the military circle of Mâcheria who, under Commandant Fen, took Udjda by surprise in 1907. Other goumes have successfully co-operated in the conquest of Western Morocco with the regular French troops. When in this latter case the government calls up the horsemen of the goumes, service is voluntary and the period does not exceed six months, the expenses of the march and of any sickness being paid by the state. The men are subjected to medical examination before their departure. On the other hand the goumes are only employed as auxiliaries and retain their own organisation. On an expedition they camp apart from the regular troops; they bring their own provisions and maintain themselves on the country occupied.

GRÂN, İmâm of Harar [q.v. and above i. 120].

GRANADA, capital of the modern Spanish province and of the former kingdom of Granada, which, besides the present province, included in addition practically the province of Málaga in the west and that of Almeria in the east, has at the
present day 80,000 inhabitants, while at the end of the Moorish period it sheltered half a million within its walls. It lies 2200 feet above sea-level at the foot of the northwestern spur (Sierra del Sol) of the Sierra Nevada (Cerro de Mul[al]hacén 11,600 feet high, called after 'Abi Abu 'l-Hasan 1461—1485) on the right (north) bank of the Genil (Jeníl, Latin Singílis, Arabic سينيل) which rises to the southeast and on both sides of the Darro (Arab. in the older period Kuzun, not Calom, Salom or Salun, and later called Hadarro, cf. Dozy, Recerches, 3, i. 340—344), a tributary from the northeast which flows into the Genil south of Granada, almost at the east end of the broad, extremely fertile and healthy upper valley of the Vega (probably from the Arabic bašfa, بسفة, cf. bašfa (Vocalistula: wašfa = campus), which runs 35 miles westwards to Loja (Arab. لوجا, the ancient Laus [Halos], Ilipula major); usually however called el-Фaij; el-Majd, el-Batba, by the Arab authors; cf. also el-Bâ'kî = Colesesria, the upper valley of the Leontes = el-Lišāni between Lebanon and Anti-Lebanus). Whether the Arabic Gharnatâ or Aghranatâ (Aghranatâ; the corresponding noun is Gharnâfâ and in popular language Gharnāfî, Granadine), is connected with a Berber place-name Kernâta (Idrîs, Description de l'Africq et de l'Espagne, p. 56, 79) or perhaps merely represents the Roman romance Granata and is connected with the Hîsh el-Românîn = pomegranate citadel, the ancient Alcazaba, el-Kaṣbah al-kadîma, the oldest settlement in Granada on the hill to the west afterwards and still called Albaicín, while the new Alcazaba, el-Kaṣbah al-qaddâda, gradually advanced eastwards down to the Darro and became linked up with it (especially in the time of the Zhîrîds 1012—1090), whose residence Dôr Dîk el-Rîsh (house of the weathercock) is perpetuated in the names at least Calle and Casa del Gallo [= de la Lona] near Santa Isabel la Real), just opposite the corresponding fortress-topped hill of the Alhambra (afterwards the residence of the Nasîrîs 1232—1492) east of the Darro, which is mentioned occasionally at quite an early date, can no longer be definitely ascertained; the true connection with the ancient Iberian and Roman Iliberris is also difficult to ascertain, cf. the article ELYVIRA, ii. 249. The only certain fact is that Granada has gradually extended itself from the two parallel hills, commanding the Darro-Genil plain (afterwards called Albaicín and Alhambra (al-Hamrâ the red fortress) in the north, as it is again doing at the present day, southwards on both sides of the Darro towards the Genil. Besides the Alhambra [q. v., i. 278 et seq.] on the whole well preserved, with the summer residence of the Nasîrîs to the east of it, the garden palace of Generalife (older Ginnarife = Arab. دنيانط al-Årîf, garden of the architect) the relics of the Arab period are very few in number; of the walls which surrounded el-Kaṣbah al-kadîma and el-Quadîda, for example, there only remains the northwest side with several gates on the north side of Albaicín which at the present day is mainly occupied by gipsies; Bib Cleda, Bib al-Bonaïda, Bib Elvira, and farther north the outer wall on the hills which included the later northern suburbs with the Bib al-Bayzin (the falconers' gate) whence comes the name Albaicín (Bib and Rabâb al-Dâiyâsîn is not so called from immigrants from Baeza, which would be el-Dâiyâsîn [with sin] in Arabic) and Bib Fadîjal-

lauzu, Fajalauza (=: Almond-ravine gate, Bib Fadîjal al-Lauza), while gates and walls have entirely disappeared in the south on the Darro-Genil plain and only el-Funduk al-Djâdirî (Al-hâdirîa Nueva) in the Casa del Carbon has survived. Of the nine Arab bridges over the Darro the majority of those in the south have been incorporated in the covering in of the river, while the old bridge over the Genil, Kanfarat Sênîl, in the east above the mouth of the Darro, is still in existence (Puente del Genil). The old mosques have mostly been turned into churches, e. g. the great mosques Dûnîmî (with Genil in place of Ljîmî, e.g. Bib = baš, hammâm = hammâm etc.) el-Kabîr is represented by the modern cathedral (particularly by the Sagrarîo); northeast of the great mosque was the high school (madrasa) southeast the great bazaar or market, Alcaicería (al-Kaṣîârîa), burned down in 1843 and afterwards rebuilt with the old pillars; the great street of second-hand shops El-Zacatîn = el-Sâkîstân runs southwards. Both led westwards to the great Plaza de Bimbarrambla (Rubbat Bib al-Ramlâ), where the Rabâd al-Ramlâ, on the other side of the city wall on the west, with the Bib al-Ramlâ (destroyed in 1875 near the modern Plaza de Reyes joined the Rambla of the Darro. Of the many Arab baths there only survives perhaps the "nut tree bath" Hammâm al-Geuzâ (Baño del Nogal) at the Kanfarat al-Kaṣî (Puente del Alcalde). As the whole of the hilly northeast part of Granada is now called Albaicín so is the southeastern slope called Antequeruela, so called after the immigration of the Muḥâdírî from the town of Antequera (Arab. Antaṭîra, the ancient Antiquaria, S.W. of Granada, north of Málaga; Yâkî, i. 370). On the southwestern hill which runs parallel to the Alhambra, the modern Campo de los Mártires there lay also the Jewish quarter with a synagogue (Ljîmî al-Yahûd) which is also called Gharnâfî or Madinat al-Yahûd. On the N.W. spur lay the Hîsh Maurîr, the still surviving Torres Bermejas of the southwestern fortifications of Greater Granada, while on the slope and in the valley of the Darro there lay Râbita and Rabâd Mâourî = Bib Axarc (Bib al-Shârî, Eastgate, Puerta del Sol): the whole range of the Campo de los Mártires is now called Monte Mauror after these Muḥâdírî of Mauror = Moron de la Frontera between Seville and Ronda. On the history of Granada cf. the articles ALHAMBA, ELYVIRA, ZHÎRÎDîS and NâSRÎDîS. Bibliography: Cf. the article Alhambra (where there should be added to the bibliography, the large plan (the best) by the Arqitecto Director de la Alhambra D. Modesto Cendoya, 1909), ELVIRa (Córdoba); Idrisi, p. 204 et seq.; Ūkî, iii. 788; Mârâṣîd l-Ilîfîlî, ii. 307; Kazwîni, ii. 367 (i. 193 'Ain Gharnâta); Abu 'l-Fîda, p. 176; Ibn Battîta, Index; Bibliotheca Geograph. Arab., Indices; Madoz, Diccionario s. v.; Baedeker's Spanien und Portugal (with good plans); L. Seco de Lucena, Guia práctica y artística de Granada, 1909; do., Plano de Granada árabe (preceded by a prólogo por D. Mariano Gaspar Remiro [Director del Centro de Estudios Históricos de Granada and of the Revista de this Centro] 1909, in which previous studies on Moorish Granada are comprised and made clear to the eye on the excellent plan although there are several errors still in it, as for example when Mauror (Moron see above)
is explained by del Moritano, de los Mauritianos, Rabaq al-Gomera (Calle de Gomeres or Gomeles), Rabaq al-Zenata (cf. Calle del Zenete) appears wrongly with the article, compared with the classical Ghomara, Zenatta, cf. however, south of Granada, Alhindin = Karaj al-Hamdan and class. Hamdan (without article); Duzy, Recherches, i. 345. The uncritical Historia de Granada, 1843 (analtered reprint: Granada 1904—1907), by Miguel Lafuentes Alcántara is useless as it is based on Conde's make-shift of 1820. The next best would be a good edition and critical translation of Ibn al-Khatib's (died 1374) Ḥaṭa fi Tārīkh Gharbī (Cairo 1919, i. ii. it is only the synopsis Merkez al-Ḥaṭa, which still lacks Vol. iii.).

(C. F. SEYBOLD.)

GUAD ... GUADI ... in a large number of Spanish river-names like Guadalquivir [q. v.], Guadiana [q. v.] from the Arabic wādī = river, valley, particularly a river which dries up in summer, which is the case with the majority, especially the smaller Spanish rivers. It is derived from the Arabic ramla, a dry sandy bed, which becomes used as a road, cf. La Rambla de Cataluña, the Corso of Barcelona = the Italian giunara (secca); wādi in the west is usually wādī, wād (French oued), in Granada wādī (Pedro de Alcalá, like bīb for bīb etc.) e.g. Guadalquivir (also contracted to Gualaiyar) = Wād al-abayd, white river = Turia at Valencia and = Segura of Murcia; Guadalete from Wād Lekk; Guadalmedina and Guadalhorca at Málaga; Guadaira (Alcáal de Guad.) at Seville; Guadiaro (with Guadalevin) rising at Ronda = Arab. Wādī ārā or ārā, also yārū, yārūd; Guatli-ĩ in a mountain brook of Madeira, without, in a solitary instance); Guajara (Guabac from Guadajara, Guadibacar; Guadarrizas, Guarrizas, a mountain brook east of Linares; it is readily transferred from rivers (valleys) to towns: e.g. Guadal-ajara [q. v.], Guadix [q. v.], Guarrumán, contracted from Wādarrumān, pomegranate river, a small town north of Linares; also transferred to mountains, e.g. Guadarrana from Wādarramāla (sand-river); still as the name of a river, village and mountain, e.g. Guadalupe, from Wādālulāb (lobb, Spanish lobo, Latin lupus, Wolf, while the Spanish adibe, Portuguese adibe, borrowed from the Arabic al-ḥiib as in North Africa means not "wolf" but "jackal") a mountain and village, while the stream is called Guadalupes and Guadalupejo; Guadalupe is also the name of a southern tributary of the lower Ebro; Guadelfu a mountain at Serpa on the lower Guadiana; Guadelim = Alcarache, a stream on the borders of Spain and Portugal south of Badajoz. In Portuguese, Spanish Guadi(ə) is usually represented by Odi ... Ōde, e.g. Odião = Guadiana [q. v.], Odivelas, Odiseixe, Odiarca, Odemira, Odellite, Odeolouca, Odega; Odigebe = Odiogebe; Divor = Odivor; cf. the Odile with its tributary Odívarga in the province of Huelva, adjoining South Portugal with the Guadiel between Linares and Bailén, Guadiela, Guadielop, Tejo, and many others.

GUADALAJARA, the capital of the Spanish province of the same name, on the plateau (2000 feet high) of northeastern Castile, with 12,000 inhabitants, is the ancient Arica (from arri, Basque "stone") on the left (eastern) bank of the Henares, which the Arabs called Wādī l-Ḥiṣarūa "Stone-river" (amnis laإقليم in Rodericus Toletanus), whence the name Guadala- lasara, the modern Guadalajarca, which was then transferred to the town and used particularly of it; the latter was also called Medinat al-Farādī, which might be translated "city of joy", if a note by al-Ya‘qūbī did not inform us that it was the site of a Berber family, the Banū Farādī (Bibliotheca Geogr. Arab., vii. 335). In 714 Guadalajarca was taken on the joint campaign of Māsā and Ţārīk and remained an Arab possession, till it was surprised by Ferdinand I of Castile in 1060, although not permanently captured till 1081, when it was taken by Alvar Fañez de Minaya, a cousin of the Cid, for Alfonso VI of Castile. Like Toledo (Toleitula till 1085) and Madrid (Madjīr), it is said till then been an important Arab fortress on the northern frontier and the home of many scholars as is testified by the Bibliotheca Arabico-Hispana (ed. Codera, 10 vols.) and al-Maḳṣari passim; the nība is Ḥiṣarūn (cf. also al-San`ānī, p. 156, Moqtabi and Ṭabbūl al-Luwāb) and is best known as that of a celebrated historian born in Guadalajarca.

Even under Aramaic it was a Christian element in Guadalajarca (cf. Simonet, Histoire de los Mézahobec). Of its later history as a Spanish town, which does not concern us here, we need only mention that it was the residence (with a Gothic-Moorish palace) of the (Basque) family of Mendoza, the Duques del Infantado, whose most celebrated member "el Gran Cardenal de España", the Cardinal-Primas of Toledo, Don Pedro González de Mendoza, the soul of the last phase of the Reconquista, the recapture of Granada by the Reyes Católicos in 1492, died in Guadalajarca in 1495.

(C. F. SEYBOLD.)

GUADALQUIVIR, the ancient Baetis (Tar- tessos, Perces, Certis), whence the province of Baetic (with Baetia in the north) = Andalusia, is the most southerly of the four great rivers of the Iberian peninsula flowing from N. E. to S. W. into the Atlantic Ocean. The Spanish name is derived from the Arabic Wādī al-Kābir, popular for al-Wādī or al-Nahr al-Kābir, the "great river" also Nahr al-Asam the "greatest river" (there are several Wādī l-Kābir just as there are a number of Rio Grande). We find the popular form as early as Yākūt, i. 275 (Nahr azīm yu-bāla lāhu Wādī l-Kābir) and Kazwini, ii. 275 (al-Nahr al-akbar al-lāhādi yu-wāfi bī Wādī l-Kābir) The Guadalquivir proper rises in the Sierra del Pobo between the Sierra de Cazorla and Segura.
describes the Guadiana as al-Nahr al-Ghaṭar, the disappearing river, with a subterranean course, and also mentions a Ḷayrat Yana above Calatava, on which cf. Kazarini, i. 177 = Ethê's translation, p. 361. Dimişki (Cosmographie, 112 = 139 et seq.) speaks of the Guadiana as the combination of the Nahr Uṭliš (river of Ucles = Bedjila = Rianesares = Gigüela) with the river of Ḷaṭr al-Rabāb (Calatrava, q. v.) = Guadiana Alto + Bajo + Záncara. Mehren says "the river of Rabāb (Guadalaviar)," but instead of al-Bahr al-Rummi = Mediterranean, as the terminus of the Guadiana one ought to course of reading al-Bahr al-Muṣlim = Atlantic Ocean. In Dimişki's second reference to the Guadiana, ibid. (only in the Paris Codex), and p. 246 = 353 Uṭliš should be read for Ṭuṭrîša (Tortosa) and (Ḳaṭṭ al-) Rabāb for Dalāya (= Dalas W. of Almería). The Guadiana is also called, as here, Nahr Rabāb al-Rabāb, the river of Calatrava, or also Nahr Uṭliš, river of Ucles, still oftenter Nahr Mērida, the river of Mérida, and Nahr Baṭaḥyās, the river of Badajoz after the principal towns on its banks.

Bibliography: Madoz, Diccion. Geogr., ix. 27; Aboulfeïda, Géographie, p. 172 = 247 b., but where it is wrongly said of Mérida: ʿala ḥajābi nahr Baṭaḥyās "south of Guadiana" for ḍawī “north” [جوبو] and [جوبو] often confused, particularly in the Maghāribī script]; Crónica del Mero Rasis (ed. Gayangos 1852), p. 62, where probably Ucles should be read for the puzzling Richin.

(C. F. Seybold.)

GUADIX, the capital of a district in the Spanish province of Granada on the northern slopes of the Sierra Nevada (Djebel Shušir = Solorius Mons, Djebel al-Thuñ = "snow-mountain" like Hermon), the ancient Iberian Acic (Colonia Julia Gemella, which was however 7 miles N.W. [Baederker wrongly S.E.] of the modern Guadix and is distinguished as Guadix al Viejo), one of the oldest bishoprics in Spain (Sedes Aciciana), with 13,000 inhabitants, on the left bank of the stream of the same name which rises to the south (Río de Guadix), with a Moorish castle (Azzaba), in Arabic called Wadisquây, alternatively Wādisquây (and Ṣawādisquây) also in poetry Wādī l-Aṣghar and Wādī l-Aṣbūh, with miṣr ʿish (from ʿish), wrongly explained by Mârmol as “water of life" (an explanation which is still given everywhere, e.g. Baederker, Spain and Portugal, 1913, p. 330) and confused with ʿāshi = life, whereas ʿāshi, ʿāshī is of course = Acic. In the Barrio (suburb) de Santiago there are remarkable cave dwellings inhabited by gypsies. West of Guadix on the Fardes (Anchon) is the ancient Arab bath Graena (from the Arabic Diļyena = Juliana), celebrated for its apples, hence called Diļyinaš al-Tuffâh (Yākūn, Geogr. Wurtbergs, ii. 109). Dimişki (Cosmographie, p. 84 = transl. p. 99, speaks of black antimony (al-kūṣah al-arwaq wajnasuma al-latīmi) which is obtained near Guadix. The whole of the northern slopes of the Sierra Nevada around Guadix are called in Arabic Senuk Wādīšah = slopes of Guadix, which still survives in the Spanish Marquesado del Zenete (cf. Jeres del Marquesado, S.W. of Guadix, N.E. of the highest peaks of the Sierra Nevada and the citadel built in 1510 for Rodrigo de Mendoza, Marqués del Zenete, south of Guadix above Alcuadra (Arabic. kudya = hill) de Guadix in the little town of La Calahorra arabised from the Iberian Calagurris, cf. Gröber,
Grundr. der Rom. Phil., I, 3, 522). In 1323 the first Naṣrīr or Ahmārīd, Muḥammad I of Granada made himself master of Guadix. In 1351 the Christians under the Infante Don Pedro of Castile were severely defeated before Guadix. In 1489 it was conquered by the Reyes Católicos, after having been previously made tributary in 1413. The name is in Arabic Wādīšāfī or Wādī-Ghrāzī; for example it is that of the poet Abu 'l-Hasan b. Niẓār who was born there.

**Bibliography:** Simonet, Descripción del Reino de Granada (*1872*), p. 98—101; do., Historia de los Mozárabes, Index; Madoz, Diccionario geográfico, p. 9; 43; Idrisi, Descripción de l'Áfrique et de l'Espagne, p. 202—247; Marreños, History of the Almohades, p. 269; Maḵkāri, i. 94—95; Yaḵkūt, i. 279, where Kašr ash (rather Kašrāsh = Cáceres) is confused with Guadix. — Soler, Sierra Nevada y las Alpujarra, Madrid 1903, p. 92—106, where however Jerez is known to be of Madoz writes Jeréz. (C. F. SEYBOLD.)

GUARDAFUI, the most eastern cape in Africa, the Ḡawāliya ṣāḥibīyāt of Ptolemy, and the Arabic Ra'a ʿAsfīr. The origin of the name is uncertain; the only certain point is that the name Ḥafūn (Opona) is concealed in it; indeed there is another cape about 60 miles southwards which the Arabs call Djar or Gard (Gard) Ḥafūn. It is doubtful if this Djar or Gard, which cannot be explained from the Arabic, has not been taken over from Europeans because the earliest name given by the Portuguese is rather to be traced to Western Saracen, but more likely from being of Arabic origin. It may be possible that the name did not originally denote a cape but the whole land of Ḥafūn (Arj Ḥafūn) and was erroneously limited by the Portuguese to the Cape.

**Bibliography:** Yule and Burnell, Hobson-Jobson, *p. 398 et seq.

**GU崁AR (GUḌAR, GUḌYUR). The name of a very widely spread tribe in Northern India akin to the Rājpūṭ and Djas and like them probably descended from Scythian immigrants about the 6th century A.D. Their physical characteristics show them to be of the purest Indo-Aryan type without Dravidian admixture. It has been shown by V. A. Smith (*Journ. Roy. As. Soc.*, 1909), by A. M. T. Jackson (*Bombay Gazetteer*, 1896, Vol. i. pt. i.) and by D. R. Bhandarkar (*Epigraphic Notes and Questions, iii.*) that the Guḍjaras entered Northern India about 550 A.D. with or soon after the White Huns. The Guḍjaras are first mentioned in Bāpa’s Harṣacārīta which couples them with the Huṇa as enemies of Harṣa’s father. They founded a powerful state with its capital at Bihimāl near Mt. Ābū. From the southern branch of this kingdom comes the name of the southern Guḍjūrṭ, while the ruling families of the central part developed into Rājpūṭ tribes, especially the Pratihāra or Parāhīr clan. But the bulk of the Guḍjaras are represented by the Guḍjaras of the present day, and their wide distribution bears witness to the former extent of their rule. The Guḍjaras were mainly a pastoral race given to war and plunder, and the same tendencies are found in many at the present day. They have not the same reputation as steady cultivators as their near kindred, the Djas, but still they have mainly adopted a settled life. In the extreme northwest of India, especially in the outer fringe of the mountains in Ḥażārā, Ḫamnī, Kāṅgra and Cibhār they are still nomad herdsmen and speak a dialect of their own, known as Guḍjūrṭ or Guḍjīr, in which Grierson finds a strong resemblance to the Mewāt dialect of eastern Rājpūṭāna. This seems to show that, during the days of Guḍjūrṭ power, when their headquarters were in Rājpūṭāna, they adopted the language of that country, which has been retained by their least civilized outlying northern branch even now though isolated among speakers of Pandjābī and Western Pahlavi dialects. In Peshāwar the name Guḍjūr is often used as a synonym for ‘herdsman’ in general. The more settled Guḍjaras are most numerous in the modern district of Guḍjūr, where they are an important element in the population numbering 111,000 in 1901. In Ḥażārā (settled and pastoral) they number 91,670, and in both districts as well as in the whole of the North and West Pandjāb they are all Muslims. Further east Guḍjaras are numerous in Hoshamārpur and in the districts along the Indus both in the Pandjāb and the United Provinces, but here the majority remain Hindu. In the Pandjāb the Guḍjaras number 739,622 and in the U. P. 344,000. In the whole of India they number 2,103,000 and are found in most provinces especially (in addition to those already mentioned) Rājpūṭāna, Central India and Bombay.

It is generally believed that most of the pastoral Guḍjaras of the plain were forced to settle in fixed villages in Akbar’s time, and that the Pandjāb Guḍjūr obtained its name at that time. The conversion to Islam is attributed to the reign of Allārūghān, but the tradition places the time of Timūr, which is very improbable. In addition to the Northern and Southern Guḍjarats the tribe has given its name to Guḍjūrānāla in the Pandjāb (where however Guḍjaras are not numerous) and to a part of the district of Sāhrān-pur formerly called Guḍjūrāt. The Guḍjūrāṭī language derives its name from the Southern Guḍjūr province, and has no connection with the tribe.

**GUḌYARAT in the present 20th century denotes the tract of country immediately east of the Peninsula of Kathiawār; but at the time of the Muhammadan power in India it included not only that, then known as Sūrāth, but also the districts as far as Sūrāt and even Bombay on the south, part of Khandesh and Malwa to the East, and the south-west corner of Rājpūṭāna round Anhilwāra to the north. It was first known to the Muhammadans when Sūrān Ṭīmūr marched from Malwa to Anhilwāra and Sūmarūth on the south coast of Sūrāth in 1354 A.D. The Sultan Shihāb al-Dīn met the Sultan Shihāb al-Dīn with a check at Anhilwāra in 1178, but 16 years later this was avenged by the Dīlī vicerey, Kūṭ al-Dīn Aibak. One hundred years afterwards the place was taken by Ulugh Ḵān, general of Sultan ‘Alī al-Dīn Khaljī; and between 1347 and 1351 Sultan Muhammad Taghliāk waged several campaigns in Guḍjūrāt from Sīnd.
GUDJARĀT — GUDJARĀT.

where he died. His successor, Sultan Firuz Shah established his authority in the country, which thenceforth remained under Muhammadan governors, of whom, Zafar Khan, became an independent ruler of Gudjrāt, under the title of Muṣaffar Khan; after the central power at Delhi had been crushed by the invasion of Timūr. This man was a notable general and in his time destroyed Sūnnāth for a third time, and subdued Idrāz, Dhar and Mandū. He also saved the Dihlī rulers from the attack of Ibn Khārībī of Djaynūr. He was succeeded by his grandson Ahmad I who founded Ahmadābād in 1413 A.D. These rulers attacked at different times Cānāb, Dīnābād, Idrāz, Cītur and Kāch, and greatly extended their power; but towards the close of the dynasty they became embarrased by the Turks and Portugese.

The country was invaded in 1573–1575 by the emperor Akbar, who came in person to Ahmadābād, Barōda, Cambay and Surat, and from that time forward the Gudjrāt country remained under Muhammadan viceroys of the Delhi court until the rise of the Marāṭhās and the advent of the English put an end to the Muhammadan domination of these parts. The revenue settlement of it was made by the famous Tūdar Mal. Among the best known viceroys were Mirza 'Azīz Kūktāsh, foster brother of the emperor Akbar; Mirza Khān, afterwards dignified with the title of Khān Khānān; Prince Khūrram, afterwards the emperor Shāh Jīhān; Prince Awrangzēb in 1644, and his brother Dārā Shīkōh in 1648–1652, and Murūd Bāshā in 1654–1657. In 1659–1662 Mūrūdji Dīssawnt Singh of Dīssāhpūr was governor. Early in the 18th century the power of the Marāṭhās became more and more aggressive, and the government fell more and more into confusion, Sūrat being sacked once by Malik Aμbar and twice by Sivāḍži. An attempt by the Muhammadans to recover Ahmadābād after the battle of Pānpīt (1761 A.D.) failed, and the Gakwār making terms for himself apart from the Peshwā, the British took possession of the Gudjrāt country of the mainland in 1818.

GUDJARĀT, a modern Indo-Aryan vernacular language, spoken by over 9 million persons in Western India and by more than 1 million persons from Gudjrāt who have settled in other parts of the country; it has a printed character of its own, a modification of the Deva-selfrī, and its literature extends back to the fourteenth century. It is the chief commercial language of Western India, and, as such, acquires modifications according to the class which uses it; while most of the Muhammadans of Gudjrāt speak Urdu, those who are descended from Hindu converts speak Gudjrātī, and the educated members of this class introduce into the vocabulary of their native language a large number of Urdu (and, through it, of Arabic and Persian) words. The Muhammadans have employed Gudjrātī but little as a medium for literary expression, and have preferred to write either in Persian or (in more recent times) in Urdu. The few works written in Gudjrātī by Muhammadans consist mainly of translations from Arabic, Persian and Urdu, or of religious tracts and elementary books of religious instruction.

GUDJĀRNĀVA. A district in the Panjāb, 3198 sq. miles in extent with a population in 1901 of 809,577 of whom 603,464 are Muhammadans. The district lies in a level plain between the Cānāb and Rāvī rivers, but does not extend to the latter river. Like Gudjrāt it obtains its name from the Gudjar tribe, but there is not now a large Gudjar element in the population. The district took its name from the town which was founded by Gudjars. Rādājēpurūs (especially Bhaṭīis), Dīssāpūra and Amūnīs are now the most numerous tribes. There are Buddhist remains at Tāki which has been identified with the "Tse-kēi" of the Chinese pilgrim Hōuen Thāng. The ruins of Shākāt in the south perhaps represent the Sākāla of the Hun king Mihrākula. Under the Moghul emperors this tract was prosperous, and some of the principal towns were founded. Esmā’īlī (properly Aminābād) was founded by Muḥammad Amīn, and Hājībābād by Hājīb, both in Akbar’s reign, and Shekhābāpur (properly Shīkōh-pura) by the prince Dārā Shīkōh, son of Shāh Jīhān, who made an irrigation channel there while his grandfather Dīssāhpūr was still living. In the eighteenth century the country was nearly deserted, and was afterwards colonized by the Sikhs. Randīl Singh was born at Gudjārnāvā and erected there a mausoleum to his father Mahān Singh. The principal towns are Gudjārnāvā (pop. 29,224) and Wazrābād (pop. 18,069). The Cānāb canal has its head in the Cānāb river and irrigates a large tract in the Hājībābād and Dīssāhpūr tahsils. Wazrābād is an important railway junction.

M. LONGWORTH DAMES.)

GUDJĀRĀT (Pandīb). The name of a district in the Panjāb in British India lying between 33° and 32° 8' N. and 73° 17' and 74° 30' E. It contains an area of 2051 sq.m. and a population of 750,458 (in 1901), of which the greater part (87 per cent.) is Mūsālān. It is a submontane district lying between the Cānāb River to the S. E. and the Dīssāhpūr to the N. W. The outer fringe of the Himalaya bounds it to the N. E. and the open waste of Shāhīpur to the S.W. A great part of the waste land of Gudjrāt and Shāhīpur is now being brought under cultivation through irrigation from the Dīssāhpūr canal.

The district was traversed by Alexander who crossed the Hydaspe (Vitasta, Vēhat or Dējsam), near the modern town of Dējsam, and skirted the mountains crossing the Acesines, (Cānāb), near the point where it issues into the plains. It seems to have formed the central portion of the kingdom of Pūrūs. It afterwards formed part of the kingdom of the Mauyras and the Kushans, but does
not seem to have been included in the Gupta kingdom nor in that of Harša. The prevalence of the Gujjar tribe and of the name Gujjar makes it probable that the great Gujjar kingdom which had its centre at Bhimāl in Rādjāpurāṇa included this tract. But the local princes had not quite been long separated from the central kingdom, which had its capital at Kannauj when the territory known as Gujjar-dēs corresponding roughly with the Gujjarāt district was ceded by the king reigning at Jammū to the king of Kashmir in the 9th century. In later times this tract from its position must have been the thoroughfare of every invading army including those of Mahāmud, Muḥammad b. Sām, Timūr, Bābār and Nadir Shāh. Its population, whether Džat, Rādžpūt or Gujjar, was gradually converted to the Muhammadan faith; the Sikh religion has never made much progress and the country remains mainly a Muslimmān tract. In modern times a rather lax heretical sect known as Ditte-Shāhī has arisen in this district. They consider the founder Ditte-Shāh Arain to be a true rasūl and disregard the strict doctrines and ceremonies of Islām.

Although the Sikhs did not spread their religion in Gujjarāt they obtained possession of the country from the time of the abandonment of the Central Pandjāb by Aḥmad Shāh Durrānī. The Bhangī Misl occupied the country up to the Dchehām, and in 1768 they went even further, as far as Rāwāl Pindi. The dominions of the Bhangi confederacy were soon absorbed by Randjīt Singh. After his death Gujjarāt continued to be part of the Sikh kingdom till 1849, when it was the scene of the most furious fighting in the Second Sikh war. The battles of Saḍadulāpur, Čilānwāla and Gujjarāt took place within the limits of the district, and Gough's victory at the latter place led to the annexation of the whole Pandjāb to British India.

The town of Gujjarāt near which the battle took place is now the district headquarters and has a pop. of 19,048. It is well known for its damascened work (kōfgārī). Here is the shrine of Shāh Dawla celebrated for its semi-idiotic mendicants with heads artificially shaped, known popularly as "Shāh Dawla's rats".

(M. LONGWORTH DAMES.)

GUINEA, a land on the coast of West Africa. Yākūt, Mdu'jam, iv. 307, mentions a land Kīnāwā (Giināwā), which, according to him, received its name from its inhabitants; the Giināwā are said to have been a Berber tribe who had penetrated into the land of the negroes (Sūdān) and become neighbours of Ghāna [q. v., ii. 139 and sqq.]. It seems to follow from this that the usual derivation of the name of Djennē (see above i. 1035 and sqq.) is incorrect. As far as we know, Marquart was the first to call attention to this passage in Yākūt (Benīn, p. 136v).

On the penetration of Islām among the peoples of Guinea cf. the article Westmann in Die Welt des Islams, i. 85 and sqq., and the literature quoted there. For further details cf. the article SUDAN.

GUL (r.) the rose. The rose plays a great part in Oriental poetry, whence its name frequently appears in the titles of Persian, Turkish and Indian books. The relations between the rose and the nightingale have already been discussed above (art. Bulbul, i. 785). There are therefore numerous poems with the title Gul u Bulbul, but the rose is also associated with other things; cf. the indices in the Grundris der Iran. Phil., ii, and in Gilb, History of Ottoman Poetry. Here we will only mention Gul u Šanawbar, "the Rose and the Pine tree", a subject which has been chosen mainly by writers in India. A Persian version is mentioned by Ethé in the Grundris der Iran. Phil., ii. 321; on the versions in Hindustān and other modern Indian dialects cf. Garcin de Tassy, Histoire de la Littér. Hindoustic, i. 157 and sqq. The same author published a complete French translation of this poem in the Revue Orient. et Améric., vi. 69-120; on the original editions that have been published in the East, cf. Ethé, p. 323.

GUL-BABA, a Bektṣhī der vish, a native of Marziyān (Marsiawan in Asia Minor in the wilāyat of Siwās) took part in several wars waged by the Turks in the reigns of Sulṭān Mehmed II, Bayazīd II, Selim I and Sulaimān II and fell during the siege of Buda (1456) in a skirmish below the walls of the city on the 29th Rabī' 1 948 = 21st August 1541 (Iccewī, i. 227). After he had been buried on the spot where he had fallen, Sulaimān II declared him the patron saint of the city (gulbanī). His name was also borne by a Bektṣshī monastery near the hot springs of Welibey outside the Khoros gate, which was founded for charitable purposes by the descendants of Ghāzi Miḳtājī. The tomb of the saint still stands in Buda: it is in the Turcubassa (Torokuteca) and in the form of an octagon, on which is a dome covered with lead plates and wooden tiles, on the top of which is a lantern. Its exterior is covered by creeping plants. Tōth Bēla discusses this saint in his Saïjroel Saïyo.

Bibliography: Ewliyā Celebi, Şevvalname, vi. 225, 244 (his authority is information given him by his father). (Cl. HUART.)

GULBADAN BĒGAM, daughter of the Empēror Bābur, half-sister of Humāyūn, and aunt of Akbar. Her mother was Dildār Bēgam, whose real name, apparently, was Sālīya Sulānā, and who was daughter of Sulṭān Maḥmūd Mirzā the ruler of Samarqand. Gulbadan was born in the city of Kābul, and as in her charming Memoirs she tells us that she was eight years old when her father died, i.e. in the last week of December 1530, she must have been born in 1522 (1523). She remained in Kābul when her father went off to the conquest of India, but she joined him in 1529 and she was in Agra when he died. She was there also in 1539 when Humāyūn returned, defeated, from Bengal. By this time, apparently, she had been married to Khāzir Khwāja Khān, a Cagāhāti Moghul and a great-grandson of Yūnus Khān. Rieu states that the marriage took place in 942 (1545), but I do not know on which authority. By her husband, who was an officer of Humāyūn and of Akbar, and who was at one time governor of the Pandjāb, she had at least one son, Muhammad Yār, and one daughter. When Humāyūn was driven out of India, she did not accompany him to Persia, but remained in Afghanistan with her brothers Kamān and Hindāl, and did not see Humāyūn again till 1545. She did not leave Kābul
for India till after Humayun's death, arriving there in 1557, the second year of the reign of her nephew. In 1570 she went on pilgrimage to Mecca in company with her niece Salima Sultan Begam and other royal ladies. On her way back, she was shipwrecked at Aden, and did not return till 1581 or 1582 (Badü‘un, Lowe's translation, 216).

In 1590 she went to Kâbul in company with Akbar's mother, in order to visit the emperor. She died at Agra on 6 Dhu 'l-Hijjah 1011 (7 May 1603), not long after the death of Queen Elizabeth of England. She was then 82 lunar years of age. The correct date of her death is given in Rieu's Catalogue, iii. 1053. She was greatly respected, and Akbar himself took her bier upon his shoulders.

The interesting thing about Gulbadan is that she wrote her Memoirs. The work is called the Humayyunnamah and has been edited and translated by Mrs A. Beveridge for the Royal Asiatic Society (London 1902). Unfortunately, the only known MS. is that described by Rieu in his Catalogue of Persian MSS. I, 247, and it is imperfect, and breaks off in the middle of a sentence. She wrote the Memoirs at the request of Akbar in order to furnish his secretary Abu 'l-Fazl with materials for his history. Probably this was in 1587. Her book is valuable on account of its domestic details, and gives a pleasing picture of the author, and of Court-life in Humayun's time. There are several references to Gulbadan in the third volume of the Akhbarnamah.

(H. Beveridge.)

GULBARGA, spelt Kalburga in Marathi, was a town of little importance until 'Ali al-Din Bahman Shah made it his capital in 1347 on establishing his independence as sulthan of the Dakhan. It remained the capital of the Dakhan until 1429, when Ahmad Shah I, ninth king of the Bahmani dynasty, rebuilt Bidar and transferred his court thither. On the dissolution of the Bahmani kingdom in 1490 Gulbarga was in the possession of the African eunuch, Dastur Dinâr, but ten years later he was defeated and slain by Yusuf 'Adil Shah and the city and province were absorbed in Bidjapur and remained part of that kingdom until it was annexed to the Mughal empire by Awrangzib ('Alângir) in 1686. The city is famous for its great mosque and for the shrine of Muhammad Gistâ Darâz, a saint who flourished in the early years of the fifteenth century. Bibliography: Historic Landmarks of the Deccan, by Major T. W. Haig.

(GULBAHAR) (T. W. Haig.)

GÜLEK BOĞHAZ, the Turkish name of the celebrated Pylaie Ciliciae of the ancients, which have already been often described. The name is derived from a place named Gülekk in the neighbourhood which, according to Cuinet, has including some other adjoining villages a population of 1850. In the Armenian notices we find Guglag in place of Gülek, latinised as Guglat or Goglagos, although the Latin chroniclers always speak of the Forta Juda. In the Arab chroniclers we find simply Darb or Darb al-Safâma. For a more detailed description see the works quoted below. Bibliography: Ritter, Erdkunde, xix. 2, p. 273 et seq.; Ramsay, Histor. Geogr. of Asia Minor, p. 349 et seq.; Le Strange, The Lands of the Eastern Caliph., p. 133 et seq.; Cuinet, La Turquie d'Asie, ii. 49.

GÜLİSTÂN, a place in the Caucasus (in the government of Elisavetpol), famous for the peace concluded there (Peace of Gülîstân) in 1813. Instigated by Napoleon, Fath 'Ali Shah had declared war against Russia. After the victories of the Russian general Koliarevsky at Aslanduz and Lenkoran the treaty of Gülîstân was concluded on the 12th (24th) October 1813, by which Russia came into the possession of the khanates of Karabagh, Shirvan, Derbend, Kuba, Baku and Talish. The khanate of Gandja [q.v.] had been previously occupied by the Russians so that the treaty only ratified what was actually a fact. At the same time Persia pledged herself not to maintain any warships on the Caspian Sea. (A. Dhillon.)

GÜLİSTÂN (v.), "land of roses, rose-garden," the name of a celebrated didactic work, a mixture of prose and verse, by the Persian poet Sa'di of Shiraz, consisting of a preface, eight chapters (the lives and doings of kings, manners and customs of the derelict, frugality, advantages of silence, love and youth, infancy and old age, importance of education and rules of conduct) and an epilogue. A number of anecdotes interwoven give us information on the personal experiences of the poet. The Gülîstân was completed in 1256 (1858), one year after the Bostân; it bears a dedication to the Atabeg of Fârs, Abû Bakr b. Sa'd b. Zangi and his son Sa'd and has appeared in numerous editions (the best European ones are by E. B. Eastwick, Hereford 1850; Johnson, ibid. 1863; J. T. Platts, London 1874) and translations; of the latter we may mention: Latin: by G. Gentius (Rosarion Politicum, 1651, 1655); French: by D'Allègre (1704), Gaudin (1789, 1791), Semelet (1834), Defrémy (1858), Franz Toussaint (with a preface by Comtesse de Noailles, 1913); German: by A. Olearius (Persianisches Reisenbuch, 1654, 1660), Schummel (1775), B. Dorn (1827), Ph. Wolff (1841), K. H. Graf (1846), G. H. F. Nesselmann (Berlin 1864); English: by Gladwin (Pers. text with trans., Calcutta 1806, 1809); Dumoulin (1807), J. Ross (1823), Eastwick (1852), J. T. Platts (London 1873), E. H. Whinfield (Pers. text with trans., London 1880); Italian: by Gerardo de Vincentiis (selection, Naples 1873); Arabic: by Djabir b. Yusuf al-Mukhaßa (1263—1847); Hindustâni: by Mir Shir 'Ali Asfand under the direction of John Gilchrist (Bâgh-i Udî, Calcutta 1802). Bibliography: H. Ethé in the Grundr. der iran. Philol., ii. 293—296, 297, 570. (T. Curtis.)

GÜLKHAÎNE, the "house of roses", Gül-khâné Meidâni, is the name of a part of the gardens, which lie along the Sea of Marmora on the east side of the old imperial Serai in Stambul; the name is derived from the fact that in olden days the building, in which the rose sweetmeats for the use of the court were prepared, stood there. The place is famous in history because the celebrated firmân of Sultan 'Abd al-Majid, the so-called Khatir-i shîrî promulgating the reforms, was publicly proclaimed there on Sunday the 26th Shawwal 1255 (3rd November 1839); cf. the description in Rosen, Geschichte der Türken, ii. 4et seq.; Lutfi, Ta'rikh, vi. 50 et seq.; on the place itself cf. White, Three Years in Constantinople, i. 110, and Recueil Hist. publ. par l'Inst. d'Hist. Ott., i. 291 et seq. (J. H. Mordtmann.)
GULPÁYÁN, a town in Persia at the foot of the Zagros range in the fertile valley of the Kūm. The Arab geographers give the form of the name Djarbaḏhákân, i.e. Gurbadákân. Hadžidi Khaļ, *Dhikḥammuq*, p. 299 still knows both forms for his Sulaimán. It is probably only a misprint for Gurbáyán. It is only in the modern times that the place is frequently mentioned; the Arab geographers only refer to it as a station on the road from İspāhān to Hamadẖān. Although Gulpáyán is the capital of a Persian province, which exports opium, tobacco and cotton in addition to agricultural produce satisfying the local requirements, it gives one the impression of considerable decay. Among the 12,000—15,000 inhabitants are a few Jews, about 150 families.

GÜLŠHENI, a Turkish poet, born in Șarukhān (Asia Minor in the wilayet of Aydın), a contemporary of Muḥammad II, to whom he dedicated his book, led the life of a hermit. His Șafīāt consists of series of moralising dialogues in verse illustrated by anecdotes.

(ČL. HuAкT.)

GÜLŞHENI (ŞarKü İdrāhīm), a celebrated mystic of the Khwālīw order, a native of Șahbaḏāḡān, studied in Tabriz and migrated to Cairo after Shāh Șāh’s had proclaimed the Şīa creed the state religion of Persia. After the capture of the city by the Turks he was treated with the greatest respect by Sulṭān Selim I. In 935 (1528-1529) he went to Constantinople on Sulṭān Sulaimān’s invitation, where he was received with unusual distinction. He died in 940 (1533-1534) in Cairo. He wrote a Persian mystic poem of 40,000 distiches entitled ฿eşwârî in answer to Djalāl al-Dīn Rūmî’s ฿eşwârî. Of his numerous pupils particular mention may be made of the poet Usūlī of Ye’dijde-i Wardar and the mystic Șuaff of Sinc-eč. An order founded by him bears his name Gülşheni or sometimes is also called Rüşheni after the epithet of his teacher and successor Dede Əmar Rüşheni. This order is distinguished by the form of its turban of eight folds.

(ČL. HuAкT.)

GUMAL, a river in Afghanistan formed by the junction of the Gumal proper which rises near Ghazni, with the Kundar in the Wān territory. It then flows eastward and, after being joined by the Żoḥb from the south, passes through the Gomal Pass into the plains of the Indus valley. Its water is here diverted into irrigation channels, and does not reach the Indus except during high floods. The Gomal Pass is one of the principal passes from India into Afghanistan, and is more used than any other by the Powindahs or nomadic traders of the Ghilzai and other tribes.

**Bibliography:** Vigne, /GPLHe, London, 1840.

(ČL. Longworth DAmES.)

GUMUSKHâNE, the “silver house” (translated into modern Greek as *Άργυρόπολης*), capital of a sandjak of the wilayet of Trepazantas, and till 1913 see of the Greek Metropolis of Chaldia, is said to have been founded only 250 years ago and according to Ewliya (ii. 343) identical with Shāhān which is known as a mint for silver currency from Sulaimān I to Khuṭbān II. Gumush-khâne was formerly the centre of the mining industry in the coast lands of Pontus famous even in antiquity for its silver; in the xviiith century (under Muḥammad I) 16,000 (dollars) were struck there for a time. During the war of 1828-1829 the Russians temporarily occupied the district of Gumush-khâne; after their departure the greater part of the Greek inhabitants, who were engaged in working the mines, migrated and the mining industry declined. Recently attempts have been made, but without marked success, by European enterprise to set the flooded mines at work again; argeniferous lead is exploited there. The present population is about 3000 of which are Greeks. The rich decorations of the five Greek churches, which date from a time when the Greek population numbered 5000 families, testify to the prosperity of the earlier inhabitants (cf. *Dhikḥammuq*, p. 622, 623; Hamilton, *Researches*, i. 234 et seq.; *Triantaphylides*, Τὰ Ποιήματα, p. 97 et seq.; Sava Joannides, *Ιστορία Τραπεζούντα*, p. 141, 248 et seq.; Cuinet, *La Turquie d’Aïre*, i. 122 et seq.; view in Texier, *Dester de l’Arménie, la Perse etc.*, Pl. 2.)

(׳. J. MordtmAn.)

GURČANI. A Baloch tribe located partly in the plains of the Dera Ghazi Khān District of the Pānjiāb, and partly in the adjacent mountains called Ṣari and Ṣalāmān, and the upland plains of Shām and Phālāwāgh. They are of mixed origin, some sections being Dōdās of Sīndh Rādippit extraction, and others being Rīd Baloch of pure blood. The Chief’s family belongs to one of the Dīda sections. The tribe was till lately very turbulent and often at war with its neighbours and with the Sikhs. In 1848 they joined Edwards against the Sikhs. The Lashārī and Dūrkānī sections are mountainers occupying a very difficult hill country.

(M. Longworth DAmES.)

GURDI. GURDI, GURDХAN. [See Georgia.]

GURGANDI, Arabic Djurdjānīya, a town in the northern part of Khuṭbān; on the situation of the town and the arm of the Oxus which flows past it, cf. the article AMU-DARYA, i. 3416. Although the town is first mentioned by the Arabs, it was undoubtedly founded in the pre-Muhammadan period; the oldest Chinese name for Khuṭbān (Yüe-kien) is apparently to be traced to the name Gurgandj. In what condition the Arabs found the northern part of the country is not narrated in the sources dealing with the Arab conquest (93 = 712). In the ivth = xth century Khuṭbān broke up into two independent kingdoms, the land of the Khuṭbānshāh with Khuṭbān, the ancient capital of the country, and the land of the Emir of Gurgandj. According to the chronicle of Şahbān (Chronology, ed. Sachau, p. 36), the dynasty which had its residence in Khuṭbān only retained the regal title (Şāhīya) after the Arab conquest; the real power (wilāya) was henceforth sometimes in the hands of the members of the dynasty itself, sometimes in the
hands of others, until under its last ruler both (the žāhātya and višlāya) were finally taken from it. This statement is interpreted by Sachau (Sitz.-Ber. Wien. Ak., lxxiii. 499) to mean that the old dynasty resided in Kāth and the Arab wāli in Gurgānd and that the political separation of north from south was brought about by this system of dual rule. In the year 385 = 995 the Emir of Gurgānd succeeded in conquering Kāth, overthrowing the dynasty which had held it since pre-Muhammadan times, uniting Khaʾrīzim once more into a single kingdom and transferring the title of Khaʾrīzimi to his own house.

Gurgānd is described as the second largest town in Khaʾrīzim by the Arab geographers of the ivth = xth century (cf. W. Barthold, Turkestam, ii. 146 et seq.; G. Le Strange, The Lands of the Eastern Caliphate, p. 447 et seq.); in contrast to the ancient town of Kāth it was then a rapidly rising city of commerce and industry. After the union of the two kingdoms Kāth and Gurgānd are described as the two capitals of this kingdom each enjoying equal privileges; under the later rulers and governors, Kāth gradually became quite overshadowed by Gurgānd. The period of Gurgānd's greatest prosperity coincides with the rule of the Khaʾrīzim khans of the ivth = viith and viith = xiith century Yākūt (ii. 54, 876-879). It gives most of the notices, unfortunately however very scanty, of the brilliant capital of this dynasty; 3 farāsāk from the capital there was in this period another town called "Little Gurgānd". Djuwaini's account of the siege and capture of the city by the Mongols in 618 = 1221 contains much information on the topography of Gurgānd in the viith = xiith century; cf. the text in Schefer, Christomathie Persane, ii. 136 et seq. and the comparison with other sources in W. Barthold, Turkestam, ii. 467 et seq. The city is said to have been rased to the ground on this occasion, the dikes destroyed and the whole district inundated by the Amu-Daryā; on the contrary other sources (Djūrijīn, Tabākh-ī Nāṣirī, transl. Raverty, p. 251, 1000; cf. also Ab al-Karim Bukhārī ed. Schefer, p. 78), say that several buildings, including the tomb of Sultan Takash escaped destruction. The inscription found in a mineret (cf. the picture in H. Landseid, Through Russian Central Asia, p. 517) giving the date of erection as 401 = 1010-1011, published by Katanow (Zapiski vost. otd. arkh. otd., xiv. 015 et seq.), actually shows that some remains of pre-Mongol Gurgānd have survived to the present day. On the commercial city rebuilt on another site a few years later, cf. Urgenci. (W. Barthold.)

GURKHAN, a title of the rulers of the Kārat Khitāi [q. v.]. The word is said by the Muslim authorities to mean "Khan of Khans" (Khān-i Khānān). This explanation is rejected by Grigoroyev (Vostochny Turkestam, i. 398) and Gurkhan equated to Mongol Gurren = "son in law"; the founder of the kingdom of the Karā-Khitāi is said by him to have adopted this title because he was related to the former Emperors of the house of Liao (in North China). Documentary authority on which this view might be supported has not yet been found; nor do we know any better how far the language of the Khitāi was related to Mongol or had adopted Mongol words and whether a form "Gurkhān" for "Gurren" could be explained by any phonological peculiarities of this language; indeed the Persian accounts of the Karā-Khitāi show that the Chinese word su-ma was used for son-in-law at the Gurkhān's court (cf. Defrémery's note to his edition of Mirkhond, Histoire des Sultans du Kharezm, p. 124). Chung-Khān's rival Djamūkhy (cf. the article Čingiz-Khān, i. 857a infra) adopted the title "Gurkhān" in the early years of the xiith century, apparently in imitation of the title of the Karā-Khitāi; the title does not seem to be found later.

GWALIOR, (Gwāliyār), the capital of the principal Native State of Central India, ruled by the Maharāḍājī Sindhis, is chiefly famous for its fortress, situated on a great table rock of Vindhyana sandstone. This rock rises 300 feet above the plain, and stretches two miles from north to south, and is half a mile broad at its widest point. It was threatened by Sultan Mahmūd of Ghazni in 1032, and was captured in 1196 for Sultan Shihāb al-Din Ghūrī, by his Dhihi deputy, Kūṭ al-Din Aībak from the Pāhrās, who had ousted the Kaʾbāwā Dājīpūtī. It was recovered by the Pāhrās 14 years later, but was reconquered by the emperor Ilutmish in 1232 after a long siege, which ended in the immolation of the women of the defenders at the Djawār tank at the north end of the fortress. After capturing the fort, the emperor destroyed the famous Sūrū Dīvān temple, which stood near the Sundā Kund at the south of the tableland. During the confusion caused by the invasion of the emperor Timūr, the place was seized by the Tūnārā Dājīpūtī, who held it till 1518, in spite of several sieges by Hūshāng Shāh of Māwa, Husain Shāh Shārī of Dājīpūtī, and the Lūdī Kings of Dīlī. During this century and a quarter the place rose to high renown, especially under Rādāj Mān Singh, who built the famous Mān Mandir (palace), and the principal gate leading into the fort. When the fort surrendered to Ibrāhīm Lūdī he carried off from it Dīlī a famous brazen bull, which was afterwards transferred to Fathpur Sikri, and there broken up. The emperor Bābur visited Gwallīar in 1526. In 1542 it fell to the Pāhrās Sultan Shīr Shāh Sūr, and under him and his son Islam Shāh, who died there in 1552, it was practically the capital of India. It was surrendered to Akbar soon after his accession, and the fine tomb of Muḥammad Gāhwīn near the foot of the fortress is, with the mausoleum of the emperor Humaỳn at Dīlī, one of the earliest important works of Mughal architecture in India. Under the Mughal emperors the fortress became a state prison, and many inconvenient members of the royal family died in the Naw Cawk cells near the north-west gate of the fort, known as the Dhowānā-pūl. The Mughal governor Muʾtamid Khān built a small mosque by the Gānēsh Gate, and deepened the Nur Sāgar Tank; he also destroyed the shrine of the hermit the Guālipī, from whom the rock is said to derive its name. The Dājīmī Masjīd, a fine building, was begun about 1605 and finished 60 years later. The Dājīngī-Mandīr (about 290 by 180 ft.) was built in the reign of the fourth Mughal emperor, north of the palace of Mān Singh, and upon the site of that of the Sūr emperors; the Shāhādāh Mandīr (520 × 170 ft.) stands north again of the former on the spot where the palace of the emperor Humāyūn once stood. After the defeat of the emperor Aḥmad
H.

HÄ, the 26th letter of the Arab alphabet with the numerical value 5, our h; it has survived everywhere except in Maltese where it has become haorra or h. As a feminine termination (hā' al-ta'ānī) with the pronunciation t the character receives the two points of the letter ṭā’. In reality the written form is here based on the ᥱ pronunciation of the feminine termination at in pause, while the pronunciation t (as in Hebrew) has survived in combination with a vowel following. The transition from at to ᥱ in pause did not, however, take place at the same time throughout the whole of the Arabic language wherever spoken, but appeared earlier in the west, where the pronunciation was authoritative for the orthography, than in the east (Noldeke, *Beitr. zur Sem. Sprachwissenschaft*, p. 10), so that the Persians have adopted Arab words with the pronunciation at. In Arabic itself this h was afterwards dropped everywhere so that the spelling with h has now only a historical interest.

HÄ, the 6th letter of the Arab alphabet with the numerical value 8. It is a guttural characteristic of the Semitic languages, approximating to the unvoiced sound corresponding to 'ain [q.v., i. 211], as 'ain passes into ḫā’ where it dialectically drops its voiced pronunciation; e.g. in Egyptian Arabic by assimilation (arbaḥṭādar, 3 from arbaḥṭādar) and in Maltese throughout when final (dumāq from dumāq). Our knowledge of the nature of this sound is no more complete than that of the related ‘ain. A discussion of the various views may be found in E. Mattessson, Études phonologiques sur le dialecte arabe vulgaire de Beyrouth (Upsala 1910), p. 41 et seq. — In South Arabic the sound approximates to hā’. The Persians and Turks also pronounce ḫ for h in words borrowed from the Arabic. — In various African names e.g. that of the Hausa people the spelling with ḫ (hs) is simply an affectation, it is really h.

(H. BAUER.)

Al-ḤABAT, the name in South Arabia for a sacred area, which is under the protection of a saint, who is usually buried there, and is a place of refuge. No one who seeks asylum on this holy ground may be slain or attacked there. The verb ḥabat in South Arabia means "to hold back" or "to restrain". The most important ḥabat in South Arabia is that of Djebel Kadjir, which lies to the south of the village of Liyya (Lahiya) on the Wādī Ḥabban in the land of the Wāhidī [q.v.]. Four saints (mugāṣṣib) of the tribe of Bā Marhūl, to whom Liyya belongs, are buried there. This ḥabat therefore is also known as Ḥabat al-Arba’ā. It is uninhabited, and the surrounding tribes only allow their cattle to pasture there after the rains. Besides places of refuge which are called ḥabat there are others which bear the name ḥawaṣa [q.v.].

1857 till 1886, since when it has been in the hands of the Maharājā Sindhia.

(J. SCHLEIFER.)

ḤABBÁ, literally grain or kernel, a fraction in the Troy weight system of the Arabs, of undefined weight. Most Arab authors describe the ḥabba as 1/60 of the unit of weight adopted, as 1/10 of the dānuṣ (which in Arab metrology is a sixth part of the unit, see i. 912), but there are other estimates which vary from 1/96 to 1/84. The ḥabba thus means something very different according to the unit of weight: there is a ḥabba of the silver measure, a ḥabba of the gold measure, a ḥabba of the mithqāl, later of the dirham etc. On the supposition that the oldest Arab unit of Troy weight was the mithqāl [q.v.] of 4.25 grammes (65½ grains Troy), we get as the most probable weight of the ḥabba in the early days of ʿĪlam about 70—71 milligrammes (1.1 grains), which approximately agrees with the European apothecary's weight of the gramun (gram, γ., of the pound) as it was used throughout Europe down to the most recent times (cf. the English Troy grain of 64.8 milligrammes). The statements regarding the subdivisions and multiples of the ḥabba also vary; the ḥabba is usually divided into 2 grains of barley (ḫabṣir) or 4 grains of rice (ṣaruz) or about 100 mustard-seeds (khurādat); sometimes 3 and sometimes 4 ḥabba on the other hand make a kīrat [q.v.].

At the present day in Constantinople in Troy measure (for precious metals, jewels and drugs) the ḥabba, of which four make a kīrat, weighs 50.04 milligrammes (0.75 grains) (the drachm of 64 ḥabba thus weights 3.2025 grammes = 49.4235 Troy grains); in the coinage system it is somewhat heavier: 50.11 milligrammes (the coin-drachm = 3.207 grammes = 49.497 grains Troy). In Cairo the ḥabba, of which 3 go to the kīrat, is the same for all measures: 64.3417 milligrammes (one drachm = 3.0884 grammes = 47.66 grains Troy).

and the metrological text books; e. g. F. Noback, *Mumaz-, Mass- und Gewichtsbruch*; Kelly's *Universal Cambist*, etc. (E. V. ZIMMERMANN.)

**HABBAN (ABBA),** a town in South Arabia, the capital of the territory of the Upper Wajidi [q. v.], situated in the wadi of the same name. According to Miles it has about 4000 inhabitants, but this figure seems to be too high. The Sultan of the Wajidi dwells here in the Castle of Masa'n a Hakir, which is built on a small isolated hill in the midst of the city and surrounded by a wall. The town itself has no walls and only two watch-towers at each end of it. The houses are strongly built like little fortresses and, as usual in the land of the Wajidi, often five stories high. In the houses of the better families the second storey is used as a madrasha (reception-room). Besides one large mosque, Habban has eight smaller ones and an important library. The town is divided into four quarters: 1. the quarter of the Hadram and Ra'yiya; 2. that of the Jews; 3. that of the family of the Fakhir Muhammad b. Hasan al-Shihli (of the prominent family of Muhammad b. Umar in al-Hawta and al-Rawda) and 4. that of the carpenters who here form a caste and are descended from the ancient great carpenter family of al-Aww, who came originally from Jeddah and are now scattered throughout almost all South Arabia. The Jews (about 200 in number) are mostly goldsmiths and, as usual in South Arabia, are subject to many restrictions; they may not carry arms, nor acquire land and have to pay a kind of poll-tax (*furqah*) to the Sultan. Miles saw many inscriptions, which he describes as Hebrew near Habbân in the little wadi of Shuhab.

**HABESH,** see ABBYSSINIA, ii. 263, 268 sqq.

**HABIB B. AWE.** (See ABU TAMAM.)

**HABIB B. MAS'LAMA,** a Meccan of the clan of Banî Fiz, one of the Caliph Mu'awiyah's greatest generals. He is generally recognised as a companion of the Prophet except by the Medina school, who are infatuated by their anti-Umayyad prejudices. The chronology confirms the correctness of this view. For, as he must have been about 15 years old at Muhammad's death, there is no reason to suppose that he was not personally acquainted with him. He very early took part in the first fighting in Syria and vigorously championed the cause of the Umayyads. Under the governorship and later the Caliphate of Mu'awiyah he distinguished himself by his numerous incursions into Asia Minor and particularly Armenia. Tradition ascribes to him the conquest of the latter country. He is also known as Habib al-Rum, Habib of Byzantium, on account of his frequent raids into Byzantine territory. He was also a madhhab al-darur i.e. he possessed the privilege of having all his prayers and requests answered by God. He was also dead at the age of about 55 early in the reign of the Caliph Mu'awiyah; but he seems to have played no part in history after this date.

**HABIB AL-NADJ'JR (the carpenter), the saint of Antakya, after whom Mount Silpius is called by the Arabs, because a much visited grave, alleged to be his, is said to be there (cf. above i. 360). This Muslim saint is no other than the Agabus mentioned in Acts xi. 27—30 and xxi. 10 et seq., and his legend, which is related in *Sura* xxxvi. 12 et seq., although his name is not mentioned, is consequently of Christian origin. When Allah, as is the tradition, sent two apostles (according to the expositors, Yahya and Yunus) and afterwards a third (Sham'un) to convert the inhabitants and the latter threatened them with death if they did not give up preaching, a man came running from the most distant part of the town, who warned his fellow-citizens to believe the messenger and proclaimed himself a believer. The wrath of the people was thereupon turned against him and, when they were putting him to death, they cried in screeching tones to him: "Enter thou into paradise!" but he rejoiced that he was worthy of the high honour of martyrdom. Allah thereupon put all the blasphemers to death and without sending an army against them: a single cry (a voice from heaven) was heard and all were dead.

That man, say the expositors of the Kor'an, was Habib al-Nadj'jr, a carpenter who made idols but had become a convert, when he saw the miracles performed by the apostles. As it appears from the Kor'anic account as if Habib had prided himself on his martyr's death after he had suffered it, we find in al-Dima' (ed. Mehren, p. 206) the fantastic story, that Habib took his decapitated head in his left hand and placed it in his right and walked for three days and nights through the city in this fashion, while the head cried with a loud voice out the verses mentioned in the Kor'an.

**Bibliography:** The commentaries on Kor'an, *Sura* xxxvi.; cf. also the bibliography to the article ANTIKYA.

**HABIL and KABIL,** the names given by Muhammadan to the two sons of Adam, mentioned, but not by name, in the Kor'an, who brought an offering to God. Jealous that his sacrifice was rejected the one slew his brother. A raven sent by God, which scratched upon the ground, showed him how he could dispose of the body (Sura, v. 30—34). As this account in the Kor'an, following the Bible narrative, appears bald and uninteresting, Kor'anic exegesis, like the Biblical, endeavours to discover the psychological motives underlying the affair. According to it, the sons of Adam were all born with twin sisters; Kabil's (also sometimes called Keb, Kabin and Kayin) was called Aklima, Habil's, who was two years younger, Labadad (the names are given in varying forms). According to one tradition which is traced among scholars bi 'l-Kitab al-Auwal (presumably the book of Genesis is meant), Kabi first saw the light in Paradise and Habil was born on earth, just as also Pirke de K. Eliezer, 21. Adam demanded that each should marry the other's twin sister; but Kabil wished to marry his own sister who was the fairer. It was to be decided by a sacrifice to which of the two the fairer sister was to go (so also Hellenoth, 62, *Gen.* X., 22 etc.). According to another version, to which the marriage with a sister was abhorrent, Habil was to have married a hourly of Paradise, while Kabil had to marry a woman of the Djinn, with which he did not agree. Nor did the rejection of his sacrifice
Habi and Kabil — Hadd.

187

(according to Tabari, i. 144 infra, he had sacrificed frits of the field of little value, while Kabil slew his favourite sheep). Kabil slew his twenty-year-old brother, according to one account following the example of Iblis, who appeared with a bird in his hand and struck off its head (a similar story is given in Sanhedrin, 30). As Habi was the first man that had died, the murderer did not know what to do with the corpse; he therefore carried it for a year on his back in a sack to protect him from the birds and wild beasts. He then noticed a raven fighting with another kill his opponent and burying the earth over him. Kabil did the same with his brother (similarly in Pirke de R. Eliezer, 21, while according to Gen. R., 22, the birds and beasts buried Abiel). When God said to him: "The voice of thy brother's blood crieth unto Me from the ground. Wherefore hast thou slain him?" Cain replied: "Where is his blood, if I have slain him?" thereupon God forbade the earth ever again to drink human blood.

Habos (A.), properly ḫūbūs, a pious endowment, synonymous with waqf (q.v.).

Hadath (A.), ritual impurity. The law recognises two conditions of ritual impurity which are distinguished from one another as "major" and "minor" hadath. A Muslim in a condition of hadath may not regain his ritual purity (ḥilāla) by the prescribed ritual ablutions (ṣuqūf or waqf) respectively; cf. Djanāba, ḡhusul and wudū'. Not only is a muḥādith (a person in a condition of "minor" hadath) forbidden to perform the salāt, but also he is not allowed to make the fawāf around the Ka'ba nor to touch a copy of the Korān; further the salāt and fawāf of a muḥādith are legally invalid. The same regulations apply to a case of major hadath; but there are a few additional rules applicable to the latter, cf. Djanāba, i. 1013.

(Th. W. Juvinsboll.)

Al-Hadath, also al-Ḫanwāk, a border fortress often mentioned in the wars between the Arabs and the Byzantines. The exact situation of al-Hadath, the "Adas of the Greeks, has not yet been ascertained, because the town (see below) has been utterly deserted for over six centuries, but there can be no doubt that it is to be located not far from Inekli on the Akṣu. It is the Akṣu that Yakūt (iv. 838) means by the Nahr Hūrīṭh, which according to him rises in the lake of al-Hadath and flows into the Djiāhān. Ibn Seraphius's statement that the river flows through several small lakes, which are now called Goink Göl, Azabli Göl and Bash Göl, is more accurate, although, as Le Strange points out, this author is wrong, when he says that the river is a tributary of the Nahr al-Kubākīb (Melas). In Ramsay, A Sketch of the Historical Geography of Asia Minor, p. 278, Adatta is wrongly placed a short distance to the north of Germanicia (Marāsh). The fortress was captured by a body of Arab troops under lyd b. Qāhan as early as the reign of ʿOmar I (cf. 162—179): it was destroyed by the Byzantines but rebuilt in the same year by command of the Caliph al-Mahdi. It was then called al-Muham-

Madiya and al-Mahdiya in his honour, but these names could not supplant the old one. The town was of great strategic importance to the Arabs, because it commanded one of the great military roads from Halab (ʿAtītab) to Ellībatān (Asia Minor), while another led thither via Marāš. Al-Hadath was therefore garrisoned by Hāfrīn al-Rashīd and was reckoned one of the most important towns in the frontier provinces (al-Thughūr). The fortress proper was built on a hill called al-Uhadab, while the town itself was of the same size as Marāš; it was much harassed in the campaigns of Basil I (882) and Leo VI (904). It suffered still more when in 979 Harūq Phokas burned it, which induced the inhabitants to call in the help of Saif al-Dawla (q.v.). The latter did not hesitate to answer their appeal, won a great victory in the neighbourhood of the town in 343 (954) and had it rebuilt. But the building was not completed, because soon afterwards the Byzantines were again victorious and won the upper hand in those regions. It was not till 545 (1150) that Masʿūd, the Saljuq ruler of Konīya, again won the town for the Muslims, who held it till the Armenians of Sis under Constantine, the father of Haiṭhum, captured it. This caused Baḥars to send a body of troops against it in 671 (1278), who took the town and castle, massacred the inhabitants and razed the town to the ground so that it was henceforth known as Gūmīk "the burned" (so the various readings in al-Maqrizi and al-Dimashqī are to be emended). This name survives to the present day as that of the lake and plain where Adatta once lay.

(1838).

Hadd (A.), plural ḥудād, boundary, limit, stipulation, also barrier, obstacle. As a scientific term the word is used in several senses.

In the K.Pāḥa, where it is always found in the plural, it means the "limits" laid down by God, i.e. the provisions of the Law, whether commands or prohibitions. It appears in this sense at the end of several verses, which contain legal provisions, e.g. Sūra ii. 183, where it is said after the exposition of the rules regarding fasts: "These are God's ḥudād (the bounds prescribed by God), come not too near them" (lest ye be in danger of crossing them). Cf. also Sūra ii. 229 et seq., where the law of divorce is laid down and other passages. According to Kazimī, Sūra ii. 283 the expression recalls the saying ṭeṣṣā ṭala, the hedge drawn round the Mosaic law.

In Muslim criminal law hadd means an unalterable punishment prescribed by canon law, which is considered a "right of God" (ḥaṣk Allāh). (Cf. the article ʿA dhād, i. 132 et seq.). These punishments are 1. stoning or scourging for illicit intercourse (ṣināʿ, q.v.); 2. scourging for falsely accusing (ḥḍafīq, q.v.) a married woman of adultery; 3. the same punishment for the drinking of wine and other intoxicating liquors; 4. cutting off the hands for theft (cf. the article ʿaṣār); 5. various punishments for robbery which differ
according to circumstances, cf. Korâân, v. 37-38. — Although the above mentioned breaches of the law are considered very serious, the criminal can nevertheless hope for the mercy of God, because he has offended against Him. If he denies the deed and refutes the accusations brought against him, the judges are recommended not to press him further, but to give him every possible opportunity to clear himself; for further details see Juynboll, Handbuch des islamischen Gerichtes.

In philosophy hâdd means definition; the qualities that differentiate an object are called târsîfât. The definition is perfect when it gives the genus proximum and the differentia specifica, e.g. man is an animal rational. There is a kind of definition, which places the object to be defined between two limits so that it is the end of one and the beginning of the other.

Hâjiyl is also the name given to the definitions which stand at the beginning of various sciences, e.g. at the beginning of Euclid's geometry; the postulates are called muṣâdarât (Codex Leidenis 999, t. Euclides Elementa, ed. Besthorn and Heiberg, 1893).

In astronomy hâdd means certain areas under each sign of the zodiac, which are each allotted to one of the five planets.

Among the mystics hâdd and particularly the participle malâdîd means the finiteness of creatures in contrast to the infiniteness of God; man is limited and bounded (mahdûd) in space and time. (B. Carra de Vaux.)

HADENDOA, a Hamitic tribe in N.E. Africa belonging to the Bedja [q.v., i. 687] group and closely allied to the Bhâjârî, Hâlanga and Bani 'Amir tribes. They live in the country between the river Atbara and the Red Sea and extend towards the South as far as the borders of Eritrea and Abyssinia. Politically nearly the whole tribe belongs to the Red Sea and Kassala provinces of the Anglo-Egyptian Sûdân.

They are a nomadic or semi-nomadic tribe of camel-owners and caravan-guards; in their general characteristics and customs they do not differ materially from the rest of the Bedja tribes with whom they also share the use of the Bedawye language. Their claim to Arab descent must be rejected, but there is little doubt that they have at various times received considerable admixture of Arab blood. Although they have been Muslims for centuries their Islâm is of the primitive African type and often only skin-deep. At the same time there are scholars among them who have acquired a certain amount of Islamic learning through intercourse with Egypt and more especially the Hâjdâi.

Historically the tribe has never played an independent part until the most recent times. Although the Ottoman Turks have held Saûkin since the time of Sultan Selim the 3rd, they seem to have exercised little authority in the interior and have left no traces of their influence. During the revolt of Muḥammad Aḥmad, the Mahdî of the Sûdân, the Hadendoa took a prominent part in the fighting against the British and Egyptian troops and won a reputation for reckless courage and fanatizm. Their adherence to Mahdism was however less inspired by religious motives than by the personal influence of their well-known leader 'Osâmân Dîqna ('Osmân Dikna), a man of semi-Turkish descent. Since the occupation of Saûkin and Tôkær by the Anglo-Egyptian troops and more especially since the defeat and death of the Khalîfa, the Hadendoa have gradually become reconciled to the new régime, under which their material prosperity has increased considerably.

(H. Weir.)

AL-HÂDI (-i), the guide, one of the names of God, thence a favourite epithet of Shi'i rulers, e.g. of the Imâms of Ǧânâ and Ǧâda; it was first adopted by the 'Abbâsîd Mûsâ. The full expression is al-Hâdi ila 'l-Hâdî, the guide to truth (God).

HÂDÎ SABZAWÂRÎ (Hâdî Mulla), son of Hâdî Mulla, a Persian philâsopher and poet, born in 1212 (1797–1798). He was a pupil of Hâdî Mulla Ǧusâin and wrote a short treatise when only twelve years old. He then went with his teacher to Meşhâb and devoted himself for five years there to study and the practice of asceticism. He spent the next seven years in Ispâhân studying under Mûlî Ǧâli'î Nûrî, then made the pilgrimage to Mecca and returned via Kirmân to settle in Sabzawâr, where his reputation soon assembled a host of students around him. He delivered two lectures a day, of two hours each. In 1295 (1875) he died suddenly while engaged in teaching. The grand vizier had a mausoleum built over his grave before the gates of Meşhâb, which is much visited by pilgrims. According to his teaching, the world is an emanation, manifestation or projection of God; it is a mirror in which the Deity regards himself, the scene on which his attributes unfold their activities. It is a brilliant ray emanating from the source of light. The farther these emanations go from their source, the thicker and coarser they become until they finally form the material world. This he calls Ǧâwâ'î mawûd (descending arc); the human soul is able to rise again on this ladder again by the different steps of the Ǧâwâ'î Ǧîdâ'îd (ascending arc). He adopted a system of metempsychosis (tanâsûk), but only within the world of the uniform (��ّمّ-مثّî) in which every one assumes the form suitable to his qualities. It was mainly the teaching of Mûlî Ǧusâin that he continued. He laid down his views in his book Ǧusâr al-Hîsâba; he took the pen-name (ṭakkhalûs) of Ǧusâr and under
it published a collection of poems of which two lithographed editions exist (1299 and 1300). The British Museum possesses his autograph (Rieu, Sapph. p. 258, n°. 31).

**Al-HADID**, iron. According to the Sūrat al-

**Hadid** (lxxv. 25) God sent iron down to earth for the detriment and advantage of man, for weapons and tools are alike made from it. According to the belief of the Sassanids, it is allotted to Mars. It is the hardest and strongest of metals and the most capable of resisting the effects of fire, but it is the quickest to rust. It is corroded by acids; for example, with the fresh rind of a pomegranate it forms a black fluid, with vinegar a red fluid and with salt a yellow. Collyrium (al-khutā) burns it and arsenic makes it smooth and white. Kāzwinī distinguishes three kinds of iron, natural iron, al-sābirān— which can only mean dark iron ores such as micaceous ore, magnetic ironstone etc. — and that which is made artificially, which is of two kinds, the weak (Pers. norm-šānom) or female i.e. malleable iron and hard or male i.e. steel (tāfād). According to al-Khidr, however, the kind of iron called sābirān is identical with male iron; both kinds are called natural iron, while steel on the other hand is not natural. These contradictory statements cannot be reconciled here. Chinese and Indian iron are particularly esteemed. The applications of iron and iron-rust in medicine and magic are fairly numerous and varied.

(R. Ruskā.)

**HADĪD** (A.), the lowest part, in astronomy, the perigee or the nearness to the earth of the sun, moon or a planet; its opposite, the apogee, or distance from the earth is usually expressed by the Persian word awfī [q. v., i. 517] which corresponds to the Sanskrit *teca* (height, highest point). These are the points in the eccentric orbit, i.e. the orbit in which the sun, or in the case of the moon and planets the centre of the epicycle, move, which are least or most distant from the earth, the termini of the Apis. In the later astronomers, al-Bārījāndī, al-Dijāhnīnī, etc., several varieties of hadīd and awfī are distinguished.

**Al-HADĪNA**, a small independent territory in South Arabia, north of the Wādi. It is one of the most interesting and most fertile territories in South Arabia. The products of the soil, which is artificially irrigated by canals from the Wādi ‘Abādān are khāwir (indigo), dhūra (a kind of maize) and dūkhān (millet). Al-Hadīna is inhabited by the tribe al-Khālīfa, which claims descent from the Hilāl [q. v.]. On the migration of the Hilāl they remained in South Arabia, whence their name Khaifa. They number about 1000 fighting men and are ruled by an ʿĀkil whose residence is in the little town of al-Līmābya. In case of war they serve under the banner of the Sultan of the Upper ʿAwwālīk [q. v., i. 514] in Niṣābūr. **Bibliography:** H. v. Maltzan, *Reise nach Sudarabien*, p. 248; Comte de Lamberg, *Arabica*, iv. p. 57—60.

(J. Schäfer.)

**Al-HADĪRA** (al-Iwawādira), a surname of the pre-Islamic poet Kūba b. Abī Al an tribe of the Thulāba (ţaţafān). He is said to have flourished about 600 A. D.; Hassān b. Thābit knew some of his verses. He exchanged lances (hījād) on several occasions with the poet Zabbān b. Sāyiyr al-Fāzāzī, who on one occasion had treated him very contemptuously. His epithet is said to be taken from a verse of the latter's in which his form was compared with that of a frog. It is also related of him that he took part in a battle between his tribe and the B. ʿAmīr.

His poems, that have survived, are very few in number; he probably composed very little altogether; it is said that he was muqīl. One of his ḥażāda's has been incorporated in the Musafidātīyāt (ed. Abū Bakr b. ʿUmār Ījāhstāni al-Madāni, Cairo, 1324, i. 1, 10—12 = Engelmann's edition, p. 5 et seq.). His Ḥawān is collected and annotated by the philologist Abī ʿAbd Allāh Muḥammad b. al-Abāhāb al-Yazīdī (died 310 A. H.). **Bibliography:** Agānī, liii., 81—84; W. H. Engelmann, *Specimen literarium exhibens al-Hadīrac Divānum*, Leiden Diss., 1878; Broeckelmann, *Gesch. d. arab. Lit.*, i. 26.

(C. van Arendonk.)

**HADĪTH** (A.). Tradition. The word hadīth means primarily a communication or narrative in general whether religious or profane, then it has the particular meaning of a record of actions or sayings of the Prophet and his companions. In the latter sense the whole body of the sacred Tradition of the Muhammadans is called "the Hadīth" and its science "ilm al-Hadīth.

1. **Subject-matter and Character of Hadīth.** Even among the heathen Arabs (see I. Goldziher, *Muhammad*, Stud. i. 41, note 8) it was considered a virtue to follow the "sunna" of one's forefathers (sunna is properly the way one is accustomed to go, i.e. use and wont, ancient tradition). But in Islam the sunna could no longer consist in following the customs and usages of heathen ancestors. The Muslim community had to hold up a new sunna. Every believer had now to take the conduct of the Prophet and his companions as a model for himself in all the affairs of life and every endeavour was made to preserve information regarding it.

At first the Șāhībī's (i.e. people who had lived in the society of the Prophet) were the best authority for a knowledge of the sunna of Muhammad. They had themselves listened to the Prophet and witnessed his actions with their own eyes. Later the Muslims had to be content with the communications of the Tābīʿīn (i.e. "successors", people of the first generation after Muhammad), who had received their information from the Șāhībī's and then, in following generations, with the accounts of the so-called "successors of the successors" (Tābīʿīn al-Tābīʿīn i.e. people of the second generation after Muhammad, who had mixed with the successors), and so on.
The traditions retained the form of personal statements for several generations; every perfect ḥadīth therefore consists of two parts. The first contains the names of the persons who have handed on the substance of the tradition to one another; this part is called the isnād (or also sanad) i.e. the “support” of the Prophet in the trustworthy of the statement. He who communicates the tradition (A) says “I have heard from B (or “B has told me’) on the authority of C”, and so on, whereupon the whole chain of transmission should follow, beginning with A, the last authority, and ending with the original authority. The second part is the matn or text, the real substance of the report. For details see Goldzibter, op. cit. ii. 6—8.

After Muhammad’s death the original religious ideas and usages which had prevailed in the oldest community could not remain permanently unaltered. A new period of development set in. The learned began systematically to develop the doctrine of duties and dogmatics in accordance with the new conditions. After the great conquests Islam covered an enormous area. New ideas and institutions were borrowed from the peoples conquered, and not only Christianity and Judaism, but Hellenism, Zoroastrianism and Buddhism also influenced the life and thought of the Muslims of the day in many respects. Nevertheless the principle was steadfastly adhered to, that in Islam only the sunna of the Prophet and the oldest Muslim community could be a rule of conduct for believers. This of necessity soon led to deliberate forgery of Tradition. The transmitters brought the words and actions of the Prophet into agreement with the views of the later period. Thus numerous interested traditions were put into circulation, in which Muhammad was made to say or do something, which was at that time considered the proper view. Christian texts, sayings from the Apostles and the Apocrypha, Jewish views, doctrines of Greek philosophers, etc. which had found favour in certain Muslim circles, appear in the Ḥadīth simply as sayings of Muhammad (Goldzibter, Neutestamentliche Elemente in der Traditionsliteratur des Islam in Oriens Christianus, 1902, p. 390 et seq.).

No scruples were felt in making the Prophet expand in this form the legends or stories, only briefly outlined in the Korān, or proclaim new doctrines and dogmas, etc. A very large portion of these sayings ascribed to the Prophet deals with the Ahkām (legal provisions), religious obligations, ḥalāl and haram (i.e. what is “allowed” and “forbidden”), with ritual purity, laws regarding food, criminal and civil law and also with courtesy and good manners; further they deal with dogma, retribution at the last judgment, Hell and Paradise, angels, creation, revelation, the earlier prophets, and in a word with everything that concerns the relations between God and man; many traditions also contain edifying sayings and moral teachings in the name of the Prophet.

In course of time the records of Muhammad’s words and deeds increased more and more in number and copiousness. In the early centuries after Muhammad’s death there reigned great diversity of opinion in the Muslim community on many questions of the most diverse nature. Each party therefore endeavoured to support its views as far as possible on sayings and decisions of the Prophet. He who could base his view on these was certainly right and thus arose the numerous utterly contradictory traditions on the sunna of the Prophet. In the great partisan struggles also, both sides used to make an appeal to Muhammad (Goldzibter, Muhamm. Stud. ii. 88 et seq.). Thus for example the Prophet was said to have pronounced the founds of the Abbāsids. In general not only the course of later political events and religious movements but also the new social conditions, that only first arose out of the great conquests (the increasing luxury etc.), were made to have been prophesied in apocalyptic-prophetic form to justify them in the eyes of the community. A special branch of these prophetic traditions is formed by the sayings ascribed to Muhammad regarding the merits of various places and districts in the lands which were only at a later period to be conquered by the Muslims. (Goldzibter, op. cit., ii. 128 et seq.).

The majority of traditions then cannot be regarded as really reliable historical accounts of the sunna of the Prophet. On the contrary, they express opinions which had come to be held in authoritative circles in the early centuries after Muhammad’s death and were only then ascribed to the Prophet. Scholarship is deeply indebted to L. Goldzibter (see his Muhamm. Stud., Halle 1890 and other works) and C. Snouck Hurgronje (cf. among other works his treatise Le Droit Musulman in the Revue de l’histoire des Religions, xxxvii. 6 et seq.) for having first clearly demonstrated the true character and historical importance of the Ḥadīth in this respect.

Although the invention and wanton dissemination of false traditions was condemned by Muslims, alleviating elements were recognised in certain circumstances, particularly when it was a question of edifying sayings and moral teachings in the name of the Prophet. For details see Goldzibter, op. cit., ii. 131 et seq., 152 et seq.; do., in the Zeitschr. der Deutsch. Morgenl. Gesellschaft, Ixi. 860 et seq.)

The Ḥadīth is held in great reverence next to the Korān throughout the whole Muhammadan world and the scruples which were originally raised in certain circles against the dissemination and recording in writing of Muhammad’s words (cf. Goldzibter, Klänge um die Stellung des Ḥadīth im Islam in the Zeitschr. der Deutsch. Morgenl. Gesellschaft, Ixi., 860 et seq.), were soon overcome. In some cases it is even believed that the actual “word of God” is to be found in the Ḥadīth as well as in the Korān. Such traditions, usually beginning with the words “God said” are designated Ḥadīth kudsi (or also Ḥālā, i.e. “holy” or “divine” Ḥadīth) by Muslim scholars in opposition to the ordinary Ḥadīth nahawi (Ḥadīth of the Prophet). A list of such holy traditions is given in the Leiden MS, n. 1526 (Catal. Cod. Ori. iv. 98).

II. Muslim criticism of Tradition. According to the Muslim view, a tradition can only be considered credible when its isnād forms an unbroken series of reliable authorities. The critical investigation of isnād has caused the Muslim scholars to make thorough researches. They endeavoured not only to ascertain the names and circumstances of the authorities (ridāj) in order to investigate when and where they lived, and which of them had been personally acquainted with the other, but also to test their reliability, truthfulness and accuracy in transmitting the texts, to
make certain which of them were "reliable" (ṣaḥīḥ). This criticism of the authorities was called al-
dжарк по ʿl-ḥaddī (wounding and authentication). (Goldziher, Mehmud, Stud. ii, 145 et seq.) The so-called "knowledge of the men" (mārifat al-
ridāj) was considered indispensable for every student of Ḥadīth; all the commentators on the
collections of Tradition therefore contain more or less copious details concerning the authorities.
Special works are also devoted to this subject, among them many of the so-called Ṭabaqāt works
(i.e. biographies arranged in "classes" of various scholars, transmitters of Tradition and other per-
Gesellschaft, xxiii, 593—614), for example the famous "class book" of Ibn Saʿd (died 230 = 844)
and the Ṭabaqāt al-Hufayl of al-Dhahabi (died 748 = 1347). To this class also belong the works
on those "weak" in transmitting, e.g. Nasāʾī's Kitāb al-Duʿāfāʾ (Goldziher, ii, 144 et seq.) and
the biographies of the Ṣaḥābā's, e.g. al-ʿIṣābā fī inayāt al-Ṣaḥāba of Ibn Ḥadjar (died 852 = 1448)
and Usd al-Ḡirba fī Maʿrifat al-Ṣaḥāba of Ibn al-ʿAthār (died 630 = 1232).

Now opinions on the reliability of the authorities might differ very considerably. The same person,
whose communications might be implicitly trusted in the view of one party, was sometimes considered
by others exceedingly "weak" in transmission or even as a liar. Originally even the authority of many
highly respected contemporaries of Muḥam-
mad was not generally recognised; for example the truthfulness of Abū Hurairah was hotly disputed by
very many. The verdict usually differed with the standpoint of the party, and this often gave rise
to bitter quarrels. We must, however, remember in this connection that the substance of the trans-
mittted statements was really always the main thing. If the truthfulness of the authorities was disputed,
it was in reality almost always the bias of their substance that aroused opposition. The ultimate
decision then rested not on the reputation of the authorities but rather on the substance of the
accounts transmitted by them.

But at a later period, after the ritual, dogma and the most important political and social insti-
tutions had taken definite shape in the second
and third centuries, there arose a certain communis opinis regarding the reliability of most trans-
mitters of Tradition and the value of their state-
ments. All the main principles of doctrine had already been established in the writings of Mālik
b. Anas, al-Ṣaḥābī and other scholars, regarded as authoritative in different circles, and mainly on
the authority of traditional sayings of Muḥam-
mad. In the long run no one dared to doubt the truth of these traditions; nor was it any longer possible
to regard men like Abū Hurairah, who had put
these accounts into circulation, as liars. Even tradi-
tions which contained the most obvious ana-
chronisms were generally considered reliable. Only
such traditions were rejected as could not be brought into agreement with what had been long regarded
by the majority as well established. But on the
whole the inclination was to give credence to
such traditions also, at least when it was possible
to explain them in a conciliatory spirit. The old
quarrels had now in course of time lost all prac-
tical interest for the younger generations and it
was found that the majority of the traditions con-
nected with them, although sharply opposed to
one another, could very often be reconciled to
one another by skilful interpretation of the con-
texts. The rejection of a tradition thus came to
be considered an extreme measure, only to be
resorted to in desperation (cf. Snouck Hurgronje,
op. cit.); the many contradictory traditions on
the same subject, which have been adopted side by
side as reliable in the great collections of Tradition
thus often form priceless evidence to the historian
of the internal development of Islam. The tradi-
tions were not, however, all considered of equal
value by Muslim scholars, but divided into cate-
gories distinguished by definite technical terms
according to the completeness of their isnaʿād's,
the reliability of their transmitters.

III. The classification of Tradition.
a. In the first place the three following categories are distinguished: 1. ṣaḥīḥ (sound); this name is
given to the utterly faultless tradition in whose
isnaʿād there is no ṣulḥ (weakness) and whose ten-
dency does not contradict any generally prevalent belief; 2. If a tradition is not absolutely faultless,
e.g. because its isnaʿād is not quite complete, or
because there is no perfect agreement regarding
the reliability of the authorities for it, it is called ḥasan (beautiful); 3. On the other hand every tradition is considered weak (weak), against which serious doubts can be raised, e.g. by reason of its contents or because one or more of its trans-
mitters is considered unreliable or not quite or-thodox.
b. Further it may happen that the value of a statement is uncertain because some remarks by a
transmitter have been interpolated among the words of the Prophet and it is impossible accurately
to separate these two components of the text; such a tradition is called muḥāṣṣa. — If a tradition is
transmitted by only one informant, whose authority
besides is considered weak, it is called muṭāḥāk
("abandoned", "no longer considered"). — If a tradition is considered absolutely false, it is called
muḥāṣṣa ("invented").
c. All traditions do not deal with sayings or doings of the Prophet; we also find in the Ḥadīth
information regarding the Ṣaḥābī's and Successors.
In this connection a distinction is made between:
1. muṣafī a tradition which contains a statement
about the Prophet; 2. muḥāṣṣa, a tradition that
refers only to sayings or doings of the Ṣaḥābī's;
3. muṭāḥāk, a tradition which does not at most go
farther back than the first generation after Mu-
ḥammad and deals only with sayings or doings of the Ṭābiʿūn.

d. The following distinctions are made according to
the completeness of the isnaʿād. If a tradition can
be traced through an unbroken chain of trust-
worthy authorities to a companion of the Prophet,
it is usually called muṣtaʿd ("supported"). If it
also contains special observations regarding all
the authorities (e.g. if it is expressly mentioned
that all the authorities swore an oath as they
handed on the tradition, or that they all gave
one another the hand), the tradition is called
muṣnaʿāl (in the first case muṣnaʿāl al-ḥāl in the
second muṣnaʿāl al-yad, etc.). Cf. W. Ahlwardt,
Katal. der Arab. HSS. der Kgl. Bibliothek zu
Berlin, ii, 267—273.

If the isnaʿād, although complete, is comparatively
very short because the last authority only received
the statement from the original authority through
the intermediary of few persons, the tradition is called ʿahhā. This is considered a great advantage, because the possibility that errors have crept into the tradition is very small in this case. On long-lived transmitters of tradition cf. Goldziher, op. cit., ii. 170, 174.

If the chain of transmitters is unbroken and complete, it is called mutaṣṣil, in the opposite case manṣūf (in the general sense), but as a rule manṣūf (in the particular sense) means a tradition in whose isnād the authority in the second generation (the Tābīʿī) is wanting. — Murṣal is the name given to a tradition handed down by a Tābīʿī about the Prophet, when it is not known from what Ṣaḥābi he received his statement. The question whether such traditions are valid was answered in different ways; the older teachers such as Abū Ḥanīfa and Mālik b. Anas answered in the affirmative but the later ones in the negative (cf. among others, Zeit schrift. der Deutsch. Morgenl. Gesellschaft, xxi. 595 note 3). — If two or more transmitters are lacking anywhere in the isnād (or, according to some other scholars, if they fail consecutively), the tradition is called muṣʿalā. If the authorities in the isnād are only connected by the preposition ʿan (e.g. A nav B, i.e. A from B), it is possible that they were not personally acquainted with one another, but only heard the statement through the intermediary of other persons not mentioned in the isnād. In this case the tradition is called muwaʿṣam (for further information cf. Goldziher, Muharr. Stud., ii. 248). — Muḥāzam is the name of a tradition in which one of the authorities is only indicated in the isnād as ʿalā islam ʿan muḥāzam of his name.

e. The following categories are distinguished according to the gurūk (*ways* i.e. according to the different chains of transmitters): 1. mutawātir is a communication handed down on many sides, which was generally known from very early times and to which objections have never been raised; 2. muğhif is a statement, which is handed down by at least three different reliable authorities, or, according to another view, a statement which, although widely disseminated later, was originally only transmitted by one person in the first generation; 3. aziz is the name of a statement which is transmitted by at least two persons and was not so generally disseminated as those traditions which are called muwatāṣir or muṣʿalā; 4. šāhād are traditions given by only one authority; 5. gharīb is in general a rare tradition; with reference to the isnād, gharīb muṣʿalā means a tradition, which is transmitted in the second generation only by one Tābīʿī (cf. also Fard, ii. 612 and Gharīb, ii. 1453); if a tradition is transmitted by only one definite person of later generations, it is called gharīb "in reference to that person" (gharīb bi l-nimāt i-lā ṣāḥibin muṣʿalā-in). A tradition which contains foreign or rare expressions in the text is also called gharīb (with reference to the contents).

These technical terms were not originally understood in the same sense by all Muslim scholars. For example it is expressly mentioned that the Imām al-Ṣaḥābi made no distinction between muṣʿalā and manṣūf; in later works also there is no absolute agreement concerning all these definitions. For details see F. Riesch, Kommentar des Ṣaḥīḥ al-Dīn Abū ʿAbd Allāh über die Kunst der Übersetzungen. Leipzig dissertation 1895; cf. Dürrejahn, Kitāb al-Farṣīf (ed. G. Flagel) and: A Dictionary of Technical Terms (ed. A. Sprenger and others).

The division of traditions into different categories is also discussed in the general introductory works on the principles of ʿIlm al-Risāla (i.e. science of transmission). Such introductory works are amongst others the three following: 1. Tūn al-Ḥadīth of Ibn al-Ṣaḥābi (died 643 = 1245); cf. Goldziher, op. cit., ii. 187 et seq.; Brockelmann, Geschichte der Arab. Litt., i. 359; 2. al-Tābiʿī wa l-Tayyir of al-Nawawī (died 976 = 1277), with its commentary the Tābiʿī al-Rawi of al-Suyūṭī (died 911 = 1505; 3. Nihāyat al-Fikr of Ḥasan Ḥadīth (died 852 = 1448) by the author himself, published by N. Lees in the Bibli. Indica, N. S. 37 of the second series, Calcutta 1862.

IV. The Collections of Tradition. Numerous collections of traditions have been prepared by different scholars. Some of these works have obtained almost canonical standing among later Muslims. An official codification of Tradition, which would be exclusively valid, has however never been made.

At the time it was not possible to arrange according to their contents but only according to their transmitters (ʿalā islam ʿan). Such a collection was called muṣnad after the traditions with complete isnād incorporated in it. This name was thus transferred from the single tradition to the whole collection. The best known of these works is the Muṣnad of Abū ʿAbd Allāh b. Ḥanbal (died 241 = 855). For further details on this collection see Goldziher, Neue Materialien zur Lutheratur der Überlieferungs- wesens bei den Muhammedanern in Zeitschrift. der Deutsch. Morgenl. Gesellschaft, L. 465—506.

Such muṣnad were also formed at a later period; some scholars, for example, arranged the traditions contained in the great collections for greater convenience in alphabetical order, others incorporated the traditions which were mentioned in the Muṣnad of Mālik b. Anas or other similar works not planned as proper collections of Tradition in separate collections etc. (see Goldziher, Muharr. Stud., ii. 227).

But as a rule the later collections of tradition were almost all arranged according to the content of the traditions. Such a collection arranged "according to chapters" (ʿalā islam Ṣaḥāba) or muṣnad maṣnaʿ (i.e. arranged). Six of these Muṣnad works were in course of time generally recognised by the orthodox Muslim world as authoritative; they all arose in the third century A. H.; they are the collections by 1. al-Bukhārī (died 256 = 870), 2. Muslim, (died 261 = 875), 3. Abū Dāwūd (died 275 = 888), 4. al-Tirmīzhī (died 279 = 892), 5. al-Nasāʿī (died 302 = 915) and 6. Ibn Mādhā (died 273 = 886). These works are usually called briefly the six books (al-Kutub al-ṣittah or also the six Ṣaḥābi) i.e. the "sound" (i.e. the correct, reliable collections). They were, so to speak, looked upon as sacred books of second rank next to the Kurān, God's own word. The collections by al-Bukhārī and Muslim were held in particularly high esteem. They are known as the two ʿaṣaḥāb (or ʿaṣaḥāb) i.e. the two collections particularly recognised as authoritative. Only traditions which are recognised as absolutely ʿaṣāb are included in these works. In this respect, however, the ṣawāṣ (i.e. the "stipulations") of Bukhārī were not the same as those of Muslim (Goldziher, op. cit., ii.,
Al-Bukhari has besides often added fairly copious notes to the headings of his chapters, which are quite lacking in Muslim's Sahih. Both trace the traditions where possible to different ṭurāḥ and both collections contain not only traditions according to "permitted" and "forbidden", but also many historical, ethical and dogmatic traditions (for details, see Goldziher, op. cit., ii, 234–248).

On the other hand the traditions included in the works of the four other compilers deal almost exclusively with the sunna's, i.e. use and wont. Hence their collections are usually put together as "the four sunna's works". They further contain not only the traditions which are considered sahih, but also the "beautiful" ones and in general all traditions on which the learned have relied in their deduction of the law even if doubts can be raised against their isnād. When the collectors think that one of the traditions given by them should be rejected they usually call the reader's attention to the fact. Cf. Goldziher, op. cit., ii, 248 et seq.

The prestige enjoyed by these six books in Islam is readily explained. In the third century circumstances were peculiarly favourable for the work of the collector of traditions. A certain unanimity had been attained on all questions of law and doctrine and a definite opinion regarding the value of most traditions had been formed by the majority of Muslim scholars. It was thus now possible to proceed to collect all that was recognised as reliable. The merit of al-Bukhari and the compilers of the other Sahih's therefore lay not so much in the fact that (as is often wrongly stated) they decided for the first time which of the numerous traditions in circulation were genuine and which false, — for the personal opinion of the compilers would have had scarcely any appreciable influence on the prevailing opinion — but rather in the fact that they brought together everything that was recognised as genuine in ortho-doxy circles in their time. (Cf. Snouck Hurgronje, loc. cit., 187.)

Although other famous collections arose in the third century, e.g. the Sunan of 'Abd Allāh al-Dārimi (died 855 = 868), these works were never permanently able to attain such great prestige in the Muslim world as the six Sahih's. Even the general recognition of the latter works themselves was only attained very gradually; Ibn Mādiya's collection in particular was for long viewed with suspicion on account of the many "weak" traditions in it. Besides, in spite of the great authority of the "six books"; it was not considered improper to criticise these traditions, which, although included in the great collections, were not universally recognised as sahih. 'Ali al-Dāraqūṭni (died 835 = 995) for example compiled a work in which he proved the weakness of 200 traditions given in al-Bukhari and Muslim (cf. Goldziher, op. cit., ii, 257).

Even at a later period new collections were made by many scholars. The work of these late collectors of tradition was limited chiefly, however, to the preparation of more or less comprehensive compilations in which they excerpted the contents of the "six books" (and sometimes at the same time of other famous collections like that of Ibn Ḥanbal) and arranged them in different ways. One of these is Baghawi's (died 510 = 1116) collection called Maqābiḥ al-Sunnah (i.e. the lamps of the Sunna), which, on account of its fullness and convenience, has always been popular among Muḥammads. It contains a selection of traditions which are taken from older collections with the isnād's omitted. The recension of this collection by Wādi al-Dīn al-Tibāri is particularly well-known; it bears the title al-Muḳhtār al-Maqābiḥ (the name is taken from Qur'ān xxiv. 35 and is usually interpreted the "niches of the lamps"). Among large collections of the later period we may mention al-Suyūṭī's (died 911 = 1505) two works entitled Liṣān al-Ḍawwālī and al-Iṣām al-ṣaḥīḥ. Suyūṭī's main object was to give a comprehensive compendium of extant collections (for details see W. Ahlwardt, Katalog der Arab. HSS. der Kgl. Bibliothek zu Berlin, ii, 155 et seq.). Other compilers confined themselves to a definite section of the traditions contained in the larger collections (e.g. to the "moral"), or to a definite number of important traditions. Thus arose, for example the numerous so-called "Arba'in" works (i.e. collections which contain 40 important traditions).

As the substance of the Ḥadīth was in many respects no longer intelligible to the later generation of believers, many scholars felt compelled to prepare commentaries on the collections of Tradition. Obsolete words and expressions required explanation; in particular many contradictions had to be explained, or rendered harmless by artificial "explanation". Most commentators further dealt with the prescriptions to be deduced from the traditions and the divergent opinions which had been championed by different scholars in this connexion. Among the best known copious commentaries we may mention those of Ibn Ḥadjar (died 522 = 1488) and al-Kaṣālānī (died 932 = 1527) on the Sahih of al-Bukhari and of al-Nawawi (died 676 = 1277) on the Sahih of Muslim (cf. C. Brockelmann, Gesch. der Arab. Litt., i, 156 et seq.).

The Shi'a judged Ḥadīth from their own standpoint and only considered such traditions reliable as were based on the authority of 'Ali and his adherents. They have therefore their own works on this subject and hold the following collections in particularly high esteem: 1. al-Kaṣīf of Muḥammad b. Ya'kūb al-Kulaini (died 328 = 939); 2. Man la yastaḥdirulu la-ḥabībī of Muḥammad b. 'Ali b. Bābūya al-Ḳamīmi (died 381 = 991); 3. Tahâfut al-Ahkâm and 4. al-Isâqābānî's famous 'Agāḥaṭa fihi 'l-Ahkâḥ (extract from the preceding) of Muḥammad al-Ṭāwi (died 459 = 1067); and 5. Nahj al-Balāqah (alleged sayings of 'Alī) of 'Ali b. Ṭahir al-Sharīf al-Muṭarja (died 436 = 1044) or his brother Râfî al-Dīn al-Baghdādī; cf. C. Brockelmann, Gesch. der Arab. Litt., i, 157, 404 et seq.; S. Schütz, The Intellectual History of Islam, London 1880, p. 69, note 2; Goldziher, op. cit., ii, 148, note 4; do., Beitrag zur Literaturgesch. der Schī'a in Sitz.-Ber. Wiener Akad., Phil.-Hist. Clr., lxxviii. (1874), p. 508.

V. The Transmission of Tradition. The general view of Muslims that a knowledge of sacred learning could only be obtained through oral instruction from a teacher, who had himself acquired his knowledge in this way (cf. C. Snouck Hurgronje in the Zeitshr. der Deutsch. Morgenl. Gesellschaft, l. 145), was from ancient times held to be particularly applicable to Tradition. The traditions had to be "heard" and students even used to take long journeys to attend the lectures of such
persons as were famous as reliable authorities (hamāla, i.e. properly "bearers") of Tradition. In many sayings of the Prophet, travel "fi talab al-ʿimā" (i.e. to search for knowledge) is recommended as work pleasing to God. For finding information regarding those talab journeys and their degeneration (how, for example, vain scholars prided themselves on having travelled through far distant lands to "hear" a few almost unknown traditions) see Goldzeder, op. cit., ii. 175–193.

In transmission, the traditions were delivered orally by the teacher. It was also very usual for one of the students to read out a copy while the others listened and the teacher when necessary improved what was read and gave explanatory notes. In this case also it was the custom to say of traditions learned in this way: N. N. (the teacher) told me (qabdathāni or ʿāghbaran only kānwāt or ʿalākhi, i.e. while the tradition was read in his presence). One who had heard traditions in this way under the direction of a teacher, could now in his turn again communicate them to others and often received from his teacher a so-called idgāza (i.e. sanction, permit, namely for further transmission of these traditions) for this purpose.

The old method of transmitting traditions, however, was not always held in respect. The copying and collation of written texts often became the main object and oral transmission fell quite into disuse. The traditions were then simply copied and permission was obtained to transmit them with the usual formula hadithāni (i.e. "N. N. told me"), just as if the contents had been acquired by direct oral intercourse from the teacher. For details of the idgāza custom and its degeneration in Jāfīm cf. Goldzieder, op. cit., ii. 188–193; A. Sprenger in the Zeitschr. der Deutsch. Morgenl. Gesellschaft, x. 9 et seq.; W. Ahlwardt, Katal. der arab. HSS. der kgl. Bibliothek zu Berlin, i. 54–95.

In certain circles the copying of traditions (biḥāṭat al-hadīth) was originally regarded as actually forbidden. Credence was only given to those traditions which had been preserved in the memories of reliable men and orally transmitted by them, but not to texts copied often without sufficient care or from unreliable records; cf. Ibn ʿAbd ʿĀsīkī's saying, "Strive eagerly to obtain traditions and get them from the men themselves, not from written records, lest they be affected by the disease of corruption of the text" (in Goldzieder, op. cit., ii. 200). Nevertheless, scholars, who utterly abstained from paper and books, are always quoted as the exceptions only, and the recording in writing of Tradition seems to have been the general custom even in the most ancient times. At the same time it could of course be acknowledged in this connexion that the writing only served to aid the memory and that the knowledge was really to be preserved "by heart" and not on the paper. For details on the writing down of Hadīth and the objections to it, see Goldzieder, op. cit., ii. 194–202; do. in the Zeitschr. der Deutsch. Morgenl. Gesellschaft, i. 475; 489; kān. 862; A. Sprenger, op. cit., x. 1 et seq.; do. in Journal of the Asiatic Society of Bengal, xxv. 303–329.

HADĪTHA (A.) = Newtown, the name of several cities. I. Hadīthat al-Mawṣīl, a town on the east bank of the Tigris. One farakh below the mouth of the upper (Great) Zab. Its ruins are still recognised in the mound of Tell al-Shārır. Various accounts of its origin are given. According to Ḥishām b. Al-Kalbī (in Ibn al-Makdisī, p. 129 and Ballādhī, ed., Bulaq, p. 340) Harthama b. ʿAfrājī, after making Mawṣīl the capital came to Hadīthah in the reign of ʿOmar b. al-Khaṭṭāb where he found a village with two churches in which he settled Arabs. That this story is authentic (it is also given in Yāṣīṭ, ii. 222) is confirmed by ʿĪbārī (i. 2807), according to whom in 24 Wālid spent some time in Hadīthah on his way back from Armenia. Ḥanża says that Hadīthah is the translation of the Persian Nokār. If it is not an invention of Shūṭābī's bias, the best explanation of the name would be that of ʿAbd ʿĀsīkī, viz., that inhabitants of the "Newtown" of Ankār Fairuzbahār migrated thither and transferred the name to their new abode. When Ḥanża and others ascribe the "foundation" of the town to the last Umayyad Marwān II. b. Muḥammad or Bar Bahlūl to his father Muḥammad b. Marwān I., these rulers may have built there but nevertheless the explanation of the name "Newtown" as "newer" than Mawṣīl is inventions (cf. Yāṣīṭ, ii. 22, Hoffmann, Syr. Akte des pers. Mürs., p. 178; E. Reitemeyer, Städtegründungen der Araber, p. 83). The town's period of greatest prosperity falls into the early ʿAbbāsid period when the Caliph Al-faḍlī stayed there before his mortal illness and when the rebel general Miṣṣ b. Bogha made it his headquarters in the reign of al-Muhtadī (Ṭabari, iii. 578, 1827). The population remained Christian. Mār Aḥāmāb was bishop of Hadīthah before he became Patriarch and Katholikos (837–850), (Budge, Thomas of Marqūa, ii. 103; Assemani, Bibl. Orient., i. i, p. 508 note 1.)

The town lay on the terraced east bank of the Tigris in the form of a semicircle. Its mosque lay close to the river and the buildings, with the exception of the mosque, were of brick. The tomb of ʿAbd Allah b. ʿOmar b. al-Khaṭṭāb was shown there but probably wrongly as he died in Medina (Muḥammad, p. 139, Marqūdī, p. 292). It is remarkable that Hadīthah is sometimes described as
the northern extremity of Sawād, which had a greater extent than the province of Ṣawrā (Yaḵūt, iii. 174; Dimidkī, p. 185). Elsewhere it is mentioned as a station on the postroad from Baghdaḏ to Mawšīl. The distances are as follows:

Baghdaḏ—Baradān . . . . . 4 farsakh
Baradān—Uḵbarā (now ʿUḵbarā). 5
ʿUḵbarā—Bāḥmāla (now Nuhār-ū Hamāla). 3
Bāḥmāla—Kāḍisīya (now Kāḍīsīya). 7
Kāḍisīya—Surr man raʾ (now Sīmarra). 3
Surr man raʾ—Djiġištā (opposite Takrīt, now al-Kaʿnaʾ). 7
Djiğištā—Sūdākānīya. 5
Sūdākānīya—Bāirimā (near al-Fatḥa, really 6 farsakh). 5
Bāirimā—Sīn (at the mouth of the Lower Zāb). 5
Sīn—Hadīṯa (1 farsakh below the mouth of the Upper Zāb, really 16–18 farsakh). 12
Hadīṯa—Banū Tamayān (?). 7
Banū Tamayān (?)—Mawšīl. 7

But when Ḥamd Allīh al-Mustawfī gives this itinerary in the xiiith century he is only copying older figures, no longer true of his time. This is clear from the fact that the Tigris has only occupied its modern bed between Sāmarrā and Baghdaḏ since the beginning of the xiiith century. Hadīṯa like many other places was already in ruins by that time. The invasion of the Tatars had made an end of it.

II. Hadīṯa al-Furāṭ, also called Hadīṯa al-Nūn (Lime-Newtown) on the Euphrates, south of ʿĀna in 34° 8' N. Lat. and 42° 26' East Long. (Greenw.), a nāhiya of the kāḏar of ʿĀna. The town itself is built on an island, only the caravan stations being on the western river bank. It has very much declined since 1910, when the reefs and dams in the river were blown up in order to make way for packet-boats which have never come; it had formerly 400 houses, 2 djāmā and 3 madḍjūl, 2 corn-mills, gardens with 1500 date palms (about 6000 in the whole nāḥiya). It was irrigated by great water wheels called nāṭara, which were put up at the rapids of the river. There are limestone quarries on the western side of the Euphrates valley which are of importance for future engineering works in the ʿArāḵ. There are three saints' tombs of the xiiith—xiiiith centuries there, from N. to S.; 1. Shaikh al-Hadīṯa (a certain Muḥammad b. Muṣṭ al-Kāḏim); 2. The Awlād Saiyid Aḥmad al-Kīfṣā; 3. a certain Nadjin al-Dīn, said to have been one of the occupants of Noah's ark. As to the history of the town, Yaḵūt (ii. 223), following Aḥmad Bad-Ḥayyā b. Djābiṛ, observes that it was taken even before ʿOmar's time in the government of Ammār b. Yāṣir. It had a strong castle on the island which was of importance as late as the Caliph al-Kāḏim's time (Marāṣīd, p. 292). According to al-Sharafī al-Saʿd al-Samānī the inhabitants were Christians.

The place is now a usual stopping-place on the Euphrates route from Baghdaḏ to Aleppo, which will probably soon fall into disuse after the completion of the Baghdaḏ railway and therefore deserves to be recorded, more particularly because several of its stations, which are also found in the ancient itineraries, are not marked in modern maps.

The following are the distances according to my itinerary:

Baghdaḏ—Nukta . . . . . 6 hours
Nukta—Fahadja . . . . . 6
Fahadja—Kāf al-Rumālī 10
Kāf al-Rumālī—Hit . . . . . 11
Hit—Baghdaḏ . . . . . 8½
Baghdaḏ—Hadīṯa . . . . . 8½
Hadīṯa—Fuḥaima . . . . . 6½
Fuḥaima—ʿĀna . . . . . 7
ʿĀna—Nuhīya . . . . . 7½
Nuhīya—al-Kāʾim . . . . . 9
al-Kaʾim—Alba Kamāl. 5½ (frontier of the wilāya)
Alba Kamāl—Ṣaḥāliya . . . . . 7
Ṣaḥāliya—Mayādīn . . . . . 10½
Mayādīn—Dāʾir al-Zawr. 9½
(cf. the Damascene edition of the Kūnānam-i Baghdaḏ, by Senior Lietn. Muzaffar Dīyār, 1314 H.)

The old itineraries are in part badly preserved as regards names and their order, but they are mostly corrected in de Goeje's editions.
on the death of the Prophet a man named Gharūr, a member of the royal family of Hira, raised the standard of revolt in Hadjar, but was overcome by al-'Ali. During the Karmaštān troubles Abū Sa‘id conquered the towns of Bahrain (cf. the article AL-DJANNAH), among them finally Hadjar, shortly before his death in 915-914. Abū Sa‘id’s son Abū Tahir made al-Ahsa’ (q.v. i. 207 et seq.) the capital of the land. It should be remembered that Hadjar (or with the article al- Hadjar) is very often used as the name of the land itself (instead of Bahrain).

Hadjar should not be confused with Hadjir, which appears as the name of several towns, including one in Yamāma inhabited by the descendants of ‘Ubaid b. Varūb’ (of the Banu Ḥamīfa, q.v.), cf. e.g. Nābihīa p. 98, Labid (ed. Huber) p. 303. Bibliography: Bakri, Geogr. Wörterbuch, ed. Wustenfeld, p. 827; Bibl. geogr. arab., ed. de Goeje, i. 154, 5; viii. 393 et seq.; Vāskī, ed. Wessels, i. 53; Hamdān, Djaïsra, ed. D. H. AL-HADJAR AL-ASWAD. [See AL-KÂRA.]

HADJAR AL-NAṢR (the eagle’s rock), a fortress in the Rif, in the land of the Ghomāra, built in 317 (929-930) by Ibrahim b. Muhammad Kāsim b. Idris II. The sons of Kāsim, called Gnuūnūn (Djimānūn) or Hannūn (so al-Bakri, ed. de Slane, p. 129) settled here. When Mūṣa b. al-‘Ayya had driven the Idrisids out of all their possessions in the Maghrib, he wished to besiege this fortress and destroy the survivors of the Idrisid family who had taken refuge in it; but he was dissuaded from doing so by the remonstrances of the most prominent men in the Maghrib. After Mūṣa b. al-‘Ayya’s fall, one of Gnuūnūn’s sons founded a kingdom with Hadjar al- Naṣr as capital under the suzerainty of the Umayyad Caliph of Cordoba. The Spanish sovereigns and the Fātimes disputed the suzerainty over it in turn, till the former finally succeeded in destroying all the petty kingdoms of the Idrisids. Hadjar al-Nāṣr was taken by Ghālib, the Umayyad general, and the last king, al-Jasam, taken prisoner to Spain. The decline of Hadjar al-Nāṣr dates from this time (369 = 975-976).

The fortress lay three days’ journey from Ceuta on the top of a steep cliff; it could only be reached by a very narrow way which only allowed access to one person at a time. The surrounding country was very fertile and covered with gardens (Ibn Ḥawkal, ed. de Goeje, p. 56; al-Idrīsī, Description de l’Afrique et de l’Espagne, ed. Doby and de Goeje, p. 96 of the text).

Its situation is not exactly known. An attempt has been made (by Beaumier) to identify it with Alhucemas, but without any real evidence. According to the statements collected by Moulières (Le Maroc inconnu, ii. 390-391, note), the ruins of the fortress still survive under the name “Hadji rat en-Nasour” in the district of Djunān Medjber (Djūnān Madjber) between al-Branes, ed-Dsoul (Tsoul) and Šanhdja on the summit of a very high cliff.

(RENÉ Basset.)

HADJAREN (HADJARIN), a town in Ḥadramīt on the ġebel of the same name, S.W. of Mesghed ‘Ali (q.v.) on the Wādī Dāwūn (Dūḏān) situated in extremely picturesque country. It is surrounded by extensive palmerous and reminds one of many mediaeval castles on the Rhône. As a centre of traffic between the coast and the interior of Ḥadramīt it is of importance. The houses of the town are built of bricks and are large but the streets are narrow and dirty. It belongs to the Kūʿaiti of Shiham (q.v.), who are represented in it by a member of their family, who bears the title nādiḥ and lives in a splendid palace on the summit of the hill. The town probably has about 1500 inhabitants. There are relics of the ancient Himyaritic period around Hadjarin, when the trade in frankincense still flourished in this district. Ruins of an ancient town, Raḏīt, with inscriptions are still to be seen about the valley.

Hadjarin is an old town, known even to Hamdān; al-Hadjarīn (al-Hadjaron, dual of Ḥadjar “town,” as he writes it), consisted in his time of two towns of Khashūn and Dammūn lying on opposite sides of the wāḍī; Khashūn was inhabited by the Saḍaf, Dammūn by the Kinda. At the foot of the fortified hill, on which Hadjarin lay, there were palmerous groves and fields with ḍhūra (a kind of maize) and ḍarr (a kind of corn or wheat), which were watered by a ḍhai coming from the top of the hill.

(J. SCHLEIFER.)

I. THE ISLAMIC HADJAJ.

a. The journey to Mecca. — According to the law every adult Muslim, of either sex, has to perform the Hadjaj at least once in the course of his life, provided he is able to do so (cf. Sūrat iii. 91). The fulfilment of the last proviso depends on various circumstances. Lunatics and slaves are exempted from the obligation; likewise women who have not a husband or a relative (ḥāḏa madre) to accompany them. The want of the necessary means of subsistence, the inability to provide beasts of burden, the precariousness of the journey are circumstances which relieve one of the obligation to perform the pilgrimage. The Ḡairī school further allows its followers to postpone the pilgrimage beyond the grave provided
a deputy is hired out of the estate of the deceased. This explains how the majority of Muslims die without ever having seen Mecca. Even among Caliphs and Sulṭāns many have remained at home all their lives while others have made the pilgrimage several times; even some, who were not Muslims, have taken part in the Ḥajj; their works are invaluable sources for our knowledge of this subject.

Since Muhāammad instituted an absolute lunar year, the Ḥajj runs in time through all seasons as it is fixed for certain days in the first half of the month Dhu 'l-Hijjah. When it falls in summer the toils of the journey prove fatal to many a pilgrim. Muhāammad is therefore said to have said: “The pilgrimage is a sort of punishment” (Sūrat ībū Ma‘ṣūṣ, Bāb āl-Khurāṣṣa jīla ‘l-Ḥajj). Those pilgrims suffer most who have to come from their homes to Mecca by land either on foot or on horseback. The steamship traffic from Djiđda to other Muslim lands which was instituted specially for the Ḥajj, as well as the Hijāz railway has however considerably diminished their number. The pilgrimcaravans only survive out of religious conservatism. The following may be mentioned.

The Syrian caravan follows the ancient trade-route from Damascus (or Constantinople) through the trans-Jordan territory, the ancient Moabitis, via Māṣūr, Māda‘īn Ṣafīḥ and al-Medīna. It is the largest of the caravans (in 1876, according to C. M. Doughty’s estimate, it contained about 6000 persons) and is accompanied by a muḥāmat [q.v.]. Blockhouses are built at the stations where food is kept ready and facilities for refreshment provided. According to Burchardt (Travels, i. 3), the journey from Damasqua to al-Medīna takes 30 days.

The Egyptian caravan is likewise accompanied by a muḥāmat; in it is the new khawāṣ [q.v.] for the Ka’ba. According to Lane (Manners and Customs, London 1899, p. 493), it usually leaves Cairo in the last week of Shawwāl and reaches Mecca in 37 days, following the route along the sea-coast. (A favourite route for pilgrims from Egypt and the Maghrib used to be from Cairo or somewhere else in the north to one of the harbours on the Red Sea opposite Djiđda; cf. Ibn Djiḥāb’s journey and al-Batānī, al-Khāda al-ḥaqq al-ba‘aṣī, p. 493.)

A caravan from the ‘Irāq makes its way across Arabia. Burchardt, in Appendices I and II to his Travels, gives the stations of the caravan from Yemen as well as further geographical notes. Pilgrims from the Maghrib, Persia and Yemen, however, come for the most part by ship, not to speak of those from more distant lands.

The caravans are composed of the most diverse elements; princes, beggars, traders with their wares, Bedouins, travellers on foot and on horseback find their place there, which is usually settled by their place of origin, so that people from the same town travel together. Most pilgrims make an arrangement with a muḥbarawī who for a definite sum provides for all the necessities of the journey.

The danger of attack by Bezuins has always been an unpleasant feature of the pilgrimage; if the pilgrims submit to being plundered, they usually escape with their lives, but otherwise not always. The Meccan authorities have finally been forced to conclude agreements with the chiefs through whose lands the caravans come, whereby the pilgrims are allowed to travel freely. The authorities have to pay a fixed sum (called yurra q.v.) for this privilege. In the history of the Ḥajj there have been many other powers obstructing the pilgrims, e.g. the Karimans, the Egyptian authorities, pirates and the Wāḥhābiyān.

The arrival of the Syrian and Egyptian caravans with the two muḥāmatā is always a great event for the Meccans. Both are received with ceremony; they encamp on certain spots outside the town proper (see the plan of the town in C. Snouck Hurgronje, Mecca, i.); as a rule they arrive only a few days before the Ḥajj.

The number of the pilgrims who arrive via Djiđda are fairly well known, since the international sanitary commission has instituted a quarantine station there. As each pilgrim has to pay a certain sum for what professes to be hygienic control, but really is quite superficial, the number of persons arriving is accurately noted. We find that in recent years the number has varied from 36,000 to 108,000 and averages 70,000. If Burchardt could now accompany the pilgrimage again, he would not be able to repeat his observations (Travels, ii. 1) made in 1814 on the number of the pilgrims and the pious zeal of the Muslims.

Most pilgrims arrive shortly before the time of the Ḥajj; a considerable number, however, even spend the month of Ramaḍān of the year in Mecca, which is considered particularly meritorious. Many Ḥajjis also remain in Mecca after they have completed the Ḥajj, either to pursue sacred studies or to die in the holy city. The number of pilgrims is usually particularly large when it is expected that the principal day of the Ḥajj, the 9th Dhu ‘l-Ḥajj, will fall on a Friday (ḥudūd abār). It is further the custom that the Shi‘is also take part in the pilgrimage; but travellers report that the adherents of ‘Ali do not always have a peaceful time in the holy city. Interesting data on the Ḥajj of the Shi‘is are given in Kazem Zadeh, Relation d’un pèlerinage à la Mecque, in the Revue du Monde musulman, xix. 1912, p. 144 et seq. (has also appeared separately).

b. Arrival in Mecca. The holy ceremonies are performed in a state correspondingly holy, the law therefore recommends the pilgrim as soon as he sets out from home to assume the īṭrām [q.v.]. But as in most cases this is not convenient, they generally enter the holy condition when they approach the holy territory. One should enter Mecca as a muḥrin and then perform the ‘umra [q.v.]. Almost every pilgrim does this as well as the other sacred duties, accompanied by a guide (ṭawāk, dālī, muṭawwīf), who on each occasion pronounces the prescribed formula, which are then repeated by his protégés. These guides further do all sorts of business for the pilgrims who in their ignorance of the language, of local customs, etc., would be for the most part quite helpless without them.

When the sevenfold circumambulation (jauwāf, q.v.) of the Ka‘ba and the sevenfold running (ṣaw‘, q.v.) between Ṣa‘āra and Marwa has been performed the pilgrim may cut his hair and come out of the īṭrām, till the Ḥajj proper begins. But if the īṭrām has been assumed for ‘umra and Ḥajj (īṭrām), this is not allowed (on these and related questions cf. the article īṭrām).

c. The Ceremonies of the Ḥajj. On the 7th Dhu ‘l-Ḥajj there is usually preaching in
the mosque of the Ka’ba, by which the pilgrims are prepared for the holy ceremonies. In the evening of the same day or on the morning of the next, the pilgrims leave Mecca. The 8th is called yawm al-harirāya (“day of moistening”), because (according to an improbable explanation) on this day the pilgrims provide themselves with water, and the art of Muzdalifah. There is no mahu’mah, and the cupboards outside the town and lead the way; then follows the variegated seething mass of representatives of different races, on foot and in litter, on asses and horses, perpetually pushing and struggling. The plain of Arafat, where a halt is to be made (wukuf), is reached via Minâ (now usually pronounced Muna) and Muzdalifah (also called Djamsh and al-Ma鲨ar al-Harâm). Here the representative of the caliph used to plant a standard, whose place is now taken by the mahu’mah (see Amīr al-Hājij, i. 330).

The description of the thickly covered plain in modern travellers agrees in its main features with those of the old Arab annual markets in the classical authors. Tents and booths (see C. Snouck Hurgronje, Filders aus Mekka, No. 13–16, cf. also 10–12) are everywhere, in the latter the numerous traders expose their wares as in the bazaa; jugglers and fakirs entertain the crowd with their skill. Many pilgrims ascend the sacred mountain (Duṣtil al-Kabâha, see the illustration opposite and the article ‘Arafat, i.), and repeat the prescribed formulas after their shahīd at the proper places; loud cries of labbaika [q.v.] are heard everywhere. Thus the time is passed till the evening, at which brilliant illuminations take place. Pious pilgrims spend the night in the repetition of prayers, others amuse themselves in worldly fashion.

The wukuf proper takes place on the 9th and lasts from the time when the sun has crossed the meridian to its setting. Almost the whole period is filled by two khaññas, celebrated as a rule by the khāñ of the holy city. The latter rides up to the platform on the holy hill, from which he reads pious commonplaces out of a book, which are not audible to the greater part of those present, or, if heard, could not be understood by them. But this does not prevent them being much moved and continually calling labbaika loudly, waving the holy garments in the air and weeping and sobbing. But as soon as the sun disappears behind the western hills, the jīfâla (or disf, nofî) i.e. the running to Muzdalifah begins. Amid the greatest confusion as the horses are spurred on by the rushing crowd, amid continual shooting and din, accompanied by military music, everyone rushes to Muzdalifah. The alautān, which mark the boundary of the jīfâla [q.v.] are passed; the evening darkness soon falls and torches are kindled; firelocks are discharged and the soldiers keep lining off their guns. In this fashion, rarely without accidents, Muzdalifah is reached, where the Maghrib and Ṭaḥā añifâr are celebrated together and the night is spent. The mosque here is illuminated. On the morning of the 10th (yarum al-harâr) a sale is again held at the mosque before sunrise and the kâba of Mecca again preaches a khâfia. After the completion of the morning service the crowd goes to Minâ.

Here quite different duties have to be performed. Each pilgrim has on this day to throw seven small stones at one of the three so-called dzamìs here [q.v.], the Dümmar al-Aṣâba. For this purpose he has previously gathered the stones in Muzdalifah. Amid a tremendous crush a rush is made for this Djamn, which stands at the west end of the valley of Minâ. A picture of it is given in Kazem Zadeh, op. cit., opposite p. 222. Only the stoning of this Djamn is prescribed for this day in the law and the turn of the other Djamn’s day (‘Arafat) till the following day.

The accounts in ‘Ali Bey and Burton agree very well with this prescription. It should, however, be noted that Burckhardt (Travels, ii. 578) and Keane (Six Months in Meccah, p. 161) expressly state that the pilgrims on the 10th Dhu ‘l-Hijdijâ throw seven stones, which they have brought from Muzdalifah, first at the eastern Djamn (Djamrat al-‘alâ), al-ṣughârâ), then at the middle one (al-wustâ; see the picture) and finally at the western (al-ṣuñfâ, al-aṣâba, al-ṣa‘ibâ); perhaps however this is an error of the two last-named travellers.

According to the Muslim explanation, this stoning is really a stoning of Satan, who is said to have appeared here to the patriarch Ibrâhîm and to have been driven away by him in this fashion. After the stoning the crying of labbaika ceases and the hajjij proper is at an end; various ceremonies, however, have still to follow, first that of the sacrifice, which has given this day its name. Thousands of sacrificial victims, chiefly sheep and goats, are kept ready in Minâ by the Beduins and merchants and sold at high prices. Only people of high rank slaughter camels. The pilgrim, who does not dare to kill the animal himself, may get a butcher to do it for him. Although there is no place specially prescribed by the law in Minâ for the sacrifice, a rock at the west end of the valley near the Aṣâba is preferably used for this purpose (Burckhardt, Travels, ii. 59; Burton, A Pilgrimage, ii. 240). It is considered meritorious to give the flesh of the animals sacrificed to the poor as kazâkah; what they do not use is left lying. The sacrifice, which is celebrated on this day throughout the whole Muslim world, is suña (see the article Al-Ṭa‘âl al-Kabir). Its omission may be made good by fasting.

It is usual to have the head shaved after the sacrifice; for this purpose there are quite a number of taxi drivers’ booths in Minâ. Both the barber and the pilgrim observe certain rules during the process, such as turning towards the kibla etc. Thereafter the īfrâm may be discarded and a return made to a secular condition (īfâl); but the pilgrim is not yet allowed to transact all the business of everyday life. The series above described, stone-throwing, sacrifice, shaving, is described in the law as suña (Minâhâjji, i. 331); but it should be noted that there is no time legally prescribed for the sacrifice, and the two other ceremonies are only limited as to time in so far that they must be performed on the 10th day.

It is usual to return to Mecca on the same day to perform a wukuf there, on which occasion the ka‘ba is seen for the first time with its new covering. Ordinary garments are donned if this has not been done in Minâ already; the pilgrims bathes and washes, which is usually very desirable after being the previous “holy state”. It is usual also to drink from the holy Zamzam water or to have oneself sprinkled with it; but this may as well be done on any other day.

The following days 11–13th Dhu ‘l-Hijdijâ are called ajiyam al-labani (on the explanation
of this name see below) called by Muhammad "day of eating, drinking and sensual pleasure," are spent in Mina; the three Džamá’s have each to have seven stones thrown at them each day, after midday. It is also the custom to sacrifice at a granite block on the slope of mount Thālīb (cf. Burckhardt, Travels, ii, 85; al-Batānānī, al-
Ka‘ba, p. 669). Abraham is said to have prepared his son for the sacrifice here. The law itself (cf. Sūra ii. 199) permits departure from Mina even on the 12th Dhu ‘l-Hijjah. It seems from the works of the travellers that this permission is usually taken and the pilgrims return to Mecca on this day. It is the custom to throw stones at the alleged grave of Abū Lahab in the vicinity of the town. Finally the ‘umra al-wada‘ (fare-
well ‘umra) has to be performed. For this purpose the pilgrim goes to Ta‘im, again to assume the ibrā‘. Modern travellers thus often call Ta‘im also “al-‘umra.” With the performance of ibrā‘ and sa‘y the Ḥadjj is at an end. Some days later the caravans leave Mecca and go to Medina to honour the tomb of the prophet with a visit.

From what has been said above it is clear that the law divides the ceremonies of the Ḥadjj into various categories; but it should be noted that the various schools differ from one another in almost all details. A good survey is given in the table on p. 178 of al-Batānānī’s work.

II. THE ORIGIN OF THE ISLAMIC ḤAJJ.

Muhammad’s attitude to the Ḥadjj was not always the same; in his youth he must have often taken part in the ceremonies. After his “call” he paid little attention at first to the festival; in the oldest sūras it is not mentioned and it does not appear from other sources that he had adopted any definite attitude to this originally heathen custom. If many obviously polytheistic practices had been usual at it, he would hardly have been so silent about it and Tradition would probably have preserved expressions of opinion from which we could ascertain more clearly the attitude of the Prophet.

Muhammad’s interest in the Ḥadjj was first aroused in al-Medina. Several causes contributed to this, as Snouck Hurgronje has shown in his Mekkaanse Reis. The brilliant success of the battle of Badr had aroused in him thoughts of a conquest of Mecca. The preparations for such a step would naturally be more successful if the secular as well as the religious interests of his companions were aroused. Muhammad had been deceived in his expectations regarding the Jewish community in Medina and the disagreements with the Jews had made a religious breach with them inevitable. To this period belongs the origin of the doctrine of the religion of Abraham, the alleged original type of Judaism and Islam. The Ka‘ba now gradually advances into the centre of religious worship; the father of monotheism built it with his son Ismā‘il and it was to be a “place of assembly for mankind.” The ceremonies performed there are traced to the divine command (Sūra ii. 119 et seq.). In this period also the Ka‘ba was made a kibla (cf. Sūra ii. 136–145) and the Ḥadjj is called a duty of man to Allah (iii. 91). This is the position of affairs in the year 2 of the Hijra. It was only after the unsuccessful siege of al-Medina by the Meccans in the year 5 that Muhammad was able to attempt to carry out his plans. The first effort was made in the ex-pedition to Ḥudaybiya, which, although it did not bring him to Mecca, by the treaty with the Kurāish brought an ‘umra into prospect for next year. In the year 7 Muhammad instituted the ceremonies at the Ka‘ba; but it was only after the conquest of Mecca in 8 that the opportunity was afforded of publicly celebrating the festival. But he did not take advantage of this occasion himself; for in the year 9 he sent Abū Bakr in his stead as leader of the pilgrim caravan to Mecca. While the latter was on the way, he was overtaken by Ṣā‘īd b. Abī Tālib, who had been commissioned to read out to the pilgrims the Sūra ‘a‘ (Sūra ix. 1 et seq.) which had been revealed in the meanwhile; in these verses the performance of the pilgrimage was forbidden to unbelievers except those with whom the Prophet had made special treaties.

In the year 10 Muhammad himself led the Ḥadjj. Tradition has much to tell on the subject of this so-called farewell-pilgrimage (ḥadījat al-
Wada‘). These accounts of the ceremonies performed by Muhammad agree essentially with the later practice. The arrangements, which he made on this occasion, are of importance, however, for the history of the Ḥadjj, notably the abolition of the “intercalation” (māsī‘) and the introduction of the new lunar year which is mentioned in the Kūran with the words: *Verily the number of months with God is twelve months in God’s book, on the day when He created the heavens and the earth; of these four are sacred; that is the true religion. In these shall ye do no injustice to one another. But fight the unbelievers, as they fight you, one and all, and know that God is with the righteous. The intercalation is but an increase of the unbelief, in which the unbelievers err, for they make it (i.e. the time in which it falls or should fall) lawful one year and unlawful the next” (Sūra ix. 36 et seq.). On other ordinances of Muhammad on this occasion see below.

III. THE PRE-ISLAMIC ḤAJJ.

The investigation of the original meaning of the root Ḥ-D-J goes no further than hypotheses—some however probable. The Arabic lexicographers give the meaning “to betake oneself to;” this would agree with our “pilgrimage.” But this meaning is as clearly demonstrative as that of the Hebrew verb. Probably the root Ḥ-D-J, which in North as well as South Semitic languages means “to go around, to go in a circle,” is connected with it. With this we are not much further forward; for we do not even know whether religious circumambulations formed part of the original Ḥadjj. We do know that in the pre-Muslim period two annual markets were held in the month of Dhu ‘l-Ḥadīj by that of Dhu ‘l-Maddz and thence the people went direct to Ḥaḍramawt. The Muslim practice of going out from Mecca to Ḥaḍramawt is therefore probably an innovation; and Islam knows nothing of religious circumambulations in Ḥaḍramawt and we little.

This Ḥadjj in Ḥaḍramawt was not a local peculiarity; pilgrimage to a sanctuary is an old Semitic custom, which is prescribed even in the older parts of the Pentateuch as an indispensable duty. *Three times a year shall you celebrate for me a
three times a year all thy males shall appear before the Lord Jahwe" (ib., 17 and xxxiv. 22). But in Arabia also there were probably several places of pilgrimage where festivals like that of the Ḥadjdj of 'Arafāt were celebrated. The month of Agghatālahi mentioned by Epiphanius seems to presuppose a sanctuary in the north.

The Ḥadjdj of 'Arafāt took place on the 9th Dhu l-Hijjāja; the most diverse Arab tribes took part in it, but this was only possible when peace reigned in the land. The consecutive months Dhu l-Ka’dah, Dhu l-Hijjāja and Muharram thus formed a sacred period during which tribal feuds were at rest; weapons were laid aside in the holy territory.

It may be regarded as certain that in Muḥammad’s time the sacred festival fell in the spring. Wellhausen has, however, made it appear probable that the original time of the Ḥadjdj was the autumn. If, as is probable, the above mentioned intercalary month had for its object to maintain this time of the year, the intercalation did not affect its purpose: from what we do not know. If the Ḥadjdj originally fell in the autumn, it is natural, when inquiring into its original significance to compare it with the North Semitic autumnal festival, the "feast of booths" (or day of atonement), a proceeding which finds further support in the fact that the feast of booths in the Old Testament is often called briefly the ḥag (e.g. Judges, xxi. 19; 1 Kings, viii. 2, 65). We will actually find several features in agreement.

Great feasts were from early times associated with the Ḥadjdj which was celebrated on the conclusion of the date-harvest. These feasts were probably the main thing to Muḥammad’s contemporaries, as they still are to many Muslims. For the significance of the religious ceremonies had even then lost its meaning for the people. The following may be stated. A main part of the ceremony was the ṣawāf “the halt” in the plain of ‘Arafat; in Islam the Ḥadjdj without ṣawāf is invalid. This can only be explained as the survival of a pre-Muslim notion. Houtsma has compared the ṣawāf with the day of the Israelites on Mount Sinai. The latter had to prepare themselves for this by refraining from sexual intercourse (Exod. xix. 15) and the washing of their garments (Exod. xix. 10, 14). Thus they waited upon their God (אֶלָּלוּ, פַּעַם), in the same way the Muslims refrain from sexual intercourse, wear holy clothing and stand before the deity (_surface = _= _ _ stand) at the foot of a holy mountain.

On Sinai, the deity appeared as a thunder- and lightning-god. We know nothing of the god of ‘Arafat; but he probably existed. Muḥammad is related to have said at the farewell pilgrimage: "The whole of ‘Arafat is a place for standing (marawif), the whole of Muzdalifah is a place of standing, the whole of Miḥā a place of sacrifice". Snouck Hurgronje has explained these words to mean that the particular places there, where heathen ceremonies were performed, were to lose their importance through these words. A little is known of these heathen places in Muzdalifah and Miḥā (see below).

It is uncertain whether the day of ‘Arafat was a fast-day or not. In Tradition it is several times expressly stated that Muḥammad’s companions did not know what was his view on this question. He was therefore invited to drink and he drank. The ascetic character of the Ḥadjdj days is clear from the ḥrām prohibitions. That these were once extended to include food and drink is clear from Muḥammad’s explanation. "The Tashriḥ days (11th—13th Dhu l-Hijjāja) are days of eating, drinking and sensual pleasure". In early Islam ascetically disposed persons therefore chose the Ḥadjdj as the special time for their self-denials (cf. Goldscher in the Revue de l’Histoire des Religions, xxvii. 318, 320 et seq.).

The ṣawāf lasts in Islam from the moment after midday till sunset. Tradition records that Muḥammad ordered that ‘Arafat should not be left till after sunset, while it had previously been usual to begin the ḥṣāda even before sunset. But the Prophet is said not only to have shifted the time, but even to have suppressed the whole rite by forbidding the running to Muzdalifah and to have ordered that it should be slowly approached. But how tenacious the old custom is, is clear from the above description of the ḥṣāda. Snouck Hurgronje thinks that he sees a solar rite in the latter, a view which has been definitely formulated by Houtsma in connection with the character of the Ḥadjdj (see below), viz. that it was originally considered a persecution of the dying sun.

The god of Muzdalifah was Kuẓāḥ, the thunder-god. A fire was kindled on the sacred hill also called Kuẓāḥ. Here a halt was made and this ṣawāf has a still greater similarity to that on Sinai, as in both cases the thunder-god is revealed in fire. It may further be presumed that the traditional custom of making as much noise as possible and of shooting was originally a sympathetic charm to call forth the thunder.

As soon as the sun was visible, the ḥṣāda to Miḥā used to begin in pre-Islamic times. Muḥammad therefore ordained that this should begin before sunrise; here again we have the attempt to destroy a solar rite. In ancient times they are said to have sung during the ḥṣāda, asbī n ṣabī ‘ainā mukām ṣawāf. The explanation of these words is uncertain; it is sometimes translated: "Enter into the light of morning, Thabr, so that we may hasten".

When they arrived in Miḥā, it seems that the first thing they did was to sacrifice; the 10th Dhu l-Hijjāja is still called yarun al-ṣawāf, "day of the morning sacrifices". In ancient times the camels to be sacrificed were distinguished by special marks (taklid) even on the journey to the ḥārām; for example two sandals were hung around their necks. Mention is also made of the ḣibar, the custom of making an incision in the side of the hump of the camel and letting blood flow from it; or wounds were made in the animal's skin. It is frequently mentioned also that a special covering was laid on the animals.

According to a statement in Ibn Ḥisham (ed. Wustenfeld, p. 76 et seq.), the stone throwing only began after the sun had crossed the meridian. Houtsma has made it probable that thestoning was originally directed at the sun-deamon; important support is found for this view in the fact that the Ḥadjdj originally coincided with the autumnal equinox; similar customs are found all over the world at the beginning of the four seasons. With the expulsion of the sun-deamon, whose harsh rule comes to an end with summer, worship of the thunder-god who brings fertility and his-
HADJīDĪ — AL-HADJĪDĪ ʻOMAR.

201

vocation may easily be connected, as we have seen above at the festival in Muzhīlīm. The name tarwīya "moistening"; also may be explained in this connection as a sympathetic rain-charm, traces of which survive in the ligation of the body. These are again parallels to the feast of bohūts (or day of atonement): the goat, which was thrown from a cliff for ʻAzażel, is not difficult to identify as the type of the sun-demon; and the ligation of water from the holy well of Siloam was also a rain-charm, for the connection between the feast of booths and rain is expressly emphasised (Zach. xiv. 17). Further we may call attention to the illumination of the temple on the feast of booths, which has its counterpart in the illumination of the mosques in ʻArāf and Muzhīlīm, as well as the important part which music plays at both feasts.

Quite other explanations of the stone throwing are given by van Vloten (Foesthundel ... van Prof. M. J. de Goeje aangeboden, 1891, p. 33 et seq.) and Chauvin (Annales de l’Acad. Royale d’Arch. de Belgique, 5th Ser., Vol. iv. p. 272 et seq.). The former connects the stoning of Satan and the ʻArāfī expression al-Shàfiţān al-rādījm with a snake, which was indigenous to the ʻĀkāma. The latter finds in it an example of scopelism: the object of covering the Ḥadjīdī ground with stones thrown on it was to prevent the cultivation of it by the Meccans. But these theories have been satisfactorily refuted by Houtsma. Cf. also Dotté, Magie et Religion, p. 430 et seq. — On the significance of the shaving in connection with the history of religions, cf. the article ʻIrmām.

On the Ṭaqrīb days some of the pilgrims dry the flesh of the animals sacrificed in the sun to take it with them on the return journey. This custom agrees with the meaning of the word Ṭaqrīb, given by the Arab lexicographers, i.e. "to dry strips of meat in the sun"; but it may be doubted whether this is the original meaning of the word. A satisfactory explanation has not yet been given. Cf. however Th. W. Janssens, Über die Bedeutung des Wortes Taschirī (Zeitschr. f. Assyrische, xxvii. 1 et seq.). It must also be noted that Dozy in his book De Israelitischen te Mecca, traces the words taqrīb and tarwīya as well as the whole Ḥadjīdī to a Jewish origin; but his thesis may be considered definitely refuted by Snouck Hurgronje’s Het Mekkaanseche Feest.

On II: The biographies of Muḥammad and the works on Tradition.

HADJĪDĪ, Ḥadijīdī, one who has performed the pilgrimage to Mecca. [See AL-HADJĪDĪ.]

AL-HADJĪDĪ HAMMŪDA (b. ʻArūd ʻAZĀdī), an Arab historian of Tunis, accompanied ʻAlī b. Ḫusain into exile in Algiers, during the reign of ʻAlī b. Muḥammad (1740) and became his first secretary when this prince succeeded to power (1782–1799). He retained this office also under ʻAlī Bey’s son, Ḫaṃmādī Bey (1782–1814) who had been his pupil. He composed a history entitled ʻIṣāb al-Baṣāqā, in which he gives a brief survey of the history of the ʻAlīdī and of the Turkish governors of Tunis and many details of the reigns of ʻAlī Bey and Ḫusain b. ʻAlī. The text which is still unpublished exists in numerous copies in the Great Mosque of Tunis. A section dealing with the wars of Khair al-Dīn and of ʻArūdī was published by Houdas in his Christomathie Maghrībīne (Paris 1891), p. 14–96; another section dealing with the French expedition against Tunis in 1770 was translated by Rousseau (Algiers 1849) and a third dealing with Murād Bey’s campaign against Constantine by Cherbonneau (Journal Asiatique, July 1851).

(RENÉ BASSET.)

AL-HADJĪDĪ ʻOMAR, a religious fanatic and conqueror in the Sudan, founder of the Tucular kingdom (1797–1864). Born at Almor in Futū on Senegal, ʻOmar Saidā Tal began his theological studies under the direction of his father, a celebrated marabout, completed them in Wabata among the Moors of Tagant and made the pilgrimage to Mecca about 1820. He then stayed in the holy city he attached himself to Shāhīḥ Muḥammad al-Ghāfīḥ, a pupil of Ṭiḍāānī and entered the Ṭiḍāānī order. On his return to Africa he spent some time in Bornū and Sokoto and posed as a reformer of Islam there, showing himself particularly hostile to the members of the Kādirīya order, censuring them severely for their laxness and tolerance. He was kindly received by the sultāns of both kingdoms and was presented by them with wives and slaves; on the other hand on continuing his journey to Segū he was kept prisoner for a long time by the ruler of Bambara. He then went to Futu Djanon (q.v., ii. 120 et seq.), where he won the sympathies of the Dijallonke, who were striving to shake off the yoke of the Fuli (Falbe) and the Sorya faction. The zāwiya founded by him in Diegunko was much visited and he himself was soon recognised throughout the country as its spiritual leader.
From 1846 to 1848 al-Hādjī ʿ Omar undertook a missionary journey in the lands bordering on Futā and won a great number of the tribes dwelling within the curve of the Niger and on its southern tributaries and even on the Senegal over to this region. Built up by his continually growing influence, the Alfa ʿAmr advocated him to enter the land of Futā whereupon al-Hādjī ʿ Omar settled in Dingiray. Here he built a fortress, collected weapons and munitions and began to preach a holy war against the unbelievers. At this time he had at his disposal about 700 guns and a small body of men composed of his pilëbe (Arabic pilo° pilipt) and sofâ (stiblemen); the latter were young slaves, converts to Islam, who began their military training by looking after the horses of the warriors. This small body was continually increased by new converts who were attracted by the hope of booty.

In less than fifteen years al-Hādjī ʿ Omar was lord of an extensive territory. In 1849 he conquered the districts of Bure, Bamhik and Belidjiqué, then turned against the Massais of Kaarta and invaded their land on annihilating their forces. Their ruler Kandiya was forced to submit with the principal chiefs of his land after a vain resistance and in 1854 the capital Niror was occupied. The victor obliged the inhabitants of the land to adopt Islam, forbade them to keep more than four wives and divided the remainder among his soldiers. It was only after five years’ hard fighting, however, that Kaarta was completely subdued. Risings broke out in many places, while the Pūl of Massina besieged Niror. Al-Hādjī ʿ Omar had farther to defend himself from the attacks of the Moors and against ʿAmmādī, ʿUlama of Segu, and finally came into conflict with the French on the upper Senegal. The military station of Medine defended by Paul Hoff without aid from his attacks from the 20th April to the 18th July 1857, till his whole army was put to flight by Colonel Faidherbe.

When he had finally become undisputed lord of Kaarta, al-Hādjī ʿ Omar turned against the Bamhikas of Segu and the Pūl of Massina, whose rulers had formed an alliance against him. He occupied Sansanding, defeated the Allied forces of his opponents at Tio (January 1861) and entered the city of Segu on the 10th March 1861 and fortified it. After another victory over ʿAmmādī, ʿUlama of Segu, and Ali, ruler of Massina, ʿAlīdāli, the capital of Massina, fell into the hands of the Tuculors. ʿAmmādī was overthrown while fleeing across the Niger and slain, and ʿAmmādī Shaykhah, son of al-Hādjī ʿ Omar, appointed ruler of Segu.

Al-Hādjī ʿ Omar then undertook a campaign against Timbuktu, which he gave over to plunder. Soon afterwards, however, a general rebellion broke out in Massina, instigated by several Pūl chiefs, who were supported by ʿAmmādī Bekkai, chief of the Kunta. A second attack by al-Hādjī ʿ Omar on Timbuktu failed. Disturbing the rebellion, ʿAmmādī Shaykhah and other local chiefs in the south. The rebellion in Massina assumed still greater proportions. Besieged by the rebels in ʿAlīdāli, al-Hādjī ʿ Omar succeeded in escaping after eight months’ siege by setting the town on fire. Pursued by his enemies he fled into a cave where he committed suicide rather than fall into their hands alive. According to another story he was suffocated by them with smoke (Sept. 1864).

The kingdom founded by al-Hādjī ʿ Omar soon after his death broke up into the independent states of Segu, Kaarta and Massina. ʿAmmādī Shaykhah endeavoured in vain to regain his father’s heritage but was only successful in winning back Niror in 1885 and Massina in 1891. In 1890 the French occupied Segu and in 1891 they took Kaarta and in 1892 Massina.

(G. VERN.)

**HADJİĐI b. YUSUF, an Omanyad statesman, was born at Tarif about 41 = 661, the grandson of the Thabashi ʿAbd al-Malik. He was a poet, and a patron of the arts, and a patron of learning. He was a patron of the arts, and a patron of learning. He was a patron of the arts, and a patron of learning.**
bib [q. v.] Hadjdjidj had to call in the help of Syrian troops, as those of the 'Irak refused to act. Shabib thereupon seized upon the absence of Hadjdjidj in Basra to advance against Kufa. The viceroy only reached it a few hours before him and step by step he fought his way into the capital; after several days of fierce fighting Shabib had to vacate the field and being pursued by the 'Irak cavalry was drowned in crossing the Daudjail. In the same year (77-78 = 696) Hadjdjidj succeeded in putting down the rebellion of a provincial governor, Mu'tarrif, son of Mughira b. Sh'a'b.

He had just begun to recuperate a little after this heavy task when suddenly a rebellion broke out which was immeasurably more serious than all the earlier risings. It was fostered by the jealous aristocracy of the 'Irak and was directed not only against the viceroy but against the Umayyad dynasty; it was decided to separate the separatist movement against the preferential position of Syria in the Caliph's empire. After the overthrow and death of Shabib, the Syrian troops had remained in the country and were overwhelmed with tokens of Hadjdjidj's favour. The Kurr什 ("Koran reciters") made common cause with the political malcontents.

A leader for the dissatisfied arose in the person of 'Abd al-Rahman, a grandson of Abī 'Abdallāh b. Ka'b, [q. v., i. 56]. Sent by Hadjdjidj to Sijljatin at the head of 40,000 men, he rebelled against the viceroy, returned and soon had 100,000 men under him. With these he drove back the troops sent against him and captured the cities of Kufa and Basra. Hadjdjidj had once more to appeal to Syria. besieged in a suburb of Basra, he held out for a month against the onslaughts of the rebels. In the early days of March 710 he succeeded in inflicting a sanguinary defeat upon them, which was crowned by his victories at Dair al-Djamādi' and Masmik [q. v.]. The 'Irak was now utterly exhausted and lay at the feet of the powerful statesman; his tenacity had crushed the spirit of rebellion.

Thereupon (83-86) the tireless governor proceeded to found a new capital, Wāsi't [q. v.]. Situated almost halfway (whence its name!) between Kufa and Basra it was so to speak a detached camp of the Syrian troops garrisoning the country. From the year 78 he united to his governorship of the 'Irak that of Khorasan and the whole Arab east, a territory which had been considerably increased by the conquests of the famous general Muhallab [q. v.]. He finally incorporated 'Oman on the Arabian peninsula in the empire, which had hitherto been independent and his generals penetrated even into the valley of the Indus. Hadjdjidj prepared the way for the brilliant empire of Walid I by these extensions of territory abroad and the restoration of peace in the 'Irak. In spite of his autocratic rule he actively supported such important generals as Muhallab and Muslim b. Kutaiba. As a statesman his activities were not confined to reforms but were creative also. *His administrative regulations on the currency, measures and taxes and in the improvement of agriculture were epoch-making* (Wellhausen, p. 159). He has been reproached with corrupting the Koran. But his work was limited, it appears, to a critical revision and the introduction of orthographical signs which were to prevent incorrect readings in the recitation of the sacred text. He also endeavoured to use Arabic in place of the local dialects which had hitherto been in use in the chancellery of the 'Irak. After putting down the rebellions, it was his first care "to heal the wounds, which a twenty years' war had inflicted on the prosperity of the country" (Wellhausen, p. 157). He dug new canals and restored the old ones.

His fidelity to the Umayyads knew no bounds; the grotesque manifestations of it related of him are inventions of historians writing in the service of the 'Abbasids. The Marwānids rewarded it by their constant favour. Hadjdjidj has therefore also been numbered among the "sins of 'Abd al-Malik". His influence continued to increase under Walid I. Hadjdjidj had energetically supported the candidature of the young prince to the detriment of his uncle 'Abd al-'Aziz [q. v., i. 36], the successor designate of 'Abd al-Malik. Walid delighted in seeking the advice of his lieutenant; on his death he received official expressions of condolence as if a member of the ruling house had died. Matrimonial alliances further attached the family of the powerful governor to that of the Umayyads.

Hadjdjidj's eloquence has become celebrated. The histories and literary collections have preserved numerous specimens. He laid great weight on purity of language and aimed at a kind of Arabic Atticism. From the point of view of prosody, he insisted one as being a sincere Muslin. He protested however against the exaggerations of the extreme parties and against the disproportionate importance which even then was being accorded to Tradition. "In his life and in his death he showed a good conscience" (Wellhausen, p. 160). Did he deserve the reproach of cruelty? We read of 150,000 victims handed over to the executioner; at his death his prisons are said to have held 50,000 men and 30,000 women. Such enormous figures are their own refutation. In this period of political anarchy, of incessant risings, nothing authorises us to say that his repressive measures passed the limits of severity. *The kindness of men to good citizens, he showed himself pitiless to the rebellious* (al-Dhahabi). But even in these cases a frank confession or a show of spirit frequently sufficed to disarm in a moment, this officer of justice, who "dominated the majority of his contemporaries by the breadth of his intellectual outlook" (al-Dajā'ī). On the other hand his excessive vehemence rendered him liable to be impatient with his best friends (al-Mubarrad); his great general Muhallab in particular had to learn this. The whole character of Hadjdjidj betrayed a jealous tendency — he was the first to covet the power and to concentrate all authority in his own vigorous hands. It resulted in his "showing himself bursque, sometimes harsh, but never cruel, still less mean or narrow" (Wellhausen, p. 159). He has been often compared with Ziyād b. Abīhī, minister of the Umayyads, a Thāqafī like himself and his most famous predecessor in the 'Irak. His excess of vigour, his feverish nervousness and his crushing and provocative eloquence were not to Hadjdjidj's advantage. He lacked the smiling and somewhat sceptical spirit, which characterised the statesmen of the school of Mu'awiyah; whence arose complications, which a more pliant nature might have avoided.

If Hadjdjidj at the end of a long period of political anarchy applied himself to the amelioration of the material situation of his vast vice-
royalty, his character, embittered by family bereavements, by the injustice of an unintelligent opposition, made him forget to staunch the moral wounds and to work efficaciously for the pacification of the minds of men.

The interests of the state had forced him to take harsh measures against Yazid, son of the celebrated Muhallab. This gained him the enmity of Sulaiman [q.v.], the guardian of Yazid and successor designate of Walid I. Hajjadj had incurred the blame of inducing this monarch to exclude his brother from the succession in favour of his own son — the victry thereof vowed not to survive Walid. He had just completed his 52nd year, prematurely aged and worn out by the labours and disappointments of his tumultuous life when he died of a cancer in the stomach in the month of Ramadan 95 = June 714. He was buried at Wasiit and to prevent posthumous vengeance all traces of his grave were removed. Feared in his lifetime the inexecrable officer of justice was regretted by the wisest and fairest of his contemporaries, such as Muslim b. Kuttiba [q.v.] and Khaliid al-Kaari [q.v.]. The hatred in which later tradition holds him testifies to the important part he played in his lifetime; holding him up to opprobrium as the greatest supporter of the Marwanids, it places him with Yazid I among the few Muslims, for whom it believes eternal damnation to be assured. "It is always a moral sentence of death for a governor, if he is compared to Hajjadj even in the remotest feature" (Becker, Fehyri Schott-Reinhart, Vol. I. 17). Unbiased history gives him his place beside Ziyad b. Abihi and reckons him among the statesmen of the Umayyad period who have deserved most of their country.

**Hadjadj Beg.** [See Rizwan Begovic.]

**Hadjadj-Girai, the founder of an independent Tatar kingdom in the Crimea.** Of his origin we only know that his grandfather Tash-Timur, a prince of the Golden Horde, ruled in the Crimea for a short period (his coins are dated 797 = 1394-1395) towards the end of the 14th century. According to native tradition Tash-Timur had entrusted the education of his son Chiyat al-Din to a member of the tribe of Girai, Dawlat-Geldi; Dawlat-Geldi afterwards went on a pilgrimage to Mecca; on his return a son was born to him and his former pupil, and therefore received the name Hadjadj-Girai. According to Polish sources, Hadjadj-Girai was born in Lithuania, whither his family had fled and thence subdued the peninsula of the Crimea with the help of the Grand Duke Witold. In the year 1434 he won a victory over a Genoese army under Carlo Lonellini. Down to his death in 871 = 1466-1467 he appears as an ally of the Poles and Lithuanians and as the enemy of the Genoese in Kaffa and of the kingdom of the Golden Horde on the Volga. In 1465 Pope Paul II. sent an embassy to him with the singular proposal that he should declare war on Sultan Muhammad Fatih. Cf. also Rugi-je-sarak-i (i. 502 et seq.) and Giray (ii. 171).

(W. BARTHOLOM.)

**Hadjadj Khalifa, i.e. Moustafa b. Adb al-Laih, also known as Kafi-je Celari, the famous Turkish encyclopaedist, was born in Constantinople in 1528-1529 = 1137 h. (February 15 March 1608). At the age of fourteen he enlisted in the picked corps of the Sultans, in which his father also was serving; at the same time he was admitted as a junior clerk in the so-called Anatolian audit office (anadolu muskiehe kalemi). From 1533-1545 he stayed continually but for two short intervals with the Imperial Army at the Eastern frontier of Asia Minor; he joined in the first campaign against the rebel Ahaza Pasha (battle of Kaisaniye end of 1533 h. = beginning of October 1624) and against the Persians (unsuccessful siege of Bagdad from Safar 11th till Shawwal 7th 1035 h. = Nov. 1295 till July 2nd 1626) as well as the second and third campaigns against Ahaza Pasha (repeated siege of Erzerum, beginning of Moharram till 16th Rabii I. 1037 h. = middle of September till Nov. 25th 1627 and from Moharram 6th-22nd 1037 h. = Sept. 5th-21st 1628) and only returned to Constantinople with the army at the end of Rabii I. = beginning of December 1628. His father had in the meanwhile died in Mogul in the I'll-Ka'da 1035 h. = August 1625, during that campaign, as the army was retreating from Bagdad; at this same period he himself became a clerk in the Office of Control of the cavalry (cemii baf muskiehe kalemi). In the beginning of Shawwal 1038 = end of May 1629, he again joined the expedition, under the grand vizier Kosrew Pasha against Persia (conquest of Hamadan end of 1039 h. = beginning of June 1630, and siege of Bagdad from Safar 22nd till Rabbi 5 I. 8th 1040 h. = Sept. 30th till Oct. 15th 1630) so that he only returned to Constantinople about the middle of 1041 h. = end of 1630. Finally he took part in the great expedition against Persia
1045—1045 H. (Sept. 1638 till end of 1635) under Murad IV., himself (conquest of Erivan, Safar 22d 1045 H. = August 7th 1635). At this time he made the pilgrimage to Mecca, whilst the army was wintering in Haleb (1633-1634). After his return to Constantinople a considerable fortune which he had inherited enabled him to give himself up entirely to his favourite hobby, his scientific studies. He gave up his post in the Office of Control in 1055 H. (1645) as he did not advance as his merits deserved, but three years later his friends secured him the post of second Khalif (assistant) in the same Office, and henceforth he called himself Haidji Khalifa. He died in Constantinople in Dhu l-Hijjah 17th 1067 H. = Oct. 6th 1657 not yet fifty years old. The list of his works as given here, is drawn from his own autobiography, with the exception of No. 5 and No. 12, which the author does not mention for unknown reasons:

1. Fadilika, a sketch of the history of about 150 dynasties, and at the same time an extract of the historical work of al-Dhanabili (died 999 H.); written in Arabic in 1051. The author mentions it incidentally in his biographical encyclopaedia under No. 2195 and 5496 (see No. 13); this is probably lost.

2. A compilation of two commentaries upon the Koran, one of them being the commentary of al-Baijawi (1052 H.); seems lost.

3. A commentary to the Muhammadiya of Ali Kushdji the astronomer; this was not finished and seems likewise lost.

4. Ta'ziim al-tawariikh, chronological tables finished in 1058 H.; the introduction and the different appendices are written in Turkish, whilst the tables themselves relating all historical facts from the creation up to the year 1058 H. are written in Persian (see Lex. Bibl., No. 3496); it was printed in Constantinople in 1146 H. (1732) together with the following tables that go as far as 1145 H., and other additions; Italian translation by the Venetian dragoman Rinaldo Cailli, Venice 1697 (see Zenzker, i. No. 924; for other translations see Kriuk, Catalogue of Turkish manuscripts in the British Museum, p. 33; and Pertsch, Verzeichn, der türk. Handschr.. . zu Berlin, l. No. 193).

5. Djhambunji, i.e. Cosmography, first edition, beginning 1062 and continued by the Sultan and Mehemmed IV. (see Lex. Bibl., No. 4355); this work was already considered as lost in the time of the printer Ibrahim (cf. below No. 10).

6. Sulahn al-wun'i il-talabat al-fahhib, i.e. biographical encyclopaedia of famous men, in Arabic. The fair copy of Vol. I. was finished in 1061 and 1062 H.; the holograph of the author is now to be found in the library of Shahid 'Ali Pasha in Constantinople.

7. Tufhat al-akhâyur fi 'l-hikam wa 'l-anthol wa 'l-jarir, an anthology containing maxims, aphorisms, proverbs and poems, composed in 1061 or 1063 H., quoted in the Lex. Bibl., No. 2537; a copy of it exists in Es'ad Efendi's library in Constantinople.

8. Kutub al-zun'âm 'an asâmi 'l-kutub wa 'l-fununi, is the celebrated encyclopaedia in Arabic, the author's most important work, for which he spent over twenty years in gathering the material; Vol. I. concluded in 1064 H., standard edition published by Fludgel, Leipzig 1835—1858; and further in Bâle, 1747 H. and Stambul, 1310—1311 H.

9. Lokami al-sân wa 'l-sinmet al-basim manur, a translation into Turkish of Mercator's and Hondius's Atlas Minor, following the Arnhem Edition of 1621; the translation was completed in 1064 and 1065 H. with the help of the French renegade Akhliji Shahîd Mehemmed Efendi; copies are to be met with in several libraries in Constantinople.

10. Dîjhamunji, second edition of No. 5, founded on quite a new plan, the author having in the meantime largely used the European standard work of that epoch (Mercator, Ortelius, Cluverius). Of the original work, which the author never brought to end, we know those parts treating of Asia Minor, by the publication of the printer Ibrahim Muteferrika (Dîjhamunji, Constantinople 1145 H. = 1732, only the first part; the second part intended to contain the description of Europe, Africa and America, was never published; for translations of the printed text by Norberg, Armain, v. Hammer, Charmoy, and others see Fludgel, Die urab. pers. u. türk. Handschr. der K. K. Hofbibl., No. 1282 and Rieu, o.c., p. 111) and by two important fragments, both by the author's own hand, one of them in the British Museum (Or. 5398) and the other in the Court Library of Vienna (see Fludgel, o.c., No. 1282). Further we possess the description of the Ottoman dominions in Europe, in several copies, three of which are to be found in the library of Râghib Pasha, in the Mewlewî-kâne of Perä and the Kutuhkâne-i 'Ummüni in Constantinople; the fourth one is in the Court Library in Vienna; the fifth copy by the author's own hand has disappeared, and it is from this last, that von Hammer translated some parts in his Kunelli und Bosna, Vienna 1812.

11. A translation into Turkish of the Latin translation of the Byzantine historian Khalkokondylas, or as the author himself styles it, of a "Frankish Chronicle"; no copy of it extant.

12. Rawânûk al-Safajun, i.e. History of Constantinople, supposed to be a translation of a work originally written in Arabic by the same author; now lost.

13. A Turkish translation of Fadilika (see No. 1); a manuscript of it is said to exist in the library of Es'ad Efendi in Constantinople.

14. Al-khâm al-mu'ahaddas min al-fa'is al-khâbâs, a treatise on different rites and rules of Islam, that cannot be observed under the certain circumstances. A copy of it exists in the Kutubkhâne-i 'Ummüni in Constantinople.

15. Düsür al-um'al li-shâh al-khalif, a treatise on the financial reforms, written in 1063 H., but published only three years after. It was printed in Constantinople 1280 H. (1863) and translated into German by Behrmaier, Zeitschr. d. Deutsch. Morgenl. Geselsch., xi. 111—132.

16. Kadîm erradim bil-sin wa 'l-tumam, a collection of curious cases of law and of the different decisions given upon them.

17—19. Extracts of about 200 miscellanea (madâniye), and two small volumes containing historical and literary anecdotes; have all disappeared.

20. Fadilîhat al-tawariikh, the continuation of the Fadilika, No. 1 and 13, in Turkish, containing the history of the Ottoman Empire from 1000 H. till beginning 1065 H.; printed in Constantinople 1286—1287 H.

22. Mizān al-šaḥīṭ fī ikhšāṣ al-ʿaḥālī, the author’s last work written in Şafar 1067 H. (Nov. 1656). A treatise concerning several theological disputes of that epoch. In this treatise he breaks definitively with his first teacher, Kādirzāde, the head of the orthodox party. Published in Constantinople in 1634, 1656, 1826 and 1851.

Bibliography: The autobiography of the author at the end of No. 22, very incorrectly edited by Wickerhauser, Wegweiser etc., p. 150—167, and the autobiographical note at the end of the first part of the Sultan al-waṣīl (No. 6); the Monakht-i Kādir Celi, which precedes the print of the Tāʿwīl (No. 4); the 15th century biography in the Dhačl-i ʿAṣbita by ʿUthmān (see von Hammer, Orn. Gesch., vi. 47); Sīdqi-i ʿOmar, iv. 395; Kādir Celi by Bāsili Mehmmed Tihār b. Rifaʿat, Stambul 1331 H.; and the older European authors who treated of Ḥāджjb, and his works are quoted by Fluegel, Handbuch der K. K. Hofbibliothek, i. 48 and Rieu, o. c., p. 33; compare also Wustenfeld, Die Geschichtsrechercher der Araber etc., No. 570, and Brockelmann, Gesch. der arab. Liter., ii. 125.

(3. H. Mordtmann.)

Ḥāджjb Pasha (Abdinlī Ḥāʤjb Pasha), whose real name was Ḥāʤjb b. ʿAli b. Ḥāʤjb, a contemporary of Sultan Bayazid Yildirim, a Ottoman jurist and student of medicine. He went to study in Cairo where he studied under Shaikh Mubarak Shah Shāh Münatake and went through his theological and legal courses in company with Shaikh Ekmel al-Din and Shaikh Bādr al-Dīn Shāhī. An illness, which he went through, turned his attention to the study of medicine and he soon attained fame in it. He ultimately became chief physician at the Cairo Hospital Ashār-i Mihr. Returning to Aydın he settled in Birgi on the invitation of Aydın Oghlu Mehmmed Bey, and died there in 1820 (1417). He also placed his services at the disposal of the conqueror Timur and is said to have instructed his physicians. He also spent some time at the court of Prince Sultan in his service.

In his early days he wrote theological and legal works: e.g. a Tasfi fī İkhšāṣ al-Anwaar fī Dhimma as-Sirr in two volumes, a commentary on Bādawī’s commentary on the Kurān dedicated to Yāsī Bey, one of the sons of Aydın, entitled ʿAvāl al-Anwaar fī Kāhḥām, and marginal notes on Fakhr al-Dīn Kāzī’s commentary on the ʿAkhbar al-ʿAzcār (f. ʿArabī) of Kādir Sirādī al-Dīn Muhammad al-ʿUmarī. His medical works are more important and have maintained their authority down to modern times. The largest is the al-Sha’faa, a work on therapeutics in Turkish written for Aydın Oghlu Mehmmed Bey which is divided into three sections treating respectively of a. physiology and dietetics, b. foods, drinks and medicaments and c. causes, diagnosis and cure of diseases. A brief similarly divided handbook for the layman is his Tehsil al-Tibb (The facilitation of medicine). Both works are said to have been translated into Latin. Less known are his: Şhīfah al-ʾAskām wa Dīwān al-ʾĀlam ("Cure of disease and alleviation of pain"), his Ferisī fī ʿIṣbāh al-ʿAḥāṣīyat al-Ḥābid, al-Wadāʾ, and al-Ki:mī al-Dīnāb.}

Tihr, Aydın Wilcliyetine Memari Mehmmed, "Ulemā, Şahārā, Muwārīqīn ve Atlînîn Terâşix-i Ahlî, Constantinople 1324, p. 174—177; Hammer, Geschichte des Osmank, Reicher, i. 276; do., Geschichte des Osman. Dichtkünst, i. 73; Fluegel, Die arab. pers, u. türk. Handschriften der K. K. Hofbibliothec, ii. 356 et seq. (Theodor Menzel.)

Ḥāʤjb can be a character in the shadow play, the inseparable companion of the Kurāgō (q. v.).

Ḥāʤjb (from Ḥāʤjb, to prevent any one entering) is the name of the office of doorkeeper e.g. Ḥāʤjbat al-Bait (the doorkeepers of the Ka‘ba, see Lane’s Lexicon). It corresponds to the office of chamberlain in our time. We may here mention the theoretical explanation of Ibn Khaldūn that the chamberlain should protect the ruler from troublesome visitors so that he may remain undisturbed in his important labours. In the western kingdoms (e. g. in Cordova) he frequently became representative of the Caliph and chief of the viziers. The petty, practically independent kings of Spain took the title of Ḥāʤjb. Among the Ḥāʤjbds (q. v.) he was superintendent of war-minister and as being the chief official the real ruler, among the Zayānīs (q. v.), superintendent of the palace and minister of finance. In the eastern kingdoms (Mesopotamia, Syria and Egypt) he had a position at court similar to that of chamberlain and was also given this title even if he served the ruler as commander of the army. He received quite different duties in the Mamluks period. To relieve the Sultan’s governor in Cairo (al-Dīvān al-Miṣr), and in the provinces or perhaps to diminish his influence, the Amir Ḥāʤjb or Ḥāʤjb al-Dīvān was entrusted with Balkārs reiga (658—676 = 1260—1277) with the decision of questions between the emirs and the soldiers, at a later period, when the office of the Sultanate in Cairo was abolished, he was placed at the head of the administrative military court in the reign of Sultan Nāṣir Muhammad and his sons. In difficult cases he consulted with the Sultan. He gradually from being a judge in military matters began to encroach on civil cases also which belonged to the kāfī’s province; the parties concerned seem to have resisted this at first, as Maḥrīzī vividly describes how they ultimately became reconciled to it and often preferred the civil jurisdiction of the Ḥāʤjb to the ecclesiastical of the Kāfī. Khalqshandī (in the time of Sultan Muṣayyed Shaikh 815—824) ranked him as the eighth official, the author of the Dīwān al-Iṣfahān (in the reign of Sultan Barsbe, 825—842) calls him the twelfth in rank, and Khalīl al-Zāhīrī (under Sultan Dājakm 842—857) the seventh; and, according to him, the second Ḥāʤjb was Tabākhānī (Amir of 40 Mamluks, q. v.), the third Ḥāʤjb Amir of twenty or ten Mamluks; there were also 20 subordinate Ḥāʤjbds without the rank of Amir. In the provinces, according to Khalqshandī, the Ḥāʤjb came third next to the governor and the commander of a corps (Atabég), and, according to Khalīl al-Zāhīrī, he was likewise third after the governor and the commander of the citadel, when there was one, and second when there was no other citadel. He was the deputy of the governor in his absence, in case of his death till the appointment of a successor. The Sultan himself only corresponded with officers here mentioned; to the Amir Ḥāʤjb of the great provinces of Damascus, Aleppo and Tripolis he called himself in the signature his father Sultan.
N. N.}}, while the Emir Ḫāḍīj in Ḥamā, Ṣafad, and Ḥanṣā had to be content with the simple suffix Ṣafad Ṣafad.

ḤADRAT, the ancient Ḥatra, "Arab on the Tābi Tharthār in the desert, three short days' journey S.W. of Mūṣul, now in ruins, on which cf. the works mentioned in the Bibliography. The town's claim to be mentioned here is that the Arab historians give a certain amount of information about its former extent and rapid decline. Ḫadr, says Yākūt, *Muḥaddis*, ii. 282, was built entirely of hewn stone; there were sixty strong forts there and 9 smaller ones between every two; there was a palace and a bath near every fort. During the reign of the Sāsānid Šābūr I. (240–271) a man of the name of Sāṭīr (according to Noldeke = Satruces) ruled here; the Arabs called him Ḍaizan. As the latter had made a raid on Persian territory, Šābūr resolved to besiege him in his capital, but could not take the strong fortifications until Ḍaizan’s daughter fell in love with him and betrayed him to the secret by which he could make powerless the talisman that protected the castle. He thus succeeded in taking the town and utterly destroying it. He took Ḍaizan’s daughter with him to marry her; soon however he became so disgusted with her ingratitude to her father, who had certainly treated her more tenderly, that he had her bound to the tail of a wild horse so that she died a terrible death. Firdawsi and several Arab historians wrongly say that it was Šābūr II, who destroyed Ḥatra, for it is certain that the town was already in ruins by 856. (Rīḵāt, p. W. Arendt, *Nack Aufschnitten der Ausstr.-Expedition der Deutsch. Orient. Gez.*, Leipzig 1908; O. Oppenheim, *Vom Mittelmeer zum Pers. Golf*, ii. 3 etseq.; where the earlier literature is also given; Noldeke, *Geschichte der Perier und Araber*, p. 33 et seq. (according to Tālabi, ed. Goeje, i. 827 et seq., with occasional references to the accounts of other writers); Pauli-Wissowa, *Real-Enc.*, s. v.; Herfeld in Zeitschr. der Deutsch. Morgenl. Gez., Vol. 41, 1897.)

**Ḥadrat, „presence”, is used broadly as a mystic by a synonym of ḥāḍar, “being in the presence of Allāh”]. Its correlate is ghaib (q. v. with its references) “absence” from all except Allāh. On the controversy as to whether in expressing this relation to Allāh ḥāḍar or ghaib is to be preferred — that is, which is the more perfect, final element — see especially Nicholson, *Ḳaṭṭat*, pp. 245 et seq. The term was later extended by Ibn Ṭurğān, working out his monistic scheme, to the Five Divine Ḥaḍarāt, stages or orders of being in the Neoplatonic chain (cf. above, vol. i. pp. 62 et seq., 986). There is a short statement of these in the *Ṭurğān of Ḥurğān*, p. 6 (Cairo 1321), which has been translated by Horton in his *Theologie des Islam*, pp. 294 et seq., where, and on p. 151, he also gives some minor uses of the term. See, too, Massugga’s *Ḳaṭṭat al-Mobāṣṣar*, p. 183 with a reference to Ibn Ṭurğān’s *Fatūṣ al-ṭāḥān*, and Hughes, *Dict. of Islam*, p. 169. In consequence, the Plotinian scheme of dynamic emanation was called in Islam mdhaḥkab al-ḥaḍarāt (Ibn Khaldūn, *Muhaddis*, ed. Qastremèr, III, p. 69; de Slane, III, p. 100). Derives their regular Friday service from (above, Vol. I, 1898). The use of ḥaḍra (ḥaḍar) as a title of respect — the Deity, saints, prophets, any educated man — belongs to the Lexicon. (D. B. Macdonald.)

ḤADRĀWĪT (the Ḥadrāwīt of the South Arabian inscriptions), now pronounced Ḥadrāmūt, a land in Arabia in the east of Yemen between 49° and 53° East, Long. and 15° and 19° North. Lat. It is bounded in the south by the sea, in the southeast by the land of Maḥra, in the N. E., N. and W. by the great Central Arabian desert, in the S. W. by the land of the *Abālīk* [q. v.] and of the Ṣuḥāfī [q. v.]. The name Ḥadrāmawt is according to Arab tradition derived from Ḥadrām b. Ḥimyar ... b. Yaʿrub b. Ẓaḥī (Ḥṣarāməwet, the son of Yūkta in *Genesis* x. 26).

In ancient times Ḥadrāmawt was celebrated as a land of frankincense and was greater in extent than it now is. The Ḥadrāmīt (Ḥadrāmīt) of Strabo (Atarinate in Pliny) were one of the most powerful tribes of the great South Arabian kingdom; their metropolis was Ṣabata (Ṣabata). According to Greek legend, the scent of the frankincense tree was deadly and the valley in which it grew was therefore called the "land of death". The Arab lexicographers also connect the name Ḥadrāmawt with the alleged unhealthy situation of the land, for they explain it as a combination of ḥaḍr "town", land and muwat "death"; but, apart from the fact that the land has only borne the name Ḥadrāmūt in modern times, the climate of Ḥadrāmawt has always been regarded as healthy. In the pre-Muhammadan period Ḥadrāmawt was inhabited by the Ṣaḥār or Ṣuḥāfī. To these the Kinda [q. v.] attached themselves, who migrated from Ḥadrāmāt to Ḥadrāmawt to the number of over 30,000 men about the time of the birth of Muḥammad; their most important clan at this time was the Ṭuḏih, who numbered 1500 men in Ilhumān’s time. In the time of the Prophet princes with the title Ḥāhilah ruled in Ḥadrāmawt; the Kinda prince Ṭaḥā b. Ṣahāthi adopted Islam in Muḥammad’s time; after the death of the prophet he succeeded but was soon afterwards conquered. The land is now under Turkish suzerainty, but this is merely nominal for the Forte keeps 20 service ḥaḍra.

Ḥadrāmawt is a mountainous land traversed by a great valley with several wādīs of considerable size branching off from it. Along the coast there are hills. These are followed by a high chain of mountains, of which the highest is the Ḥiḥbāl al-ʿArāb (a vast plateau). A second chain of mountains adjoins the main valley on the north and this runs up to the great desert. The two chains consist mainly of limestone and are as a rule barren; only here and there do we find small ṣib (aloe)-trees, thorn-bushes and pastures.
The main wadi runs from west to east and then to the south where it flows into the sea near the fishing-village of Sahūt, which belongs to the land of the Mahāri. The most western town in the main valley is Shābwa. From Shābwa the road runs through a sandy and sparsely populated district to the isolated mountain al-Kaʿīma.

To the left of this road to al-Kaʿīma lie the wādīs Dhhīraya (well cultivated) and Sārer, and on the right the wādīs ʿIrma, Dhuhr and Rakhīya (the latter on the important valley of Sahāwā [Sahwah in Wrede]); to this wādí also belong the Bahr al-Ṣafī mentioned by Wrede, where in the midst of the desert, according to the observations of this explorer, all that is thrown into sinks; in the S. of the W. Dhuhr and Rakhīya begins the land of the ʿAwahlī. S. E. of al-Kaʿīma lie the two towns Kaʿūthā and Hainin (Hainan, Ḥaninem in Nibāub, on the wādí of the same name, in Hamdānī’s time a large village with kūn and a market inhabited by the Ṭadhīlī). Sometimes Kaʿūthā rises (on the right of the main wādí) the three wādīs ʿAmid (formed by the union of the two wādīs Nīr and Ra’idā Arḍīn at the town of ʿAmid), Dāwān and al-ʿĀlīn (in Hamdānī also called ʿAbr). The important Wādī Dawān (a town of Dawān, mentioned by Hamdānī [Dawān in Ptolemy], no longer exists) has a right (western) arm Dawān al-Aimān and a left (eastern) arm Dawān al-Aimin and Dawān al-Aisār; the northern part of the Wādī bears the name Ḥadājrān after the isolated mountain Ḥadājrān with the town of the same name near it (q.v.). The Wādī is thickly populated. The most important places in this wādí are: al-Ḥaribālī (the most southern town in the wādī), ʿĪsā (Seif, Saṣīf in Wrede), Biḥā, Kāḏūn (Kāḏūn in Nibāub and Wrede with the tomb of the greatest saint of Ḥadramawt, Ahmad b. Ṭūsī, called ʿAmīd al-Dīn), Meshhed ʿĀli (the so-called tombs of the kings), we may further mention the other localities: al-Qarrān, ʿAwrā, Ḥādīn, Ḥalbān, Ḥabhū and Ar-samā. Not far from the village of al-ʿĀlīn in the confluence of the Wādī Dawān and Wādī ʿAmîd, on the twenty-five miles west of the town of the same name, in the same region of ʿAmid, is the town of Ḥadīr (mentioned in Hamdānī’s time, an important town inhabited by the ʿAqāf in ʿAmid, ʿAqāf), called a large town by Hamdānī.

On the Wādī ʿAmid the important town of Ḥawara (q.v.). From the town of Ḥawara up to the ancient and still important town of Shībām (q.v.) the main valley is called Wādī al-Kasar (in Hamdānī also Wādī Ksar Kāshākū or Kāshākū after the town of this name built on the top of a hill), to Shībām Wādī bin Ṭadhīlī and Wādī al-Aḥāṣ (also called Kāšākū); briefly the Wādī (Ḥadramawt) or Wādī Masila. The most important towns in the main valley east of Shībām are: al-Gharra, Tarīs (Tris in Nibāub, Tertiary in Wrede, in Hamdānī’s time a large town), Saiʿān, now the largest town and chief centre of learning, the very ancient town of Maryama, Būr, Tāriha (Tarba in Nibāub, Tyrābi in Wrede), the ancient capital Tarīm (q.v.). Ināṣ (Eināt, on the Wādī of this name) and al-Kasm. From al-Kasm ʿAbhū Hūd is reached, the tomb of the prophet Ḥūd on the Wādī Barahat (q.v. i. 653 & 829). West of Shībām in the main valley we may further mention the important town of al-Katīn. From Ḥawara to the city of Ḥawara the valley is thickly populated and covered with date-groves, gardens, fields and many villages, from al-Kasm to ʿAbhū Hūd it is less populated and from ʿAbhū Hūd to Sahūt the population is very small. Of side-wāḍīs of the great valley there are still to be mentioned: (in the north) Wīdān Sarr (with ʿAbhū Ṣālīḥ), al-Naṣrān, al-Djūlāʿāmah (both the latter east of Shībām), Madar (east of Saiʿān), Thībī (Thībi), ʿAidīd (with the tomb of the saint ʿAidīd), both west of Tarīm, and al-Ḥabān (east of Tarīm), (in the south) the two important wādīs Bin ʿAlei (east of Shībām) and ʿAinīd (Odam in Wrede, not far from Tarīm). The more important localities on the coast in addition to the two great harbours al-Makālān [q.v.] and al-Shīḥr [q.v.]: are Būrūm (Būrūm, Burūm, with an important harbour, according to Sprenger identical with the Pirontus of Ptolemy), Fūwa (with 50 houses including a few of some size), Ghaṭl Bawāzīr (with very fine tobacco plantations), al-Ḥamīn, al-Shirma and Kusārī. Of wāḍīs on the coast may be mentioned: Ḥūrīn, Huwaira and al-Maidī. The chief wāḍī and the side-wāḍīs are usually dry and only swollen with floods in the rainy season.

Among the many mountains we may mention Huwaira (on the wādí of the same name), ʿAbd Allāh Qarīn, al-Skīra, the Plateau al-ʿArāṣa already mentioned, ʿAmān (all in the north near the coast), Raʾīdā al-Dājrīn (in the north of the Wādīs ʿAmid and Dawān), Ḥasīn, al-Ḥūṣā, Raʾīdā al-Māʿrā (in the south of the Wādī ʿAmid), Suwāqūn (with Ḥṣān al-Kaʿī, in the south of the Wādī Bin ʿAlei, Dijhānān, Ḥoumadān, al-Gaḥawīr (in the north of the Wādīs ʿAmid and Dawān), Dijhāl al-Abīt (between the Wādīs Djjīhā and Wādī Hainin), Dijhā (with Ḥṣān ʿArkaḥū), Dijhīma (both south of Saiʿān), Wādī (in the north of Tarīm), al-Munābiʿāz (south of Tarīm), Ghaṭl Bin Rūn (N.W. of ʿAbū Hūd). In the west of the northern mountain chain rises a large plateau, Raʾīdā al-Saʿīr (called after the ancient Bedouin tribe Saʿīr, a clan of the ʿAmbāq, whose name was borne in Hamdānī’s time by a fine breed of camel), to which a larger plateau Nadjad (Nayid, Nadjad al-Kaṭāhr̀ and Nadjad al-Awāmīr is linked up. Both bound on the great Central Arabian desert in the north. In neither of these mountain ranges is there any place of the slightest importance.

The climate of Ḥadramawt is dry and healthy; in summer it is very warm and in winter very cold; even in summer it freezes on the high mountains. The rainy period lasts from October to February, in which however it hardly rains four times; in many years there is absolutely no rain; in the coast the rainfall is more abundant. The products of the soil are: cereals, dhara (a kind of maize), dakh (a kind of oats), dates, grapes, figs, nebāk fruit, indigo, sesame and tobacco. The irrigation of the soil is artificially performed by artesian wells. The houses are built of bricks, sometimes in the style of a ḥijāć; they are from two to four stories high and are loopholed. The Bedouins live in mud huts or caves; there are no tents in Ḥadramawt; nor are there coffee-houses (kahwa) here, such as are found everywhere else in Arabia.

The ruling class in Ḥadramawt is the tribe (kaḥḍām). The chiefs of the tribes called muḥkāmān live in fortified palaces and maintain small garrisons. The free citizens of the towns, who control the trade and industries of the town are raʾīya of the muḥkāmān, who levy oppressive taxes on them. The most powerful prince on the coast of Ḥadramawt is the ruler of al-Ṣhir, to
whom the towns of al-Makalla, Ghail Bawtizir, al-Hadjareen, Hawra, al-Ka'tan and Shibbam also belong. In the interior the greatest smashed is the town of Sultân and owns the towns of Tarim, Tats and al-Ghurfa. Hadramawt is inhabited by the following tribes: I. Baraik, Bedouins with the hereditary title Shaikh in the country Shabwa (a portion belongs to al-Shihr); II. Al 'Am, in the wadis of 'Irma and Duhr; III. Bait Kinda, Bedouins, divided into: Al Sai'ar (in the Ra'id al-Sai'ar and the mountains around) and 2. Al Mat'hûf (formerly in Hadjareen, now scattered over the adjoining mountains); IV. Al al-Karab, Bedouins around Rakûn on the Wadi D'jibya; V. Al-Nahdi, on the lower part of the wadis Rakhîya and in the main valley as far as Ka'asha and Hainin (with ten subdivisions, of whom the Hukman are the most important; the chief of the Hukman, who lives in Ka'asha is in muqaddam of the whole tribe); VI. Al Ballalîh and VII. Al Haïdara (both Bedouins on the upper part of the Wadi Rakhîya); VIII. Al Dja'da, almost all Bedouins, on the Wadî 'Amd; IX. Al 'Amûd or Bani 'Isa (called after Shaikh Ahmed b. 'Isa, 'Amûd al-Dîn) with the hereditary title Shaikh, on the Wadî dawân and on the Ra'id al-Dai'în (with 22 subdivisions; the most important are the Al Matju'h, whose chief lives in the Dja'da; X. Al 'Asha'ib (sing. Al 'Ashab) and XI. Al B. Sai'd (both Bedouins, on the Wadî Ain and in the surrounding mountains); XII. Al Yâbî, on the coast and in the towns of al-Hadjareen, Hawra, al-Ka'tan and Shibbam, divided into: 1. Al Thobai (with 8 minor divisions); 2. Al Labûs (sing. Al Bu'si), with 4 minor divisions; 3. Al al-Ma'sin (with 8 minor divisions, of which the most important is the Ka'ta [sing. Al-Ka'atî], whose chief is head of the whole tribe); XIII. Sai'ibân, a large Bedouin tribe, divided into: 1. Sai'ibân proper in the north and northwest of the Djebel Houara; 2. al-Akâbîra (sing. Al-Akâbîrî), in the south and S.W. of the mountain mentioned; 3. Al-Awâbîthâ (sing. Al-Awâbîthûnî), in the S.E. of the Wadî Dawân; 4. Al Bahsas (sing. Al-Bahsasî), on the Wadi Djibra and the surrounding mountains; XIV. Al-Hamûd, Bedouins in the mountains of 'Abd Allâh Gharib, al-Fikra, al-Arsha, Tabha; XV. Al-Sa'ina, descendants of Shanfarl al-Hamâni (according to the legend the first prince of Hadramawt), a large tribe, divided into: 1. Al Kathir (Khatiri), between Shibbam and Sai'ûn (with five large subdivisions, among them the Al 'Abd al-Wodûd, around Ko'sarî); 2. Al-Awâmir (al-'Amûrî), in the large valley between Sai'ûn and Tarim and the mountains to the north; 3. Al Djibir, Bedouin tribe, in the mountains of Djidja and Dji'mma and the Wadis Bin 'Ali and 'Adim; the chief of the Shanfarra is the Sultan of Sai'ûn; XVI. Al Bâdjair, in the N.E. of Sai'ûn between the Kâbir and 'Awâmir; XVII. Bani Thanna (see Al-Thanna), divided into: 1. Al Tamim, in the large valley between al-Kasm and Kâbir Hûd (their chief resides in al-Kasm); 2. Al-Manâkilh (Minâhil), a Bedouin tribe on the Wadi Maslala between Kâbir Hûd and Saihjût and in the mountains to the east and west (their chief lives in Saijût); 3. Al-al-Simäh (sing. Al-Simâhî), a Bedouin tribe in the hills to the north of Wadî 'Ināt.

Besides the kâbûl and ra'îya there is Hadramawt another separate class of society, the Saiyids, who represent the religious aristocracy of the land. They are very numerous and enjoy a great prestige among the people, surpassing that of the muqaddams; the other inhabitants kiss their hands in token of respect. They are exceedingly conservative and averse to any innovation; they bear the title hâbîb and are divided into families whose hereditary superior bears the honorific title munjib. Many of the Saiyids are reverenced as saints and presents are lavished on them, many again enjoy a great reputation as scholars. They bear no arms and as a rule pay no taxes. They consider themselves the highest nobility in Arabia. They trace their descent from the Shaikh Ahmed b. 'Isa mentioned above, who in his turn is said to have been a descendant in the seventh generation from Muhammad's grandson Husain. According to tradition, Ahmed b. 'Isa came several centuries ago from Basra to Hadramawt with eighty men, who became the ancestors of the Saiyids.

The number of inhabitants of Hadramawt is not accurately known. According to Van den Berg's investigations, the total population is not more than 150,000, viz., from the Wadî Duhr to the Wadî Rakhîya 20,000, in the Wadis 'Amîd, Dawân and al-'Ain 25,000, from Shibbam to Tarim 50,000, from Tarim to Sai'ûn 60,000, in the north of the great valley to the Central Arabian desert 15,000, south of the great valley to the sea 16,000, Shihr and the neighbourhood 12,000, Makalla and the neighbourhood 6000.

The trade is of importance on the coast particularly in the towns of Shihr and Makalla. It extends to the east coast of Africa, British India, the Red Sea, the south coast of Arabia (particularly Aden, Masqat and Zafar) and the Persian Gulf. The exports are: fish-fins (to British India and China), dates, cloths dyed with indigo, gum-arabic and resin. Imports are: cereals, coconuts, coffee, sugar, rice, cotton, iron, petroleum etc. The trade by caravans with the interior is slight. It stretches on the west as far as Yemen on the one side and on the other eastwards as far as Omân. In the larger towns there is a market every Friday (the largest is at Sai'ûn). The tribes have their representatives at the markets of the larger localities, called adâlât. [q. v.] (brokers, called kiiyâb al-suk market-dogs by the people), who are appointed to sell their goods and who form a separate guild under an adâs (superior). The chief industry is the textile, which is now on the decline on account of the competition of cheaper European products; its great centre used to be Tarim. Besides the textile industry we may mention the manufacture of indigo and shipbuilding on the coast. Agriculture is in the hands of the Kâbûl and the Saiyids, who have their fields tilled by slaves. The latter are as a rule Somalis or Nubians and are usually Muslims; they bear special names, which are distinct from the usual Arab names, e.g. Ma'brûk, Murdjan etc.

The Hadramâris are an able, industrious people devoted to their native land. On account of the increasing power of the country many are forced to leave home and seek their fortune in foreign lands; many Hadramâris are to be found at the present day in the trading centres of Arabia where they earn a living as porters and petty traders, in Egypt and particularly in the English and Dutch Indies. As soon as they have acquired a modest
fortune, they return home often after an absence of twenty to thirty years. They are Şahānīs and are exceedingly fanatical and superstitious; they believe in spirits, who haunt places where treasure is buried; Christians and Jews may not even make a temporary stay in their land which they call Ḥudīl (q.v.) - vilāyāt ("land of knowledge and of faith"). Their women, who are even those of the Saiyids (as a rule ignorant of reading and writing, enjoy a better fate than their kinswomen in other parts of Arabia. Divorces are exceedingly rare; nor is polygamy practised among these Bedouins.

Ḥadramawt was first visited in 1843 by Adolph v. Werde, who could only explore a part of the land, as he was recognised as a European in the town of Ṣif and only managed to escape the death that threatened him by a hurried flight. Fifty years later Leo Hirsch and Mr and Mrs Th. Bent visited the country but could not explore the land to its full extent.

ḤADŪR (Ḥadūr Nabi [Nebi] Shu‘aib), a mountain in South Arabia, belonging to the Sarat group of Aḥān, to the west of Su‘a (q.v.) between the Wādī Ṣahām and the Wādī Sūrād near the Ḥudr range (q.v.) from which it was separated in Hamdānī’s time by the Balad al-Ḫabrāt (now Ḥaṁmā [q.v.]) inhabited by the Saiyids (branch of the Hamdānī). The name Ḥadūr is derived from Ḥadūr b. ʿAbd b. Maḥlib, an ancestor of the prophet Shu‘aib b. Maḥdam, mentioned in the Kūran (cf. Sūra vii. 83 et seq. and xi. 85 et seq.) who was sent to preach and to warn his people on Mount Ḥadūr and was thereupon slain by them.

The mountain is about 9400 feet high; according to Arab tradition, Ḥadūr Shu‘aib was the highest of the three mountains (the other two were Lijebel Shāhār [Shu‘aib] and Kanīn in Ḥawālān [q.v.]), which remained above the waves during the Deluge. The highest peak on Ḥadūr is the Ḥijāb Kāhār, also called Lijebel Bait Kāhān, on which is the celebrated tomb (with mosque) of the prophet Shu‘aib, which is always much visited (particularly by young women who hope to be cured of barrenness here); on the last day of Ramaḍān and on the festival at Ṭārlāt, great festivities are arranged here. From the terrace of the mosque a splendid view is obtained over the whole Yemen. 700 yards W. by N. W. of Ḥijāb Kāhār lies Ḥijāb ʿIzām, south of which are the mountains of Ḥabba, Manṣūra and Ḥabbaṯ (with the village of the same name and ancient ruins). Ḥijāb ʿIzām leads to the south of Kāhār.

To the east of Ḥudhr lies the Kāna Ṣahām, with the villages of the Meten (Mottene in Niebuhr), called Ḥanān Sīnāt by the Turks (8000 feet above sea-level, with a teemeter [shelterhouse] said to have been built by Sinān Pāshā, who is open free to any traveller), Sahmān (also called Mīrīyū), Bait Mahdam, Bait Radam, Dāʾer, Mīsib (Maysāb), Bait Kāhān, which now belong to the so-called Ḥiṭāl al-Būṭānī.

The following localities in Ḥudhr may also be mentioned: al-Kaṭra ("the village"), Ḳark or Ḳark (north of Kārya), Ḏaṭal (in the N.W. of Ḥudhr), the Sāda (Ḥudhr) village Zuhār or Dūhr in the south. The range is traversed by numerous wāḍāi (among them the Ẓahr Dūhr and Ẓahr Jāzil, which latter is often mentioned in the South Arabian inscriptions), which flow into the large Wādīs Kāhrīd, Ṣurād and Ṣahām. In the valleys of the range excellent vines are found in addition to various fruit-trees; in the deeper parts of the Ḥudhr the cedars particularly grown are Ḏiṭura (a kind of mellet), barley and burr (a kind of wheat or corn.

On the Ḥudhr Shuʿaib it snows almost every winter and the snow often lies for days several feet deep so that the inhabitants cannot leave their houses.

In Hamdānī’s time the Mikhāl Ḥaḍhr comprised amongst others the districts of al-Maʿṭal (so Muḥller, Ḏiqāra, in several passages, which he equates with the Ḏiqāra of the South Arabian inscriptions, for Glaser’s Ḏiqāra, consisting of Ṣādī, Ṣahmān and Ḥudhr proper [al-Ḏiqāra]), Maṭīna (including the two gardens of Yemen), Dāyr and Ḏaṭal, and Rīfān or Rīfānān, Ṣhamm (lower part), Maṭīkh, Sahīb, al-Maḥām, Baraṣḥ, Maysāb, al-Šaṣyād. The hard white honey of Ḥaḍhr was famous in Arabia, it is even mentioned by Ibn’u-l-Kaṣi in one of his poems. The people of Ḥaḍhr according to Hamdānī spoke bad and clumsy Arabic (Hinayāri).

The Ḥaḍhr of the Banū ʿAzid, called Ḥaḍhr al-Shaḥiḥ, is distant from Ḥaḍhr Shuʿāib and is the largest mountain of the Sarat group of al-Maṣānī (al-Maṣānā’s). It is about 9500 feet high.

The Ḥaḍhr Shuʿāib and that of the Banū ʿAzid have been visited and explored in modern times by the explorer Eduard Glaser.

Al-ḤĀFIZ (a.), the guardian, the protector, one of the names of God, cf. 303. When used of men a Ḥāfiz is one who knows the Korān by heart, literally "preserves" (in the memory).

ḤĀFIZ, a Persian lyric poet. His real name with jāḥiṣ was Shams al-Dīn Muḥammad.
He seems to have been born in Shiraz, not earlier than 1326 A.D. Practically nothing is known of his parents or other relatives; he never explicitly mentions them in a way that is free from ambiguity (a sister and her children are referred to without mention of names over two centuries later in Ferishta's History). In his youth he learned the Koran by heart (hafiz), devoted himself to the study of theology and allied subjects and obtained an excellent knowledge of the Arabic language and literature. In later years he mentions (Divan, ed. Brockhaus, p. 579) as a reminiscence of the reign of the Turk Shahik Abû Ishaq-i Indji (see the article INDJ), king of Fars, four notables of Shiraz whom he had apparently known personally: Aghul al-Din ʿAbd al-Rahman al-Ijadi, died 1355; (cf. Brockelmann, Gesch. d. arab. Litt. ii. 208-209), probably his tutor; the chief judge of Shiraz, Maqdî al-Din Isma'il b. Muhammad b. Khudâdad (died 17th July 1355, Divan, ed. Brockhaus, No. 604; cf. Ibn Baṭṭaṭ, ed. Deffrey, ii. 54-63); the dervish, otherwise unknown, Shahik Amin al-Din, who had perhaps an influence on the development of Hâfiz's more liberal outlook; lastly Hâjji Kiwâm al-Din Hasan (died 11th May 1355), a high favourite at the court, a noble, spirited philanthropist, to whom Hâfiz seems to have been indebted for material support, either directly or indirectly (Brockhaus, No. 610; Mirkhwând, Rawât al-Šâfi, Bombay 1271 A.H., iv. 142).

In 1353 the vigorous Sultan Muḥârîz al-Din Muḥammad (q. v.) of the Muṣaffarîd family conquered the petty principality of Fars and finally took Shiraz also (2nd Nov. 1353) to the great misfortune of its citizens. Hâfiz himself was unable long to put up with the changed conditions. Muḥârîz al-Din was a strict ruler who forbade the people of Shiraz the enjoyment of wine. There was also a religious ground for discomfort in his reign. Hâfiz was a Shīʾî (Divan-i Hâfiz, ed. Calcutta 1791, text fol. 1 r–2 v), although no fanatic. Aḥī al-Ridâ is celebrated by him as Shâh-Sultan of Khorassân; Hâfiz belonged to the Shīʾa sect of the Twelvers (Iǧâlaʿ ʿAḫariyya, cf. the kâṣida in Cod. Pers. Monacensis, No. 69, fol. 9 r–10 v; also Cod. Pers. Monac., No. 68, fol. 138 v). In one passage his belief in the Korâb having existed from eternity (kādim) appears (Brockhaus No. 686, Bait 119, which belongs to the last two years of the poet's life). Hâfiz breathed more freely when the relentless Muḥârîz al-Din was deposed by his son Djalâl al-Din Shâh Shâhjasâ (1358) and the new government again allowed greater freedom for the free enjoyment of life. Hâfiz by this time was a notable literary figure. He had previously sung the praises of Muḥârîz al-Din's vizier Burhân al-Din Fâṭḥ Allah and now lamented the death of the vizier Abû Naṣr Lutf Allah (died 20th Oct. 1359, Cod. Pers. Monac., No. 67, fol. 135 v). It is therefore no cause for surprise that among Hâfiz's friends was the new vizier and former master of the mint Kâhâdja Kiwâm al-Din Muḥammad b. ʿAli (1358-1359-26th August 1363), a man who steered the ship of state with dignity and great authority. When the minister was ultimately executed with great barbriety by his sovereign, he was lamented by Hâfiz (Brockhaus No. 605) although the latter is careful to avoid the wrath of the tyrant. Hâfiz was professor of Kurâb exegetes in a madrasa in Shiraz (Divan-i Hâfiz, ed. Calcutta 1791, 2 v–4th introduction, p. 8) and tradition credits one of the two Kiwâm al-Din's, either the above mentioned Kiwâm al-Din Hasan or the minister Kâhâdja Kiwâm al-Din Muḥammad with having given the appointment to Hâfiz.

Hâfiz excelled in the ghazal. He ultimately collected his ghazals into a Divân, which he expanded by the addition of kâṣidas and other smaller poems, completing it in 770 (1365-1369) (ed. Calcutta 1791, text fol. 2 v, line 9). Now for the first time the poet's name became widely known beyond the bounds of his native town. The ruler of Hormuz (Turk-Shâh, according to Münedjiddin bâshi, Şârzâf al-İkhkûr, Turkish edition, i. 23; for other accounts of the genealogy and order of succession see the more reliable account of the great Portuguese historians Lasio de Barros, Decaydas da Ásia, Vol. ii. 1, Lisbon 1559, fol. 15 v–17 v, and Conto, Decaydas da Ásia, tomo i. 1, Lisbon occidental 1876, p. 579–583) likewise showed his appreciation of the poet, while the Muṣaffarîd Naṣrat al-Din Yahyâ, the ruler of Khorassân, who had once a very considerable influence (1351 to 1392), noted in his life-time as a miser, would have nothing of the impious singer of Shiraz (Brockhaus No. 577). In the reign of Muḥâmid Shâh I. (1378–1397), a ruler of the Bahâmid dynasty of the Deccan, Hâfiz was invited to his court by his minister of justice; but Hâfiz did not in the end accept. The Ikhlâs Ahmad, himself a poet (cf. above s. v. AHMED İHLÎ, i. 106 et seq.), is also said to have invited Hâfiz to Baghdad. Hâfiz, who in his time had sung the praises of Ahmad's father Sultan Lewis (Brockhaus No. 204) cautiously declined the invitation of his bloodthirsty son.

He was deeply affected in 1383-1384, when he lost his "brother" Kâhâdja Adîl at the age of 59 (Brockhaus No. 600). On the 9th October 1384 Sultan Shâhjasâ al-Din died; the period of Hâfiz's poetical activity lies practically within his reign. Hâfiz had often sung his praises and many anecdotes are related of their friendship. Before as well as after the latter's death Hâfiz was on remarkably good terms with the all-powerful vizier Djalâl al-Din Turâkanîh (died 25th Aug. 1385; Brockhaus No. 602), who had once devotedly served Sultan Shâh Shâhjasâ and on his death had secured the succession for his son Zain al-Abîdîn (1384–1387) against another claimant to the throne of Fars. In December 1387, on the conclusion of his great campaign of conquest in Persia, Timür came to Shiraz and spent two months there. It is possible that on this occasion the celebrated dialogue about one of the poet's verses, alleged to have been held between him and Hâfiz, took place (cf. Brockhaus, No. 577), though at the end of his life Hâfiz once more found a patron in the Muṣaffarîd Shâh Manşûr who seized the province of Fars shortly after Timür's departure and was celebrated by Hâfiz more than any of his predecessors in a tone of most devoted affection. Hâfiz who seems to have filled an office at the court of Shâh Manşûr (ed. Calcutta 1791, 2nd Intro., p. 8, l. 8) had need of patrons of high rank; for his property had long since slipped away from him, and too many, who professed to be his friends, did not hesitate to cavil at this grey-haired old man bowed down by debts (Brockhaus No. 639; No. 418, Bait 10). In 791 (1389), perhaps however not till 733 (began 20th Dec. 1389), Hâfiz died in Shiraz.
Hāfiz clung with touching affection to his native city of Shiraz, which he only rarely left and even then apparently only for short journeys. The story, however, that his travels abroad were confined to a journey to Yazd and the Persian Gulf seems to be a legend. He himself mentions his pilgrimage to the tomb of 'Ali al-Riḍā in Māshhad (Cod. Pers. Monac., No. 69, l.c.). Hāfiz never tires of singing the beauty of the women and boys of Shiraz, the charm of its river Ruknābād and the promenade of Muṣālla. He is buried on the latter in a beautiful tomb.

Hāfiz is the greatest writer of ghazals and the finest lyric poet that Persia has produced. He is restrained in his love-scenes and avoids the obscene. As a singer of the joys of wine he is unequalled by his predecessors or successors in the east. Of contemporary authors Hāfiz only mentions the panegyrictist Salmān (Brockhaus, No. 562) and of the older poets Firdawsī. The general line of thought in his poems raises the question whether Hāfiz's unflagging praise of love and wine is to be interpreted in the Sufi fashion as a profession of Muslim Pantheism. Apart from occasional exceptions, the answer is in the negative. It is also said that Hāfiz belonged to a Dervish order (which?) but we have no reliable literary authority on this point.

A number of Hāfiz's poems particularly of the earlier period have certainly been lost. After his death, his friend Muḥammad Gul-anāmī collected the scattered poems, arranged them in the original Diwān and gave the whole a preface. This fact of the posthumous arrangement of the Diwān by a strange hand explains the numerous variations in the number, the order as well as the text of the poems in the manuscripts, a circumstance which moreover is of importance for selecting the contents of the original Diwān of the year 770 and completing the poet's biography. Relatively the most complete is the printed edition of Abū Tīlib Khān (Calcutta 1791; 725 poems) but it is full of errors. The most carefully prepared from the point of view of textual criticism is that of Hermann Brockhaus, based on Süli's recension (Leipzig 1854—1863; 692 poems). Of commentaries four Persian and three Turkish are known with their authors' names (Eṭḥ, Grundr. d. iran. Phil., ii. 303, 304; cf. also Nos. 1142 and 1143 of the Catalogue of the Hamidiye Library in Constantinople, 1300 A.H.). The best of all the commentaries on Hāfiz is the Turkish of Süli (died 1591-1592), which has been often printed; he however omitted the few Shi'i poems of Hāfiz.

We possess three complete translations of the works of Hāfiz; two in German: 1 by Joseph von Hammer-Purgstall (2 vols., Stuttgart and Tübingen, 1812-1813) and 2 by Vincent Ritter von Rosenweig-Schwanau (in 3 vols., Vienna 1858—1864) as well as 3 an English one by H. Wilberforce Clarke with valuable notes (3 vols., Calcutta 1891). Hāfiz has inspired Western literature in Goethe's Westöstlicher Diwan (1819) and in Friedrich von Bodenstedt's Die Lieder des Mīrā Schaffa.

Besides his poetical works Hāfiz left glosses on Zanakhshār's Kāshf and on the Miʿrāj (see Diwan, ed. Calcutta, 1791, p. 8).

Al-Hāfīz, the eleventh Fātimid Caliph, whose real name was Abuʾl-Maimān (al-Maimūn) 'Abd al-Maḍjīd. He was born about the year 467 = 1074 (there is no general agreement about the exact date) at Ascalon, whither his father, Abuʾl-Kāsim Muḥammad, a son of the Caliph al-Mustaʿṣir, had gone on account of the famine then raging in Egypt (Abuʾl-Abbār, x. 468). But it was not till late in life that he began to play an active part in politics. He was a comparatively old man when in 524 = 1130 al-ʿĀmir [q.v., i. 320 et seq.] fell a victim to the Assassins without leaving a male heir and he was elected regent as the prince with the nearest claim to the succession, under the name al-Hāfīz Li-Dīn Allāh but not Caliph, as the imāmāt could only descend from father to son according to the Shi'i views then prevailing and as the accouchement of al-ʿĀmir's widow was shortly expected; in the end however she gave birth to a daughter. The new ruler had hardly taken up the reins of government when they were torn from him, when AbūʾAli Ahmad, son of al-ʿĀḍāl [q.v., i. 146], known as Kīlīfīt, rebelled against him with the support of the troops, overthrew the vizier appointed by al-Hāfīz and took over the office himself; he imprisoned the regent in the palace and having little regard for the legitimacy of the dynasty had prayers offered for the exalted Imām and coins struck in his name. For a year he ruled the supreme title of the new al-Majdīd succeeded in putting him out of the way and ascending the throne as Caliph. His first vizier was the Armenian Yānīs, who however soon seemed to be too powerful and was disposed of by poison after only three months of office. The Caliph now sought to govern the state alone — not unsuccessfully it appears — until the quarrels of his own sons, Ḥasan and Ḥādīrā, shook his power to its very roots. The corps of Ḍūyūṣhya took Ḥasan's side, while the Ṣafawīs championed his brother and after fierce fighting the latter were defeated. The arrogant attitude of Ḥasan, who was now practically omnipotent, and even treated his father in a most humiliating fashion, finally led to his fall and al-Hāfīz found himself forced, yielding to the clamour of the army, to have him poisoned by his Christian physician. The troops now effected the appointment of a new vizier, the Christian Armenian Bahnūm, but he favoured his countrymen and fellow Christians too much, so that he was disposed of after two years of office. With his exit closes the "Armenian period" of the later Fātimids which had begun with the rise of Badr al-Djamlī. He was followed by Rūḏawān, who however likewise soon quarrelled with al-Hāfīz, as he tried to arrogate all power to
himself and being himself a Sunni also cast doubts on the genuineness of his claim to be Imām. At the same time the Caliph was enraged because the vizier, to win popularity with the people, repealed the market dues and thus deprived him of a source of revenue. Thus new turmoil arose in which Rûdwan was finally slain. In the next year, the aged Caliph died of acute colic — the beating of a drum made of seven metals at the culmination of each one of the seven planets is said to have given him relief — at the age of about 75 (Ljumadād 544 = October 1149) in the midst of a period of mutiny and unrest. His reign already shows all the signs of the approaching end of the dynasty...

**Ḥāfīz Ābrū, a Persian geographer and historian.** His proper name was Shihāb al-Dīn Ābū Allāh b. Lūf Allāh b. Ābū Rashīd al-Khwāfī (not Nūr al-Dīn Lūf Allāh b. Ābū Allāh al-Hāravī, as is stated in European catalogues following an erroneous statement of Ābū al-Razzāk Samārākī). According to Ābī al-Razzāk, he was born in Herāt and educated in Hamādān. From his own works we only learn that he was considered an expert chess player, was at Timūr’s court and was on terms of personal intimacy with the sovereign himself and was able to write of the last campaigns and death of Timūr and probably of Shāhrukh’s campaigns also as an eyewitness. In 817 = 1414-1415 he was commissioned by Shāhrukh to write a geographical compendium based on an Arabic manuscript (probably a copy of the Bahkhī-Īṣākī), which had come into that monarch’s possession. The work (its title is nowhere given) is divided into two volumes: Vol. I contains, besides a cosmographical introduction, a description of the various lands (geographically following the direction W. to E.) from the Mahgrib to Kermān; in the two last chapters (on Fars and Kermān) the geographical description is followed by a compilation of the accounts of the political history of the districts concerned down to the author’s time. The author intended to deal in much greater detail in the second volume with the geography and history of Khorāsān and Mā warāʾ al-Nahr (the chapter on Khorāsān alone exceeds in extent the whole first volume), but no complete copy of this volume has yet been discovered; the Codex Fraser 155 (in the Bodleian Library) ends with the geography of Mā warāʾ al-Nahr (the history is wanting), while the other manuscripts only contain the section on Khorāsān. The cosmographical introduction was written in 820 = 1417, Vol. I concluded in 822 = 1419, while in the second volume the date of its composition is given as the following year. By command of the same ruler, Ḥāfīz Ābrū was in 820 = 1417 to combine in one work the most important chronicles of the world’s history; to prepare himself for this task he had the Persian Ṭabarī, the greater part of the Dīmāp al-Tawārīkh of Rashīd al-Dīn and the Zafar-Nāma of Nīgām al-Dīn al-Shāhī copied word for word; Ḥāfīz Ābrū himself only wrote the continuation of the Dīmāp al-Tawārīkh (from 703 = 1304 to the accession of Timūr) and of the Zafar-Nāma (events of the year 806—819 = 1403—1416) for this work. A complete copy is preserved in Constantinople (Dāmad Ibrāhīm Pāsha, No. 919). In 826 = 1423 Ḥāfīz Ābrū began to write a history of the world in four volumes for prince Bāsīnghūr (q.v., i. 596 et seq.); the two first volumes (prehistory, history of the Prophet and Caliphs) and the second part of the fourth (history of Shāhrukh up to 830 = 1427) have survived, the latter (certainly the most important part of the work) exists only in one very carelessly written manuscript (Elliot 422 in the Bodleian); ‘Ābū al-Razzāk gives most extracts from the lost portions (cf. i. 639 infra et seq.). A Persian writer of modern times, Muḥammad Ḥasan Khān, claims to have a complete copy of the Zabīdat al-Tawārīkh in his possession; but nothing has as yet been discovered about this copy. In 824—825 Ḥāfīz Ābrū by order of Shāhrukh published a new edition of the Dīmāp al-Tawārīkh; the portion of the work then considered lost was replaced by the first part of the Zabīdat al-Tawārīkh. The composition of his history of the world was interrupted by the death of the author on the 3rd Shawwāl 833 = 25th June 1430. As a compiler Ḥāfīz Ābrū incorporated much information in his work from writings which have since been lost; for the events and conditions of his time the pertinent sections of his work are an authority of the first rank. Cf. W. Barthold, ʿIḥāṣī ʿĀbrū i tāgī Sočinīānī in al-Muṣafīṭarī, St. Petersburg 1897, p. 1 et seq.; cf. also Žapikski, ed. arkh. obšč., xviii. 138 et seq.

(Edward William Mark Huntington)

**Ḥāfīz Āḥmad Pashā** was the son of a muʿāddhin native of Philippopolis. Owing to his rare accomplishments as a musician and a poet he was employed at the imperial Serai and became the confidant (muṣābiḥ) of the Sultan. After quitting the court service he was appointed dākhīnī bašī (at 22nd Shawwāl 1016 = 12th December 1607), but was dismissed in 1018. After this he became Governor-General (keleşbeg) of Damascus and remained there till 1027 (1618). Whilst he was there the first insurrection of the Druzes headed by Fāḵr al-Dīn broke out and Ḥāfīz Āḥmad Pashā specially distinguished himself at this period. He remained governor of several more Anatolian provinces, till we finally find him governor of ʿIyābībekir. In this office he managed to suppress the revolution headed by Bekir Şubashi, who had seized Būghdād, but he could not prevent Shāh Abbās from entering the city on the 28th November 1623. After the death of Ėrke Kāhmed Pashā (died 18th Rabi‘ II 1034 = 28th January 1625) Ḥāfīz Āḥmad Pashā became his successor as Grand Vizier; he was at the same time commander in chief of the Ottoman Army at war against Persia. In the following year he besieged Būghdād for 8 months (from the 12th ʿAṣar to the beginning of Shawwāl 1035 = 13th November 1625—beginning of July 1626) but without success. Owing to his lack of success he was relieved of his functions and returned to Constantinople where he made second Vizier of the Cupola. Though 60 years of age he now married a sister of the Sultan.
A few months after having been appointed Grand Vizier for a second time (29th Rabī’ 1 1041 = 25th October 1631) he was put to death in a most atrocious manner by mutinous Shi‘ahs (19th Redjeb 1041 = 10th February 1632); the presence of the Sultan himself, who had in vain tried to rescue him. Historians and men of his time especially note his strength of will, his upright and generous character, qualities that raise him far above the other statesmen of his era; it must be confessed however that both as Grand Admiral and commander-in-chief he had nothing but defeats to report.

**BIBLIOGRAPHY**

Besides the biographical notices in Hadżāj Khāla‘ī, Fadżlíka, ii. 145 et seq., (on which Maneğdžīm-başhi, iii. 676 et seq.; ‘Osmānīzāde Ta‘īb, Hadżāj-etu, p. 73 et seq. is based) and in the Sidqīlī ‘Uṣμānī, ii. 98 (inexact in its dates), there should also be consulted the passages relating to the history of this period in the chronicles of Pe‘wī, Hadżāj Khāla‘ī (Fadżlíka, Tafsīr al-Khāber, and Na‘īmā, and in von Hammer, Geschichte des Osman. Reiches, vol. v., and Zinkeisen, Geschichte des Osman. Reiches, vol. iv.; lastly Wüstenfeld, Fach-ar-din der Druzens fürst und seine Zeitgenossen, §§ 55, 125—132, 142—148.

(See Hāfīz al-Dīn; Hāfīz al-Mulk; for Hāfīz Raḥmat Khān; Hāfīz Raḥmat Khān. During the latter part of the 17th century, and the first part of the 18th, extensive settlements of Afghāns were made in the fertile lands of the Ganges valley. In the troubled times which followed the death of Awdāh, and especially after the invasion of Nadir Šāh, these brave and turbulent settlers began to form states under successful leaders of their own race and were generally known by the name Rohilla (properly Rōhīlā) or Highlander, a western Pandājabī adjective from rāh “a hilly country”; and the territory lying between the Ganges and the Himalaya, now comprised mainly in the Bareilly Division of the United Provinces, obtained the name of Rōhīlkhand, although the intruders spread beyond its limits. Three families in particular stand out among these chiefs, the Bare‘ of Aonla, and Bareilly, the Bangash of Farrukhābād, and Naqīb Khān of Bedghoor who was also connected with the Bare‘. Among these Hāfīz Raḥmat Khān Bare‘ was perhaps the most important. He was the son of Šāh ‘Alām, a Bārdā, whose family, originally from Shōrāwāk (now included in British Balīcūstān) had settled first in Čād Iyālā on the Indus, and afterwards in Hindūstān. A slave of Šāh ‘Alām’s (his son according to some writers) named Dā‘ūd rose to a position of importance in the country of Kāţēr (afterwards Rōhīlkhand), and was succeeded by his son (or adopted son) ‘Alī Muḥammad, commonly believed to be by birth a Hindī Dūst. Šāh ‘Alām followed Dā‘ūd to his new country and there Raḥmat Khān was born about 1708. Four years afterwards, probably at the beginning of Farrukhsiyār’s reign, Šāh ‘Alām was murdered by Dā‘ūd’s orders, and Dā‘ūd himself was killed soon afterwards. ‘Alī Muḥammad continued to develop the new state, and after his services against the fallen Sāyyīds of Bārīhā at the siege of Dājānath in 1150 (1737) he received the title of nawwāb. Raḥmat Khān was now associated with him and by his ability and courage contributed to the increase of his dominions especially after Nadir Šāh’s invasion. ‘Alī Muḥammad was soon at enmity with Saḍfār Dījāng, and after the fall of Awadh, whose influence in the Empire was now paramount, and in 1155 (1746) he was defeated and taken as a prisoner to Dījāng. Raḥmat Khān however by a bold stroke suddenly appeared at the capital with all his forces at a moment when it was destitute of troops, and not only obtained the release of ‘Alī Muḥammad but his appointment as Governor of Sirhind, so that when Aḥmad Šāh Durrānī invaded Indīs in the following year he was in a position to recover his lost dominions. After the accession of the Emperor Aḥmad Šāh to the throne of Dījāng in 1161 (1748) ‘Alī Muḥammad made peace with Saḍfār Dījāng to whom Raḥmat Khān rendered important services in obtaining the post of Ważīr of the Empire. In this year ‘Alī Muḥammad died having appointed Raḥmat Khān to be Hāfīz or Guardian of his sons, Dūnd Khān his cousin to be commander of the troops and other relations to other important posts. The elder sons ‘Abd Allāḥ and Faţī Allāḥ were hostages with Aḥmad Šāh Durrānī, and the others were minors. Hāfīz Raḥmat Khān became the actual ruler, and continued so throughout his life, his recognition of the claims of ‘Alī Muḥammad’s family being little more than nominal, Saḍfār Dījāng soon resumed hostilities, as the Bārdāh states stood in the way of his ambitions. After failing in a direct attack on Hāfīz Raḥmat Khān he induced Kā‘īm Khān the Bangash Nawwāb of Farrukhābād to attack him, offering him the Sā‘ā of Kāţēr as a reward. Kā‘īm Khān however was defeated and slain at Bādān, and Hāfīz Raḥmat Khān annexed that part of his dominions which lay north of the Ganges. Saḍfār Dījāng without any scruple immediately began to insult and plunder the family of his late ally, and the Rohillās chiefs incensed at this (being nearly connected with the Bangash Pākhāns) joined in the war. Hāfīz Raḥmat Khān himself was at first unwilling to take part in it, but did so after a force of Sa‘d Allāḥ (a son of ‘Alī Muḥammad) had been defeated. The Ważīr Saḍfār Dījāng was supported by a powerful Mahāṛtā army and by the Dūtās, and the forces of the two Pākhān States could not make head against them. Hāfīz Raḥmat Khān lost Aonla and Morādābād and was forced back to Lādhāng in the Terāi on the skirt of the Himalaya. The advance of Aḥmad Šāh Durrānī however in 1166 (1752) induced the Ważīr to make terms, Hāfīz Raḥmat Khān agreeing to pay tribute to him as ruler of Awadh, and also giving a bond for 50 lākhs of rupees to be paid to the Mahāṛtās. Aḥmad Šāh insisted on the recognition of the rights of ‘Alī Muḥammad’s sons who were with him, and a partition of the territory was made, an arrangement which did not last long. Hāfīz Raḥmat Khān extended his rule over Pilibhit (renamed Hāfīzābād by him), and this town with Bareilly becomes his principal residences. After his misfortunes he soon became more powerful than before. His adversary, Saḍfār Dījāng, who had lost the post of Ważīr, retired to his dominions in Awadh and died there in 1167 (1754). His son Shādīja al-Dawla was for a time allied with Hāfīz Raḥmat Khān, and the two combined to resist the Mahāṛtā army which had been in-
stigated by the new Wazir Ghāzi al-Dīn to attack the powerful Rādhan leader, Nadjīb al-Dawla, in Bidiārū. After the murder of the Emperor 'Alām-gir II. by Ghāzi al-Dīn, the Durrāni king again entered Indīs, calling upon all Muḥammādī chiefs to combine in resisting the growing power of the Mahrattās. Ḥāfiz Rāḥmat Kẖān contributed a large force, and his son ʿĪnāyāt Kẖān and his cousin Dūndī Kháns took part in the battle of Fīnpāt 1174 (1760). In reward the conqueror assigned the Etāwā district in the Dūndī to Ḥāfiz Rāḥmat Kẖān, but it was still held by the Mahrattās and he had to conquer it for himself. The Awadh attacks on the Bangash chiefs of Farrukhābād soon recommenced, and Nadjīb al-Dawla, now Wazir, was allied with Shujāʿ al-Dawla in this enterprise, but Ḥāfiz Rāḥmat Kẖān took the side of Farrukhābād, and was able to prevent its accomplishment. In the following year however he allied himself with Shujāʿ and Kāsim ʿAlī Kháns of Bengal against the English, taking part in the attack on the fort and the battle of Buxar (Bakṣar). After his defeat the Nawawīs of Awadh found refuge with Ḥāfiz Rāḥmat Kẖān at Bareilly, and after his further defeat at Kārā he made terms with the English, but no attempt was made to interfere with Ḥāfiz Rāḥmat Kẖān whose prosperity continued for some years longer, although the Mahrattā danger was never absent. His administration was good and he was especially praised for his abolition of transit duties. His position was however precarious, and no reliance could be placed on any treaty or alliance among the rulers of that period. Nadjīb al-Dawla in 1184 (1771) joined the Mahrattās in the Farrukhābād State, and Ḥāfiz Rāḥmat Kẖān was not able to retain his late acquisition of Etāwā. His son ʿĪnāyāt Kẖān rebelled against him at this period, and died soon after.

The death of his cousin Dūndī Kháns was a blow to him, and the death of Nadjīb al-Dawla made matters worse, as his son Zābīta Kháns to save himself became an agent of the all-powerful Mahrattās. To understand the events that followed, the universal terror inspired by the Mahrattā power must be realized. The English East India Company considered that the best course to prevent the whole of Northern Indīs falling into the hands of this race was to establish a strong Muḥammādī State capable of resisting their perpetual raids, the Empire of Dīlī having ceased to fulfill this function, and the State of Awadh under the Nawāb Shujāʿ al-Dawla was the only one likely to develop the necessary power. Ḥāfiz Rāḥmat Kẖān to promote this object bound himself to pay 40 lakhs of rupees to the Nawāb to be used against the Mahrattās. This agreement was made in the presence of the British General, and by the joint efforts of the allies the Mahrattās were for the time repulsed. Ḥāfiz Rāḥmat Kẖān, however, did not pay the stipulated sum, and the dispute speedily developed into war in which the Awadh army was assisted by a British force. Some of the Rōhīlās condemned their leader's action, especially Faqīr Allāh Kháns, son of ʿAlī Muḥammād, and the sons of Dūndī Kháns took no part in the war. The Awadh army and the British forces after expelling the Mahrattās from Etāwā invaded Rōhilkhānd. Ḥāfiz Rāḥmat Kẖān met them at Mīrānpūr Kārā, but was defeated and killed in the battle 1188 (1774). His territories with the exception of Rāmāpūr were annexed to Awadh, and Rāmāpūr was given to Fāqīr Allāh Kháns, and continues to the present day to be ruled by his descendants.

The stories of whole-sale desolation of the province which were circulated at the time by the opponents of the Governor General, Warren Hastings, are void of foundation: the mass of the population was unaffected by the change of masters, and Mustaʿṣāb Kháns, son of Ḥāfiz Rāḥmat Kẖān, in the Gulkānī-ī Rāḥmat, gives no countenance to such charges. The whole subject has been fully dealt with by Strachey.

**Ḥāfiz-ābād.** Town in the District of Gudrānwāla, Pandīs Jāb 32.4 N., 73.41 E. Founded by Ḥāfiz, a favourite of Akbār, and mentioned in the Aʿīn-ī Akbārī, as the chief town of a Mahāl. Formerly the Taḥil of Ḥāfiz-ābād was entirely in Gudrānwāla, now partly in Dīhāng. The dry tracts are now irrigated from the Cinīl canal, and there is also a fertile millet belt near the river.

**Bibliography:** Aʿīn-ī Akbārī, trans. Blochmann (Calcutta 1873); Imperial Gaz. of India, vol. XII.

**Ḥafrah, a district in Fārs, in the plain at the confluence of the Pulwar Rād and the Kurr. It is only mentioned by Ḥamād Allāh al-Musawīfī (Le Strange, p. 66 and 113) and seems to be unknown to the older Arab geographers. At one time it was sought to recognize in it ʿḤafīrānī, the name of a district derived from the name of the Elamite people Ha-pi-ri-ti. This was in the first place erroneous and very unsuitable, but it is now quite untenable, since V. Scheil has shown that the character "pi" in the name Ha-pi-ri-ti is also transliterated "ta-am" and the Elamite name of the Elamites is to be read "Ha-tamī" and not Hāpirī, cf. Scheil, Or. Lit. Zeit., viii. (1905), 203 and 250 et seq.; Dīlīg, en Perse Men., Vol. ii. n. xxiii. and xxvii. (1911); Weissbach, Keilschr. d. Achaim., in Ford. As. Bibl., (1911), p. 143; Zeitschr. d. Deutsch. Morgen. Ges., lxvii (1913), 292 et seq.; Noldeke in Grundr. d. iran. Phil., ii. 540. Ḥafrah is not identical with the district and towns of the same name of Kẖabar, the modern Kẖaf (south of Sarwīstān, west of Fās) on the map compiled by Ḥadjīlī Mirzā Sāyīd Ḥasan al-Šīrāzī. From the Arabic Kẖabar and the modern Kẖaf the original name may be supposed to have been Kẖapīr. The etymology of the name may therefore be connected with Ḥafrah.

(E. Herzfeld.)

**Ḥafṣ b. Sulaimān.** [See Aḥbāl al-Ṣalāma, i. 106].

**Ḥafṣ al-Fard.** Aḥb āmr or Aḥb Yāḥyā, an Arab theologian, according to the Fīhibīst, p. 180, was a native of Egypt and went to Baghdad
where he became a pupil of the Mu'tazilite theologian Abū Hudhayl [q.v.]. According to another account (in al-Murājda, Ḥāfīz al-Sādī, ii. 47) he had previously studied under the kāfi Abū Yūsūf and afterwards went over to the Mu'tazilis. He had many disputes with the Imām al-Shāfī'i, who had little good to say of him and his kalām and called him Munfarid ("isolated, solitary") in stead of Fard). (See H. Bauer, Die Dogmatik al-
Ghazālī's, p. 19). But he is said to have afterwards returned to orthodoxy, as did al-Aszārī after him, and to have preached the khāṣṣ al-qaf'al (that man's actions are caused by God). The Fihrist (and al-Shahrūši also) numbers him with Naḍīdār to the Mu'tahibūr school (absolute determinism) and quotes six works by him, including one against the Mu'tazilis and another against the Christians. Cf. also Horten, Die philos. Systeme der spek.
Theologen, p. 499, and the literature given there. (H. BAUER.)

HAFSA, daughter of the Caliph O'mar and wife of the Prophet. She had first married the Kuraishi Khusain b. Hudhayl, who had died childless in Medina soon after the battle of Badr. She must then have been about 20 years of age. Muhammad, who wished to secure O'mar's co-operation, married her after the "day of" Uḥad. She was once repudiated, it is not known on what grounds, but was restored to favour by divine command in consideration of her Muslim virtues, i.e. her devotion to prayer and fasting. In reality the Prophet feared to estrange O'mar. In Muhammad's ḥarīm Hafsa took the side of 'A'īsha against his other wives and threw her whole influence into the service of the "triumvirate" i.e. the party, which was endeavouring to secure the succession for Muhammad for Abū Bakr and O'mar. Like the other wives she received her share in the booty of Khaibar and on Muhammad's death an annual revenue which was entered in the Diwan and amounted to about 10,000 dirhems. On the whole, even in her father's Caliphate, she played a very modest part in striking contrast to the versatile 'A'īsha. On the occasion of the ḥuṣnāma, of the "judgment" of Adhrū [q.v.] Hafsa induced her brother, the insignificant 'Abd Allāh, to appear as a claimant to the Caliphate. She is agreed to have died in 45 in the reign of Marwān b. al-Hakam aged about 60. Her marriage with Muhammad was a childless one.

med's, ii. 74 et seq. (H. LAMMEN.)

HAFŠIDS, a Berber dynasty of northern Af
erica, which ruled ifriqiya for over three cen-
turies (626-981 = 1228-1574). It took its name from Shāikāb Abū Hafṣ; O'mar, chief of the Hintāta, one of the first disciples of Ibn Tūmart and one of Abū al-Mun'in's most faithful lieutenants. (Cf. the article ALMOHADES, i. 317b). His descendants enjoyed such esteem that, according to Ibn Kha
dūn, they alternated with the descendants of Abū al-Mun'in as governors of Spain, the Maghrib and Ifriqiya. It thus came about that Abū Mu-
hammad b. Abū Hafṣ was appointed governor of Ifriqiya by the Caliph al-Nāsir in 603 = 1207. He won great successes over Ibn Ghāniya (q.v., i. p. 285 et seq.) and retained his command till his death in 618 = 1221-1222. His son Abū Zaid chosen to succeed him by the Almohad chiefs in Tunis was dismissed, then replaced in office by lastly two of his other sons Abū Muhammad 'Abd Allāh and Abū Zakariya who were given office by the Caliph al-Abdal, the first being appointed governor of Ifriqiya and the second of Gabes.

Cf. till then the Hafṣids had remained subject to the authority of the Almohads, Abū Zakariya cast it off and founded an independent dynasty. Appointed governor of Ifriqiya by al-Mu'min in place of his brother, who had refused to recognise this caliph, he installed himself in Tunis (1228). Soon afterwards, giving the violent deeds and heterodox innovations of the Caliph as his reason, he left his name out of public prayer and himself took the title of Emir. In 634 = 1236-1237 he finally had prayers read in his own name. Successful expeditions won him Constantine, Bougie and Algiers. The Hwāra, who had risen, were severely punished, Tlemcen taken (639 = 1242) and Yagh\n\n
orānse forced to pay tribute. The Marinids and the people of Mīknās likewise recognised the suzerainty of the Emir of Tunis, whose sway now extended from Tripoli to Ceuta and Tangier and from the Mediterranean to the Zāb and Si
djīmānas. Valencia, Murcia, Seville, Xeres and Tarifa, being threatened by the Christians, summoned him to their help and placed themselves under his rule. When he died at Bône in 647 = 1249, he was highly regarded as the most powerful ruler in Muslim Africa.

The reign of his son and successor Abū Abū' Allāh al-Mu'tanṣir billāh (647-675 = 1249-1277) was not less brilliant. Emerging vic-
torious from the rebellions raised against him by his cousin al-Liyāni, by the Arabs Riyāh, Dawā\nwa etc., he succeeded in maintaining Hafṣid authority throughout the Central Maghrib. In 1270 he successfully resisted the expedition sent against Tunis by St. Louis and Charles of Anjou. His fame spread far and wide. At his court assembled the envoys of the Marinids, ambassadors from the King of Kānem and also Christian princes, who had sought refuge there and who took part in the expeditions into the Maghrib by the side of Muslim chiefs. While Abū Zakariya had been content with the title emir, al-Mu'tanṣir took that of Caliph and Amr al-Mu'min. After the capture of Baghād by the Tatārs (1258) he actually had a diploma granted him by the Grand Sharif of Mecca designating him the heir to the 'Abbasid Caliphate.

The foundation of the Hafṣid empire assured Ifriqiya some years of real prosperity and made Tunis not only the political capital but also the political and intellectual centre of the whole country [cf. Tunis]. The two first rulers of the dynasty erected numerous buildings the palaces, mosques, zāwijās, aqueducts and libraries. They attracted poets and scholars from all parts of the Muslim world, notably from Andalusia. The friendly rela-
tions which they maintained with the Christians, gave a new impetus to commerce between Europe and Africa. Treaties were concluded with Frederick II. of Sicily (1231), with Marseilles, Pisa (1234) and Venice and renewed in the reign of al-
Mu'tanṣir.
This brilliant epoch was followed by one of disorder and anarchy. Al-Wâhihi, al-Mustanṣir's successor, was deposed by his uncle Abū ʿIshāq (678 = 1279); the latter driven from his capital by the usurper, Ibn Abî ʿAmara, was slain near Bougie in 682 = 1283. The Ḥafṣids empire itself soon became divided into two kingdoms; that of Tunis, where Abū Ḥafs ruled, and that of Bougie (c. i. 766 c.e. etc.), held by Abū Zakariyya (683 = 1284). After twenty-three years of internecine warfare, in which the Arab tribes of Ifriqiya, and the Central Magrib and the ʿAbd al-Wādīs of Tlemcen joined, peace was finally restored. An agreement concluded between the king of Tunis, Abū ʿAsâda Muḥammad b. al-Wâhihi, and Abū Ṭabakâ, Sulṭân of Bougie, stipulated that the whole empire should fall to one of them on the death of the other. Abū Ṭabakâ was thus able to restore Ḥafṣid unity to his advantage only but for a short time, for in 1311, Abū Zakariyya b. al-Lihyāni, a Ḥafṣid prince, seized Tunis and slew Abū Ṭabakâ; while another, Abū Ṭabakâ, set himself up in Bougie. In 718 = 1318, however, Abū Yaḥyâ succeeded in regaining Tunis and reunited Ifriqiya and Central Magrib under his sway. His position still remained very precarious however. Forced to fight the Kabr and other Sulaimi tribes allied with the ʿAbd al-Wâdīs, as well as Abū Dorba, the ex-Sulṭân of Tunis, Abū Yaḥyâ was driven from his capital on four occasions. He finally overcame his adversaries with the support of the Marinids, with whom he contracted a close alliance. A Ḥafṣid princess married Abū ʾl-Ḥasan, son of al-Saʿîd, Sulṭân of Fâs. By the end of his reign, Abū Yaḥyâ had succeeded in restoring order in Ifriqiya; he had reduced to obedience the towns of the Djarâb, which, taking advantage of the disorder had constituted themselves independent principalities, and, although Tripolitania slipped from him, he at least succeeded in regaining Djarâb, which the Christians had seized at the end of the preceding century (cf. ʿDjarra, BILĀD-EL-DJARÂD). On his death in 747 = 1346, disorder broke out once more. The massacre of the Ḥafṣid princes by Abū Ḥafs, who had usurped the power to the detriment of the legitimate heir Abū ʾl-Abbas, provoked Marinid intervention. Sulṭân al-Ḥasan advanced on Ifriqiya, occupied Constantine and Bougie and entered Tunis, which had been abandoned by Abū Ḥafs (748 = 1347). But being defeated in the following year near Kairawân by rebel Arabs, and recalled to his own country by the rebellion of his son Abū ʿInâ, the Marinid Sulṭân could not retain his conquests. Ḥafṣid princes re-established themselves in Bougie, Bône and Constantine. One of them, al-Fadl, even re-entered Tunis, but fell a victim to a plot led by his vizier Iba Tâfarîdîn. The Marinids besides were again able to invade the Ḥafṣid kingdom. Abû ʿInâ seized Bougie in 1353, Constantine, Bône and Tunis in 1357 (758), but when he attempted to check the excesses of the Arabs, who only saw in these wars a pretext for devastation and plunder, he found himself abandoned by his army and had to evacuate Ifriqiya. The Ḥafṣid Abû ʾIshâq II. seized the opportunity to re-enter Tunis. The situation of the kingdom nevertheless was still deplorable; anarchy continued. Three princes were reigning simultaneously, Abû ʾIshâq II. at Tunis, Abû ʿAbd Allâh at Bougie, Abû ʾl-ʾAbbas at Constantine. The latter finally remained sole ruler (770 = 1368-1369). He, endeavouring during his reign to restore peace and order, placed a curb on the turbulence of the Arabs, forced the Shaikh of the Djarâb, Gafsa and Gabes to submit to him. This restoration of Ḥafṣid power continued in the reign of his son Abû Fâris ʿAli (797-837 = 1393-1434), with the exception of a narrow power in the Magrib. He was thus able to intervene at Tlemcen, first in favour of the pretender Abû ʿAbd Allâh against the Sulṭân Ṭabâb al-Malkî, and again in favour of ʿAbd al-Malkî himself. After the death of this king he seized Tlemcen and placed a Zayânî prince on the throne, who recognised the suzerainty of Tunis (1431). Reviving the tradition of his ancestors, Abû Fâris was a literary ruler and friend of the arts. Al-Kârâwânâ gives a long list of all kinds of buildings (mosques, āwiyâs, schools, libraries and hospitals), built under his auspices.

His successors, Abû ʿOmar ʿUlûmân (834-893 = 1434-1494), Abû Zakariyya Yaḥyâ (893-932 = 1488-1494), Abû ʿAbd Allâh Muḥammad (889-932 = 1494-1526), patrons of literature but lacking vigour, allowed the Ḥafṣid power once more to decline. By the end of the xviith century Constantine, Bône and Bougie had regained their independence; Tripoli, Gabes and the townships of the Djarâb had constituted themselves republics, and the Arab tribes of the interior refused allegiance to the Sulṭâns of Tunis. During this period the Ḥafṣid sovereigns observed a policy towards Christians identical with that of their predecessors. The treaties of commerce concluded in the xxiith century with the Genoese and Pisans were renewed in the xviith, others were concluded with Aragon, Majorca, Montpellier, Venice and Florence. Tunis, Bône, Bougie, Sfax, Gabes and Djarra had fundûks (q. v., ii. 117b) where Christian merchants stored their goods. But the acts of aggression committed by Christian powers (occupation of Djarra, attack on Mehdiya etc.), on the one hand, and the increase of piracy on the African coast from the last years of the xviith century on the other, rendered friendly relations more and more difficult to maintain. The ports of the Ḥafṣid kingdom became the regular refuge of the corsairs; the king himself, who held the bajârân power itself exposed to the reprisals of the Spaniards, when they thought of establishing themselves on the most important points of the African coast.

They were, however, anticipated by the Turks. In 1534 Khâireddîn [v. ḪAIR AL-DÎN], in response to an appeal by a Ḥafṣid prince, who had escaped the massacre of his brothers by Mûsâ Ḥasan, successor of Abû ʿAbd Allâh Muḥammad, seized Tunis. Mûsâ Ḥasan was able, however, through the support of Charles V., who took Tunis in 1535, to regain possession of his kingdom, but he had to pay tribute to Spain; he was moreover only able to maintain his position in his capital with the help of the Spanish garrison of La Goulette. With the loss of a strip of land between Tunis and Bizerta, the whole of Tunisia slipped from his rule. He was finally dethroned and blinded by his son Ahmad Sulṭân (1542). This ruler retained the reins of power till 1569, when Eulji ʿAli took Tunis to prevent the Spaniards using the town as a base of operations against the Turks. As a result of the victorious expedition of Don John of Austria the
Hajids regained the throne for the last time in 1573, but the next year Sinān Pasha took Tunis and La Goulette (q.v. = 1574). The last representative of the Haṣids, Mullā Muḥammad was led captive to Constantinople and the Turks definitely established themselves in Tunisia.

Haidar. A mem. on the life of Haṣīd, is of constant receipt in the histories of Islam. During this period a woman is ritually impure, may not perform the ṣalāt nor the ṭawaf, nor fast, nor touch a Kūrān, nor repeat a verse from it nor enter a mosque. Cf. Juyboll, Handbuch des Islam. Gesetze, p. 174 et seq. She only becomes ritually pure again on the completion of her course after a major abortion (gḥal, q.v. ii. 167). According to Kūrān, ii. 222, sexual intercourse with her during this period is forbidden, but it does not, like the Jewish law (Lev. xv. 19 et seq.), prescribe seven days’ separation.

Haidar, son of the Narrak of the 1101 in Arabic, which was given him on account of the strength of his neck and forepaws (Lisān al-ʿArab, v. 249). ‘Ali’s mother first of all gave him the name Asad after her father; she herself was called Fātimah bint Asad; but when Abū Ṭālib returned from his journey he gave him the name ‘Ali. In some poems ascribed to him he gives himself the name Haidar, but Ibn Makarim thinks this is only to suit the metre; nevertheless Haidar is supported by a poem, which Ibn Abī Majāṣ al-Murādī, of the same tribe as his murderer, composed on the occasion of his death (Tabari, Annals i. 3466, 11). (Cf. Huart.)

Haidar (Shāhīk Haidar), son of the Sāfawi Shāhīk Dnund of Ardabīl (grandfather of Ismā’īl Shah) and of Khadiżeh Begam, Uzun Ḥasan’s sister. On the death of his father, who was killed by an arrow in a battle against Khalīf, Sulṭān of Shīrāz (shortly before 860 = 1456) he was recognised as his successor by his followers. His uncle Uzun Ḥasan gave him his daughter Ḥamāma Begam, who was called ’Alam Shāh, to wife. She became the mother of Sulṭān ‘Alī, Sālid Ibrāhīm and Shāh Ismā’īl. When Uzun Ḥasan died, Haidar collected his retainers ostensibly for a raid into Georgia, in reality however to wreak vengeance on Shīrāz; but the ruler of this land, Farrukh Yasar, supported by his son-in-law, Yākūb Beg, offered a stubborn defence; Haidar fell in battle at the head of his army in 898 = 1498. He wore a scarlet turban with two white peaks, according to the story, on account of an appearance of All to him in a dream; whence the name Tāwīrī Haidarī, which was given to this headgear, which he also prescribed for his followers. It is from this that the Turkish term kyzyl-bāş (redhead), applied to the Persians of the Safawī period, is derived. This story, however, may be entirely an invention to give the name kyzyl-bāş an honourable origin (Noldeke).

Soc., April 1896, p. 253); Johannes Ros, Physicis, Vera, costitus et statuatur, de’s Soft (Venetia s.d.), i. 1; Chardin, Zoro, Commentarii del Viaggio in Persia, Venice 1557; Mehemdji dismissing, Tūrīq, iii. 118; Schefer, Chrönsthmathe psacrai, ii. 76. (Cf. Huart.)

ḤAIDAR 8. ’Ali Ḥusainī Rāzī, a Persian historian, author of the Tūrīkh-i Haidarī, begun in 1020 = 1611–1612 and concluded in 1028 = 1618–1619, when the author was 35 years of age; cf. Persch, Verzeichnis etc., Berlin, No. 418 (p. 408 et seq.); Ch. Rieu, Supplement to the Persian Catalogue, p. 20 et seq. The author himself gave no title to the work and did not dedicate it to any ruler; this fact as well as its explanation in the preface shows, as Persch has pointed out, independence remarkable in an Oriental”. The arrangement of events is also peculiar in that it is not chronological but geographical; the work is divided into five parts (bāb), each of which is devoted to a separate area: 1. The Arab world; 2. The Persian world; 3. Central and Eastern Asia; 4. The West; 5. India. The chronological order is observed only within each bāb. The first volume which is devoted to the "Prophets, Caliphs and Sultans” was to be followed by a second on philosophers, scholars and poets’. Rieu’s assertion that the work contains "no original matter” but can only be described as "comprehensive and useful compilation of standard historical works" does not quite agree with the facts; the narrative is frequently brought down to the author’s time and therefore contains much information which could not have been taken from written sources. The preface was published by Wilken (Mirdadndi Historia Gasperidarium, p. xii. et seq.). The three chapters given by Ch. Schefer as an appendix to his edition of the Tūrīkh-i Nartshahk (p. 230 et seq.) from what he calls an anonymous "Madīma al-Tawārīkh” composed towards the end of the xvith century” are in reality taken from the Tūrīkh-i Haidarī. No details of the MS. are given by Schefer; it is therefore not known whether it is identical with one of the two mentioned by Blochet (Catalogue de la Collection... formées par Ch. Schefer, p. 60, No. 1330–1331) Madīma al-Tawārīkh (sic), which are said to contain a "history of the Mongols down to Shāh Ṭahmasp” (sic) or with a manuscript in the British Museum; in the latter the author’s name is certainly not mentioned and the work has been given the title Madīma al-Tawārīkh by the first owner of the
HAIDAR — HAIDARĀBĀD.

manuscript. Cf. also Elliot, History of India, vi, 574; W. Barthold, Turkestan, ii. 57 et seq.
(W. BARTHOLD.)

HAIDAR ’ALI KHĀN BAHĀPUR, founder of the short-lived Mughal dynasty of Māisūr, was born in 1722, the son of Fatḥ Muḥammad Khān, a soldier of fortune, and a Nāvēštā lady. He first distinguished himself at the siege of Devanhalli, captured in 1749 for the rādja of Māisūr by his minister Nandjarādī, and was rewarded with the command of 50 horse and 200 foot. His advancement was rapid and he soon became fawāyiddār of Dinīgul and ḍajūřārād of Bāngalor. He gained great credit by the success of his operations against the Mārāḥās in 1759 and was saluted as Faṭḥ Ḥaidar Bahādur. He enriched himself by indiscriminate plunder and expropriation and by the enforcement of the most extravagant demands against the state which he served. He was instrumental in degrading his former patron, Nandjarādī, and after this service added four districts to his fīqeh, which already included more than half of the Māisūr state. In 1760, when Ḥaidar had sent most of his troops to assist the French against the British, the rādja’s party made a determined attempt to rid the state of a servant who had become its master. Ḥaidar was defeated by Khande Rāwā who had succeeded Nandjarādī as minister, and reduced to great straits, but by means of strenuous exertions and the expedient of enlisting the assistance of Nandjarādī, whom he afterwards ignored, succeeded in making himself stronger than ever, and imprisoned Khande Rāwā in an iron cage. Ḥaidar was now the real ruler of the state of Māisūr and it was only from policy that he retained the rādja as a pageant. On his death he formally acknowledged his son, but kept him in confinement. Ḥaidar now coined money in his own name and extended his dominions westward to the coast, where he established an arsenal, but, having encroached on some districts claimed by the Niẓām and the Mārāḥās, was involved in hostilities. Though defeated by the Mārāḥās he contrived to retain his conquests when the allies invaded his territory he bribed the Niẓām to join him against the British. He and the Niẓām were defeated and the British compelled the latter to enter into an alliance with them. In 1769 the British made peace with Ḥaidar but during the next thirteen years he was frequently at war with them, in alliance with the French, and died in camp near Arkā in Dec. 7, 1782, while invading British territory. He was succeeded by his son Tīptū.

ḤAIĐAR-MĪRZA, a Persian historian, author of the Ta’rīkh-i Raḵšābī, born in 905 = 1499-1500, died in 958 = 1551. On his descent cf. the article DUGHLT (i. 1079 et seq.); through his mother he was a grandson of the Cāgḥātāi Khān Yūns and a cousin of Bābūr. Most of our knowledge of his life is gleaned from his own work; Bābūr (ed. Beveridge, p. 11) devotes a few lines to him; the Indian historians Abu ‘l-Faḍl and Fīrāqta give some information about his later years. His real name was Muḥammad Ḥaidar; as he himself says, he was known as Mīrza Ḥaidar; Bābūr calls him Ḥaidar Mīrza.

After the assassination of his father (914 = 1508) he had to flee from Bakhshārī via Badakhshān to Kābul, which he reached in 915 = 1509. Received like a son by Bābūr, he took part in the victorious campaigns against the Uzbeks and in the reconquest of Bakhshārī and Samarkand, but abandoned his benefactor in the black year 918 = 1512, betook himself to Fargāna to the Mongol prince Saʿīd Khān, received from him the title Gūrgān (son-in-law) and went with him to Kāshghar and Yarkand. In the Mongol empire as restored by Saʿīd Khān he held a prominent position; by the Khān’s orders he carried out several campaigns to distant lands like Badakhshān, Kāfarīstān, Lakād and Tibet. On the Khān’s death in 939 = 1533 and the accession of his successor ʿAbd al-Raṣḥīd, who was no friend of the house of Dughštā, Ḥaidar Mīrza had to leave the country and go over to the Tūmūrīs, against whom he had fought as recently as 936 = 1529-1530 in Badakhshān. In 948 = 1541 he succeeded in conquering Kašmīr and founding a practically independent kingdom for himself there, although his coins were struck first in the name of the native prince Nāzūk Shāh and later in the name of the Emperor Humāyūn; in 958 = 1551 he was slain during a rising of the native population.

It was while ruler of Kašmīr that Ḥaidar composed his work which was called after his former sovereign ʿAbd al-Raṣḥīd. The second part, which describes the vicissitudes of the author’s life and the events of his time, was written as early as 948-950 = 1541-1544, the first (history of the house of Carghātā from the accession of Khān Tughrūlk Tūmūr in 748 = 1347-1348) not till later (951-953 = 1541-1544). As Bābūr testifies, the author had received a good literary training, and this is also apparent in his work; the book had a great success not only among Ḥaidar’s compatriots (it was twice translated into Eastern Turk) but in other countries also (India, Turkestan and Persia) and was used as an authority by all authors, geographers and historians who have discussed the events of the xii. = xvi. century. The historical narrative as well as the geographical sections inserted in it (descriptions of various provinces, towns etc.) give a wonderful picture of the conditions of his time. In Russian extensive excerpts from the Ta’rīkh-i Raḵšābī have been published, in particular by Velaminov-Zernov (Izvestovaniye o kaspovskikh carakh i carevichax, ii. 130 et seq.) and Salesmann (Mélanges asiatiques, ix. 321 et seq.) while an excellent English edition has been prepared by N. Elias (The Ta’rīkh-i Raḵšābī of Mīrza Muḥammad Ḥaidar Dughštā, an English version, edited by N. Elias, the translation by E. Denison Ross, London 1895; cf. the review by W. Barthold in Zapiski vost. obš. obsčeh. x. 215 et seq.). No complete edition of the text has yet been published. Cf. also Elliot, History of India, v. 127 et seq. (W. BARTHOLD.)

ḤAIĐARĀBĀD, now the capital of the Niẓām’s dominions in the Dakhān, was founded in 1590 by Muḥammad Kull Kūṭh Shāh, fifth king of the Kūṭh Shāhī dynasty of Golkonda, who at first named it Bhānagār after his favourite Hindu mistress Bhāgnātī, but afterwards, regretting his infatuation, changed its name to Ḥaiḍarābād, the city of Ḥaidar, or ’Alī. In 1591 he made it his capital and it remained the capital of the kingdom until the extinction of his dynasty in 1687.
Haidarabad then became the chief town of a sultanate of the Mughal empire and in 1724 passed into the possession of Cîn Kâîh Khan (Aasf Dîjâh, Nîjân al-Mulik) who made himself viceroy of the Dakhân and established his virtual independence of Dîhîl by defeating Mubâzîr Kâhan at Shâkarakhâля, renamed Fathâkheljâ by the victor, in Bêrjâr. The principal buildings in Haidarabad are the Cîr Nîmâr, a large building originally designed as a college but now a central police station, the Dîjîmâheid, built by Muhammad Kûlt, the Cîr Kâmîn, a market place, and the Mûkkâh Masjid, a magnificent mosque founded by Muhammad Khammâd, sixth king of the Kuth Shâbi dynasty, but left unfinished until after the capture of the city in 1687 by Awrangzib, who completed it.

(T. W. HAIG.)

HAIDARÂBÅD (Sindhi). The name of a town and district in the province of SÎndh. The district lies between lat. 24° 13' and 27° 14' N. and long. 67° 52' and 69° 22' E. It has an area of 8291 sq. m., and a population of 689,030 of which 75 per cent are Muslims, chiefly Baloche and Sindhis of Râjîpât and Dîjât origin, of whom the Sâmâ and Somrâm are the principal. There are also many persons claiming Arab descent. The Hindu population is concentrated in the towns. The Balochees have been to some extent naturalized and have mostly lost their original language. The Indus bounds the district to the W. and it extends eastwards to the dry tracts of Thar and Pîrjâr and southwards to the Rann of Kâch. The soil is barren except near the Indus where it is irrigated by the Jamrâo and Nâsrat canals.

The city of Haidarabad is of modern origin. Under the Mughal Emperors Thatta was the capital of the sultanate of Sindh. Haidarabad was founded in the middle of the eighteenth century by Ghulâm Shâh Kâlhûrâ, and soon after his death the Kâlhûrâs were superseded by the Tâlpur Balochees, whose Amirs made Haidarabad their capital. They continued to rule there until 1843 when Sindh was annexed to British India after the battle of Mîjâni. The capital was transferred to the port of Karâtî, and Haidarabad lost the importance it had obtained as the seat of government.

(M. LONGWORTH DÂMES.)

HAIFA, a port at the foot of Mount Carmel. The name is not found in the Old Testament and is first found as Haîfâ in Eusebius and as Haifa in the Talmud. After the Arab conquest of Palestine Haifa, which was overshadowed by Akka, did not play an important part and it is not till the middle of the 6th century that we have a brief description of it by Nasir Khusraw, who mentions the palm groves and the large barques built by its inhabitants. In 1100 the town was taken by the Crusaders and attained some importance, as is clear from Idrisi's account of it, during the Frankish period as the harbour for Tiberias and a good anchorage. But by 1177 Salâh ad-Dîn regained it for Islam. In modern times Haifa has risen at the expense of Akka as a place of call for steamers and terminus of the railway. The modern town does not occupy the site of the ancient Haifa but lies to the east of it.

Hâik (hâik), a piece of cloth of rectangular form, on the average about ten yards long and three breadth, which is worn as a garment by men and women in North Africa. Dottûe distinguishes: 1. the hâik for men, made of wool, which is worn alone or also as the principal garment; it is more frequently called kâthan hâik; 2. the over- hâik of silk or fine wool, which townspeople wear over their other garments; it is worn more for decorative purposes and is likewise often called kâ than also; 3. the irûr, likewise a rectangular piece of cloth, without seams, usually of linen or cotton, worn by Beduin women in North Africa; 4. the hâik, which women, particularly in the towns, wear above their other clothes when they go out.

The hâik is worn in North Africa itself by men on the looms with low warp by women with high warp; but in Lyons also a highly prized hâik cloth (of silk and wool) is manufactured, which is destined not only for North Africa and sold nowhere else, not even in Lyons itself.

On the manner in which the hâik is put on and worn, cf. for the men the illustrations in Dottûe (Maurâkêsch, i. 255—259, Paris 1905), for women of the towns, see A. Bel and P. Riaud, Le Travailler de la Laine à Tlemçen (Algiers 1913), p. 107.

There is an excellent treatise on the hâik in the above mentioned work of Dottûe (p. 248—252). On the manufacture of the hâik by native weavers, cf. Le Travail etc. p. 109 and pass. This book as well as Archives Marocaines (Vol. xv. part 1) is now to be added to the excellent bibliography given by Dottûe. (ALFRED BEL.)

HAIMA AL-KHÂRIDJĪYA (“Outer-Haima”), in Niebuhr Heime al-Alsafl “Lower-Haima”), also called Hûdîrî, a district in South Arabia, between Harîz [qv.] and Hoodîr Shûhaib [qv.]. It is an isolated (small district) of the kâlad (large district) of Manîkha [qv.] and stretches from Bawân (probably Yoûn in Niebuhr, 8570 feet above sea-level, with a market) to Bait al-Mâdhî. The capital is Mehfâk (Möfâh in Niebuhr with hisân). North of Mehfâk at Dîbel Manâr (8700 feet above sea-level) lies Sîk al-Khâmîs, a spur of the Karn al-Wal (“deer-antlers”, which it resembles; highest pass 9186 feet) which is connected with the Hûdîrî. Between Bawân and Sîk al-Khâmîs on the Wâdî Abîr al-Hâjî (tributary of the Wâdî Saḥâm) lies the village and citadel of Kûmânî. Of places in Haima we may also mention: I’djî al-Dîjâhdîb, Alkassân and Ruhiuniya (the two latter now in ruins). There are few coffee plantations or cornfields in Haima. In Niebuhr’s time the district of Haima was rich in vines.

Haima al-Dakhâliyya (“Inner-Haima”) in Niebuhr Heime al-Ala “Upper-Haima”) adjoins Haima al-
Ka'fridjiya, with the villages of Yanā' and 'Ur (Urr). Haïma al-Ka'fridjiya corresponds to Balad al-Akhūrūd in Hamdān. It belonged to the Sarāt Alhān and lay near the Wādi Shāhām between the Maḥāsa and Haïma (Haïf). It took the name of Akhūrūd from Akhūrūd b. al-Ghawāh b. Sa'd. The Balad was inhabited by the 'Uṣalāh, a clan of the Hamdān, who still live in Kumlān. Ḍhāt Djīrīn (which E. Glasser proposes to identify with Mefāk) lay in the centre of their land. Besides Ḍhāt Djīrīn, Hamdān mentions the villages already mentioned of al-Djāhāḍib, 'Alasān and Yanā', (he reckons the two latter to Lower Jādūr.) The language of the people of Balad al-Akhūrūd was intermediate between good and bad Arabic.

**ḪAI'R or ḪAIR,** originally a place-name; for example the sacred district of Hebron (Ḫabrūn or Ḫabrā'), which contains the graves of the Jewish patriarchs (Yāתק, i. 195, wrongly pointed Ḫair), Makaddās, p. 172, 10); also the area sacred to Ḫusain in Kerbelā (Yāתק, ii. 189-190, 282; Ṭabarī, iii. 752). The passage in Ṭabarī is also historically important as it testifies to the existence at so early a period of the cult of Kerbelā with official priests, who were supported by endowments founded by Umm Mūsā', mother of the Caliph al-Mahdī. A large quarter of Samarrā was also called Ḫair; it included the whole hinterland of the central town and consisted of lands which had originally formed part of Mu'tasim's great zoological garden. The latter bore the peculiar double name Ḫairān (cf. Ṭabarī and Yā لكم, Ṭabarī, s.v. Ḫair). Hair is also found as the name of a park in the ʿUṣūn al-Tawwālīḥ of Muḥammad b. Shaẖīr (in Sauvage, Journ. Asiat., 1896, May-June, p. 377), where a park, Ḫair Sarḥān, belonging to Sarḥān b. Manṣūr al-Rūmī, Mu`tawwila's secretary is mentioned; it lay at the Kaṣān-gate of Damascus and was afterwards called Bustān al-Ḳīṭṭ, the "Cat-garden." There was a Ḫair al-Haḍājīdā in Baṣra and it is mentioned this was dry, with which fact is probably connected the erroneous meaning "basin," which was given to the word (according to Farāḥī in Yā لكم and Maḥāḥīd, p. 282). There was a "day of the Arabs" at a Ḫair Mahma in Yamāma (Yā لكم and Maḥāḥīd, l. c.). Lastly Makaddās calls the harbour of Tyre Ḫair (p. 164 Cod. C); and according to Ṭabarī, i. 745, Buḥkattānas built a hair in Ḫira as a market for the Arab merchants there.

From these illustrations it is clear that the meaning of the word is "enclosed area, tenement;" i.e. similar to that of the originally descriptive name al-Ḫira. Ḫair might therefore also be a loan-word. As in the case with Ḫayyār the plural varies as well as the singular: Ḫirān, Ḫirān, Ḫuwār. The lexicographers give the meaning "park, pen." An etymology goes back to Asmāʾ, according to which the word means "a place with a depression in the centre and higher round the edges" (read Ḫưr statt Ḫuṭr in Yāたく, i. 188). This etymology must be described as false as well as that which attempts to explain the word from the motion of water in it (yaṭaḥāfa), or connect it with the many variants of the word Ḫûr (cf. Lane, Fieytag, s.v., de Goeje's glossaries to Balāḏūrī and Bibl. Geogr. Arab., ii.).

**ḪAIṢA BAĪṢA,** the nickname of the Arab poet Șīhāb al-Dīn ʿAbū ʿl-Fawāris ʿSād b. Muḥammad b. Saʿd b. ʿAl-Šāfiʿī al-Ṭamīmī, who claimed to be a descendant of ʿAqīm b. Saʿīfī (cf. ʿUṣr al-Ǧibāl, Cairo 1286, i. 117 et seq.). He is said to have received the name Ḫaiṣa Baīṣa because he once used the expression (cf. Liān,
viii. 274 and 285 et seq.; Grünert in Verhandlungen der VII. Orient. Congresses, Vienna, 1888, Sem. Sect. p. 202 et seq.,) to express the great excitement of a crowd. He does not seem to have known the date of his birth himself; according to a note in Kharidat al-Kārīf, f. 70v, 2, he was in the fullness of manhood (fi rai‘ān ‘umrīhi) in 520 (1126). He studied Fiḥṣ under the Shāfi‘ī Қaḍī Muḥammad b. ‘Abd al-Karīm al-Wazzīn (cf. al-Subkī, Tabākīt al-Shāfi‘īyya, iv. 77 et seq.) in Ḳayy, but at the same time followed his inclination for belles lettres and attained a great reputation as a poet and writer of the classical Orients. In his dictionary, the Ẓahīrīn, he was considered an authority on poetry as well as on Bedouin dialects and used always to speak pure Arabic; he was also fond of dressing as a Bedouin, which gave an opponent subject for a satire. He had many a "flying" with the poet Ibn al-Kaṭānīn [477(8)—558] celebrated as a satirist and is said to owe his nickname to him. Among his patrons special mention may be made of the vizier Shāraf al-Dīn ‘Ali b. Ṭārād al-Zainabī (under the Caliphs al-Mustarshīd and al-Muqtasīf), Ibn ad-Dīn al-Ţibrānī’s Khāridat al-Kārīf contains a long series of fragments of his poems. In addition to a number of verses descriptive in matter, there are a large number of panegyrics addressed to Caliphs al-Mustarshīd, 512—529 = 1118—1135, al-Musta‘fī, 566—575 = 1170—1180, Shāṭījk Şayāt (e.g. Muḥmād b. Muḥammad b. Malik Shārī, 511—525 = 1117—1131, Ma‘ūd b. Muḥammad b. Malik Shāh 527—547 = 1133—1152), viziers, particularly the vizier al-Zainabī, and other nobles; cf. above ii. 150; fragments of elegies (Maraštī) and specimens of his letters are also preserved in al-Ţibrānī’s work.

The Berlin manuscript, Ahlwardt, Versetznick, No. 8628, 3, contains 7 short beggling letters from the poet to the Caliph and the latter’s reply.

Haïsa Bâïsîa died on the 6th Shâbân 574 (17th January 1179) in Baghdaad.

Biographical: Ibn Khallîkîn (ed. Wûstenfeld), No. 257, 724, 780, 817 (transl. de Slane, i. 559 et seq.); 337, 589 et seq.; 237 (v. 119 et seq.); al- Kittûbî, Ṭahrîr al-Wâlayât (ed. Bûlûk, 283), ii. 392 et seq.; Imam ad-Dîn al-Ţibrânî, Khāridat al-Kârîf, Ma. in Leiden, 21st. Goli. (Cat. Cod. Orient., ii. 208 et seq.), f. 44v—75v (p. 77—138); Houtsma, Recueil de Textes relatifs à l’Histoire des Séjourcides, ii. 175, 212; Ibn Abî Usâfîbî (ed. A. Muller), de Slane, i. 285 et seq. (ed. Ahlwardt, xi. 91, 106, 215, 300; al-Îštâkî (ed. Ahlwardt), p. 355 (C. Van Arendonk), Ĥâîya (A.), the snake. When God sends a serpent on the ground, it falls on the land of Siǧfjân, so that to this day there are still many snakes there. The land would be uninhabitable if large numbers were not devoured by the ‘irbadd, a large snake.

There are many kinds of snake. The most notable is al-ajzā‘ or al-sīlī; it is exceedingly large and has a human face; it said to retain the same appearance for thousands of years and can slay a man by looking at him. The kind called al-mukhštala‘t by Damirî and al-mukhš by Khawānî, who has a little crown on its head, is the most deadly. It burns up all that it crawls over; no plant grows near it, birds fall dead when they cross its path, and no animal can pass without having its nails driven into its body. It kills by its hissing even a bowshot off, its look also is mortal and whoever is bitten by it dies at once. Similar things are told of other kinds.

Snakes reach the age of 1000 years; they cast their skin every year. They lay 30 eggs after the number of their ribs (l), but the ants collect on the eggs and destroy them so that only a few are hatched. The eggs of the snake are longish and dirty in hue, or green, black, white or spotted. In copulation the snakes wind themselves round one another. The female snake remains beside the eggs till the young ones are hatched, while the male is constantly crawling around diquieted. The tongue is split, so that many people think that a snake has two tongues. The snake swallows its prey without chewing it; to break bones, it winds itself firmly round a tree so that the bones are broken in its stomach. It will under no conditions eat a dead animal; if it can find nothing to eat, it lives on air. It can go for a very long time without food, particularly in old age, when it then becomes lean. It does not require water; but when it has once began to drink, it takes too much and poisons itself with it so that death often ensues. The eye is firm and immovable like a nail in the head; if torn out, it grows again, while the fangs if taken out grow again in three days, as does the tail if cut off. When the snake becomes blind or comes blinded out of the ground, it rubs its eyes on fennels and regains its sight.

Snakes are attracted by fire but flee before naked men. They have extraordinarily strong backs; for although it has neither claws nor limbs with which to hold on, no man is able to draw a snake out of its hole by its head.

According to al-Dājib, three groups of snakes are to be distinguished according to their poisonousness. No remedy nor treatment can avail against the bite of the first; antidotes and medicines are of use against the second, while the third kills through horror which opens the pores of the body, by which the poison takes effect. There are naturally numerous charms and amulets against snakes. He who kills a snake performs a work as meritorious as if he had slain an unbeliever. Not all snakes are aggressive, many only bite when aroused or trod upon, others are harmless. The medical applications are numerous.

Snakes play an important part in folklore and superstition, for they are one of the most usual forms in which Dinn appear.

Al-awawā‘, the snake-charmer, is the Arabic name of the ՝awawā‘ and al-‘aiyā the name of the snake he holds.

Hâiyân b. Khala‘f. [See Ibn Hâiyan.]

Ĥâkam (A.) “judge, arbitrator”; one of the names of God.

Ĥâkam b. Sâd al-Âshîra, a tribe in South Arabia. They lived in Tîhâm in the district of Abû Arîsh and were neighbours of the Ḥâshid (Ḥadîr [see Ḥawṣ] and Khawānî [q. v.]. Their land the Balad Ħâkam was five days’ journey in length. The following places belonged to them, al-Sûd, al-Sâkikatîn (or al-Sâkikatîn, Yâkût, Mu‘jam, iii. 104, Šakîfâtîn probably misprint), al-Kaṣâfî (all three on the Wâdî Khulab or Khilâb),
al-‘Aḍāya, al-Ḥadjar, the group of villages of al-Makharif (watered by the Waḍīs Zāīra and Shāyā) and besides the Waḍīs just mentioned, those of Ḥaraḍ, Ḥaḍair, Ḥaḍir, Ḥaḍbar, Dājir, Ḥaḍir or Dāmīd, Ḥaḍrān, al-Ḥaḍar, Tashar, Liya and Sabya, most of which flowed from the land of the Ḥashid and Ḥawālid. The chief town of the Ḥakam was al-Khasūf (usually called Madīna Ḥakam); in Hamdānī’s time the coast town of the Baḥal was Sharrajā. Sprenger identifies Ḥakam with the ‘Arab an qaṣīs of Tolomey. Their chiefs are descended from ‘Abd al-Lajjād (Dzdjād or Dzdjād), whence their name Al (or Bani) ‘Abd al-Lajjād (Dzdjād).

**Al-Ḥakam**, the name of two Spanish Omayyads:

1. **Al-Ḥakam I b. Ḥishām, third Omayyad Amir of Cordova** (180-206 = 796-822), waged continual warfare for almost twenty years against the pretensions of the Faqih and the people incited to rebellion by them, notably their superior Yahyā b. Yahyā. After the first rising in Cordova (189 = 805) and Mērida (190 = 806) had been soon suppressed and Toledo (Tolalpa), strongly fortified which was endeavouring to win independence, had been finally taken by stratagem and the treachery of the governor ‘Amrūs, a renegade (191 = 807), a second, much more dangerous, general rebellion broke out in Cordova in Ramadan 198 (May 814; according to Ibn Adhārī and Ibn Khaldūn in 202 = 817, cf. Dozy, Musulmans d’Espagne, ii. 353 et seq.) which ended with the utter destruction of the southern suburb by al-Ḥakam (whence his name al-Raḥbājī the subburner), the massacre of the greater part of its inhabitants and the expulsion of the remainder (about 60,000) from Spain. The exiles found a new home in Egypt and afterwards in Crete [q. v., i. 873, and Abu Ḥafs ʿOmar, i. 87b] or in Fāṣ [q. v., ii. 77]. Al-Ḥakam punished a last rising in Toledo similarly by the destruction of a quarter of the town (199 = Autumn 814). All these domestic troubles naturally favoured the advance of al-Ḥakam’s enemies abroad, Alfonso II of Asturia and Gāliacia gradually extended his kingdom to the south and east and al-Ḥakam lost Barcelona in 185 = 801 to Alfonso’s ally Louis the Lion, then Viceroy of Aquitania.

2. **Al-Ḥakam II b. ‘Abd al-Raḥmān III, called Al-Musṭanṣir bi-llāh (“he who seeks his help in God”), the ninth Omayyad Caliph as second of Cordova** (350-369 = 961-976), fought successfully against Sanche I, king of Leon and Castile, and Garcia, king of Navarra, and forced them to make a lasting peace in 355 (966). In the same year his fleet victoriously repulsed a Norman invasion on the Rio de Silves, after the latter had almost annihilated a Muslim army on land near Lisbon. The war with the Fāṭimīd al-Mu’tazz and his allies, the Idrisids of Tangier, ended, after the Fāṭimīd governor Bulqashī [q. v.] had unsuccessfully attacked Ceuta (356 = 971): with the conquest of Tangier by al-Ḥakam’s admiral ʿAbd Allāh b. Riṣālah in 361 = 972 and the capture of the Idrisids who were brought prisoners to Cordova by al-Ḥakam’s general Gāḥāl b. ʿAbd al-Raḥmān (363 = 974). Al-Ḥakam II thought more of the prizes of peace than of war and was an enthusiastic and liberal patron of art, science and education; indeed he was himself probably the most scholarly ruler Islām has known. The university of Cordova became the first centre of learning in the western Muslim world by his foundation of a splendid library (about 400,000 volumes); mathematicians, astronomy and medicine particularly flourished there. On his architectural activity see Córdoba, i. 878. With al-Ḥakam’s death on the 3rd Safar 366 = 1st Oct. 976 the decline of Omayyad power in Spain began.

(M. Schmidt.

**Ḥaṭīka** (A., pl. ḥaṭīqīyāt) is (a) an abstract noun meaning “reality”, so a thing which has no reality, la ḥaṭīka lāha, then “the reality of a thing”, meaning that by which the thing is what it is with respect to its reality (distinguish kwuwayt “individuality” and ʼaḥyāya “quiddities”) or, broadly, what distinguishes it from other things; this is called also its ḥaṭīya. Then (b) “a reality” in the sense of a thing which certainly exists; using the verb you say, ḥaṭīq-ʾa-taʾah, “the thing certainly exists.” Hence ʾahl al-ḥaṭīka are the mystics who know the real nature of God, as opposed to ʾahl al-ḥaqq, the orthodox followers of the Sunna, and al-ḥaqq is the last thing reached at the end of the derwish tariqa (W. H. T. Gairdner, The way of a Moh. mystic, pp. 19 and 23). Also ḥaṭīq-ʾa-taʾah is Allāh as the stage of unity which embraces all realities, otherwise called the ḥadrat al-djmāʾ, “Presence of joining” and ḥaṭīq-ʾa-taʾah, “Presence of Being” (see art. ḤAḌRA). The ḥaṭīqa of Allāh is distinguished by Sūfīs from his ʾaḥk; it indicates his Qualities (irişaʾ) while ḥaṭīq indicates his ḏāʿ (Dict. of tech. terms, pp. 333 et seq.). With this apparently connect the following definitions belonging to the system of Ibn ʿArabi, but formative for all later mysticism in Islam (Fuṣūṣ al-Ḥikam, ed. of Cairo 1309 with comm. of ʾAbd al-Rażāk al-Kaḥānī [q. v.], ’asām, and Quṣūr al-Din, p. 62). The ḥaṭīq of the Names of Allāh are individualizations of his essence and are its relationships to the things of the world; by relationship to these things, which are called also the Qualities (irişaʾ) and which are infinite in number, the primal unity is broken up. Also the ḥaṭīqa al-ḥamāmadtīya is the divine essence taken along with the first of these individualizations (i.e. Muḥammad); it is also the Most Great Name (al-ʾazzm al-ʾaʾām; Fuṣūṣ, p. 428, l. 9). ʿAḥka also
indicates (c.) a descriptive noun or phrase used in a primary or real sense as opposed to a metaphor (magās). When, however, the metaphor has been used so often as to have become conventional, the word or phrase may be called ḥākīma 'wrfiya. (Mehren, Rhetorik, pp. 31, 78).

See also Ḥakkīm.

(D. B. MacDonald.)

ḤAKIM (pl. ḥukamāʾ) the Arabic name for "physician, doctor". The root-meaning of the word, is "wise, skilled, clever"; cf. the Hebrew and particularly the Aramaic meaning of the root ḥ-k-m. From this original meaning ḥakīm ("governor, judge") has developed as well our Ḥakim. (Cf. the French sage-femme, midwife, and sage-homme, jurist). In the same way the second Arabic word for "doctor" tāḥīb (pl. ṣāḥībāʾ) is ṣāḥīb "to be wise, to understand", whence ṣāḥīb has been particularly developed in Ethiopian. In the older period ṣāḥīb is more frequent particularly in the literary language; in the later period and particularly in popular language ḥakīm is preferred, sometimes with the subtle distinction that ḥakīm means a "doctor", ṣāḥīb rather a "physician". In addition to the general term ḥakīm there are other names for specialists; e.g. al-dājrāḥi the "surgeon", al-kāḥfāl "the oculist"; in the modern language it is usual to use compounds of ḥakīm for these, thus ḥakīm al-ṭuṣīa "oculist", ḥakīm al-asānān "dentist". Tārīkh al-Ḥukamāʾ "history of the physicians" is the title of several works on the history of medicine, of which the best known is that of Ibn al-Kīfi (q. v.), which has been edited by J. Lippert (Leipzig 1903).

(Ε. ΜΙΤΤΒΟΧ)  

ḤAKIM (A.), who he decides, the authority.

AL-ḤAKIM BI AMRI LLĀH, sixth Fāṭi-mid Caliph, his pre-accession name was Abū ʿAlī al-Manṣūr. To get as clear as possible an idea of the character of this enigmatical ruler three periods in his life must be sharply distinguished: first, the period of his minority, from his accession as an eleven-year-old boy till the assassination of Bardjawan in 390 = 1000; the second period runs from this event till 408 = 1017, when he declared his divinity; and the last covers the period to his disappearance in 421 = 1031.

386—390 (996—1000). It is very likely that al-ʿAziz died in Bilhis, his only son al-Manṣūr (born of a Christian mother on the 23rd Rabīʿ I 375 = 13th August 985) received homage as Caliph; he was then given the title "al-Ḥakim bi Amri LLāh". His guardian by the will of his late father was the slave eunuch Bardjawan but he could not maintain his authority against the Maghribi Ibn ʿAmmār, commander-in-chief of the troops, to whom Ḥakim had given the rank of "Wāṣifa" and the title "Amin al-Dawla". The way in which the general gave his kinsmen, the Kitāna, preference among the troops, led to a most intolerable state of affairs. Finally the Turkish troops resorted to force of arms against the aggressions of their Berber comrades-in-arms, conquered them and thus brought about the fall of Ibn ʿAmmār, who although pardoned, was soon afterwards disposed of by assassination. Bardjawan was now all-powerful, but becoming overbearing, he allowed his grasp of power to slacken and gave himself carelessly up to the enjoyment of his immense riches neglecting the education of his ward, whose feelings he had deeply hurt by nicknames ridiculing him. Only too soon, however, he was to learn the latter's true character; in 390 = 1000 Ḥakim made short shrift of his guardian and although after this bloody deed he appealed to the people, who had theretofore rebelled, to stand by him in his helpless youth, he soon showed that he no longer required any one to wait on him by actions which showed an alarming independence.

2. 390—408 (1000—1017). The character of the Caliph, in the form in which it developed soon after the death of Bardjawan, becomes intelligible perhaps, if we see the motives of his whole attitude in an extraordinary religious fanaticism, which endeavoured to exert itself not only in the most rigid enforcement to the utmost letter of the law of certain prescriptions of Islam in general but especially in the promotion of Shīʿī ideals in particular among the people, throughout whom Sunna views still prevailed. If this is the striking feature of his whole attitude, it was complicated by a sense of unrestricted power, which grew more and more in this strange personality, and a boundless capriciousness, with which cruel traits were strongly mingled. The first mentioned tendencies may explain the rigorous edicts (such as the prohibition of intoxicating liquors and certain foods, as well as the regulations regarding women etc.) which were published up to 399 = 1008—1009, some obviously directed against the Sunna; they also explain the harsh and ruthless oppression of the Aḥl al-Kīthā, e.g. the laws regarding dress passed against the latter and the destruction of their places of worship. That at the same time Christians continued more and more to fill the highest offices, shows how impossible it was even now to do without their ability. To Shiʿī enthusiasts also al-Ḥakim's buildings owe their origin: the Rāshida mosque, the mosque of al-Maṣṣ and the great university called Dār al-līm (Dār al-Hikma), opened in Djiμādā II 395 = March 1005. The "Ḥakim mosque" was completed in 393 = 1002 or 401 = 1010, (which had been begun by al-ʿAziz). — But the Caliph always displayed a tendency to despotic deeds of brutality, of which the highest officials and officers of the kingdom, of whom hardly one died a natural death in this period, were particularly the victims. The dangers of this provocative rule of tyranny soon showed themselves in the rising of the Spanish Omayed prince known as Abū Bakar who threatened Egypt and the capital itself with disasters and found ready support from the Banū Kurra and Banū Zakīta, driven desperate by Ḥakim's violence, and later from the Kitāna also. It was only with great difficulty that the doughly al-Faḍl was finally able to overcome this dangerous enemy (396 = 1006). Probably influenced by these events as well as by the failure of crops for several years in succession, the Caliph saw the necessity for milder measures and for conciliating the Sunnis to a considerable degree; indeed he went further and abolished those customs that were peculiarly Ismaiʿī and went right over to the Sunna. We so far have the possibility of suggesting motives
for Hakim's actions, it is quite impossible to do so in the years that follow, which show alternately a leaning to Islamism or to the Sunni in the constantly changing stream of edicts issued by the Caliph. Only the persecution of the Christians and Jews remained unchanged and the cruel treatment of those in authority without distinction of creed.

III. 408—411 (1017—1021). At all events the Caliph carried Ismaili secret doctrines to their farthest conclusions when in 408 = 1017, dominated by the influence of al-Akrham, Imam al-Zara'ani [q. v.] and the Batinis of Darasati [q. v.], he agitated to the peculation of his own district. Considering Hakim's psychology, this step is really not very surprising; it should also be remembered that his father and grandfather before him seem at least to have claimed supernatural powers (de Sacy, Druzes, p. ccxxvii. and Wustenfeld, Fatimiden-Chalifen, p. 160). — It was quite in accordance with the dogmas of the Isma'ilis under whose influence he was, that Hakim finally showed the greatest tolerance in religious matters; the penal enactments were repealed and Christians and Jews now began to breathe freely. (The Jewish story given by Kaufmann in Zeitschr. d. Deutsch. Morgenl. Ges., li. 442 et seq. is characteristic.) On the other hand the Muslim population rebelled against the heresies openly proclaimed by the heralds of the new teaching, and the result was that the ruler was imprisoned in his palace in which the agitator Darasi was known to be concealed. Hakim, however, facilitated the latter's flight to Lebanon where he founded the sect of the Druzes, who still revere Hakim as an incarnation of God and look forward to his return (cf. Druzes, i. p. 1076 et seq.). — The Caliph did not hesitate to wreak terrible vengeance with his negro troops on the town of Fușat, where the rebellion had originated. Fierce battles between the Turkish and Berber troops on the one side and the arrogant black soldiery on the other followed, the confusion in the capital was becoming worse and worse, when suddenly deliverance came in the mysterious disappearance of the Caliph in the night of the 27th Shawwal 411 = 23rd February 1021. The suggestion, often put forward, that he was murdered at the instigation of his sister Sitt al-Mulk, has not sufficient basis in fact (see de Sacy, Druzes, i. p. ccxxvi. et seq.) on the other hand, considering the whole development of his character, A. Muller's (i. 693) hypothesis that, recognising the impossibility of propagating his views in Egypt, he retired into concealment, is not without probability.

In Hakim, whose final self-deification prejudices them before hand for a fair appreciation of his personality great in its way, Muslim historians and also the naturally biased Christian authors see only a madman and a blood-thirsty tyrant, around whose strange figure they hastened to gather a mass of stupid anecdotes, which have yet to be carefully investigated. Most European historians also are influenced by the same view; Dozy alone, and following him A. Muller, has endeavoured to give a just appreciation of his character; it combined fanatic religious enthusiasm with truly oriental notions of despotism, yet is not without its ideal trait. Many of his much abused regulations were clearly intended to check the immorality of his people, to whom he set an excellent example by his own stainless conduct and a contempt for all pomp. Even in the second period of the reign we constantly find edicts in which he orders his name to be mentioned in prayer only in the simplest manner possible and forbids the usual tokens of respect to be paid him. His liberality is nowhere denied and scenes have been preserved from the years of the low Nile for example, in which he is depicted in the midst of his people, accessible to every request and anxiously endeavouring to check the ravages of famine. Nevertheless it cannot be denied that his administration guided as it was solely from his one-sided point of view and subject to his capricious will, particularly in the last years, was on the whole disastrous to the country.

On the political events which had their scene outside of Egypt during al-Hakim's reign and hardly concern us here in discussing his personality, cf. the article Fatimids [ii. 90].

HAKIM AṬA', a Turkish saint of Khunarim, a pupil of Ahmad Yasawi (cf. i. 204 et seq.) who died in 562 = 1166-1167. His proper name was Sulaiman Bakurghânî and he is also called Sulaimân Aṭa or Hakim Khodja; this Bakurghânî is not identical with the Baghirkânî mentioned by Muḥaddass (ed. de Goeje, p. 343, vi) but lay considerably farther north, a little below the modern town of Kungrad; the tomb of Hakim Aṭa there is still visited by pilgrims; according to a biography of the saint, the name is said to be a corruption of Apâk Kurgân = "very white fortress". We find the same place-name in another part of Turkistan; at Khodjand there flows into the Sir-Daryâ, the river Khodja-Bakurghânî, on which, as the name shows, the cult of a saint has likewise been localised. We have only legends of the life of Hakim Aṭa. The works ascribed to him (besides the collection of hymns called Bakurghânî Kitâbî, also Hadfrat Maryam Kitâbî, Akhîr Zamân Kitâbî etc.) have frequently been printed in Kazan; old manuscripts have, as far as is known, not survived. Cf. C. Salemann in Bulletin de l'Acad. Imp. etc. 1898, Sept., ix. No. 2, p. 105 et seq.; cf. also W. Barthold in Turkistan etc., ii. 149 and Nachrichten über den Aral-Stie (Leipzig 1910), p. 33; P. Komarow in Protokol Turk. Krûča Ljub. Arch., vi. 105 et seq. (W. Barthold.)

HAKK. The original meaning of the root  hakk has become obscured in Arabic but can be recovered
by reference to the corresponding root in Hebrew with its meanings of "cut in" or "on," hence "prescribe," "fix by decree" (Brown-Driver-Briggs, *Hebrew Lexicon*, pp. 349 et seq.). We have thus in Arabic to begin with the primary idea of permanence, fixity (thubāt) and not with that of correspondence, suitableness (mūyāḥa, mawwāfākūn) which is essentially secondary and a discovery of the rhetoricians (al-ʻalāmānī; Dārjānī, *Tārīṣīh*, p. 61, 11 et seqg. of ed. of Cairo 1321). This point is unfortunately confused in Lane (s. v. pp. 605 et seqg.), following some of the native lexicons. Al-ḥakkēk, then, means that which is fixed, permanent, real, and is regularly paraphrased in the commentaries on the Kur 'an as al-thabīb. Thus Baidawi explains al-ḥakkēk, meaning Allah, as al-thabībat rubūḥiyatūn, "he whose lordship is fixed, real." (Kur. x. 33; Baid. ed. Fleischer, i. 414, 12.) Similarly al-thabībat itthākhiyatūn, "whose divinity is fixed," contrasted with that of false gods which is ṣāṭīl, "vain," "unreal." (Kur. xxii. 29; Baid. ii. 116, 10 et seqg.); in Kur. xx. 113, he is thabīr in his essence and qualities (Baid. i. 607, l. 5); further, on Kur. xxii. 6, Baid. explains 658 on him because he is the thabīr in himself by whom things become realities," hūk tatḥuḥabbu-l-taḥṣīātīn. On this last passage, Rāzī explains (Masūfī. Vol. vi. p. 144, l. 3 of ed. of 1308) "he is al-mawydīd al-thabībi." The Śāhāb (s. v.) content itself with defining ḥakk as the opposite of ṣāṭīl, and that is the fixed usage in the Kur 'ān and elsewhere. This is Pre-Islamic as in the well known verse of Loeb (Heber, *Dispens des Leibes*, xli. verse 9), Alī kullu ẓār'in mu khāṭā-tūn āḥīūn, "Lo, everything is vain except Allah alone." Ibn Iṣāq in his *Shajara al-ḥadīth* connects also with Hebrew conceptions of nothingness, vanity, unreality contrasted with that which is sure, real and trustworthy. So, ṣāṭīl stands in Arabic over against ḥakk and al-ḥakkēk is most suitable for a name for Allah, the absolutely real, even as nečmīn, "trustworthy" is said of Yâhweh (cf. al-mawīn' of Allah in Kur. lxx. 25). Allah is real of himself and of necessity (Baidawi on Kur. xxii. 61, vol. i. p. 638, l. 15), while other beings depend for their reality on Allah (see Baidawi above on Kur. xxii. 6). "The Real," or "The Reality" is therefore the nearest rendering of the word when used as one of the Names (asa'īsa; see above) of Allah, and "the Truth" as it is often translated is misleading. All the native authorities distinguish carefully between ḥakk and ṣāṭīl with its opposite kīḏāb, and lay down the rule that ḥakkēk is equivalent to ṣāṭīl only when used of a judgment (ḥukm). Thus an event (waṣīf) really took place, so it is ḥakk; but a judgment or statement about it is ṣāṭīl, though the statement may also be called in this sense a ḥakkūn. Used as one of the Names, al-ḥakkēk is frequently explained as Creator, but for this the only basis seems to be its constant contrast with al-ḥakūk "creation," e. g. in Ithāf al-nūdā, vol. x. p. 556, l. 20, asīnīt al-ḥakūk aṭālūn al-ḥakkēk. "Vox populi, vox dei." Yet see another explanation suggested in Massignon, *Kīfāb al-Ṭawāsun*, p. 174. Besides the above meanings of "reality" — used absolutely of Allah and derivatively of his creation — and "truth" used of a statement corresponding to reality, ḥakkēk means also "right," "valid," going back to the idea of prescription. Thus, ḥakkēk li "a right due to me" and ḥakkēk ʾalāsiyya, "a right obligatory on me." From this comes the ḥakk of Allah — as distinguished from the ḥakk ūdāni, ḥakk al-tawās — the punishment for trespasses against Allah by which no man is injured in his rights (see Juynboll, *Handbuch des Islam*, Ger., p. 292 and by index). Again, just as al-ḥakībēk is the last thing reached by the Šuff on his journey, after even ma'rifā is passed, so ḥakk al-yaṣīn is that real certainty which comes with the passing away (fana) of the creature in his ḥāl in the Reality after he has had visual certainty (ainw-yaṣīn) and scientific certainty (ainw-yaṣīn). On this see Nicholson, *Kāfṣ*., pp. 36, et seq., Kuhiqari, *Riṣāla* with commentaries of *Arāsī* and Zakariyyā, ii. pp. 99 et seqg. and Dārjānī, loc. cit., the phrase is derived from Kur. lvi. 95. Among Șīfs the ḥakkēk al-nafs are such things as are necessary for the support and continuance of life as opposed to the ṣāṭīl, things desired by the nafs but not necessary to its existence (Dict. of tech. terms, pp. 311, 330 and 417, l. 10 et seqg.).

**HAKKĀRĪ (HEKKĀRĪ), now the name of a sandjak in the wilāyat of Wān in the Persian frontier, which formed an independent wilāyat before 1876. According to Cuinet, *La Turquie d'Asie*, ii. 716, it now has an area of about 11,000 sq. miles and about 300,000 inhabitants, most Kurd or Armenian in origin. We may also mention the Syriac Christians (Nestorians), who reside at Kočanes, 11 miles N. of Djalāmran. The land is mountainous and difficult of access as much on account of the predatory character of its inhabitants as on account of the nature of the country and has therefore been little explored. The Turkish government, which only instituted a certain amount of order here after the middle of last century, has its representative in Djalāmran [q. v., i. 1091]. With the possible exception of ʿAmadiya [q. v., i. 321 et seq], there are no other towns of importance.

The name Ḥakkārī is derived from the inhabitants, the Hakkāris, a branch of the Kūrīs, who have inhabited the wilāyat of Wān and the surrounding Turkish and Persian provinces with other Kurdish tribes from ancient times. They are mentioned as early as Ibn Ḥawkāl and the land is called Hakkārī after them by Arab geographers and historians. These Hakkāris led a practically independent existence in their almost inaccessible mountain fortresses. The celebrated Aṭābeq Zangī was the first to attempt to bring them into subjection and took several of their mountain fortresses, to one of which he gave the name ʿAmadiya (cf. *ʿAmadiya*). But the country soon returned to its previous state. The all-conquering Timūr alone was able to force the Hakkāris to own his sway, when he besieged their Emīr in the fortress of Wān in 787 = 1385. Later they fought with the Aḵ-ḵuyunlī, but even after the rise of the Șafaws in Persia and under the rule of the Ottomans they remained the real masters of their country.

There is much controversy as to the possibility of the continuance (dawâm) of aḫwâl. To be distinguished also from the hâl is the waḥât. It is that “Now” of the present, with its content of presence with or absence from God, and with it alone the Sâfi should be occupied. It belongs to the murîd and is his religious experience under the effect of an ever renewed Now, while the hâl comes from God and enters that Now like a soul in a body (Nicholson, Kâšf, pp. 367 et seq.; Kâshârî, Râbî’ al-Âkâm, ii. pp. 21 et seq.).

HALAB (Alep). A. A Turkish vilâyet in Northern Syria, bounded on the N.W. and N. by the vilâyet of Adana and Siwâs, in the N.E. by the vilâyet of Ma‘mûriyat al-Azîz, in the E. by the sandjak of Dîr el-Zîrî, in the S. by the vilâyet of Damascus, and in the W. by the vilâyet of Bârit and the Mediterranean sea. The district presents no marked geographical features; it is divided into three liwâ‘s or sandjak’s, a. Aleppo, with 24,000 square miles, 672,500 inhabitants; b. Mar‘a­shî [q. v.] and c. Urfa [q. v.]; the whole vilâyet has an area of 36,000 square miles, 995,800 inhabitants (792,500 Muslims, 49,000 Armenians, 154,300 Syriac Christians, according to Brockhaus’ Con­versiones lexico). Aleppo may be considered the name of an administrative area since the time of the Hamdanid Sa‘îf al-Dawla (about 420 A. H.); he was the first prince of Aleppo. From this time on the district of Aleppo (whether principality, suljânate or province of the Mamlûk or Ottoman empire) continued to stretch over the Euphrates to Hârrân, till in the last quarter of the sixteenth century its area was diminished by the creation of the independent sandjak of Dîr el-Zîrî; in the south however Hamân was separated, as early as the Fâtimid period. It reached its greatest extent in the Mameluke period in the 13th century A. H., when it stretched as far as Dîrîrgi in the N.F. of Asia Minor and for a time included Hîms in the south. In the Byzantine period down to the 15th century A. H. Kiînîrî [q. v.] was the capital of the province; Antioch and the lands attached to it, which had been ruled by the Crusaders for over a century, was taken from them by Sultan Baibars in 668 and added to the province of Aleppo.

We have a certain amount of information (collected in A. v. Kremer, Kulturgeschichte des Orientes under the Chalifen, Vienna 1875, p. 359, 351, and in Le Strange, Palestine under the Muslims, p. 43-48) about the total of the taxation, which the province had to pay in the time of the “Abbasid governors. The province of Aleppo and al­Awâmî paid, according to Ibn Khaldûn’s quotatio­n from the Dîrîr al-Dawla, 400,000 (in another Ms. 420,000) dinârs (the dinâr may be estimated at ten shillings following Le Strange) in the reign of al-Ma‘mûn (158-170); 470,000 dinârs (according to a quotation from al-Djâshshîyarî’s Kîrî al-Wa‘zûr) under the Caliph al-Rashîd (170-193); 360,000 in the year 204, according
to Kûdama, Kitâb al-Khaṭrî; 400,000 dinârs in 259, according to Ibn Khurdadhîb and Ibn al-
Fâkih, 360,000 dinârs in 371 (al-Muṣâdâdî). The revenue under Nûr al-Dîn (541—569) was smaller; it is given by Carlyle from the Cambridge MS. of the Ta'ârîkh Bani 'Ayyāb on p. 17 of his notes to his edition of the Maw'rûd al-Latâ'if of Ibn Taghribardi. He gives 402,733 dinârs as the revenue for the whole kingdom, which included Syria as far as Damascus and Mesopotamia to Mûsul, but did not include the 'Awyâm (or Aleppo and the immediate neighbourhood 96,186). The revenues were considerably higher in the reign of Sulṭân al-Zâhir Ghâzi, they are given for the year 609 by A. v. Kremer in the Sitzungsber. der Wiener Akad. Phil. Hist. Klasse, 1850, p. 245—248 in the translation of Ibn Shîna (on authority of Ibn Abî 'Tâyî), viz. 6,584,500 dirhems = 4,655,613 dinârs for the town of Aleppo (including its fields and gardens) and at the close of the reign of Sulṭân al-Nâṣîr Yusuf II (about 656 A. H.) they approached 8,000,000 dirhems = 533,333 dinârs.

The administration of the province of Aleppo, our authorities for the Mamlûk period are good. According to the 'Asâr al-Sulûb of Kâshâshâdî (cf. the article Hâdîb (ii. 206 et seq.), Aleppo was the largest province next to Damascus. At the head was the governor, an Emîr of 1000 Mamlûks, the representative of the Sulṭân, with the title Malik al-Umârî (Chief Emîr). Next to him came a. the governor of the citadel independent of the former (an Emîr of 40, who was often promoted in this position up to an Emîr of 1000), the Atâbâg, the commander of troops stationed in the province (at this period 6000 mercenaries and 500 Mamlûks); and the president of the military administrative court ('âdâb al-'âdâbî), who was assisted by three hâджîbs (q. v.) of lower rank. These were the military officials, almost always chosen from the Turkish corps of Mamlûks, 6.) The religious officials: the chief kâ'lîs of the four recognised schools; a Hânâfi and a Shâfi'i military kâ'lî, each with a mufti; the administrator of the treasury (baî't al-Mâârî, q. v., i. 598 et seq.), c.) civil officials: the vizier, who bore the title "in-
spector of the province" in Aleppo, the private secretary (in Aleppo called "chief of the corres-
pondence-office"); these two officials were of lower rank than the corresponding officials in Cairo); the chief of the commissariat the inspector of offices; the mayor; the postmaster; the inspector of government lands; the inspector of buildings; the chief of police; the superintendent of the market (who was often chosen from among the ecclesi-
asical officials). d.) Medical officers: (mi'n al-
tâqâf'îf al-tâqâf'îf; the chief physician, the chief oculist and the chief surgeon. — This complicated administration, which was a copy on a small scale of the central government in Cairo, was based as regards the mercenaries and Mamlûks to some extent on a system of feudâlism. It remained similar in constitution under the Turks, although the titles and the divisions were slightly altered. It was only after the destruction of the Janissaries in the first quarter of the xîth century and the introduction of the reforms that the administration was simplified. The province of Aleppo in the Mamlûk period was governed by sub-governors of different ranks, who were in part directly under the gov-
ernor, while the more important were appointed by the Sulṭân. The frontier fortresses were under Emîrs of 1000, other towns according to their military importance under Emîrs of 40 and 10 or under officers of the mercenary troops. Two Bedouin tribes, 13 Turkoman tribes and a few tribes of Kurds were ruled by their own chiefs who were appointed by the Sulṭân. On the modern administration cf. the article Tûrkeyya.

b) Halâb (Aleppo), the second largest city in Syria.

I. Topographical and General.

Aleppo is situated in 37° 2' E. long. (Greenw.) and 36° 11' N. Lat., 1335 feet above sea-level, on the river Kuwaîk (Gök Sû) on the border between the areas into which Northern Syria may be divided, mountainous west and the flatter east. The climate is cold in winter (for accurate meteorological ob-
servations see Russell's Natural History of Aleppo, London 1794, i. 83—96), but the spring begins in February; the heat is very great from May to September; the average temperature for the year is 68°, in winter 42°, in summer 87° Fahrenheit. Aleppo's commercial importance rests on the fact that it lies on the great route from north to south and on the roads from the Mediterranean to Mesopotamia; it thus concentrates upon itself (cf. Karl Andre'Geographie der Weltande, new ed. 1912, ii. 278) the trade of a great part of Northern Syria and Northern Mesopotamia as far as Dîyarbakir and Mârdîn and on the Euphrates as far as 'Ana. Although the commercial importance of Aleppo began to decrease after the discovery of the sea-route to the East Indies, it was still a flourishing centre of trade in the xviith and xviiiith centuries. A large number of French, German, Dutch and Venetian merchants traded in exports and imports there under the protection of their consuls, chiefly through the intermediary of Jewish middlemen; the most numerous however were the English who possessed a great factory there from the reign of James I (1603—1625). In 1775 80 European firms were represented in Aleppo. In the middle of the xixth century Aleppo had almost entirely lost its prosperity and trading connections through the insecurity of the Mediterrane-
nian during the time of Napoleon I, through particularly bad government, the mutinies of the Janissaries in 1814 and 1826, the terrible earthquake of 1822 (and smaller ones in 1827 and 1832), the ravages of cholera (1832) and plague (1837), as well as the incredible misgov-
ernment of the Egyptian officials from 1831—
1837, which did not affect other parts of Syria so unfavourably (see F. Perrier, La Syrie sous le gouvernement de Mehemmed Alej Ali jusqu'en 1840, Paris 1842), and the return of the Turkish régime. While in 1775 the imports amounted to about 8½ million francs and the exports had risen as high as 9 million, in 1844 the imports had de-
clinued to 5½ million frcs. and the exports as low as 2½ millions (see Henri Guy's instructive work, Essai de l'état politique et commercial de la Syrie, Paris 1862). It was not till the eighties of last century that Aleppo began again to revive, the number of inhabitants and the totals of exports and imports are increasing and the favourable railway connections (Aleppo—Rayâyk—Damascus—Bairût; Aleppo—Hims—Tripoli; Aleppo's proposed connec-
tions as a station on the Baghdâd railway; and its future direct connection with the harbour
of Alexandretta) make it certain that the town is destined to have a great future.

At the present day the imports amount to 58½ million francs (of which 20 millions is cotton etc. alone); the exports 20 million francs (sesame, liquories, gall-apples, butter, olive-oil, wool, silk, hides etc.). Before the earthquake of 1822 the population was estimated by travelers at 150,000, after 1822 it sank to 50,000. In 1882 (Guido Joanne for 1887) it is said to have been only 90,000—100,000, in 1894 it had risen to 130,000 (Meyer's Reisebuch) while in 1912 the figure is estimated (Baedeker, French ed.) at 200,000—150,000, which is probably too high. The old city was a quadrangle (4½ miles round) enclosed by walls but even by the time of the Arab conquest there were suburbs around it (see below). The city and the suburbs had gates. Of the city-gates several are well preserved, but nothing has remained of the gates of the suburbs except the inscription at the former Bāb al-Malik (Pl. x). The Europeans live in the Arzitaya quarter (see Pl. 23), the native Christians mostly in the Muššārka (see Pl. 23) and Kuttāb quarters (see Pl. 22), the Jews in the Bahšita quarter (Pl. i; also called Shākhjah). The inhabitants are protected from rain and heat by vaulted bazaars; these are so extensive that a walk of 4½ hours' duration may be taken on their roofs. Aleppo is notorious because its inhabitants are liable to a disease, the Aleppo scab, an ulcer (jabhū), which disfigures the skin. The germ of the disease seems to enter the body through slight wounds in the skin, children are particularly liable to it, while adult Europeans are seldom attacked by it. Cf. v. Luschian, Mitteil. über die Therapie des Aleppo-Knotens, in Verh. d. Wien. Anthrop. Gesells., xiv. 71; Globus, Vol. vii.

II. History of the City.

1. Before Islam.

Aleppo, one of the oldest cities in existence, perhaps a Hittite foundation, is first mentioned as early as the second millennium B.C. under the name Hallab (Hallaw, or Halvan) in the documents of Boghazkoi, among which is a treaty with Aleppo. In Babylonian texts Aleppo is mentioned in the treaty between Asšur-nirari and Matu-itu about the year 750 B.C.; there and in Assyrian on Salmanasar's monolith inscription of 850 the god Ramman of Hallab is mentioned (information supplied by E. Weidner). In Egyptian texts Aleppo (Hērū) is mentioned in the xviith century B.C. in the biography of the general Amenemheb (Sethe, C.r.-kundten, iv. p. 890 et seq.) and in the accounts of the battle with the Hittites at Kadeshe in 1288 B.C. (information supplied by Dr. Bürckhardt). In the Old Testament Aram Šōba seems to correspond to Aleppo. In the Seleucid period it was given the name Berodia (Bërdīa, Berōia, Berđīı etc.) by Seleucus Nikator, who favoured it exceedingly. It suffered severely at Khusraw 1's conquest in 540 A.D. (not Khusraw II. as is wrongly stated in Van Ess-Wissman and Baedeker). In the Byzantine state we find the old name reappearing in the Greek form Χαλεπον.

2. Under Arab Rule.

Aleppo seems to have been predominantly a Syrian town with a strong admixture of immigrant Arabs in contrast to the more cosmopolitan Kin-
meeting any serious resistance he occupied Damasc
 curs and Aleppo, where he was hailed as a libe
tator. His son Khumārwaḥ [q. v.] appointed
Toghd b. Dżaff (father of Muḥammad al-Ḫiṣṣid, q. v.) governor of Aleppo in 275. Khumārwaḥ
Dżaff died in 280. He was succeeded by his son Dżaff, and
his own city of Hārān after protracted hostilities peace was finally made in 286
between the Caliph and Hārān; Aleppo remained to the Caliph. In 290 an invasion of the Karma
țians [q. v.] took place, they defeated the governor and besieged Aleppo but were forced to retreat
after a sortie in which the troops were assisted by the citizens. To reconquer the lost provinces of Damasc and Egypt, the Caliph al-Muktafi
sent a strong army under Muḥammad b. Sulaimān,
which received accessions in Aleppo from the tribes of Kīlāb and Tāmīm. He routed the Kara
țians in Central Syria, conquered Egypt and
new Hārān in 292 A. H. This victory secured the
Caliph’s hold on Syria for a considerable
time. The governors and deputy governors were
changed frequently by force of arms. In 325 Syria became dependent on the governor of Egypt, Muḥammad al-Ḫiṣṣid [q. v.], who
appointed Ahmad ibn Sa’īd al-Kīlābī, chief of the
Bedouins of the tribe of Kīlāb, to be governor of
Aleppo. The Kīlābīs flocked thither in large
numbers. The Caliph granted Syria to Muḥammad
b. Ra’iḵ [q. v.] to rid it of al-Ḫiṣṣidis who did
not recognize his authority. Ibn Ra’iḵ drove out
the al-Ḫiṣṣid governor, Ahmad al-Kīlābī, and took
the field against al-Ḫiṣṣid himself. Muḥammad
al-Ḫiṣṣid was defeated, surrendered Damasc and to
ibn Ra’iḵ and fled into Egypt. In 329 Muḥammad
al-Ḫiṣṣid sent his general Kāfūr with a large
army into Syria; he defeated Ibn Ra’iḵ’s governor
and conquered Aleppo. In the following year peace was made between al-Ḫiṣṣid and Ibn Ra’iḵ, who
now received Aleppo and Hīmā also. In the same
year Ibn Ra’iḵ was slain by the Ḥamdānī Naṣrī
al-Dawla; the latter became Amir al-Umarā’, and
his famous brother ‘Ali received the title of honour
Sa’īd al-Dawla. The history of Aleppo for the next
few years is so closely bound up with his career that we must refer the reader to the article Sa’īd
al-Dawla. After the death of Sa’īd al-Dawla in
356 (967) his descendants continued to rule there
till 406 (1015) if we include the sequel of
Ḥamdānī rule under the Ḥamdānīs Mamlūk Lulu’
and his son Maṇṣūr. During this period, the history
of which is given in greater detail in the article Ḥamdānīs, Aleppo had developed with the lands
attached to it into a practically independent prin
cipality and was now the most important city in
northern Syria. Its importance in the world’s history lies in its successful struggle with the Byzantine
empire. By his extraordinary abilities Sa’īd al-Dawla
had retained Syria for Muslim culture; in the above
mentioned year, however, the city fell directly under Fāṭimid rule, for which it had already been prepared
under the Ḥamdānīs and Lulu’ and Maṇṣūr.

The Caliph al-Ḫākim remitted the taxes for 407
of the province which had been so impoverished by
continual warfare and appointed ‘Aziz al-Dawla
Fāṭik governor of Aleppo and its citadel. The
latter built himself a fortified residence connected
with the citadel and renovated the walls (see architec
ture). He was also able to come to good
terms with the Byzantines. At this time the Em-
peror Basil had forbidden trade with the “infidels”
in Syria and Egypt in reprisal for al-Ḫākim’s
cruel treatment of the Christians, but he made
an exception in favour of ‘Aziz al-Dawla. Relying
on his twofold power as governor of the city and its citadel and a friend of the Byzantines,
he showed his independence of his brother by stringing
up pagans in payment of revenue to him.
The Caliph enraged prepared to take the field
against him, but before the preparations were com-
plete he was murdered [see the article al-Ḫākim] in
411. ‘Aziz al-Dawla is said to have made peace
with his successor al-Zahir and Ījākim’s sister
who conducted the government; but it is related
that he was murdered in 413 at the queen’s
command. Others throw the guilt on Bāḍr, com-
mander of the citadel in Aleppo, who wished the
power for himself. His plan miscarried however.
The regent drove him out of the city with her
troops and as a precaution in 414 appointed two
independent governors, one for the city and an-
other for the fortress. But no one in Syria was
satisfied with Fāṭimid rule. We thus come to
have in the next year the remarkable phenomenon
of the chief of the three great Bedouin tribes of
North Syria, the Kīlābīs (led by Sa’īd b. Mirdās,
q. v.), the Kāfūrīs (led by Sa’īd b. al-Mufarradā’) uniting for joint
action. Sa’īdīs was to attack Aleppo, Siṣmān Damasc
and Hāṣān Palestine. In face of this danger
the Caliph’s best general, Anuṣṭiktīn al-Dibzārī,
was sent to Palestine to put down the rebellion.
Anuṣṭiktīn was overcome by superior forces. Sa’īd
was thus free to advance on Aleppo and after
two months the city was delivered up to him
through disension between the two governors.
Sa’īdīs left a portion of his army behind to capture
the citadel, and went southwards with the remain-
gerain defeating Anuṣṭiktīn and taking Hīmās,
Bā’albek and Sidon in 416; Raḥbā, Bābaḡī, Bālaḡ
and Raṣānīya in the east also submitted to him.
Syria thus regained its independence. When the
situation in Egypt had improved the Caliph al-
Zahir in 420 sent a new army to Palestine under
Anuṣṭiktīn, this time successfully; Sa’īdīs b. Mirdās
fell in the battle of Uḫwānā on the Jordan.
His sons, who had stayed behind in Aleppo,
shared his power; Mu’tāz al-Dawla Thāmil
received the citadel, Shībī al-Dawla Naṣr the city, but in
the next year he seized the citadel also and
inherited his brother elsewhere. He again began
the famous summer raids on the Byzantines and
severely defeated the governor of Antioch. To
revenge himself the Emperor Romanus advanced
against Aleppo, but his army, which had suf-
dered severely from the great heat of summer and
the scarcity of water, was defeated and forced
to retreat. The new governor of Antioch was more
successful in plundering towns belonging to Aleppo and
capturing numerous Muslims. Naṣr thus found
himself forced to submit; he promised to pay
tribute and observe peace. The next few years passed peaceably enough apart from a few trifling
outbreaks. In 437 the new Fāṭimid Caliph, whose
favour he had won by vast gifts taken from
Byzantine booty, confirmed his investiture and
granted him the highest rank of vizier. Two
years later, Anuṣṭiktīn, who had been governor
of Damascus since 420, resolved to take Aleppo
with Fāṭimid troops aided by the irreconcilable
Kīlābīs. Naṣr advanced to meet him with his
followers. In the battle of DāPräs Thīmul took to
flight and Nayr was killed. His brother Thimāl took his place as ruler of Aleppo, but went off to Cappadocia leaving representatives in the city and citadel. After his departure anarchy and plunder reigned there till Anushītkin besieged the town, which surrendered by agreement; the citadel also surrendered shortly afterwards. Anushītkin placed governors in Aleppo both for the city and citadel and further strengthened his power in Northern Syria. His successes aroused the mistrust of the Fāṭimid vizier, who prevented the general's family in Cairo from going to see him. Vigorous protests from Anushītkin widened the breach, till finally they were so close that Diāb had to leave him and again granted Aleppo to the Mādīsī Thimāl. Abandoned by the ka’ids Anushītkin went with a small following to Aleppo, followed by Thimāl; Anushītkin, despondent and ill, died in 433. His successor handed over Aleppo to Thimāl on receipt of the Caliph’s firmān to that effect after fighting several battles with him. He was on good terms not only with the Caliph in Cairo, who in 436 again confirmed the firmān granting him his position, but also with the Empress Theodora, who granted him and his successors titles and presents in return for payment of a yearly tribute. He was also able to avoid war with the powerful Turkish chief al-Bassārī who had fled from Baghdad before the Saldūj Sultān Thoghirl Beg and granted him Rāqṣa. The demands of the Kilābīs continued to cause great difficulties to Thimāl and their insolent attacks hurt him so much that he exchanged Aleppo for Djiboua, Bairūt and ’Akka in 449 with the permission of the Fāṭimid Caliph. The Caliph appointed two governors in Aleppo one for the town and one for the citadel and peace reigned for the years. But in 452 the Kilābīs under Thimāl’s nephew Mahmūd collected their forces to capture Aleppo. After long fighting with varying success (Aleppo on one occasion saw three different masters in three days) Mahmūd finally occupied the city and its citadel. But he could not long enjoy its possession; by command of the Caliph, Thimāl retook it from him in 453, without however having defeated him, as the Shaikhs of the Kilābīs decided that it was improper to support a nephew against his father’s brother; Mahmūd received compensation elsewhere. Towards the close of the reign of Thimāl fighting with the Byzantines went on continuously with varying result. About the end of 453 Thimāl fell very ill and died; during his long reign he had been able to maintain for Aleppo a fairly independent position between the Byzantine and Fāṭimid empires. Shortly before his death he appointed his brother ’Arīya his successor, but Mahmūd declined to recognise his uncle and revived his old claim to the inheritance as Nayr’s son. After four years of fighting Mahmūd, who had obtained Turkish mercenaries with Byzantine money, succeeded in taking Aleppo in 457. In 459—462 pestilence and the continual ravages of Turkish hordes brought about destitution, famine and great loss of life in Northern Syria. By this time the power of the Fāṭimid had declined. The ‘Abbāsid Caliphate, supported by the arms of the Saldūj Sultān, had won new influence, so that Mahmūd found himself forced to mention the Caliph al-’A’īm and Sultān Alp Arslān in prayer, hoping for their effective support. While the Shaikhs understood the changed political situation and put on black (‘Abbāsid) garments, the people rebelled and took the straw mats out of the mosques, saying these were ‘Ali’s praying carpets. Abū Bakr could get new ones for himself. Alp Arslān then demanded of Mahmūd that he, like the other vassals, should join his army at the head of his followers. When Mahmūd declined, Alp Arslān, although he advanced against Aleppo, contented himself with surrounding the town hoping to take it without storming it, in order not to weaken it unnecessarily so that it might serve him as a bulwark against the Byzantines. At the last moment Mahmūd surrendered the city, but received it back at once from the Sultān in the Ka’ids’ desire to expel him, which had reached Bṣalbek when he had to return Aleppo to protect his kingdom from the raids of his uncle ’Arīya, who had formed an alliance with the Byzantines. Against the latter Mahmūd enlisted the leaders of Turkish mercenaries from Palestine in his service and the Byzantines retreated; ’Arīya went with them to Constantinople, where he soon afterwards died. In 466 Mahmūd died, in the latter years of his reign he had become avaricious and autocratic; he was succeeded by his eldest son Djalal ad-Dawla Nayr, a cruel tyrant. When he was slain in 468, the Turkish mercenaries chose his brother Sābīk as ruler, while soon afterwards the Kilābīs took the side of another brother, Waththāb, and advanced on Kinnisrin. They dared not face the advancing Turks however and fled in disorder. The Turks took possession of their camp with their women, children and flocks as booty of war. Waththāb and his followers then turned for help to the Sultān, who himself was unable to assist them; however he granted Syria as a fief to his brother Tutush and ordered the leaders of the Turkish mercenaries to place themselves under his banner. Tutush entered Syria and made an alliance with the Kilābīs and with the Oğalīl chief Sharaf ad-Dawla Muslim. The united forces besieged Aleppo for three months in 471 but the alliance between the Arabs and the Turks was not a close one. The Kilābīs and the Oğalūls kept aloof from them, Muslim returned homeward with Sābīk, took leave of Tutush and advised the other Kilābī chiefs to seek safety. The remaining Kilābīs went over to Sābīk. After further Turkish auxiliaries who were approaching Aleppo had been defeated by the Bedouins, Tutush raised the siege and went to the Euphrates. Next spring he again advanced on Aleppo, but was once more defeated and went to Damascus, which was given him by the Turk ’Aziz. From this centre he ravaged Northern Syria and plundered the country of Ma’arrat al-Nū’mān to Aleppo so that many of the inhabitants fled to Mesopotamia. As Sābīk felt he could no longer resist, he surrendered Aleppo at the end of 492 to the Oğalīl Muslim against his brother’s wish. Muslim came with fresh troops and munitions and compensated the three brothers by granting them smaller towns. An Arab ascended the throne of Aleppo for the last time in the person of Muslim b. Kūraish [q. v.]; after he had fallen in 477 in battle with the Saldūj Sulaimān b. Kutalimish [q. v.], the city was henceforth ruled only by dynasties of Turkish origin. Ibn Kutalimish proceeded to besiege Aleppo, but the inhabitants led by the Sharīf al-Tutāli (who had built an outer fort at the southern side of the city wall, called *Kār al-Sharīf*) resisted in the hope of receiving
support from Malik Shāh. They next sent for help to Tutush, who hurried at once to their relief; Ibn Kūلمūnīsh advanced to meet him. In an encounter near Aleppo his troops were put to flight and he in despair committed suicide. Tutush came up to Aleppo to occupy it as had been agreed but when Sharīf al-Ḥusaynī refused to surrender the town, he forced his way into it after a week's siege with the aid of traitors in the town. Shāh b. Kirāshī, the commander of the citadel, who had been pledged by Muslim to surrender the citadel only to Sultan Malik Shāh himself, alone successfully resisted Tutush. Meanwhile Malik Shāh was approaching with a large army, subjecting all the strongholds on his route. Tutush retired to Damascus and Malik Shāh marched unopposed to the shores of the Mediterranean. In Aleppo he appointed his faithful friend Kāsim al-Dawla Aṣ-ṣonḵūr [q.v., i. 226b infra seq.], the founder of Zangid line, as governor in 479. The trade and commerce of Aleppo [see Architecture sect. iii.] flourished during his reign and during almost ten years of peace security reign and his subjects were mildly treated. Unfortunately he was taken prisoner in 487 in battle with Tutush and executed, Aleppo passed to Tutush and, on the latter's death soon after, to his son Riḍwān [q.v.].

Period of the Crusades. For the next few years devastating wars raged continuously between the rulers of Syria so that they were unable to resist the invasion of the Franks at the beginning of the Crusades in 490. HowBoemund of Tarentum captured Antioch, defeated the powerful army sent to its relief in consequence of the dissension among the Syrian Emirs and founded the kingdom of Antioch, which formed a continual danger to Aleppo for many years is well known. Although Riḍwān, being hated as a member of the Ismā'īli sect of the Assassins, received little support from his fellow Muslims, the Crusaders were unable to take Aleppo itself while he lived. On their raids however they frequently came up to the very gates of Aleppo. He died in 507. After the short reign of his feeble-minded and debauched son Alp Arslān, who was assassinated in 508, his son, the infant Sultan Shāh, came to the throne under the regency of Luṭf, who met a violent death in 511. In the same year Ilgāhāz b. Urtuq [q.v.] was chosen regent, but he could not at first maintain his army in consequence of the devastation and destitution of Aleppo, so that it was not till 512 that he obtained a firm footing by alleviating the famine to some extent by a favourable treaty with the Franks. Ilgāhāz, occupied in constant fighting, spent little time in Aleppo, where he had left his son Sulaimān as his representative. As the latter rebelled against his father in 514, Ilgāhāz deposed him and put his nephew Sulaimān b. 'Abd al-Djabārī in his place. The latter built the first madrasa (a theological school of the orthodox, Sunni creed) in Aleppo and aroused such wrath among the Shīʿi population that they are said to have destroyed by night what he built by day. Sulaimān, who succeeded to power on his uncle's death in 516, was deprived of it the next year by his uncle Balak b. Bahram [q.v., i. 612], when he failed to defend the province successfully against the Franks. Balak deposed the king of Aleppo, the Sālīḏūk Sultan Shāh, and exiled him to Harān. In this year the ravages of the Franks brought them up to the gates of Aleppo; plundering the sanctuaries they tore the sarcophagi out of their consecrated tombs. In reprisal the Kāfī ibn al-Khāshshāb turned three churches in Aleppo into mosques [see Architecture]. In the next year Balak fell at the siege of Manbijī, and his inheritance passed to his cousin Timūršāh [q.v.] of Mardin, who appointed a governor for Aleppo. Timūršāh was not strong enough to protect his new possessions against the Franks, who advanced on Aleppo with Sultan Shāh and Dubais [q.v., i. 1077 et seq.] of Hilla; the latter, a Shīʿī, hoped that the inhabitants, of whose enthusiasm for the Shīʿī we have already had two examples, would surrender to him without striking a blow. But he was deceived in this expectation; for the inhabitants led by the Kāfī ibn al-Khāshshāb defended themselves valiantly. As their lord Timūršāh had left them in the lurch, they had applied for help to Aṣ-ṣonḵūr, ruler of Mṣūl. The latter advanced with a large army and forced the Franks and their Muslim allies to retreat. Wisely refraining from following up the enemy's retreat, he contented himself with making his hold on Aleppo secure in the closing days of 518. His brief reign was occupied with wars with the Franks till in 520 he was murdered in Mṣūl by the Assassins. He had shortly before appointed his son Masʿūd his representative in Aleppo. The latter succeeded him in the government of his lands but, when he died the next year, utter anarchy reigned in Aleppo. Kūṭlūgh, to whom Masʿūd is said to have ceded the town, took possession of it, but was thereupon besieged by the dissatisfied inhabitants in the citadel, till finally Kāraḵīsh, the lieutenant of the new lord of Mṣūl, the Aṭābḫī Zangi [q.v.], arrived with an army and put an end to the strife. When Zangi himself arrived, he restored order but severely punished the culprits. In the next year (523) he was granted Aleppo by the Sālīḏūk Sultan. Aleppo itself was never endangered during his reign, filled with fighting as it was; security and prosperity were restored. He increased his territory by the conquest of Ǐılmāʾ, Ǐīmī, Ǐalābīk etc. When he was slain in 541 at the siege of Kaft Dīṣīr, he was succeeded by his son Nur al-Dīn Mahmūd [q.v.] in the government of Mṣūl and Aleppo (including the Syrian appanages). He improved his position against the Crusaders, by taking Damascus from the incapable Bārīd [cf. e. 800] Abāk and prepared the way for the end of the feeble Fatimid rule in Egypt through Saladin. His son al-Malik al-Sāḥib Ismāʾīl, who succeeded to power on Nur al-Dīn's death in 569, had repeatedly to purchase a shameful peace from the Franks and to cede Damascus to Saladin. Ismāʾīl soon afterwards died in 577 and Ǐrā al-Dīn Masʿūd I of Mṣūl, whom he had designated to succeed him, ceded Aleppo in the following year to Ǐmād al-Dīn Zangi II of Sindjār, but the latter was not able to defend it against Saladin. In the beginning of 579 the latter again advanced on Aleppo; but although the troops offered a valiant defence against the besiegers, Zangi II finally saw that he could not hold Aleppo, as he lacked provisions and money to pay his soldiers. After secret negotiations the two princes came to an agreement whereby Zangi II received Sindjār, Niṣībin and other lands, while Aleppo in return was ceded to Saladin.

The Aiyūbīds (579—658). Saladin at first granted his eleven year old son al-Malik al-
Zahir Ghazi Aleppo, but a few months later he transferred the government of it to his brother al-Malik al-Adil [cf. i. 138]. In 581 Saladin fell ill that his death was hourly expected. On this occasion he became convinced that he could not trust his relations absolutely and, when he had recovered, decided in 582 on a new division of his lands. Al-Adil was removed from his Syrian post and sent to Egypt as Atabeg of Saladin's son; Ghazi was again granted Aleppo and betrothed to al-Adil's daughter Dulta Khatun. Ghazi, like a faithful vassal, supported his father against the Crusaders and on the latter's death recognised al-Malik al-Adil as his suzerain. The aim of his policy was to maintain the balance of power of the Ayyubid chiefs by alternating alliances. He strengthened the defences of Aleppo to defend himself against all attacks. Ghazi died in 615; he had previously designated as his successor his younger son al-Malik al-Aziz Muhammad by his marriage with al-Adil's daughter, in order to influence al-Adil in his favour. Al-Adil's son al-Malik al-Asfah Musa took over the command of the troops in Aleppo and was successful in warding off an attack by the Saljuk Sultan Kalkawus; the civil administration was in the hands of Ghazi's trusted lieutenant the Atabeg Tughril (see architectural notes and the famous Kadi Bahri al-Din Ibn Shaddad [q. v.]). Al-Adil and his son and successor al-Malik al-Kamil each confirmed al-Aziz in his throne. In 628 he took over the command himself, appointed new officials in Aleppo and commanded in the fortresses of his vassals to strengthen his position. With the support of al-Kamil he captured the fortress of Shajzar; he inherited al-Bira (on the Euphrates) from his uncle al-Zahir Daud (a son of Saladin). Ghazi and al-Aziz brought great prosperity to Aleppo and extended their territories in Mesopotamia and Syria. Al-Aziz died young in 634 and left the throne to his seven-year-old son al-Malik al-Nasir Yusuf II (by his marriage with Fatima, daughter of Sultan al-Kamil). Yusuf's grandmother Dulta Khatun [see above] became regent during a period of political crisis. Mistrusting al-Kamil of Egypt, she formed an alliance with al-Asfah of Damascus. She was easily able to defend herself against the Templars who were raiding her territory and her troops under the command of al-Mu'azzam, son of Saladin, on several occasions inflicted such losses on them that they were forced to retire. To strengthen her power the regent made a close alliance with the Saljuk Sultan Kai-Khusraw of Rum (Asia Minor), recognised him as suzerain (in khutba and on coins) and betrothed her youthful grandson to his sister. A great danger was at this time threatening Syria. The wild, warlike people of Khazarim, driven by Chingiz-khan [q. v., i. 859 et seq.] out of their lands on the Caspian Sea had come to Mesopotamia and occupied the lands of al-Kamil's son al-Salih Aiyyub. Unfortunately the Ayyubid princes in consequence of their eternal rivalries were not united and when it suited their interests allied themselves with the Khazarim. In 638 the armies of Aleppo were severely defeated by much superior forces, their leader al-Mu'azzam taking prisoner all their baggage fell into the hands of the enemy, who laid the whole country waste from the Euphrates to Hamah in their raids up and down the country; finally the Aleppo army reinforced by the king of Hamah and a body of Beduins, who had deserted from the enemy, felt strong enough to offer battle to the Khazarim troops. They had to follow the enemy, who evaded them, as far as Haran, and the armies met not far from there. The invaders were utterly routed and retreated via Hajarra to Anah on the Euphrates, where they remained in the Caliph's territory. The plains of Mesopotamia were taken from them and the captives left in Harran set free. In 640 the Aleppo troops again utterly defeated the Khazarim, plundered their camp and took rich booty. A few months later the regent died; her grandson al-Nasir Yusuf took over the government and extended his power over almost all Syria, but just when it had reached its zenith, the end of his kingdom was at hand. The Tartar Khan Hulagu advanced on Aleppo in 658. Sultan Yusuf, who had relied in vain on help from Egypt, fled to Damascus and had afterwards to surrender to Hulagu. The latter took Aleppo, which was given over for days to plunder, conquered the Syrian cities of Hamah, Hala-bek, Damascus and appointed governors in them. Later Period. The rule of the Tutara lasted but a short time. In 659 they were utterly routed by Sultan Kutzuz at 'Ain Djallat [q. v.] and forced to retreat. Kutzuz placed a governor in Aleppo. Soon afterwards a body of Tartar troops succeeded in taking Aleppo once more and maintained themselves in it for three or four months practising the greatest cruelties. At the end of the year they were defeated at Hims and had to abandon Syria. Sultan Yusuf then is said to have been executed by Hulagu (not after the battle of Ain Djallat as is often stated). Aleppo now passed under the sway of the Mamlik Suljan; in 660 it once more suffered terribly from Timur Lenk's invasion. It was restored after the retreat of the Mongols and now became a bulwark against the hereditary enemy Armenia, against which the governors waged countless wars, later against the Turkoman rulers of the Ak and Kara-Kuyun ot and of Ablisin, as well as against the Ottomans. The territory in Asia Minor conquered from time to time by the Mamlik was always added to the province of Aleppo. The city itself was strongly fortified by its governors, notably its citadel by Abrak, the governor of the second last Mamlik Sultan Ghazi. It passed to the Ottomans by treachery; the citadel was so strongly fortified that the rebel Djembari could not take it in 926 in spite of a siege of several months' duration. The scheme of its defences has remained almost unaltered to the present day. Under the Ottomans Aleppo continued to be a flourishing commercial centre although it suffered a great deal from the misgovernment of the Pasha. From 1851-1839 Aleppo was held by the Egyptians. Ibrahim Pasha [q. v.], an enlightened man, although he had the best intentions, oppressed the city by heavy war-levies and conscriptions as well as by a system of monopolies, which were only beneficial to his officials. Matters became even worse on the return of Turkish rule. Since 1880 however the city has made great steps and will once again regain its ancient importance as a commercial centre.

III. Notes on the Architectural History. (Based on the joint researches of Dr. Herzfeld and the writer).

Aleppo is rich in monuments of a military, religious and civil character. The majority are
well preserved and almost all bear inscriptions defining their date and origin. In addition to these we have the numerous architectural notes in the historians. The buildings of Aleppo thus afford a complete picture of the architectural development, which is authoritative not only for the town itself but for the whole of northern Syria.

1. The City-walls. Aleppo was a strongly fortified town even in the Seleucid and Byzantine period and it is probable that its walls formed a rough rectangle with a gate in the middle of each side. Khusraw I captured Aleppo on his campaign of conquest in Syria (540 A.D.) (Procopius, ii, 7, and Niceph, Kalisth., xiv. 39), and destroyed the walls but spared the citadel. Between the Bab al-Di‘ân (see plan iii.) and the Bab An‘âkiya (see plan iv.) portions of the walls built with Persian bricks, said to date from the restorations by Khusraw, were still to be seen in Ibn Shaddad’s time. The name “The Ditch of the Greeks” of the ditch, which the walls now follow in much the same way, does not go back to these ancient times however, for it was dug by the Emperor Nicephorus when he besieged Aleppo in 351 A.D. When the Arabs captured Aleppo, Abû Ûbaida entered through the Antioch Gate in the year 16 A.H., so that it is evident that the position of the main gate has not been altered. The old line of defence was apparently always followed by the wall in the first four centuries of the Hijra, for which we have but few notices of it, while architectural remains are entirely absent.

The oldest part of the defences that still survives is the inner wall in the parapet between the two towers of the Antioch gate, built by the governor ‘Aziz al-Dawla in the reign of the Caliph al-Lâ‘îm (407—413 A.H.). It cannot be ascertained with certainty how much of the wall proper dates from an early period, as inscriptions only exist on the gates and towers. The architectural history of the wall is therefore based on the latter.

Saladin’s son, Sulţân al-Zâhir Ghâzî, in 600 built the north gate of the city the Bab al-Nâṣr (Pl. i.), which was called Bab al-Vahd before his time. It has not altered: it consists of two strong towers forming a gate way, the entrance is through one of them by a zig-zag path (barâbkhâmû, dergâh, cf. van Berchem, Notae d’Arch., p. 42, Note 2). More has survived of the restorations undertaken by Sulţân al-Mu‘ayyad Shâhîk after the destruction by the Mongols under Timûr Lenk. The Bab An‘âkiya (West Gate) in its present form dates from his time (823). Two inscriptions of Sulţân Barûk (792) and Farâdî (804) replaced on the gate by al-Mu‘ayyad bear witness to the restorations carried on between 807 and 823, which had been rendered necessary by earthquake and the Tatars. This gate is from the point of view of architectural technique the most advanced in Aleppo and shows the type in perfection viz., the two towers, both of which jut out with flattened corners, with lofty vaulting within, a narrow gateway and barâbkhâmû in the right tower is protected by a crenellated way between the towers. The gateway is defended by loopholes in its three walls and machicolations. The gates had folding gates and draw gates in front of them. In the tops of the vaultings were openings through which missiles could be hurled on the enemy from the upper storey if they penetrated so far. There was a sanctuary in one of the great niches of the gate way. A portion of the Bab Khînnesrin (Pl. v. south gateway) also dates from the time of al-Mu‘ayyad, namely the courtyard between the two towers, also the second tower south of the Bab al-Di‘ân (west wall) and the fine towers at the southwest corner of the city (south wall). Al-Mu‘ayyad intended that his restorations, which were never completely finished, should cover the whole of the old line of defence. Under Barsîyeh (825—842) this was definitely abandoned and an outer wall which followed the “Greeks’ ditch” was added to the city wall, with the Makâm (Pl. vi.), Nîrâb (Pl. vii.) and Hadîd (Pl. viii.) [in place of the earlier bab al-Kânat] gates.

About 803 A.H. Sulţân Khât Bey built the Bab al-Farâdî (Pl. ii.) at the south side, of it only the south tower, now quite built over, survives. Unlike the older gates the entrance is through the courtyard between the two towers. The Bab al-Makâm also, built on the same principle, may be essentially the work of Khât Bey although it also bears Barsîyeh’s cartouches. Barsîyeh built the Bab Nîrâb.

At the close of the Mamlûk period Sulţân Kanâ‘î Khûrî, once more repaired the fortifications of Aleppo to defend it against the Ottomans. From him dates the modern form of the Bab al-Di‘ân (918) and the fine Bab Khînnesrin which resembles the Bab An‘âkiya; several towers of the east wall, the Bab al-Ahmar (Pl. viii. east gate) and the Bab al-Hadîd (Pl. ix.) were entirely renewed by him (northeast corner 915). The town soon afterwards passed to the Ottomans through treachery, but they allowed its fortifications to fall into decay. Only one slight tower, the third to the south of the Bab An‘âkiya bears an inscription commemorating repairs by Sulţân Ahmed (1015—1026) and on the Bab Nîrâb Sulţân Ma‘mûd (1143—1165) has perpetuated his name by some immaterial improvements.

As Syrian architecture is essentially moderate in character, avoiding all superfluous ornament and only seeks effect through the solidity of its freestone work and the beauty of its proportions and disposition of its masses, we naturally find these features particularly well marked in defensive works. Apart from the inscriptions and their frames there is hardly the slightest decoration on the walls of Aleppo. A frieze on the Bab al-Nâṣr may be mentioned as quite unique; it shows an arabesque undergrowth through which a hare is running (see ARALESQUE, i, 363 et seq., Pl. ii. 15). There are Mamlûk escutcheons on a number of towers, lions or leopards in the rudest relief, which can scarcely claim to be works of art but are only placed on the walls as heraldic emblems (perhaps with talismanic significance).

2. The Citadel. The citadel is a natural mound with its slopes artificially steepened and a deep ditch. Its form is oval, about 300 yards × 150 in area at the top, while the ditch encloses an area of 500 × 350 yards, its height above the bottom of the ditch is 100 feet. The mound does not lie equidistant from the city walls but near the centre of the east wall. The only entrance (Pl. 2.) is in the south.

The citadel was certainly in existence at a very early period, the period when we find Aleppo mentioned in Assyrian and Hittite monuments; from this time date two Hittite sculptures of lions in basalt. It is to be presumed that its sanctuaries also date from this remote age. Although Aleppo
was only a provincial town in the Byzantine period it was fortified. A relic of this period is a vast cistern almost in the centre of the citadel hewn out of the rock and covered with nine cross arched vaultings resting on four pillars. The ‘Abbasid and early Arab dynasties have left no monuments. The deep well on the north side, around whose cylindrical shaft a staircase winds, was built in the Seljuk period as an inscription of Malikshah found in a passage below, near the steps, shows.

The existing fortifications must have been rendered useless by earthquake in 568 as Nur al-Din instituted great works of restoration, of which several inscriptions have survived on towers on the west side (568). In the interior Nur al-Din (563) built the lower sanctuary of Ibrahim al-Khalil (Pl. g) (Abraham is said to have visited Aleppo on his travels) with a splendid mihrab carved in wood, one of the finest examples of this branch of art. The celebrated minbar of the Agha mosque in Jerusalem was also originally designed for this sanctuary. The space on which Sultan Ghazi undertook restorations already shows the type usual in the Ayyubid period, a rectangle carried up by a cupola between two broad girders.

In the reign of al-Zahir Ghazi the citadel was entirely transformed and to him in the main it owes its present form. In the years 606—608 he deepened the moat and repaired the slopes, parts of which he probably also cemented. He built the high arched entrance bridge and the great gate (Pl. p), which, according to the style of city-gates then in vogue, consisted of two much projecting towers close together. A well-known talismanic relief of a snake above the gate in the archway certainly dates from him. The vaulted gateway is broken into five pieces. The entrance was closed by three heavy hammerd iron gates. This edifice of Ghazi’s is the most perfect example of a fortified gate in the east, nor indeed is there anything like it in the west. Considerable portions of the outer walls also date from Ghazi, particularly in the north where there is a small sortie gate with a hammered iron door. This wall had a vaulted parapet along it and only rectangular towers projecting slightly. Inside the citadel in addition to the restorations of Makam Ibrahim in 610 Ghazi rebuilt the great mosque with its minaret z. It was a very ancient sanctuary and had been a church down to the time of the Mirdasids. Nur al-Din had restored it, but in 609 it had been entirely destroyed by fire. Ghazi’s building is a rare type of mosque: a large central area with a cupola between every pair of cross-vaults, and a court in front of it surrounded by barrel-vaulted halls. The minaret, like all old Syrian minarets, is square in plan and divided by ceilings into stories (here three); at the top is a gallery with a cupola supported by four pillars.

In 650 Hulagu captured and destroyed the fortress so that it had to be entirely restored under Sultan al-Ashraf Khalil (inscriptions on the great gate of 691). By 786 the portions of the walls repaired by Khalil required restoration, which was carried out by Barkh in anticipation of attack by the Mongols. This building was severely damaged in 803 by the Mongols under Timur. In 809 the governor Djakam began to rebuild the walls, when he proclaimed himself Sultan in opposition to al-Nasr Faraj. He vaulted the gate-way and above the rectangular area thus obtained he built a great hall which is still the characteristic feature of the citadel. He further built two isolated talus towers connected by the citadel by posterns in the north (Pl. g) and south (Pl. g). This period of the development of the citadel closes in the reign of al-Mu’ayyad about 820. In 877—880 Saleh Bey began improvements in the hall and built a square bastion with considerable projection in the centre of the north wall (877). Then followed the period of the decisive struggle between the Mamluks and the Ottomans. For his defence Ghazi repaired the citadel and the city walls in a most thorough fashion. In 916 he repaired the hall, deepened the moat in 911—915 and cemented its sides anew, repaired the bridge and built the lofty tower at its head (913). He seems to have entirely rebuilt Djakam’s two talus towers (Pl. g and g) (914) and in 915 built a high storey on Saleh Bey’s north bastion. The main object of these comprehensive additions and restorations must have been to fit the citadel for the use of the new artillery.

Although the citadel was built entirely with a view to defensive operations, the architects of various periods substituted new art upon it. The splendid freestone architecture and the imposing dimensions of the buildings are enhanced by the many valuable materials used and by the use of decorative elements marked by excellent taste and artistic feeling. All things considered, the citadel is one of the most impressive and important monuments of Syrian architecture.

3. The Great Mosque (Pl. g). — The Great Mosque of Aleppo, also called the Mosque of Zachariah after a tomb in it, lies in the bazaars to the west of the citadel. It was founded in the reign of the Umayyad Sulaiman Ibn ‘Abd al-Malik and is said to have been built on the cemetery of the chief church (see Halawiya). No traces have survived of this early building, which is said to have built after the plan of the Umayyad mosque in Damascus. According to a tradition (Ibn Abi Ta’iy), partly confirmed by inscriptive evidence, the present edifice was first begun by the Kadi Abu l-Hasan Ibn al-Khasshab under the Mirdasid Sabil Ibn Mahmud. In the troubled period that preceded the taking of Aleppo by Aksunqur, Malikshah’s governor, little progress seems to have been made with the building. The lower storey of the minaret bears the date 483 and its inscription mentions Malikshah and the Kadi Ibn al-Khasshab, that in the upper ceiling mentions Malikshah’s brother Tutush. The remains of an inscription in a medallion, which we found in 1908 during repairs of the east wall of the east hall belongs to the same period (since plastered over and now invisible). The architecture of the whole building and the absence of later inscriptions show that the appearance of the whole mosque has remained practically unaltered for centuries. Kalain built its mihrab (664), as the old one had been destroyed during a fire begun by the Armenians allied with Hulagu. Sultan al-Nasir Muhammad built the minbar. Four Mamluk maqsuras, which we were still able to see in 1908, have been removed except the Maqsurat al-Khatib (746) during the repairs since undertaken. The central door of the haram dates from the early Mamluk period, in spite of their later inscription (Sultan Murad III, 996).
The ḥaram consists of a hall of three naves each with 18 cross vaultings on solid quadrangular pillars. Malik Śāh’s time the hall is said to have had marble pillars. The mihrāb is a simple, deep, round niche. On the left beside it in the south wall is the tomb of Zachariah. Before the ĥaram lies the splendid wide court with old decorative marble pavement, two roofed wells, a sundial and an open prayer estrade. Around it are halls similar to the ĥaram. The two-naved east hall belongs to the architectural period of Malik Śāh. The north hall with a large water reservoir has also two naves; it was restored by Barākū in 797 but he preserved the old front. The one-naved west hall is a modern building. At the northwest corner of the mosque the four cornered minaret of five stories rises above the flat roof of the halls. Entirely a work of the fifth century, with its rich classicising ornament and its inscriptions in kūfī and naskhi it is quite unique in the whole of Muslim architecture.

A work of the same period, but afterwards essentially altered is the mosque with tomb of ‘al-Ṣāliḥin’, south of the city built by Ahmed, a younger son of Malikshah designated as his successor in 479, with an old and interesting mihrāb.

4. The madrasa al-Ḥalāwīya (PL. W). — The Madrasa al-Ḥalāwīya lies to the west of the great mosque from which it is separated only by a narrow street. During the Arab conquest this was the cathedral church of Aleppo. On its ancient remains Dr. Samuel Guyer writes: “The Madrasa al-Ḥalāwīya contains in the south remains of an ancient Christian ecclesiastical building. The tradition which mentions a church built by Helena, points in this direction and the exedra-like vesting borne on pillars adjoining the main cupola in the west, which strikingly recalls similar motifs in the central churches of Dīyarbekr and Rusafa, must on account of the form of its pillars etc. be traced to a building of the end of the vii century. According to Herzfeld’s investigations, the cupola itself was built contemporaneously with this exedra and the same holds of the aisles north and south of it. We have apparently to recognise in this complex the most western part of a basilica covered by two or three cupolas, parts of the choir of which abutted on the street still running between the madrasa and the chief mosque (cf. Guyer’s article in Bulletin de l’Inst. Franc. d’Archéol. au Caire, 1914)”. It was not till 517 that the Kâdi Ibn al-Khashshāb transformed this church into a mosque in revenge for the destruction of Muslim tombs by the Crusaders. In 543 Nūr al-Din made it a madrasa. The first Madrasa in Aleppo was the Madrasa al-Zadjudjiyya built by Salāmān b. ‘Abd-al-Dabār b. Ortuṣ (510—517) of which no traces have survived (a generation later than the Ṣū‘a’imya of Bagdad). Almost at the same time in 509 the first ḥanḵāh, Ḥanḵāh-al-Balāt was built by a freeman of Rūdān’s under Alp Arslān b. Ibn Rūdān.

5. The Shu‘a‘ība. — Close behind the Antioch gate lie the remains of a building which later writers describe as an ancient arch with a Kufic inscription of later date, called Djamī al-Tūn. In reality it is the Madrasa al-Shu‘a‘ība built by Nūr al-Din in 543, which occupies the site of the oldest mosque in Aleppo built by Abū Ḫaibā (see history). The importance of this building with its luxurious ornament, its architectural features which seem quite archaic for so late a period and its Kufic inscriptions lies in the fact that it is one of the chief evidences for the still unexplained radical change, which took place in the reign of Nūr al-Din, in the epigraphy and style of his inscriptions and in the style of architecture.

6. Ayyūbīd buildings. — The whole wealth of Ayyūbīd buildings in Aleppo can only be touched on here. But as even Cairo itself, otherwise so rich in monuments, is poor in religious buildings, of this period we may here at least mention the chief buildings viz.: the Masjid ‘Aḥi in the west of the city, part of which is older in origin, the sepulchral mosque of al-Zāhir Ghāzī, the Sulṭāniyya (PL. H.) to the south, at the foot of the citadel, and the Zāhiriyya in the Makāmat (PL. 48), the sepulchral mosque of Firdaus (PL. 47) in the same place, the Kāhnāk in the Farafra (PL. 14) and that of Abū Rūdān in the Kallās (PL. 24) as well as the sepulchral mosque of Shaikh Fāris in the north of the city in Bābilā.

7. Mamlūk buildings. — A large number of the buildings belong to the period of the Mamluks and Ottomans. In addition to the many mosques, Djamī Utīrā(i) (PL. I), Alṭunghāli (PL. K), Taqāšt (PL. M) with their varied minarets, which cause the prospect of Aleppo to remind one of Cairo, a beautiful Mārstan Arghīn (PL. f) of the year 755 and a whole series of large warehouses and shops (Khan) (PL. t-e), dwellings, baths and public wells have survived.

Bibliography: No comprehensive modern account of the history and topography of Aleppo has yet been prepared. I have collected the necessary material for the purpose of editing the inscriptions there. Dr. Herzfeld has undertaken the description of the buildings as well as the history of the architecture. The preparatory studies for Aleppo are almost completely and the volume will appear in about two years as a section of Van Berchem’s Corpus Inscriptionum Arabicarum in the Mémoria de l’Inst. Français d’Archéologie du Caire. The same holds of Ḥama and Damlas. — On the topography of Aleppo: Muhammad Ibn Shaddād al-Ḥalabi (not Saladin’s Kāfī) about 674 wrote al-‘Ālāb al-ḥajīra fī Diwān ‘Umar’s al-Ṣa‘īb’s wa l-Djazira (cf. Sobermann, Ibn Shaddād’s Darstellung im Mittelalter in Centenaria della Nascita di Michele Amari ii. 152—163). His history of the rulers of Aleppo has been lost. The works by Ibn Ḥaṭṭab al-Nāṣirīya and Ibn Shīhna are based on him. The Kādi Abu l-Yumna al-Baṭrīn, a teacher in the mosque of Ḥusna Raw Pasha in Aleppo, produced a version of Ibn Shīhna in the vii century A. H. (the manuscripts of Ibn Shīhna in Berlin, Vienna, Gotha and Copenhagen are copies of it; C. Brockelmann, Geschichte der arab. Literatur, ii. 42), printed in Baitur 1909 by the Jesuits. A. von Kremer translated several chapters in Sitzungsberichte d. Wiener Akadem. Phil. Hist. Klasse, Vol. iv. 1850, p. 212—250 and 304—316; the anonymous Ms. 1683 in Paris is also based on an edition of Ibn Shīhna; Blochet has translated several passages from it in his Histoire d’Alep (see below, p. 226—245) as is Dr. Bischof’s Geschichte von Aleppo (Arabic, written by a Shaikh) an uncritical book without the slightest claims.
to accuracy; the Turkish geography Djjihân Numû, Constantinople 1732, p. 593, and Ritter's detailed account of Aleppo in his Erdkunde. Vol. viii., part. ii. 1733-1777, were the principal older sources that are quoted and digested. Plans of Aleppo, prepared by Rousseau in his Recueil des Mon. de la Soc. de Géogr., Paris 1825, ii. p. 194-244, by Niebuhm, published in his Travels in and Russell's above-mentioned Natural History of Aleppo; as well as a new plan prepared by the engineers of the wilâyêt, which is given here. On the geography cf. also M. Hartmann, Das Läwû Halâb in Zeitschr. d. Geogr. Ges., Berlin 1894: Le Strange, Palestine under the Muslims.

On the History of Aleppo: on the history of the conquest by the Arabs: Leone Caetani, Annali dell' Islam, Milan 1910, Vol. iii., which contains a list of the works consulted (the most important are the writings of Wellhausen and de Goeje), as well as a critical investigation of the sources. For the history to 640 'Omar b. al-Adîm's work is the fullest; of the Arabic text there have been published: the years 16-336 by G. W. Freytag, with Latin translation, introduction and valuable notes (Bonn 1819); Die Regierung des Sâd al-Dawla (356-361), Arabischer Text mit Deutscher Übersetzung und Anmerkungen (Bonn 1820); the text for the reign of Ibn Sâd (381-392) and for the years 634-641 in the Bonn Christomathia (Lokmani Fabulae) 1823, p. 41-46, the text for the years 577-588 in the Christomathia Arabica, Bonn 1834, p. 97-138; the history from the death of Ibn Sâ'd to the end of the Mirdâsids (394-472) from the same work by N. Müller, Bonn 1830, in a Latin translation often abbreviated and inaccurate; the history of the Hamândâs, in German in extracts by G. W. Freytag, Zeitschr. d. Deutsch. Morgenl. Ges., x. 432-498; xi. 177-252; the years 488-569 in a French translation by Silvestre de Sacy, printed in Rührich's Beiträge zu den Kreuzzügen, Berlin 1874, Vol. i. 209-246 (see also Recueil des Historiens orientaux, iii. 57-96, 690); Blochet's translation of the years 541-640, entitled Histoire d'Alep, Paris 1900; further extracts in Defrémery, Mémoires d'Histoire orientale, i. 35-65; in the edition of Leo Diaconus, Bonn 1828, p. 359-391. The Christian-arabic sources (Euchychus and his son Yahyâ b. Ba'trik) and the Byzantines are best utilised in Schlumberger, Un Empereur Byzantin au xivme siècle: Nécrophore Phocas, Paris 1890, l'Épêche Byzantine à la fin du xiième siècle, 1896-1905, 1-3. For the Crusading period: Wilken, Geschichte der Kreuzzüge; Reinaud, Extrait de l'Histoire de France, Paris 1839; Recueil des Historiens orientaux, Paris, 1-5; Rührich, Geschichte des Königreiches Jerusalem, Innsbruck 1898; Wüstenfeld, Geschichte der Fatimiden-Chalifen, Göttingen. Also the standard works of Weil, A. Müller and Clément Haurt. — Arabic authors: Ibn al-Adîrî, Balladurî, Abu 'l-Fidâî, Ibn Halîb (extract in Orientalia II by Meursinge and Weigers, Amsterdam 1846). Ibn Iyâs (printed in Cairo, except the years 906-922, for this gap cf. Miss. in Paris and Petersburg); Ibn Khaldûn (particularly Vol. iii., History of the separate Dynasties); Makrizî's Sunûk (translation from the beginning to 648, by Blochet, Paris 1908, with valuable extracts from Ibn Wâsî); Quatrémère (translation of the years 648-708 under the title Histoire des Sultanînas Mamlûkînas with valuable notes, Paris 1837); Nuwairî (Miss. in Leiden and Paris); Ibn Taghribîrî's Nuwâ'im, edition of the text from the beginning in 365 by Schwimmer and Mathes (Leiden 1852-1851), p. 365-564 by Popper, Leiden 1909-1915. — For biographical notices: Kamal al-Dîn'omar, Burzûyât al-Tâlib (a few biographies printed in the Recueil des Historiens orientaux, i. 691-782; Ms. in Paris); Ibn Khallânî's well-known work; al-Sâfîdi, Ayyûn al-Ârî (Ms. in Berlin) and al-Wâfi bi 'l-Wâfiyât, various portions of the Ms. in Paris, London etc.; Ibn Taghribîrî, Manhal al-Sâfî (Ms. in Cairo, Paris, Vienna). — Epigraphy in Blochet's Histoire d'Alep, translation of the inaccurate texts of inscriptions by Bischoff. A few inscriptions in M. Freyher von Oppenheim, Inschriften aus Syrien, Arabische Inschriften, edited by M. van Berchem; also Sobernheim in Mélanges Deroenbourg, p. 379-390: Das Heiligtum Shi'îch Muḥâsin in Aleppo.

(M. Sobernheim.)

AL-HALÂBî, IBRAHîm b. MUHAMMAD, an Arab jurist, author of a handbook on the Furû'a, according to the Hanafi school much used in Turkey and often annotated. Its title is Malûka l-ahâr (printed with Šâhîhâ's commentary, Stambul 1241, 1310, by al-Hashâfî, ibid., 1258, 1287, 1310; French transl. by Sauvare, Marseilles 1882, Turkish transl. by Hamid Râghib, printed in Bulaq 1254, Stambul 1269; cf. Hâdîddi Khâlî, vi. 102 et seq.). Al-Halâbî, a native of Halâb (Aleppo) studied in his native city and in Cairo, then came to Constantinople where he filled the offices of preacher and professor and died in 956 (1549) at the age of 90. Besides the textbook already mentioned he composed other works detailed by Brockelmann, Gesch. d. Arab. Lit., ii. 432.

Biographie, cf. Brockelmann, b.}

AL-HALÂBî Nûr-AL-DîN B. BURHân AL-DîN 'Ali b. IBRAHîm b. AHMAD b. 'Ali b. OMRAN AL-MA'âRÎH All. a. 10TH. — Arab author, born in 975-1567 in Cairo, was a professor in the Madrasa al-Šâlîyiya there and died on the 30th Sha'bân 1044 = 17th Febr. 1634. The best known of his numerous works is the biography of the Prophet, entitled Mînân al-Îyâni fi Sirât al-Amin al-Ma'mûn, usually called al-Sira al-Halâbîya, an excerpt from al-Sira al-Shâmilîya of Shams al-Dîn al-Shâliî al-Shâmilî (died 942 = 1536), considerably expanded by numerous additions, completed in 1633, printed in Cairo 1286, 1398. We also still possess from his pen the Sûfî treatise al-Nawî'a al-Awamîya fi Bayân Hunân Turâkh al-Sâdî al-Âdîmîya, see Ahwardt Verzeichn. d. Arab. Hlst. der Kgl. Bibl. zu Berlin, Nr. 10104, and the Odd al-Mardîjîn fîmâ yata'allâk bi 'l-Đinn, a digest of Suyûtî's digest of Shîbi's work, discussed by Nûrêde in the Zeitschr. d. Deutsch. Morgenl. Gesellsch. (Vol. iii., p. 439 et seq.; see also lxv. 155), see Fihrist al-Kutub al-'Arabiya al-Mahfûzîya fi 'l-Kutubîn 'ala al-Sawâfînîya, vi. 157; vii. 302, Bibl. de l.'Ecole française de St. Sâcy, Paris 1842, Vol. iii., Miss. p. 5. No. 31, 2. Of the many commentaries and supercommentaries which he wrote on textbooks current in his time, the only one that has survived is that on Zakariyâ al-Anṣârî's commentary on Nawâti's Minâhîd al-
HALABI — HALI.

HALETI ʿAZMI-ZADE MÜYÆFQ EKRN, known as ʿAZMI-ZADE or by his pen-name Haleti, a famous Ottoman scholar and poet, born in 977 on the 15th Shabān (23rd Jan. 1570) in Constantinople, the son of Pir Mehmed ʿAzmi Efendi, a literary man of some importance, the tutor of Sultan Murâd III. He had the good fortune to study under the most distinguished scholars of his time, notably the historian Khodja Sâd al-Dîn. Under their direction he laid the foundations for his later encyclopedic knowledge of history. He was a munidirs and kâdî in various places, Damascus, Cairo, Jerusalem, Brusa, Adrianople and Constantinople and reached the highest office viz. Kâdî ʿAsker of Anatolia and later of Rumelia. He died on the 26th Shabān 1040 (30th March 1631) and was buried in Constantinople near the Süleyman Çârşëyy.

Haleti was one of the most cultured and best read men of his time, and rivalled 'Ali Čelebi in intellectual knowledge. He left a library of 3000—4000 volumes, all of which he had annotated in his own hand. As a poet he occupies an honourable place among Ottoman poets of the second rank; to the first he does not belong, however much he may have been esteemed in his own time. His language is fine and dignified. His poems are pitched on a tender key. They are characterized by a certain pessimism of tone. Haleti's main importance in poetry lies in his nihâ and even more in his râbiz (quatrain), composed after Persian models and forming a separate Divân, in which he successfully imitated ʿOmar Khayyâm and won a special place in Ottoman literature from which he has never been ousted. He also left a fairly good Divân which is still popular (printed Bûlak 1528), and a Sâbî-Nâmë (Book of the Cup-bearer) in Maâhmarî verses, after the Persian model, a typical example of this style of poetry, and a Fend-Nâmë in Mathnawi verses (moral precepts). He added a considerable number of new verses to it, although he did not complete the romantic Maâhmarî Mihr e Muḥfiz (Sun and Jupiter), the translation of the work of the Persian poet Muḥammad ʿAssâr, which his father had left unfinished.

His prose works are all those of a professional scholar: marginal notes on the Minâr Ibn Malîk and the Dürer see Çihans, a commentary on the Maâhmarî 'L-Lâh, additions to the commentary on the Höyây, the Miškâ-i Şahrûk and the Mişbâh, further treatises on the exegesis of the Úrûn and collections of letters (Munshâsî ʿAzmi-zâde Efendi) as models of style.

HALF, HALI [see HILF.]

HALI (Haly, Hal, al-Hâli), a town in Arabia, lying to the south of Kufa and near the border between the Hidjaz and Yemen on the Wadi 'Aqsh, with the small harbour of Marsâ Hali and the mountain spur of Ra's Hali (the latter according to Niebuhr in N. Lat. 18° 36'). Ibn Baṭûta, who visited the town on his journey to Yemen in 1311 A.D., gives it the name Hali b. Yaʿqûb and
describes it as a flourishing seaport with fine buildings and a splendid mosque. The Saifan, who was at that time ruling the town, belonged to the Kinana [q.v.] and was a gifted poet and a model of Arabian hospitality. In Niebuhr’s time it was a dependency of the Sharif of Mecca, who had a large garrison here. In 1805 or 1806 the town with the whole coast was taken from the Sharif by the Wathibis [q.v.]. In 1815 Muhammad ‘Ali’s Egyptian troops regained it after having been driven out in the preceding year by the neighbouring mountain tribes of ‘Asir [q.v.] and in the same year Burckhardt during this stay there found the tax-collectors of the Sharif of Mecca again installed in it. In 1824 and 1825, on their campaigns against the tribes of ‘Asir, the Egyptian troops passed through Halil. During the Egyptian campaign against ‘Asir in 1834 Halil was burnt to the ground by Ahmad Pasha’s troops.

HALIL, Sayyid AlṬaf Husain Angārī, the foremost living Urdu poet, was in his youth a pupil of the poet Ghālib [q.v.]; at the age of 40 he came under the influence of Sir Saiyid Ahmad Khan [q.v.], at whose suggestion he wrote his Musaddas, entitled Maddu ‘ajar-islām (“The flood-tide and ebb of Islam”), first printed in 1296 (—1879); this poem embodies the ideals of the reform movement in Muslim India and has exercised a wide spread influence on contemporary thought and activity; it has frequently been reprinted and later editions have been considerably enlarged. In 1903 he published his Divān, accompanied by a prose introduction on the nature of poetry and the characteristic features of poetic literature in various languages, including Urdu. Among his prose writings are Ḥayā‘ī-Ṣiḍ‘ār (1886), ‘Īḏgār-‘Īḏgār (1897), and Ḥayā‘ī-Īḏgādār (a life of Sir Saiyid Ahmad Khan) (1901). He has been living for some time past, in retirement in his native town, Pānpat.

Al-HALIM (a. s., the mild, one of the names of God, see i. 304).

HALIMA, a woman of the Banu Sa‘d b. Bakr, according to Tradition, Muhammad’s nurse. In a year of famine she came to Mecca with other women of her tribe to seek foster-children and finally adopted the orphan Muhammad, who soon brought great happiness to her household. During his stay with her, two angels came to him, opened his breast and took out a black clot of blood. Although in the later accounts of Muhammad’s wars there are one or two illusions to his foster-kinship with the Banu Sa‘d, the whole story is simply an evangelistic infantiae, the motif of which, as the story itself shows, is that every true prophet should have once been a shepherd. The custom of sending children to Beduin nurses is occasionally mentioned (Tabari, i. 851; cf. Burckhardt’s Reisen in Syrien, p. 344 et seq. for the Sharif-families), but was only practiced by rich or distinguished people. The cleaning of the breast, which is placed at a different period in other traditions (Tabari, i. 1154 et seq., 1157) is apparently only a materialising of Sura xxiv. 1.

Bibliography: Ibn Higham, ed. Wustenfeld, p. 105—107, 355; Wellhausen, Wakte, p. 350, 364; Ibn Sa‘d, ed. Sachau, i. 69—71; Tabari, Annalen, ed. von Goethe, i. 960—972, 1143; Causin de Perceval, Essai sur l’histoire des Arabes, i. 286 et seq.; Sprenger, Muhammad, i. 119, 163 et seq.; Caetani, Annali dell’Islam, i. 154 et seq. (Fr. Bühl.)

HALIMA, the name of the daughter of Al-Hārith b. Dījāhala, king of the Ghassān, celebrated for her remarkable beauty. It was from her — or according to others, from a monkey, called Marūd Ḥalima after her — that the Yawm Ḥalima, one of the most celebrated battles of the pre-Islamic Arabs, the Ayyūn al-Arab [q.v.], received its name. It was a battle between the Ghassānids led by the above named king and the Lakhmids commanded by al-Mundhir b. Mā‘ al-Samā‘. The cause and the course of the battle are differently given in the different accounts. The fray is said to have been so fiercely fought that the dust raised hid the sun and the stars became visible by day. A well known proverb says: Ma‘ yawm Ḥalima hā‘īr “the day of Halima is no secret”. This is said of anything which every one knows.

Bibliography: al-Maidānī, Ma‘ṣūma al-Anthālī (Caio 1284), ii. 189 and 334; cf. Freytag, Arabische Proverbia, ii. 611, iii. 531; Ibn al-Ṭabari, Chronik, ed. Rhummel, ii. 104; Mittwoch, Freiheit Arabumm paganorum (Berlin 1899), p. 22. (E. Mittwoch.)

Al-ḤALLĀDI (the carder) Abu ‘l-Muqīth al-Ḥusain b. Manṣūr b. ʿAlā‘amī al-Baḥrī, a Persian mystic and theologian who wrote in Arabic. He was born about 844 (858) at al-Tār near al-Baṣrā (Fārs), the grandson of a fire-worshipper, or descendant, it is said, of the Shafti Abu Aiyūb. From 260 (873) to 284 (897) he lived in retirement (ḥalawma) with Sufi teachers (Tustari, ʿAmr Makki, ʿUmaīn). Then he broke with them and went out into the world to preach (dāʿawā) asceticism and mysticism, thus assuming the part of a Kūrti (Ṭalikī), Ahwāz, Fars, India (Gudjarāt) and Turkestan. On his return from Mecca to Baghdād in 296 (908) disciples (Hallādīya) rapidly gathered round him. He was then accused of being a charlatan by the Muʿtazila, excommunicated by a ta‘wīfī of the Imāmīya and a fatwā of the Zāhirīya, and twice arrested by the ʿAbbāsid police. Brought before the vizier Ibn Ḥāṣim and put on the pillory in 301 (913), he spent eight years in prison in Baghdād. The patronage of Shaghab, mother of al-Muktadr, and of the ʿAbdīl Naṣr brought upon him the hatred of the vizier Ḥāmid, who had him executed after a seven months’ trial on a fatwā approved by the Mālikī Kādi Abū ʿUmar. On Tuesday 24th Dhu ’l-Ka‘da 309 (26th March 929), on the esplanade of the new prison of Baghdād (on the right bank of the river) opposite the Bāb al-Tāk, al-Hallādī was flogged, mutilated, exposed on a gibbet (maṣṭūf) and finally decapitated and burned. This “sacrification” gave rise, as in the case of Christ, to legends of substitution (cf. Rev. Hist. des Religions, i. xi., 195—207). His persecuted disciples gathered round
Abū 'Umrān al-Hāshimī in al-Ahwāz, and Fāris al-Dinawarī in Khurāṣān. It was from this last group that the mystic revival of Persian poetry originated with Abū Sa'īd [q.v.] and of Turkish with Ahmed Yesevi and Nesimi [q.v.].

Madākh (doctrines) of the Hallidjīya:

a. in Fīkh, the five farādī, even the Ḥadījī may be replaced by other works (＝ ishāf al-wasātī).

b. in Kalām, God’s transcendence (tanāzī) above the limits of creation ( áll, 'ard), the existence of an uncreated Divine spirit (rūḥ nāfṣka), which becomes united with the created rūḥ (spirit) of the ascetic (khatāl al-hikmat fi l-rūḥānī); the saint (qayyūl) becomes the living and personal witness of God (kwāna kwānā) whence the saying: Amīn 'l-Hāshī, “I am Creative Truth” (cf. Tawāsin, VI, 32).

c. in Taṣawuf, perfect union with the divine will (‘āin al-dīn) through desire of and submission to suffering. The ḥikr given them by Shaikh Sanā'ī is modern.

Few men in Islam have been so much discussed; in spite of the iṣma of the judges who condemned him, popular devotion has canonised him. The following are the principal doctors who have taken part in this cause célèbre: (k = taufīk, w = wiliyāy, i = tauswīyī):

Among European scholars different verdicts have been passed upon him. A. Müller and d’Herbelot think him to have been secretly a Christian; Reiske accuses him of blasphemy, Tholuck of paradox; Kremer makes him a monist, Kazanzki a neoplatonist, and Browne “a dangerous and able intriguer”. Halādīj, a dialectician and exoteric, (cf. Lullius, Swedenborg), endeavoured to bring dogma into harmony with Greek philosophy on a basis of mystic experience; he was in this a precursor of Ghaszend, and although he would have repudiated their caustic esoterism, the Sufis have made them their “martyr” par excellence. — Of his works (cf. Kitāb al-Fihrist 1, 192) there remain the Kitāb al-Ta‘wūsīn (ed. Massignon, Paris, 1913), 27 Riwāyat of the year 290 (902); 400 fragments in prose and 175 in verse of rare beauty.

(LOUIS MASSIGNON.)

ḤAMĀ (also called Ḥamāt or Epiphania) is built on both sides of the Orontes (Nahr al-Asī); the larger part of the town lies on the left bank (cf. Plan), which in places rises as high as 120 feet above the river. Three bridges connect the two sides. No traces remain of the mediaeval citadel and only a mound of ruins marks the site of the palace. Their stones are said to have been used to build the palace of the family of ʻAbd al-Kādir al-Gilānī who immigrated from Baghdad; in this palace and also in that of the palace of the ʻAmā family there are two fine ǧūr (rooms built for the hot season) ornamented with wood carvings. The water of the Orontes is led to the gardens and fields through aqueducts, to which it is raised by water wheels (nībīra), whose singing noise has a peculiarly soporific effect. There are also small aqueducts in Antioch (The Crusaders brought them to Germany; they are still used in a little valley in Franken near Bayreuth). In Abu ʻl-Fīdā’s time there were 32; now there are about 9 such water wheels. Ḥamā has 51,000 inhabitants (about 6000 Christians, the remainder Muslims); it is connected by railroad with Aleppo, Ḥimṣ (where there is a branch line to Tripolis) as well as with Damascus and Bārat. A high road leads to Lattakya via Dījas al-Shughīr. On the prospects of Ḥamā see M. Hartmann’s Reisebriefe aus Syrien (Berlin 1919), p. 50–57.

Historical. Ḥamā was first settled by Ḥittites; it is the most southerly place where Ḥittite inscriptions have been found. In the wars against Salammassar II in the years 855 and 845 B.C. king Irkhuleni of Ḥamā took part as an ally of Hazad of Damascus; in 738 King Eni-El paid tribute to Tiglath Pileser. In 720 a rebellion by king Iltu-Bidu was put down by Sargon and the town incorporated in the Assyrian empire. Ḥamā called the “great” in the Bible is frequently mentioned there. In the Hellenistic period it received the name Epiphania from Antiochus IV Epiphanes. In 16 A.H. (unlike Ḥimṣ it was a little town of no importance) it was surrendered to the Muslims and remained till the 17th century under the administration of the dīnār (military district) of Ḥimṣ. In the time of the Ḥamādīn Saif al-Dīn (333–356, q. v.) it was incorporated in the administrative district of Aleppo, in which it remained till the death of Ridyān, in 507. The ruler of Damascus the Atabeg Tughrīk (q. v.) seems then to have taken the town. It was taken from him in 509 by the Saldjāk general Bursbūk and given to Khirkhān ibn Karājdī, governor of Ḥimṣ [q. v.], who transferred it to his brother Shīhāb al-Dīn Māmādī. During his reign the Franks in 511 took advantage of an eclipse of the moon, to penetrate into the suburb of Ḥamā but they had to retreat without taking the town itself. When Māmādī died in 518, Tughrīk at once marched his troops into the town and took possession of it. On his death in 522 his son Būrā [q. v.] succeeded him. In 524 Būrā made an alliance
with Zangi and sent the governor of Ḩamā, his son Sewindj, to his support. Zangi treacherously imprisoned him, entered Ḥamā with Khirkiān and handed the city over to the latter, as had been agreed, but soon afterwards made him a prisoner to gain Ḥamā for himself. Once more he lost the city for a brief period. Būrī’s son Ṣunā’il took possession of it in 527 and held it till 529. Zangi again took it in the latter year and placed a strong garrison there. The ownership of the city next passed to Nūr al-Dīn and to his son Ṣunā’il, till Saladin took it in 572. Two years later he granted Ḥamā in fee to his nephew al-Malik al-Muẓaffar, whose descendants retained it in their possession and made it their aim to keep on good terms with the great Ayyūbīd rulers. Recognising their weakness they did not attempt to resist Hūlāghī Khān and after his defeat they acknowledged the Mamlūk Sultāns as overlords. The main line became extinct in 698; the nephew of the last Sulṭān was the celebrated author Abu ‘l-Fīda’ Ṣunā’il [q. v.] who accompanied Sulṭān Muḥammad al-Nāṣīr on his campaigns and was bound to him by ties of the closest friendship. Al-Nāṣīr Muḥammad granted him Ḥamā with the rank and title of Sulṭān. Under him the town enjoyed great prosperity. His tomb is still preserved in Ḥamā (see Graf Milline in the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, 1908, p. 657—660). His son al-Malik al-Afdal Muḥammad drew the wrath of the Sulṭān upon himself by his incompetence and was finally banished to Damascus. After his death (742) Ḥamā was ruled by governor of the Mamlūk Sultāns. In importance it was overtaken by Tripolis and about 750 was considered a governorship of the second class. Under Ottoman rule Ḥamā at first continued to be a province under a Paḫā. At the present day it is a sandjak under a mutaṣṣarīf of the wīlāyet of Damascus.

The Great Mosque. The Ḥaram has been evolved from a Christian basilica of unusual form: 3 naves of different breadth, 8 supports with 5 cupolas in the centre and covered by five cross vaultings on each side. The west wall seems to have been the narthex wall of the church. The south wall dates from the pre-Christian period so that, as in Damascus, the building is temple, church and mosque. In the east, standing alone, is an old four cornered minaret with ūṭūr inscription, probably of the 4th century.

The beautiful court is surrounded by vaulted halls, an estrade with two mihrābs before the Ḥaram, a second with a basin and isolated mihrāb at the north hall, a khazna on 8 ancient pillars. In the east hall a turbe and a hall of prayer with heavy bronze windows of the Mamlūk period. From the west hall one enters through a room the mausoleum of al-Malik al-Muẓaffar III (683—698) with splendid cenotaphs carved in wood; a second minaret rises outside in the centre of the north hall; its form and inscription proclaim it a Mamlūk building. A peculiar feature of the architecture of Ḥamā finds marked expression in the mosque: the adornment of the walls by mosaic in sections or the alternation of black basalt and white limestone.

The Djiām al-Nūrī is built on the left bank of the Orontes on sloping ground and high substructions. The building was founded by Nūr al-Dīn and, in spite of the many alterations, still contains considerable portions of the old building, for example, the long haram, the cross vaulting of which belongs to a later period, three cupolas of different forms in the east hall, the substructions of the east and north sides and the north outer wall of the mosque. The lower part of the minaret with its square white blocks is perhaps also old. The mosque contains the beautiful remains of a wooden mihrāb given by Nūr al-Dīn, and a richly decorated mihrāb with decorated marble pillars given by Malik al-Muẓaffar Taklī al-Dīn (626—642) and in the eastern ante-room a mihrāb of marble columns the capital of which bears an inscription of Abu ‘l-Fīda’.

Bibliography: See under Ḥalab. Some of its numerous inscriptions have been edited by van Berchem in Freih. v. Oppenheim’s Syrische Inschriften (see under Ḥalab), p. 22—34. (M. Sofferneiheim).

ḤAMADHĀN, the Hagmatān of the Old Persian inscriptions, NOBTS OF THE BIBLE (Ezra vi, 2).

Aṭṣārīn in Herodotos, Ecbatana in the classical authors, lies in a fertile plain at the foot of Mt. Elwend [q. v.]. This is not the place to discuss its pre-Muslim history for which the reader may be referred to Pauly-Wissowa, v. 2155, and Streek in Zeitschr. f. Assyir., xx. 367 et seq. Perso-Arabic tradition still knows of the age and ancient greatness of Hamadhān. A Persian author quoted by Yākīt (cf. Mūgām, iv. 983) says that Dājiw created Sārū (Sārū, Sārīk is the name of the citadel of Hamadhān). Sārū surrounded it with a girdle, Bahman b. Isfandiyār completed it, i.e. Dājiw (Dijāshīd, Vima) built the citadel (in the old Persian tradition also Vima is the builder of the castle, Vara), Darius fortified it with walls, and Bahman, the ancestor of the Sāsānids, completed it. According to another tradition, Darius rebuilt the city, which had been lying in ruins since the time of Bokht-Naṣr in order to have a safe asylum for his harem and treasures during the war with Iskandar. For this purpose a palace was built in the centre of the town with not less than 500, according to others, as many as 1000 treasure-rooms and 28 double iron doors fell high. Whether the other citadel of Hamadhān actually dated back to such early times, must remain uncertain; it is certain, however, that it was destroyed by Aqgh Muḥammad Khān in 1789 and that the remains, now called al-Muṣallā (the place of prayer) are to be seen outside the town.

Another monument of ancient times, of which the Arabs give an account is the Lion Gate (Bāb al-Asad), which gave entrance to the town from the Elwend side and was adorned by a colossal figure of a lion. The inhabitants looked on this figure as a talisman, which protected the town from misfortune and cold, so that no wall commotion was aroused when the Caliph al-Muṭṭaf ordered it to be brought to Bagdad in a car drawn by elephants. Fortunately they were able to convince him of the impossibility of carrying out his plans so that the lion remained in Hamadhān. Shortly afterwards (319 = 931) the Bāb al-Asad was destroyed by the rude Dailamī warriors of Merdawīd and the lion thrown down. (Mas‘ūdī, Murūdī, ed. Paris, ix. 21). The inhabitants, however, to this day esteem a figure of a lion lying outside the town as a talisman against hunger and cold (Curzon, Persia, i. 568). Cf. the picture in Jackson, Persia Past and Present, p. 197.
Other old buildings mentioned by the Arab geographers were not in Hamadhān itself but in the neighbourhood, e.g. the fire-temple of Barāhān or Furđāgān which was destroyed by the Turk Burūn in 858 (958) (cf. Vākūt, op. cit., i. 540; iii, 380); buildings erected by Bahram Gōr at Dēwān from foundations, with Persian inscriptions and others besides. The fullest account of these is given by the geographer Ibn al-Fakīh, a native of Hamadhān (ed. de Goeje, p. 217 et seq.). Old Persian inscriptions of Arta xerxes II have, it need hardly be mentioned, been found in Hamadhān and others of Darius and Xerxes on Mount Elwend.

As the centre of a well populated district Hamadhān developed at a very early period and is said to have been four parasangs in length and in breadth to have stretched as far as where later the villages of Zainawbāb, Sangbāb, Bar dāhān etc. lay. After the battle of Nehāwānd in 23–644, the town fell into the hands of the Muslims (cf. al-Baladhurī, ed. de Goeje, 309 et seq.), but continued to be the market of the country round. According to Ibn Haḵḵal, it was one parasang square and consisted of the town proper and suburbs (rābaḵ). Four gates led into the town. The cold climate and the heavy snowfalls during the long winters did not make it a very inviting residence so that it played the modest part of the chief town of a province until, in the last years of Saddāb power, it was chosen as a residence by these Turks, who were used to a cold climate. Royal palaces were then built in the city, but nothing has remained of these. They were all destroyed by the Mongols when they took and sacked Hamadhān in 617 (1220) (cf. Ibn al-Athīr, ed. Tornborn, xii. 248 et seq.).

The town however afterwards recovered, as is clear from Ḩam Allāh Mustawī’s description, but remained what it had been under the Arabs and still is, the market place of a fertile district. The local industries are leather and metal (gold, silver and copper) work. According to Ker Porter, the population in the beginning of the sixteenth century was about 40,000, according to Curzon in 1889, there was no more than 20,000. Among these are a considerable number of Jews (1500–2000), who are attracted not only by the favourable conditions of trade, but also by the alleged grave of Mordecai and Esther in the middle of the town, not far from the Masjīd-i Džum’a to which also many Jews from other countries make a pilgrimage. Cf. Jewish Encycl., v. 233; at Hamadhān there is also the tomb of the celebrated philosopher Avicenna who died here in 428 (1037). Cf. the picture in Brugsch, Keis nach Persien, i. 362. Bibliography: The History of Hamadhān by Abu Ṣuḏāḥī Sirīyā b. Shahardār has unfortunately not survived. Cf. also: Bibliogr. Arābī, ed. de Goeje, particularly Vol. v. 217 et seq.; Vākūt, Muṣḥām, iv. 951 et seq.; Kazz wini, ed. Wustenfeld, ii. 323 et seq.; Ḩam Allāh Mustawī in Schefer, Sissatennameh Suppl., p. 198 et seq., and Le Strange in the Journ. Roy. As. Soc., 1902, p. 240. The older travellers in Ritter, Erdreise, li. 95 et seq. and Curzon, Persia, i. 568, Note 2; Brugsch, Keis nach Persien, i. 362 et seq.; J. de Morgan, Explication scientif. etc., iv. 235 et seq.; Le Strange, The Lands of the Eastern Caliphate, p. 194 et seq.; Jackson, Persia Past and Present, p. 144 et seq.

Hamadhān (358–398) Abu ʿl- Faḍīl Abū Ṣuḏāḥī b. Abū Fāris Abū Ṣuḏāḥī b. Abū Fāris, called Bāḏr al-Zamān, poet and elegant writer. He studied at his native place Hamadhān with the grammarian Abū Ṣuḏāḥī Abū Ṣuḏāḥī Abū Ṣuḏāḥī. He then worked in Fars and Ctesiphon, from where he for a time acquired the favour of the Sāḥib b. ʿAllādī b. ʿAllādī. He then went to Dārūs, where he found a patron in Abū Saʿīd Muhammad b. ʿAllādī. In 382 he went to Nisābūr, where he joined the Šāhīrīzī, the leading adīb of the time, and was invited to contribute to his periodical Al-Qāṣem, which was published in the various branches of Al-Qāṣem, which was published in the various branches of adab; in the account which he gives of the match (transl. by v. Kremer, Kulturgesch., ii. 471 et seq.) he represents himself as victor; but though this appears doubtful, the affair brought him credit and when Ḥāfiz al-Ṣāḥīf b. ʿAllādī died in the following year he succeeded to his honours. He found patrons in the Itilāf b. Ḩalīm and in the cities of Khurāsān and Chezān, and finally settled at Herāt, where he married the daughter of Abū Saʿīd Abū Saʿīd Muhammad b. ʿAllādī. Muhammad b. ʿAllādī.

Of the works by him which have come down to us the Maḥānāt would seem to have been dedicated to Kāla b. Abū Ṣuḏāḥī, prince of Saḵtaḵt, whose honourable treatment of the author is also described in the Letters (no. 173). The word Maḥānāt which before his time seems to mean “sermon” (Murādī al-Dhahabī, v. 421) or “discourse” (Dāḥīr, Būḥārī, p. 218, 19) from its employment as the title of Hamadhān’s compositions came to mean something like the Greek Mimes, i.e. an entertaining dialogue. Hamadhān claims to have composed 400 of these, no two alike; this boast is not borne out by the surviving collection, which numbers 51 pieces, some of them duplicates. The subject is ordinarily kudāya, i.e. ingenious devices for obtaining money, wherein the hero displays some learning, eloquence or wit; some however might better be described as scenes of contemporary life in Baghdaḵ, while some are placed in the past, e.g. one in which the poet Ḥāfiz b. Ṣaḵtaḵt figures, one which deals with Muhammad b. Ṣaḵtaḵt b. Ṣaḵtaḵt b. Ṣaḵtaḵt (died 257), and one which reproduces a scene in the life of Saʿīd al-Dawla (died 356). The subjects include theological discussions, sermons, poetical pieces, as well as the devices of beggars and thieves. According to Ḥusṭī (Zahr al-Adāb, i. 254, 1505) they were suggested by the Arbaḵ’, the letters of Ibn Durūd.

The collection of Letters (233 in number) consists mainly of private communications, written however with sufficient elaboration to justify publication. The persons to whom they were addressed were in most cases men of some eminence, though only a few are still remembered, e.g. the historian Ibn Miskawī, and the adīb Abū Bakr Ḥāfizī. The contents are usually only of private interest, e.g. requests for the loan of books, or complaints of the amount of the harrādī; some however deal with matters of more general importance, e.g. no. 167 which describes the spread of the Shiʿī heresy.

Selections from his poems were made by Ṣaḵtaḵt (Yatmaa, iv. 195–214), and some others are inserted by Ṣaḵūt in his biography; the divān which has been published (Cairo 1903 as ʿAbd al-Wahhāb Ṣeḵwān and Muhammad Ṣeḵwān) fills
The European literature on Hamadhanī is enumerated by Brockelmann (i. 94). The biography by Yaṣṣūṭ (Udalib i. 94–118) is based chiefly on Thālabī, but also on Shirūyā’s History of Hamadhanī. (D. S. Margoliouth)

Ḥamā’il, talismans. The use of amulets is very widespread in the lands of Islam. In North Africa they are called ḥurṣ, among the Arabs in the East ḥamāyā or ḥātṣ, ṣāḥba or ṣāḥiba, and in Turkey, yafsa, niqka or ḥamāil. They are often carried in little bags, lockets or purses, which are worn round the neck or fastened to the arm or turban. Among rich people they are of gold or silver. Children are given these amulets as soon as they are forty days old; the crudest articles may be used as amulets, such as a shell, a piece of bone, sewn into leather and fastened under the left arm (see Emily Ruete, Memoirs of an Arabian Princess, trans. by L. Strachey (New York, 1904), p. 68). Bedouin girls have an amulet which they call ṣāḥba and prize highly; it is a book of prayers 7 cm. long and 4.5 cm. broad enclosed in a gold or silver box and is worn as a brooch.

The prayers, signs and figures on these talismans are of very different origin and their investigation offers great difficulties. We find on them divine names, names of angels, verses from the Korān, astrological symbols, Kaballistic letters, magic squares, signs of geomancy, figures of animals and men (cf. Dżądwal, i. 992 et seq.). According to Muslim tradition, God has 99 names, which in reality are only epithets, such as “the Great,” “the Wise,” “the Knowing,” “the Merciful”; some authors like Tirmidhī and Ibn Māḏja enumerate them all. (The Douay Magic and Religion dans l’Afrique au Nord, p. 200; see also Redhouse in Journ. Roy. As. Soc., 1880; cf. the article Allāh, i. 302 et seq.). These names may be used as one pleases or arranged according to the numerical value of the letters composing them. Besides these, God has a name not to be spoken, which men do not know but which is revealed only to prophets and saints.

The names of the angels are also numerous. The best known are those of the four archangels Michael, Dżābrā’il, Azizā’īl and Israil, which are found on many amulets. Besides these there are host of others, which are given in the angelologies. There are several works of this kind in Arabic which are ascribed to supposed authors like Andrūn or Andahirush; they contain a doctrine, which is derived from the notion of the gnostic aeons. There are angels who preside over the planets; others preside over the months or the days of the week. Seven are given for each day; their names, barbaric in their sound, frequently appear in pairs e.g. ‘Ṭalīkh and Iṣḥq, ‘Īṣṭar and Māṭar, ‘Īṣṭahsh and Yākintah, a kind of combination such as we find in the Gog and Magog of the Bible and the ‘Īṣṭāḏu and Maḏāḏu of Arab Tradition. An angel very prominent in the world of magic, who presides sometimes over the planet Jupiter and sometimes over Mercury, and whom the Arabs seem sometimes to have confused with Mīkhā’īl, is Meṣṭaḥrīn. He is one of the great figures in Kaballistic literature. We find him also in the Zohar, where he figures as part of a kind of demiurg. (Cf. Renan, Vie de Jésus, p. 247, note 4; Les Aphorès, p. 170; Schwab, Vocabulaire de l’Angélogie, p. 170).—Two other angels, who have a history of their own, are also mentioned in the Korān likewise appear on talismans, namely Hārūṭ and Mārūṭ [q. v.].—Besides the angels, several mythical beings are also invoked, notably the seven sleepers (Aṣḥāb al-Kāfī, q. v., i. 478 et seq.).

Of the verses of the Korān the most efficacious as amulets are the short sūras exlii. and cxiv.: *Say: I take refuge (d’āḥa) in the Lord of the dawn etc.*—Say: I take refuge in the Lord of men, the king of men etc.” These two sūras are called al-muṣrūwūdhetān ("the two who preserve"). In the first the evil women are mentioned "who blow upon knots", it is believed that it is particularly efficacious against theills of the flesh; the other is credited with more power against psychic afflictions. Besides these the Sūrah Yāsīn is highly esteemed by pious Muslims. This is also true of the Pāṭika, the Ayat al-Kurūs (Sūra II. 256) and the verse-name, Ayat al-ʿArš (Sūrah IX. 130). Other verses than these are also used in special circumstances.

The astrological signs, the signs of the planets and of the zodiac are well-known; they are naturally used for talismans. We often find quite peculiar signs which may be traced to different Kaballistic alphabets; these frequently turn out to be transformations or corruptions of Hebrew or Kufic letters. Kaballistic alphabets are given by Ibn al-Walīṣiyah in his Kitāb Shawk al-Muṣṭahām. Small circles, or rings or ornaments are often found behind the Hebrew letters; these scrolls are called "little moons" or "crows". According to the Sefer Yetzirā, every letter in a talisman ought to have its crown (Sefer Yetzirā, transl. by Mayer Lambert, p. 114).

Geomantic figures formed by points arranged in different groups are also sometimes used. Geomancy, Arabic ʿImr al-Ramāl, is divination from points formed in sand. Four lines are drawn in the sand, points marked at regular intervals and some of them wiped out at random. The remainder form definite figures to which names and different meanings have been given. These figures are used on talismans; for further details see RAMĂL.

Magic squares (waṣṣ, wīṣ, q. v.) are also often met with. They consist of 9 or 16 compartments. Usually the same number is added to each of the 9 or 16 numbers of which they consist. This gives the thing a more learned look. Thus they begin with 9 instead of 1 and run from 9 to 24 instead of 1 to 16. Instead of numbers, letters are often written in the squares, e.g. the four letters of the name Allāh, aṭḥ, four times in different order. The name of magic squares has been thoroughly studied by the Arabs, for we see from the Ikhāṣa al-Ṣafā that squares of 9 columns were known.

Forms of men and animals are rarely found in North Africa on talismans; but in the East we find them on amulets and charms, which have been produced under the influence of Persian art. Looking-glasses, cups and seals to which magic
power is ascribed, are often adorned with them. For this purpose figures of angels or animals, particularly griffins with human heads or the signs of the zodiac are used. A talisman, which Reinaud saw, represented a man drawing something out of a well; this talisman had the peculiar property of helping to locate hidden treasure. Several other examples are given in Herklotz, The Customs of the Musulmans of India, p. 339 et seq.

The human hand is a very popular symbol among Muslims. It is carried around the neck, cut out of gold or silver or engraved on a medallion; it is said to avert the evil eye. This charm is usually called “the hand of Fāṭima.” The Shiṣis interpret the five fingers as the five saints; Muḥammad, ʿAlī, Fāṭima, ʿAbdul and Hūsain.

To sum up, it may be said that the subjects used, except the verses from the Korān, may for the most part be traced back to Gnostic or Talmudic sources. According to Arab tradition, Adam himself discovered or rather revealed the talisman. According to the Abrégé des Merveilles (transl. Carra de Vaux, p. 142), ʿAnāḵ, the son of Adam, stole from Eve, while she slept, the charms she used to conjure spirits; but he made a bad use of them. Solomon was a great magician, according to Muslim belief; his ring plays a great part in Talmudic legends and Arabic tales. The djinni, who appears in the story of the fisherman in the “Arabian Nights,” was confined in a vase, which had been sealed with Solomon’s ring. The talisman, still known as Solomon’s seal and worn by Muslims and Jews alike, represents a six-pointed star. The Berbers also, according to the Abrégé des Merveilles, were very skilled in magic and, when they threw their talismans into the Nile, they were able to bring numerous plagues upon Egypt.

In Arabic literature, there are various treatises on the science of talismans. The most celebrated writers on this subject are Maslama al-Majriti (died 1007 A. D.), who brought the Ikhwan al-Safa to Spain, the “forger” Ibn al-Wahshiyah, the author of the Agriculture of Nabataa; and al-Buni (q.v., i. 793). A number of amulets preserved in the Bibliothèque Nationale in Paris are ascribed — certainly wrongly — to the great theologian al-Ghazālī.

Muslim theology, which prohibits sorcery, tolerates the use of amulets. They are usually prepared by dervishes, who belong to various brotherhoods, and are only of value when they are received from their hands.

**AL-ḤAML (A.), the Ram (Aries), the first constellation of the zodiac, after the Greek μισθ. It contains 13 stars which make up the figure and five others outside it. The ram is represented with its body facing the west but its head is turned back. The two bright stars on the horn (β and γ) are called al-Sharafān, “the two signs,” because they betoken the approach of the equinoxes; the bright star α outside the ram is called ḫalijil, “the burls”; sometimes it is included with α and β under the name al-Aghāṣ, “the signs.” The stars δ, ε, κ in the tail, which form an equilateral triangle with δ on the thigh, are called al-Batāin, the belly, i.e. of the ram. Al-Sharafān and al-Batāin are also the names of the first two stations of the moon.

Bibliography: Kaswin, Adybi,’ al-Makh- tālit, ed. Wüstenfeld, i. 35, 42; L. Ideler, Untersuchungen über den Ursprung der Sternnamen, p. 132. (J. RUSKA.)

**AL-ḤAMĀN (A.), the dove, particularly the ring-dove. A distinction is made between tame doves which live in dove-cotes and wild doves. The dove is one of the cleverest of birds and one can find its way home from the most distant parts. To find its bearings, it flies upwards in spirals like a man climbing a minaret; when it finds the direction of its home, it darts off thither in a straight line and reaches its goal in the shortest possible time. Only clouds, which obscure its view, or birds of prey can cause it to lose its way.

According to Muḥannā b. Zuhair, there are no tokens of love between man and woman which are not also to be observed in doves. The cock knows the brooding-place of the hen and alternates with it in sitting on the eggs; they also build the nest together in proportion to the size of their bodies, by first scraping a hole and filling it with straw and leaves. The dove lays two eggs after fertilization, one containing a cock, the other a hen. The feeding of the young is done principally by the cock. Even the young ones can distinguish between eagles and hawks; if they see a white hawk (hākin), they die of fright. The worst enemy of the doves is the marten (al-dalāj). It enters the dove-cots and leaves not a dove alive, although there are hundreds of them.

Allāh sent two wild pigeons to the opening of the cave in which Muḥammad was concealed; the pigeons of the sacred area in Mecca are descended from these. Proverbial expressions are “safer than the doves of Mecca” and “tamer than the doves of Mecca.” The use of pigeons as letter-carriers and as objects of the chase is often mentioned. Ḥārūn al-Raschid is said to have been very fond of doves. The medical applications are numerous.

**ḤĀMĀN, the Persian minister hostile to the Jews in the book of Esther, according to the Korān (xl. 25) acted with Ḫārūn (Korāḥ) on Fir’aun’s council and filled the office of grand-vizier. These two learned of the approaching birth of Mūsā and advised that the boys should be slain and the girls allowed to live. When Mūsā appeared as a prophet of God, they called him a liar. Fir’aun said: “O Ḥāmān, build me a tower, on which I shall reach the paths, the paths to
heaven and ascend to the god of Moṣū" (Sūra xl. 38 et seq.). That Muḥammad places Ḥamān in this period betrays his confused knowledge of history, of which many other examples may be found in the Korān. Indeed, the Talmud (Sanh. 105b) and Midrash (Exodus R. 18) contain a similar anachronism when they make Balaam, Job and Jethro all members of Pharaoh’s great council which advised that Moses should be disposed of. Another passage in the Midrash (Num. R. 22) describes Hāmān and Koḥrā as the richest men in the world. The Koḥrān commentary on the above passages (xx. 25 and xxviii. 38) is interesting; it gives the following account of the building of the tower by Hāmān: 50,000 masons worked for seven years on the building and when it had reached an extraordinary height Ḫūbrīl overthrew it. In any case it is remarkable that neither Koḥrā nor commentary nor the Arab historians know anything of the true Hāmān of the book of Esther. It must be presumed nevertheless that the story of Hāmān was not quite unknown in Arabia. This is irrepeatably established from the frequent mention of the name Hāmān.

ḤAMĀSA (A.), bravery. Poems, which celebrate valor in battle, form a considerable portion of the ancient Arab poetry and therefore occupy pride of place in anthologies; the collections by Aḥū Tāmīm (q. v.) and al-Būṭīrī (q. v.) are therefore briefly called Ḥamāsā.

ḤAMAWAND, a notorious tribe of Kurds, which rendered the banks of the Tigris south of Mōṣūl unsafe by their robberies in the second half of last century. According to Cuiinet, La Turquie d’Aasie, ii. 768 they migrated thither from Southern Persia; according to Curzon, Persia, i. 557, they are a small body of the settled Kurds of Kermanshāh. It was only after several expeditions that the Turkish authorities succeeded in putting an end to their depredations.

ḤAMAVI, SAʿD AL-DIN MUḤAMMAD B. AL-MUʿTADIR. B. ḤAMAVI was born in 650 (1252) in Khorasan, a famous Arab mystic. His ʿUlim al-Ḥaṣābī were published in Kurdi’s Madjamʿat al-Raṣālīl, Cairo 1328 (p. 494 theory of Lāhūt and Nāṣīrī). Cf. Djiami, Nafaḥat al-Uns, ed. Lees, p. 492 et seq. (LOUIS MASSIGNON.)

ḤAMD (A.) Praise. Cf. the article Ḥamāda.

ḤAMD ALLĀH MUSTAWFI. [See AL-KAZ-WIMI.]

Al-Ḥamāla means the saying of the formula, al-Ḥamdu lillāh (for the different vocalizations — ḏu, ḏi, ḏa — see Līlān, iv. 133 ll. 7 et seqq.). "Praise (in its whole genus and of every species) belongs to Allah"; for from him all praise-worthiness proceeds and to him it returns. Ḥamād is the opposite of ḥamāh, being praise for something dependent on the will of him who is praised and it differs in this from madh which is not so limited; it is thus different from, although it may be an expression of thukr, "gratitude", the opposite of which is kusfrān; ḥamān, often rendered "praise", more exactly "taking account of", is used both of praise and disparage. The phrase is formally ḥamār or ḥabār, "narrative" but in its use it is inshār, "assertive", for the speaker makes it an expression of the praise which he at the moment directs towards God (Muḥammad ʿAbdū in Taṣārīf al-Fātiḥa, Cairo, 1325, p. 28; see, too, the elaborate discussion by Moḥammad b. Ḥusayn on the Kifāyat al-Awāmūd of Faṣāḥ, p. 3 et seq. of ed. of Cairo, 1315). In Lane’s translation, "Praise be!" (Lexicon, p. 638) he meant an emphatic affirmation, not a ḏu'; this is plain from his letter to Fleischer on the translation of tabīraka etc. in the Zeitisch. d. Deutsch. Morg. Gesell., xx. p. 187. But this use of "be!" is misleading and hardly defensible as English. Perhaps the inshār force could be indicated by a mark of exclamation as Palmer does in his translation of the Kurān. As the phrase occurs twenty-four times in the Kurān, besides other forms such as inhu ʿḥamād, it naturally became frequent in Muslim usage. All things come from Allāh, and for all things, pleasant or grievous, he is to be praised. Yet the verb ḥamāda does not seem to belong to the classical language and is thus later than basmāla, which may even be pre-Islamic. In the Sāḥih and the Liṣān it does not occur, though basmāla is in both, in the latter fortified with a verse from ʿOmar b. Aḥbār (Schwarz, Diwān, N°. 413, ii. 241; the evidence for the line and the usage is fullest in the Taḥfī, s.v.). In the Mīṣāḥ (finished a. h. 734) ḥamāda is mentioned, but only under basmāla; it has no entry of its own. Finally, it is entered in the Sāḥih so slowly did it win recognition as a word. Besides its broad, devout usage the phrase is statedly a part of the ṣalāt and of the supplemental tasīb being repeated thirty-three times in the latter (Lane, Modern Egyptians, chap. iii.; Lexicon, 1290). Further, as one of the seven Mathāni, in the sense of the verses of the Fāṭifa, it has part with the Fāṭifa in various mystical and magical usages and meanings. Thus it is the Mathāni assigned to the first of the seven stages of the Ṣafīya ʿṣārī (W. H. T. Gairdner, Way of a Mohammedan Mystic, p. 12, 25). Even in an orthodox tradition the Fāṭifa has been to have magical value: cf. in Bukhārī (Kitāb al-Taṣārīf; Ṣafī Fāṭihat al-Kitāb) the story of the man who used it as a charm (rubay) against snake-bite, and the Prophet approved. For later elaborate developments in magic, see al-Būnī, Shams al-Maʿārif, Faṣā, X, and Aḥmad al-Zarqāwī, the modern Egyptian magician, Mafāṭīḥ al-Ghāšīb, p. 175. But the Ḥamāda does not seem to be used by itself in magic as is the Basama. Again, the tendency to use the phrase as an introductory formula soon expressed itself as a tradition from the Prophet: "Whatever speech (or thing of importance) is not begun with praise of Allāh is maimel" (cf. Baslama). Thus the Ḥamāda became one of the three required things at the beginning of any formal writing. But this requirement was distinctly later, for, while the use of the Baslama in this way held from the earliest times, we do not find the Ḥamāda prefixed to the Sirā of Ibn Ḥīṣām nor to the Aẓhamī nor even to the Fākrist. See on this usage and the traditions supporting it, the commentary of the Sāyiṭ Murtuḍā on the Iḥyāʾ, i. 53 et seqq. On the praisefulness of this exclamatory see especially ibid., v. 13 et seqq. (Kitāb al-Adhākār).

HAMDÂN (†Ham) of the South Arabian inscriptions), a large Arab tribe, belonging to the Yemen group. Their genealogy is Hamdân ( Awsala) b. Mālik b. Zaid b. Rābi’a b. Awsala b. al-Kāhiyār b. Mālik b. Zaid b. Kalīḥ. Their chief Balad Hamdân, a centre of civilization in ancient Arabia, was five days’ journey in length and breadth and lay to the north of Ṣa‘īn [q. v.]; it stretched eastwards as far as Mārīt [q. v.] and Nadhrān [q. v.], northwards to Ṣa‘da [q. v.] almost up to the desert and westwards to the coast (Abī Arīḥ). It was divided into two parts, the east belonging to the Bakil and the west to Ḥashīd, who still form two powerful groups of tribes in their ancient abodes [cf. Ḥashīd and Bakil]; but Ḥashīd clans also lived in the land of the Bakil and vice versa. In addition to the Balad Hamdân proper there were also four tribes in Ḥazīr [q. v.], the clan of Nāshā, on the ‘Dha‘al Barang’ in the south of the Kūbih country on the Wāḍī Ṣabāh, in Ḥadramūṭ (e.g. in the village of al-Maqāʾīl) and in the large fortified town of al-Kīra (the clan of Nāshā), in Kaḥmā (a town near Zabīd), al-Yabūsān (belonging to the South Arabian Mihkhāl al-Saḥil), Ḥulā (a fortified town in the Mihkhāl Sībah Aqān [Upper Sharaf, the Lower Sharaf belonged to the Ḥashīd], inhabited by the clan of Mārātīn) and Falaḍja, which belonged to the district of Damasūk. The land which now bears the name Balad Hamdân is only a portion of the great area once known by this name (cf. E. Glaser in Farnamans Mitteilungen, xxix., 1886, Table 1). In the time of Dāhkhāh the Hamdân worshipped the idols Yaghūth and Ya‘āqūb. The idol Ya‘āqūb was the cause of a battle at Mulaḥā (Ruzm, in the Djawf) in the land of the Murād between the latter, who were carrying off Yaghūth, and the Hamdân, on the same day as the battle of Badr (17th or 19th Ramaḍān 2=624). The Hamdân with their allies, the Balḥārīh (Harīb b. Ka‘b [q. v.]), inflicted a severe defeat on the Murād; another battle between them and the Murād was fought at al-Ka‘ (in the Djawf). On the “second day of Kulāb”, fought between the Balḥārīh and the ‘Ad tribes Kībāb and Sa‘d b. Zaid Manāt, the Hamdân fought on the side of the Balḥārīh along with the Kinda and Kūfā. When the Abyssinian ruler Abraha (in the “year of the elephant”) tried to destroy the Ka‘ba, the Hamdân at the instigation of the Yemen chief Dhū Nafar took the field against him with other tribes whom Dhū Nafar had roused to defend the house of God. In the “year of the deputations” (9=630-631) a deputation from the Hamdân under Mālik b. Namaṭ and Abū Thawr, called Dhu ‘l-Mishār, was on those that appeared before the Prophet. In the year 10 (631-632), when the greater number of tribes had already been subdued, the Hamdān were among the few who did not yet absolutely recognise the Prophet. Muhammad therefore sent ‘Alī against them at the head of an army, whereupon they submitted without resistance. In 37 (559) 12,000 of the Hamdân fought on the side of the Caliph ‘Alī in the ‘Irāq. In the same year with the aid of the Hamdân, whom he called his “spear and cuirass”, ‘Alī revenged the death of Āmmār b. Yūsuf, who had fallen in battle against the ‘Irāqis. Under the Caliph ‘Umar, ‘Uthmān, ‘Alī and under the Umayyads the Hamdân numbered with the Muhājirīn and the Ḥiṣāmīn (†al-Qādis). Dār al-‘Imārah (49-9=545; 53-9=545), or 87, 11-12, 127-2, 85, 6, 5, 101, 1-2, 103, 2, 105, 17, 117, 106, 16-17, 107, 9-10, 108, 28-29, 115, 127, 1-7, 132-3, 283, 293, 190, 1-2, 194, 21-22, 198, 13-16; Yākūt, Muḥammad, i. 129; ii. 158, 407, 478, 776; iii. 115, 283, 413; iv. 38, 301, 438, 751, 1022; Taqīṣ, Annals, i. 1953, 1994, 2489, 2495, 3312, 3321 and Index; Ibn Hishām, Sīra, p. 52, 950, 963-964; Aḥqāf, iv. 132, x. 82; xiv. 26; xv. 73 and Index; Caussin de Perceval, Essai sur l’histoire des Arabes avant l’Islamisme, i. 202, 268-280; ii. 582; iii. 294-295, 308, 313; F. HAMDÂN KARMĀT b. AL-‘ASĪ‘ĀTH, an Imamī missionary, the founder of the Karmātī sect, was a peasant in the neighbourhood of Kūf; his nickname karmīţākh, which belongs to the Aramī dialect spoken in that district seems to mean “man with red or fiery eyes” (Tabārī, Annals, iii. 2125). He was converted through meeting Ḥusain al-Ahwāzī, ‘Abd Allāh b. Māmān’s missionary, whom he succeeded at his death. He settled in Kālābdhā near Bagh- dād, from which he could easily keep in touch with the mission in Khorāsān and with the Grand Master, who resided in ‘Askar-Mukram (261 = 875); near Kūf he built himself an official residence called Dār al-Hīḍra (place of refuge); this became a centre around which his followers settled and from which they undertook their raids (297-390). He was a man of keen intellect, who was never without a loss of composure and manner, very capable and full of ambition. On the death of ‘Abd Allāh he declined to recognise his son Ahmad as Grand Master and remained faithful to the Imam Muhammad b. Is- mā‘īl. He went to Syria where he died soon after. His brother-in-law ‘Abdān who composed most of the sacred books of the sect was murdered soon afterwards by Ḥizbarwālī, one of Ahmad’s followers. To obtain funds Karmāt had introduced, a series of taxes, each heavier than the preceding, the first, a silver piece per head, then the hīḍra, one gold piece per head, which was changed to the budgāh or seven gold pieces; finally he demanded al-Fā or community of wives and property.

(D. B. MACDONALD.)

AL-HAMDĀNĪ. A Ṣaḥīḥ, or a collection of traditions compiled by al-Hamdānī, a student of the Prophet, and transmitted by him to the world. The contents of the Ṣaḥīḥ are divided into four parts: (1) The life of the Prophet; (2) The life of the Companions; (3) The life of the Successors; (4) The history of the world. The Ṣaḥīḥ is a valuable source of information regarding the life and times of the Prophet, and is particularly interesting for its detailed account of the events of the early days of Islam.
year is not given — in Şanâvar and grew up there. He then went on his travels, spent some time in Mecca, afterwards returned to Yemen and settled in Șa'da. He is said to have been thrown into prison there on the accusation of the local poets that he had composed a lampoon on the Prophet. From the Berlin MS., Ahlwardt, Verschieden., No. 9664 (fragment of the Chronicle of Muslim al-Labadi, cf. Strothmann, Die Littetaten der Zadilik in Der Islam, l. 363 et seq.), f. 45b infra, 45b supra, it is clear that he was in prison in the time of the Zaidi Imâm Ahmad al-Nâsir (died 315) and Șa'd b. (Abi) Ya'far al-Hiwi (died 332) for Șanâvar or Șanav and that he appealed for assistance from his cell to Abu icious șAli, the son of the Karâmtian dâ'î Abu 1-Kasim al-Hasan al-Mansûr (the latter died in 322; cf. al-Djandâni in Kay, Yaman etc., p. 140 et seq. of the text) and dedicated panegyrics to him, which are said to be in his Dîwan. From f. 217b infra, 218b supra of the Paris MS. Bibl. Nat. (Blochet, Catalog. de la Coll. . . . Schefer, Paris 1900) No. 5982, said to contain the 800 (cf. al-Labadi, Muzaffar, this is giving among others a synopsis only of the Berlin fragment, it may be deduced that his imprisonment was connected with the desertion of two of al-Nâsîr's officers and the rebellion of the people of al-Ashba. A reference is here made to a detailed account, which appears no longer to exist. Al-Hamadânî died in 334 (945-946) in prison in Șanâvar, according to tradition. It is hardly to be supposed, however, that he had been continuously deprived of his freedom since the time of al-Nâsîr.

Al-Hamadânî crowned himself with honour in several fields of knowledge. He had a reputation as a philologist, poet, historian and genealogist (he is also given the name șNaṣîhah) and had also studied astronomy and geometry. His native land was the focus of his interests and his works are of the utmost importance for the study of the geography and tribal relationships of Arabia and particularly South Arabia. In his Iktil, of the 10 books of which only vii, [ed. and annotated by D. H. Müller in Sitzungsber. d. kais. Akad. d. Wiss. zu Wien, phil.-hist. Cl., xciv. (1879), p. 335 et seq.; xcvii. (1880), p. 955 et seq.] and x. have survived, he discussed the ancient history, genealogies of the tribes and antiquities of Yemen [cf. D. H. Müller, Sûdarab. Studien in Sitz.-ber., Vol. 86 (1877), p. 108 et seq.]. His Geography of the Arabian Peninsula, Sîfa Dîjarat al-arab (ed. D. H. Müller, Leiden 1884-1891) was written after the Iktil and at the earliest in the reign of the al-Nâsir already mentioned (cf. p. 58,4 et seq.). Al-Hamadânî's poetical works formed a Dîvan in 6 volumes, which was collected and annotated by Ibn Khâlîla (died 370) (al-Dhahabi, op. cit.); in addition to this there is also mentioned his Al-Kaṣida Al-Dâmîgha (according to Ya'qub "fi fa'dl șa'dîn", according to șNaṣîlî șNaṣîhah "fi l-šu'ârah"), on which he himself wrote a very full commentary. On astronomy he left tables (Zijd); his work Sîr (Șarâ'ir) al-šâmka (Ibn al-Kiftî, op. cit.) dealt with the science of the heavens. He also wrote a Kitâb al-Šuyar al-ṣufîsî (also: Ya'âbî șa'îr), (to his Kitâb al- Šuyar min al-Ya'âbî he refers in Dîzan, p. 203, 190) wâ șkâma wâ ș-nidâl â Kitâb al-Șu'ârah. Except the two books of the Iktil and of the Sîfa Dîjarat al-arab, all these works seem to be lost.

**Hamadânîs.** The Hamadânîs took their name from șHamdân b. șHamdân, a member of the great tribe of Taghlib (cf. his genealogy in Wustenfeld's Tabellen, C. 32). We find him as early as 272 (885) a close ally of the Khârîjîs Harûn and a few years later in possession of the fortress of Mâšîn. When in 281 (894) the Caliph al-Mu'tâdîd advanced against this town, he found Hamadân no longer there; he had given over the fortress to șUlûm. [q. v.] behind. The latter occupied the gates of the fortress of Dâr al-Zafarân to the Caliph, who soon afterwards captured șHamdân also. Cf. Ibn al-Mu'tazz in Lang, Mu'tadid als Prinz und Regent in Zeitschr. der Deutsch. Morgenl. Gesell., xii. 243. The Caliph kept Hamadân a prisoner in Baghdad as long as the Khârîjîs Harûn was in the field, but when he was defeated by șHusîn in 283 (896) and rendered harmless, șHamdân was pardoned and honoured were heaped on his sons, notably șHusîn. This was the beginning of the future greatness of the Hamadânîs. șHusîn distinguished himself in the wars against the Karâmtians, but had to become a refugee and live in the reign of al-Mu'tâdîd, as he had taken part of the unfortunate poet șAbî Allâh b. al-Mu'tazz against the Caliph. Through the intervention of his brother șIbrâhîm, he was pardoned by the Caliph and received the governorship of șKham and șKâshân, which he had administered by a deputy. In 303 (915) he again quarrelled with the Caliph and ended his days in prison in 306 (918-919).

His brothers Abu 1-l-šûr șA'dîd șIbrâhîm, șA'dî and Abû 'l-1-Hâjî'â șAbî Allâh [q. v.] prospered no less than he during the nominal reign of the insignificant Caliph al-Mu'tadîd. Honoured by the important governorships, they did as they pleased and thus occasionally came in conflict with the Caliph, but at once pretended to submit and were left in their offices or received others not less important. The swashbuckler Abu 1-Hâjî'â distinguished himself most; by 293 (905) he was appointed governor of al-Mawilî and ruled this important city with short interruptions till his death in 317 = 929, although from 308 (920) he entrusted the actual administration to his son șHasan. șHasan, who afterwards received the title of honour, șNâ'îr al-šawla [q. v.] was able to keep his position there till his death in 358 (968) and to extend his power over the whole of Dîyâr șA'dîdâ and Dîyâr Mu'dhar. He was succeeded in al-Mawilî by his son Abû Taghlib șFadhîl șA'dîl, better known under the name al-Ghâdânî fâr [q. v.], but he became involved in the conflict between the various Bayüd rulers and was unfortunate in the struggle so that he had to vacate Mesopotamia and soon afterwards met his death in Syria (369 = 979). The rule of the Hamadânîs in al-Mawilî seemed to have come to an end with him, for al-Ghâdânî's brothers,
Abū Tāhir Ibrāhīm and Abū ‘Abd Allāh al-Husain, entered the service of the Būyids. After Sharaf al-Dawla’s death, however, they obtained Bahā al-Dawla’s permission (379 = 989) to return to al-Mawṣil and, although the Būyid at once saw the false step he had made, they succeeded in obtaining the city with the help of its inhabitants. But their rule did not last long, for they had to fight with the Kurds and Okālid; in the struggle Abū Tāhir and his sons were taken prisoner by Muḥammad b. al-Mustawfiyy and slain in 380 (991). Abū ‘Abd Allāh had before this been taken prisoner by the Marwānid Abū ‘Ali and was only liberated on the intercession of the Fāṭimīd al-‘Aziz, who sent him to Syria. The last we hear of him is that he plundered ‘Tyre in 386 (996); his descendants, however, long occupied high positions at the Fāṭimīd court till in 465 (1072-1073) the last of them, Nāṣīr al-Dawla Abū ‘Ali and his son Fakhr al-‘Arab fell victims to a conspiracy.

The Hamdānīs did not however rule al-Mawṣil and Mesopotamia only; by 333 (944) they had extended their rule over Ḥulab and Northern Syria also. It was “Ali, the brother of Ḥasan, afterwards famous as Saif al-Dawla [q.v.], who won the first-named town and Ḥims also from the Ikshidīs al-‘Aziz in this year. But it was some years before the Egyptians under Kāfir left them in peaceful possession of Northern Syria. Saif al-Dawla, however, owes his fame to his wars with the Byzantine unbelievers. Even before 333 he had made raids into Byzantine territory, but it was not till he had made his position secure in Ḥalab that he devoted himself entirely to war on the infidels, with varying success, it is true, as is detailed in the article SAIF AL-DAWLA; here we will only mention further that another member of the Hamdānī family, the famous poet Abū Firāz [q.v.], cousin of Saif al-Dawla, also distinguished himself on these campaigns. Saif al-Dawla’s claim to fame as a patron of Arabic literature and science is no less great, than as a warrior; but this also is dealt with below. Saif al-Dawla died in 356 (967). (Editors).

His sole surviving son, Abū ‘l-Ma‘ālī Sharīf, who afterwards received the title of honour Sa’ād al-Dawla from the Caliph in Baḥdād, was at once recognised by Karghiyā and the other chiefs and went from Maiyāfārīkīn, where he had buried his father in the family tomb, to receive homage in Aleppo. He then advanced against his father’s cousin and companion-in-arms Abū Firāz, his vassal in Ḥims whose subjects had lodged complaints against him. They met at Sa’dād where the latter was slain; Ḥims was then taken by Sa’ād al-Dawla. The first encounter with the Byzantines took place in the second year of his reign. Byzantine troops attempted to surprise Aleppo; Karghiyā who went against them was himself captured but managed to escape. Soon afterwards the Emperor Nicephoros, with a large army, took all the towns between Aleppo and Ḥims and conquered Lāṭaġỹkīa and Ḫabala. In the beginning of 358 he blockaded Antioch, occupied Baghārīs and fortified it as a base for the Byzantine troops. He returned to Constantinople and left Petras Phokas (in Arab authors Torbasi or Atrābasi, probably derived from ταρηκ) in command of the towns conquered in Mesopotamia and Michael Burzīs in command of Baghārīs. Sa’ād al-Dawla went via Bālis to his mother in Maiyā-
Ka'lát Sim'án and take its monks as prisoners to the slave market. A roar of rage went up from the whole Byzantine world. Bardas Phocás at once raised the siege of Apamea and advanced on Aleppo. Sa'id was unable to offer any serious resistance, had to submit and peace was only granted him in 576 on condition that he paid all the arrears of tribute. Bardas Phocás treated him very leniently, as he wished to be free for the war against the Bulghars. Sa'id had peace for five years, till in 581 (991) Bakdžur, who after a quarrel with the Fāṭimid Caliph had been living peaceably in Raḳṣa, once more marched on Aleppo, in the vain hope of obtaining the support of the Fāṭimid Governor. Sa'id and his general Lu'lû' defeated him with the aid of Byzantine reinforcements at Nā'ura and had him executed on the spot. Soon afterwards Sa'id in 581 fell sick of a colic. To some extent recovered he held his triumphal entry into Aleppo but died the same night, as he had not taken sufficient care of himself. He was succeeded by his son Sa'id al-Dawla under the regency of Lu'lû', whoabouts the latter afterwards married. His reign was occupied with battles with the Fāṭimid troops under Bandjuttin (Manūtugin), whom he defeated with the help of the Byzantines. He had to sustain long sieges. When he was hard pressed in 584, he appealed for help to the emperor Basil, who, although occupied with the Bulghar war, arrived with incredible rapidity before the walls of Aleppo with 17000 men and this alone was sufficient to disperse the enemy. Although Sa'id could have offered him no serious resistance, the Emperor remained faithful to the treaty and scorned to occupy Aleppo. Sa'id on his side also observed the treaty till his death in 592 (1002); he with his wife was poisoned by the latter's father Lu'lû', who coveted the throne for himself. At first he ruled in the name of Sa'id's sons, but two years later he sent them with the whole Ḥamdānid harem to Cairo and made his son Ma'nūṣ his co-regent. When in 599 (1008) Lu'lû' died at a great age, he was succeeded by Ma'nūṣ under the name Murtaḍa 'l-Dawla, a title granted him by al-Ḥākim (Journ. As., ix. 160), when he began to mention the latter's name in the kūhba, so that Fāṭimid rule in Ḥalab may be said to date already from this time, although Ma'nūṣ afterwards quarrelled with Ḥākim. A brother of Sa'id rose against him with the help of the Kūlābīs but was defeated, when Ma'nūṣ won the latter to his side with bribes and promises, and fled to the Byzantines. To get rid of the Kūlābīs, who pressed him to fulfill his promises, Ma'nūṣ invited their chiefs to a great feast, at which he seized them. Many perished in the noxious dungeons, half-starved; Ṣālīḥ b. Mīrūd alone succeeded in escaping. He then led his Bedouins against Ma'nūṣ and forced him to make terms favourable to the Kūlābīs which he once more did not observe. Through all this he aroused great dissatisfaction; Fāṭih, the commander of the citadel, abandoned him and by a stratagem made him believe that Ṣālīḥ had entered the town, Ma'nūṣ fled in terror to the Byzantines. On the further history of Ḥalab see the article Ḥalab [i. 229 et seq.].

---

**ḤAMDĪ, ḤAMD-ALLIḤ ČELERI,** the youngest of Şaikh Ak Şams al-Din (cf. i. 226), a famous Ottoman poet. He was born in Goinik about 852 (1448), 12 years before his father's death in 864 (1459-1460). The early death of his father proved detrimental to his education, for his brothers bore him no goodwill. At first he devoted himself to a theological-legal career but had only advanced in the official hierarchy as far as the office of muddirs in Bursa before he went into retirement in a life of quiet meditation and follow up his literary inclinations and the study of mysticism and poetry. He is said to have obtained the means for his modest subsistence by copying his own chief work. Little esteemed in his life-time, which explains the scanty notices of him in the biographers, he died in Dhu l-'Ka'da 914 (February-March 1509, according to others in 900 or 909) and was buried beside his father in Goinik.

His earliest works are a number of mystic tracts Meğjalis al-Tefsār (the reunions of the commentaries); a treatise on a hadīth, taken from the New Testament, that God had prepared for the believer "what eye hath not seen, nor ear heard etc." and another, "The sweetness of this world is bitterness for the next and the bitterness of this world is sweetness for the next". Of much more importance are his poetical works. He was not a great creative genius, but rather an industrious and clever imitator and editor. When he relies entirely on himself, his usually so brilliant language begins to halt. He does not seem to have composed a regular Dirāwān, unlike the usual practice of scholars, but only a collection of ghazels. His fame as a poet is based almost entirely on his romantic matnawīs, of which he is said to have written five in imitation of Niẓāmī's Khamsa: Yüsuf u Zalikha, Leila u Meşgūn, Mevleli-i Nobi (Mevlendi-dî jamûni and Mevlendi-rûfûni), Tuhfet al-Usâhikha and Muḥammediye.

Yüsuf u Zalikha marks an epoch in the history of the Ottoman matnawi. It has become by far the most popular and best known Turkish matnawi. From the point of view of language it is the most perfect work in Ottoman literature up to the appearance of Fuḍūl's Leila u Meşgūn. In the first part it appears to be a version of Firdayest's simple work of the same name, while the second part is a brilliant translation, expanded by additions and lyrical pieces scattered through it, of the almost contemporary work of Ḥārim, the head of the rhetorical and allegorical school in Persia. The subject "the story of Joseph", taken from the Kur'an, which has always been popular throughout the east on account of its Süfî interpretation, was particularly popular in this version, as Ḥamdī followed the most scrupulous commentators on the Kur'an. The work, which was completed in 897 (1491-1492), bears no dedi-
HAMDÍ—HAMDÍ

cation. Hamdî is said to have fearlessly withdrawn the dedication to Bâyâzîd II. It has never been printed but numerous manuscripts exist.

His Lezîr u Medjûîn is the oldest version of this likewise popular motif after Nişâmi's Persian model, but it was soon displaced in popularity by Fuzûlî's work. Copies of the Mathnâwi, Medîî-t-Nebî are very rare. The only one of his works that can lay any claim to originality is the Tâthjît al-Uthâshâ (Present for Lovers) which is distinguished by simplicity of language.

His much praised and popular Kiyâfît-Nâme is also written in simple Turkish mathnâwi verses: it is a book on the science of physiognomy for the discernment of character, which seems to be the oldest of its kind. An Evâr-nâme is also ascribed to him.

Cf. also the Catalogues by Flügel, Pertsch, Kien.

(Theodor Menzel)

HAMDÌ, a coast-town in Hasrâmât, about 18 miles N.E. of Shibîr [q.v.], near Baba's Shamra, in a very picturesque and fertile district. Like Makalla and Shibîr it belongs to the Ku'aît of Shibâm [q.v.] and has, as the name shows, thermal wells of the temperature of boiling water. The houses of the little town are low and built of mud; in the centre of the town and on the shore there are two important bâsîns. The inhabitants are mainly fishermen; and their number was estimated by Capt. Haines at 500 in 1839. Behind the town lie thick palm groves and fields with luxuriant crops of Indian corn.

HAMDÎ b. al-Âbeds Abû Muhammād, born in 223 (637), died 311 (923), according to the satirist Ibn Buzaim, in early life a waterseller and vendor of pomegranates, was one of the ablest financiers of the ʿAbbasid Caliph al-Muwaffak and al-Muṭṭadid. He combined the collection of the Khorâd and diwâr of Wâṣîf (from 273 = 886) with that of Fârs (from 287 = 900) and Baṣra. In 306 (918) he was appointed vizier, and afterwards was given Ali b. al-Djarraḥ as his naqîb. His financial administration resulted in riots in Baghdad and his strong measures with dissenters like the Karmâṭians, Sûḥâ (execution of al-Ḥallâd [q.v.] and particularly the ʿImâmîya (imprisonment of Ibn Rûh, the ʿImâm's nakîl) finally brought about his fall. He was tortured by the new vizier's son, Ibn al-Furât and put in the pillory; he died in Wâṣîf soon afterwards, apparently of poison.

Bibliography: Hilal al-Ṣâbi, Historical Romances, ed. Amelroz, Index s. v. (In his preface, p. 18, the editor gives as a vivid picture of this cunning and ruthless financier).

HAMDĪ (the Maṭûna of Khalkokomyleon, p. 65, 66, and Maṭûn of Phrantzes, p. 82; for Hamdî al-Dîn), was the founder of the dynasty called after him ʿIṣâmî-oghlu. He had been the leader of the Turkoman tribes on the Byzantine frontier of the Seljuqid kingdom of Konia, "in the mountainous region between Adalia and Konia" (Abû l-Fidâ), corresponding to the ancient Pisidia; we find him finally independent by the end of the viith century of the Hijrâ. Of his successors we know: i. his son Felek al-Dîn Dândâr bey, who took up his residence in Ėgèerdîr, since then known as Felekâbâd. In 724 H. Timûrî, the governor of Edûmân Abî Saʿîd Bâhâdîr in Asia Minor, put an end to his rule. Shortly before this ʿIṣâmî-oghlu had conquered Adalia (Abû l-Fidâ), which remained under the rule of the ʿIṣâmî-oghlu till the Teke-oghlu took possession of it: 2. Khiḍrîr bey of Dândâr. During his reign, which began in 728 H., he conquered the districts Akhshir, Beyshehri and Seidsehir. We suppose him to be identical with Seif al-Dîn Kaidar, mentioned in the Kitâb al-tuḥfâ, Not. et Exs. xii. 361, Note 3), and his name-sake the governor of Adalia quoted by Şihâb al-Dîn reigning in 728 H. Nâdîm al-Dîn Abû Ishâk, son of Dândâr, Ibn Baṭûta visited him in Edûlî (Voyages, ii. 267), as well as his brother Mehemmed Celebi who was residing in Gîl-i-jâr, and Eychârî Bey, who was continually at war with his neighbours, the Kâramân-oghlu, and was defeated by them several times. 5. Këmîl al-Dîn Ùsîsîn Bey, son of Ùsîsîn, who sold the greater part of his dominions to Sultan Murâd I in 783 H. The latter's successor Bâyâzîd I put an end to Ùsîsîn Bey's rule in 793 H. Of his son Meṣṭafa we know only that he had been following Murâd I a year before, and that he fought in the battle of Kossova. The provinces in the Eastern part of the country with the cities of Aṣîshêhri, Beyshehri and Seidsehir were then occupied by the Kâramân-oghlu and afterwards formed a source of continual dispute between them and the different Ottoman Sultans. During the invasion of Asia Minor by Timûr (1402-1403) the country was devastated several times by his troops, and Timûr ended his expedition by storming the fortresses of Uluboru and Ėgèerdîr (Şâraf al-Dîn, Zafarname, ii. 448, 464, 446, 484 et seq.). Under Turkish government the dominion of the Hamidoglu was formed into a sandjak of the eyalet Anadolu called Hamdî-eli, and Isparta became the residence of the Sandjak-bey (cp. the description in the Dîwân namâ, p. 639). Nowadays it figures as a sandjak of the vilayet Konia under the name of Hamdî-âbâd. After Isparta we may turn as towns of importance Uluboru, Ėgèerdîr, Burdur, Keçiçîl, Aṣî Karağah (= Ağaçsus) and Yalovât; then the lake of Burdur and the lakes of Ėgèerdîr and Hûrâm, and the lake of Beyshehri, the country being an important lake district. The chief products of the country are "Hamdîwheat", opium, tobacco, traganth (bete), carpets, cotton and cloths of mixed fabric (alâdja and bighast), leather and silver goods.

Since the conclusion of the Smyrna—Dinler Railway the country has been opened up to commerce and civilisation, as far as the lake district.
The numerous mosques and madrasas in Ispara, Eğirdir, Olsaburu, Burdur and the collections of manuscripts in these towns belong to the older period.

(J. H. Mordtmann)

**HAMÌDÎ, HAMÌD AL-DÎN ABÛ BAKR OMAR B. MAHMÛD BALKİ, a Persian writer of makâmas, died in 559 (1164); he wrote his makâmam, some of which are to be considered munâzârât, in 551 (1150) on the model of his Arab predecessors Al-Hammâdi and Al-Hârîrî. Their number is 23 or 24; printed, Cavnâpur 1268 (1852), Lucknow 1879, Tehran (1889).

**Bibliography:** Ethê in Grundzüge der Iran. Phil., ii. 228; Browne, A Literary History of Persia, ii. 346 et seq.; Rieu, Cat. of Pers. MSS. in the Brit. Mus., p. 747.

**HÀ-MİM B. MANN ALLÁH B. HÂRÎZ B. 'AMR, of the Berber tribe of Zerwâl in the Rif, known as Al-Mustârî (the forger). He attempted to introduce a new religion among the Chômâras, which, although not exactly in its practices, at least in its dogmas proceeded from Islam. His period of activity covered the years 313–325. Of the canonical prayers he only retained those at sunrise and sunset; he abolished the fast of Ramadân and replaced it by fasting on the three (or ten) last days of this month, on two days in Shawwâl and on the Wednesday forenoon and Thursday of each week. The breach of this rule was punished by a fine of 6 head of cattle. He abolished pilgrimage, purification and complete ablation and allowed the eating of pork; on the other hand, he forbade the eating of fishes, which were not killed in the lawful fashion; the heads of all animals and birds' eggs were likewise forbidden food. To this day the Tuareg and the Berber tribe of Shûnûr near Tispa will not eat hens' eggs. Hà-mim wrote a book which the Muslim historians call a Qûrân. His aunt Tâyât (var. Ta'yân, Tâhî) was suppliant in the prayers of the faithful and regarded as a prophetess, as was her sister Dûdji. He won many adherents and fell in a battle with the Mâhâmâd near Tan- gier in 319 or, according to others, 329. But the religion which he founded did not die with him.

(RENÈ BÂSET.)

**HAMMAD, a Berber ruler, founder of the Hammadid dynasty, son of the Zirid Balukkîn [q. v.], chief of the Sanhâdja and governor of the Maghrib under the Fatimid Caliph al-Mu'izz, was given the governorship of Asir [q. v., i. 452 et seq.]; in 377 (987–988) by his brother al-Manûr, Balukkîn's successor. For several years he valiantly championed the cause of the Sanhâdja, continued the war against the Zanût, who had invaded the central Maghrib, with the aid of his brother Itû- wîn, and in 391 (1000–1001) put down the rebellion of his uncle Mâkîn, Zaïûna and Hâin, whom he besieged in Shenhwa and forced to submit (cf. KâBîS AND MEENAD, i. 556 et seq.). In 395 (1004–1005) he raised the siege of Asir which the Zanût, the allies of the rebels, were trying to take, thus restoring the supremacy of the Sanhâdja throughout Central Maghrib and in 398 (1007–1008) built himself a strong mountain fortress, al-Ka'a [q. v. and ALGERIA, i. 265] as a secure place of refuge in case of another hostile invasion. But soon afterwards his feudal lord Bâdis Abû Menad, successor of the Zirid al-Manûr, abolished the renunciation of the Hammadid's governorship over the district of Tidjân and Constantinople in favour of his son al-Mu'izz, the latter thereupon rose against Bâdis, at the same time revoking his allegiance to the Fatîmids and declaring himself a vassal of the 'Abbâsids. Bâdis marched against the rebel and shut him up in al-Ka'a, but died during the siege (406 = 1016). The war continued between Hammad and al-Mu'izz, the son and successor of Bâdis, and was concluded by a treaty, which was negotiated by al-Kâdî, a son of Hammad, (408 = 1017–1018). It resulted in the dismemberment of the Zirid kingdom: Hammad received Mîla, Tobna, the Züb, Asir and all the lands of the central Maghrib, which he was likely to conquer. "From that hour" writes Ibn Khalîdân "the two rivals laid down their weapons and allowed themselves by marriages, after dividing the kingdom between them. The Sanhâdja dynasty was thus divided into two lines, that of al-Manûr in Kairawân and of Hammad in al-Ka'a". Hammad died there in 419 (1028).

**Bibliography:** Ibn Khalîdân, Histoire des Berbères, transl. de Slane, ii, 16 et seq., 43; Fournel, Les Berbères, ii. (G. YERK.)

**HAMMAD AL-RÂWIYA, i.e. the transmitter, namely of old Arabic poetry. He was born in 75 (694–695); Ibn Khall.: 95 in Tabân; his father, whose name is differently given (Harmuz, Maisara, Sâdrî) and who bore the kunya Abû Lâlah, was a Dailami prisoner of war. Hammad's speech also betrayed his origin.

He won great fame from his comprehensive knowledge of pre-Islamic as well as of Islamic poetry, of battles and Bedouin dialects. It is even said of him that he could recite kasîdas of the Djahiliya of considerable length, rhyming in each letter of the alphabet, a hundred for each letter, and that he could at once decide whether a poem was old or modern. Great value was placed on his judgment on poets and poetry. He was almost always able to detect plagiarism and borrowings. He himself was less conscious however in transmitting and used his gifts to smuggle verses of his own into ancient poems, a proceeding for which al-Muâfaddal al-Dabîs censured him and for which al-Madhi took him to task (Alûhâ, i, 172, 16 et seq.).

As Nûdeke has pointed out, Hammad's great merit is that he collected the Mu'allâkât [q. v.]. He was one of the three Hammadûn (with
Hammâd 'Adîrîd and Hammâd b. al-Zibrîkân), who, bound by ties of closest friendship, caroused and worshipped the Muse together and were all suspected of zandaqa. Among his friends were also the poets Mu'tî b. Iyâs and Yahyâ b. Ziyâd.

He enjoyed the favour of the Calif Yazid II; he was afraid of Hishâm, but the latter is also said to have once invited him to court and richly rewarded him. This story, however, is doubtful on account of an anachronism and features similar to those of an anecdote related of Wâlid II. This last Calif in particular often entertained himself by listening to Hammâm's recitations, and his recitation was greatly admired by the 'Abbâsids. He was one of the poets who left Baghdad in the reign of al-Mansûr "to seek a livelihood"; he then went to Kûfa; the Calif however is said to have invited him back to Baghdad from Basra. But the latter's son Dja'far, into whose presence Hammâm allowed himself to be taken by his friend Mu'tî at the latter's solicitation, treated him shamefully, when a verse recited by the poet proved distasteful to his superstitious notions.

The date of his death is differently given: 155 (Ibn Khallîkân), 156 (Fihrist) or in the Caliphate of al-Mahdi, i.e. 158 or later; in Aga', iii. 80 infra, he is even associated with al-Râshîd.

Hammâmâd (also called gada in the Sahara Almohads), who, according to the eulogies of the ground in the Sahara, according to E. F. Gautier (Sahara Algérien, Chap. I), "the form assumed by the rock in the plateau", usually appears as a broad flat surface which is sometimes slightly undulating but rarely traversed by ravines. The edge of the plateau often consists of long series of steep slopes with rather well marked contours which are called bâten or ûbel. The upper surface is devoid of vegetation on account of the utter absence of soil and covered with stones, which sometimes are broad and flat and sometimes consists of small splinters which are formed by the breaking up of the rock through the sudden changes of temperature and severely impedes the progress of men and animals. The Hammâmâd thus forms an almost insurmountable barrier to traffic through the Sahara, so that the caravans prefer to go round rather than cross them. The most important Hammâmâd are, the Hammâmâd al-Hasîn, south of the Tripolitania, which is 140 miles broad and 400 long, and reaches an elevation of 1600–2000 feet.

Bibliography: See the article Sahâra.

(G. Ver.)

Hammâmids, a Berber dynasty in Central Maghrib, which was founded in 405 (1014) by Hammâmî b. Bulukâkin [q. v.] and overthrown in 547 (1152) by the Almohads. They had to wage continual warfare on the Zenata, who threatened them from the west, the Zirids, the former lords of the central Maghrib and later from the second half of the 12th century onwards against the Hilâlî Arabs also. Al-Kâlid, Hammâm's successor (419–446 = 1028–1154), was deposed Hammâm, son of Muizî b. Ziri b. 'Ayya, and forced his cousin, the Zirid al-Mu'izzî b. Kâlid, the ruler of Kairawan, who had besieged him in al-Kâlid to sign a truce (412 = 1040). To show clearly his independence of his Zirid cousin, when al-Mu'izzî had cast off the suzerainty of the Hammâmîs in the Caliph, he had the khatża read in the latter's name. Soon afterwards the invasion of the Hilâlî Arabs by destroying the power of the Zirids of Kairawan in 445 = 1051, ensured the supremacy of the Hammâmîds in the Maghrib. After Bulukîn b. Muhammad, second successor of al-Kâlid, had suppressed the rising of the Beni Komman of Biskra [q. v., i. 732], he penetrated in the extreme Maghrib and seized the town of Fez, the notables of which he carried off as hostages. On his return from this campaign he was murdered by his cousin al-Nâsîr, whose sister Tannahîrt he had put to death.

The reign of al-Nâsîr b. 'Alâ'annas (454–481 = 1062–1088:1089) on the variants of the name 'Alâ'annas, see al-Râysân al-Maghrîbî, transl. by Fagnan, i. 445, note 3) and that of his successor al-Manûrî (481–498 = 1088:1089–1104:1105) form the golden age of the Hammâmîd dynasty. After al-Nâsîr had become lord of Algiers, Milîya, Hamzâ, Nîguss and Constantine, the government of which he entrusted to his sons or brothers, he endeavoured to extend his kingdom eastwards by taking advantage of the feuds that had broken out among the Arab tribes. For a time he was recognised as their ruler by the people of the districts of Kastîliya, Kairawan, Nusa, Maa and Tunis. After his defeat at Sbeitla in 457 = 6704, however, he was not present in the districts of Zab and Hôdna by the Hilâlî Arabs and their allies, the Maghrëbîs of Tripoli, led by al-Mustansîr b. Khâzûrîn. In the end, however, al-Nâsîr won the upper hand; the Zab was reconquered and Hammâmîd troops penetrated to the Sahara as far as Wargla. These successes made him the most powerful ruler in the whole Maghrib. To raise the prosperity of his subjects by increasing trade, he eagerly endeavoured to attract Italian merchants to Bougie [q. v., i. 766 et seq.] which had been founded by him. He also corresponded with the Pope Gregory VII through the intermediary of the priest Seripandus, afterwards Bishop of Bôna.

Al-Mansûr, al-Nâsîr's successor, moved his residence to Bougie in 485 = 1090:1091, being continually threatened in al-Kâla by the inroads of the Arab Bedouins. He regained the cities of Bôna and Constantine, which the Hammâmîd rulers had given over to the Zirids, subdued the Kabyls of the district round Bougie and paid particular attention to the defence of his lands against the Almoravids. When the latter had taken Tenmen (474 = 1081:1082) they won the Benû Wammûn, who had till then defended the western Hammâmîd frontiers, to their side and threatened the central Maghrib. Al-Mansûr, who had taken bands of Hilâlî mercenaries into his service, took the field
repeatedly against them, till the defeat of the Almoravid general Ibn Tanimert at Djebel Tessa{"e}l and the recapture of Tlemcen by al-Man\={u}\={s}\={u}r 496 = 1102 checked the progress of the Almoravids. Successful campaigns against the Berbers, who had risen in several districts, finally completed the restoration of order.

Soon afterwards however, the decline of Ham\={u}\={m}\={a}\={d} power began. The successes of al-A\={i}z\={i}z (498–515 = 1104–1121), al-Man\={u}\={s}\={u}r's successor, whose fleet captured Liptar and who defeated the Arabs who had invaded Hodna, were only temporary. His successor Yah\={y}a, devoted to women and the chase, proved utterly incapable of coping with the ever increasing danger that threatened his kingdom from without. In 1136 the Genoese plundered Bougie, the Berbers again became restive, the Hilali Arabs continued their raids, and finally the Almohads invaded the central Maghreb. On the approach of Abd al-Munim, the Ham\={u}\={m}\={a}d al-K\={a}\={i}d, governor of Algiers, abandoned the city without offering any resistance. S\={e}ha, another brother of the Sultan, suffered a defeat at Bougie, while Yah\={y}a himself fled from his capital which was thereafter occupied by Abd al-Munim [q.v., i. 51] without opposition. After its fall al-Kal'a was razed to the ground by the invaders. Yah\={y}a, who had first of all fled to B\={o}\={n}a, and then to Constantine, finally surrendered to the conqueror without striking a blow (547 = 1152). He was taken a prisoner to Marr\={a}k\={u}\={s}\={u}ch and then to Sale, where he died in 558 (1163).

Chronological Survey of the Ham\={u}\={m}\={a}d Dynasty.

List of the Ham\={u}\={m}\={a}d rulers.

\begin{itemize}
  \item H\={a}m\={m}\={a}d b. Bulakkn. \(405–419 \) (1014–1028)
  \item al-K\={a}\={i}d, son of Ham\={m}\={a}d \(439–446 \) (1028–1055)
  \item Mu\={s}\={i}m, son of al-K\={a}\={i}d. \(446 \)
  \item Bulakkn b. Mu\={s}\={a}hm\={a}d. \(447–454 \) (1055–1062)
  \item al-N\={a}\={s}\={i}r b. A\={e}lm\={a}n\={a} s. \(454–481 \) (1062–1088)
  \item al-Man\={u}\={s}\={u}r, son of al-N\={a}\={s}\={i}r \(481–498 \) (1088–1104)
  \item B\={a}\={d}\={s}, son of al-Man\={u}\={s}\={u}r \(498 \)
  \item al-A\={i}z\={i}z, son of al-Man\={u}\={s}\={u}r \(498–515 \) (1105–1122)
  \item Yah\={y}a, son of al-A\={i}z\={i}z. \(515–547 \) (1122–1152)
\end{itemize}

\textbf{HAM\={M}\={A}L} (Ar. \textit{hamada} "to carry"), messenger, porter. In countries where the roads and means of transit are still very primitive, the porter is indispensable for the transport of all kinds of goods. In Muslim lands the \textit{ham\={m}\={a}l} are therefore numerous and much employed; sometimes they carry burdens, which in other countries would only be dispatched with the help of beasts of burden or conveyances. The simplest equipment used by the \textit{ham\={m}\={a}l} is a fairly thick rope which he ties round the object to be carried and thus keeps it firm on his back. But where the \textit{ham\={m}\={a}l} are organised into gilds as in Constantinople, they carry on their backs a padded saddle (\textit{zemir}) covered with leather resting on a piece of leather on the back (\textit{ark\={a}k\={e}}). On this the weight of the burden rests and it takes the place of a porter's crate. If however the burden is too heavy for one man, several work together by taking a long stick (\textit{zyry\={e}}) between each two from which the trunk or bale is hung by ropes. — When the \textit{ham\={m}\={a}l} are going through a crowd carrying burdens they pass and shove the people aside, at the same time calling out in Arabic: \textit{Oa r\={a}\={s}"{a}k (dahrah) "Mind your head (or back)", or in Turkish: \textit{Dokunmasyn (look out) or varda (Ital. guarda).} In Persia the European women are carried in sedan-chairs (\textit{ze\={d}eh}), like those which were used in Europe in the xvith century; this service also is in the hands of the \textit{ham\={m}\={a}l}.

(\textbf{CL. Huart.)}

\textbf{HAMM\={A}M} (lit. "heater", Ar. \textit{hamma} "to heat"), Hebr. \textit{hamam} "to be warm"). a hot steam-bath. These are isolated buildings communicated with the street or market place by one or less imposing door; they consist of a number of large rooms surrounded by little chambers and crowned by domes pierced with holes to admit the light, which filters through little glass bells like bottle-bottoms. The first room to be entered is the \textit{maslak} (\textit{apodyterium, spoliorium}), where the clothes are taken off and put up into a bundle which is entrusted to the owner of the bath; in the centre is a basin with a jet of water (\textit{faz\={i}ya}). The \textit{har\={a}ra} (\textit{caldarium, sudatio}) is next entered, a large room filled with steam; to avoid touching the superheated marble floor, wooden shoes or slippers with high heels are worn (\textit{ha\={k}\={a}k\={i}a}). Here the bather stays till he perspires; the attendant then takes him into one of the little chambers with a basin (\textit{magh\={a}\={t}, piscina}), which surround the \textit{har\={a}ra}, or into one where there are hot and cold taps (\textit{ha\={n}afiyah}), and rubs his body, after making all his joints crack, with a horse hair-glove (\textit{k\={i}b}), which removes the epidermis in grey rolls, and covers him entirely with frothy soap, beaten up to a lather by means of a \textit{tij} (palm-fibres), till he is quite clean. All that is now to be done is to wash in hot water, dry and wrap oneself up including the head, in clean linen and go back to the \textit{maslak} to rest there smoking and drinking lemonade or coffee. On days, when the bath is reserved for women, a piece of cloth is hung across the outer door. In winter, the clothes are taken off in a room between the \textit{maslak} and the \textit{har\={a}ra}, which corresponds to the \textit{tepidarium} and is called \textit{bait awsal} (first room).

In Persian the \textit{ham\={m}\={a}m} is called \textit{garm-\={a}be}, the apodyteryrium binæ (H. Fert, \textit{Journ. As.}, 8th Ser., vii. 391, note 2) and in Turkish \textit{g\={i}mekn} (Vers. \textit{g\={i}mekn}.

(\textbf{CL. Huart.)}

\textbf{HAMM\={U}DIDS}. The Ham\={u}\={m}\={a}dids are the successors of the two sons of the descendant of the Prophet \textit{Hamm\={u}\={m}d b. Maim\={u}n b. Ah\={m}d b. \textit{Ali b. Ub\={a}id All\={a}h b. Omar b. Idris b. \textit{Abd All\={a}h b. al-\={I}s\={a}n b. \textit{Ali b. Abi \={T}alib}, who are connected with the Idrisids of Morocco (172–375 = 788–958) through Idris b. \textit{Abd All\={a}h} [q. v.] founder of the dynasty. In the confusion of the civil war that preceded the fall of the Umayyads...
of Cordova, the elder brother, al-Kaṣim, obtained the governorship of Algeciras [q. v.] and his ambitious younger brother 'Ali that of Tangier and Ceuta. After conquering Malaga the latter overthrew the feeble Umayyad Sulaymān al-Mustawwir (407 = 1016) and made himself Caliph in Cordova. After his assassination the brother al-Kaṣim did the same (408 = 1018), in 412-413 = 1021-1022 he was driven from the throne by his nephew, Yahyah b. 'Ali, but regained it in 413-414 = 1022-1023, at the same time ruling Malaga 1018-1021 and 1022-1025. 'Ali's descendant's (8) maintained themselves in Malaga from 1025 till 1057, when it passed to the Berber Zirid prince 'Ališ [q. v.] of Granada, while Algeciras remained under the sway of al-Kaṣim's son Muhammad al-Mahdi (431-440 = 1039-1048) and his grandson al-Kaṣim al-Walīgh (440-450 = 1048-1058), when it was taken by the 'Abbāsidis [q. v.] of Seville, 'Ali's son Yahyah ruled Malaga 416-427 = 1025-1035 and was succeeded by Idris I al-Mutā'aīyid 427-431 = 1035-1039, Hasan al-Mustā'zīr 431-434 = 1039-1042, Idris II al-'Alī 434-438 = 1042-1046, Muhammad I al-Mahdi 438-444 = 1046-1052, Idris III al-Mawaffaḳ 444-445 = 1052-1053, Idris II (second reign) 445 = 1053, and lastly Muhammad III al-Mustā’lī 446-449 = 1054-1057. Just as the half berberised early Ḥammūdids shared a glory reflecting from the dying Caliphate of Cordova, a century later the dynasty has the darkness into which it was sinking illumined by the scholarly efforts of the court geographer of the Norman Roger II of Sicily in Palermo, al-Sharīf al-Idrisī [q. v.], the grandson of the kindly but feeble Idris II of Malaga.

(C. F. SEYBOLD)
at the battle of Uḥud where he wrought wonders of valour. The negro Waṣḥi pierced him with a javelin, tore his breast open and brought him still beating heart to Hind, the mother of Muʿawiyah, who buried her teeth in it. So at least says one story hostile to the Umayyads and without much support. Ḥamza is said to have been about 57—59 years old. But if our view is correct, that ten years should be deducted from the 60—65 years usually given to the Prophet, it will be necessary to reduce ten years younger also. None of Ḥamza's children left issue. Cf. also the articles BAKD and OHOD.

(HELMANN.)

ḤAMZA b. 'Ali b. AHMAD, founder of the theological system of the Druses and author of several treatises, which have obtained a place among the sacred books of the Druses. Little is known of his life with certainty. According to al-Nuwairi, he belonged to Zawzan (Zarzaran) in Persia and was by trade a maker of felt (labbāf). In 410 (1019) he is said to have first publicly put forward his doctrines but, according to Ḥamza's own statements, this took place two years earlier in 408 (1017), from which year the Druses date the manifestation of the divine incarnation in the person of the Fāṭimīd caliph al-Ḥākim b. Amr Allāh [q. v. ii. 225] and the beginning of the Druse era. It is not certain when he came to Egypt, possibly in 405 or 406. But after he publicly proclaimed his doctrines in a mosque in Cairo, a riot broke out and Ḥamza had to remain in concealment for a time under the Caliph's protection. What became of him after the latter's disappearance (411 = 1020) is unknown. He plays a still greater rôle in the religious system of the Druses as Kā'im al-Za'mān or last incarnation of the universal intelligence (āḏī). According to al-Makīn and other authors, he was usually called al-Ḥādi i.e. Ḥādi 'l-Maṣṭafātībn, leader of those who obey (the divine call).

ḤAMZA, called the Sīliḥdār, was born about 1140 in the district of Dewelū Karahisar, the son of a landed Agha, called Mehemned; he began his career in 1156 in the halwa-ghāne (honey-bakery) of the Imperial kitchen (cf. v. Hammer, Staatsverfassung etc., ii. 31), but soon his gifts won him a position among the pages (enderum-ḥumayd), where he won the favour of Mustafā III. When the latter came to the throne in the 21st Safar 1171, he at once appointed Ḥamza his sīliḥdār (sword-bearer), see v. Hammer, l. c. ii. 238 note, afterwards granted him the rank of vizier and betrothed him to the infant princess Hibetullah, who died however on the 15th Dhu 'Hijja 1175. From 1172—1182, he filled in quick succession no fewer than twelve governorships in Rumelia and Anatolia, in accordance with the system then in force in annual change of office; in this period he fell into disgrace for a few months in 1178 and was banished to Demotica with loss of his rank. As wali of Egypt in 1179 he came into conflict with the Mamlik Emirs and the celebrated Shāhī b. Bendī 'Ali Bey (v. Hammer, Gesch. d. Osman. Reiches, viii. 292) and was finally driven out of the country by them. When in 1182 (1768) the Sultan was eager for a breach with Russia, but found his bellicose plans opposed by the Grand Vizier Muṣḥin-zade Muḥammad Pasha and the Shāhī al-Īslām, he dismissed the former on the 21st Rabī' II 1182 and appointed in his place his old favourite the Sīliḥdār Ḥamza, who was at that time governor of Anadolu. A few days after his arrival in the capital the new grand vizier had the ultimatum to Russia approved at a great council and imprisoned the Russian resident Obreschok, who declined to fulfil the demands of the Porte, in the Seven Towers (4th and 6th October 1178, see v. Hammer, Gesch. d. Osman. Reiches, viii. 312 et seq.); in consequence the unfortunate war with Russia broke out, which was only concluded by the peace of Kīčuk Kainardja in 1774. Ḥamza Pasha did not live to see the beginning of hostilities; he was suddenly dismissed from office on the 8th Djamād I 1182 (20th Oct. 1768), the cause given being insanity, but others say at the instigation of the Khān of the Crimea and sent to Crete as governor of Canea; on his way thither he died at Gallipoli in the same month.

(J. H. MORTMANN.)

ḤAMZA ḤAMID PASCHA, son of a merchant of Dewelū Karahisar, named Ahmed Agha, was born in Constantinople in 1110 and entered upon his official career in the offices of the Sublime Porte. Owing to the protection of the celebrated Raṣḥib Pasha (Grand vizier 1170—1176), whose pupil he was in the elaborate prose of the official style, he received a secretarial appointment to the Grand Vizier on the 10th Dhu 'l-Ka'da 1153 (5th January 1741), which he held for many years. On the 15th Muḥarram 1169 he was appointed Raṣḥ al-Kutbah (i.e. Minister of Foreign affairs) and, in addition to other high offices in the years following, three times filled the office of kānyū to the Grand Vizier, i.e. Minister of Home affairs, but only for short periods and without further distinguishing himself. After being appointed "vizier of the dome" in Rabī' II 1176 he took the place of the Grand Vizier Raṣḥib Pasha, when the latter fell severely ill in Ramaḍān 1176, and on his death (24th Ramaḍān 1176 = 8th March 1563) he succeeded him. But he was not a strong enough man for this position, for, as his biographers say, he was slow in coming to a decision and was too fond of ease and comfort. The only note-worthy event of his period of office was his sending Ahmed Resmi Efendi to the court of Friedrich II in response to Graf Rexin's embassy (cf. Zinkeisen, Gesch. d. Osman. Reiches, V, 907 et seq.). After less than a year of office he was deposed on the 24th Rabī' II 1177 = 2nd Nov. 1177 and sent to Crete, where
he remained, except for a brief interval, till 1183. In this year at his own request he was given the governorship of Dijād and Ḥabesh and died in Mecca in Dhu Ḥijjah 1183.

**ḤAMZA AL-HARRĀNĪ,** a prominent family in Damascus of 'Aliid descent, which for so many centuries filled the office of Ḥākib al-Aṣghārī there, so that the family is sometimes simply called Bait al-Ḥākib. Muhībī Khulqūt al-Āthīrī (ii. 105) gives the complete genealogy down to the xīth (xvith) century. As early as 330 (941-942) a member of this family, Ismā'īl b. Ḥusayn al-Naffī, who was Ḥākib, and this office has passed from father to son to the present day. Several members of the family distinguished themselves by their learning and literary gifts, as may be seen from Muhībī, ii. 105 et seq., 125 et seq., iv. 124 et seq. One of the best known members of the family in later times was Maḥmūd Ḥamza, born in Damascus in 1236 (1821), who became Mufīt of Syria and won the thanks of the oppressed Christians during the massacres in his native town (1860) by his conduct. He was the author of an imposing series—35 titles are enumerated—as writings, mostly on theological and legal subjects, of several have been printed. He was also an excellent calligrapher; in his leisure-hours he used to amuse himself by writing the fatīha on a grain of rice or the names of those who fell at Badr on the stone of a signet ring. Maḥmūd Ḥamza died in 1305 (1887).

**Bibliography:** G. Zaidān, Muhībī al-Sharkī, ii. 165 et seq.; Brockelmann, Gesch. d. arab. Lit., ii. 466.

**ḤAMZA AL-ISPHAḤĀNĪ.** This is the shorter name by which the philologist and historian Abū ʿAbd Allāh Ḥamza b. Abū ʿIsān al-Iṣphaḥānī is usually known. He was born in the viiith decade of the third century A. H. in Isfahān in Persia and spent his life—except for a few journeys for purposes of study—in his native town, where he died between 350 and 360 (971-971). Although on his journeys he attended the lectures of the most important traditionalists of his time, his own special field was philology and history. His „Annals“ which became known comparatively early in Europe, have caused him to be described almost exclusively as a historian. The majority, however, of his works deals with questions of philology and lexicography. Of the twelve works, which he is known to have written, three have survived to us viz. „the Annals“ (Hamzās Iṣphaḥānīs Annalium libri x, ed. I. M. E. Gottwaldt, Tom. i., Text. Arab., Tom. ii., Transl. Lat., Petrograd 1844-1848), the Kitāb al-Amthāl al-Afʿal, is a collection of proverbs in the form of comparisons (e. g. more general than Ḥaṭīm) preserved in the Munich Codex Anmer 642, and his edition of the Diwan of Abū Nuwās (Berlin Ms., Ahlwardt, Nr. 7531, and Cairo, iv. 239, besides 3 incomplete MSS.). Ḥamza’s writings are characterised by a strong personal note. A characteristic of his is his habit of paying particular attention to Persian affairs, readily explained by his Persian origin. He did this in his „Annals“ as well as in his philological works, in which he delights to discuss Persian words that have found their way into Arabic, and Pehlevi etymologies. All his works moreover bear evidence of a critical attitude, which often expresses itself very pithily. His criticism however is not, one might perhaps expect, one-sided or directed against the Arabs and Ḥamza cannot be described as a representative of the linguistic Shī′īyya, the „philological reaction against Arabic influence“—Ḥamza’s works soon found approval and have been much copied. In particular, al-Maʾṣūmī has copied almost literally Ḥamza’s collection of „comparative“ proverbs in the second section of each chapter of his Maṣūmī al-Amthāl.

**ḤANAFĪS.** The Ḥanafīs are those Sunni Muslims who follow the teaching founded by Abū Ḥanīfā (f. 701-76, see above i. 908 et seq.) which has been collected and contained in several authoritative, more or less detailed writings of his pupils. Abū Ḥanīfā [q. v. i. 1149] and al-Shābānī [q. v.] in particular were the direct pupils of Abū Ḥanīfā who developed the system of Fīqḥ on their master’s principles and placed the Ḥanafī school on a firm basis. Although rival systems arose in opposition to the Ḥanafī school, at once in the case of the school of Malik and later in that of Shāfiʿī, which found more support in certain parts of the Muslim world, it was always able to assert itself in the eastern lands of the Caliphate and finally to attain an unchallenged supremacy in the Ottoman empire. In Central Asia also and in the Indian subcontinent and in the Sunnīs the majority of the Sunni Muslims belong to it.

The necessary preparatory work for a history of the Ḥanafī school has not yet been done, so that we will not here attempt to define the relationship of this school to the others. The usual view, however, is certainly wrong, namely that the Ḥanafīs represent more liberal views than the other schools; as regards principles they are on exactly the same ground as the others. For the rest the reader may be referred to the article Fīqḥ [ii. 103]. The Arabs have been content to collect biographical and bibliographical data in the so-called Ṭabābāy (class-books) among which the best known is Ibn Kullubūgha’s [q. v.] compendium edited by Flügel. Cf. Die Klassen der Hanefitischen Rechtsgelehrten by G. Flügel in Abhandl. der Königl. Sächs. Gesells. der Wissenschaft, vol. 8, Leipzig 1861. For works of the kind cf. Ḥadīṯī Khūṣīd, s. v. It may therefore be sufficient to mention here a few of the most famous legal compendiums, which are considered authoritative within the madhab and whose authors are all dealt with in separate articles. Such are the Kitāb al-Khārijī of Abū Ḥanīfā, the Qāmūs al-arṣād of al-Shābānī, the Muḫtaṣar of al-Kudūrī, the Ḥṣāya of al-Marrūnī and its commentaries notably the Wāḥidā of Burhan al-Dīn Maḥmūd, the Faraḍī of al-Saʿdāwī, the Kitāb al-Majmūʿ al-Raḥīm of Ibn
The Zayed al-Khalifa and the palace in Juba.

all cases of the plane and spherical triangle with the aid of the rules discovered (rule of the four quantities, theorem of tangents, rule of the plane and spherical sines etc.).

On purely practical geometry (mensuration, geodesy) the Arab mathematicians as a rule did not write special treatises, but discussed such problems in their works on the construction and use of the astrolabe and quadrant, on which cf. E. Wiedemann's work quoted below.

Händüs (i. e. brass or basse silver), the name of the base small money of the Magrib in the 7th to 9th centuries, the delasped copies of the square Almohad silver coins, which had long enjoyed great popularity and were struck by many Christian rulers as monetae militarem, milliaries. — The rūnātayya are small, irregularly cut little coins of base silver weighing from 7 to 14 grains. As a rule they bear neither ruler's name, mint nor date, but only a religious legend (a variant of Qurān, x. 47) and probably owe their origin to the Zird, Hāsfī, Marinid and other rulers of North Africa and the smaller Spanish dynasties of this period. They attained a certain importance as a standard coin in the petty commerce of the western Mediterranean and were therefore also imitated by the Christian mints of Spain and south-eastern France.

Hānī, b. Īrwa, one of the principal chiefs of the Banū Murād in Kufa, in the early years of the governorship of Ubaid Allah, son of Ziyād. He was a devoted adherent of the Ālids and was numbered among the ḫurrān, or distinguished reciters of the Qurān. When Muslim b. Āqīl, the cousin and secret agent of Husain b. Ali, in Kufa, learned of the arrival of the new governor Ubaid Allah in this city, he hurriedly left his previous place of refuge, the house of Mkhṭār, to find a new asylum with Hānī b. Īrwa. The latter had, although unwillingly, to agree to receive the fugitive for whom the authorities were searching, but he was denounced to Ubaid Allah and a few days later hanged beside Muslim b. Āqīl on the public square of Kufa.

Hānīf (A.) "May it do you good", is said by one who denies an invocation (made by saying taḥfīd al-bismillāh) to a meal. The omission of this wish would be not only a gross discourtesy but would expose the meal itself to the danger of the evil eye; so Lane, Manners and Customs, chap. v. — According to Hartmann, Arab. Sprachführer, p. 39, in Syria, people, who still retain old customs, say to one who has drunk, "Hānīf", whereupon the latter answers bānāk allāh or alla yāhanni. — An invitation to eat is declined in Syria with the word afḍāl or afḍalū "thou art (you are) very kind".

(H. Bauer.)

Hānīf (pl. ḥunafā‘) appears repeatedly in the Korān as the name of those who possess the real and true religion; e. g. in Sūra, x. 105; xxii. 32; xxx. 29; xviii. 4 etc. It is used particularly of Abraham as the representative of the pure worship of God. As a rule it contrasts him with the idolaters as in iii. 89; vi. 79, 162; x. 105; xvi. 121, 124; xxii. 32; but in one or two passages it at the same time describes him as one who was neither a Jew nor a Christian; e. g. ii. 129: they (the Ahl al-Kitāb) say, become Jews or Christians that ye may be rightly guided! But thou shalt say: the religion of Abraham as a hānīf; he was not one of the polytheists, and iii. 60: Abraham was neither Jew nor Christian, but hānīf muslim and was not one of the polytheists. The simple collocation of hānīf and muslim found in this passage is sufficient to show that for Muhammad the word was not the name of a particular religious body, which is still clearer from the phrase hunaṭa‘ il-lāhī, xxii. 32, so that the existence of Ḥanīfism as an organised body as insisted particularly by Sprenger has no support in the Korān itself. Sūra, xxx. 29 is of special importance for the understanding of the Korān meaning of the word, where is said: "Turn thy face towards religion as hānīf, (namely) Allāh's creation (fiṭra) according to which he has created man; there is no change in the work of Allāh;" cf. also vi. 79; x. 105. It is clear here that the word means the original, innate, primitive religion in contrast to the particular which arose later, polytheism on the one hand and the in part corrupt religions of the possessors of scriptures. As to the period of composition of the passages quoted, they may be mainly ascribed with certainty to Medina, only in vi. 79, x. 105, xviii. 4, it is doubtful, but here also we must consider the possibility that they were afterwards put into another form. The later Islamic application of the word depends on the linguistic usage of the Korān. The Ḥanīfyya (very rarely Ḥanṣafyya) means the religion of Abraham, e.g. Ibn Ḥishām, p. 143, 8, 147, 4, 822, 1. But as Muhammad renovated the pure religion of Abraham, hānīf is frequently used in the sense of muslīm (Mussulmanan), e.g. Ibn Ḥishām, p. 982, 18, 995, 11, cf. also p. 871, 5, where hānīf is used of religion itself in the sense of "pure, orthodox" as well as the obsolete verse of Farazdāk, Naṣirī, i. 379, 11, where the variant offers a different reading.

In various traditions the Prophet describes the religion proclaimed by him as al-ḥanīfiyya al-samāḥa, the mild or liberal Ḥanīfism, in opposition to ascetic movements, e. g. Ibn Sa'd, i. 1, 128, 13; ii. 1, 287, 8. The verb ḥannūn means sometimes the purer exercise of religion in the pagan period (Wellhausen, Skizzen und Vorarbeiten, iv. 156),
sometimes it is practically the equivalent of "to adopt Islam", Kāmil, p. 526, 8 (a poem by Dārā); Lisān al-'Arab, x. 404, 17. It is the same with the verb tabannath, which Hirschfeld and Lyall as previously E. Deutsch, wish to derive from the Hebrew teḥannath, but it perhaps rather derived from tabannath (cf. Nöldeke, Neue Beiträge zur Semit. Sprachwissenschaft, p. 72); for the latter is explained by Ibn Hāšām, p. 152, 9, and Tāhānī, i. 1149, 12, by tabarrnū, to practise piety, but means also, to become Muhammadan, Tāhānī, i. 2827, 17.
The above mentioned passage also (Sīra, xxx. 29) where the word means the innate religion is found in later Arabic authors, e.g., Kāmil, p. 244, 3: What is a hanīf ala 'Iṣfārī... or Diyārkāri, ii. 177; if I die 'ala ẓāri'ī 'l-Ībā, Connected with this, but at the same time remarkably modified is the use of the word by some authors as the designation not of the pure primitive religion but of the ancient paganism, which preceded the later separate religions. Thus Ya‘qūbī calls the Philistines, who fought against Saul and David, ḥanafī and adds that they worshipped the stars; and particularly Mas‘ūdī in his Tanbūh uses the word as identical with zāhītan [q.v.] of the people of Persia and the Roman empire, before they adopted Mazdaism and Christianity respectively, and distinguishes this step in religious development as the first hanīfīya from the pure hanīfī religion. At the same time he says that the word is an arabicised form of the Syriac hanīfī, in which connection it should be remembered that the Syriac hanīfī is actually used particularly of the Šabians (e.g. Barhebraeus, Chron., p. 176).
If we now inquire into the origin and earliest history of the word hanīfī, the first thing to do is to look for passages which may possibly contain a use of the word independent of the Korānic usage. But unfortunately most of such passages present great difficulties either because their genuineness is doubtful or because they are so indefinite and uncertain that different interpretations are possible. Scholars have thus arrived at utterly different results, e.g., Wellhausen deduces from such passages, that hanīfī originally meant a Christian ascetic; de Goede explains the word by "heathen", and E. Mayer (in A. H. 51) thinks the word everywhere means Muslim. This last meaning undoubtedly best fits an oft quoted verse of the first century A. H. (Yākūt, ii. 51; Kitāb al-agāhā, xvi. 45 etc.), where the hanīfī is distinguished from the Christian priest and the Jewish rabbi. On the other hand, it is doubtful if this meaning is also found in the story of the death of the Baki Christian Bīstām, the scene of which is laid in northeast Arabia (Kāmil, p. 131, 5; Naqātī, ed. Bevan, i. 314). Bīstām called, when his brother wished to return to him: I shall become a hanīfī, if thou wilt return! However, Mubarrad shows, by his remark to the effect that Muḥammad had then appeared as a Prophet, that he understood hanīfī to mean Muslim; but the sense is much more forceful if one translates it by "heathen" (Nöldeke) or "apostate". In Şāhī’s verse (Ḫūṣraw, Kosegarten, xxvi. 11), where the wine-drinking Christians are making a noise around a hanīfī, one of the scholars suggests Muslim; but the passage would equally fit an ascetic who refrained from wine. The same holds of the hanīfī in the verse of Dūḥi Ṭūma, Lisān al-‘Arab, xiii. 206, who turns to the west when praying, unlike the Christians, cf. the comment.

The Hadīth verse, Lisān al-‘Arab, vi. 133, where there is a reference to a stay for worship made by a hanīfī is quite colourless, Greater value might, on the other hand, be attached to some verses where the verb tabannūf appears in the above mentioned sense of performing acts of worship. One is by a heathen poet Dārān al-‘Awd of the Hawazin tribe of Numair in Nadīj (Lisān al-‘Arab, x. 404, cf. Kāmil, i. 198), and mentions as-‘ābil al-muṭaṭāḥānīfī, who observes his prayers (ṣalāt), by which he can only mean an Arab ascetic; Dārān (Naqātī, ii. 595, 18) must also be thinking of such a one when he says of a tribe, that they have allied themselves with some of the Christians with the religion him who yataḥannūfī. The poems, which are ascribed to certain contemporaries of Muḥammad, would bring us an essential step forward, if their genuineness were only to some degree certain, but this is unfortunately not the case. This is particularly true of the verses placed in the mouth of the Awst opponent of the Prophet, Abū Kāsīb al-Aslāt, in which he invites the foundation of a din hanīfī, a pure faith (Ibn Ḥāšām, p. 180, 5), and contrasts this primitive religion to Christianity and Judaism (ibid., p. 293). The genuineness of the poem of Umayyā b. Ḥabīb, and the salt, very doubtful. Even if we set aside these poems, however, the verses quoted above are sufficient to show, what must be considered quite certain, namely that Muḥammad in his use of this word was simply following a recognised usage, and it may be suggested as highly probable that hanīfī even before his time denoted the people, who, although influenced by Christianity, had refused both Christianity and Judaism in favour of a simpler and more primitive religion. But the historical development of such a movement is wrapped in an obscurity, which cannot be cleared up with the material at present available. That it was connected with the religious movements of South Arabia, as modern scholars suppose, is possible, but by no means certain, as the most reliable of the verses quoted belong to the north.

As to the etymology of the word, as has already been mentioned, even Mas‘ūdī had seen in it an Arabic loanword and his opinion has also a number of champions in modern times, who derive the word from the Canaanite-Aramaic hanūfī "hypocrite, godless, heathen, heretic". That this view would find substantial support, if the meaning "heretic" in the above-mentioned story of Bīstām were correct, is illuminating. The word would then be a foreign name for heretic, which those to whom it was applied, had somehow adopted in Arabia in a good sense. In any case, we should have to be content with this derivation from the Aramaic, as the corresponding Ethiopic word to which H. Winckler proposes to trace it as a foreign loanword only found in literature. Schulthess has, it is true, rightly pointed out that the Aramaic hanūfī, hanūfī cannot become the Arabic hanīfī, but this probably only shows that we must presuppose an intermediate form, and this is supported by the form of the word in Mandaean, cf. the Syriac abstract noun hanīfū, mentioned by Mas‘ūdī. Besides we might, if forced, attain the meaning "sectarianist" from the Arabic hanūfī "to break off" which would give a similar development of mean-
ing; and of course the possibility must not be excluded that new South Arabian texts may throw light on the word and its history.

ḤANIFA b. Luʾājām, an important branch of the great North Arabian tribe of Bakr b. Wāʾil [q. v.], consanguineous to the Ḥidj. During the Ḥijāţ they were in part heathen, in part Christian. The pagans honoured an idol in the form of a cake of butter and honey, which they used themselves to consume in time of famine.

They led a settled life in Yamānā, where they built the fortified town of Ḥadjr, which later became the capital. The Ḥidj l-ʾIrād and among others the following places belonged to them: al-ʾAwša (inhabited by the clan ʾAdi), Faiṣān (belonging to the clan ʾAmīr), al-Kirs (on the lower Wādt l-ʾIrād, inhabited by ʾAdi), Khidrīma (a large town with many villages, inhabited by the Suḥaim and ʾAmīr along with the Ḥidj), Kurran (belonging to the clan Suḥaim), al-Mansūf (a fortified town, belonging to the ʾAmīr), Talāʾ b. ʾAtā (inhabited by ʾAmīr), al-Thāq (so Hamdānī, Dīẓārī, p. 141, 7; Dīẓārī, p. 162, 25 has al-Nakb; al-Nakb and al-Thāq appear to be identical and there is either a misprint or error in the manuscript; the place belonged to the Ḥidj), Tuʾām (in common with the Azd and ʿAbd al-Kaṣīr), Ubād (a battle took place here between Ḥālid b. Ṣalīh and Musailama) and ʿUthāl. There was also a settlement of Ḥanifa in Ṣanāʾ, the mines of the Numair b. Kaʿb.

Historical. In the last years of the Basīs war [see BAKR b. WĀʾIL] the Ḥanifa separated from the Bakr and went over to their opponents, the Taghlibī, on whose side they then fought. Like the Taghlibī, they recognised the sovereignty of the Lakhmīds [q. v.] in Ḥira, the vassals of the Sasanids. In the famous battle of Ḥāḍir Kār between the Bakr and the Persians [see BAKR b. WĀʾIL] the Ḥanifa took no part.

Ḥawdā b. Ṣādī, chief of the Ḥanifa, resided in ʿAṣār. He had to lead the Persian caravans coming from ʿIrāq to Yemen to protect them from attack on the way. On one such occasion he was attacked by the Tamīm in the ʿAṣār. This was by no means the only occasion on which the Ḥanifa had to fight the Tamīm. When the ʾAmīr, who migrated to Yamān to the Ḥanifa after the battle of Ḥabāʾa (with the Ḥabīyān) quarrelled with the chief of the Ḥanifa Ḥālid b. Musailama, they went to the Saʿd b. Zaid Manāt of the Tamīm and found asylum with them. In the battle of Sītār Ḳaṣī b. ʿĀṣim of the Tamīm slew Ḥālaṭa. Of other battles with the Tamīm there may be mentioned that of Ḥusaynī (near Yamānā) and that of al-Zahr.

In Muḥarram 6 = 628 the chief of the Ḥanifa, Ṣuḥaymā b. ʿUthāl, while on his way to Mecca to visit the holy places (ṣumūr), was surprised by thirty Muslims and taken prisoner. He adopted Islam and was released. Through his influence over the Ḥanifa, out of friendship for the Prophet he prevented supplies of provisions reaching the Kūraish in Mecca from Yamānā whence they were wont to obtain them. In the "year of the deputations" (9 = 631) the Ḥanifa appeared before the Prophet under Ḥālid b. Ṣādī, called Musailama, who later appeared as a rival to the Prophet and proclaimed himself a companion and future successor of Muḥammad. When he, whom Muḥammad called al-Kaḍījīb, the "lār," appeared on the scene in 11 = 633 at the same time as the false prophets Aswād al-Anṣūrī and Tulaḥi, a large section of the Ḥanifa followed him, encouraged by their chief Raḍījīb b. Unfūwā, who declared he had heard the Prophet with his own lips in Medina designate Musailama as his colleague and successor. The majority remained faithful to him in the caliphate of Abū Bakr also. ʾIṣṭrīna b. ʿAbī Ḥālabī, who took the field against Musailama, was defeated. An attack by Shuraḫūb b. Ḥaḍram, who was repulsed by the Ḥanifa. Musailama thereupon collected his forces at ʾAšṣārā, a place near Ḥadjr. Here a famous battle was fought with the Muslims under Ḥālid b. Walīd, which ended in the utter rout of the Ḥanifa. Their two leaders, Muḥammad b. Ṣuḥaymā and Raḍījīb b. Unfūwā fell in battle and Musailama was put to death; the Ḥanifa are said to have lost 10,000–20,000 men on this day. When Ḥālid b. Walīd proceeded to besiege Ḥadjr, the Ḥanifa submitted on the intervention of Muṭiḍa and agreed to adopt Islam and deliver up all their movable property, which was divided among the Muslim soldiers.

(H. SCHLEIFER.)

HANSAŁILYA, plural of hansali, the name given to the members of the ṣāliḥī or religious brotherhood, founded by Sīdī Saʿd b. Yusuf al-Hansašī (known in Morocco as Sīdī Saʿd b. Aḥansal). The epithet Aḥansal or Hansašī is said to be derived from his birthplace Hansala, a border village of the tribe of Bent Mīr (in the Moroccan Atlas).
He belonged to a family of marabouts, whose most important ancestor, Sidi Sa‘id al-Kabir, is buried in Dades (southern Morocco), where his tomb is visited by many pilgrims. After the example of this holy man Sidi Sa‘id b. Yusuf spent the whole of his youth in studying the teachings of the Sufis in the most important zawiyas of Morocco. After spending periods in Fes, Ksar al-Kabir and Tafilt, where the strictness of his conduct became everywhere proverbial, he went to the east, to make a pilgrimage to the tomb of the Prophet. He spent a considerable time in the East and studied successively in Medina and Cairo, where he completed his education in mysticism under the direction of Shāhīkh Sulān, who was popularly believed to have been inspired by the king of the djinn. He then went to Damietta and there became a pupil of Sidi Isā al-Djumali. He received the dhikr (prayer peculiar to the order) from the latter. This dhikr is a kind of poem of great inspiration, usually called damayya‘a. He then went to Alexandria to visit the tomb of the famous Muslim mystic Abu ‘l-Abdās al-Marsi. While he was reading the Kur‘ān one evening by this grave, the saints of the Paradise appeared to him with the Prophet at their head. The latter gave him a whip, to drive away the evil spirit and ordered him to win converts in his native land. Sidi Sa‘id now returned to Morocco and visited the principal zawiyas; he finally settled in Teda, in the zawiya of the Dja‘zuliya and became their ma‘addam. He afterwards founded a zawiya for his own followers in the land of the tribe of Ait-Messat between Teda and the land of the Berbers, on the road to Marrakesh, in the upper valley of the Wādir Dn‘a. There he died on the 1st Rajab 1114 (19 Nov. 1702). He had been able to win great prestige and considerable influence over the Berbers of the Atlas by his conduct.

He was succeeded as head of the brotherhood by his son Yusuf, under whom it developed considerably. Feeling secure in his power he was not afraid to afford shelter to Ahmed Dhababi, the rebellious son of Sulṭān Mulay Isma‘il of Morocco. But this action and the jealousy of the sherifs of the influential marabouts, who were competing with them, cost him his life. His followers were persecuted and some of them entered the other brotherhoods of Morocco.

Yusuf’s successor Sidi Sa‘id flad fled before his persecutors and found safety in the east of the regency of Algiers; there he won a vast number of adherents. His successor was Sidi Mu‘ammār, who was buried among the Talagham, a tribe in the neighbourhood of Constantine. On his death Sidi Zwā‘i became head of the order; he belonged to an old and distinguished family of Constantine and already had a zawiya near this town on the hill of Shattaba. Sidi Zwā‘i’s descendants have since directed the fortunes of the Hansaliya order in an unbroken line. A majority of the adherents of the Hansaliya are to be found in the province of Constantine and the High Atlas.

The chief centres of the influence of the order are: in Morocco the mother zawiya among the Ait-Messat and that of Dades; in Algeria the zawiya of Shettaba, near Constantine, and that of Kef in Tunisia.

The Hansaliya, like several other religious orders, devote great attention to peculiar songs and dances, which produce ecstasy by their effect on the nerves. They also practice flagellation. Their assemblies are secret and only members are admitted. The people credit them with a mysterious power over the djinn. They are therefore often invited to the houses in cases of sickness to drive away the evil spirits, which cause the illness. In Morocco the influence of the head of the zawiya is so great among the Ait-Messat, that in the time of the explorer de Foucauld it was sufficient to afford the traveller protection from Marrakesh to Sfax.

HANŠI. An ancient town situated 29° 7' N. 75° 58' E. in the Hīsār district of the Panjīāb. Population (in 1901) 16,523. It is the centre of the tāyšil of the same name, a tract partly under irrigation and partly sandy waste, which has a pop. of 128,783.

Hānsi was possibly a foundation of the Kūshāns, but the Tomara Rālpūts held it when historical information is first available. It had passed into the hands of the Cauhāns before it was taken by Mas‘ud I, the Ghaznavid invader, in 427 (1036). It was recovered by the Cauhāns and rose in importance until its conquest by Mu‘izz al-Din in 588 (1192). It was the capital of the country known as Sawalakh until the rise of Hīsār. It does not play an important part in history until it became the headquarters of the soldier of fortune George Thomas in 1758. Thomas ruled a considerable district and struck coins at Hānsi till defeated by Sindia’s army under Perron in 1801. From 1803 till 1857 it was a British military station. Mas‘ud’s first conquest is commemorated by the Shahid-ghandī mosque.

HANŻALA b. MĀLĪK, an Arab tribe belonging to the Ma‘addi group. Its genealogy is Hanza b. Mālik b. Zāidī Manāf b. Tammīm. Among its more important subdivisions were the Baradīm (to which the poet Faradāk belonged), Dārim and Yarbi‘. The poet ‘Alkama b. ‘Abada traced his descent from the Hansala.

They dwelled between the two sandhills of Djarud and Marrūt near Himā (Darya) in Yamama. The villages of al-Sammān (with many wells, cisterns and irrigation works), al-Rakāma, the Wādis al-Ghumein and al-Jrik, the lakes Khānī (Wüstenfeld, Register, p. 203, probably by error, Dhābi) and al-Lawāhan, and the mountain Kurfa belonged to them.

Historical. The Hanza played an important part in the ‘Ayyān al-‘Arab. On the second day of Uwara’ (in the Dahna near Bahrain) the Lakhmim king ‘Amr b. Hūd had a hundred Hanza of the clan Dārim buried alive, because one of his brothers, who had been entrusted to the guardianship of the chief of the Dārim, Zurāra b. ‘Udas, was slain by the latter’s son-in-law Suwwāid b. Rabā’ (Amr’s epithet al-Mu‘arrīk ‘the consumer’ dates from this event). When Zurāra’s
lour. The more Somali blood there is in them, the more closely they approach a bright black. The early conquest by Abyssinian kings gave the Amharic language a firm footing in these lands and even when the population had long been Muslim, the Amharic dialect was still retained. This is spoken there to the present day, but it has borrowed more and more from the Galla, the Somali and particularly from the Arabic. It is doomed to decline, as it cannot hold its place against these languages. Quite recently the Shoa Amharic, the language of the governing classes and of polite intercourse in modern Abyssinia has penetrated to the town.

In the period in which the power of the Abyssinian empire stretched far to the south, southeast and southwest, Harar also passed under its sway; but we possess no reliable historical account of this period. The fact that an Amharic dialect is spoken in Harar and Maqetir's statement that Arabic and Abyssinian were spoken in these lands, show that the Abyssinians ruled there in early times; the date may be the xiiith, xith and xith century; for by the xivith century a wave of Islam had begun to roll westward and, although often repulsed, gradually gained ground till for a time in the xviith century it covered all Abyssinia. If we go by tradition, Shekh Abädir is the earliest figure we meet with in the history of Harar. In reality, however, the name Harar is first found in an Abyssinian chronicle, that of King 'Amda Sion (1314—1344); there the governors of Harar are mentioned, who had allied themselves with many others against the Christian king of Abyssinia (Perruchon, *Historie des guerres d'Amda Sion*, Paris 1890, p. 52 and p. 130). At this time Harar belonged to the emirate of Zäila and the chronicle of Harar counts the first Emirs, who were still residing in Zäila, as Emirs of Harar also. The first, to be mentioned in the chronicles, is 'Omar Walshem who may have reigned about 1150. In 1457 Harar appears on Fra Mauro's map, with the name much corrupted however. In 1521 the Emir Abû Bakr transferred his official residence from Zäila to Harar; he was probably forced to do this by the advance of the Turks, who at that time under Selim I were occupying Yemen and the whole African coast to Cape Guardafui and soon naturally came into conflict with the Portuguese, in Zäila also. Meanwhile another man had arisen to seize all power for himself. This was Ahmed called Grañ. This epithet which means "left-handed" was perhaps given him by Christian Abyssinians. He was born about 1505; nothing is known of his origin. He served as a horseman in the Emir's army, but then hatched a conspiracy against him and rebelled. By his victories he made himself independent and forced the Somalis also to follow his standard. His future greatness is said to have been foretold him by a miracle with a swarm of bees and his memory still lives in the popular tales of Abyssinia. He became actual ruler of Harar, but he seems neither to have taken the title *Emir* nor Sultan, but to have contented himself with the title *Ismam*. Beginning in 1576 he waged unceasing war on Abyssinia, soon subdued the whole country, burned monasteries, churches and manuscripts, plundered the treasures of the churches and carried off women, and children into slavery. Many Christians must have then lapsed to Islam, so that later a special ritual had actually to be prepared in the Abyssinian church for the re-baptism of the apostates, who returned to their original faith. In 1543 Grañ fell in battle against the Abyssinians, who were supported by the Portuguese under Christopher da Gama. In 1550—1551, Harar was burned by the Abyssinian general Fämntëll. Several Muslim generals had hostile encounters with the emperor Claudius (1540—1559) and were usually defeated; these battles are celebrated in an old Amharic ballad in praise of the emperor. But Claudius himself fell in battle against Nür, then Emir of Harar. But Nür could make no further progress against the Abyssinians, and at the same time the Galla hordes were pressing forward with all their forces and occupying the lands of Harar. The power of the Emir thus became gradually limited to the town of Harar and the once so mighty kingdom of Zäila. Harar now became an insignificant principality till 1875. In this year Ra'if Pasha of Zäila set out against Harar at the instigation of the Egyptian government, while at the same time Prince Hasan operated against Abyssinia in the north and Münzinger Pasha advanced from Tadjura. The two latter expeditions failed in their object, but Ra'if installed himself securely in Zäila and Harar and began to reorganise the country. The Emir Muhammed 'Abd al-Shakir was pensioned, but murdered in 1876. In 1878 Ra'if was dismissed by Gordon Pasha (General Gordon), as the latter feared that Ra'if might establish himself in Harar independent of Egypt. After several other Pashas had ruled there, it was decided in 1884 to vacate these lands. In 1885 Ridwan Pasha handed over Harar to the Emir 'Abd Allah. But Menelik II of Shoa soon attacked Harar and in the battle of Tshélanken, west of Harar, 'Abd Allah was slain on the 26th January 1887. The correspondence on the occupation of Harar between Menelik II and the king of Italy was published in the *Documente Amaranzi* (Rome 1871), p. 208 and 207. Harar now came once more into the hands of the Abyssinian Christians, who had been driven out of it some 600—700 years before. The celebrated Ras Makonnen was installed as governor, a very capable, clever, energetic and cultured man. He died in 1906; a beautiful church-like tomb was built for him outside the walls of Harar.

AL-HARAWI [See AL-HEREWL.]

**HARAZ** (Haras, Harras, Harráz), a high mountain range in South Arabia, lying to the west of Shaq and the Wadi Surud near Haşar Shu'ayb [q.v.]. It is composed of basalt and is over 8500 feet high. The following mountains belong to the Haraz:
Lahab (with Dhiebeh Mebar, Dhiebeh Medherre, Dhiebeh Shukrafl, Dhiebeh Lakama), Hawzawa (of the South Arabian inscriptions, with the Dhiebeh Karad and Kahil) and Shibam, Masar and joined to the latter, Safan. Of places in Haraz we may mention the large town of Manakha (southeast of Shibam with 3000 inhabitants, residence of the khammak of Haraz, Haima [q. v.]) and the Dhiebeh Aniz southeast of Haraz, Attara (between Masar and Hawzawa, formerly the residence of the da'a of Yam [Nadjran]) the large village of Masar (on the mountain of the same name), Humael, Mityab (both on Mount Safan), Shibam (on the mountain of that name), Lakama (north of Shibam with many Jews), Mawza (three hours from Manakha), Usil (on the mountain of that name near Masar), Birar (Brar, near the latter), Emla or Kusiba (on the Hawzawa); at the foot of the Haraz lies the town of Hudjaila. Among wadies there are Har, Idrub (both west of the Safan, in the land of the Banu Arraf) and Hidyjan (near the village of Birar). There are extensive coffee plantations on the mountains which yield an especially fine quality of coffee. The fruits (apricots, peaches, a small kind of pear, several kinds of grapes and walnuts) are famous far and wide. The people of Haraz are some Shaffiens and some Ismailis.

The Haraz is an enormous district divided as follows:
1. Banu Arraf (on the Safan); 2. Safan proper.
4. al-Maghribia (north of Masar).
5. Banu Ismail (northwest of Masar).
6. Haslwan (on the Wadi Dayyan, a tributary of the Surud).
8. Lahab.
10. Ya'abir (south of Manakha).
11. Muktait (adjoints Thuulith).
12. al-'Ukum (southeast of Manakha).

Down to 1763 the Haraz was (nominally) under the Imam of San'a. In this year, however, it was taken from the Imam by the Ma'rami dynasty of Nadjrjan (Yam) which had just arisen. In 1772 the citadel of the da'a of Yam, Ahmad al-Shalami, at Attara was destroyed by the Turks, whereupon the Imam made peace with the Turks and retired to the lands of their tribe in Nadjrjan.

In Hamdaini's time the Mikhal Haraz comprised the following seven parts: Hawzawa, Kafar (؟؟؟ of the South Arabian inscriptions, Glaser: Kurar, Yakkut: Kira), famous for an excellent breed of cattle, Safan (Yakkut, Safkan, a misprint), Masar (with fortress, well and irrigation works), Lahab, Mudjaliyah (Yakkut: Madjanah) and Shibam (with a fortress and a large mosque). The inclusive name for all these was Haraz and Hawzawa, also called Haraz al-Mustahizriza or briefly Haraz (in Qazwina, p. 105, l. 9-11, to make seven, Haraz al-Mustahizriza and Hawzawa have to be counted as one; in Deza, p. 168, l. 17-19, Shibam and Safan are omitted, but instead Haraz and Haraz al-Mustahizriza are given as two). It is fertile and rich in cornfields, honey and sesame. Among places in Haraz, Hamdaini mentions al-Taim, al-Idrub, 'Adjah, al-Ahaq, al-Dhanabat, al-Arijah, al-Mu'shir, Safwana (a fortifed place). The market of Haraz was al-Mawza. As inhabitants Hamdaini gives the Haraz and Hawzawa whom he describes as two Himyarite stocks; in Haraz there were also Hanatiia, Laif and Nashekh, of the Hamdaini (cf. n. 246). The language of the people of Haraz was midway between good and bad Arabic.

In recent times Haraz has been visited and explored by the traveller Eduard Glaser.

**Harb,** a powerful Arab tribe of Yemen origin in the Hijaz between Medina and Mecca. They are divided into two great bodies, the Bani Salem and B. Massuh. To the B. Salem belong amongst other clans, al-Jamada, al-Sabib, 'Amr, Mu'ara, Waled Selim, Tamim (not the celebrated great tribe of this name), Muzaina, al-Hawzam (Awaizam, Hazam), and Sa'dan (Sa'din, sing. Sa'dan); to the Massuh, amongst others; Sa'di (Sa'adi), Lahabba (all robbers of pilgrims), Bishr, al-Humran, 'Ali, al-Djaham, Banu Hassayen (al Aghraib), and Banu 'Amr.

Doughty gives amongst others the following villages of the B. Salem (between Medina and Yanbu) and on the great Wadi Fara (in Robey Ferra's), Djedida, Umm Teyyan (Dejeyan), Kaif, Dar al-Hamra, al-Kissa, al-Khorma, al-Wasita, al-Hassanie, al-Safa (with extensive date-palm groves and a large market; besides the chief article of commerce, the date, which is here sold very cheaply and the excellent honey from the adjoining mountains, genuine Mecca balsam is sold here, and is found genuine nowhere else in Arabia except at Badar), al-'Ali, Djedid, Bedur (Beda?), Medus, Shatia (Sweyka); of Massuh: al-Kherebyey (near Mecca), Kyles, RBaeb (not far from here the traveller Charles Huber was murdered by his retinue, the Harz), al-Swerya. A portion of the Harz also lived in the Wadi Al-Ham (al-Ham near Wadi Rumma), the small harbour of Liij and the Dhiebel Figgera (Fiikera between Medina and Yanbu, belonging to the B. Salem). The Harz, who make the pilgrims' route between Mecca and Medina unsafe by their ambushes and are therefore held in terror by the Syrian pilgrims, came from Yemen to the Hijaz (a clan of the Wadi' of the Hishid [q. v.] bears the same name) in the Muslim period. In the beginning of last century they succeeded only after hard fighting in overcoming the Wahhabis [q. v.]. During Palgrave's stay in Nejd, in 1864, the Shammar chief Telaf b. Rashid in person led an expedition against the Harz tribes and conquered a portion of them. Palgrave gives the number of the Harz, who were under the Shammar chief, as 14,000. Doughty on the other hand only 2000. In his Qazwina Hamdaini mentions the Harz as neighbours of the Bal [q. v.] and Djdateina [q. v.] in the country between Khaihar and Medina and near Mecca.

(J. SCHIEFELB.)

HARBA, (plur. hIRaB) spear. According to the Arab lexicographers, the harba is smaller than the ruma means larger than the anaus [v.]. It has the same function as the latter in the Muslim ceremonial, and we therefore find in some traditions that in Muhammad's time an 'anaus, in others a harba was used as sutra [v.] (cf. the chapter sutra and anaus in the different collections of tradition.) It has been supposed that the erection of a sutra at the salat had originally a protective object; in agreement with this is the fact that, according to some traditions, when the Prophet went out to relieve nature he had an 'anaus carried behind him (Bukhâri, Kitâb al-Wud'û, Bâb 17; Muslim, Sa'dîb, with Nawawî's commentary, Cairo 1285, i. 337); for it was just on these occasions that one was most exposed to demonic influence. On the ceremonial significance of the harba, cf. further Rhodonakas in Wetter Zeitkritik für die Zeit des Morg., xxvi. 75 et seq. We do not know what the instrument was called in the Koran. On the use of the 'anaus by the khaibât, e. g. in Celebes (cf. Adriani and Kruyt, De Barde sprekkende Torajása van Midden-Celebes, i. 329 et seq.).

The spear is the attribute of the commander, the chief of a tribe, etc. It is related that Haman, the leader of Fir'awn's troops, held a harba in his hand (Tha'labâ, Kitzâ (1290), p. 172). Tabari (ed. de Goeje, I, 1214, 15, 1215, 19) relates that Idris b. Hujairi, when acting as chief of the Bani 'Abd al-Ash'ul, took the harba in his hand and that Sa'd b. Mu'âshir took his place, took the harba out of his hand. Lane tells us that a long spear is stuck in the ground in front of the tent of the Amir al-Hadjî [v.] in Cairo, perhaps also as a sign of his rank (Manners and Customs, London 1899, p. 443).

The story that Muhammad received 'anaus or harba from Abyssinia as a present, gains in probability when one recalls that such staffs are used to this day in Abyssinian ceremonial (Bent, The Sacred City of the Ethiopians, i. 50, 54, 56).

Bibliography: Besides the works quoted in the text, the bibliography to 'ANAUS (i. 346).

(A. J. WENSCB.)

HARBA (with dIff or yâ), now Djar Harba, a ruined town in the Juddaj district, ½ hour S. W. of the palmgroves of Balad, on the west bank of the ancient Tigris bed, the Shu'ta'i, in about Lat. 34° N.

The name and the town date from pre-Muslim times. According to Yâ'ûtî (i. 187), an older name was Wukhâir, which sounds Babylonian. The Sassanian authorities reckoned the northern boundary of Sûristân or Dil-e Erâghshahr, the later Sawad al-†ârâ, from Harba in the farâdî Maskin (the modern Tell Maskin) and 'Alâh (or 'Luh, the modern 'Alâh) lying opposite it on the east in the farâdî Buzurgshâper). In the north it adjoined the province of Ather. These frontiers were maintained in the early Muslim period down to the 'Abba- sids, for example in Omar al-Kha'tâbî's survey (cf. Khurâshibhî, p. 14; Yâ'ûtî, p. 104; Mas'ûdî, Tabari, p. 38; Yâ'ûtî, ill. 174). Another early mention of the place is found in Tabari, ii. 916, year 76, where the Khârîjî leader Shâbîb on his march against al-†âdajîdajî crosses the Tigris at Harba (an anecdote with pun on Hârba and harb). In Harba there were flourishing manufactories of heavy cotton goods, which were exported everywhere (Yâ'ûtî, ii. 235; and Torajás, p. 295). That pottery was also a highly developed manufacture is clear from the quantity of shards strewn among the ruins; it is usually a ware, identical with the so-called Rakka-ware and belonging to the xiiith—xiiiith centuries.

When the great change in the course of the Tigris is begun in the beginning of the reign of al-Mustanîrillâh and the river left its ancient bed just above Harba and forced a way into the bed of the canal Kâtûl Abû 'l-Djund, its modern course, the Caliph began to build great irrigation-works to irrigate the land rendered waterless. Apart from the fact that at least the whole of the present Djudjail canal is a relic of his scheme, the ruins of the Mustanîrillân canal above Harba and the great bridge at Harba, after which the place is now called Djar Harba are further witnesses of his enterprise. The bridge has already been examined by J. F. Jones and described in his Selections from the 'Arabian旅行 notes, xlIII. (1857), but I have studied it in greater detail. It is solidly built of baked bricks and spans the ancient canal on four arches, 180 feet long and about 40 broad. An inscription about 300 feet long on both sides gives the date of its erection as 629 A. H. and is of particular interest on account of its detail and the unusual, from the orthodox point of view almost blasphemous eulogies. The ruins are rendered conspicuous by the cupola of the tomb of a Shaikh or Saiyid Sa'd, visible afar off. (E. HERSHEY.)

Harba is the side or edge of a thing. Hence 1. a letter of the alphabet (being the edge of the syllable or word), e. g. 'ârîf al-maddâ = dIff, wâw, yâ, and so on; 2. as a grammatical term, one of the three parts of speech, whatever is neither a noun nor a verb ('i'm or fá'il), whether consisting of one letter or more, as bî, kattâ'; etc.; 3. in prosody, the letters alif, wâw, yâ, when they may not be employed as râ'i, are called harîf al-†â'â; 4. a dialect of the Arabs in the hâdih ("The Kurân was revealed in seven dialects (hûrîf)"); or this may mean according to seven readings (kâ'ra'; cf. Noldeke-Schwally, Geschichte des Qurâns, pp. 88 et seq.; 5. as a Sub term hârîf is defined to be the language or the medium through which the Truth speaks to one; and the hûrîf al-dâhir potential realities such as that of the palm tree in the date stone: 6. in the cabalistic sense 'î'm al-†â'â (hûrîf) means disposing the letters in magic squares, etc.

HARPUSH, a family of Emîrs in Baalbek, which possessed the doctrines of the Metawâlî [v.] and during the Ottoman period held the power in their hands till the Turkish system of administration was reorganised in the middle of last century. How and when the Harfush attained their influential position has not been made clear; we only possess detailed information for the Emirs Musli b. 'Ali and Yunus, who lived in Baalbek in the time of Fakhr al-Dîn. Cf. al-Muhibbî, Khatîbat al-†athâr, iv. 432; Wüstenfeld,
HARUSH — HARAM.

HARĪB, a district in South Arabia, about two days' journey east of Maʿrib [q. v.] probably identical with the Caripeta of Pliny, the place from which the Roman general Aelius Gallus on his expedition to Arabia Felix began his retreat to the coast. Harīb, a centre of ancient Arab civilisation, is traversed by a large wādi, the Wādi 'Ain, which receives on its left bank two small wādīs, the Wādi Mūkbal and Wādi Ablāh. Two hours' journey before reaching Wādi 'Ain rises Mount Mablaḥa, to which a series of steps four yards long and fifteen yards broad, hewn out of the rock (by a certain Barghāl, according to tradition) leads, at the end of which is a large South Arabian inscription. At the junction of the Wādi 'Ain and the Wādi Ablāh lies the isolated hill Karn (a hill 1200 feet high), on which the Bani 'Abd, who are mentioned as early as the South Arabian inscriptions, dwell. On this hill is the tomb of the saint Uways al-Murādī al-Karānī, a contemporary of the Prophet, to which pilgrimages are made from distant districts. From the Wādi Ablāh, Timmā, the ancient capital of the Kabbātān, the Thamama or Thunna of Pliny, مکبلا of the South Arabian inscriptions, is reached in a wide plain; a portion of the plain, called al-Djufra, which belongs to the tribes al-Kabasa and al-Sbird, is full of imposing ruins, which bear the name al-Musaima; in their midst rises a large building whose walls still stand with many inscriptions.

The capital of Harīb is Darb Āl 'Ali situated between the Wādi 'Ain and the Wādi Mūkbal. It is mainly inhabited by Aghārīf (notables), about 750 in number (apart from their wives and slaves), who are divided into four families of whom the most important is the Āl 'Ali b. Tālīb, from whom the Emir of Harīb, is always chosen; his residence is in Darb and he is held in great honour by all the people of the land. Besides the Aghārīf there are a few merchants, labourers and artisans (called barsawi) in Darb. Half an hour's journey from Darb Āl 'Ali lies the little town of Darb Bū Tūhēf (Tūha), belonging to the independent tribes (gābšīlū) Āl 'Ali Tūhēf, who claim descent from the Hitāl [q. v.]. An hour's journey from here is a field covered with ancient ruins, called Ḥadjar Harīb. Of places on the Wādi 'Ain (right side) there may be further mentioned: Darb Āl Amr, inhabited by the Āl 'Amr and Āl Mas'ūd, clans of the Bani 'Abd (on the Djebel 'Ain) and their ra'iya, with the Āl Hitāl, the Bani Ḥijār and the Bani Ḥijdrāna (the latter belonging to the Emir of Harīb, who incarcerates in it those who refuse to pay their tithes), and the village of al-Sāja, inhabited by the Āl Ghuthaim, who enjoy a great reputation throughout South Arabia for a kind of padlock (ṣufl ghuthaimāh), made by them which is sold everywhere.

We may also mention the ruined town of Ḥadjar Hitāl at the foot of the hill Karn 'Ubaid above the Wādi 'Ain from the centre of which rises a large building on the forefront of which still stands, and which bears long inscriptions. The ruins are also called Hitāl al-Zarār (Zatir) after a certain al-Zarār b. Sa'āk, who according to tradi-
Christians more than once attempted to regain it but it remained permanently in the hands of the Muslims. In 630 (1232) the Ayyubid al-Azzî built a strong castle on an artificial mound there, the ruins of which still exist.

**Bibliography:** Yâkût, Muṣyim, ii. 184; ʿAllî Dîwâd, Mâmmâlîk ʿothmânî, taʾrikh dje-ğhrâfîa etc., p. 317; Rîter, Erkundungen, xvii. 1643 et seq.; v. Kremer, Beitrag zur Geogr. des nordl. Syria, p. 35; Cuiinet, La Turquie d’Aisie, ii. 211; Le Strange, Palestine under the Muslims, p. 449.

**Hârim (a) forbidden,** particularly the women’s apartments and their occupants (harem). — Certain pieces of ground, which are withdrawn from cultivation or building without the owner’s consent, are likewise called hârim, as the Ḥârim Dîr el-Khîlîfa and the Ḥârim el-Tâhirî in Baghîdâd, which included whole stretches of the town.

**Ḥârirî (born 446, died 6 Râyîb 516), Abu Muḥammad al-Kâsîm b. Ṭâli b. Muḥammad b. al-Ḥârisî, grammanian and elegant writer, was born and brought up at Mâshûn near Bâṣra; he also studied at Bâṣra, though the name of his teacher seems wrongly given by the authorities as al-Fâṣî b. Muḥammad al-Kâṣhânî, since this personage died 444. At Bâṣra he held the office of ḍâhid b-khâbar, i.e. head of the intelligence department (cf. Tabari iii. 1260, 13) to the court; and this office remained with his descendants till the time of ʿImâd al-Dîn Isâfînî, who visited Bâṣra in 556. Ḥârirî’s house was in the quarter of the Banî Ḥârum, but his office at Mâshûn. He repeatedly visited Baghîdâd (e.g. in the year 504), and is likely to have performed the pilgrimage; other travels of his do not appear to be recorded. His office brought him into connexion with many of the notables of the metropolis.

His most famous work is the Maḥsûmât, a collection of fifty pieces modelled on those of Bâdî al-Zamân Mâshûmânî, wherein the adventures of one Abu Zaid of Sarṭid are narrated by al-Ḥârisî b. Mâmmânî. The historian Ibn al-Dubâtîhî asserted that this Abu Zaid was a real personage named al-Muṭâhârî b. Sallâm to whom Ḥârirî addressed verses, but this is doubtless a fiction similar to those which are found in connexion with other celebrities of romance. According to one of Ḥârirî’s friends and correspondents, Ḥibat Allâh b. Sâḏî b. al-Tîmîdhi, the Maḥsûmât were commenced in 495 and finished by 504; the first date seems correct since they mention the taking of Sarṭid by the Franks in 490; but the last date too early if Ibn al-ʿĀṣîr be right in stating that the Asadî Dubâsî was a youth in 503; since this personage is mentioned in the work as a well-known man. Different theories were held concerning the person at whose request the tales were composed; the viziers of Mustarsîd Abu ʿAli b. Sâḏîk (512) and Anâṣârâwîn b. Khâlid (cf. i. 357) are both named in this connexion.

The Maḥsûmât became classical in the author’s lifetime; and he claims to have himself “licensed” 700 copies in spite of detractors (such as Dîyâ al-Dîn Ibn al-Āṣîr and the author of the Fâkhrit) they maintained their popular appeal; and an early commentator, ʿĀshîm al-Hillî (died 601), told Yâkût that he had been created in order to demonstrate the surpassing excellence of Ḥârirî; for he had found himself unable to rival the Maḥsûmât, after outdoing all other monuments of Arabic literature. They fall far short of Hamadhâni’s in originality, but excel them in facility, command of the Arabic language and poetical ability. Their popularity spread beyond the Muḥammânî community to Jews and Christians who translated or imitated them in Hebrew and Syriac. Some specimens were rendered into Latin in the eighteenth century by Schlutten and Reiske, and a monumental edition of them was produced by de Sacy in 1822; this was followed by numerous editions both Oriental and European, and translations have been published in several modern European languages, e.g. by Rücevelt in German (Die Verwandschaften des Abu Saʿîd von Seraf, 1826, etc.) and by Chener and Steingass in English (London, 1898).

Of Ḥârirî’s correspondence a selection was made by ʿImâd al-Dîn, which is embodied in his Kha-fira; another selection is reproduced by Yâkût in his life of the author (Muṣyim al-Ulûbî, vi.). Two of the epistles, called Sînîyûna and Sînîyû, because in one every word contains the first of these letters and in the other the second, are also printed in Arzâl’s Anthologica. Some of the correspondence preserved by Yâkût deals with the grammatical poem Muḥ̄âl al-ʿîrânâ, composed at the request of the above-mentioned Ibn al-Tîmîdhi.

His remaining treatise, Dunnât al-Ghawwâsî, is a collection of strictures on the erroneous use of various expressions; an extract of this treatise is published by de Sacy in his Anthology Grammaticale, and the whole has since been printed; to the Constantinople edition of 1299 there is attached the commentary of Sîhâb al-Dîn Khâfîdî, who disputes many of the author’s assertions.

**Bibliography:** Yâkût, Muṣyim al-Ulûbî vi. 179—184; Ibn Khallîkân, tr. de Slane, iii. 400—494. (D. S. MARGOLIOTH.)

**Ḥariyîya, a sect of the Rîfâ’îya in the district of Damascus founded by ʿAli b. Abu l-Ḥasan al-Ḥarîf al-Marwâsi who died in 645 (1147) at Bûṣra in Ḥawrân. His extreme pantheism, as it finds expression in his poet Nadîm al-Dîn b. Isârî, was banned by Ibn Taimiya in a very important fatâwa (vol. xxvii. n. 2 of the collection Tefsîr al-Kawâkhî al-Dâwî, formed by Ibn ʿUrwa, manuscript in Damascus, Tefsîr, n. 151). Cf. also al-Ṭârîḥî (died 649 = 1249) in Abu l-Ḥudîd, Kiltât al-Dajwâhirî, Stambl 1302, p. 326. (LOUIS MASSIGNON.)

**Al-Ḥârisî, Disel.** [See ARARAT.]

**Ḥārîth E. Kaʾb, usually called Balḥarît, an arab tribe belonging to the Yemeni group. Their genealogy is: al-Ḥârisî b. Kaʾb b. ʿAmr b. Qaʾa b. Dîjî b. Maḥbûhî (Mâlik).** They lived in the district of Nadrîn [q. v.] and were neighbours of the Hamân. The following places amongst others belonged to them: al-ʿArâb, al-ʿAdh, Ṭaʾa l-Dhâhîh, Deir l-Marrî, Frûtî (pl. Afrît, between Nadrîn and the Djâwîf, Ḥâdûra (Khadûrâ), Ḥâṣân-a (between Ḥudades and Ṭâmâma), ʿĀṣrâh, Ṣâḥîb, Ṣâbîn or Sawhân, Minnân or Mainân, Shâbī Ẓâyîd (belonging to the clan Zayd); wâdis: al-ʿAwhâl al-ʿālî và ʿAwhâl al-asfâl, al-Nuḍârî, Thâdir; wâters: al-ʿAins, al-Ṭâbirî, Ḥābî, al-Dijîf, al-Ḥarîf, Ḥimmâ, Yâdâmât, al-Kawâkib, Ḥâmata (Khatma, a well in the sand), Khûlâqî, al-Malâḥâṣî, Mîwa, Shîṣâ, al-Shalîla (belonging to the clan Dārîf); mountains: Tuḥûtûm.
Sections of the Bahārīth lived also in Rādāt al-Ṣafār in Ḥadrānūt, in the town of Rādā (inhabited by the 'Anṣ and Khwālān), in the valleys of al-Ṣama and Ḥadākān, which belonged to the Bakil, and in al-Faladja near Damascus. In the Dāḥiliya a section of the Bahārīth worshipped the idol Yaghūth. Another section professed Christianity. The 'Abd al-Madān b. al-Ḍayyān, a prominent family of the Bahārīth, built a large church, Dār Nadjrān, also called the Ka'ba of Nadjrān (according to many authorities, a tent composed of 300 pieces of hide).

Historical. The idol Yaghūth was the cause of a battle between the Bahārīth and the Murād, who claimed Yaghūth for themselves, at al-Razm (in the south of Nadjrān, in the land of the Murād) on the same day as the battle of Baḥr (17th or 19th Ramadān of the year 2). The Bahārīth, allied with the Ḥamādān, inflicted a severe defeat on the Murād and Yaghūth remained in their possession. On the second day of Kūfīt (in the Dāḥīna) the Bahārīth (under Nūmālyn b. Diṣās) fought against the Tamīm tribes Rihāb and Sād b. Zaid-Malā'ī (under Ka'īb b. Abī ʿAmīm). On the side of the Bahārīth were Hamādān, Kinda, Ḥudās and other tribes, in all about 8,000 strong, divided into four divisions, with four leaders, who all bore the name Yezīd and were under the supreme command of 'Abd Yaghūth b. Sa'īd. In this battle the Bahārīth were defeated. The chiefs of the allied armies fell and 'Amīr Muzākiyā' after the burning of the dam of Mār ib. When Muḥammad's call had gone out through all Arabīa, the Christians among the Bahārīth (about the year 630) sent a deputation to the Prophet in Medina, which consisted mainly of ecclesiastics, including a bishop, Abu l-Ḥārīthah. They arranged an interview with the Prophet at a place near Medina, where they were to undergo a trial by the ordeal called mukhāba or ʾīrum (ceremonies of baptism). But when they were convinced of Muhammad's mission and feared a defeat, they begged the Prophet to cancel the arrangement. The Prophet agreed on condition that they paid a larger tribute. In Rabi' 1 of the year 5 (630) Muḥammad sent Khālid b. Walid with 480 men to the Bahārīth to demand that they should adopt Islam. Those who were heathen and a number of the Christians also submitted and Khālid remained among them to instruct them in the religion and the institutions of Islam. After some time Khālid returned with a deputation of the Bahārīth (among them two members of the Christian family of 'Abd al-Madān) to the Prophet. Muhammad gave each member to ounces (400 dirhams) and appointed one of them, Ka'īb b. Al-Ḥusain, emir of the Bahārīth. When in 25 = 633 the false prophet Aḥḥāb b. Ka'b, usually called al-Āsawd al-ʾAnsī, appeared, the Bahārīth influenced by his emissaries, followed him. They drove out the governor of Nadjrān ('Amr b. Ḥaẓm, and al-Āsawd entered the town in triumph. The Muslims remained faithful to Islam under 'Abd Bakr, and the Christians renewed the treaty.

(J. Schleifer.)

HĀRITH B. BADR, of the Tamīm family of the Banū Ghudān, a general and friend of Ziyād b. Abī Hī. He must have been born about the time of the Hijāra. He is said in his early days to have been a follower of the Meccanos Sadājīn. At the battle of the Camel he was on the side of 'Alī's opponents but afterwards entered the latter's service. He early became attached to Ziyād, afterwards viceroy of the Ḵurāṣān. He was an orator and poet, particularly learned in the ancient history of the Arabs, and was of tried valour. He distinguished himself in society by his lovable nature no less than by his intellectual gifts. The combination of so many rare qualities in him won him the name Dāhīya (a term applied to a distinguished man). The only thing with which he was reproached in the days of the caliphate was his lechery. He owed it to his friendship with Ziyād that, although a Tamīmi, he was entered in the tribal lists of the Kuraẓī, a distinction which carried with it a considerable increase in his emoluments. "Ubaid Allah, son and successor of Ziyād, did not show himself so ardent a friend of Hārīthah. In the political turmoil which followed the death of Yazīd I, Hārīthah fought with varying success against the Khāridjī; his failures were usually caused by the lack of discipline among the Bāṣra troops. In the course of one of these campaigns he fell ill in 66. It was not correct, as one source states, that he lived into the reign of Walīd I.

HARKARN, a Persian stylist, son of Maṭurādās Kanbū of Muṭstān; was for many years muṣīḥ (secretary) to Nawwāb lībār-Khān, a eunuch in the service of the Moghul emperor Ḫānjāhr and was then appointed yubādar (governor of Akbarābād) (Agra) (1031 = 1622). He is the author of a collection of letters (inšād), divided into seven sections, which bears his name and contains model letters as well as official documents (ed. with English transl. by Francis Balfour, Calcutta 1781, 1804, reprinted 1831; hist. Lahore 1869). The work was used by the English authorities as a model for official correspondence conducted in the Persian language with the Indian
sovereigns. The Paris manuscript is dated 1062 A. H., and is entitled Irjīd, al-Talīlīn.

HARRA, a basalt desert, "a district covered with black broken stones, which looks as if it had been burned by fire". Such harras, which owe their origin to subterranean volcanoes which have repeatedly covered the undulating desert with a bed of lava, are found particularly in the east of Harran and stretch from there to Medina. Samhūl, Khūlaqat al-Wafī bi-Akhbār Dīr al-Mustafā, ed. Mecca, 1316, p. 38 gives a detailed description of a great earthquake at Medina which began on the 1st Djamād II 654 (26th June 1256) and lasted several days. Cf. also Wüstenfeld, Geschichte von Madya. There is perhaps, as Wetzstein has suggested, an allusion to these fearsome stony wastes in Jeremiah xviii. 6 (בַּעֲרָל). Yāzū, Muṣṣāb, ii. 247 et seq., details no less than 29 of these harras with their names (cf. Zetzschke, d. Deutsch. Morgenl. Ges., xxii. 365 et seq.), among which the Harr Wāḵīm at Medina has obtained a place in history on account of the bloody victory won by the Umayyads there over the Medinees in 63 (683). An accurate map with an index of names to the whole territory, in which harras are found is published in the Zeitschr. des Deutsch. Palästinavereins, vol. xii., in the narrative of A. Stübel's journey to Dīr-itt-Talūl and Ḥarrān (1882). The same author has also discussed the supposed origin of such deposits of stones in Die Vulkanberge von Ecuador after v. Oppenheim, Von Mittelmee zur Pers. Golf, i. 90, note 5, as has v. Oppenheim himself in Petermanns Geogr. Mittell., 1896 (Zur Routenkarte meiner Reise von Damaskus nach Baṣrād in dem Jahre 1892). Cf. also the literature quoted in the first named work of v. Oppenheim, i. 89 et seq.

HARRAN, a very old town situated in the Meṣopotamia province of Mesopotamia, near the sources of the Balīgh river, between Edessa and Ra's-Ain. It is familiar as the home of Abraham and Laban, but is especially famous as the chief seat of the Sabians and of their religion. To the Greeks it was known as Ḫalīd, to the Romans as Carrhae, to some Church Fathers as Hellemopolis ('heathen city'), to the Muhammadians as Harrān or Arrān. In its long history Chwolson distinguishes five periods, the Biblical, the Greek, the Roman, the Christian and the Muhammadan. The form of the name found on the cuneiform inscriptions, Harrānū, that is 'route', points to the importance of the place as a trading emporium; but it is chiefly famous all down its history as the seat of the worship of the moon-god Sin, whose temple was adorned by more than one of the Assyrian kings. The overthrow of the Chaldæan supremacy and the rise of Persia wrought no change in the circumstances of the City, but from the time of Alexander a large Macedonian population settled in northern Mesopotamia, which became known as Mygdonia, and the deities worshipped in Harrān received Greek names. Rome, on the other hand, left little trace of her sway in Asia: it was the Eastern civilization which influenced the Western conquerors. About the beginning of the Christian era the indigenous Syrian population of northern Mesopotamia, was largely mixed with Macedonians and Greeks, as well as Armenians and Arabs. As a frontier town Harrān was treated with indulgence by the earlier Emperors, and it was not until Christianity became the religion of the state, that efforts were made to suppress the cult of which Harrān was the chief seat. These attempts were not carried to extremes, no doubt owing to the fact that in Harrān, as in other places, the people depended for their livelihood upon the temple. Hence the Church-fathers speak of Harrān as a heathen city, and, although bishops of Harrān were appointed, the place continued a seat of idolatry, even after the country had become a province of the Caliphate. The same commercial necessity may account for the existence here from the beginning of the sixth century of a Monophysite community with a bishop at their head. The majority of the people, however continued heathen. Harrān capitulated to 'Abd b. Qānām in the year 639 A. D., at which time it was the chief town of Dīyar Muqar. It was the favourite residence of Yazid, the last Umayyad Caliph (744—750), and here Abū-Ḥubbār the Abiwas was imprisoned and put to death. The people, however, appear to have been allowed to continue the practice of their religion, but under Rashid a violent persecution arose, from which the Harrānians sought to free themselves by means of bribes. It was in 830 A. D. that Ma'mūn offered the Harrānians the choice between Islam, the adoption of one of the tolerated religions, and extermination. They claimed that they were Şabians; and by this device they saved themselves from extinction [see ŞABIJN]. Towards the end of the 9th century Muḥammad bin Ǧāhiz describes Harrān as a pleasant town, defended by a fort built of finely cut stone. When Ibn Djābir visited it in 1184 it acknowledged the sovereignty of Sulādīn (Ṣulāh al-Dīn), and its people were noted for their hospitality towards strangers. By Abu l-Fidā'ī's time (d. 1332), however, it had fallen into decay. At the present day the site is marked by a village of sugar-loaf cottages and ruins of ancient buildings of basalt.

In addition to the worship carried on there, Harrān was noted for its honey and for the preserve called Ḳubbait, as well as for the purity of the Suryac spoken there. Chesney states that splendid crops of maize, tobacco and cotton are raised on the plain; but its fame will always rest on the long line of philosophers and men of science who flourished there, of whom Ṭāhāt b. Ḳurra, and his sons and grandsons, and al-Mātīnī are the best known.

HARRAN. [See Harrak.]

HĀRUD. A river in Afghānīstān which rises in the Siyāh Kōh and flows southwards past Sabzawār and Zākīn, discharging itself into the Hāmūn or Lake of Sīstān. It has been identified by Tomasekh with the Pharmacoki of Pliny and the Hyarenañāhiti of the Avesta.

HÄRÜN.

HÄRÜN E. IMRÂN, the Aaron of the Bible, born 3 years before Mūsā, when Fir'awwân's command to slay the male children was given (Tâhâ’l, p. 100; Ṭabârî, i. 448). When Mūsā received the command of God to effect the deliverance of the Israelites out of Egypt from Fir'awwân, he asked for a companion of his own kin (Sûra, xx. 30–40). Hārûn, who sat on Fir'awwân's council (al-Kisâ', p. 211, and Taqahuma E.,xxviii. i. 7). He took the greatest share in the erection of the golden calf (Sûra, vii. 134–136, xx. 90–95 and E.,xxviii. i. 7). According to the Talmud (Sanh. 77) he had been forced to do this for fear of the Israelites who would have slain him. But other legends show that the Israelites were particularly attached to Hārûn. For example al-Kisâ', p. 238, Ṭabârî, p. 146 and Ṭabârî, i. 502 give the following story in almost identical words: Mūsâ and Hārûn once noticed a cave from which light streamed. They went in and found there a golden throne with the inscription "destined for him whom it fits". As Mūsâ proved too small, Hārûn sat upon it. The angel of death at once appeared and received his soul; he was 127 years old. When Mūsâ had returned to the Israelites, they asked where Hārûn was. "He is dead", said Mūsâ. "Thou hast slain Hārûn", they answered. Angels then at once appeared with Hārûn's bier and cried: "Do not suspect Mūsâ of such a crime!". According to another tradition (Ṭabârî, ibid., Ṭabârî, i. 505), Mūsâ led the Israelites to Hārûn's tomb, where he called him back to life, and Hārûn confirmed the story of his death. Midrasch, Jebot, 764, Aboth d. R. Nahman, 32, Pirke d. R. El., 12, also give this Arabic legend.

HÄRÜN AL-RASHID, the most celebrated of the ʿAbbâsîd Califîs, born in al-Raî in Dhū l-Hijjâja 145 = March 763 or, according to another, in itself more probable authority, in Muharram 149 = February 766. His father was the Caliph Muhammad al-Mahdi, his mother a slave named Khadzrun, whom Mahdi set free and married in 159 = 775–776. After Hārûn ascended the throne in Rabi' 1 170 = Sept. 786, he appointed the Barmakids Yahyâ b. Khâlid minister with unlimited power, and during the following seventeen years the latter is said with his two sons al-Fadl and Dja'far to have been the real ruler of the great empire; the catastrophe of Muharram 187 = January 803 [cf. Barmâkids and Dja'far b. Yahyâ] was thus all the more unexpected. In 176 = 792–793, an ʿAlid, named Yahyâ b. Abd Allah, raised the standard of revolt in al-Dailâm and won numerous followers, so that the Caliph had to send a great army against him under al-Fadl b. Yahyâ. The latter entered into negotiations and, when he had Yahyâ's presents and Hārûn promised to pardon him, Yahyâ surrendered. But when he arrived in Baghdâd, Hārûn in spite of his promise had him thrown into prison. About the same time a bitter feud between the North Arabsians and the Yemenis in Syria blazed up into open war and it was not till 180 = 796–797 that Dja'far b. Yahyâ was able to restore peace. In 178 = 794–795 the Egyptians rebelled against the governor ʿIsâk b. Sulaimân; but when Hārûn sent his able general Harthama with a great army the rebels were soon routed. Unrest broke out in Kairawan also, but this was quelled by Harthama, for a time at least, but after his return in 181 = 797–798 the unruly populace rebelled again. Order was restored by the governor Ibrahim b. al-Aghlab, who however soon made himself independent, and in 184 = 800 Hārûn had to grant him the country as an hereditary fief on payment of annual tribute. Like so many of his predecessors, Hārûn had also much hard fighting with the Byzantines. At the very beginning of his reign he had the frontier towns fortified and almost every year his governors made raids into hostile territory without however winning any permanent advantages. In 181 = 797–798 the Caliph himself took the field, but soon returned. As usual war again broke out the next year; the Empress Irene, however, on account of internal disturbances in Constantinople had to make peace and pay tribute. Peace only lasted till the accession of the emperor Nicephorus in 186 = 802, who sent the Caliph a scurrilous letter and demanded the return of the tribute that had been exacted. Hārûn at once took the field and forced the emperor to pay a new tribute. The latter, however, paid no attention to the agreement and the war was continued. In 190 = 806 Hārûn took Heraclea and forced the emperor to pay not only a new but also a kind of poll-tax for himself and his family; in the following year however Yazid b. Mâkhdad was defeated by the Byzantines and the efforts of his successor Harthama proved equally unavailing. The years of warfare therefore left the state of the parties in the end practically unchanged. According to western historians, Hārûn was on the other hand on terms of friendly intercourse with Charlemagne and mention is often made of embassies from one to the other. There is however no mention of this in Arab sources and the truth of these statements has even been seriously doubted [on this point cf. Schmidt, Karl der Große und Harun al-Raschid in Der Islam, iii. 409–411, Barthold, ibid., iv. 333 et seq. and the literature there quoted]. The governor ʿAli b. ʿIsâ had made himself generally hated by his exactions in Khorasan. When the people complained, the Caliph went in person to al-Raî in 180 = 805, but allowed himself to be fooled by ʿAli and confirmed him in his office again. About the same time Râfî b. Latîf rebelled in Samarkand. He was defeated by ʿAli b. ʿIsâ; the complaints of the people of Khorasan about the latter's boundless greed became louder and louder and Hārûn had finally to transfer the government of Khorasan to Harthama. By this time Râfî was lord of all Transoxania and as the situation was rapidly becoming more serious, also the Caliph resolved to take the field himself and sent his son al-Maʾmûn in advance to Merv. On reaching Tus, Hārûn fell ill and died, according to the usual account, on the 3rd Dhumâdâ ii. 193 = 24th March 809. He had a long time previously made arrangements to secure the succession for his son al-Amin, but these in the result proved most unfortunate [cf. the article al-Amin. i. 327 et seq.]. Hārûn took a great interest in art and science
and his brilliant court was a centre for all branches of scholarship. In spite of occasional outbursts of Oriental despotism he was undoubtedly one of the best of the Abbâsîds; nevertheless it is from his reign that the beginning of the decline of the dynasty dates. In legend and tradition however he has always been looked upon as the personification of oriental power and splendour and his fame has been spread throughout East and West by the “Arabian Nights”.

(K. V. Zettersten.)

al-Hârûniya i. a village in al-‘Irâq near Djalûla. Yahyât says that an ancient Persian bridge built of stone with leaden joints stood here.

2. One of the chain of frontier fortresses (thugâhâr) between Asia Minor and Syria. The exact position is not known, but it stood one day’s march to the west of Marâsh in the hill country between it and Ain Zarîta. It was founded by the Caliph after whom it was named in the year 183 (799). The fort was ruined by the Byzantines in 348 (959–960), when 1500 Muslims were captured (Yahyât, s. v.). In spite of this it was a flourishing town a few years later when Ibn Hawkal apparently visited it. The town was rebuilt by Saif al-Dawla the Handâmîd of Alexâp (d. 356 = 967). Thereafter it was retaken by the Christians and included in the kingdom of Little Armenia.

(T. H. Weir.)

Hârûrâ, Hârawrâ, the meeting place of the first Kârîdîs, not far from Kâfûn, where they publicly disclaimed allegiance to ‘Ali and were soon afterwards almost exterminated in the bloody battle of Nahrawân. From it comes the name Hârûniya for the early Kârîdîs (q.v.).

Bibliography: Yahyât, Mu‘jamân, ed. Wûstenfeld, ii. 246; Tabari, ed. de Goeje, i. 3341 et seq.; and the other Arab chronicles in the passages quoted in Brünnow, Die Charidekten, p. 16 et seq., and Wellhausen, Die religio-politischen Oppositionsparteien, p. 4 et seq.; al-Shahrastânî, ed. Cureton, p. 86 et seq., etc.

Hârût and Mârût, two angels who are mentioned in the Korân (Sûra, 2, 96) in the words “and it was not Sulaimân that was an unbeliever but the devils, who taught men sorcery and that which had been revealed to the two angels in Bâbîl, Hârût and Mârût; but they taught no one without saying “we are but a temptation, therefore be not unbelieving”. People learn from them means by which they may separate man and wife” etc. A number of stories are attached to this passage, the main outlines being as follows. When the angels in heaven saw the sinful children of men, they spoke contemptuously of them before Allâh. But He said: “If you had been in the same position you would not have done any better”. They did not agree to this and received permission to send two of their number to earth as an experiment. The two chosen were Hârût and Mârût, who were ordered to abstain from grievous sins such as idolatry, whoredom, murder and the drinking of wine. But when they saw a wonderfully beautiful woman they were soon led astray and, when they were discovered, they slew the man who had discovered them. Then Allâh asked the angels to look down at their brethren on earth: then they said: “In truth, Thou wast right.” The pair were given the choice between punishment in this world or the next. They chose the former and were incarcerated in Bâbîl, where they have since suffered grievous torments. A. Geiger has already noted that these elements are in the main also found in a Jewish midrash; and it can now be added that many are found as early as the New Testament (2 Pet. ii. 4; Jude, v. 6) and the Book of Enoch, in connection with Genesis vi. This is clear from the following:

The incident is said to have taken place, according to a Muslim version, “when men were multiplying and sinning”. In the same circumstances the sons of God descend to earth in Genesis vi.; and “they took unto themselves wives”. The two angels are called Shâmîzîzi and ‘Azâzîl in the midrash. These names are found in a corrupt form even in the book of Enoch. The ‘alîbî gives the following story: Three angels descended, Hârût, or ‘Azîz, Mârût or ‘Azîz, and Mûsâ’alî. The latter on the very first day felt himself too weak for earthly temptations and was at his own request again taken up to heaven. According to one version, Hârût and Mârût are said to have flown up to heaven at the end of each day; but when they had sinned their wings were disabled. A connected motif is found in the Schatzkohle (ed. Bezdol, 68–69), where the sons of Seth are no longer allowed to climb the holy mountain after their sin. It is also stated that the disabled ones begged their contemporary Idrîs to intercede with Allâh for them. According to Kâzwîn (ed. Wûstenfeld, i. 61), the derision of men by Hârût and Mârût took place while Adam was still alive. As to the woman her name is given as Zuhra, Anâhid (Bâhind) and Bidûkht; in the midrash she is called Işîhâr, in other Jewish legends Nàmâ (the lovely); this all points to Venus. According to some, she was an ordinary woman who brought a dispute with her husband before Hârût and Mârût, who had to administer justice among men. When they both tried to seduce her, she begged them to act contrary to the divine command and tell her the word of might (in the midrash the name of God) by virtue of which they were able to ascend and descend. When she had learned it, she made use of it; but when she was in heaven, Allâh made her forget it and changed her into a star. Hârût and Mârût however remained in Bâbîl and taught sorcery (cf. Enoch, Chap. 8, 9, 95, 97). It is also related that they were kept imprisoned in a well in Demûwend. Their tortures are painted in vivid colours; they are kept in chains, as is already related of the fallen angels in the Book of Henoch (Chap. 14, 26, 69, 69) and in the Jubilees (5, 6). (Cf. also the Syriac Apocalypse of Baruch, ed. Ceriani, p. 152, col. 2, ult. = Chap. 56, v. 13). Water
also is held in front of their mouths but they cannot reach it (cf. Tantalus). Mention is even made of several Muslims who have seen them by magic means; the prisoners are said to have rejoiced, when they heard of Muhammad's coming as the end of their tortures was believed to be at hand.

In a legendary history of Egypt, translated by Wasetenfeld in Orient and Occident (i. 329) it is related that Harut and Marut lived in the time of the Egyptian king 'Aryak.

The names Harut and Marut are connected by de Lagarde with Haurvati and Arematati. But it is remarkable that the pair of names shows a strong analogy to other such pairs, found in the Korân such as 'Ujdat and Madjan, 'Ulalt and Djalalt. One of each of these pairs may be traced to pre-Muslim tradition, the other was formed by Muhammad by altering the first consonant of the former. Marut is quite a common Syriac word for power, it possibly contains a remembrance of Sin.

HASÁ, HASSÁ. [See Al-Hasan.]

HASAN (A.), beautiful, good; a technical term in the science of Tafsir, see above, ii. 190. Cf. also Goldziher, Forschungen über den Islam, p. 106.

AL-HASAN b. 'Abd Allâh. [See Nashir al-Dawla.]

AL-HASAN b. Abi 'l-Ijjasan al-Baqari, a prominent figure in the first century of the Hijra. During the wars of conquest his father was carried off as a slave from Mâsîn and brought to Medina. There he became a client of the celebrated Za'id b. Thâbit [q. v.] and married a client of Umm Salama [q. v.] named Khairas. Hasan was born of this marriage in 21 (642). Brought up in Wâdi l-Kurâ, he afterwards settled in Basra. There he won a great reputation for strength of character, piety, learning and eloquence. While other men, who were held in great esteem, such as Ibn Sîrîn and al-Shâbâbi, being questioned on Yazid's succession did not dare give their opinion, Hasan frankly expressed his disapproval. He showed the same freedom of speech in his letters to 'Abd al-Mâlik and al-Hâjjâjîd, so that later authors, like al-Shahristâni, who thought they detected a leaning towards the doctrine of free will in them, preferred to ascribe it to 'Abd Allâh b. 'Aṭâ' [q. v.]. It was considered the equal of his contemporary al-Hâjjâjîd as an orator; he was highly esteemed as a transmitter of tradition, because he was believed to have been personally acquainted with 70 of those who took part in the battle of Badr, although his chief authority was Anas b. Malik [q. v.]. He exercised a lasting influence on the development of 'Usâs, by his ascetic piety, which shone all the more by contrast, as by his time a worldly spirit had penetrated all classes in Islam. Numerous pious sayings are placed on his lips and the Sûfis see in him a predecessor, whom they quote as often, as do the orthodox Sunnis.

But the Mu'tazila also openly reckon him one of themselves not only because the first representatives of their doctrine, 'Amr b. 'Uba'id and Wâsîl b. 'Aṭâ', were among his pupils, but because he himself like them inclined to the doctrine of free will. That Wâsîl b. 'Aṭâ' afterwards separated from him, does not alter the case. In this way almost all religious movements within Islam go back to Hasan and we cannot be surprised when we are told that, when he died full of honour on the 1st Rajab 110 = 10th Oct. 728, the whole city of Basra attended his obsequies.

AL-HASAN b. 'Ali, the last Zîrid ruler of Mahdiya (545-543 = 1121-1122-1148-1149). He was still a child when his father 'Ali died and had to leave the administration to his freemen. They were particularly occupied with warding off the attacks of the Normans of Sicily. In 1122 Admiral George of Antioch seized the island of Cossira (Pantelleria) and the castle of Cape Dinas and began to lay siege to Mahdiya, but was forced to return to his ships after severe fighting in which he lost heavily. In 1135 the Christian fleet again appeared before the Zîrid capital, this time however to protect al-Hasan who, being attacked by land and water by the Hamamîdîs, had appealed for help to Roger II. The Muslim ruler rewarded the Christian sovereign for his assistance by allowing him to impose his authority on the chiefs of the coasts and making over to him the yield of the customs in his land. A new naval demonstration, this time effective. Because of Mahdiya by Admiral George of Antioch in 536 = 1141-1142, forced al-Hasan to accept the conditions imposed by Roger II, by which he became to some extent his vassal. This humiliation however did not save the Zîrid kingdom. Under pretext of defending the rights of the sons of Vusuf b. Djamîl, lord of Gabes, who had been dispossessed at the request of the inhabitants themselves, Roger II once more sent George of Antioch against Mahdiya. Abandoned by its ruler and a number of its inhabitants, the town was occupied by the Christians without a blow being struck, at the end of 543 = 1148-1149. Thus spoiled of his lands, for the rest of his life al-Hassan had some years previously cast off the Zîrid yoke, al-Hasan took refuge among the Kyoto, then in Bone, and finally at Bougie whose king interred him in Algeria. He lived there till it fell into hands of the Almohads (547 = 1152-1153). He was kindly treated by 'Abd al-Mu'mîn, to whom he had made his submission and, after Mahdiya had been regained from the Christians in 555 = 1160, al-Hasan returned to his former kingdom as governor. He was later recalled to Morocco by Vusuf b. 'Abd al-Mu'mîn and died at Abar Zellû in the province of Temesna in 563 = 1167-1168.

Bibliography: Ibn Khalîdûn, Berbères, transl. de Slane, ii. 26 et seq.; Ibn al-Athîr,

AL-HASAN b. 'Ali b. Abī l-'Uṣūl al-Kalbî, an Arab general, was sent to Sicily in 948 (336 or the beginning of 337) by the Fātimid caliph al-Manṣūr [q. v.] to put an end to the unrest there, which he did successfully. In Dhu l-Hijjâda 340 (May 952) he won a great victory over the Christians in Calabria, as a result of which the Byzantine Emperor Constantine VII made a truce and allowed the exercise of the Muslim religion in Calabria. Hasan himself then returned to the region and built a great mosque there. Al-Manṣūr however died about this time and Hasan at once went over to Africa leaving his son Abū l-'Uṣūl Aḥmad as his deputy in Sicily. He was confirmed in the office of governor of Sicily by al-Mu'izz, al-Manṣūr's successor, and held the appointment until his death in 554 (965). The rule of the Banū Abū l-'Uṣūl was firmly established in Sicily by his resolute and energetic action.

Bibliography: Ibn al-Āthîr, Kâmîl, ed. Tomberg, viii. 354 sqq. 371; transl. in Amari, Bibliotheca arabica-sicula, i. 419 sqq.; Amari, Storia dei Musulmani di Sicilia, ii. 244 sqq.; Müller, Der Islam etc., ii. 617 sqq.; Vasilev, Vicinanza i Arabi, ii. 303 sqq.

AL-HASAN b. Abī l-Ṭālib, the eldest son of 'Ali and Fāṭima, the daughter of the Prophet. The exact date of his birth (the year 3 or 4) depends on the date still to be settled of the marriage of his parents. The Sûra represents him as a particular favourite of his grandfather. An abundant apocryphal literature has grown up around this subject, taken from the domestic life of Muhammad. Sensuality and a lack of energy and intelligence seem to have been the fundamental features of Hasan's character. After the premature death of Fāṭima, he was not on particularly good terms with his father and brothers. He spent the best part of his youth in making and unmaking marriages; about a hundred are enumerated. These easy morals earned him the title mitlâb ‘the diviner’ and involved ‘Ali in serious eminities. Hasan moreover proved a thorough spendthrift; he allotted to each of his wives a considerable establishment. We thus see how the money was scattered during the caliphate of ‘Ali, already much impoverished. He was present at the battle of Šī‘fîn, without taking an active part in it; he took no further interest in public affairs during the lifetime of his father.

After the assassination of ‘Ali, Hasan was proclaimed Caliph in the ‘Iraq. His partisans tried to persuade him to renew the war against the Syrians. Their importunities upset the plans of the indolent Hasan, and he henceforth thought only of treating with Mu‘awiya. They led to a rupture between himself and the ‘Iraqis. The latter ended by severely wounding their nominal sovereign. From this time on, Hasan's one idea was to come to an arrangement with the Umayyads. Mu‘awiya left to himself the task of fixing his price for the renunciation of the Caliphate. Besides a pension of two million dirhems for his brother Iṣâṣ, Hasan asked for himself a sum of five millions and the revenues of a district in Persia during his lifetime. The ‘Iraqîs later opposed the execution of this last clause. All his demands were granted and the grand-on of the Prophet had the inpentence to express publicly his regret that he had not asked for double. He left the ‘Iraqi and the jers of the people to retire to Medina.

There he resumed his life of pleasure and foolish dissipation. Mu‘awiya agreed to pay the expense, only stipulating in return that Hasan should not disturb the peace of the realm. At a meeting at Aḥraš [q. v.] he had previously forced him to renew publicly his renunciation of power. Henceforth Mu‘awiya ceased to trouble about him, being reassured by his negligible and indolent personality. Dissension continued to reign among the ‘Alids however. Hasan was not on good terms with Iṣâṣ, while both were in league against Ibn al-Mansîa [q. v.] and the other children of ‘Ali. Hasan died at Medina of consumption, probably hastened by his excesses. An attempt has been made to throw the responsibility for his end on Mu‘awiya; in addition to the stain, which would thus be thrown upon the Umayyads the object of this charge was to justify the title Shâhid (martyr) and ‘Sa‘îdî of the martyrs’ given in compliment to Fāṭima’s insignificant son. Only Shî’i writers, or those particularly favourable to the ‘Alids dare openly voice such a grave accusation. It at the same time gave an opportunity to implicate the family of Āshâth b. Kâ‘î [q. v. i. 481 sq.] detested by the Shi’is on account of his share in the coup of Šī‘fîn. Mu‘awiya was not the man to commit an unnecessary crime and the frivolous Hasan had long become quite inoffensive. His life was a burden only on the treasury of the Umayyads, which was beset by its constant appeals. The sigh of relief heaved by Mu‘awiya on hearing of his decease can be readily understood. He probably died in 49 H. H. at the age of about 45. By his death his brother Iṣâṣ became head of the ‘Alids. In the later history of this faction we generally find that the numerous descendants of Hasan have to give way to the more enterprising Husainids. The two families did not agree any better than their ancestors had done.

AL-HASAN b. ‘Ali. [See AL-ASKAR, IBN MA‘KÜLA, NI‘ÂM AL-MULK, AL-UṬRUSH.]

AL-HASAN b. ḤANÎ. [See AḤN NÂLYKS.]

AL-HASAN b. AL-KHAṢİR, Aḥbî Bakr, an important Arab astronomer, of Persian descent, often quoted in astrological works of the Christian middle ages under the name Albu-bakr. He flourished about the middle of the third century A. H., for Abî Ṭâlib Ta’îfîr (died 280 = 893) mentions him in his Kitâb Baghâdôd as a contemporary. A Liber de Nativitatibus (beginning:
Dicit Albudder magis Alhassili Acharisi filius) by his was translated into Latin by a certain Canonici Salio (2) in Padua in 1218 and printed at Venice in 1492 and again in 1501, and in 1540 at Nürnberg. The words Alhassili Alcharsi are very probably corrupted out of Alchassili Alfarsi, indeed a Munich manuscript has Alchassii. It has not yet been established with which of the works mentioned by the Arab biographers this is identical; two works fit-i-Mawāsid (“on births”) which are in the Escorial (Carsi, n6, 935 and 973), ascribed the one to Ibn ‘Aṣrāl al-Khāṣibī, and the other ascribed to Ibn al-Khāṣib al-Kūlī, are perhaps by this astrologer, although the first may be by Abūrahm b. ‘Ezdī.

Al-Hasan b. Mahmūd. [See Ibn Mahmūd.]

Al-Hasan b. Muhammad. [See Al-Muhālaimi.]

Alī b. Al-Hasan b. Muḥammad, Sultan of Morocco, fourteenth of the dynasty still ruling there, the Ḥasanī [q. v.] Sherīfs of Sidjīmasa, also called Fikhr Sherīfs or Alawīs.

After the death of his father Muḥammad b. ‘Abd al-Rahmān (18th Raḍāb 1290 = 12th Sept. 1873) Mūlāy al-Hasan was chosen Sultan by the most prominent members of the Moroccan court, then in Marrakesh. But disturbances at once broke out on all sides; Fās, the capital of northern Morocco, drove out his governor Ḥāḍīj Muhammad al-Modani Benris; the people of Azemmūr killed their governor Ahmad b. Faradāj; Mūlāy ‘Abd al-Kābīr b. ‘Abd al-Rahmān, the Sultan’s uncle, supported by the Berber tribes Banū Ṭājāl, Ait Yūsī and Ait Aiyāsh set up as a claimant to the throne and occupied the town of Mekeins with the surrounding country. Mūlāy al-Hasan then set out on his long series of campaigns to subdue the various rebellious elements in his kingdom. He turned his attention first to Azemmūr, put down the rising and levied a heavy indemnity on the people. He then marched through the Shāwiya territory, collected the arrears of taxes and reached Ḳāṭāṭ, one of the three most important cities of northern Morocco, where he met with a friendly reception during a festival. Here he visited the most prominent religious leaders and scholars and made them presents. He also gave considerable sums for the benefit of the public libraries and madrasas. This was a clever stroke of policy, to seek his chief supporters among the Sherīfi clergy to which his ancestors had belonged and among the educated citizens.

In the meanwhile his uncle ‘Abd al-Kābīr had been captured and surprised among the Ait Yūsī and delivered up to him. The Sultan now suppressed the rebellion of the Arab Banū Ṭājāl who lived in the plains of the lower Sābīn and then made a pilgrimage to the tomb of Idrīs I on Mount Zahrān. No Moroccan sovereign had previously prepared himself for his campaigns as did Mūlāy al-Hasan by visiting the tombs of saints in the great zawiyas, particularly those administered by sherifs. The pilgrimages to the great sanctuaries showed his zeal for religion and thus increased his prestige among the fanatical masses and assured him the support of agents, who established peace among the tribes or supplied valuable information. Mūlāy al-Hasan for example began his campaigns in Northern Morocco by visiting the tomb of Sād ‘Abd al-Salām b. Mahīš (1306 = 1888), those against Tadla and the High Atlas by visiting the marabouts of Bu ‘l-Dā‘īd (1307 = 1886), the campaigns against Tālīfīt by visiting the tombs of his ancestors (1310 = 1892) etc.

But it was almost always force alone that enabled him to win the upper hand over tribes little inclined to submit and objecting to the payment of badly distributed taxes. To collect the taxes and keep the tribes under control, Mūlāy al-Hasan’s father, Sultan Muḥammad, had tried to create an army on modern lines, on the European model. The wars with France (campaign of Isy in 1844) and with Spain (Tetwān war of 1860) had determined him to this measure by showing him the strategic inefficiency of the Dījīsh [q. v., i. 1047 sg.] contingents. Mūlāy al-Hasan, benefiting by his father’s efforts further developed them by entrusting the instruction of his troops and the creation of an arsenal to bodies of English, French or Italian officers. The new army, the ‘asker enabled him with the help of the Dījīsh to put an end to the interminable rebellions and pursue the collection of taxes. Throughout his reign the Sultan never ceased to march his army or māḥalla up and down his territory. In his twenty-one years’ reign he made over thirty military expeditions, often of long duration. His army used to encamp in a district and, after cutting off numerous heads, eat up the country (to use the Moroccan expression) till the impost levied had been completely paid. This procedure, more feared than actual battle, soon prevailed with the tribes or towns forced to maintain the Sultan’s troops during their stay with them.

There were nevertheless times when the Sultan’s troops were unfortunate. In 1305 (1887) notably, his army under the command of his uncle Mūlāy Sghūr was utterly routed by the marabout ‘Ali b. al-Makki Mahāmah and the Berbers in the High Atlas. This marabout slew the Sultan’s uncle with his own hand.

The expeditions against the Banū Snassīn in (1291-1292 = 1874-1875), those of the Spaniards in the Rif, the settlement of the English at Cape Juby in 1305 (1887) brought the Sultan into negotiations with France and other European powers. Numerous embassies were sent to him to seek all sorts of industrial or commercial concessions in Morocco. Resuming the policy of his most illustrious ancestors, but only after a public consultation with the official jurists (1304—1816) on the possibility on religious grounds of commerce with Christians, he increased the number of ports open to commerce and organised the Sherīfi customs in them. He thus established a source of revenue more stable and reliable than the razzias on the tribes for the collection of taxes.

This ruler, one of the most remarkable for energy and intelligence that Morocco has known, recalls by more than one side of his character the founder of his dynasty, the great Mūlāy Ismā‘īl. Like the latter he was a great builder. In Fās he
built a palace imitated, according to Muslim writers, from the Alcazar in Seville. He built roads, bridges etc. He devoted all his care to the development of Muslim teaching.

He never would grant to Europeans industrial concessions as he feared that their influence would thereby find opportunity to penetrate into the interior of Morocco. Jealous of his rights and authority, all reforms, all improvements that he made, were carried out in the name of the Makhzen [q.v.], even those executed by foreign agents. They were thus as transitory in their effects as the persons enforcing them.

Mūlāy al-Ḥasan died on Thursday, the 3rd ʿIlāhja 1311 (9th June 1894), on the way back in a campaign against the Berbers of the High Atlas. He was succeeded by his son, Sūlṭān ʿAbd al-ʿAzīz.

A. C. CURTIS.

AL-ḤĀSĀN b. al-ṢABBĀH, founder of the order of Assassins. According to passages in the Dājmī al-Tawārīkh, the Taʾrīkh-i Guzāda and in Mīrkhwānd, based on the Sargūḏḡāhī-ī Sāyīdīnā (cf. i. 491) his genealogy was ʿHasan b. ʿAlī b. Muḥammad b. Djiʿfār b. al-Ḥusayn b. al-Ṣabbāḥ al-Ḥāmīyār. ʿHasan claimed to be descended from the ancient Ḥumayrīte kings, but Mīrkhwānd quotes on this point a statement of Nīẓām al-Mulk that the people of Tūs alleged the contrary and said that his ancestors had been peasants in their country. While ʿHasan is said to have further alleged that his father migrated from Kāfā to Kūz, we find him simply called Rāzī, i.e. native of Rāzī, in Ibn al-Aṭāh. The date of his birth is unknown, but he was still a young man when he was won over for the Fāṭimid propaganda. The chief Dīʿāt in Persia was then Ibn ʿAttāsh, the latter commissioned him in 464 (1072) to go to Cairo to the Fāṭimid Caliph al-Mustāṣirīn. In 471 = 1078 (Ibn al-Aṭāh, x. 304, gives the date as 479) he arrived there after first travelling through Persia, Mesopotamia and Syria. In the struggle as to who was to succeed the aged ruler, he took the side of Nīẓām, while others preferred another of Mustaṣirīn's sons, who actually occupied the Egyptian throne on his father's death under the name al-Mustaʿlī. He then returned to the east and eagerly advocated Nīẓām's cause in different places. Finally, in 483 (1090-1091), he gained possession of the strong mountain fortress of Alamūt [q.v.] although the stories in the Sargūḏḡāhī-ī Sāyīdīnā (also in the Taʾrīkh-i Guzāda) on this point are legendary. According to Ibn al-Aṭāh, x. 216, he was able to win the confidence of the commander, an ʿAllī, and then had him seized by his men and taken to Dūghānān. This same thing happened, although by different means, with other fortresses, probably by Ibn ʿAttāsh's orders, whose son, likewise usually called Ibn ʿAttāsh, himself resided in the fortress of Shaḥzīdīdī at Iṣāpāhān. As long as the latter lived, Ḥasan played no prominent part, although the famous Sālūqūdzī vizier Nīẓām al-Mulk had already long suspected him on account of his frequent meetings with Egyptian missionaries. The well-known story of the early friendship of these two men, in which ʿOmār ibn Khsyūṣān appears as a third, even if, as Browne has shown, it is accepted by Kāšīd al-Dīn also, is however a fable. Cf. Recueil de textes relatifs à l'histoire des Seldjoucides, ii. Introduction, p. 14, note. To make this dangerous opponent harmless, the Assassins resorted to assassination, a means they were so often to use in the years following. Nīẓām al-Mulk was to be first to fall, being murdered in 485 (1092). It is probably also in this period that the organisation of the Assassins into a secret society falls; on their organisation and aims, cf. the article ASSASSINS (i. 491 et sqq.), which has also pointed out there that conditions were then favourable to them and that it was only after the death of Dīvārīyān, that Sūlṭān Muḥammad could seriously think of putting an end to the Assassins' reign of terror. After Shāhīdīz has been taken in 500 (1107) and Ibn ʿAttāsh executed, the other robbers' nests fell one by one; and finally Alamūt too. During the siege Muhammad died (511 = 1118) and his troops as a result ran away; ʿHasan, who after the death of Ibn ʿAttāsh had presumably been recognised as Grand Master of the Assassins, was saved. Seven years later (518 = 1124) he died after arranging that Kāya Buzurg Umūm Kū Ḍārī should succeed him.

If ʿHasan is considered the founder of the Assassins, it must not be supposed that the main object of his life was to secure his personal power by planning assassinations; it is not even proved that he recommended or used this detestable means. Assassination had, as is pointed out in the article ASSASSINS (i. 491) - already for long before ʿHasan's time been commended as a religious duty by the leaders of certain sects, and shortly before Ḥasan's public appearance it had been practised wholesale, notably in Iṣāpāhān. Cf. also Ibn al-Aṭāh, x. 214. Ḥasan's importance lies much rather in the fact that he gave the Assassins' power a central stronghold in Alamūt, so that it maintained itself there even after his death also. He also devoted his activities to authorship and composed several works in Persian, which were all unfortunately destroyed at the capture of Alamūt by the Mongols. The quotations from them given by Shahrastānī and others go no farther than well-known ʿShīʿī doctrines; the fact expressly emphasised by the authorities that he did not publicly proclaim his teaching to the people, also agrees entirely with the ʿShīʿī principle of taqīya. He only differed from other ʿShīʿīs in that he recognised Nīẓām, son of al-Mustaṣirīn, as Imām even after he had been incarcerated by al-Mustaʿlī in 488 (1095). How far he was responsible for the organisation of the sect as a secret society cannot be ascertained from exact details. That he was held in great reverence by his followers is proved by the title Sāyīdīnā, "our lord", by which he was called by them.

Bibliography: In addition to works quoted in the article ASSASSINS, Shahrastānī, Milāl, ed. Cureton, p. 150 sqq.; Schefer, Siasat Nameh, Supplement, p. 48 sqq.; Müller, Der Islam, ii. 97 sqq.; Blöched, Le Messianisme dans l'histoire des musulmans, p. 105 sqq.

AL-ḤĀSĀN b. ʿAbd Allāh al-Ṣaḥīfī, one of al-Maʿmūn's governors. Like his brother, al-Faḍl b. ʿAbd Allāh, ʿAbd al-Ḥasan was originally a fire-worshipper, but the latter adopted Islam. In 966 = 811-812, when al-Maʿmūn trusted the administration of the eastern provinces to al-Faḍl with almost unlimited power, he appointed al-Ḥasan minister of finance. After al-
Amin's assassination in 1928 = 813, he was appointed governor of Arabia and the 'Iraq through his brother's influence, while the Caliph himself stayed in Merv. But al-Hasan, as a Persian, was unable to win the sympathy of the Arab population and trouble soon broke out. An adventurer, named Abu l-Sarayā, appeared in Kūfa in 797 = 815, and allied himself with an 'Ali, Ibn Ṭabāṭaba, whom he persuaded to set up as a pretender. The government troops were defeated; but Ibn Ṭabāṭaba died suddenly and al-Hasan turned for help to the tried general Harthama b. A'yan, who blockaded Abu l-Sarayā in Kūfa. When the latter tried to escape he was captured and beheaded in Rabh 1 200 = October 815. Soon, however, the mercenaries of Baghdad mutinied, but had to surrender after three days' fighting; but after the murder of Harthama b. A'yan in Dhū l- Ka'bāda 200 = June 816 the governor of Baghdad, Muhammad b. Abi Khalid joined the rebels and advanced against al-Hasan in Wāṣit. Muhammad was defeated and died soon after of his wounds. Meanwhile, however, al-Mansūr, a son of the Caliph al-Maḥdī, had been recognized as al-Ma'mūn's representative in Baghdad. His troops were defeated however by 'Abd al-'Uzzā and, as he drew his adherents mainly from the lowest classes and the town as a result was given over to all possible excesses, the more thoughtful elements of the population sided with Hasan and put an end to the rule of the mob. But peace did not last long. When Ma'mūn in Ramadān 201 = March 817 proclaimed the 'Ali b. Abī Muṣā, called al-Riḍā, as his successor, a rebellion broke out in Baghdad and Ibrāhīm, another son of al-Maḥdī, was proclaimed Caliph. In Rudāb 202 = February 818 the rebels attacked al-Hasan in Wāṣit, but were defeated and had to retire to Baghdad. After the murder of his brother al-Faṣr in Shābān 202 = Febr. 818, al-Hasan became insane. He recovered however and in Ramadān 210 = 825-826, his daughter Hazīma married him. al-Hasan was much esteemed for his liberality to poets and scholars. He died in Sarakhs on the 1st Dhū l-Hijādja 235 (16 June 850) or 236.

AL-HASAN b. USTĀDĪ HORMUZ ABU 'ALI, the son of Abu Dījar far Ustādī Hormuz [v. i. 182], became even in the lifetime of his father leader of the Dailami troops under Samsām al-Dawla. After the murder of the latter (908), Hasan entered the service of the Bayād Bāhī al-Dawla, who sent him as governor to Kūhīzān in 390 (1000) and gave him the title 'Āmid al-Dīyyah. He later sent him in the same capacity to the 'Irāq and there he waged several wars with his predecessor Abū Dījar far Ḥaḍīḍjābī, Abū 'l-'Abbās b. Wāṣil, who had rebelled in the swamp country [see BAṬHĀ], Badr b. Hasanwaih [q. v.] and others. He died before his father at the age of 49 in Baghdaḏ in 401 (1010-1011) and was entombed in the burying-place of the Kurjaḥ. The famous poet al-Sharfī al-Radī dedicated an elegy to his memory.

AL-HASAN b. YūSUF b. 'ALI b. AL-MUṬḤABAR AL-HILLI AL-SHĪ ḌIYAMAL AL-DĪN ABU 'L-MANṢŪR, known as al-ʿAlī, born 648 (1250) at Hilla, was the greatest Shī'a jurist of his day. He successfully represented the Shī'a sect in a discussion which once took place with the Sunnis in the court of Sultan Ghiyāth al-Dīn Ul-Dīn Ul-Dīn al-Maḥmūd ibn-Ḥababānd Muhammad (723—716=1324-1316) and the Sūfī was so impressed with his arguments that he adopted the Shī'a doctrines in many respects. He died in Hilla in 726 (1326) and his dead body was taken to Mashhad and buried there.

AL-HASAN b. ZAID b. HĀSĀN, a great-grandson of ʿAli. He was a pious man, who following the example of his father and grandfather, abandoned all political aspirations and reconciled himself to ʿAbbāsid rule. His daughter became the wife of the Caliph Abū l-ʿAbbās, while he himself lived at the Caliph's court, and is even said to have occasion to communicate the views of his ʿAlīd relatives and their dependants to al-Maḥdī. In 150 = 767 al-Mansūr made him governor of Medina, but in 151 = 772 he aroused the Caliph's wrath and was dismissed, imprisoned and had his property confiscated. But restitution was made to him by al-Maḥdī's successor, al-Maḥdī, who gave him back all that he had lost, after al-Maḥdī's death. He died in 169 = 783 at al-Hāḍir, while on a pilgrimage to Mecca, and was buried there.

Bibliography: Annales, ed. de Goeje, iii. 144, 149, 258, 358 sq., 377, 400, 453 sq. and 2518 (variants); Yaʿqūbī, Historiā ed. Houtsma, ii. 456; Ibn al-Athīr, Chronicle, ed. Tornberg, v. 420, 454; vi. 4, 21 sq., 53. (Fr. Buhl.)

AL-HASAN b. ZAID b. MUḤAMMAD, a great-grandson of the preceding, founder of an ʿAlīd dynasty in Tabaristan. The high-handed and ruthless rule of the Tūhrīs produced such resentment in this country that a number of men, under the
influence of the strong 'Alid sentiment in these regions, looked around for a man of 'Ali's line to whom they could entrust the government. They therefore turned to Hašan who was living in Rayi and had been recommended to them by another 'Alid; the choice proved a fortunate one, for Hašan possessed an energy and sturdy resoluteness of purpose rare in an 'Alid. He was summoned to power by a section of the Tabaristanis and a number of Dalilami chiefs; he succeeded in defeating the Tabarids troops and seizing the town of Āmul and Sāriya and, after an unsuccessful attempt, Rayi also. But Hašan had to be perpetually on his defence against attacks on all sides and was more than once driven out of the country, on which occasions he found it very useful to have a secure refuge in friendly Dalilam. From there he always returned and fortune often favoured him so that in 257 = 871 he was able to take Lārdjūnā and in 259 = 873 Kūms. In this latter year a new and dangerous enemy arose against him in the person of Yaqūb [q.v.], the "coppersmith", whom Hašan, not without humour, called al-Sandān, "the anvil". He succeeded in being dismissed from the Caliph to punish the rebellious 'Alid and easily found a causa belli when Hašan would not deliver up the Sījestānī 'Abd Allāh who had sought asylum with him. Hašan was not strong enough for so powerful an opponent and was again forced to retire to Dalilam but was saved by tremendous rains, which in these lands are particularly dangerous, and brought Yaqūb to such a plight that he could only get out of the country with great loss. Hašan returned and remained for a period unharmed, till 266 = 880 a Khuḍjūštānī, named Ahmad b. 'Abd Allāh, invaded Lārdjūnā and conquered a part of it. While Hašan was fighting with him there, another 'Alid, in order to have himself proclaimed ruler, spread the news in Tabaristan that Hašan was slain, but on Hašan's return he was defeated and killed. Hašan died in 270 = 884 in possession of his territory and his family continued to rule in Tabaristan till 316 = 928. Personally he was a deeply religious man with a taste for poetry and the various branches of jurisprudence and allied sciences.

Hašan Abād. A small town situated in the district of Atak (till lately part of Kāwāl Findi, in the Pāndjāb. Extensive ruins and Buddhist remains in the neighbourhood were supplied by Cunningham to represent the site of Taxila, but recent discoveries make it probable that Taxila was situated at Kālā Sāriā, more to the East. The sacred spring of Elātpatra visited by the Chinese pilgrim Hionen Thsiang in the 7th cent. A.D. is no doubt identical with the spring at Hašan Abād now dedicated to the Saint Bābā Wall of Kandahār. It is full of sacred fish which may not be killed. This spring according to Hiouen Thsiang was 10 li from Taxila to the northwest. The Sikhs as well as the Muḥammadans have a shrine near the spring, named Panjā šāhīb from the supposed impress of the fingers (pandja) of the Guru Nānak on a stone. Here was a halting place of the Mughal Emperors, from Akbar onwards, in their journeys to Kashmir, and a tomb surrounded by cypresses is assigned by tradition to Lāla Rukh, daughter of Awrangzēb. Akbar followed this route certainly and Dājangir on one occasion after arriving at Hašan Abād turned back to Kālānī and entered Kashmir by the Bihmār road. Bernier's memoirs show that later emperors preferred the Bihmār and Fīr-Pāndjāb route. Yet a tomb at Hašan Abād is by tradition assigned to Lālā Rukh, daughter of Akbar, who is the heroine of Moore's well-known poem, one of the scenes in which takes place at Hašan Abād. Descriptions will be found in the travels of Elphinstone, Moorcroft,Burnes and Hügel, and a notice by Cunningham in the Archaeological Survey of India. The name Hašan Abād is undoubtedly, as supposed by Elphinstone, the true name of the Saint now called Bābā Wall, although Cunningham doubted the fact, and said that Bābā Wall was a saint from Kandahār, while Hašan the Abād, or religious madman, was a Ġūjarī whose tomb was at the foot of the hill. The mention of Bābā 'Iṣārān Abād in the Ta'īrīkī Maṣūmi below that he was born at Sabzawār and accompanied Shāh Rukh, son of Timūr, to India and afterwards died and was buried near Kandahār, where his tomb became a place of pilgrimage. Mir Maṣūm, the author of this history, lived in Akbar's reign and claimed descent from Bābā Hašan Abād. The town bore his name and was called in Akbar's time, for the A'bīn-i Akbarī records (p. 446, Blochmann's trans.) that Shams al-Dīn built himself a vault there, and that 'Īsām Abū 'I-Fath was buried in this vault by Akbar's order, also that Akbar himself visited the tomb on his return journey from Kandahār.

Bibliography: Blochmann, Trans. of A'bīn-i Akbarī (Calcutta 1875); Ta'īrīkī Maṣūmi (in Elliot and Dowson, Hist. of India, vol. i. London 1867); Elphinstone, C ŭ b d u l , vol. i. (London 1839); Moorcroft, Travels etc., London 1841; Hügel, Travels in Kashmir etc. (Eng. trans.) (London 1845); Burnes, Bokhara, vol. i. (London 1834); Cunningham, Archaeological Survey of India, vol. ii. (Simla 1871); Price, Trans. of Memoirs of Dāhāngir, p. 137 (London 1829). (M. Longworth Dames.)

Hāsān Agha, Khaīr Al-Dīn in Algiers. He was born in Sardinia and had been taken prisoner by Khaīr Al-Dīn on a raid and enrolled among his eunuchs. He soon won the confidence of his master who made him kīya (major-domo) and entrusted him with the government of Algiers during his campaign against Tunis [see Khaīr Al-Dīn]. When Khaīr Al-Dīn was recalled to Turkey in 1636, he left the government in his hands and Ḥasan filled his office to the general satisfaction. "To this day", writes Haedo, "many of those who knew him say that there never was a more just Paša".

Charles V's attack on Algiers fell within the period of his administration (1541). According to Haedo, Ḥasan showed exceptional valour and personally contributed to the defeat of the imperial
troops. According to contemporary historians, on the other hand, Hasan’s attitude was rather ambiguous. They say that he had been won over by the proposals of Count d’Alcandé, governor of Oran, and only the resistance of several generals prevented him handing over the city to Charles V. In any case, after the collapse of the Spanish expedition, Mawardi met in Khanka, who had made an alliance with the Christians, and forced him to pay tribute and deliver up his son as a hostage (1542). According to Hacédo, he undertook a campaign to the West to protect the king of Tlemcen against the Spanish forces in Oran, but this campaign is rather uncertain. Soon afterwards Hasan fell suddenly into disgrace, retired into private life and died unnoticed in 1549 at the age of 58. He was interred in a silk bag, which his kiaza had built near the Bab-al-Wel and the inscription is preserved in the Algiers Museum. (G. Colin, Corpus des Inscriptions Arabes et Turques de l’Algérie, département d’Alger, Algiers 1900, no. 202).

(On Yer.)

HASAN Baba, Dey of Algiers (1682–1683), usually called Baba Hasan. He was previously a rais (corsair captain) and took part in the revolution of 1671, which put an end to the rule of the Aghas and replaced it by that of the Deys. As son-in-law of Hâdji Muhammad, who was the first to fill the office of Dey, he held the actual power in name of his father-in-law. He made many enemies by his arrogance, mistrust, and cruelty but suppressed with a strong arm all attempts at rebellion. In 1680, under the pretext of restoring the order broken by the rivalry of the sons of Murad Bey, he attacked Tunis; in 1681, he fought in the West against Mula Ismâ’il’s troops. When in 1682 Hâdji Muhammad fled to Tripoli on hearing that the French had sent a fleet against him under Duquesne, Hasan Baba took over the reins of government. During the first bombardment of Algiers (20th Aug.–12th Sept. 1682) he ruled the town with a rod of iron and executed without mercy every one who dared complain or speak of negotiations. In the following year Duquesne again appeared before the city. After several days’ bombardment (26th–29th June) the Dey was brought to negotiate with the French admiral. He handed over the chief of the Ra’is, Hâdji Husain (Mezio Morto), as hostage and released the Christian prisoners. As an agreement could not be reached regarding the indemnity to be paid to the French, Mezio Morto was allowed to go on shore, as he said he would hasten the negotiations. Scarcely had he disembarked however when he called the Ra’is together and forced an entrance to the Djenina, had Hasan Baba murdered, and was thereupon elected Dey (22nd July 1683).

Hasan Beyzade, a Turkish historian, son of Kâçek Hasanbey, who had been secretary of state (raîs al-buṭṭāb) during the grand-vizierate of Kâdîm Meshel Süleyman Pasha (Islamic 1053–25th Rabî’ II 583), and later a writer’s career and took part in the Hungarian campaigns during 1598–1603 as secretary to Serdar Sâṣūrdjî Mehmed Pasha, later as tekbâr- eddîjî and, after 1601, as raîs al-buṭṭâb to his successors, the grand-vizier Ibrahim Pasha (died 9th Muḥarram 1010 = 10th July 1601) and Yemeniṣji Hasan Pasha (dismissed 27th Rabî’ II 1012 = 4th Oct. 1603). In 1018 we find him Anadolu dersârî (superintendent of the finance office of Anatolia); according to Hâddji Khalîfî, Lex. Bibl., no. 2160, he died in 1046 (1636–1637). The first part of his history of the house of ‘Osmân (Ta’rîkh-‘âl ‘Osmân), dedicated to Sultan Murâd IV, is merely an extract from Sa’d al-Dîn’s well-known Târîkh al-Tamârîkh, the second part, covering the period from the accession of Suleiman I to the second accession of Muṣṭâfî (1032) is in its later sections based on his own researches and is often quoted by the Turkish historians Pehlevî, Hâddji Khalîfî (Fethîkî) and Naḥîmî as a valuable authority. Manuscripts of this work are not common (Vienna Library, No. 1046–1049, of which 1046 is complete, and 1049 has a continuation down to 1045 a. H.). There is a biography of Hasanbeyzade in Ahmed Resmi’s Sefmet el-Rûsi, p. 26 sq. (copied word for word by Djinâl al-Dîn, Annîsî Zarîfî, p. 21 sq. of the Morêtman, J. H.).

(On Yer.)

HASAN BAZBURG, Tâdji al-Dunyâ wa’l-Dîn b. Husain Gurgan b. Afsuka b. Ilkân Novan, usually called Shaikh Hasan, the founder of the Djâlā’îrîd dynasty in Baghdad after the death of the Ilkhan ‘Abî Sa’îd. He attained a high position while the latter was still alive, as his mother was a daughter of the Ilkhan Arghun. He was therefore spared when accused, probably falsely, in 732 (1332) of having designs on the life of the Ilkhan ‘Abî Sa’îd and the death sentence was commuted to banishment to Kâmâsh. In the following year he received the governorship of Asia Minor. After the death of ‘Abî Sa’îd 736 (1335) a struggle for the throne soon broke out; the newly elected King Arpa lost his throne and life in battle with ‘Ali Pâšâshî, governor of Baghdad, who had paid homage to another descendant of Hulagu, named Mîsa, Shaikh Hasan then rose against him and put forward another claimant, Muhammad. The two rivals met at Al-Bârîgh near Karadere on the 14th Dhu’l-Hijdîja 736 (24th July 1336); Shaikh Hasan was victorious and made ‘Tabriz his headquarters, while Mîsa retired to Baghdad. But as it was not only a feud between Hasan and Mîsa but between two Mongol tribes, Djalâ’îr and Uirât, the Emirs of Khurâsân chose a new King Toğha Timûr, to whom Mîsa submitted. But they were defeated by Shaikh Hasan in a battle near Mârâgha in 737 = 1337. Mîsa was taken prisoner and slain. Meanwhile a new rival to Hasan appeared in “Little” Hasan (see Hasân Kûbîk), who won a battle and even succeeded in capturing and putting to death Muhammad, the Khan recognised by Shaikh Hasan. Shaikh Hasan had saved himself in time by fleeing to ‘Tabriz and was able to come to terms with his rival, while he thought to gain new support by paying homage

**HASAN ÇELEBI KINĀLĪ-ZADE, a famous Ottoman scholar and biographer of poets. Born in 953 (1546-1547) in Brusa, the son of Kinālī-Zade Mīrāmān Āli Celebi b. Emur Allah, famous as a poet and scholar, then mūdīrīs in the Hamza-Bey-Medrese, Hasan, like his father, devoted himself to the study of law and theology. After an active and honourable career as māzār and kādī in Brusa, Adrianopole, Aleppo, Cairo, Gallipoli, Eivān and New Zāgra, he died kādī of Rosetta in Egypt on the 12th Shawwāl 1012 (14th March 1604). Hasan Celebi was, as is the custom with Turkish scholars, also a poet, although only an imitator. He wrote marginal notes on the Durr e Ghiyār as well as additions and notes on some important theological works and certain other writings. But his great work, which was to bring him lasting fame, is his great collection of 607 biographies of poets, the Qādir al-Shawārī, which is dedicated to the historian Khādīja Sād al-Din and was completed in 994 (1586). The work is of inestimable value for its biographical details and the numerous quotations. Of the many Ottoman biographies of poets it is considered the best in spite of its pompous style, its affected bombast and its fondness for anecdotes. Hasan Celebi discusses the poets from the earliest times under three heads, a) Sūfis, b) princes and c) other poets. His little weakness for enshrining all members of his family in his work as poets is not to be taken too much amiss.

HASAN PASHA. Beylerbey of Algiers.

He was the son of Khair al-Din [q.v.] and a Mooress. His father’s influence with the Porte obtained him the office of Pasha of Algiers in 1545. He was entrusted with the task of restoring Turkish power in western Algeria where it had been considerably weakened. In 1546, Hasan conducted a campaign against the Spaniards in the Tlemcen district, but just as he had come face to face with the Christian troops near Arbil he had to return to Algiers as his father had died. He succeeded him as Beylerbey and soon afterwards undertook a new western campaign, this time against the Moors, who had occupied Tlemcen in 1551. An army composed of Janissaries under the command of Hasan Corso and Kabyls under the Sultan of the Beni ‘Abbās (Sultan of Labes in the European authorities) defeated the Moors, followed them up to the Medjila and regained Tlemcen (1552). During this time Hasan was carrying out important works in Algiers; he increased the fortifications, built the Bardj Milały Hasan (Fort l’Empereur), on the Kudyat al-Šābīn, erected public baths and a hospital for the Janissaries. His hostility to French policy, however, induced the Porte to recall him to Constantinople and replace him by Ṣalah Ra’i (1552–1556).

In 1557, he returned to Africa. The disturbances which followed on the death of Ṣalah Ra’i, notably the rebellion of Ṣalah Corso and the murder of Pasha Tekbely and the Sultan to send him once more to Algiers as Beylerbey. In the west the Sherif Muhammad al-Mahdī had taken advantage of this unrest to invade the Tlemcen country again and to occupy the city; in Meghwar alone a Turkish garrison held out under the command of Khādī Saffa. After Hasan had restored peace in Algiers he took the field against the Moors who vacated Tlemcen on his approach. The Turks pursued them up to the walls of Fas, where they inflicted a disastrous defeat on them. The Beylerbey had however to retire hurriedly lest he should be cut off by the Spaniards. On the latter’s request (1557), and under the command of Esmail, the Spaniards besieged Mostaganem in the following year, Hasan came to its aid and routed the Spaniards (26th Aug. 1558). The Christians had now to confine themselves to Oran and ceased to be dangerous to the Turks.

Now Hasan had peace in this direction, he planned the subjection of the Kabyls. In order to be secure against any insubordination among the Janissaries he organised a force of Spanish renegades. By his marriage with the daughter of the Sultan of Kako he secured the assistance of a number of Kabyl tribes and thereupon undertook a campaign against Ahmad b. al-Kāfi, the chief of the Kabyl tribe Ahbās. The latter was bested in battle, forsook his forces and killed in an encounter at the Ka’fa of the Beni ‘Abbās. His brother Mokran continued the war but became a Turkish tributary in 1559.

The intrigues of the Sherifs and the naval preparations of the Spaniards prevented Hasan from completing the subjection of the Kabyls. He therefore resolved to leave the latter opponents alone for the moment. After the destruction of the Spanish fleet under the Duke of Melina Coeli by Piali Pasha at Djerba (15th March 1561) the Beylerbey was able to devote his whole energies to the Moors. He was just about to begin the war with them when the Janissaries, who were discontented with the creation of new Kabyl troops, seized him and sent him in chains to Constantinople.

It was not difficult for Hasan to clear himself of the charges against him laid before the Porte. He returned in 1567, a third time to Algiers where an envoy of the Sultan had already restored order and executed Agha Hasan, the ringleader of the conspiracy against the Beylerbey. Hasan was now determined to clear the Spaniards out of the country and set about the capture of Oran and Mars al-Kabir. At the head of an army of 30,000 men he began the siege of these two towns, while his fleet blockaded them from the sea (April 1567). After two months of vain essays and repeated assaults, in which the Beylerbey himself risked his life, the arrival of a relieving fleet of Spaniards forced the Turks to retreat. Hasan was not able to resume his plan again. Soon afterwards he had to lead the Algerian galleys to Malta which the Turks were besieging. Here he lost a portion of his ships, but the fighting qualities which he showed on this occasion won him the rank of Kapūdān Pasha (1567). He died in 1570 and was buried beside his father Khair al-Din in Büyük Dere.

(G. Véry.)

HASAN PASHA, known as Vezir Pasha, the greengrocer, was a native of Albania and entered the service of the Seni rose from sūfi bulduqi (halderdier) to ṣuqdi baqli (chamberlain). His countryman, the grand vizier Sinan Pasha made him an agha of the Janissaries in the beginning of Dhu ‘l-Ka‘da 1002 (8th July 1594) during the Hungarian war; in Rabī‘ II 1003 (December 1594), he was dismissed, but reinstated in Shawwal 1003 (June 1595); in Djamāda I 1004 (January 1596) he became wali of Shārā w and on his return from there Wazir of the Diwan. In this office he carried out the currency reform of Rabī‘ I 1005. On the 1st Shahrī 1009 (16th February 1007) he was appointed deputy (kirmāmām) for the Grand Vizier Ilahib Pasha during his absence in the field and appointed his successor when Ibrahim died on the 9th Muharram 1010 (10th July 1601). As Serdar he continued the campaign in Hungary (defeat at Stuhlweissenburg on the 15th Oct. 1601; relief of Kanischa, recapture of Stuhlweissenburg on the 29th August 1602; capture of Pest and siege of Ofen by the Archduke Mathias late in the autumn of 1602) and only returned in January 1603 on hearing of the unrest in the capital caused by the Sipahis. Although he succeeded in suppressing the riots, he was nevertheless dismissed through the intrigues of his enemies on the 27th Rabī‘ II.
HASAN PASHA — HASANI.

1012 (10th Oct. 1603) and strangled by the Sultan's orders on the 12th Djumâda I (18th Oct.) of the same year.

HASAN PASHA, son of Husain, governor of the Yemen for nearly a quarter of a century, whom he received the name Yemeni, was a native of Albania and held the office of bostângâbâghi in Constantinople when Sultan Murad III sent him in Djumâda I 988 (June 1580) to the Yemen to restore Ottoman prestige in this province, the greater part of which had fallen into the hands of the Zaidi Imâm Muťahhar. In the course of five years he succeeded in subduing the unruly Sheiks partly by force and partly by guile and regained the fortresses which they had seized. To prevent further risings he deported the Al Muťahhar to Constantinople at the end of 1584, where they were kept in custody to the end of their lives. In the next few years he subdued a number of smaller strongholds and conquered the Yâfi and other districts so that by 1591, the land could be considered pacified. Six years later a new and dangerous rebellion broke out among the Zaidis led by the Mahdi al-Kâsim b. Muḥammad; the latter occupied the district of Kaukebân and the fortress of Thulû and was only driven out in 1598 after fierce fighting, but continued to hold out for some years more in Shaţaha. At the end of Redžeb 1012 (beginning of 1608) Hasan Pasha was recalled at this own request and returned to Constantinople. At the end of Safar 1014 (middle of July 1605) he became governor of Egypt, which post he held till the end of Muḥarram 1016 (end of May 1607). A few months after his return from there he died in Constantinople on the 9th or 16th Redžeb 1016 (beginning of November 1607).

HASAN PASHA. [See SOROLLI and DJÂZZARI.

HASAN PASHA AL-SEYIYD, a native of a village in the district of Karâshîn-i sharîkh, entered the Janissaries in 1146 at the rank of kûlkâya (lieutenant-general), took part in the Persian campaigns and in the middle of Kâbî 1151 (beginning of July 1738) during the war with Austria was promoted to be aga of Janissaries. After receiving the rank of pasha of three tails for his bravery in this war, he was appointed Grand Vizier on the 4th Sha'bân 1156 (23rd Sept. 1743) in spite of the fact that he could neither read nor write. The continuation of the war with Nâdir Shah, the cessation by the convention of 15th January 1744 of the border warfare with Austria, which had been going on intermittently since the Peace of Belgrade (1739), and various diplomatic steps, which were instigated by the celebrated adventurer Bâneval Ahmed Pasha [q. v.] with a view to the reception of the Porte into the European Concert, all fell within his period of office. As a result of Seraf intrigues he was dismissed on the 2nd Redžeb 1158 (10th April 1746) and banished to Rhodes. In the following year the Beylerbeyi of Itschil and a little later that of Diyarbakir was given him, and he died in the latter town at the end of 1161 (1748).

HASAN PASHA SHERIF (in Wâsîf, Cebebi Zâde al-Seydî 'Hasan) was the son of Rûşuk Celebi al-Hasjî Sultanîm Agha, who is mentioned in the year 1770 as leader of the troops of Rûşuk, Sûliman and Turgut Hoca theencer of the regiment of artillerists (1769—1774). He himself took part with distinction in the Krîm-Khân Girâ'i's raid into the Ukraine in the winter of 1769 which war became celebrated in Baron Tott's description (Mémories, iii. 171—201), as serden geldî aghasî (chief of volunteers). In the course of the campaign he was rewarded for the financial support which he had given the Grand-Vizier Muhsin-zâde by being granted the rank of kapûnik bîchtî and on the 23rd Djumâda II 1187 (11th Aug. 1773) was appointed commander of Rûşuk with the rank of vizier. After the conclusion of peace (1774) he fell into disgrace, lost the rank of vizier and spent a number of years in exile in Philippiopolis and Salonica. After the outbreak of war with Russia at the end of 1201 (autumn 1787) he was again given various military commands on the Danube and, after the death of Djâzzâ'rî Hasan Pasha on the 1st Sha'bân 1204 (16th April 1790), he was appointed Grand-Vizier and generalissimo in his place. While his brother Seiyid Mehemmed was able to inflict a considerable reverse on the Austrian and their Russian allies on the 25th Râmâdân 1204 (8th June 1790), his own campaign against the Russians was most unfortunate; towards the end of the year the latter captured in rapid succession the fortresses of Kilia, Tałcha, Isak'dja and Ismîl and, as Sherif Hasan Pasha had moreover brought suspicion upon himself by all kinds of arbitrary actions and the frankness of his reports, he was surprised in the night of 9th Djumâda II 1205 (12—17th February 1791) in his quarters in Shumla and shot by the Sultan's orders.

HASANI, in the plural hasaniyin, a kind of patronymic, or nisha given to the 'Alîd [q. v.] Sheriffs, descendants of al-Hasan son of 'Ali and Fatima, the daughter of the Prophet Muhammad. Hasanî is used in opposition to Hasani, the surname of the Sheriffs, who trace their descent from al-Hasan the second son of 'Ali and Fatima.

In Morocco, however, the surname Hasani is particularly applied to the Sheriffs descended from Muhammad al-Nafs al-Zakîya, to distinguish them
from their cousins the Idrisids [q. v.]. These Sherifs, formerly located particularly in the south of Morocco, have played a considerable part in the history of N.-W. Africa. The date and cause of their installation in the country is not known. Legend says that they arrived there at the time of the rise of Marind dynasty. A number of pious Muslims of Sidjilmâsa, a town in the south of the Great Atlas, returning from the pilgrimage to Mecca are said to have stopped at Yanbu', a town on the Arabian coast, to the west of Medina. There they became friendly with a Sherif named al-Hasan. Appreciating the spiritual advantages of attending his discourses and the heavenly benefits obtained by his intervention they persuaded him to follow them and settle with them in their own country. This individual was surnamed al-Dâkhîl, i.e. he who introduces his family (into a country). The expectations of the devout Muslims were fulfilled: al-Hasan and his sons were a source of blessings to their new country.

At this time the people of the Wâdi Dra'a found to their grief that their palms were dying and the fruit would not ripen. It was said to them: "If you bring a Sherif to settle among you as the people of Sidjilmâsa have done, your fruits will undoubtedly be as good as theirs". The people of Dra'a took this advice and brought from Yanbu' the Sherif Mâliy Zîdân b. Âhmad, cousin-german of al-Hasan al-Dâkhîl through his father. Al-Hasan's descendants throughout Tafîlalt and formed the stock of 'Alawi Sherifs, so called after their ancestor 'Ali al-Marrîkashî. Those of Zîdân lived in the Wâdi Dra'a and were the ancestors of the Sa'di Sa'lîns, so called after an ethnic group, the Banû Sa'd b. Âbu Bakr, among whom the sons of Zîdân had settled together.

No less turbulent than the Idrisid Sherifs of northern Morocco, the Sherifs of Sidjilmâsa or the Banû Sa'd had frequently quarrels to settle with the Marinids. But being farther from the seat of the central government, behind the formidable natural rampart of the High Atlas, they were more easily able to organise themselves either to render themselves independent or to extend their influence. Supported by solidly constituted Arab groups, aided by the religious faction, controlled entirely by the Sherifs of different origins, the Sa'dis succeeded in overthrowing the Berber Emir dynasties of Morocco and in guiding the destinies of the country for over a century (1555—1664). Seven years after their disappearance from the centre of turmoil, about 1671, Mâliy Ismâ'il was the true founder of the Sherif dynasty which still rules Morocco.

(Al. Cour.)

HASANWAIH. R. AL-ÎUSAIN AL-BARZIKI, a Kud chief, founder of a dynasty which bears his name, which maintained itself for about half a century. Two other chiefs of his tribe, the brothers Wânâs and Ghânîm were also particularly distinguished. When Wânâs died in 349 = 960-961 he was succeeded by his son 'Abd al-Wâhâb, who had soon to cede his territory to Hasanwaih. The power of the latter now increased more and more. His rule extended over a great part of Kurdistan and included the towns of Duzrawar, Hamadân and Nahawand. Although he forced caravans to pay heavy tribute and made the roads unsafe by his raids, Rukn al-Dawla did not trouble about him, as Hasanwaih supported the Dailamids in their wars against the Khorâsânians. But in Muûarram 359 = Nov.-Dec. 969 Rukn al-Dawla had finally to send an army under the vizier Ibn al-'Amid against him. The latter died on the road and his son had to make peace with Hasanwaih. After the death of Hasanwaih in 369 = 979-980, his son Bu'dar [q. v.] was recognised as governor of Kurdistan by the Bu'yid 'Aqil al-Dawla. In 905 = 1014-1015 Bu'dar was murdered and the dynasty of the Hasanwaihids disappeared with his grandson Zahir ('Tahir) b. Hîlîl, who succeeded him but was defeated and thrown into prison in the same year by the Bu'yid Shams al-Dawla.

HÅSHID and BAKIL. A large confederation of tribes in South Arabia. The genealogy of the Håshid is given by the Arabs of South Arabia at the present day as Håshid al-Aqghar b. Dju'ashm b. Nâwî b. Håshid al-Akbar b. Dju'ashm b. Hamdân. Bakîl is held by them to be the son of Håshid al-Akbar. Their land, called by Niebuhr Balq al-Kâbâbī "land of the tribes", lies near Sanâ'a [q.v.] and stretches eastwards to Ma'rîb [q.v.] and Naqîfân [q.v.] and northwards right up to the desert as far as eastwards of Sa'da [q.v.].

The Håshid, who number 22,000 warriors, are divided into three main groups; al-Khârif (with three subdivisions [ibidem, "third"]: Dju'jar, Kâlîyin and al-Syadyan), Banû Suraim (north of the Khârif, with nine subdivisions [late "ninth"] including Khâmîr) and al-'Casmât (Uimed in Nîbûhr) to the north of the latter up to two days' journey from Sa'da with three subdivisions, including the 'Casmât al-Watî). At the present day the Beled Hamdân (north of Sanâ'a) and Sanûn (s.w. of Sanâ'a) are also reckoned to the Håshid.

The following are included in the lands of the Håshid, the Kâa' Shams, Kâa' Hais (with an ancient cistern and 'Himyarete cemetery), and the Kâa' al-Bawu (part of the Wâdî Hirzân). The Dju'jar Dhi Bin (Duwan in Nîbûhr), with the Wâdti of the same name (a tributary of the Wâdti Shu'abâ [Hirzân]), the villages of Hût, Arâket (in Syadyan), Khâmîr (an ancient 'Himyarete town, according to Hamdânî, the birth-place of As'ad Tubbâ), the ruins of Ta'far (on the north bank of the Wâdti Shu'abâ with mosque and tomb of a saint. Near the Bawu at Dju'jar Tanlîn [al-'Ikhlî of Hamdân]), on the northern peak of which is a very ancient 'Himyarete mausoleum (with many inscriptions), the tomb of the saint Khârif, to which the Håshid still bring offerings, lies the famous ruin of Na'ît (Na'ît, CnJ6 of the South Arabian inscriptions, formerly with 20 palaces, among them Dham La'wa), which Hamdânî calls the most splendid that he had ever seen.

The Håshid have a bad name throughout South Arabia. The explorer E. Glaser, who visited their territory, on the other hand describes them as frank and kindly in their nature. Unlike the Bakîl there is a certain tribal spirit among them and many gifted poets are still to be found among them, whose productions are not inferior to those of a Nêshân.

The Bakîl (Bakîl of the South Arabian inscriptions), who live to the east of the lands of the Håshid, include the following tribes: Bal-Hârih [q.v.], Bilâd al-Bustân (between the Hâdir Shu'âbî and Hamdân [s. Hâdir]), Khâlân [q.v.], Dju'jar, Arâh (north of the Bal-Hârih), Nîhîm (Nehim, east of Arâh), 'Ayâl Sha'îrî (Sha'îrî, west of Arâh), Dju'jar [q.v.], Nâwî, Dhu Mu'hâmman (in Nîbûhr Dhu Mu'hâmman), Dhu Usain, Sufyân, Murhîba (Murbâbi, the two latter north of Arâh), Wâdî al-Wâdîa (Wâdîa'â, Wadey in Nîbûhr, north of Naqîfân), Hamdân (different from that at Sanâ'a), 'Ayâl Sâmîn, Wâlîa, 'Amânîsa and Ahl Ammâr (perhaps identical with the Al-Amar, which Miles [in a letter to Sprenger] mentions among the tribes of the Wâdti Dawâsir). Sanâ'a itself was at one time considered to belong to the Bakîl. The Bakîl are said to number 80,000 warriors.

Of the tribes mentioned we have detailed accounts in modern times of the Arâh whose land was visited and explored by Glaser in 1885. It is a small territory but rich in ancient monuments. It is bounded on the south by the Balharih, on the east by the Nîhîm, on the north by the Sufyân, Murhîba and Håshid (al-Khârif, the subdivisions Dju'jar and Syadyan) and in the west by the 'Ayâl Sha'îrî and Hamdân. It is divided into two main groups, Zuhâir (with five subdivisions) and Dhu Mu'hâmman (in Nîbûhr Dahâf) with Hisân (with seven subdivisions, among them the Ahl Mansûr and Hâkâm). In the land of the Zuhâir are the following places, Dju'jar, Shâssarîm, Zabîlîd (with 'Himyarete ruins, often mentioned in South Arabian inscriptions), Sîrîshât (different from that near the Dju'jar [q.v.], rich in ruins; in this district, at the so-called Hâdir [stone of] Arâh, the Arâh hold their assemblies on important occasions), Khubbâ (with the ruins of al-Medînîtân and Hîsh Sanad, near the basilisk cone of Durrî, the famous village of Madar (south of Sîrîshât), Shîra, Dara-fât, Bait Marrân, Shâhir, Bawas, and Radjâw. In the land of the Dhu Mu'hâmman lie the famous ruins of Itwa (Etwâ) and Rîyân; in Hîshân is the large village of Hirzân (with the tribe of the same name). Among the wâdis in the land of the Arâh may be mentioned the great Wâdti Khârif. The plateau of Arâh is volcanic in character. The west of the land is stony, basaltic rocks of the kind like the land of the Hamdân and 'Ayâl Sha'îrî.

Like the other once flourishing lands of the Håshid and Bakîl, Arâh is now poverty-stricken and deserted; in the lower parts poor crops of cereals (wheat and barley) are found, in the higher, perhaps dhûra (a kind of millet). The once splendid vinegroves of this district have long since been utterly ruined. In Hamdânî's time Arâh was famous for an excellent breed of cattle.

The Håshid and Bakîl belong to the Zaidi sect and are mostly independent (only the Balharih, Bilâd al-Bustân, Khâlân and 'Ayâl Sha'îrî are under Turkish suzerainty). On account of the increasing impoverishment of their lands many of the Håshid and Bakîl have been forced to leave their territory; we thus find Håshid in the district of Dju'jar Bârâ (in the south of Khu'riya land [q.v.]) and Dhu Mu'hâmman in the land of Ta'izz [q.v.]. They usually enter the armies of the neighbouring rulers (the Imâm of Sanâ'a, and the Sha'ir of Mecca). Even in India they are sought as mercenaries.

During Glaser's stay in Sanâ'a in 1885, a fierce war was raging between the Bakîl and the Håshid. The feud was caused by the Bakîl (Sufyân) who carried off two women of the Håshid, whereupon the latter began massacres in the villages of the Sufyân in Khu'riya. The settlement of the dispute was conducted by the governor-general of Sanâ'a, Izzet Pasha, who thereby won a certain influence over these tribes.

Hamdân in his Djazira gives us a detailed account of the Håshid and Bakîl. He mentions the most of the above-named tribes. In his time they inhabited the same districts as at the present day. They lived in the "Balad Hamdân" [q.v.], which was divided into two parts, the east belonging to the Bakîl and the west to the Håshid; in the lands of the Bakîl there were a certain number of Håshid and vice versa.

In Hamdânî's time the land of the Håshid included Ruhaba (chiefly inhabited by the Wâdti'a),
the great plain of al-Bawm (in common with the Bakil, with the villages of Rai'da [with the citadel of Tal'um], Hamud, 'Ahtar, al-Qhail, Kafa, Uruth), Ziba, the latter belonging to the Hizib of al-Khuraf, the two ruins of I'twa and Rii'am, Ummi (العربية) of the inscriptions, a large town, in common with the Bakil, the ruins of Mudar (Madar, in common with the Bakil), and Yam, 'Ahrab (called Durnain the Djibaliya; here the poet al-Ashia of Hamdan used to live during the date-harvest), the Balad al-Sayed (with al-Khurab, Dha

Bin [البين] of the inscriptions, Yant'a or Yun'a), al-Kharif (الخريف) of the inscriptions, with the market Hamal or Flatim, dating from heathen times and the villages of Asuman and al-Huf or al-Huf), the Balad Wadi'a (with Sanam, Hamdan, [so Dju'a, p. 112, 6, the index on the other hand has Hamadun, 'Amu). Hind and Hauna, Balad Khaiwan (the largest district of the Hishid, the east was inhabited by the Bakil), Khairim, La'a (the beginning of the Hishid in the south, with the two mountains Akaan (between the Wadi La'a and Wadi Sudud) and Aizam or Ajiama, the markets of Tamam and al-Arijka), Balad Hadjar (with 40,000 inhabitants; with the villages of al-Djubrah [large market for Tibama, Mecca, and all Hamdan, which used to be visited by 20,000), Subha, Hajara and Djada'a, Udrar Sha'b, Hisam (a very fertile district, rich in palms and horses), inhabited by the brave and distinguished clan of al-Ashim, which numbered 5,000 warriors), the two fortified hills of Alishan and Shubara or Shabara, with the precious stone called 'Ajud, after Wadi Said near Sana'a, a black stone with white veins), the Djebel Hadjaja, Mawtak and the great mountain Shufar (lower part) the markets of al-Kalabidj, Bara (both belonging to the Djabar), Safir, al-Fakia, Kutaba.

The lands of the Bakil included: al-Sama'a, Ijadaan (both in the west of the Rahm of San'a), Ma'nasa al-Sa'ib, or al-Utham, with numerous wadis, which flow into the Khair, and with many cornfields and vineyards), the Djebel Dharab, rich in vines (inhabited by the brave and distinguished group of tribes Dhaibah b. Aliyan), Hairb al-Radrad (with silver-mines; on the boundary between the Nihm, Murhiba, Bal hiringh and Upper Khairan, the Wadi Ma'sam (inhabited by the Murhiba and Nihm), the Upper Djarf (with the villages of Shuwalta, Herran [on the tributaries of the Khair of the same name], Sawane, the Djebel Warwar (with market), which belong to the Sufyan b. Abih, the Sabib, the villages between Khaiwan and Sada (including al-Khaddiya, 'Iyan, Birklan or Baraka), the Balad Shajir b. Bakil (with the great mountain of Barat [with a very healthy climate, rich in cornfields, inhabited by the clan Dhauma, presumably the Dhulhene or Dom Masu of Nibeher). Djadira, Tubai [Tubaa]; the Wadis of this Balad, which flow to the Ghrab, Djawf and Nadjran, were rich in wild asses, al-Harran, (inhabited by the Wa'il b. Shajir). Markets of the Bakil were the Warwar already mentioned, Ghrab and Rai'da (the latter in the land of the Hishid).

According to Yakut, a very poisonous plant grows in the land of the Hishid and Bakil, which is known only to them and is found nowhere else. The Hishid and Bakil therefore guard it carefully and use it very sparingly, as the Egyptians do with the plants from which they press balsam. Several kings of the Banu Nadhir died of this poison.

HASHIM b. ABD AL-MANAF, ANCESTOR OF THE HISHIDS. The tradition that Muhammad belonged to this family is confirmed by several ancient poems e.g. Alsha in Ibn Histam, p. 256, 11, who calls Muhammad Hashim's son, cf. also p. 334, 199, 19. But whether Hashim really was Abd al-Mutallab's father and Muhammad's grandfather, as tradition avers, is by no means so certain, as the association of the Bani Hashim with the Banu Mutalib, ibid, p. 356, 14, or the enumeration of the Meccan families in Hassain b. Thabit (Kamil, p. 141, 29) do not exactly corroborate it. In any case, all that the Arabs tell of his life is mere legend. He is said to have supervised the provision of water for the pilgrims and to have been a merchant honoured alike by the Emperor and the Nadzih, who first instituted the two annual caravans of the Meccans. He received his name because he had broken (haksama) bread for the hungry during a famine. His wife Salmah bint 'Amr belonged to the Khazraj family of al-Nadjar, but this is probably one of the many mistakes of the Medineans to make their relationship with the Prophet tenable (cf. the articles AMNA and 'ABD AL-MUTALLAB). According to this tradition, Hashim died in Ghaza (q.v.) and was buried there.

HASHIYA (A.) 1. is identical with HASHUV (q.v.) in its third, fourth and fifth senses; 2. the margin of a page: hence a marginal note, superintending upon a commentary (SIRAH, q.v.) upon another (MATIN, q.v.). The whole text is comprised in the sirah, but only a word or two in the hashiya, though the latter may be more extensive than the original text. For other meanings of hashiya see Lane, Lexicon, and Dozy, Supplément.

HASHMET, an Ottoman poet, son of the Kali-Askar Abas Efendi, a contemporary and favourite of Râghib Pasha. He chose a career in law and theology. But before he had passed through the various grades of the Mdcreisiat, he was banished to Brusa with the poet Nevres Efendi for his satirical verses in 1175 (1761-1762) and afterwards alone to Rhodes, where he died in 1182 (1769-1769) and was buried beside Murad Râfis. Hashmet was as good a marksman and swords-
man as he was an excellent poet. His great strength lies in ingenious imitations and adaptations to the ideas and language of his predecessors, not in original works. In him the characteristic feature of Ottoman poetry in general, great skill in imitation, a parasitical kind of poesy, flourishing only on a foreign growth of assured reputation, became a consideration of genuine composition. In his Ḍawād he imitates Naʿfīr, in his ghazals a number of poets. He is only entitled to a modest place as an original poet, which he also tried to be. A vigorous and robust tone marks his more independent poems. The boldness with which he attacks his highly-privileged enemies is striking.

His Dīwān was not published by himself but by the Brusa scholar, Seyyid Mehməd Saʿdī Imāmzāde, with a laudatory preface from the latter's pen in 1180 (1759-1760). It was printed in four parts at Būlāq in 1257 (1841). Of his prose works there have survived: Intisāb al-muṣallāt (The Service of the Kings), a vision which Has̱hi̱met proffers to have had on the accession of Muṣṭaṣf̱ī III; a Sīr-nāme or Wilāyet-nāme, the description of the festivities on the occasion of the birth of the princess Heibet Allāh 1172 (1755); the Sevāl al-Shaʿrār, a work dedicated to Raghib Paşa and accompanied by a metrical introduction by him; lastly the explanation of a sūra of the Kurān and of the Hadīth transmitted in metrical form.

HAS̱R (a), assembly, particularly that on the day of resurrection (yawm al-Haṣr). Cf. the article KIYĀMA. — Title of Sūra lix.

HAS̱HW, the stuffing of a pillow, cushion, vegetable, etc. Hence: i. Mediai. You say *its alfī has become medial (haṣ̱hwāni).* 2. A relative clause. Şhawān calls a sin a haṣ̱hw (Muṣafq̱, ed. Broch, p. 57). 3. A parenthesis, with nothing in the sentence is syntactically connected, synonymous with Firtād (ạṟi, Makḇm, ed. De Saç, p. 85, 86). 4. A redundancy or tautology or otiose expression, as Sinul ạ-raḏ (headache of the head). It differs from tola in that the latter always serves to remove a doubt (ạṟi, loc. cit.). 5. In prosody, the portion of either hemistich of a verse between the first and the last foot. (Freytag, Darstellung der arabischen Verskunst, p. 119, 246, 257). A verse consisting of the foot mawṣūli̱m repeated four times would have no haṣ̱hw.

Bibliography: Sprenger and Lées, Dictionary of Technical Terms, Pt. i. p. 395 sq.; Dujourdja, Tarifīt, ed. Flügel, p. 31 and 92. (T. H. Weir.)

HAS̱HW̱YA, also HAS̱HW̱YIA or AHI AL-HAṢ̱HW̱YA, a contemptuous term for those among the men of Tradition (ạṣ̱ẖib al-Hadīth), who recognised in a peculiar and archaic pronunciation tradiions as genuine, without criticism and even with a kind of preference, and interpreted them literally. A few names of individuals who made themselves notorious in this way and who belonged neither to the Karrāmiya nor to those Shiʿis who did the same, are mentioned by al-Shahristānī, ed. Cureton, p. 77. The Saʿdīmiya (cf. Goldziher in Zeitschr. der Deutsch. Mor.

gen. Gesell., lxxi. 79) are among them. The Muʿaṭṭa scorned the whole of the ạṣ̱ẖib al-Hadīth as Haṣ̱hi̱miya because they tolerated anthropomorphi- ersions expressions, although without the lack of good taste of the Haṣ̱hi̱miya proper and often with the retention of the "how" (baš kafī).

HAŠK (HASEK), a town in the Maharashtra country [q. v.], east of Mirbāb [q. v.], in 17° 21' N. Lat. and 55° 23' E. Long., at the foot of the high mountain of Nās (Lūs), the Aṣ̱ẖwān of the Periplus Maris Erythraei. Before the town lies the "bay of herbs" (Dīnj al-Hashīsh), the bay of Hašk (Ra's Hašk), also called Kurya and Muruya Bay after the two islands lying opposite (Khāryān and Maryān in Idrisi). Idrisi describes Hašk as a small fortified town four days east of Maryān, with many inhabitants, who are fishermen. Ibn Battūta landed here on his way through ʿOmnān and found the houses built of fishbones with roofs of camelskins. In Ibn Battūta's and Idrisi's time there was great intercourse between Hašk and the island of Soksorā [q. v.] to the south. The frankincense, which was produced in the Maharashtra country, was exported through Hašk. The town is now quite ruined. It is called Sūk Hašk and is inhabited by the Korāh (or Korah) and other tribes of the frankincense country.

Opposite Hašk, according to Miles, about 20 miles from it lie the "seven isles of Zeno[h]ia" (the ạṟtī ṭi, al Zewa[h]a, λευκόροι of the Periplus), the Khāryān and Maryān group of Idrisi, called the Džārīn Ibn Khulāfān, after a prominent Mahri family, by the Arabs of the south coast. The most westerly of the islands, Kibīyiya, is covered by a large number of peaked hills mainly composed of red and streaked granite and inhabited by pelicans and diving birds. Hulton, who visited the islands in 1856, found only one of them, Hallaniya, inhabited by men, twenty-three ichthyophagi. He found that their language resembled that of Soksorā. The nuts in which they lived consisted of loose stones above which were laid fishbones covered with seaweed. They belonged to the Bait (Banū) Djanaba (Djenabi = Σωμακός of the Periplus) to the same tribe as lived on the coast between Hašk and Ra's al-Hadd. Their ancestors are said to have migrated thither several centuries ago, after being driven from Hašk and Mirbāb as a result of feuds with their neighbours. Poolemy and Pliny call the people of these islands Asurtrā or Ascidae, a name doubtless connected with Hašk, although the ancients connected this name with ạṟkwa "wine-skin".

HÄSÄN. b. MAlik, grandson of the Kalbi chief Bahd al. Unaf [q. v.] and uncle of the Caliph Yazid I. These qualifications as well as the prestige of his family and of the powerful tribe of Kalb procured him in the reigns of Mu'awiya and Yazid the post of governor of Palestine and the Jordan territory. He has often shown himself in battle in the Syrian army at Siffin. He then accompanied the young Yazid, when the latter went to Damascus to ascend the Caliph's throne. During the reign of his nephew he was the most influential person at court. On Yazid’s sudden death and the succession soon after of Mu'awiya II, his grandnephew, Ibn Bahdal — as he was usually called — became governor of the Dijar of Jordan, the only one which, through his intervention, had remained faithful to the Omayyad cause. He now advanced against Damascus to be able to follow events on the scene and to champion the interests of the younger sons of the Caliph Yazid, who had been entrusted with his guardianship. He took up his abode with them in Dãbiya. From here he is said, by a series of clever manoeuvres, to have succeeded in unmasking Dãhiß b. Kãis [q. v.] who was a traitor to the Omayyad cause. Another story however, given by Ibn Sa'd, ascribes this diplomatic success with more justice — as Fr. Buhl has shown — to the able Ubaid Allah, son of Ziyâd. The latter also persuaded Marwân b. al-Hakam to come forward as a claimant to the vacant throne. When Hãsãn took up the candidature of his grandnephew Khalîd b. Yazid, the Omayyads and their supporters were forced to come to him at Dãbiya. There an assembly was held under the presidency of the Kalbi chief [cf. Uãbiya, i. 988 sq.]

After 40 days' negotiations Marwân b. al-Hakam was chosen Caliph. But before Ibn Bahdãl recognised him, he extorted his consent to the succession of the young Khalîd after Marwân's death, important privileges for his tribe, and the confirmation of all the privileges which his family had enjoyed under the Sufyanids. Henceforth his influence began to decline. When Marwân died, he is said to have pledged him to recognise Abd al-Malik as his successor. On 'Amr al-Aslãhâk's [q. v.] rebellion, Hãsãn took 'Abd al-Malik's side and was among the Omayyads at the murder of this rebel. After this event the name of this Kalbi chief, who had held the fortunes of the Omayyad dynasty in his hand for a long period, is no longer mentioned.

Bibliography:

HÄSÄN b. NA'MAN b. AL-QHÄSSÄN, GOVERNOR OF IFRIQIYA. After Zubair's departure (which is not to be explained by the religious scruples to which it is usually attributed), and his defeat and death at Barqa, Ifriqiya remained without a governor, the Caliph 'Abd al-Malik being wholly occupied with his struggle with Ibn Zubair. On the conclusion of this war Hãsãn was sent to Ifriqiya to pacify or rather to reconquer it. He first of all attacked Carthage, which still belonged to the Byzantines. The city was taken by storm but a number of the inhabitants were able to escape to Sicily. The fall of Carthage produced great consternation at the court of Constantinople. The emperor Leontius equipped a fleet, which appeared before Carthage under the patrician Johannes in 667. [Hãsãn could not oppose it; he had just been beaten on the banks of the Wadi Nimi by the Berbers, who had risen under the prophetess celebrated under the Arabic name of Khâhîna [q. v.] and were cooperating with the Greeks. Hãsãn and the few of his followers who had survived the disaster were hard pressed to Gades and did not stop till they reached Barbàca. There he awaited help from the Caliph. In 698 Carthage was besieged by the Muslims from land and sea and again taken and the patrician Johannes returned to the east with the remnants of his fleet. Hãsãn conquered all the fortresses in Ifriqiya occupied by the Greeks and then took the field against Khâhîna. As usual the Berbers after their first success had been unable to agree among themselves; the heroine was thus defeated by treachery and killed in Awarès at a well which afterwards bore her name (according to others at Tabacco). Hãsãn was next proceeding to levy khurâd on the whole of the conquered country when he was suddenly dismissed by 'Abd al-Azîz, the governor of Egypt, and deprived of all his estates. He died in 80 (699-700). The chronology of his campaigns against Carthage and the Berbers was uncertain even by al-Ishãrî's time; here that of Diehl is followed.

the jealousy of the Ghasānī, but Ḥassān succeeded in allaying his suspicions. On the return of al-
Nābiqha to the favour of al-Nuʿmān, Ḥassān prudently withdrew. At the fair of Ḫāqān his claim to preeminence had been rejected by his Badawi rival, and his inferiority demonstrated. He is said to have been about sixty years of age when he deemed it prudent to throw in his lot with Mu-
ḥammad, who was fast winning his way to the front. This did not alienate the friendship of the Ghasānīs, though Ḥassān, in view of Muḥammad's raids, did not deem it prudent to visit his old friends. To Muḥammad the services of Ḥassān were invaluable in replying to the lampoons of the unbelieving poets; and the Prophet showed his appreciation of them by presenting him with an estate and the Egyptian slave Sīrīn, sister of Mary the Cop, and even forgave the part he played in the matter of ʿAbī Ḥaṭaḥ and ʿAbī Sāvān. His most notable service to ʿIsām was perhaps the conversion of Tamīm, whose champions he worsted in a contest of verse. He survived not only Muḥammad but also Abū Bakr and ʿUmar, upon all of whom he has some fine elegies; but he was especially devoted to ʿUmmān, whom he had lived in his brother's house in Madīnat al-Hidīri [q.v.], and the guilt of whose murder he laid at the door of ʿAli. He is said to have died at the age of 120 years: his family became extinct.

Ḥassān was the founder of the religious poetry of ʿIsām. His verses abound with Kurʿānic phrases, but they are also full of the boasting (jubbūr) of the Ignorance. His forte, however, was satire and sarcasm. It was these qualities which made him a useful instrument to Muḥammad. To European taste his poetry is preferable to that of the desert poets; but his chief value is as a source for the history of ʿIsām.

Bibl.: Divān, Tunis 1864, Bombay 1865, Leyden 1910 (ed. by Hartwig Hirschfeld, Gibb Memorial Series); Ibn Ḥāšāfī ed. Wilstefen, by index. (C. H. WEIR.)

HĀTĪF (A.) means one who cries out, summons, proclaims, with a voice harsh, high, strong. The root is also used to express the ringing sound of a bow, the yearning of a pigeon, a moaning wind, rolling thunder. For these forces see Lām, xxx. 259, but ḥātīf in the sense "thunder-cloud" is found only in Asās al-Balāgha and connects with the modern Arabic use of ḥāṭīf in the sense "steady rain" (Soim, Divān ans Centr. Arab., i. 188, l. 11). More narrowly it is used to de-
scribe a voice which comes, while the speaker remains invisible, bringing mysterious information, or warning; or summoning, or inspiring with poetry. The last is common in Persian, e. g. in Nīṣāmī, see W. Bacher, Nīṣāmī's Leben u. Werke, p. 21, note 23. P. 44. It brings tidings of death (Aghānī, xxi. 126, l. 22); is heard in connection with a family of kāhūn (Aghānī, xv. 76, l. 28); by it a serpent-fox (ṣūfī) shows its gratitude (Aghānī, xix. 86, l. 2). It is thus a method by which the ḏīṃm manifest themselves, and may be contrasted with the ẓāfīr or ẓāfīr al-
khayāl, which is seen, while the ḥātīf is only heard, and which had apparently satanic associations (Aghānī, vii. 131, last l., and Lane, Lexi-
con., 1905-1906a). Yet in Aghānī xii. 65, l. 16, a ḥātīf is heard but not seen. The narra-
tive in Aghānī, vii. 131, of how a ḥātīf brought to Bulhāna news of the death of Dājīm is de-
tailed and psychologically very suggestive. As an auditory hallucination, veridical or otherwise, it could easily be paralleled in Gurney and Myers' Phan-
taoms of the Living (also Encycl. Brit., xii. 802) and explained on their hypothesis. But for the ḥātīf other words were quite commonly used in older Arabic (mamānāt, ṣūfī, ḏīm). and so, while the phenomenon is closely parallel to the Hebrew Sah ḥol (cf. Bat ḥol in Jewish Encycl., ii. 588 sqq.) the word ḥātīf is only one descriptive among others and not a specific name. Goldziher (Arabische Philologie, i. 210 sqq.) distinguishes the more frequent ḥātīm from unintellible sounds of the ḏīm from these other voices carrying a meaning, and Wellhausen even thinks of the ḥātīf as a later development under the influence of the civilization of the towns (Rete, p. 139, note). For a later sceptical atti-
tude, with a rationalistic explanation, see the Mu-
ūzīzīlate Masūdī in Muraḍī, iii. 323 sqq. But this attitude made little way and the ḥātīf in later, and especially in religious literature, lost its vagueness and became more and more defined and frequent. The stories of the lives and expe-
riences of the saints (wulātī) are so full of occur-
rences that separate references are needless. Ḥātīf's gave many testimonies to the truth of the pro-
phesy of Muḥammad, and according to Spreng-
ger (Leben, i. 57), there were at least two books written on these under the title Ḥuwaṭīf al-
Dājīm by Abū Bakr al-Kharaqī and Ibn Abī Dūnīa (d. 281). See on the latter Ḥaḍīdī Khā-
līf (sub tit.) and Brockelmann, Gesch., i. 154;
the Fihrist (p. 185) does not mention this book in dealing with him. In magic such voices can be sent at will by the use of certain rites. This is called irṣal al-huwaṭīf, and the messages com-
mittcd to them will be heard by the persons men-
tioned in the spell (Aḥmad al-Zarkāwī, Mafāṭīb, pp. 175, 198). Finally, we have, in Persian and Turkish, the Perso-Arabic compound ḥāṭīf-i-dīm (mawardi mīrūbeh) (Gibb, Hist. of Ottoman Poetry, p. 513). The medieval usage in the sense of "herald" belongs to the lexicons, see Dozy, sub voc.

Bibl.: It has been given in the article. The important passages are in Gold-
ziher, Arabische Philologie, i., especially p. 212 and in Wellhausen, Rete, p. 139. Cf. Sprenger, Leben, i. 216. (D. B. MACDONALD.)

HĀTĪF, SAVĪD AHMAD HĀTĪF, a Persian poet of Isphahan, died in 1128 (1784). He is the author of a famous ṭarfīf (poem with a refrain), translated by Schlechte-Weswed in the Zeitschr. d. Deutsch. Morgenl. Gesells., v. 80 sqq., and was celebrated as a writer of gazelles. Specimens of the latter are given in Band, A Century of Persian Ghazels, p. 38 sqq. Manuscripts of his Divān are rare: there is one in the Bodleian Library, cf. Ethē, Catalog., No. 1188.

Bibl.: Dcrs. in Journ. Asiat., 5th Series, Vol. vii. 130 sqq.; Ethē in the Grund-
d. Iran. Phil., ii. 315 sqv.

HĀTĪF, ʿAYD ALI, a Persian poet, son of Dājīm's [q. v.] sister, born at Khardjird in the dis-
trict of Dājīm, which belonged to Herāt, and died in 927 (1521). He celebrated the conquests of Timūr in an epic entitled Timūr-nāma (also Zafar-nāma), lithogr., Lucknow 1869. He also in-
tended to compose a "fiver" (khamis), i. e. a collection of five long poems, but never carried his plan into operation. We possess, however a
HĀTĪF — HAUSAS.

A brief account of Hátim’s life and deeds was given by Husain Wādi‘ Khāshīf (died 910 - 1504-1505) in Kītāg-i Ābār-i Hátim Tā‘ī or Risāla-i Hátiyya, ed. Schefer, Christlichtheit Persiens, ii. 173 sqq. There is also a Turkish translation of the Kītāg-i Hátim, entitled Arābī-ī Mahīl, which are cited in the Indian Office Catalogues, ii. 2, Hindustani Books, by J. F. Blumhardt, p. 135 sq., cf. also Garin de Tassy, Hist. de la Lit. Hindoue et Hindustanî, i. 552 sq.; on a metrical version of the romance in Hindī and Hindūstānī, cf. Garin de Tassy, op. cit. i. 497, iii. 148.

HATTIN or HIẒṬIN, in the Talmud Kefar Haṭţiyė, a village to the west of and above Tiberias on a fertile plain, the southern border of which is formed by a steep limestone ridge. At both the western and eastern ends of the ridge there is a higher summit called Kurin Haṭṭin. A tradition, known in the x3th century, the origin of which is uncertain, places the tomb of the prophet Shu‘aib (Vitro) here; the little chapel, which has been rebuilt in modern times and is annually visited by the Druses, lies on an elevation in a rocky valley at the western summit. On the uneven tableland southeast of the rocky ridge was fought the battle which destroyed the power of the Crusaders, when Salah al-Dīn won a great victory over the Christians on the 5th July 1187. After the Frankish troops, tormented by heat and thirst, had been some cut down, others put to flight, the remainder retired to the eastern summit, where many were thrown over the steep southern side. In memory of this the victor built a small chapel on the summit, called Kubbah al-Nasr.

HAUSAS, a negro people in the Sūdān. They occupy the zone included between the Sāhara on the north, Bornu on the east, the bend of the Niger on the west and the coast countries.
of the Gulf of Guinea (Togo, Dahomey, Benin and the Cameroons) on the south. It is one of the largest ethnic groups in Africa; according to Robinson it numbers about 13,500,000 souls.

The Hausas are very clearly distinguished in physique from other black races. As a rule they are tall; their hands and feet are small, their features regular and their physiognomy intelligent. They are active and quick-witted and are fond of sport and war. Their physical qualities and their bravery make the Hausa excellent soldiers. Therefore the English in Nigeria and the Germans in Togoland and the Cameroons recruit their police forces from among them.

The Hausas live by agriculture, industry and commerce. The soil, tilled by the hoe and improved by manuring, produces rice, millet and especially cotton, which is manufactured in the country itself. Industry indeed is well developed and bears witness to the relatively high degree of civilization which the inhabitants have attained. The textile industry is particularly flourishing. The cotton thread spun by the women is dyed in various colours, then woven into long narrow strips, which are used to make different articles of clothing (robes, shirts, trousers and tunics). These clothes are famous for their fineness and are exported all over the Sudân. Basketmaking, tanning, shoemaking and saddlery are equally prosperous as well as goldsmithry and the manufacture of metal goods for domestic use or ornament. In all these works the Hausa show a well developed artistic sense.

They are also able and enterprising merchants. Their towns, particularly Kano, have very frequent markets. Every year their caravans make the three months’ journey across the Sahara, carrying to Tripoli the products of the Sudân, clothstuffs, leather, ivory, and ostrich feathers, and returning laden with European products. Other caravans go to Upper Egypt and the shores of the Red Sea. Lastly the pilgrimage to Mecca, methodically organised, furnishes the Hausa with the opportunity and excuse for lucrative trading operations. They were at one time great slave traders but European intervention has considerably reduced this traffic. Colonies of Hausa merchants, numbering sometimes 2000-3000 individuals, are established not only in the principal places of the Sudân but also at Ghadames, Ghibr, Tripoli, Tunis, Cairo, Massawa and in the majority of the towns of the Atlantic coast (Lagos, Akra, Freetown etc.).

Islam is now the religion of the Hausas. Introduced in the 15th century, it made considerable progress in the sixteenth as a result of the conquest of the country by the Fulbe (Fulbe) who imposed it by force on the conquered people. Only the tribes of the forest or mountain districts have remained fetish-worshippers. In religious matters however the Hausas show a singular lukewarmness. According to Robinson, mosques are hardly found, except in Sokoto and Kano. “In the large towns,” writes the same author, “perhaps half the population are nominally Mohammedans, whilst the rest can hardly be said to have any definite form of religion at all” (Hausa and Benin, 184). If the idols have disappeared, overthrown by the Fulbe, ancient superstitions have survived, such, for example, as the belief in lucky and unlucky days, the use of talismans to cure diseases, a custom exploited by the Hadjijis returned from Mecca, who are credited with possessing the power of writing infallible charms. In spite however of the rather unorthodox character of these practices the Hausas are none the less active propagators of Islam among their fetish-worshipping neighbours.

At the same time as their religion they spread around them the use of their language, which has become the lingua franca of the Sudân and even of certain parts of the Sahara. The character and classification of this language has been often discussed since Schon made the first specimens of it known to European scholars. Some philologists (e.g. Miller and Lepsius) relying on certain morphological analogies which it presents with the Berber dialects, proposed to class it in the Hamitic family. According to another view put forward by M. Delafosse and supported by M. Lippert, “Hausa is a language of negro origin on account of its very large number of radicals and vocalic terminations. This negro language has been profoundly influenced in grammar by the languages of the Hamitic family and has borrowed a considerable number of radicals and roots. . . . Semitic influence on this language has been almost nil; not more remarkable, in any case, than on any language spoken by Muslims and equal to the influence of the European languages on the dialects of the coast (importation of foreign words designating new objects)”. The literature consists of a number of chronicles, tales and popular songs which have been collected and published by Europeans.

History. The origin of the Hausas is very uncertain. Barth identifies them, but in a very hypothetical fashion, with the Atarantes of Herodotos. One fact is certain: the Hausas used to live in a more northern region than that which they now occupy, which corresponded to Damergú and the oasis of Air. The Hilâlî invasion brought into these lands Tuaregs driven southwards by the Berber tribes of Northern Africa. For some time these two races lived in harmony and their inter-marriage produced half-castes, the ancestors of the servile tribes who now live in dependence on the Tuareg. Then, the resources of the oasis becoming insufficient, the Hausas migrated southwards and founded various states which were to become powerful when they were driven out of the country by the Barba. According to a mythical genealogy given by Barth, Biram was actually considered the ancestor of the Hausas. His descendants, Gober, Kano, Rano, Katsena and Segrez (Zarâ) were the creators of the kingdoms which still bear these names and which are called the seven legitimate Hausas (Hausa boke). The other states, the population of which has become much mixed with foreign elements (Yoruba, Nupe, Guari, Yauri, Bautshi, Sanfara and Kebbi), were known as bastard Hausas (Hausa banya boke). These kingdoms varied in extent. The oldest, Biram and Kano, were not much larger than their capitals, the others attained a considerable development. The Sultans of Gober and later those of Katsena, Kano and Zarâ conquered vast territories and were able to put in the field armies of 2000 horsemen and 10,000 foot-soldiers.

The earliest mention of a Hausa kingdom, Gober, is found in Ibn Batûtah. When this traveller visited the Sudân (1353), the Hausa were still pagans. Although certain legends ascribe the introduction of Islam to missionaries sent by the Caliph Omar, this religion was in reality brought to the Hausas.
at the end of the sixth century by merchants coming from the countries of the central Niger and Bornu, which had long been Islamised. Their propaganda was perhaps strengthened by the preaching of the celebrated marabout of Tuit, Muhammad b. Abd al-Kadir al-Maghili. In any case, by the end of the eighth century Katsina and Katsena had become recognized centres of intellectual culture. The marabouts of Djenné and Timbuktu stopped there on their return from the pilgrimage to Mecca and taught theology and Maliki law there to the native students. The conversion of the Hausas was not complete however and even in the nineteenth century the people of Gobra relapsed for a time into paganism.

We know very little about the history of the different Hausa states. Their material prosperity seems however to have been remarkable in spite of the bloody wars they had to wage against their neighbours, notably the Songhai and the people of Bornu. As a result of the Moroccan conquest Katsena inherited the economic importance of Gao and, according to Barth, had more than 100,000 inhabitants. Kano became and has remained to the present time the most important market in the whole Sudan.

The political organization of the country was profoundly modified in the beginning of the ninth century. The Sukas, the various states had remained independent of one another. They were now incorporated in the vast empire the foundations of which were laid in 1802 by the Fulbe marabout 'Othman dan Fodio (cf. the article Fulbe). In fifteen years all the Hausa country was conquered, the local sultans were dethroned and replaced by governors dependent on the Sultan of Sokoto, the capital built by 'Othman. On the latter's death the empire was divided into two sultanates with Sokoto and Gando as capitals and the various provinces were shared between the two sovereigns.

The conquerors were however in part absorbed in and assimilated to the conquered. The Fulbe established in the towns mixed with the Hausa and gradually lost their own language and civilization by this intercourse. The extension of the conquest even developed the spirit of initiative and enterprise in the Hausas. They broke their original bounds on all sides and introduced their language and the Muslim religion into the neighbouring countries. This is why we find them settled in large numbers in Togoland, in Adamawa and the Cameroons. Lastly, in the last quarter of the ninth century, Europeans, informed by travellers of the richness of the country, have endeavoured to submit it to their rule. The French and English disputed access to the Hausa country at the same time as to the lands of the lower Niger. The English were successful and the Anglo-French treaty of the fifth August 1890, completed by the agreements of the fifth July 1893, the fourth June 1898, and the Anglo-German agreement of the fifth November 1893, left practically the whole of the Hausa country in the sphere of British influence.

G. VYER.

HAWĂLA (A.), literally "turn"; in Muslim law the transferrence of a debt from one person to another. The hawala is an agreement by which a debtor is freed from a debt by another becoming responsible for it (N. Seignette, Cote Musulman par Khalil, p. 173). This transferrence of the obligation is the angle around which this legal mechanism "turns".

The word hawala then comes to denote the document by which the transferrence of the debt is completed and next receives the meaning of cheque, or order to pay, to a public chest also.

Biblilographie: N. de Tornau, Das Mus-
limische Recht aus den Quellen dargestellt,
Leip-
zig, p. 139 sqq.; A. Querry, Droit Musulman
(Sfïf), i. 480.

(Ch. HuART.)

HAWARI, apostle. The word is borrowed from the Ethiopic, where ḫawārīyā has the same meaning (see Noldeke, Beiträge zur sem. Sprachwiss., p. 48). The derivations from the Arabic "he who wears white clothes" etc. are erroneous. Tradition delights to give foreign epithets which were current among the "people of the scripture", to the earliest missionaries of Islam. Abî Bakr is called al-Ṣiddīq, Ummar al-Fārāb, al-Zubair Ibn al-ʿAwām al-Ḥawārī.

At the same time we find the collective name al-Hawārīyān for twelve individuals, who are said to have been appointed ṇâhīs of the Medinese at the "second Akaba" by Muhammad (or by those present) as "surety for their people just as the apostles were sureties for Isâ b. Maryam
and I (Muhammad) am for my people). Christian influence is also found elsewhere in the account of the "second Akaba", the total number of those present being usually given as 70 or 72, apparently on the analogy of the Evangelical accounts of the 70 or 72 apostles (St. Luke, x. 117).

From these accounts it is again clear how the rivalry between Anšār and Muhājirūn has influenced Tradition.

The tradition regarding these twelve Muslim apostles has perhaps, like so many traditions, arisen as a deduction from a statement in the Korân. In Sūra 3, 181, 134, Jesus says: "Who are My Anšār for God (is cause)?" and the Hawariyyin answered: "We are the Anšār of God."

The parallel with Muhammad’s own position is here clear enough and it is obvious that Muslim Hawariyyin were found to be a necessity alongside of the Muslim Anšār.

There are statements in several Muslim writers regarding the disciples of Jesus, which for the most part go back to passages in the Apostles. Cf. the articles Isā and Ma’ṣîna.

HAWASHIL. [See HÂSHIYA.]

HAWASHIM or HâSHIMIDE is the name given to those Sherifs of Mecca, descendants of a Ḥasanîd named ‘Abd al-Hâshim Muhammad, who ruled there from 455 (1065) to 597 (1201). Their names are Abi Hâshim Muhammad till 487 (1094), his son Abi ‘Uulfát Kásim till 517 or 518 (1124), Fulafia b. Kásim till 527 (1133), Hâshim b. Fulafia till 543 (1154), according to another statement till 511 (1150), Kásim b. Hâshim till 556 (1161) Isâ b. Fulafia till 570 (1174-1175). The latter’s sons, Mukhîrih and Dâ‘îd, as well as Munṣûr b. Dâ‘îd then disputed the succession, till finally another Ḥasanîd named Kâtsâ (q. v.) took advantage of this family quarrel to seize the town of Mecca and transmitted the Sherifate to his descendants. None of these Hawashim did anything remarkable; at first their ambiguous attitude on the question, whether the Pâṭimid or Abbâsîd Caliph was to be mentioned in prayer, more than once brought great misfortune on the Meccans. For further details cf. Wustenfeld, Geschichte der Stadt Mecka, p. 222 sqq., and Snouck Hurgronje, Mecka, i. 62 sqq., where the native sources are also given.

HAWAZIN, a large North Arabic tribe. Their genealogy is Hawazin b. Masûr b. Ḥirîma b. ‘Abbas b. ‘Abd Allâh b. ‘Umar b. Khassaf b. ‘Abd Allâh b. Ḥarûb. Among the important clans of the Hawazin may be mentioned the Thâkîf in ‘Irbâ‘ northeast of Mecca where there is still a powerful tribe of them, the ’Amir b. Sa‘îda (q. v.), the Dhiwash, the Sa‘îd b. Bakr (Haltum b. Abî Dhuwaib, the nurse of the Prophet, was descended from them) and Hîlî. They were of the same stock as the Sulaim. During the Dîhâliya they worshipped the idol Dîlah in Uqât, the large and much frequented market of the Thâkîf between Tarîf and Nakhlâ, where the poetasters recite their poems on the public market-place.

They were scattered through Neflid (on the Yemen border) and the Eastern Hijaz near Mecca. Among places which belonged to them may be mentioned: Amâhâ, ‘Adâ‘ al-Maṭâ‘ül, al-Dardâ‘, al-Dalî‘ân, Fâsib al-Kih; among wâdîs, Awaṣâ‘, Iyya, Turaba and Zabaya (so Yûkî ‘Uthmanî, ii. 917: Hammânî, Dîrayân, p. 59, o gives Rûnîya and Turaba as belonging to the Hîlî, but as the Hîlî are a clan of the Hawazin and as in other districts places which had once belonged to the Hawazin or their clans were later inhabited by the Hîlî, e.g. Ta‘îf, Runiya and Zabaya may be identical in the case where there is a misunderstanding between r and z or b and n); among wâdîs, Dhu ‘Hulaîla and Tiyan (Wustenfeld, Register, p. 220, Tyayân); among mountains, al-Mudâjîlîyâ.

Towards the middle of the sixth century after the collapse of Yemeni suzerainty over the Ma‘addi tribes, the Hawazin had to pay tribute to the chief of the Ghaṭaṣfân, Zabair b. Dîhâma in the name of Ḥasîn. When the latter was slain in 597 (1161) by the ‘Amîr b. Sa‘îda in revenge for a massacre which he had instigated among one of their clans, the ‘Ishaqîn (q. v.), the Hawazin became independent. After the conclusion of peace between the ‘Abs and the Dhû-Abyân, they united for common action against the Hawazin (Dhiwash, ‘Amîr b. Naṣir b. Mu‘awiyah) and the Sulaim their allies. Among the resulting battles were Râkî, Nubî and Liwâ in which the Hawazin were defeated.

In the ninth decade of the sixth century the Fidjîr or sacrilegious wars began (so called because they took place chiefly in the sacred month of Dhu ‘l-Ka‘da, by which the latter was profaned) between the Hawazin on the one side and the Kuraish and other Khannâa tribes on the other. The cause of the first Fidjîr day, which took place on the market place of ‘Ukâz was the aggressive attitude of Badr b. Ma’âshar of the tribe of Qhîfîr, a branch of the Khannâa, towards Aḥmar b. Mâzîn of the Hawazin and the insulting of a man and woman of the Hawazin by the Kuraish and Khannâa soon after. After a cessation of hostilities for some time, war broke out again when Urwa al-Râbahîl, an important member of the Hawazin (of the clan of Kîlîb), whose leading a caravan of Nûmân b. Mundhir, king of Hijrî, to the market of ‘Ukâz, was treacherously murdered by Bara‘îd b. Kâsî, a client of Harb b. Umaiya, chief of the Kuraish, in the land of the Ghaṭaṣfân. The Kuraish, who were in the market of ‘Ukâz at the time, hearing of the murder, left ‘Ukâz surreptitiously before the conclusion of the market to return to Mecca. They were pursued by the Hawazin and the battle of Nakhlî resulted. The Kuraish, fewer in numbers than their opponents, retired to the sacred district of Mecca (qaram) and thus escaped being followed up by their pursuers. The Prophet is said on this day to have been engaged in collecting the arrows shot by their enemies on the battlefield for his relatives, the Kuraish, being then according to some 14 and, according to others, 20 years of age. In the month of Dhu ‘l-Ka‘da of the following year, the Hawazin, reinforced by the Sulaim,
were the first to arrive at the market of 'Ukṣū and took up a position on the hill of Samta. The Kurash, who appeared soon afterwards on the battlefield under Ḥarb b. Umaiya, at first won the upper hand over their opponents but had finally to retire. The fortune of war again proved favourable to the Hawāzin a few months later in the battle of Abīlā (near 'Ukṣū). This was followed by a battle on the field of 'Ukṣū itself. In order not to be able to run away and to make good former defeats, a number of the Kurash had no recourse to their five sons of Umaiya, who hence received the name al-'Arābhī the "lions"), a strategy repeated in modern times in the war between the Egyptians under Muhammad b. 'Abbās b. Rabbabah and the Wahhabis, in which a great many of the Arabs were found dying in this position. They thus withheld the enemy and the Hawāzin had to retire. The last battle between the Hawāzin and Kurash, which was followed by definite peace, was that of Hurarā, in which the Hawāzin put their enemies to flight.

When Muhammad conquered Mecca in 8 = 629, the Hawāzin decided to march against Mecca under Mālik b. 'Awf. On Mālik's advice they were followed by their women, children and cattle. Muḥammad, warned by spies of the intended attack, went to meet them with an army of 4000 men. They met in the valley of Ḥunāṣ [q.v.] (about 10 miles from Mecca behind Mount 'Arāfā). The Hawāzin suddenly fell upon the rear of the Muslīms, who began to flee in panic. Inspired by the Prophet, who collected his most intimate companions (including his uncle 'Abbās b. Ṣufyān, Abū Bakr and 'Omar) around him and in the battle of Badr [q.v.] cursed his enemies by throwing a handful of dust against them with the words "may your face be covered with destruction", the Muslmīns took courage and attacked the enemy. The Hawāzin were put to flight and left many dead upon the field; their women, children and cattle fell into the hands of the Muslims and were brought to Djiţira. A number of the Hawāzin then retired to the valley of Awţā. Abū Mūṣā al-Asghārī, who went against them, drove them to seek refuge among the hills. They then fortified themselves in Ṭīţ. Muhammad besieged the town, but had to raise the siege after twenty days (on account of a dream, it is said) and returned to Djiţira. Here the Prophet received a deputation of the Hawāzin who offered the submission of the tribe, if their families and possessions were restored to them. Mūṣāmmār offered them the submission of his tribe between their families and their possessions. The Hawāzin chose the former and peace was made; Mālik b. 'Awf was then chosen amīl of the Hawāzin. During the general secession under Abū Bakr, a number of the Hawāzin rebelled but submitted to Ḥālid b. al-Walid after the battle of Buţākh in 11 = 32, like the Sulaim and other tribes.

**Hawar,** earlier Hawrāz (diminutive from Ḥajar), a town in the swamp-country (Ḳhūr al-'āṣim) east of the Tigris in a very unhealthy situation. The town and its Nahlātīa population had a bad reputation even among the Arabs. It is clear from Abū l-Waḍā' Zād b. Khūfātk's words quoted by Yāqūt; he draws a repulsive picture of both in language imitated from Korānic phraseology. The older Arab geographers do not mention Hawrāz, because, as Yāqūt says, Dubais b. 'Abī al-Asādī, who died in 386 (996), was the first to build there, while Ḥamd b. 'Alāʾ Mustawfī ascribes the foundation of the town to Shīhūr Dhu l-Akta; according to the latter, in the viith century it was one of the most flourishing towns in Kūhāzīa, by Wāde still is a centre of the Mandāns. Cf. above, i. 678 sqq.

**Bibliography:** Yāqūt, Muḥṣīm, ii. 321 sqq.; Le Strange, The Lands of the Eastern Caliphate, p. 241.

**Hawar,** see al-Dhirāz (Dhīhān).

**Hawra (Hūra),** a town in Ḥadramūt, N. E. of Ḥadramūt [q.v.] on the Djebel of the same name. The little Wādi Hūra flows past it, running for the earlier part of its course parallel to the large Wādi Anī [see Ḥadramawt, p. 569] and then joining it. At the upper end of the town there is a large ḥarīr with seven stories, flanked by corner towers, which commands the town. Here the ḥākim resides; he is appointed by the Kûšait of Shībām [q.v.], to whom the town belongs. Hawra possesses a small bazaar and two mosques and is surrounded by gardens and fields, on which corn, indigo and tobacco are grown. The streets of the town are narrow and dirty. Leo Hirsch estimates the population at 2000. The figure given by the present author of this town, 5000, is much exaggerated like other figures given by this otherwise very meritorious explorer.

**Hawran,** the chapter of the Bible, Hawrān of the cuneiform inscriptions, Aṣīrīs (Josephus etc., is a district on the other side of Jordan, which has no well marked boundaries. Hawrān proper is the Djebel Hawrān with the plain of al-Nakāra; in the wider sense the name covers the land up to the district of Djādir, the Nahī al-'Alā, a tributary of the Yarmūk, the Wādi l-Shallālā and southwards as far as al-Balkā [q.v.] and the steps (al-'Ashmām). The Turkish name Mutasarārīlik of Hawrān however also comprises the district of Djādir, as well as Djālin (Qulānīs), Adjān (Gilead) and al-Balkā. The governor (muṣarrar) resides at Shaiṭān Saʿd; Buṣr al-Hairī, al-Suwaydā, al-Kunātār, Dārāt (Edrei), Iribd and al-Salṭ are the headquarters of the kā'īn Mikhail's subordinate to him. Under the Mamluks of Egypt the province was called al-Kibīliyya and the residence of the wālī was at Darāt. At an earlier period the ancient Bosra [q.v.] was the capital.
Hawran is entirely a lava formation and is exceedingly fertile, the plain of al-Nu'ra being the granary of Syria; on the other hand, the adjoining trachon of al-Lejla is a dreadful desert. The Hawran range (the Asalamans of the ancients, usually called Djebel al-Duruz) after its present inhabitants, is the highest elevation of the east Jordan country and attains a height of 6000 feet.

Historical. Hawran is rich in historical associations. In so far as these reach back to remote times or belong to the Roman and Byzantine periods, they need not be dealt with here. That even before the Arab conquest there was an Arab kingdom in Hawran is generally mentioned in the article QHASSAN [q. v.].

The capital of Bosra was the first town to be conquered by the Arabs (634) and after the institution of the djund [q. v.] Hawran belonged to the Djjand Dimashq, as it has always since, although this military system of division afterwards fell into disuse and with the introduction of civil administrative divisions the name Wilayet Dimashq appeared. The history of Hawran thus coincides with that of Syria. For a time it attained greater importance during the Crusades, when the Muslims driven out of Palestine migrated hither and were able to make a stand against the Christians here. After the fall of the kingdom of Jerusalem, these immigrants returned to their old homes and Hawran had only a scattered population of Arab tribes left, who are included under the general name of 'Urbân al-Djebel.

In the eighth century the resettlement of Hawran by the Druses of Libanon began. It was brought about by the victory of the Shihâbids over their opponents, the Yemenites, in 711, whereupon the latter migrated to Hawran. At their head was the Hamdan family whose abode was in Suwaidâ. These migrations became more and more frequent in the ninth century, when the condition of Libanon became worse and worse for the Druses. In Hawran on the other hand, they led quite an independent existence, paid no taxes, and in consequence of the fertility of the soil soon attained great prosperity. When the Hamdan, who had hitherto taken first place among the leading Druse families, became extinct, the Astragh took their place. Finally, in 1852, the Porte decided to send troops thither to bring them into submission but they were again withdrawn on the outbreak of the Crimean War, Midhat Pascha [q. v.] therefore sought to come to an arrangement with the Druses peacefully, and appointed one of their sheikhs ka'mma'kân of Hawran with his head-quarters in Suwaidâ; the latter succeeded in arranging the administration of the province on the Turkish fashion, but, although the Sheikhs were quite satisfied as they had now the support of the Ottoman government behind them, the peasants were very discontented and became rebellious, so that utter anarchy soon reigned again in Hawran and the Druses in 1595 even besieged the Muslim population of the village of al-Harîk in the Nukhra, who had taken refuge in the mosque, forced them to surrender and destroyed the mosque. The Porte had again to intervene and bloody battles were fought, which did not however lead to the final pacification of the country, until finally 'Abd Allah Pascha's strong measures succeeded in breaking the resistance of the Druses and introduced a tolerable state of affairs.

HAWSHIBI (plural HAWSHIB), a tribe in South Arabia, of pure Himyarite descent. Their land lies roughly between 45° 45' and 45° 5' East Long. (Greenw.) and between 15° 11' and 15° 30' North Lat. and is bounded in the south by Lahdj (Lahedj) [q. v.], in the west by the land of the Subaili (Sobbi) [q. v.] and of the Haddiyya [q. v.], in the north by the land of the Dja'da [q. v.] and in the east by the lower Yài. The climate is tropical, the land fertile, producing wheat, coffee and cotton. Among the mountains may be mentioned Djebel Shibab (about 6000 feet high). The Wadis Nira and Boma (Bâma) bound the land in the west and east. The capital and seat of the Sultan (Shaikh, 'Akil) is Raha, with a hîsâ and many stone houses. The Sultan receives an annual revenue from England and has to provide 1500 men when called upon. The inhabitants of the country, which is reputed unsafe, are 'Abâbîl (independent tribes) who only obey the Sultan in case of war. They are Shaikhis and mainly cattle-rearers. They are constantly fighting with their neighbours. In 1870 they went to war with the Yâsî with the Sultan. They are said to number 12,000—15,000. Hamdani mentions them as inhabitants of the Djebel Sabîr (Sabh).

Bibliography: Hamdani, Djasira, p. 78, 99, 19; Yâkût, Muq'dam, iii. 367; Ritter, Erdkunde, xii. 676; H. v. Maltrian, Reise nach Südarabien, p. 350—352. (J. Schlieffer.)

AL-HAWTA, the name given in South Arabia to a district which is considered holy and regarded as a place of refuge. The substantive al-hawta denotes a place surrounded by a wall, then a place under the protection of a saint, who is said to reside there. The most important Hawta in South Arabia is that at Inat ('Inât [q. v.], Hadramât, where the famous Shaikh Münasab Bû Bakr b. Sâlim is buried. The second in importance is the Hawta in the land of the Wâhidî [q. v.]. The name Hawta is also borne by the capital of the land of the 'Abâdî, Lahdj (Lahedj) [q. v.], because several saints are buried there. Cf. Lautenberg, Arabica, v. 205—206.

AL-HAWTA (HOTA), a town in South Arabia in the land of the Upper Wâhidî [q. v.] on the Wâdi 'Ama'mân. It has over 1000 inhabitants who belong for the most part to the 'Abâdî family of Muhammad b. 'Umar, who is said to be descended from 'Abd al-Kâdir al-Djâlin (flourished in the viiith century), about 100 forteslike houses and in addition to a large mosque which has seven smaller ones, a large market with shops, many looms and a considerable cotton industry. Al-Hawta is a free, independent town and pays no taxes. Next to Inat [q. v.] it is the most
important place of refuge in South Arabia. The saint of al-Hawṣa who is buried in the great mosque, is the fāṣih 'Ali b. Muhammad, a contemporary of the famous Shāhīn Bū Bakr b. Sālim of Ṣafī. The fāṣih 'Ali is said himself to have planned this town to be a city of refuge and to have laid out its boundaries. The boundary stones (maddām, plur. madāmat) still stand upright. On the birthday of the Mawlid of al-Hawṣa, which is celebrated on three days (Monday, Tuesday and Wednesday) after the appearance of the 6th autumn star at the beginning of the northeastern monsoon, a great market is held in the town, which is visited by people from great distances, e.g. from Ḥarrīb (q.v.) and ʿOmarān. The neighbourhood of al-Hawṣa is very fertile. A mountain of some size rises above the town, where chamois, which are numerous there, are hunted.

**Bibliography:** H. v. Mältzan, Reise nach Sudarabien, p. 130; Landberg, Arabia, v. 189—192.

**HAWWA**, the wife of Adam, created in Paradise out of a left rib from her sleeping husband, which operation caused him no pain. Otherwise no man would cleave to his wife (Thālabi, p. 18; Kiṣā'ī, p. 31). As she was formed from a living being, he called her Hawwa (ibid., also Ṣabari, i. 109; Ibn al-Athir, i. 24, cf. Genesis 2, 21). As Adam was created out of dust and Hawwa out of a bone, man becomes more beautiful with increasing years but woman more ugly (Thālabi, ibid., agreeing with Dent. R., 6, Genesis R., 14 u. 17. Hawwa (Sūra vii. 20) bore the main guilt of the first sin, as, tempt by ibis, she ate of the tree of evil. Tradition relates that Hawwa offered her husband first wine, than the forbidden fruit and so became the cause of original sin (Thālabi and Gen. R., ibid.). Wine is therefore considered the source of all evil. Another tradition says that this meal plunged mankind into eternal grief. (Thālabi and the Midrash, ibid.). Ten punishments, including menstruation, pregnancy and travail, remind the daughters of Eve of their mother's trespass. To console her, Hawwa received the assurance that every pious woman, devoted to her husband, would share Paradise in recompense for the mortal agonies of travail. If she died in child-bed, she would be enrolled in the body of martyrs and united with her husband in Paradise. Jewish and Arab sources mention in almost the same words the marriage of Adam and Hawwa at which God, Gabriel and the other angels were present (Ṣaba B., 75; Sanh., 8, Erubin, 11, Gen. R., 11, 17, Levit. R., 20, Kokhelet R., 8 and Kiṣā'ī, p. 35). After the expulsion from Paradise Adam and Hawwa made the pilgrimage to Mecca, observed several ceremonies and Hawwa had her first menstruation. Then Adam stamped on the ground and the well of Zemzem burst forth and she used it for a bath of purification. Hawwa died two years after Adam and was buried beside him.

**HAYIL (al-HAYEL, ḤAIL, ḤAYIL), the capital of the land of Djebel Shammar [q. v.] in western Nejd in the centre of a long plain called Sāhīla al-Khammasiya, which lies between the parallel ranges of Al-ʿAjā’il (Munīf) and Salmā (Fitti) about 5000 feet about the level of the sea. The town, which is one of the main stations on the route for Persian pilgrims to Mecca, is surrounded by walls about 20 feet high and round and square towers. It is divided into eleven quarters and has a large mosque, a fortified palace with two towers of imposing height, an important market with many warehouses and shops, in which in addition to foodstuffs (rice, meal, spices, coffee etc.) there are exposed clothstuffs, garments, weapons, tools (spades, crowbars), ores (iron, tin, lead ingots) etc., and large parks and gardens. Clothstuffs are imported from Manchester and Bombay, garments from Djeef and Baghdād, tools and ores from Europe. The trade of Ḥayil is important, but industry (chiefly carried on by women, embroidery and needlework) very insignificant. Artisans (smiths, metalworkers, carpenters) are few in number in the town. The houses are well built and mostly of one storey, and the streets clean. Outside the town there are many gardens, palmgroves and single houses, which belong some to the chief citizens of the town, some to the members of the royal family of Shammar. According to Palgrave, the population is 20,000—30,000, while Doughty puts it at only 3000.

The suburb of Ḥayil is Sweifieh (Suweifeh). About the year 1867 after a famine a pestilence raged here which carried off about 200 individuals in a period of two months. During Doughty's stay here the houses were almost empty and the palmgroves quite abandoned. Wāṣīt, a second suburb of Ḥayil, was likewise uninhabited and falling into ruins as a result of this pestilence, when Doughty visited it; the palm trees had shrivelled up and died as a result of this period of neglected irrigation. In Ḥayil itself 700—800 are said to have died of the plague; after the plague a pernicious fever raged in the town for two years. Behind Wāṣīt is the Maṣṣāḥ (cemetery) of Ḥayil, the tombstone of which after the Bedouin fashion are devoid of ornament or decoration and usually contain only the name of the deceased. Between the Maṣṣāḥ and the town is a small colony of nomads, Shammar Bedouins, some of whom are related to the ruling family and stay here only during the spring.

In the beginning of last century the government of Ḥayil was in the hands of the family of Bait 'Alī. Towards the year 1820 'Abd Allāh b. Rashīd, a rich and distinguished chief of the prominent family of Djā'āfīr, attempted to win the throne for himself with the help of his numerous and influential kinsmen. War resulted; 'Abd Allāh lost and had to go into exile but after about ten years he returned to Ḥayil with the help of the Wahhābī chief Faisāl, who owed the conquest of the province of Ḥaṣār [q. v.] to 'Abd Allāh and was appointed hereditary governor (Emir) of Djebel Shammar by the Wahhābī chief out of gratitude for his services. The Arab and European were driven out of the town and almost exterminated by 'Abd Allāh's elder brother 'Ubaid (Abeyd, called "the wolf"). 'Abd Allāh built the great palace. A period of prosperity for Ḥayil began under his son and successor Tefla, who reigned twenty years,
dying in 1864; Téfá improved the defences of the town, built the great mosque and market, and laid out the beautiful gardens of the town: in order to improve trade and industry he invited merchants from Bázra, Wúsí, and other towns, artisans from Moğhán and Yermen and engaged into commercial relations with the other towns of Arabia and Persia. During Doughy’s stay in Hái-yil, Muḥammad b. Rásíh, then the richest horse-owner in Nadjí, (Doughy estimates the value of his horses at £250,000), was Amir.

Hamdání mentions a Wádí Hái-yil in Ilimá (Dariya), which may be identical with our Yákát mentions Hái-yil as a wádi between two ranges of the Taiy (i.e. Asá and Salmá) and as a large district, according to some between Yámánma and the Bód of the Bálíha, according to others in Yamánma itself, inhabited either by the Kúsháír or the Númsír and the Bání Himálm (Hamíán) of the Támír. Sprenger identifies Hái-yil with the ʿAlí Khán in Pólemy.

Házará, the sixth metre of the proseody of the Arabs, has as its scheme two mufášúlm (originally, or rather in accordance with the system, three) in each half-verse. It has one ārūd and two dár: mufášúlm, mufášúlm, mufášúlm, mufášúlm.

The suppression of the n (ka³f) is, except in the dáéré, very usual, while that of the i (ka®b) is rare; but the loss of one necessitates the retention of the other. We also find, though rarely, that mu is omitted at the beginning of a poem. This last omission (ka®rrum) is called qatáár or kbar, when it is combined with ka®b or ka³f. In Persian, Turkish, and Hindustáni a ka®re is found very commonly or rarely of only two feet in the half verse. This metre also shows numerous other irregularities, particularly in Persian, but these cannot be discussed here. For the bibliography, cf. the article Ārūd.

Mát, Ben Chéné.

Házará, Hazárístán (Afghanistán). The name Házará is applied to the race which inhabits the mountain country north and west of the valleys of the Helmand and Tarnák, extending northwards to the Hindukush and Koh-i Bábá and westwards nearly to Herát and the Harúd-valley, but the most westerly tribes in this area are known as the Cábá Aímaq and are distinguished from the Házará proper by creed and language, being Turki-speaking Sunnís while the Hazará are Shi'ís and speak Persian. They are however predominantly of Mongol blood as their features clearly show, although no doubt mixed with the original Ghóri stock of these mountains from which they acquired the Persian language. They are supposed by some to be the descendants of the army of Mángú, but evidence is lacking as to the actual facts. It cannot be doubted however that after the Mongol irruption which fell with extreme violence on the Ghóris, who offered a determined resistance, the depopulated tracts were occupied by Mongol settlers, and that both strains are represented among the Házarás of the present day. They are still a hardy and industrious race, and often employed in other work where physical strength is required; they have also shown a desire for military service in British India. They are on bad terms with the Afghánis under whose rule they dwell, and in 1891-1892 they rebelled against the Amir 'Abbád-al-Ráhnám, but were ultimately suppressed.

The name Házará is no doubt a Persian version of the Turkish mágár, and refers to the "thousands" in which the invading Mongol armies were organized. The whole country is known from its inhabitants as Hazárístán and also as the Házará-djâl or the "thousands".

Házará, a district till lately included in the Pándjáb, now part of the north-west Frontier Province of British India. It consists of a number of valleys and mountainous tracts at the base of the western Himalaya between Kásím and the Indus from lat. 33° 44′ to 35° 10′ N. and long. 72° 33′ to 76° 6′ E. Area 3062 sq. m. Population 528,666, almost entirely Musalmán of the Sunni persuasion. Hindús number only 4 per cent. The most northerly part is the long narrow valley of Kágán watered by the Kúhár K. a tributary of the Djehíán. The remainder of the district is drained by tributaries of the Indus. The Indus is the western boundary in the south, but to the north-west lies a block of mountain country between the district and the Indus. This block known as the Black Mountain is inhabited by independent Páñési tribes. Within the district the population consists partly of Paní tribes (Dááín, Tárín, Utmáznás, Míshwán, Swáiti and Díčáí), and partly of tribes which were at one time Hindús by religion (Gákhar, Tání, Gúdar, Donáli, Kárál, Dááinter and some other). There is a small tribe known as Turk, believed to be the descendants of the Khárághs whom Timúr brought into the district. The Gákharás, Gúdarás and some of the others, are probably descendants of the Suytán (Kushán and Ephthalite) invaders who entered India between 10 B.C. and 500 A.D.

The common language of the country is Hindú, a dialect of the Láhánda or western Pándjáb, but Pashto is spoken by the Míshwán and some of the Utmáznás, Swáiti and Tarikheús. The Gúdarás speak a dialect of their own (see Gúdará).

The ancient name of the country was Uráṣá (still found in the valley of Rásh near Abbótábád). Pólemy mentions it under the name of Asa, its ruler in Alexander’s time was called Arásaka according to Arrian. It formed part of the dominions of Asoka, whose edicts in the Károshthí character are found at Mándaráh. In Híoun Thíang’s time (7th cent. A.D.) by whom it is named Wú-la-shí it was dependent on Kashmir, and is frequently mentioned in the Kádžar tâzgarámi. The town of Pákhlí on the Indus has been thought to represent the Páktyá of Herodotus, and under the Mughal Emperors according to the Aín-i Ābbári the whole country between Kashmir and the Indus.
was comprised in Pahlavi. Invasions from Kshmir continued up till the 12th century. The Mongol
invasions do not seem to have affected Hazara
directly, but the Karlugh Turks who were asso-
ciated with the Shaha of Khwarizm and established
a principality in Kapi and the Kuraun valley,
seem to have spread into the country along the
Indus further north, and were known in Mongol
fashion as the Karlugh "Ming" or Hazara. The
name of Hazara seems undoubtedly to be derived
from their settlement, as were those of the neigh-
bouring tracts of Çaç Hazara and Takht Hazara
in the Atak district from similar settlements of Mongol or Turkish "Hazara". The A'uni Akbari
asserts that Timur left the Turks as a garrison
in Pakhl (Blochmann's trans., p. 454) but it does
not seem that he introduced them into the district.
He probably found them already established and
made them his garrison, as a race of his own
kindred. The evidence shows that their first
settlement on the Indus was two hundred years before
his time. As time went on the Afghan tribes from
beyond the Indus, especially the Swatis and Ta-
náolls, invaded the country and made important
settlements. The power of the Gakkar chiefs and
of the Karluks declined in proportion. From
1748 Hazara formed part of the Durrani kingdom,
and in 1819 was annexed by Ranjit Singh to the
Sikh monarchy. Perpetual wars were with the tribal
chiefs followed. After the first Sikh war in 1845-
1846 Abbott was appointed by the British Govern-
ment to organize the country and he continued
his labours with great success after the annexation
in 1849. Abbottabad, the headquarters of the
district, was founded in 1853 and named after
him. It is now a town of 8000 inhabitants and
the site of a military cantonment. Since his time
the district has continued to prosper, but there
have been frequent troubles with the independent
tribes of the Black mountain, and expeditions
against them were undertaken in the years 1852,
1868, 1888 and 1891 besides some minor opera-
tions.

HAZARASP, a town not far from Khiva but
nearer the Oxus, with which it is connected by a
channel. According to al-Mukaddasi, the town was
of the same size as Khiva and surrounded by a
ditch. It was peculiarly suited to be a fortress on
account of the latter and the many canals, which
cut up the surrounding country and rendered ac-
dress difficult. Atsiz sought refuge here when he
rejected against Sandjar but the town was taken
by the Saidjûk sultan after a two months' siege
in 542 (1147). In the time of Yâkût, who visited it
in 616 (1219), Hazarasp was a well fortified and
rich town. It still exists to-day under the same
name.

Lands of the Eastern Caliphat, p. 450 sq.

HAZARASPID Spe, a name given to the Banu
Fadlîya, who ruled for two centuries in Great
Luristan (543-740 = 1140-1339). For details see
the article LUR.

HAZÎN, Shaikh Muhammad 'Ali b. 'Ali Tâlib,
was born at Isfâhân in 1103 (1692). After visiting
many countries of Arabia and Persia, he finally
settled in India in 1146 (1733). He died at Be-
nares in 1150 (1766). Among his works the fol-
lowing may be mentioned: A Dîwân in Persian;
Farâs Nâma, a treatise on farriery: Khâzâns Maj-
haywan, or Tâfakkir Sâhibiya, a treatise on Zool-
ology; Tâfakkirat al-'Azâd, memoirs of his own
life, with an account of his travels (translation by
F. G. Bouchot, The Life of Shaikh Muhammad
'Ali Hazîn, 1830); Tâfakkirat al-Mu'tânî, notice
son some poets who lived in Persia during the
author's time.

HAZîNÂN, name of the ninth month of the
Syrian year.

HEBRON. [See AL-KHALÎL.]

HELMAND, The principal river of Afghan-
istan. The name also takes the forms Hir-
mânt and Helmand; it is the Eynamnds of Ar-
riana, the Erymanthis of Polybius and the
Hâzamat of the Avesta. It rises in an elevated
valley on the western side of the Paghman range,
which is part of the lofty system of mountains
to the west of Kâbul connected with the Hindú-
Kush and Kôh-i-Bâba, and after a long course
through the unexplored valleys of eastern Hazâ-
rîstân in a south-westerly direction emerges into
the open plains of S. Afghanistan near Gîrîshk.
Below Girishk, near the ruins of Bus it receives the
joint stream of the Arghandab, Tarnak and Ar-
ghasan which drain S. E. Afghanistan. On
approaching Sistan it suddenly turns north and
finally flows into the Hamûn or Lake of Sîstân
[see art. HAMûN]. The irrigation of the plains of
Sistan is drawn from the Helmand.

(H. LONGWORTH DAMES.)

HÉNNA', the henna shrub, Lawsonia in-
ermis L., a tall slender shrub, reaching a height
of 9-12 feet, occasionally becoming practically
a tree, belonging to the family of Hythrâriacae,
with white clustered flowers yielding a pleasant
odour and smooth, entire leaves; it is grown in
congenial soil all over North Africa, Persia and India.
The flowers are used to prepare fragrant essences
and oils. With the powder made from the dried leaves
the nails, the palms of the hands and the soles of
the feet are dyed orange yellow throughout the
east, in Persia also the hair of the head and
beard. Dark hair assumes a cochinile shade, while
light hair becomes a burning red. The powder is
mixed with lukewarm water and, after the hair
has been carefully cleaned, applied as a paste; it
must remain at least an hour. If a deep black
colour is desired, it must be next dyed with paste

(M. LONGWORTH DAMES.)
made from *roug*, an indigo plant. To preserve the peculiar lustre produced by the *henüa* the hair is often again treated with *henüa* for another quarter of an hour after the application of the *roug*.

The tails of the royal horses are also dyed with *henüa* and white horses are turned to dun coloured, or painted with tassels and tufts with stencils.

The flowers, fruit and leaves of the *henüa* have of course many applications in medicine.

**HENÖCH.** (Sec IDES.)

**HERÀT,** an ancient city in *Afghanistan*, situated 24° 22' N. and 62° 9' E. It gives its name to a province and is the centre of the administration and trade of a large district. Population from 15,000 to 20,000. The Great Mosque built in the 13th cent. is celebrated for its beauty. The Mašalla a group of buildings outside the walls was destroyed for defensive purposes when fortifications were constructed. The history of Herât begins in the Avesta. It is undoubtedly the Haroyu or Harašva of the Vendidā, the Haravia of the Achaemenian inscriptions and the Arica of the Greeks where Alexander founded Alexandria Areion. It retained its importance under the Sassanians and the Khalifat. After the conquest of Persia Herât took part in the general rising against the Arabs in 712 the reign, and was taken in Ibn Amur’s expedition in 714 (622). Its importance continued under the Šāmānids, Ghaznavids, and Seldžuqs. It suffered greatly under the Mongol invasions. It was taken by Tūsl son of Čingiz Kūhā in 619 (1222) and the Muslimān population massacred. The chieftains of the Kūt family, who were of Tadjik descent, retained possession of Herât and ruled the surrounding district under Mongol supremacy till 706 (1307) when the Mongols took the town, but Chiyāt al-Din regained the favour of Uljaitūt, and restored the prosperity of Herât. The Kürts held it until its final destruction by Timūr in 785 (1385). The Timūrids under Shāh Rukh made Herât their capital after Timūr’s death, and prosperity began to return to it. Many fine buildings were erected during this period and the town became a centre of art and learning. Shāh Rukh’s reign lasted from 807 (1404) to 850 (1447) and after some short reigns Ḥusain Bišṭārā obtained the power and ruled from 873 (1468) to 915 (1507), and throughout this period Herât was a great and prosperous centre. Towards the end of his reign the defection of the Arghūns and the invasion of Shābān weakened Ḥusain’s kingdom, and Herât was taken by Shābān in 913 (1507). Bābār tried in vain to recover it, but it did not remain long in the possession of Shābān, who was defeated and slain in 916 (1508) by Shāh Ismā‘il who had just founded the Safawi dynasty and established the Shī‘a creed in Persia. He enforced it with severity in Herât, which had hitherto been Sunni. Henceforward Herât remained under Sufi rule, but did not enjoy security at first for, it was captured by the Shābānids under Ummān Allāh in 941 (1538). After the decay of the Safawi rule Herât was included in the kingdom of the Durrānīs under Aḥmad Shah and his descend dants who held it even after they had lost the rest of Afghanistan. Mahmūd Shāh was succeeded by his son Kāmrān who was murdered in 1258 (1842). The Persians had long had designs on Herât and were, it has been supposed, encouraged by the hope of Russian assistance. In 1837 Mahμammad Shāh Kādmār besieged Herât. The defance was organized by E. Pottinger, a young English officer, and after the siege had lasted a year it was abandoned. After Kāmrān’s death however in 1258 (1842) the Persians renewed their attack and this time with success. The town remained in their possession till 1280 (1863) when Dōst Mohammad retook it, dying himself while in camp before its walls. During the wars between Shī‘a ‘Ali and his brothers Herât remained faithful to him and was held by his son Yaqūb. After Shī‘a ‘Ali’s death and the accession of ‘Abd al-Rahmān another son of Shī‘a ‘Ali ‘Aiyābī still held Herât and there collected an army with which he attacked the English force at Kandahār. ‘Abd al-Rahmān fortified the town strongly in 1885 during the visit which followed the Boundary Commission of that year, and it was during this period that the Musalla was destroyed as Hol dick has related.

(M. Longworth Dames.)

He visited Bāghdād and al-Raiyī and attended the lectures of Abu ‘l-Faṣād Muḥammad b. Aḥmad al-Dī‘afar, the expositor of the Qur‘ān Yahyā b. Ammār al-Sidžī, Abu Dharr al-Herewī etc. His most notable pupils were Abu ‘l-Waṣī ‘Abd al-Awwal b. ‘Isā al-Sidžī, Abu ‘l-Faṣād Muḥammad b. Ismā‘il al-Kāmi. He was a great traditioinist, a defender of Ḥanbali orthodoxy and a bitter opponent of the Ikā’ī; he was further an expositor of the Qur‘ān and an inspired preacher, he had also a sound knowledge of history, literature, theology and Sūfism. He was banished for a time to Balkh for his continual warfare on the enemies of the Sunna, and was five times threatened with death. Accused of anthropomorphism, he only owed his escape to his devotion to the Qur‘ān and Sunna. He it was also who induced the people of Herât to use names of the form ‘Abd combined with a divine attribute.

Haḍra, Haidarābād, n. d., iii. 375; Sayyūṭ, Ta-

**HERÊ (OR HARI) RUD,** a large river in Af-
ḡānīs[tān which rises in the Kōh-l-i-Hidā and flows westwards through a long narrow valley between the bank and Sulph Kūd. Ms. to Herēt and Ghōrān, where it turns to the North. At Zu l-Hikār it leaves Afḡānīs[tān territory and flows by Sarakhs into the Tisian oasis where it finally disappears, the water being mostly used in ir-
rigation. It forms the boundary for part of its lower course between Persia and Afḡānīs[tān and Turkīs[tān on the right.

**Biography:** Holdich, *The Gates of India.* (M. Longworth Dames.)

**HERSEK (M. L.)** i. e. Heršak, vīzie[r of the caliph al-Mustazhir. Hībat Allah was appointed vīzie[r in Mahārra 501 = Aug.-Sept. 1107 but dismissed in Kamānšā at the instigation of the Sulṭān Mahār b. Malikshāh. The caliph restored him his office soon after on condition that he pledged himself not to take any disimām into his service, but he was again dis-
missed in 510 = 1110-1109 or 513 = 1109-1110 and forced to seek asylum for himself and his family with the Sulṭān.

**Biography:** Ibn al-Ṣahr (ed. Tornberg), x. 305, 309, 318, 330, 335. (K. V. Zetterstēen.)

**HĪDĀD (A.)** A woman’s mourning garment. [See *ʿindā."

**HĪDĀ (A.),' a lam[poon. *The hidā* is originally a ch stirring or curse; the word itself, the etymology of which is not quite clear, perhaps means something like incantation. The origins of the hidā are connected with the old notion that words solemnly uttered by individuals qualified or authorized to do so have a permanent effect on the persons or objects to which they refer. In the original hidā the poet thus appears with the magic power of his verse inspired by the Dīnā."

Goldziher, *Abhandlungen zur Arab. Philologie*, i. 27 sqq., who gives the words of Bahlam as the oldest example of hidā and *op. cit.*, p. 59, note 4 compares the Arabic word with the Hebrew ʿidā (Is. viii. 19). The hidā as a branch of poetry was particularly cultivated by the Arab poets; several poets were masters in this kind of verse but Dījir [q. v.] may be regarded the palm.

**HĪDĪJĀB (A.), any partition which separates two thrones; whence in medicine the diaphragm (Abū ‘Abd al-Lūṭī al-Khwārizmī, Mafāṭib al-ʿAṣām, p. 156; P. de Koning, *Traite Traite d’Anatomie*, p. 350, 816). — In the Kūrān it has the sense of "curtain", "val[", e. g. one should speak with women from behind a curtain (Sūra xxxii. 53); in the next world the elect and the damned will be separated by a curtain (vi. 44); the term here seems to be synonymous with ʿalārāf and was therefore early explained as *wall* (Ṭabarī, Tafsīr, viii. 126; Baidῑānī, ii. 326) in allusion to Kūrān v[iii. 13. The unbelievers said to the Prophet: *There is a hidā between thee and us* (XII. 4). It is not possible for a man to hear God speaking unless by a revelation or from behind a curtain (xii. 50), as was the case with Moses (ʿAbd, according to al-Suddī; Ṭabarī, Tafsīr, xxv. p. 45). Among the mystics hidā means "all that veils the end", signifies the impression produced on the heart by the phenomena constituting the visible world, which prevents it admitting the revelation of truth (Durrātān, Definitions, p. 86; ʿAbd al-Razzāk, *Technical Terms*, p. 33, no. 116). The passions (ʿawāf) are the main cause of the obscurity, but each limb has a special passion that gives rise to a particular veil; substances, accidents, elements, bodies, forms, and qualities are so many veils, which conceal divine secrets. The higher truth is hidden from all men except saints (wāλī) alone. The opposite of hidā is kāḥf; the condition of soul in the former case is called kāḥf (contraction) in the second vast (expansion). Mystic love (wājīd) is aroused on account of the obstacle opposed to it in the first case (occultation), and satisfied by contemplation in the second (revelation). These expressions are borrowed from the Gnostics (Pistis Sophia, in E. de Faye, *Constituts et gnosticism*, 1913, p. 266).

**AL-HĪDĀZ,** a territory in Ar[abia on the Red Sea, with indefinite boundaries, which is at once understood when we reflect that the word hidāz means "harbor" and is applied in Arab topography to the mountains of Sarat, which shut off the highlands (Nedjād) from the flat coastlands (Ṭīhānā). As the name of a district, Hīdāz is limited to that part of the west coast, which does not belong to Yemen, to be more exact, to that stretch of land which extends from Ṭakra to al-
Līth on the Red Sea with the corresponding hinterland. Neither the highlands of Ṭars (q. v.) in the south nor the ancient land of Madīya and Ḥimā in the north belong to the Hīdāz proper, although they are often included in it, cf. above i. 367* in. 199. In the Turkish administrative system, the Hīdāz is a wilayet whose capital is Mecca, and is divided into 3 sandāiq, Mecca, Medina and Dījād. Although this division was never actually carried out in detail and the Turkish institutions and officers existed for the most part on paper only, it is useful as establishing the area of the Hīdāz proper. Recently however the Porte has made the sandāiq of Medina into an independent mutasarrīflīk which is governed by the ʿAbd al-Hamān and a Muḥāfāz, the commandant of the Turkish troops. For further in-
formation see the article MEDINA.

Al-Hīdāz consists of two very different parts, the flat, barren and hot coast land (Ṭīhānā) and the mountainous hinterland. In Ṭīhānā, which is almost devoid of vegetation — for there are no large wādīs in this part of Arabia — the few permanent settlements are on the coast, with the exception of Mecca, which owes its existence to the ancient holy places there (e.g. the Zamzam well). On account of the many coral banks there are no good harbours on the coast, only more or less available anchorages, which in ancient times suf-
faced for small ships and were then more visited than at the present day. Some, like Leukokome, which Sprenger has recognised in Al-Hawârî, and Dîjîr [q. v. i. 1016], the ancient harbour of Mecca, are now quite deserted, while on the other hand Yanbû [q. v.], the present harbour, and particularly Ijdûda [q. v. i. 1641], have developed into important towns on account of the pilgrims lodging there. The seafaring population is in general dependent for its livelihood on fishing.

The mountainous hinterland is in places not unfertile, for example in the volcanic district of Medina and particularly in the beautiful oasis of al-Tâ'if [q. v.] which from ancient times has been a favourite summer resort of rich Meccans on account of its wealth of fruit and its cooler climate. The hills themselves, the Djebel Karâ east of Mecca, reach a height of 6000—6500 feet. The highest are the hills of al-Tâ'if (6168 feet) and Djebel Radjâ west of Medina (5900 feet). Only the latter are of any importance; the land would not be able to sustain its inhabitants if imports from Europe, Egypt and India did not come to its help. The exports are insignificant.

The Hijâjâ gives its real importance to the two holy cities, Mecca and Medina, which occupy quite a special position in the Muslim world and will be dealt with in special articles. In addition to the coast-towns and al-Tâ'if already mentioned, the Arab geographers give the following, Kûh, Khâbûr [q. v.], al-Murwa, al-Hawârî, al-Sûkhiyâl, al-Awâniyâ, al-Djûfânya, and al-Ushâira and of minor importance Badr [q. v.] Khulûsî, al-Hijâjîr [q. v.], al-Durâ, al-Sahâra, Djaibâ, Tâ'if, and Al-Hijâjâ. Besides these there is a fairly long list of names, which owe their fame to the circumstance that Islâm has consecrated them — when they were not already sites of primitive cults — either through historical associations or as outposts of the sacred territory (haram) of Mecca. It would be useless to detail these here; when they are of sufficient importance for religious reasons they will be found either in the articles MECCA and MEDINA or in special articles.

The population of al-Hijâjâ consists of Arab Bedouins, except in the large towns where it is more or less mixed, particularly in Ijdûda, less in Mecca itself, the old tribal names being Tâ'if [q. v.], Awa [q. v.], and Khazrâdj [q. v.] in Medina, Kûraish [q. v.] in Mecca, have their place in history while Tâ'if [q. v.] and Hudhâil [q. v.] are still known as the inhabitants of Tâ'if and the southern Hijâjâ. We may also mention Bali [q. v.], Djuhâaina [q. v.], Sulaim [q. v.], Hutaîm [q. v.], and Harb [q. v.].

The various pilgrim-routes which meet in Mecca have lost most of their former importance, which will be developed with the development of steamships, which has caused the majority of pilgrims to travel via Djiddâ, and will be still more deserted when the Mecca railway, which now runs from Damascus to Medina, reaches the holy city. Cf. M. Hartman, Die Medi- kabahm in Orient. Litteraturzeitung, 1908, p. 1 sqq.

The history of the Hijâjâ is the history of Mecca and Medina so that the reader may be referred to these articles.

Bibliography: Cf. the notes above i. 372 on the geographical literature of Arabia and also the bibliographies to the articles on MECCA and MEDINA. Of recent literature we may mention al-Batânînî, al-Khâlî al-Hijâjâryâ [3], Cairo 1329; 'Abd al-Muhsîn, al-Khâlî al-Ya'maniyya bi-Sâhib al-Dawla Husainîl-Djâhî, Amir Mekka, Cairo 1330, and Lammens, Le Bureau de l'Islam, p. 9 sqq. AL-HIJâJîR (Hadjier, Haascher, Houdschier, Al-Heugr in Ritter) a town in Arabîsia, a day's journey from Wâdi 'l-Kura [q. v.] south of Tâlma [q. v.] identical with the ancient commercial town of 'Eylez in Ptolemy and Egra in Pliny. The town no longer exists. At present the name al-Hijâjîr is given by the Bedouins to the flat valley between Mâbrâk al-Nâ'îka (Marjân) and Bir al-Ghânam which stretches for several miles and has a fertile soil with many wells at which numerous Bedouins encamp with their herds. Two roads lead from al-Hijâjîr to Mecca, the Naqdî road, the modern pilgrim route, and the Marw road, which was in ancient times the road followed by the pilgrims to Mecca.

To the west of al-Hijâjîr is a mountain of five isolated sandstone cliffs, called Athâliyâ (in Doughty, Travels, always written Ethelih), on which are carved a large number of artistic monuments (including the Kaşr al-Biint, Bait al-Sâghîkh, Bait Akhâmî, Mahâll al-Madjalis, and Dîwân, which are adorned with numerous sculptured figures of birds and animals and many inscriptions). Ch. M. Doughty, the first European to visit Hijjur (1876-1877) and to examine closely the cliffs, with their carvings, found the latter (except one, the Diwân) to be exclusively tombs (family vaults) with niches and remains of human bodies. Pilgrims going to Mecca rest on Mount Athâliyâ for a day and offer up prayers here. In ancient times there lived here a godless and arrogant cave-dwelling people, the Yamûdî [q. v.] who were allowed in the Kûrân that they knew their houses out of rock. To convert them God sent a kinsman of theirs, the prophet Sâlih [q. v.], to them, who made a camel and her young one arise out a cleft in the rock as evidence of his divine mission. But when they continued in their idolatry and slew the camel which Sâlih begged them to spare, God sent an earthquake which destroyed them. The sandstone cliffs of al-Hijâjîr with the monuments carved in them are also called Moinân 'Sâlih 'Sâlih's towns' after Sâlih. According to the Arab legend, the patriline of Abraham, by Gabriel's command, abandoned Hejjar and her daughter in al-Hijâjîr. The Mûmâl is also said to be buried here beside his mother. Al-Hijâjîr also finds a place in the history of the Prophet. When Muhammad was going through Tabûk towards Damascus in the year 9 (631) he came with his army into the neighbourhood of al-Hijâjîr. The troops wanted to rest here to refresh themselves at the wells but the Prophet would not allow them to enter this place that had been visited by the wrath of God. In modern times the Wâhâbî chief Sa'd wished to build a town here but the scheme fell through on account of the vehement objections of the 'alamâ to rebuilding on a site cursed by God. Hijâjîr, since Doughty's visit, has been twice visited by the Alsatian C. Huber, in 1879 and again (with Euting) in 1884.

AL-HIDJR, a district in Arabia near Bishá [q.v.] and the land of the Khazázim. It is called after Hidjr b. al-Azd. The land of al-Hidjr was very fertile and rich in fields of wheat and barley and had many fruit-trees (apples, peaches, figs, plums and almonds). Among the clans of Hidjr Hamdání mentions the 'Amir (with the subdivision 'Abd), Aşğibiga, Rabia, Shahr (with the divisions al-Asal, Bal-Harîh, Malîk, Naşr and Nażla). Among places in the land of al-Hidjr he mentions Ashşdan (very important), al-Haţa, Hâchah (the largest town in al-Hidjr), Hâbab, al-

Khadrâ, Na'dinâ, Rhâb, Zasâma, among wâdis Aid, Bâhîn, Dshabâl, Ilî (with the village of Hîbal), Kârib, Khiš, Nişyat (with many fruit-
trees) Raymâ, Sadawân and Tânîmâ (with 60 villages).

(J. Schleifer.)

HIDJR, the name of a village (indeed of several) in South Arabia which is exclusively inhabited by Sâdâ or Azhrâf ("lords", "notables", descendants of the Prophet) and is considered sacrosanct. These villages (e.g. Hâfa in Arhab [cf. Hâshid and Bâkî] may not be overrun in war. The members of the Hidjra, who are chiefly judges (khâḍîr) and jurists (jâhaba), receive from the tribe to which they belong a certificate of their membership of the Hidjra and enjoy great esteem, which surpasses that of a shâhid. Individual members are also found scattered throughout the villages as writers and preachers.

Another Hidjr different from the preceding is that of Djebel Dîn (see Hâshid and Bâkî) of a more monastic character, whose members attend to the tomb of the saint (wafîl) Kûdam b. Kâdir on this hill, cf. also the article HAWA.

(J. Schleifer.)

HIDJRA (HIDJRA), the migration of the Prophet from Mecca to Medina, the starting point of the Muhammadan era.

The Prophet, not having succeeded in overcoming the resistance of the Kuraish and on the other hand having already won friends among the people around Medina (then called Yathrib), resolved to remove to the latter town. The Arabic word hidjra should not be translated "flight", for the idea of fleeing is not properly expressed by the verb hajâra. This verb means "to break off relations, to abandon one's tribe, to emigrate". At the present day in Muslim countries the name Muhâqir is still given to Muslims who have quitted countries in which Christian powers have become established. The word does not imply that there has been precipitate flight but only difficulty in living or repugnance to living in the country abandoned.

Muhâqir, according to Muḥâqir (Tâhir), had ordered his followers to migrate to Medina; they set out in small parties. Among the first to reach Medina was 'Omar, afterwards Caliph. This migration had certainly been preceded by negotiations with the people of Medina, as Tâhir's Chronicle (Persian synopsis ii. 437 sqq.) relates. The Prophet himself set out accompanied by Abû Bakr. He left 'Ali behind to return some property entrusted to him to their owners. 'Ali remained three days behind in Mecca and then joined the other emigrants.

A very popular legend is associated with the Prophet's migration. The Kuraish wished to slay him and appeared in the morning at his house; but they met only 'Ali who drove them back at the sword's point. They then rushed off to pursue Muhammad on the road to Medina. When the latter heard of this, he hid with Abû Bakr in a cave and God willed that a spider should spin its web at the entrance to this cave. When the Kuraish saw the web, they thought it impossible that any one could be inside and passed by. This story explains the allusion in Sûra ix. 40: "when the two were in the cave and he said to his companion: Be not afraid, see! God is with us". (Cf. R. Basset, La Bordade du Châaël el-Bousiri, p. 81—85, and the parallels given there).

Along the road the Ansâr came flocking up to the Prophet: they took the reins of his camel and begged him to settle among their tribes. But Muhammad answered: "Let my camel go; it is obeying God's command". (Cf. Mas'ûd', Prairies d'Or, iv. 139).

The traditions regarding the erection of the first mosque and institution of the Friday service are also connected with this journey. The Prophet is said to have entered the house of Sa'd b. Khai-

ghama in Kûhâ and to have had a mosque built there. He is said to have performed the solemn Friday service (gala al-Djum'a) for the first time with the Bani Zâlim, when he came among them on his way. Arriving in Medina he took up his abode with the Ansâr Abû Ayîb.

Authorities are not agreed about the exact date of the Hidjra. According to the most usual account, it took place on the 8th Rabî I (20th Sept. 622). But this would not be the date of the departure from Mecca but of the arrival in Medina. According to other versions, it was the 2nd or the 12th Rabî I. Al-Birâni says that the Jews were just celebrating the 'Ashurâ festival (Day of Atonement) when the Muslims arrived in Medina.

The 8th was preferred as it was a Monday. According to a tradition, the Prophet is said to have answered when asked why he observed Monday especially, on this day was I born, on this day I received my prophetic mission and on this day I emigrated".

The fixing of the Hidjra as the beginning of the Muhammadan era dates from the Caliph 'Omar. The traditions which try to trace it to the Prophet himself are devoid of all probability. According to another tradition, Ya'la b. Omaîya, Abû Bakr's governor in the Yemen, was the first to use it, but the view that it dates from 'Omar is by far the most prevalent.

*It is related in various forms that 'Omar after
having regulated the administration of finance and made up the registers and the levies of taxes found himself embarrassed about the dating, or rather he was reproached for not dating at all. According to a tradition quoted by al-Biruni, Abu Mas’ud al-Agha’i wrote to him saying: “Thou art sending us letters undated”. The Caliph discussed the matter with his officers and after investigating the customs of the Greeks and Persians it was decided to establish an era. Some proposed to date from the birth of the Prophet, but this date was not certain. All is then said to have proposed to take the Hijira as the beginning of the era, as it marked the date when the Prophet began to assume sovereign power. This decision was come to in the year 17 or 18, some however say 16, but the general view is the year 17.

Before fixing this date the Muslims gave their years names such as “year of the permission”, “year of the earthquake”, “year of the farewell” etc. (Cf. al-Biruni, Chronology, p. 35). When Muhammad began his preaching, the Arabs were reckoning from the “year of the elephant”.

The year of the Hijira was then chosen as the year 1, but the calendar was already fixed by the Kursan, the months were retained and Muham- ram was retained as the first month because business is resumed then after the pilgrimage. The era thus began, not with the day of the Hijira but with the 1st day of the moon of Muharram of the Hijira year. This first day fell upon a Friday and corresponded to the 16th Tammuz (July) 933 of the Seleucid era, and 622 of the Julian calendar.

(B. CARRA DE VAUX.)

HIKAYA has had a varied history, of importance not only lexicologically but also in the development of Arabic literature. In Lane (pp. 618 sqq.) the history is unfortunately confused, but when we turn to the native lexicons (e. g. Lisiin, xvili. 207 sqq.) we are met with the paradox that the meanings are not those found in the great mass of later Arabic writings and that the commonest later meaning, “story”, “narrative”, occurs hardly at all. The root does not come in the Kur’an (there hadith is commonest as a noun and hikayat and nabba’s as verbs; on asabt al-awwalin see Sprenger, Leben, ii. 390 sqq.) and as used in traditions it means to imitate an action, usually in a bad sense (Lisiin, loc. cit.). Hikayat is therefore misused and from that all follows. In the first instance it is mimicking for purposes of amusement; the professional hikayat is a mimic. Then imitation of speech may be reproduction; thus hikayatu ‘anhu ‘l-hadith 2 reproduced from him the tradition”. It then also involve simple re- semblance as though one thing reproduced another by being like it. So the meanings remained for at least the first four centuries. Theologically the distinction lasted much longer. In the Kulliyat (xvili., cent. A. D.; quoted in Muhiti al-nabhi, i. 431”) hikayat cannot be said of Allah since there is nothing like his speech; but see Haidawi on Kür, xxxviii. 164 and Ibn ‘Arabshah, Tafihat al- Khulafa, ed. Freytag, p. 108, l. 25. In the Fihrist (latter part of iv. cent.) narratives are hikayat, sometimes ahadith, and stories told for entertainment are asmur or khwarafat or ahadith but never hikayat; see, for example, the well-known passage on the history of The root Nights (pp. 304 sqq. and cf. p. 313). Asmur, of course, may also be historical, e. g. al-asmur al-tahabiya (p. 305, l. 9) while hadith has, been from beginning to end, the broadest word of all. But hikayat in the Fihrist only makes a reproduction of a statement, transcript, e. g. p. 275, l. 20 hikayat min khifat . . . “a transcript from the handwriting of . . .”, l. 21, nii khidiki hikayaturku, “of which this is a tran- script”. It may often be translated “statement”, and is in avato recita when there is nothing to the contrary. In Hamza of Jihabah (early part of fourth century) the usage of the root is the same, e. g. p. 17, l. 12, p. 64, l. 1, p. 65, l. 13; p. 201, l. 4 of ed. Gottwaldt. In the Aghani (Abu I-Faraj d. 356) hita, hadith and khabar seem to be used indifferently for narrations, but hita as in the Fihrist and by Hamza, e. g. ed. Baldiz, l. p. 44, l. 20: hadiik mutaw’i min abib akhir hikayatu wali-lasfu yisatu wa-yamiki “this is a general reproduction of what I heard from Abib Alkahr although the expression may not be exactly in his words”. Yet the verb hikayatu occurs in the meaning “narrate”. See vol. viii. p. 162, ll. 7 and 10, where the verb and hikayat come side by side, the latter in the sense “imitation”. Apparently the noun retained the original meaning longer. In Mas’udi’s (d. 345-346) well-known passage on the Nights (Muraqja, iv. 59 sq.; de Sacy in his Monographs on the origin of the Nights gives the passage in four forms) khwarif is the word used for such tales; hikayat does not occur. It may be said generally that the older translations of this word (e. g. by Gottwaldt, Kosegarten, Barbier de Meynard) are misleading. Thus in Mas’udi, viii. 16 sq. it is mimicking that is meant and not story-telling. But when we reach Hariri (d. 516) hikayat is used at the beginning of the Ma- gma’ at indifferently with hadatha, aghbara and rawa in the sense “to narrate”. But he also (ed. de Sacy, vol. ii. p. 420) uses hikayat in the old sense of “resemble” which later became so ar- chaic that the commentators had to explain it. With Hariri the change of meaning is complete, and when we turn to the oldest Ms of the Nights (both the Galland Ms and that of the “Story of Sul and Shumal” at Tubingen are of the early xivth cent. A. D., after A. H. 700) we find hikayat in normal use for a story told for entertainment. See Seybold’s Geschichte von Sul u. Schumal, p. 164, and my “Story of the Fisherman and the Jinn”, in the Noldeke-Petschini, passim. Of the words for such tales used in the Fihrist and by Mas’udi, asmur has fallen back to its original use of conversation and tales told at night in the desert life, and khwarafat has developed to mean only ridiculously impossible stories, as opposed to those which are fictitious but pleasing; thus in Damiri’s Hayat al-Hayawan, i. 185, l. 31 of. ed. of Cairo 1313, khwarafat al-ri’yada, and ii. 101, l. 25, khwarafat al-’arab. Only in Tripoli, ap- parently, is it still the normal word for “story”; see Stumme, Moeren aus Tripolit.

We are now left with two questions. Can this
change of meaning be in any way bridged and explained: and, what must have been the character of the first ̣ikāyā in the new sense? There have always been stories in Arabic from those told in the Kurān and the competing translations from Persian by Naḍr b. al-Ḥārīrī ( Ibn Ḥāfīẓ, p. 191), to the modern ḥadīṣī or Marchen, told in colloquial and, so far, reduced to writing and print only by European scholars and some eccent- ric Egyptian and Fāry. The text's multiplicity of names for the different kinds of the story shows how they have been cultivated and how keenly they have been distinguished. Some of these names have been given above. Others are ṛisālā which began by being the oral recital of a narrative or a poem by a ṛāsā and has now become an ordi- nary word for "story" and the normal word for a play, comedy or tragedy, with or without ṭam-tāthīl (tim-tim), maṭḥāl (matthal), the story as an example or illustration of some situation or prece- dence. Kalīla wa-Dimna, is Kalīla wa-Dimna and all beast-fables (dīl al-asāmat al-ḥayawān), sīra (sīyar), "manner of life" and then "biography"; naṣāil, unconnected anecdotes; ḏiṣa (ashing), a story of any kind but specialized by Kurānic usage and that of the professional ṣūgīl (Goldschir, Mah. Studien, i. 161 sq.) to legends of the past and stories about the prophets. To these last the first ̣ikāyā formed an exact opposite. They were not stories of the past but pictures of the present. This is made plain by the only example so far printed, ̣iṣāyāt Abī l-ʿAṣām al-Baghḍādī, edited by Adam Mez under the title, Abūl-Ḥasan abū ǂbagai Sittenbild. The author, Muḥammad Abū l-Muṭṭahhar al-Aṣā’ī, shows in his preface that he knows that he is producing a new literary form. It is not to be a poem or a riṣāla or a maṣāma (he must have known those of Hamadānī) but a realistic transcript of Baghdād manners and phrases in the person of a, for us, very disputable representative who, however, seems to be regarded by the author as of literary refinement. Story there is none, but a day is filled with a dinner party and with scops of verse and of or- nate prose in the current forms of rhetoric, but all concrete and direct, written not for the sake of playing with words but for producing a picture of life. The use of a single figure to mirror the ideas and ways of a city he defends with a long quotation from DMIṣ (Bayān, ed. Cairo, p. 31, ll. 12–24) who seems to have been the first to take pleasure in pictures of classes of the people. Yet it is only a new application of the realism of the old poetry of the desert to the artificial town life, marked, however, with all the coarse- ness of language and idea which distinguished the town from the desert and the new from the old. Of the ̣iṣāyā badāwīya, meant probably as a contrast, which the author says (p. 2, l. 16) he has added we have no trace left. But ̣iṣāyā in the quotation from DMIṣ is evidently used of a mimic and not of a literary artist who creates a representative figure. The development which produced so striking a literary genre as that of Abū l-Muṭṭahhar calls, therefore, for explanation, and I would suggest that it was due to the influence of the Aristotelian doctrine of μιμεσις in art (Poetics, i.–iv.). DMIṣ died in A. H. 266 and Abū l-Muṭṭahhar wrote after 400 (Mez, p. xv.). But it is evident that the Poetics of Aristotle found translators and attention only slowly. There was a Muḥḥīṣar by al-Kindī (d. about 247; Fihrist, p. 250, l. 5 and 257, l. 6) but no full translation until that of Mattāb, Yūnus (d. 328; Fihrist, pp. 250 l. 4; 263, last l.) and his pupil Yahyā b. Abī (d. 364) wrote a ṭafṣīr on it (Fihrist, pp. 250 l. 4; 264, l. 12). In that translation (ed. Margoliouth in his Arabica Orientalia) the word used for μιμεσις is ḥikāyā. The conception of literary art as an "imitation" of life may thus, when translated into Arabic forms, easily have resulted in Abū l-Muṭṭahhar's new literary type. The next development into "story" must have come very rapidly for we find that Ḥarīrī (d. 516) has forgotten so completely the earlier uses that he can apply ḥikāyā even to such amīḍāt as the apologues in Kalīla wa-Dimna (ed. de Sacy, ii. 13). When he implies in the same passage that his own maṣāma are also ̣iṣāyā he is much nearer the true meaning, for they are certainly renderings of contemporary life though treated with artificial rhetoric and a playing with words for the sake of the words. On this side they are the nearest that the Arabic of literature ever reached toward that life of the open road and of living by one's wits that is the mark of the picareseque novel. But in popular Arabic the same motif was taken up and extended in such tales as the cycle that surrounds the name of 'Ali al-Zaibāq. On the picareseque side these are true reproductions of life; there is an abbrev- iated recension of them in the Night and much longer independent forms have been printed at Beyrut and Cairo. But before ḥikāya reached the possibility of being used for any story it must have passed through a stage in which it meant a fictitious story, not of wonderful happenings in the past or in distant lands or by the agency of the djīnum and of talismans, but of such life as its readers themselves knew. Examples would be the cycles in The root Nights known as "The Hunchback" or, very differently, "Ali b. Bakrār and Šahms al-Ṭahār". In this way a specifically new thing entered Arabic literature. There is no trace of it in the Fihrist even as there is no trace of the beginnings of the maṣāma as developed later by Hamadānī and Ḥarīrī. We have record there of professional entertainers (mudhfsan, nādāmūn), pp. 151–155), of wonderful tales, love-stories and stories of the djīnum (pp. 304 sq.), but of nothing which can be identified as belonging to this particular genre. To Abū l-Ṭarāḍī, the author of the Aghānī, Ibn Ḥalīlīkān, in Wünstfeld's text (no. 451) ascribes a "Book of ḥikāyāt", but this elsewhere is read al-ṭarādī, "taevuns"; (Kosegarten, Proc- eins to his ed. of Aghānī, p. 196, and so, decisively, Wright, Christomathy, p. 87, l. 11 from the autograph Ms.). We have thus the appearance, practically at the same time between the fourth and the fifth cen- turies of the Hijrī, of two new forms which in their beginnings were closely akin but which quickly separated into two widely different types. The maṣāma was at first practically a ̣iṣāyā in the original sense, and the ̣iṣāyā of Abū l-Muṭṭahhar is practically such a monologue, though not one delivered standing as was the maṣāma. But to Abū l-Muṭṭahhar his new form was distinct from the maṣāma and was rather a development from the mimetic ḥikāya. The intention in the two forms was different and the difference is expres-
sed in the names applied to them by their authors. The maḫmūma was an oration and therefore ran out in rhetoric; the hikāya was a reproduction and therefore turned to action and life. The latter transformation must have been aided by the rapid development in the verb ḥāk of the meaning "to believe." Muslims "public story-teller" and hikāya came to be applicable to any tale, while still retaining even in the colloquial (see Dozy, sub voc.) the possibility of the original meaning. And probably even in the hikā- wātī there is still some feeling left of the mimetic, as the oriental story-teller always acts out his tale. Yet the terms are sometimes curiously confused. Thus in Nushat al-Abār wa I′Asma fi Aḥbār Dīwān al-Kinā (date?) there is (pp. 82–89) ed. of Cairo, 1905) a short realistic story fi ḍiāmm al-niʿād which is called a maḫmūma.

Only one consideration remains. This development has been conditioned and limited by a constant factor. The professoriated, at least in Arabic Islām, has always, with few and individual exceptions, looked down upon the story and refused to recognize it. He has never condescended to a narrative of fictitious facts and events told for its own sake. Such he left to professional entertainers, buffoons and the vulgar in general. The only stories recognized as forming part of polite literature have been those with an ulterior object. They have been apologues (anīṭāl) as in Khāla wa-Dīmma, Fakhrat al-Aslāf, Saltān al-Muḥsī and the like; or simply vehicles for poetry and rhetorical prose like Laylat al-Shāhāk and the whole range of maḫmūmāt; or collections of historical and literary anecdotes like Ḥām al-Nūr, al-Fārādī beʿd al-Shāhād and Maṣārī al-Uṣhākhā; or stories with ethical or mystical purpose, as Saltānān and Abālā and Hāyī ibn Yākūn of Ibn Sīnā and the Muḥkāmātāt of 'Ali `Azīz of Crete. Yet Muslim writers were early in contact with stories in good literary standing which came to them from without. They had translations of Greek romances and of Persian and Indian tales (Fīrūz, pp. 305 sqq.; Ḥamza of Iṣbahān, p. 41 sqq.). In the time of the compiler of the Fīrūzān and his school it was evidently possible for a reputable author to write stories; on p. 306, ll. 9 sqq. he gives the names of several. See, too, (p. 304, ll. 21 sqq.) how Dījalshīyār, a writer of distinction, could occupy himself with the compilation of a collection similar to The 1001 Nights and a brother of Shāhī could transcribe it. But the popularity of such things under the Abbāsid was so great that the warrāḥān took to writing them and that naturally affected their standing (p. 308, ll. 9 sqq.). The relation also to the professional jester and entertainer was too close to see on these pp. 140 sqq. and especially on Abū l-Tāliba and his standing, partly as astronomer and partly as nādir of al-Mutawakkil and purveyor of kāh literature, p. 151, ll. 23 sqq. So stories tended to be anonymous and to be classified with dubious subjects — stories of the bat-fālān, of Djalāh, of kāh (pp. 313 sqq.). This is well illustrated by The 1001 Nights. We have there stories showing in their structure a technical skill beyond any public reciter; but they are as anonymous as Märchen; their authors did not dare to own them. Such are Kamar al-Zamān and Budār, "The Three Ladies of Baghdad", "The Three Apples" and the realistic novels. The romances of chivalry, on the other hand, in so far as they professed to be biographies (siyār) and not hikāyāt, required the support of the authority of stated authors, but the names given are usually unknown to us and probably always false; cf. above on Ṭantara, i. 362 and on Bārk, p. 589 sqq.

The above holds of Arabic-speaking Islām. In Turkish, apparently, and still more in Persian, stories retained a position of higher literary respect and were treated with greater care as to style, although there also they tend to anonymity. Further, the Turkish medērān corresponds closely to the old Arabic ḥākīa, and in the modern development of a new Turkish literature the art of the medērān is influencing the realistic novel. For many specimens of medērān-stories — strikingly resembling in type the hikāya of Abu l-Mutahhar — see Georg Jacob's Türkische Bibliothek, passim, and on the whole subject the introduction to vol. i. 6 sqq. and Paul Horst, Gesch. d. türk. Moderne, pp. 12 sqq.

Bibliography has been given in the course of the article; but the first reference must always be to the Einleitung of Mez to his Abuḫūṣūm.

(D. B. Macdonald.)

HIKMA. (Hebr. ḥokhmā, Syr. ḥekhemrēkhā, "wisdom". In the ancient portions of the Korān the term is applied to the Prophet's preaching (xvi. 116; liv. 4), then it is used as synonymous with "sacred, revealed books" (iii. 43, 75, 148; iv. 57; v. 110; xxi. 41; the "Gospel" xiii. 63) and applied to the Korān itself (ii. 231; iv. 113; xxxii. 34; lix. 2). Its original acceptance is found in ii. 272; applied to David, ii. 252; xxi. 19, and to the sage Luḵān, xxx. 11. In this last passage it is explained by Ṭabarī, (Ṭaṣfīr, xx. 39) as "knowledge (ḥak) of religion, reason and truth" and by Baidawi (ed. Fleischer, ii. 113), "Hikma in the conventional language of the learned means the perfecting of the human mind by the acquisition of the speculative sciences and complete faculty for doing excellent deeds according to the ability possessed". The same idea of wisdom is already found in the Kāthān inscriptions where H-K-M is an epithet of the moon-god. (Ditlef Nielsen, Zeitschr. d. Deutsch. Morgenl. Gesellschaft, lxvi. (1912), p. 592, l. 25; H. Deroenbourg, Revue d'Asyriologie, v. (1902), p. 117 sqq.). The lexicographers define ḥikma as "the knowledge of the best things by means of the best science" (Liddān, xx. 30); "to be just in a judicial decision, to know the truth of things as they are and to act according to the requirements thereof" (Ṭāqū al-ʿArūs, viii. 253); "the science in which is sought the true nature of things, as they are in themselves, as far as is humanly possible (Ḥāḍḏiḫ Khalfā, Lex. Bibl., iii. 89)." Hikmat al-ʿIrāq, a kind of neo-Platonic mysticism, is the philosophy of illumination (mujhriyya) [see Falsafa, p. 50b infr.]. Practised as early as the time of Avicenna who wrote a work entitled al-Hikma al-Mujhriyya, it had at that time a secret character which it has since lost. The Alchemists call their science ḥikma (cf. Mafāṭīḥ al-ʿIlm, p. 256).

(HUAR.)

HILADI (or HAILADJ), a Persian word adopted into Arabic, an astrolcal term, associated with kahhādā by Ibn al-Rūmī (died 284 = 897) in a celebrated verse. According to the Burūhan-i ḫāqānī, it is derived from the Greek, and means “elixir of life”. By its asonance to Hailadji, the word has given ‘Aṭār a title for his Hīdāyā Nāmah, a long Persian poem, which describes the ideal of mystic union in the form of the story of a martyr.

HILĀL, an Arab tribe belonging to the Maʿṣādī (Ismaʿilī) group. Its genealogy is Hiliāl b. ʿĀmid b. ʿAbd b. Maʿṣūm b. Bakr b. Ḥawwāzīn . . . b. Kaʿīs ʿAllān. During the Dāniliya they worshipped at Tabāla the idol Khalsa, called the Kaʿba of the Yemen, which was also worshipped by the Badjilā, Ḥārītī b. Kaʿb and Khaṭṭāb.

They lived in Najd (on the Yemen border) and were neighbours of the Sulaim [q.v.]. The following places belonged to them, al-ʿAbīla, Buraika (with the Ḥarīta of the Banū Hiliāl), Dūmī, al-Futuḥ, al-Kurāhī (the two latter were already ruined by Hamdanī’s time), Gharwās, Ṣarrār (a large town on the road to Ḍaqrā with numerous wells, palms, and cornfields), Ṣirāh b. Darīla and the famous market place of Ḫaṭā (in Hamdanī’s time); the following wādis: Dīdhān, Ṣirāmīya, and Turāba (near Mekka, very fertile; shared with the Dībā and ʿĀmid b. Rabīʿa), and the following mountains: Buṣh [with the lake al-Nakūz; in Wüstenfeld, Register, p. 224, wrongly Boss and al-Baʿa (Baʿba)] and al-Kaṣā. There were also many Hiliāli at Bishā [q.v.]. According to Hamdanī, they spoke good Arabic.

Historical. In the pre-Muḥammadan period, Dānīla b. ʿAbī Ḫurīza, chief of the Hiliāl, on a raid stole several of the Azd; the chief of the Azd, the poet Hāḍīzī, then made war upon them and took many prisoners. On the ‘Ayyād (al-Watīdāt) between the ʿĀmid b. ʿAbd b. ʿAbd and the Tāmm, the Hiliāl fought on the side of the former and lost nearly 80 men killed. During the ‘Abīdī [q.v.] battles between the Kurāsh and Kainānī on the one side and the Ḥawwāzī on the other we find the Hiliāl on the side of their kinsmen, the Ḥawwāz [q.v.]. Just before the conclusion of peace between the Kurāsh and Kurāsh and the Kainānī, at the invitation of Wāḥb b. Muʿāthtib, the chief of the Thilīj, a tribe related to the Ḥawwāzī, they made a raid upon the Banū Lāṭīb, a clan of the Kainānī and stole their cattle, under the leadership of Rabīʿā b. Ābī Ẓabīyān in conjunction with other tribes of the ʿAbbāsid Caliph al-Wāṭḥik (230 = 844—845) his general Būghal al-Kabīr sent an army against the Hiliāl, who were then with the Sulaim creating unrest in Medina, and had three hundred of the malcontents thrown into prison in Medina; they attempted to escape from here along with the Sulaim prisoners but were prevented by the Medinēse and, when they resisted, were massacred to a man. The tribe afterwards migrated to Egypt where they settled at first in the Nile Delta, but were afterwards conquered by the ʿAbbāsid Sulṭān al-ʿAzīz (365—386 = 975—996) and forced by him to take up their abode in Upper Egypt, as they had taken the side of the Karmaṭians. Māriskī tells us that in 797 they lived in the Aswān district in the province of ʿAyd; among their clans in Egypt he mentions the Banū ʿAmīr, Ḥabīb, Ḥadījīr, Ḫudhrīr, ʿIrāq (at Ḥumrin), ʿUkba or ʿAḥba (Wūstenfeld, Mārkhīr (see Bibl.) p. 404 erroneously: Corra) and Ḏamiya near ʿAṣūr (ʿAṣūr; Wūstenfeld, l.c.: ʿAṣūr, a misprint) and Asnā. In the year 444 = 1052, at the instigation of the ʿAbbāsid Caliph al-Mustaʿṣir (427—487 = 1035—1094), they migrated to North Africa (Kairawan) where after considerable fighting they conquered the Ḏārīs, the former governors in the Fāṭimid, then the real lords of the country. Many tribes in Africa trace their descent from Hiliāl.

The migration of the B. Hiliāl to Africa and the wars in which they had to wage during the conquest of the country form the historical background of a collection of heroic tales and love stories, the romance or rather epic, Sira al-Hili (History of the B. Hiliāl) which exists in two recensions (Sira al-Šāmīya and Sira al-Ḥijāyāya) containing three cycles.

The first cycle describes the history (the Sira proper) of the B. Hiliāl, in Bilād al-Sarw wa ʿUbdā. Two sons, ʿAbīrā and Dībārā, are born to al-Mundhir, son of Hiliāl, by his two wives Ḥudhrībā and ʿAdhābā on the same night. Dībārā goes off with his mother and afterwards becomes Sulṭān in Najd.— The Emīr Ḥāzīm and Kirk of the line of Dībār rule in Bilād al-Sarw. Kirk marries al-Khādira, the daughter of the Sheff of Mecca, whom he had aided against the king of Rūm. She bears him a son, the dark Barakāt, afterwards called ʿAbū Zaid (Ẓād). Hāzīm’s successor is his son Sīrīhm (Ṣarīh); the latter is succeeded by his son ʿĀṣān, who marries Kharma, queen of the Yemen, after conquering the fire-worshippers in the land of Bardhakha, against whom Kharma had appealed for help. India is conquered with the help of ʿAbū Zaid and Hasan then goes with Kharma to Bilād al-Sarw wa-ʿUbdā. The second cycle deals with the migration (riḥa) of the Banū Hiliāl to the land of Najd. A famine drove the Hiliāl from Bilād al-Sarw to Najd, where they were received in the most kindly fashion by king Ḳūnum and his sons Dīyāb (Diya, of the line of Dībār) and their people, the Banū Zughba. The Hiliāl conquer the king al-Haiḍāb, who was chief of the seven rulers of Najd; Hasan, who marries al-Naṭīfī, sister of Dīyāb, then rules in Najd with vassal kings. A war breaks out between Dīyāb, who kills two of Ḳūnum’s brothers, and ʿAbū Zaid; Dīyāb submits and peace reigns. The third cycle deals with the migration of the Hiliāl to the west (Taghribah) and their wars with the Zanātī Caliph in Tunis. In 460 = 1068 ʿAbū Zaid, with his retinue goes to Tunis to seek a more productive dwelling-place on account of the famine reigning in Najd. Saʿdā, the daughter of the Zanātī Caliph, falls deeply in love with
HILAL — HILF.

p. 783. Hilal was put to death as a Shafi'ite heretic by U'bad Allah (Shabani's sister's son) in 939 (1532-1533).

Bibliography: Sâm Mirzâ's biographies; Sprenger's Cat. Libraries of the King of Oudh; Bâbur's Memoirs, trans. Erskine, p. 196, and Pavet de Courteille, i. 411; Ḥâšib al-Suyû, ed. Bombay, Part iii., vol. iii. 350, where he is called Mawlaan Nûr al-dîn; Ethè in Grundriss der islam. Philologie, ii. 228, 245, 297, 301. (H. Beveringe.)

HILF (A.), a league or confederacy, originally of tribes or clans, which had previously formed more or less close units. The ceremonial act by which the alliance was usually completed seems to have had for its object the unification of the previously separated groups. Cf. Joh. Pedersen, Den Semitiske Ed etc., Copenhagen 1912, p. 10, 20—32 (German ed., Der Eid bei den Semiten, 1914, p. 7, 21—31), where it is made probable that the idea of "swearing" is not the fundamental notion in the root ū-l-š but has developed out of the notion of the oath of a kîb. Bûrākî, who then takes the throne, by his tyrannical rule auras a general rebellion among the B. Zughba in which he loses his life at the hands of Naṣr al-Dîn, son of Dîbah.

Of the two chief heroes of the romances, Abû Zaid and Dîbah, only the latter is found in history, but there he plays only an unimportant part, like Roland, the hero of the epic of the Charlemagne cycle.

The brief synopsis given here only covers the main outlines of this romance, so highly valuable for philology and the history of Arab culture, which contains a great number of separate stories. Cf. M. Hartmann, Die Beni Hilal-Geschichte in the Zeitschr. für afrikan. und oce. Sprachen, iv. 289 sqq.

HILAL AL-SÂBI. [See al-Sâbi.]

HILALI, the pen-name of BADR AL-DIN. Of Cağhân origin and born at Astârâbâd he was educated at Herât, and was patronised by 'Ali Shâh. The fullest account of him is by Sâm Mîrzâ who was a friend of his. (See Silvestre de Sacy in Not. et Extraits, i. 285). The account there given of his begging to be put to death by a certain young man is not in the B. M. copies of the Tahâfat-Sâmi and may be an interpolation. Hilalî's best known poem is the Shâh Darwish (Shâh u Gâ-dâ), Bûrâb severely criticises its morality, and Rûcû, ii. 656, seems to take the same view, but Professor Ethè claims it to be a spiritual poem, and has translated it into German verse, Morgennâd. Studien, p. 197—282. See Ind. Off. Cât., N. 1426.
A hereditary right of the ḥālif confirmed by Kūrān iv. 37 (according to another view it refers to the brotherhood of the Mūhadžirūn and Anṣār) was abolished by xxxii. 6; cf. al-Ṭabarī, Taʾṣifīr, v. 31—33; Th. W. Juybīlī, Handbuch des islāmischen Gottes, p. 239 note.

In Islamic law which was to make all its adherents brothers the ḥālif was condemned; the Prophet is made to say: "I ḥālif li ʾl-Islām, but he is said to have recommended the fulfilment of obligations of alliances contracted in the Dāḥiliyya (cf. also al-Ṭabarī, o. c., v. 34; 12 sqq.)

HILL. [See ḤALIL].

At-Hilla, a town in the wilāyet of Bahdād, the capital of the sandjak of the same name, with 30,000 inhabitants (Cuinet), was founded in 495 (1101—1102) by Šaḍāka b. Mansūr al-Mazaydi and given the name Ḥillat Bān Mazyad (settlement of the B. Mazyad). The site was happily chosen by the vigorous Arab emir on the site which had once been occupied by the famous city of Babel, ruins of which still exist some miles up the river. The river, which flows past the town and which has since about the viii (xii) century been regarded as Euphrates proper, was regarded by the Arab geographers as an arm of the main stream and was called Nahr Šūr al-Asfal. Even before the foundation of Hilla there was a flourishing town here, called al-Djamāʿian, on the left bank, while Šaḍāka built his town on the opposite side. The bridge of boats, by which communication between the two banks was carried on, soon became the main passage across the river on the road from Būhād to Kūfa, which had previously led via Ḫir ibn Hubairah. Hilla as a result rapidly began to flourish and down to the present day has always been a centre of great importance, from the military point of view also.

Bibliography: Yakūt, Muqātdā, ii. 322 sqq.; Ibn Ḫubairah, ed. de Goeje, p. 214; Ibn Baṭṭūṭa, ii. 97; Ritter, Erdkunde, xi. 783 sqq. (where the older travellers are given); Le Strange, The Lands of the Eastern Caliphate, p. 71; Cuinet, La Turquie d’Asie, iii. 160 sqq.

AL-HILLA, ʿṢārī al-Dīn ʿAbīd al-ʿAzīz b. Saʿīd, an Arab poet, born on the 5th Rabiʿ II 677 (26th Aug. 1278) at Hilla on the Euphrates, settled at the court of the ʿUtrūqī of Mārdīn and sang their praises. In 726 (1326) he went to Cairo to the court of al-Mālik al-Nāṣir but soon returned to Mārdīn and died in 750 (1349) or 752 (1351) in Baghādād. As a rule he only follows in the footsteps of his predecessors in his very numerous poems. Only in popular poetry did he introduce an innovation by inventing a kind of mawṣūlāh, called mānawīān.

The collection entitled Durar al-Nuḥār, in which the name of the ʿUtrūqī al-Mālik al-Maḥṣūr of Mārdīn is sung, contains 29 poems each of 29 distiches, all of which begin with the same letter and end with the letters of the alphabet in order. A poem entitled al-Kāfīya al-bahiyya is devoted to the praise of the Prophet and was annotated by the author himself. The Kāfīb al-ʿṣīl al-kaḥl is a treatise on the metres of popular poetry called saṣāl, muṣāl, kāḥlīn, and ʿāzīzān. His Divān was printed in Damascus (1297—1300) and Bairūt (1300); a poem in honour of Malik al-Ṣāliḥ Abū ʿl-Maḵārim was translated by G. H. Bernini into Latin (Leipzig 1816).

(CL. Huart.)

AL-HILLī, the native of Hilla [q. v.], the name of three esteemed Imāmīya theologians.

1. Nādīm al-Dīn Ḥaḍār b. Muḥammad, called al-Muḥākṣik, died about 674 (1275), author of the Sharḥ al-Islām, the standard handbook on Shīʿī law (translated into Russian by K. Sembegev, into French by Querry).

2. ʿĪṣām al-Dīn al-Dīn al-Ḥaḍīṣ b. al-Muṭṭahar, called ʿAlīn, died in 726 (1326); author of the Kāfīya al-ʿAbdāl, besides other treatises.

3. ʿAbd al-Mabāḥ, died in 806 (1403), "Ṣalih al-Muṭaʾakhkhīrin".

Bibliography: Kūfisīrī, Riwāt al-Djamāʿāt, lith. Teheran 1307, pp. 20, 145, 235; Brockelmann, Gesch. der arab. Liter., i. 466; ii. 164. (LOUIS MASSIGNON.)

HILMEND [See HELMANN.]

HİMİLAL [See ḤİMAL].

AL-HİM ĀR (A.), the ass. Tame (al-ahlī) and wild (al-waṣāhi, al-farād) are distinguished. Some of the tame asses are beasts of burden, others are ridden; many of the latter are very swift. The ass can find its way again by a road even though it has only traversed it once before; its hearing is keen and it suffers little from disease. The ass is of special importance in Persia, Syria and Egypt. Many Arabs will not ride an ass out of pride, and it is not considered proper to mention the ass by its real name in good society. Its bray is exceedingly repulsive; the dog howls with pain when it hears it. When an ass brays, it has seen a devil; when a cock crows, it has seen an angel. If a stone be tied to an ass’s tail, it will not bray. When an ass sees a lion, it stands still or runs at the lion; it is said to be saved thereby. If a man is bitten by a scorpion, he should sit backwards upon an ass and the pain then passes to the ass. The uses of various parts of the ass in medicine are innumerable.

Wild asses are so like one another that no man can distinguish them. The he ass is very jealous; when he sees a young male, he tears his testicles out with his teeth for fear he should cover a she ass, when he grows up. The she ass knows this and therefore shortly before foaling she goes to some inaccessible place and does not return to the herd until her foal has hard hoofs.
and can run swiftly. It is further remarkable that individuals never separate from the herd, even though there are thousands of them. Hunting wild asses is therefore very easy. The hunter hides in a narrow pass and waits till a wild ass comes along and then kills it. The others could escape if they fled back, but as they remain together, the hunter is able to slay as many as he cares. This however does not agree with the descriptions of hunting scenes collected by G. Jacob from the poets.

There is a breed called Abhdariya, called after a king of Ardashir which bred with wild asses or those that had run wild. These are the finest and swiftest among wild asses. According to some authors, the wild ass reaches an age of 200, according to others, 800 years.

(J. RUSKA.)

**HIMS** (pronounced Ḥums) is situated in the great Orontes plains of Central Syria, about a mile from the Orontes (Naar el-Azār) name of stream connected with it. The town, which has 50,000 inhabitants (of whom 15,000 are orthodox Greeks), is the capital of a Levā under a kāmmaḵām and belongs to the wilayet of Damascus. It is connected by railway with Tripolis, with Ḥamā and Aleppo, and with Damascus via Rayḥān. Ḥums (called 'Emeisa' by the Greeks and Romans; on the various forms see the article 'Emessa' in Pauly-Wissowa's Realencyclo.) is not one of the towns founded by the Seleucids; the town is first mentioned by Pliny; in the time of Pompey the adjacent Arethusa (Restan) was the seat of an Arab dynasty (see Marquardt, Römische Staatsverwaltung, i. 245). Emessa was the birthplace of the Emperor Elagabalus, who rebuilt with great splendour the famous temple of the sun-god here from whom he took his name, and furthered the prosperity of the town in every way by granting it privileges. In the Byzantine period also when we already find the name Xwfw; it was a flourishing city and the see of a bishop.

At the end of the year 13 the inhabitants concluded a treaty with the Arabs by which by paying a sum of money they secured peace to protect their trade. In the beginning of 14, with the help of a Byzantine garrison, they were able to ward off an attack on the town, but it fell to the Arabs at the end of the year after two months' siege. They seem to have left the town again next year, at least, it is several times said that it surrendered to Abū 'Ubayda in 16 and received a grant of protection. On the division of Syria into military districts Ḥums became the capital of a jund [i. v.] It rebelled under Marwān II., was taken by storm and severely punished. As a rule the jund's of Ḥums and Aleppo were administered by the same governor. We possess information on the revenues of Ḥums for various periods [cf. Ḥalāb]. While the figures for Ḥums are wanting in the Ljrāh al-Dawla and in al-Muqaddas, we still possess of Ḥums's and of Ḥums's figures. The yield of the taxes of Ḥums (cf. Le Strange, Palestine under the Moslems, p. 44-48) (reconciling the dinār at 10 shillings) was:

a. for the reign of ʿIrān al-Rashīd (787-193), according to a quotation from al-Dāhishiyīn's Kitāb al-Wustār, 530,000 dinars and 1000 camels-loads of dried grapes (the vineyards of Ḥums were famous and were only destroyed during the Crusades).

b. for the year 204 (Kūdāmā's Kitāb al-Khārīj) 310,000 dinars (the same sum is given by al-Ifsafānī, quoted by Ibn Khurdaḡbīb).

c. for the year 250, according to Ibn Khrudaḡbīb, 340,000 dinars.

d. for the year 278, 220,000 dinars (al-Yaḵṣībī, who wrote about this time).

The low figures given by Kūdāmā, al-Ifsafānī and al-Yaḵṣībī are due to a different method of calculating the revenue; they have perhaps deducted the salaries of the officials or other administrative expenses in their calculation.

Under the Ḥamānīd Saif al-Dawla [q.v.] Ḥums passed under the rule of the kings of Halab and was frequently granted by them as a fief. Among those who there held it we may mention Saif's cousin, the famous poet Abū Fīrās ʿAli, whom Sa'd al-Dawla deprived of the town. In 367 he granted Ḥums to his general Bakdūr, whose government of it was highly praised; a minaret of architectural interest with a Kufic inscription dates from his time. During this period Ḥums suffered from the repeated ravages of the Byzantines. In 475 it belonged to the notorious Bedouin chief Khilaf b. Mulaṭīb (cf. M. Hartmann, Zeitschr. d. Deutsch. Pal. Verein., xxiv. 49-66), who recognised the Fātimid caliph as his overlord. Enraged at this and moved by the complaints of Khalaf's subjects against his cruelty, the Saljuḵ Sultan ordered the Emir of Syria to take him prisoner. He was besieged in 483, captured and brought in a cage to Isfahān. Ḥums was granted to Sultan Tūṭḥū from whom his son Rīḏwān inherited it. He granted Ḥums to Rūṭḥū from whom his son Riḍwān inherited it. He granted Ḥums in 491 to his stepfather Dānāh al-Dawla, who was murdered by the Ismāʿīlīs in 491. Later we find an Emir Karadžā (perhaps identical with the vassal lord of Ḥarrān, one of Malikshekā's mamluks. After his death in 506 his son Khirbān [see ḤAMĀ] succeeded him and died in 523. His children, who were still minors, suffered a great deal from Zangi's efforts to conquer Ḥums, till their guardian in 530 exchanged the city for Palmyra and Rahba with Shihāb al-Dīn Maḥmūd, king of Damascus. The latter at first granted it in fief to his vizier Onor, but after long negotiations finally transferred it to his stepfather Zangi in 532 (Onor received other towns in compensation). Nār al-Dīn inherited it from Zangi and his son Ismā'īl from him, till Saladin received it in 570. Four years later he appointed his cousin Muhammad b. Ṣhirkūh ruler of it. With one interruption (it was taken by al-Nāṣir Yusuf II of Aleppo in 646 and ceded to him, but seems only to have remained a short time in his possession), his descendants remained rulers of Ḥums till 661; they had readily opened their gates to the Mongol Khān Hulālgī. From 661 it was governed by deputy-governors, sometimes attached to Ḥamā, sometimes to Damascus. In the xviith century an aqā of a native family ruled there, independent of the Paša of Damascus. In the xvith century Ḥums passed, like Aleppo, under Egyptian rule (1813-1914) but it suffered so much from the arbitrary conduct [cf. ḤALĀB] of the officials that a rebellion broke out, which was with difficulty suppressed.
Only a few insignificant ruins of the city wall (see plan) and gates survive, while of the citadel, which was destroyed by Ibrahim Paşa, a tower with an inscription of the year 594 of Saladin’s cousin, Muhammad b. Shirkūh, and a gate still stand (see plan). The mausoleum of the great general Khiḍr b. Wadej, also known as Wadej (plan 15), which formerly stood on the site of the qasba, has recently been rebuilt. (The valuable inscriptions were previously copied by van Berchem, Freiherr v. Oppenheim and M. Sobernheim). A number of mills on the Oronites belong to Himṣ, of which one, as the Arabic inscription shows, belongs to the year 524 A.H. and another with Turkish inscription to the year 975 (N.B. this is the only Turkish inscription of this period in Syria). The most interesting building is the great mosque (plan 11), in which half of the cathedral is said to have been incorporated at the beginning of the period of Muslim rule. Hefeld writes the following note on it: The great mosque lies in the centre of the bazaar and is entered from the south of it. The main entrance, on the west side, leads through a vaulted passage into the court, and a side entrance on the east leads directly into the hamam. The hamam is an oblong space with two naves each with 13 cross-vaultings. There is a small dome above the bay of the window of the mosque. In the west side, a second, older mihrab with gold mosaic, which seems to belong to the earliest Muslim period. The court façade of the hamam shows that the plan has undergone many alterations. This wall was apparently originally the wall between the main and side nave of a basilica church of quite an unusual type: a large arch, alternating with 3 double-storied sections, each of 5 small arches. The columns and capitals, of which many lie in the court of the mosque are remains of the ancient building. This court is oblong, surrounded by narrow cloisters, quite undecorated. An estrade with basin and mihrab almost fill it. Beside it, on the west, is a well with a cupola resting on six antique columns.

graphy: some inscriptions have been discussed by v. Berchem in Inscriptions de Syrie, Cairo, 1897, p. 54—56 and in Frhr. v. Oppenheim’s Inschriften aus Syrien etc., p. 4—13.

(M. SOBERNHEIM)

HIMYAR, the name of an ancient stock in South Arabia. The form Homeritae, Omey-
irae, in the classical authors suggests a diminutive formation; the Arabic form now usual is only found in Theodorus Anastasios (6th century A.D.), Hist. eccles., ii. ch. 58 (cf. Nicephorus Callistas, Hist. eccles., xvi. ch. 37) in the form Hamsel or Hamsus, Nonnosos, who went to Aksum and South Arabia as the envoy of Justinian, and following him, Malalas use the form Ameyri, which goes back to the Ethiopian Hemer. The form found in inscriptions is Him-y-r-n with nimation and the plural Hm-y-r-n, which presumably is to be pronounced Ahmurd (al-ahmir). According to the Arab authorities, the Himyar, who were divided into a number of smaller tribes, lived around Lajīb, in the district of Zafrār and Rida and also to the east in Sarw Himyar and Nadīj Himyar. The Homeritae are first mentioned in Aelius Gallus’s account of his expedition to South Arabia in 25 B.C., preserved in Pliny, Hist. Nat., vi. § 161, with the note that they are “the most numerous tribe” (numerisimimos esse); ac-
cording to Strabo, xvi, ch. 4, § 21, at the time of the Roman invasion Marib, i.e. Mārib, the capital of Saba’, belonged to Iṣasaros who ruled over the Rhammanites. This statement most probably refers to Turṣarath Yaldbh, king of Saba’ and Dhū Rai’dān, i.e. of the Sabaecans and Himyaries, who are known from inscriptions. When the anonymous Peripitus Maris Erythraei was written (about 80 A.D.), the Himyaries ruled the greater part of South Arabia, namely, the coast of the Red Sea and Indian Ocean up to the frontiers of Ḥḍramawt, with the corresponding interior, including the land of the Sabacans; they also held a portion of the East African coast (Azania). Their king Charibahal the legitimate ruler of the Himyaries and complaint the inscription of Zafrār (Z-y-r n inscriptions; in addition to the form with T — Tahrā, Thadrān, Thadrā, Thadrā and Taphra — the spelling with S, Saphar, is also found, in Pliny and Potomus; Ethiopian Saiš; not to be confused with the port of the same name on the Indian Ocean), which remained the chief city of South Arabia till the Persian occupation. This ruler was on friendly terms with the Romans. He seems to be identical with the Kari-
ba’il Wt-r Yubīn king of Saba’ and of Dhū Rai’dān, of the inscriptions, coins of whom are also known, struck in Raidān. The passing of the hegemony of South Arabia from the Sabaecans to the Himyaries took place about the end of the second century B.C. and may have been partly brought about by the discovery of the sea-route to India by the admirals of the Ptolemies, whereby Saba’ lost its importance as the centre of the overland trade of South Arabia. Greek and Roman sources are all silent regarding the further history of the Himyaries down to the 4th century A.D. The inscrip-
tions so far discovered give a series of kings’ names but without precise dates. In the reign of the Emperor Constantine II. (337—361) Christianity was introduced by the Indian Theophilos, a native of Dūt; he built churches in ‘Aden and Zafrār and other towns; even at this time there were numerous Jewish communities here (Philostratus, Hist. eccl., iii. ch. 4). According to another account in Theodoros Anagnostos, i.e., the conversion of the Himya-
rites did not take place till the reign of Constanti-
nius (491—518). About the middle of the 4th century the Abyssinians, the *ḥ-h-ḥb-h-n of the inscriptions, i.e. the rulers of Akṣum, found a firm footing in South Arabia and Axäana, the king of Akṣum, a contemporary of Constantius II, in his inscriptions includes among his titles that of *king of the Himyaries and of Raidān*. The Abyssinian invasion seems to date back as early as the third century; Marcianus (beginning of the 4th century) calls the Homeritae an Ethiopian people, and this description is often repeated in the older Byzantine writers. The Roman em-
perors were in regular communication with them (see Zeitschr. d. Deutsch. Morgenl. Gesellsch., xxxi. p. 73), partly in the interests of trade and partly to secure their support against the Sas-
ianics, who were endeavouring to penetrate into South Arabia through ‘Oman. About 521 the na-
tive princes under Dhū Nuwās (Dūnas, Dinnus, Daminianus of the Greek sources) aroused a serious rebellion against the Abyssinian invaders. Dhū Nuwās, who is said to have had to profess Judaism and to have organised the persecution of Christians in Nefrān, which has become famous through
the martyrology of St. Arethas, fell in 526 in battle with Kaleb Ela-Asbaḥa, king of Aksum, and the land passed under the sway of an Abyssinian dynasty, whose founder, Ela-Abraha, made himself independent of Aksum a few years after the withdrawal of Kaleb Ela-Asbaḥa. We possess an authentic source for his history and his relations with Byzantium, Persia and Abyssinia, as well as with the Ghassānids and other Arab princes, in the great inscription of Marīb of the year 540, in which he also gives an account of the restoration of the great dam. In this period arose the "laws of the Ḥimyarites" and other apocryphal works, which are associated with the name of St. Gregentius, bishop of Zāfār under Ela-Abraha, and his successor (Migne, *Patrol. Graec.* , vol. 86, i. col. 563-784). In the reign of Emperor Justin II, about 570, the Ḥimyar chief invited the Persians into the country. Masrūq, the last ruler of the dynasty of Ela-Abraha (corrupted to Sanatukes in Theophanes Byzantius), fell in battle with the Persians, who placed the country under military occupation, leaving the various districts (miḥlāf) under native princes. The Persian governors (marzubān) resided in Šanā. When Muḥammad sent his first envoy to the Yemen, the kingdom of the Ḥimyar, as such, had long ceased to exist and the new religion was adopted without appreciable opposition by the Ḥimyar chief, as well as by the descendants of the Persians, the so-called Ḥimyarīs.

The inscriptions hitherto found in South Arabia in the local alphabet, which we usually call Ḥimyaritic inscriptions, belong to widely varying periods, from about 700 B.C. to about 550 A.D. and only a few fragments among them owe their origin to the Ḥimyar in the narrower sense of the word. Linguistically they fall into two main groups, the Sabaean and Minæan inscriptions; the Ḥimyar texts belong to the former group. The coins hitherto discovered — almost all silves — apart from a few of the earlier issues, are on the other hand mainly to be ascribed to the Ḥimyar. The alphabet (called muṣnad by the Arabs, which however inscriptions "inscription"), a variety of the Phoenician alphabet adapted to the Ethiopian, contains all the consonants of the Arabic language with the addition of a variant of the sibilant س. The Sabaeans-Ḥimyar language is an Arabic dialect which is distinguished from northern Arabic by certain grammatical peculiarities (mimination instead of nunciation, replacement of the article by the affix -ān, ḥaf'al for ʿaf'al in the 1st form of the verb) and also in vocabulary. On the other hand the supposition of the Arab philologists that the later South Arabian dialects or even the dialects of Mecca and Kādār are offshoots from the ancient language of the Ḥimyar has proved incorrect, although they have preserved in their vocabulary many roots and words, which are not known to Northern Arabic, but which are found in the inscriptions.

Before the discovery of the inscriptions the accounts of the Arabs formed, with the scanty records in ancient and Byzantine authors, our only source for the ancient history of South Arabia. The ṭubbāš of the Yemen are already mentioned in the Kurān and the kings of the Ḥimyar were henceforth known in history by this name; we now know from the inscriptions that the kings of the Sabaeans and Ḥimyar always called themselves malik and that ṭubbāš is a corruption of the name of the powerful family of Bata of the tribe of Ḥamdān. The same inscriptions teach us that the statements in the literary sources on the Ḥimyar, kāṣṣ and adhūyā (kings and feudal lords) are for the most part based on misunderstandings. The lists of kings handed down in this way to us and the doings of individual ṭubbāš are still more unreliable. In the Kurān we find allusions to the Old Testament story of the queen of Sheba, to persecution of the Christians by Dhib Nuwās in Neddīn (not certain, see Zeitschr. der Deutsch. Morgenl. Ges., xxxv. 610 sqq.) and to the expedition of a ṭubbāš against Mecca. At quite an early period the expositors of the sacred book and the story-tellers at the court of the first caliphs began to devote attention to the ancient history of the country (Ibn 'Abbās, Ka'b al-Aḥbar, Wahb b. Munabbih, ʿAbbāb b. Shārya); although several of them belonged to Yemen, they made less use of genuine popular tradition than of foreign legends, e.g. the Alexander romance and Jewish traditions, and added other matter of their own invention.

The last traces of this kind of historical research are popular works still eagerly read like the story of Bilqis and Dhi l-Karnain, the Sira Seif b. Dhi l-Yasam, etc. The works of three natives of South Arabia are much more serious however: al-Fathún fi Maluk Ḥimyar of Ibn Ḥishām, the celebrated biographer of the Prophet, the Ḥillah and the Sīfat Qaṣrāt al-ʿArab of al-Hamdān, as well as the so-called Ḥimyarite kašīda with commentary, and the lexicon Shams al-Ulīm of Nashwān (died 573); they read the ancient musnad's, although their language was no longer entirely comprehensible to them, and used them in their genealogical and historical researches; how far they worked from old native traditions has still to be investigated, but in any case they were also independent of the scholars already mentioned. Only the information regarding the last century before Islam can be used for the writing of history properly.

nello Yemen (Roma 1911); lastly the royal inscriptions of Aksūm (most recently in vol. iv. of the "Deutsche Aksüm-Expedition", 1913).

HIND, daughter of the Meccan Ḫabīr b. Bābīla, of the family of ʿAbd Shams, which was related to the Ḩāshimids. She was the wife of Abū Sufyān, to whom she bore several children including Muṣawiyah, afterwards Caliph. Tradition seems to take a special delight in drawing an unusually repulsive and no doubt caricatured picture of the short, stout woman, who certainly had a very passionate temperament. Her hatred of Muhammad was increased by the fact that Ḥamza killed her father in the battle of Badr. With other women she accompanied the Meccans on their expedition against Medina in the year 3 and was one of the most ardent in urging on the men to battle; when Ḥamza fell in the conflict on the hill of ʿUhad, she is said to have mutilated his body and bitten his liver. When the Prophet attacked Mecca in the year 8, she stormed against her cautious and far seeing husband who wished to hand over the city without striking a blow. According to some narrators, the Prophet on this occasion condemned her and a number of other people to death but afterwards pardoned her; this is probably only a malicious invention, as other writers make no mention of it and in some traditions she makes a very stormy appearance at the paying of homage; it is moreover very improbable that Muḥammad would have injured by such an order the feelings of Abū Sufyān, who had met his overtures halfway. Besides she had every reason to be content with the new regime as her son was made governor of Syria; according to one story, she took part in the battle of the Yarmūk with undiminished vigour by urging on the Muslims to circumscribe with their swords their uncircumscribed opponents. In the end Abū Sufyān divorced her and she is said to have vigorously revenged herself by various intrigues. Some traditions make her die in the reign of ʿUmar, others under ʿUṯmān.

HIND. The general name for India in Arabic and Persian chronicles and geography. The earlier writers generally make a distinction between Sind and Hind; the first name being confined to the countries bordering on the Indus and Mīhrān, and the other to India beyond the limits of the Muḥammadan conquest. This is the use in Ibn Khuradḫibīh, al-Masʿūdī, Ibn Ḥawqāl and al-Biṟūnī, and is clearly shown in Ibn Ḥawqāl’s map (reproduced in Elliot and Dowsen, Vol. I. p. 32). In later times the name Hind was extended to embrace the whole of India, the term Hindūstān being restricted to the Northern plain of the Ganges and Ḥindān, and such is the modern use. After the invasions of the Charnawīds and Ghurīds it became less usual to speak of Sind as a separate country from Hind. The name Hind is originally identical with Sind, the Skr. sinḍu ‘river’ becoming hindū in the Avesta, and having first been applied to the R. Indus was extended to the country adjacent to it.

HINDĀL MĪRZA, fourth son of Bābur, born early in 1519. His real name was Muḥammad Abū l-Nāṣir, but the name Hindāl “Taker of India” was bestowed upon him by his father who was then meditating the conquest of India. Hindāl’s mother was Dildār Begam, so that he was the full brother of Gulbān Begam, the Memoirs-writer. He proved unstable and foolish, rebelling against his elder brother Ḥumāyūn, and had the faḵr Bahlūl brutally murdered in order to show his adherents that he would always be an irreconcilable rebel. He was killed in eastern Afghānīstān, in November 1551, in a night-attack made by his brother Kāmrān on Ḥumāyūn’s camp. By this time, Hindāl had become reconciled to Ḥumāyūn, and died, fighting for him. The good-natured monarch was inclined to lament his death, but Muṣīm Kāhū coolly told him that he was bewailing his own gain, for now he had one enemy the less (Bīyāt al-Bīyāt’s Manuscr. quoted by Erskine). Hindāl was buried at Kābul, near his father. His daughter Ruḵayya Begam was Akbar’s
first wife, but had no children. She brought up Shāh Dājhān, and died in Agra at the age of 84 in January 1626. (Blochmann 309).

HINDI, a modern Indo-Aryan vernacular, descended from an earlier Prakrit, and comprising two distinct languages, i. Western Hindi, spoken by more than 40 millions of persons inhabiting the Gangetic Doab and the country to the north of it, and 2. Eastern Hindi, spoken by 22 millions in Awadh (and throughout India wherever men from Awadh have wandered in search of employment), Baghelkhand and Chattisgarh. The chief dialects of Western Hindi are Hindustani [q. v.], Bangari, Bradj Bhāsā, Kāsnavdi and Bandel; only the first of these, under the appellation Urdu [q. v.] has been extensively used as a literary medium by the Indian Muhammadans. The names of a few Muhammadans are recorded who occasionally wrote verses in Bradj Bhāsā. Abu 'l-Faid (commonly known as Shaikh Faidji), the friend of Akbar, and Faidji's younger brother, Pahim, and Akbar's great general, Khān Khānān Mirzā 'Abd al-Raḥīm, all wrote Hindi dīvān's (or couplets), doubtless under the influence of the strong interest which the emperor took in Hindi thought and literature. Less illustrious poets of the same period were Saiyid Muḥārak 'Alī Bilgrāmī (b. 1583), Saiyid Ibrāhīm (b. 1573) who became a Vaishnava and was known by the name of Ras Khān, and his pupil, Kādir Baksh. Such instances however are rare, and when Muhammadan poets, such as Amīr Khusraw, are said to have written Hindi verses, the dialect they employed was Urdu rather than any form of Bhāsā. (Journ. As. Soc. Beng. XXII, 443). The legend that Sa'ūdi ever wrote verses in Hindi has been shown to be without historical foundation (Journ. As. Soc. Beng. xxi. 513 et seq.).

Eastern Hindi has three chief dialects, Awadhia, Baghelkhand and Chattisgarh. Western Hindi by Muhammadan writers are rare; the most notable is the Padamawati of Malik Muhammad Džādī, written in the Awadhi dialect about 1540; it is a romantic epic founded on the story of the taking of Čītōr by 'Alī al-Dīn Khlīdī in 1503; the poet himself explains that the story is an allegory of the search of the soul for true wisdom.

Up to the early part of the nineteenth century all Hindu literature was in poetry; Hindi prose first took its rise under the influence of English officials, but the cultivation of it has been almost exclusively confined to Hindu writers and any account of it would therefore be out of place here.

Hindu-Kush, a lofty and extensive range of mountains which forms an extension of the Himalaya to the south-west from the region of the Pamir. It extends from about 75° E and 37° N. to about 66° E. and 35 N. The continuation of the range further west bears various names (Kōh-i-Bbā, Siyāh-Bubuk etc.) this portion being generally known to modern geographers as the Paropamisus, although the Paropamisus of the ancients no doubt included the Hindu-kush. The name Caucasus was also used by the Macedonians, the name according to Arrian having been bestowed upon this range by Alexander the Great.

The north-eastern part of the Hindu-Kush rivals the Himalaya in the height of its peaks and the extent of its glaciers, some peaks being over 25000 feet in height, among these Rakkhipošh south of Hunza and Tiračmir west of Čital are among the best known. The extreme north-east Hindu-kush at its point of junction with the Pamir forms the boundary between three systems of drainage, those of the Indus, the Oxus and the Tarim, while further west it forms the watershed between the Indus and the Oxus, and can be traversed by several passes. From Hunza the Kilik Pass leads to Sarikōil and Yārānk, and also to upper Wakhān. From Yāsīn and Mastūdji the Barāghīl Pass leads also into Wakhān, and other passes from Čitār into the same country. The most important pass from Čitār is the Dorī Pass leading into Badakhshān by the Warādū and Kökča valleys, and the Mandāl Pass gives communication also between Kāfrīstān and the Kökča valley. North of Kābul the best known passes are the Khāwāk, Kaušān, (or Ghorband) and Bāmīān, passes, by one of which Alexander crossed Bactria from Kābul and back again to that region. The pass over the Indian expedition. The central block of the mountains between the Kābul and Kunar river to the south and Badakhshān, up to the high range between the Mandāl and Khawāk passes, is occupied by the wild and inaccessible country of Kāfrīstān. This has now come under Afghan rule since its conquest by 'Abd al-Raḥīm, and the countries of Badakhshān and Wakhān to the north are also under the same rule, but in the north-eastern part of the southern slopes Čitār, Yāsīn, Hunza-Nagar and Gilgil are politically attached to British India, and the Chinese empire embraces the northern slopes from the Pamir eastwards. The pass over Šāh Džādī was traversed in the 7th cent. A. D. by the Chinese pilgrimage Houen Thang who saw the gigantic Buddhist figures on the face of the cliff which modern travellers have found still in existence. In-vaders of India and Afghanīstān have usually preferred the easier route over the passes near Herāt, but the passes near Kābul have been used from time to time. Timūr travelled by Bāmīān on his return from India. Bābār came from Kunduz to attack Kābul in 910 (1504) probably by the Kaušān Pass, and Humāyūn followed the same route in 953 (1547). Shāh Džādī's army under Rādž Dārgāt Sangīn met with disaster in crossing the Hindu-kush to attack the Ubzags in 1056 (1645), and tradition ascribes the name Hindu-kush "Hindu-slayer" to the losses undergone by his Rādjug troops. Awrangzēb two years later experienced great hardships in his retirement from Balkh in the same region and lost 5000 men. Bābār gives a fairly minute description of the Hindu-Kush passes in his memoirs. He came into Ghorband from the Andarābād valley, evading the army sent to watch for him in the Panḍīshīr valley, by which he would have come out of the mountains if he had made use of the Khawāk Pass. It may be added that Bābār uses the name Hindu-kush which proves that the legendary ex-
HIPPOKRATES. [See BUKRAT.]

AL-HIRé, the capital of the Lakhmid kings, 3 Arab miles south of Kūfa, an hour's ride southeast of Nadjaf (Meshed ʿAli), on the lake of Nadjaf, now almost dry close to the edge of the desert. The name is Aramaic (corresponding to the Syr. ḫeṯa, and Hebr. ḫaṣṭir) and means literally "camp" but was transferred as a proper name to the permanent camp of the Lakhmid chieftains under Persian suzerainty, from which the city gradually developed. The date of its origin, placed by the Arabs in the time of Nebuchadnezzar, cannot be accurately fixed; bishops of al-Hira are mentioned at the synods as early as the beginning of the fifth century A.D. For further information see the articles LAKHM and LAKHMÁ (now found in inscriptions, see Florilegium de Vogüé, p. 389, 463 sqq.). The situation was a favourable one as the country between Nadjaf and the Euphrates was intersected by canals and rich in cornfields and date-groves. The air is also celebrated for its salubrity. Among the inhabitants, as the mention of bishops shows, there were a number of Christians who professed the Nestorian creed. Among them were the family of the Hira poet ʿAdi b. Zaid. The Lakhmid princes themselves finally adopted Christianity and Hira, the mother of king ʿAmr (reigned after 550), founded a monastery in the city. Near Hira were a number of strongholds including the 'white cathedral', built by a Persian king, Ibn Bukišai's cathedral and the citadel of the ʿAdasās of Kalb; cf. also the article AL-KHAWWARNAK. Among the products of the city the saddles of al-Hira are mentioned by the ancient poets (Imruʾ al-Kais, 4, 59; Nābihā, 5, 59). The town reached a certain stage of civilization and poets gathered eagerly round the court of the kings. Traditions also relate that the art of writing was well known in Hira and spread from there to Arabia. After the death of Naʾmān III (602) the Persian kings incunctly abolished the system of Lakhmid vassals and placed Persian governors in the city, to whom the Arab princes were subject. This was still the arrangement in 632, when Khalid attacked Hira at the head of the Muslim army. The town surrendered without a battle and pledged itself to pay a considerable tribute. Its importance henceforth ceased, although it existed till much later and is occasionally mentioned. The ʿAbbāsids did not choose it as a residence and the rise of Kūfa threw it more and more into the background. The Caliph Hārūn al-Rashid however made a short stay in Hira and erected buildings there, but this aroused great resentment in Kūfa, so that he left the town. Under Muʿtamid (906—932) it suffered like the rest of the Sāwīd from the raids of the Bedouins, so that the government had to send an army thither. In the last half of the 8th century, it is described as extensive but thinly populated. The decline of the whole district afterwards affected Hira severely so that in the end it utterly disappeared from the face of the earth. Its site is now pasturage where only a few low mounds and heaps of sherds recall its past.

a mountain some three Arabian miles from Mecca in a N. E. direction, facing Thabîr [q. v.], so that these two are often mentioned together, and sometimes compared to two waves of the sea. Both are without water or vegetation other than a few thorns. Hirâ' is higher than Thabîr, and is crowned by a steep and slippery peek, which the Apostle with some companions once climbed. Muhammad was in the habit of staying here with his wife, and it was in a cave of this mountain that he received his first revelation. Hence the present name Djabal Nur. The cave is still shown. On his return from al-Tâ'if Muhammad also hid himself here until he could enter Mecca.

Hirâ or Hurz (A.) A mulet. [See Hamâ'il]

Hîsâb or īlm al-Hîsâb, is the name given by the Arabs to the whole field of arithmetic; al-fâsik, also al-kasâsib, is the calculator, arithmetician. Arithmetic was one of the four prophetic sciences (al-âlâm riyaḍiya or rihâ miya), which, as in antiquity, comprised arithmetic, geometry, astronomy and music. It is divided into two parts, theoretic or speculative (nasâri), which was sometimes also given the Greek name arithmatoiê̂s, and is essentially based on the vii, ix, tenth books of Euclid, and practical (camâli), arithmetic proper.

About the year 770 Hindu scholars brought, along with their Siddhântas (astronomical works), arithmetical lore to the court of Baghdad, notably the Hindu numeral system with the zero (Sansk. śūnya; Arab. ʾṣâr = empty). Recent research (see F. Naun, Nachtr. in the Journal Asiatic., x, th series, Vol. 16, No. 2, p. 258 sqq.) however make it possible that a knowledge of the Hindu numerals with the zero had reached Syria even earlier, and that the Omeyyad conquerors of North Africa and Spain perhaps brought the older so-called Ghûbâr figures (al-ghûbâr = dust (on the counting-board) to the west from Syria, before the newer numerals spread in the east from Baghdad.

But although these Indian numerals were known in certain circles of the learned, the great majority of Arab arithmeticians and astronomers were reluctant to have anything to do with this ingenious Indian invention, and during the second and third period in the Christian middle ages the Arabic numerals made very slow progress against the Roman. The majority of the authors of Arabic arithmetics in the xi, th century still wrote all the numbers out. Among the representatives of this conservative school we may mention al-Kârkhî (Abû Bakr Muhammad, c. 970-1036) with his al-Kâfi f 'îl-Hîsâb (the essentials of arithmetic); there is a manuscript of it in Gotha, of which A. Hochheim has published a German translation (Halle 1875-1880). Others, especially the authors of astronomical tables, made use of the old Semitic and Greek practice of using the letters of the alphabet as numerals (Arab. = Hîsâb al-Dînawr, cf. the edition of al-Battânî's tables by C. A. Nallino, 3 parts, Milan, 1899-1907. As a champion of the use of Hindu numerals in reckoning we may mention Muhammad b. Mûsâ al-Khwârizmî (780-850), the author of the oldest Arabic arithmetic known to us (only in a translation however) as well as of the oldest work on algebra and of the oldest astronomical tables. This arithmetic was translated into Latin, by whom is not known, and this translation edited by B. Boncompagni, Trattati d'arietica, i, Rome 1857. — Among these users of Hindu numerals was a contemporary of al-Kârkhî, Ali b. Ahmad al-Nasawi (c. 980-1040), who wrote al-Mu'âbbî f 'îl-Hîsâb al-Hindi [the satisfying (account) of Hindu arithmetic]; this work has not yet been published in its entirety; on it cf. F. Woepcke in the Journal Asiatic., 1863, i, 492 sqq. and N. Suter in Biblioth. Mathem., 3rd series, Vol. vii. (1906), p. 113-119. In these two contemporary works, the Kâfi and the Mu'âbbî, the two schools of arithmetic were striving for supremacy; it seems that in the east the Hindu arithmetic was for long neglected while in the west it was able to hold its own. — Of arithmetical works by Arabs of the west, we may mention the Kitaâb al-Šâghir f 'îl-Hîsâb (the "little book on arithmetic") by Abû Zakâryâ Muhammad al-Ḫâṣār, who probably lived in the xi, th century, of which the present writer has published a translation of the most important portions in Biblioth. Mathem., 3rd series, Vol. ii. (1901), p. 12-40, the Talkhîs, a synopsis of the preceding work by Ibn al-Rannâ (c. 1260-1340) of which A. Marre has published a French translation (Rome 1865, first appeared in the Atti dell' accad. pontif. de Nuovi Lincei, vol. xvii. 1864); Lastly the Kâšîf al-ʿAṭrâr ʿan īlm al-Ghûbâr (revelation of the secrets of the art of the Ghûbâr i.e. of counting with the numbers used by the Arabs of the west) by Abu ʿl-Ḥasan ʿAlî al-Ḵaṣādî (died 1456 in Tunis), of which F. Woepcke has published a French translation in the above mentioned Atti etc., Vol. xii. 1859; it was published in Amsterdam in 1887-1898.

We cannot here go into details of the methods of counting as space is limited but shall only emphasise a few points that differ from modern procedure. We may first mention that Muhammad b. Mûsâ, unlike the Hindûs, begins addition and subtraction on the left hand side; the erosion of the left hand figures required for this purpose was facilitated for the Arabs by their custom of counting on the dust-board; al-Ḫâṣār also still begins subtraction (not however addition) on the left; al-Ḵâṣādî was the first to begin both operations on the right; it thus required six centuries for the simplest and most natural way entirely to supersede the others, but we do not doubt that in the interval practical arithmetics had here and there adopted the natural way.

Al-Nasawî still did not use a horizontal line to indicate fractions being content, like the Hindûs, simply to place the numerator over the denominator; al-Ḫâṣâr was the first to write fractions in our present form with a horizontal line. — Astronomers in their calculations chiefly used sexagesimal fractions as the Babylonians and the Greeks had done before them; e.g. 33 1/2 would be written thus = 3 partes, 37 min. 30 sec. (32 37 30") i.e. = 3 + 37 + 30/60.
The square root was extracted in the same way as at present; the Arabs expressed surds approximately in the usual fractional form, as they were not yet acquainted with decimals. For the square root is not found till al-Kaššālī, who uses the initial letter of *djidhr* (= root) for it.

The Arabic arithmetic also contains applications of the principal operations to everyday and commercial purposes, and even to geometry also, i.e. calculation of areas and volumes. — To the domain of the theory of arithmetic but usually also included in the practical handbooks belong the tests of the correctness (proofs by testing out sevens and nines) of calculations, summation of arithmetical and geometrical series, of square, cubic and biquadratic numbers, the theorems regarding perfect and related numbers, etc.

We cannot here go into any details of certain branches of arithmetic like *hišāb al-khaš'ānī* (*regula duorum falsorum*), *hišāb al-dhāran wa l-dīnār* (calculation of drachms and dinars) etc., which in any case belong rather to the realm of algebra. Finally, we have to mention that the Arabs, besides counting on paper or on the dust-board, had also a system of counting on the hands, fingers or "air" (*hišāb al-yad or al-hawā*). There are a number of MSS. in existence on this form counting, cf. Suter, *Die Mathem. u. Astron. d. Araber, and Nachträge (Abhandlungen v. Gesch. d. mathem. Wissensch., x. 203; xiv. 181), and the review al-Maḫšīrī, iii. 1900, p. 171—174.

**Hišār** (A.), castle, fortress, citadel (from the Arabic *ḥasara*, "to compress, to surround in order to capture"); *ḥasara* "to enclose, to besiege").

Anadolu *Hišār* is the name of the fortress, now in ruins, built by the Ottoman Sultan Bāyāzīd I Yildirim on the Bosphorus between Kandilli and Göğüs ("the sweet waters of Asia") to facilitate the siege of Constantinople; in conjunction with Rumble*-Hišār*, which Muhammad II Fīrūz built in 1452 opposite it, it completely commanded the passage and the latter actually earned its name B огромн-Kasan (throat-cutter), [see *Boğaz*, i. p. 737].

*Hišār* is further found as a component of many place-names in Asia Minor: Kāra *Hišār-i Şāhīb* (the minister's black fortress), official name of Ayyūn Kāra *Hišār* in the province of Khudis-wandagār; *Shābin Kāra Hišār* (black alun fortress) in the province of Jāmapū; *Aṭīb Kāra Hišār* in the province of *Tepezant*; *Aṭīb Gūz el Hišār* (the beautiful prince of Aidin), the ancient Trelles; A Ḥišār (white castle), Yatirta in Lydya; Arāb Ḥišār (Arab fortress), Abanlanda; Kūz-i-Ḥišār (Ram castle), near the salt lake of Tuzgöl, near Ak-Sü; *Kilise Hišār* (Church fortress), south of Nigde on the site of Tyana; Kāra *Hišār-i Dewelā*, a village in the kaḍā of Dewelā (sandjak Kaşarïya, province Angora) between Nigde and Kaşarïya, where may still be seen the ruins of an ancient castle, called Zendjār; Eski Hišār (old castle) is a village with ruins at Gebize, the ancient Lybiasa; also the site of the ancient Ladaicea ad Lycum, north of Deinëli; *Hišār-i Djiq* (little castle) is a village in the nāhiyya of Āla-čam (kādā Bāfra, sandjak Samsun, province Trapezent); lastly *Hišār-i Kāršālī*, in the sandjak Bīğāh, marks the site of Troy.

**Bibliography:** A. Djevdet, *Lughātā Djevda*rgiye, p. 329, 330, 603. (C. L. HOART.)

**Hišār**, on Russian maps Gissar, a district in Bukhārā. The capital of the same name lies in a fertile and well-tilled, but damp and unhealthy area on the bank of the Kāhānka which flows into the Kāfārihan; not far from Hišār the Kāfārihan leaves the broad valley and enters a narrow ravine. Cf. the view of Hišār in Fr. v. Schwarz, *Turkestan*, p. 233. The site of the town approximately corresponds to that of the Shāmān of the Arab geographers, cf. *Amū-Daryā* (i. 340). The name "Hišār-i Shādāmīn" or simply "Hišār" is first found in the history of Timūr as the residence of one of the most powerful Turkish—Mongol kings who divided the country among themselves during the troubled times that followed the death of the Emir Kāršīghān (759 = 1358) (*Zafar nāmeh*, ind. ed., i. 40), and later as an arsenal (*zarrādšāhān*) of Timūr (ibid., p. 451). Under the Timūrids as well as under the Uzbek, Hišār owed its importance to its being a strong fortress and the residence of actually independent kings or chiefs. The area ruled from Hišār attained its greatest extent in the second half of the ixth = xvth century under Mahmūd Mīrza (son of Sulṭān Abū Sa'id, i. 105 sq.) whose kingdom included all the lands up to the Hindū-Kush (*Bābar nāmeh*, ed. Beveridge, fol. 26b); yet even in the time of the Timūrids Hišār was considered a small and poor country (ibid., fol. 56b). On the great misfortune, which overtook Hišār during the last battles between the Timūrids and the Uzbeks (only 60 men are said to have left out of the population of the town) cf. the *Ta'irkī-i Qaḏīm*, transl. by E. D. Ross, p. 262. When the kingdom of the Uzbeks in Mā warā al-Nahr had collapsed after the decline of its first dynasty (cf. *Arb Allāh*, i. 25), Hišār passed under the sway of the Turkoman tribe of Yūz. From the beginning of the xvith century till 1669 the rulers of Bukhārā were only able to enforce the homage of the Beg of Hišār by force of arms and for brief periods at a time only; only under Russian suzerainty did the Emir Muṣaffar succeed in breaking the power of these hereditary rulers and permanently uniting the district with Bukhārā (cf. *Bukhārā*, i. 782). About the middle of the xvith century the inhabited land of Hišār, as Muḥammad Wafā Karimnag (Tuḥfat al-Khānī, Ms. of the Asiatic Museum, c. 581, i. 1364) tells us, began at the village of Mir Shādi in the valley of Surkhan; in the xith century districts further to the west, like Bāsūn and Shīrābdā were also reckoned to Hišār; in the south, besides the ancient Cağhañīya (q. v. i. 811), Kabadīyan and a portion of the ancient Kuttāl with Kurgān-Tūbe also belonged to Hišār; on account of the great extent of the former Hišār territory the range, which forms watersheds between the Zarafshān and the upper Amū-Daryā, is called the Hišār range by the Russians. The Beg of Hišār now only rules the land between the upper Surkhan and the Wakhsh; this office is usually filled by a son of
the Emir or by another prince of the ruling house. The people still frequently rebel against the government. The cultivation of saffron mentioned by the Arab geographers is no longer pursued; the chief products are cereals and flax and the land is of some economic importance for Buḵẖārā, although the only method of transport is still by beasts of burden; vehicles are quite unknown. The land was first opened to European exploration by the Russian Ḥišār expedition of 1875 ("Gissarskaja ekspedicija").

**Ḫišār Firūzā, an ancient town in the Fārdāb, the headquarters of the district of Ḫišār, the centre of a tract of country formerly known as Ḥarrān[a], which formed part of the province of Sawālkhār. The district lies in the dry belt between the Satlaj and Djamā on the northern fringe of the Rājdūṭān[a] desert. Part of it is sandy waste but part is irrigated by a branch of the Western Djamā Canal. It lies between lat. 38° 36' and 30° 36' N. and long. 74° 29' and 76° 20'E., has an area of 5271 sq. m. and pop. (in 1901) of 781,717. The western part of the district (Sirsa) is inhabited by the Bṛāṭt Rājdūṭās, and was formerly known as Ḥarrān[a]. The town of Sirsa (formerly Sarsut) derives its name from the river Sarrasut. The Ghaggar river, which receives the north- and west-flowing Sarrasut, is still flows near Sirsa, and its waters have been utilized in modern irrigation works. The Musulmān population (202,009) is mainly of Rājdūṭ origin, and is locally known by the name of Rāngār. Besides Ḫišār the capital and Sirsa the principal towns are Bhīwānī, a large trading centre, Ḥānās[q. v.] and Fathābād (like Ḫišār founded by Firūz Shāh). Firūz Shāh Tughlāk took especial interest in this district, the home of his mother, who was of Bṛāṭt Rājdūṭ descent, and he founded here the town of Ḫišār Firūzā, which took its name from him, in the year 757 (1356), and, to irrigate the land in which it stood, constructed a canal from the Djamā. There was no doubt an older town on the spot, as the fort built by Firūz Shāh is to a great extent constructed of fragments of Hindū buildings. Ḫišār was long a place of importance. It was taken by Bābur in 932 (1526) and bestowed on him (with the district, which yielded a kro of rupees) on his son Humayūn. Humayūn in his turn assigned it for the maintenance of Akbar, and put the ‘father of the coinage under Shēr Shāh Sūrī, Humayūn and Akbar. At the end of the 16th century it came into the power of George Thomas (see under Ḥaṣbā) who built a fort named Georgeftagh, now corrupted into Ḥāḏābī. In 1857 the district fell into anarchy for a time during the mutiny.

**Ḫišba, a technical term in administrative law, the meaning of which is, act of counting, office of muḥāṣāsīḥ. The word then acquired the special meaning of police, and finally the police in charge of the markets and public morals. It is in this

latter, the narrowest, meaning that ḥišba is used by those authors who deal with Muslim law (Māwardī, Ibn Khaldūn, Maḏṣīzī etc.), but there can be no doubt that ḥišba meant something more than the office of muḥāṣāsīḥ in the narrower senses. Occasional references in historians (Dār al-Mūḫṣābā wa l-Muvaṯṭaṯ or wa l-Mawād) show that ḥišba was the name of the registry office, where deaths and births were registered and estates and the funds for orphans administered. We also find the ḥišba as office of weights and measures (= Dār al-ṣīyār), as well as the supreme audit office, and finally as army commissariat. [Cf. also the article muẖṣāṣīḥ.]

**Ḫišān b. ʿAbbās al-Malik, Umāiyād Caliph, son of the Caliph ʿAbbās al-Malik b. Marwān and ʿĀʾisha, daughter of Hishām b. Ismaʿil, governor of Medina. He was proclaimed Caliph in ʿĀdibīn 105 = January 744 and began his reign by dismissing ʿUmār b. Ḥubaira, governor of ʿIrāq. Khalīl b. ʿAbbās al-Ḵāṣṣī was appointed his successor and ruled the province for nearly fifteen years and earned the gratitude of the populace by its peaceful development under him. His enemies, however, ultimately succeeded in bringing about his downfall. In Ḍjamādī I 120 = May 738 the Caliph dismissed him and gave the vacant office to ʿUṣuf b. ʿUmar al-Thaqāfī. Khalīl was thrown into prison and only released in Ḡawwāl 121 = September 739. About the same time, Zaid b. ʿAli, a great-grandson of the Caliph ʿAli, set up as a pretender in Kīfah and readily gained numerous adherents among the volatile people of that city. But his plans were unexpectedly frustrated, and he was to raise the standard of revolt, he had to give way to superior forces and was mortally wounded.

In 106 = 742-745 Asad, Khalīl’s brother, had been appointed governor of Khūraṣān, where feuds between the Arab tribes and the activities of ʿAbbāsīd emissaries caused him great trouble. In 109 = 727-728, Asad, who had only held his office under the control of his brother, was replaced by Asbras b. ʿAbbās al-Sulami, who became involved in war with the Ṣoghdians and the Turks and could only hold his position for two years. He was succeeded by al-Ḍjamādī b. ʿAbbās al-Raḥmān [q. v.], who continued to serve against the Turks. During his long reign Ḥišān continued the war against the Byzantines vigorously but with varying success. Naval enterprises were undertaken every summer on a large scale, in which ʿAbbās Allāh b. ʿUṣba and later ʿAbbās Allāh b. ʿAbd Maryam commanded the fleet, while the Caliph’s two sons Muḥṣīwīya and Sulaymān, conducted the land operations. In 122 (740) the Arabs under ʿAbbās Allāh al-Baṭṭāl were severely defeated at Arkoinos in Phrygia and al-Baṭṭāl himself fell in the battle. But when the Byzantines in the following year attacked the capital of Melitene the Caliph himself hurried to its assistance and they had to
retreat. On the Caspian shores the Turkish tribes gave the Caliph's troops much trouble. In 112 = 730-731 the latter were defeated at Ardabil. Hishām's brother, Maslama, then carried out several successful expeditions, but the final triumph of Muslim arms was particularly due to Marwān b. Muḥammad, afterwards Caliph. At the same time ʿAbd al-Raḥmān b. ʿAbd Allāh al-Ghāfikī, governor in Spain, defeated Eude, Duke of Aquitaine, but was in turn defeated by the Franks under Charles Martel, in Ramdān 114 = October 732, between Tours and Poitiers. Further the Berbers were discontented, because they were not treated by the Arabs as fellow-citizens on equal terms but as vassals paying tribute, and the Khaṭrīd propaganda poured oil on the flames. In the end a great rebellion broke out and in 125 = 743 Hishām had to send a Syrian army under Kūljbūn b. Ḥyād against the Berbers. But the Syrians suffered a fearful defeat: Kūljbūn fell and his nephew Bālḏ b. Bīhīr escaped to Spain with only a third of his army.

Hishām died in al-Rūṣāfa on the 6th Rabī' II 125 = 6th February 743. He was an upright and conscientious Muslim. He particularly endeavoured to look after the finances of the state but his economy occasionally degenerated to parsimony. Beside foreign foes, ʿAbbāsid emissaries and Khaṭrīd agitators were gradually undermining Umayyad power and in spite of his merits the Caliph could not prevent its increasing decline.

**HISHĀM B. AL-HAKAM ABU MUḤAMMAD**, one of the most distinguished Shiʿī theologians of the earlier period. He was a client of the Banū Shāhi b. Kūsra b. Kaws, although his actual birthplace is believed to have been Wāsiṭ; he moved to Baghdād in 199 (814-815) but died soon afterwards (according to one tradition however, he is said to have lived into the reign of al-Maʿmūn). He was held in great esteem by the Barmākī Yāḥyā b. Khūlid and presided at all the disputations which were held in his presence; he was also acquainted with Harūn al-Raṣḥīd himself. He seems at first to have been a pupil of Dājām b. ʾṢafwān [q. v.]. His acquaintance with the ʿAlī b. Dīnār who died in 148 (765) made him one of his followers, so that he became one of the most intimate friends of his son Mūsā b. Dīnār. Henceforward the Shiʿī doctrine of the Imāmāte was the central point of his belief and doctrine around which his views on other theological and philosophical questions grouped themselves. His teaching was frankly anthropomorphic as in his view God could not otherwise influence material things. The question of the creation or non-creation of the Kurʿān was in his view an idle one, as the Kurʿān is the word (kalām) of God and therefore a quality (ṣifā), which cannot be defined by other qualities. The same of course holds in his opinion with regard to the other ṣifāt. It is not quite clear what his attitude was to the question of the freedom of human action but, according to the expression testimony of Ibn Kūtayba, (Muḥtaṣīf al-Hādīkī), he belonged to the Dājbārīya, which attitude is probably to be traced to his early intercourse with Dājām b. ʾṢafwān.

Hishām wrote a number of works, the titles of which are detailed in Fīhrīs, p. 175 sq., but they are all lost. The Arab authorities mention his disputations with the Muʿtazilī Abū ʿl-Hudžail [q. v.] and state that his teaching was further developed by his pupils, not however without developments in many points.

**HISHĀM I.** Abu Ḭaʾlāl al-Raḍāʾ or al-ʿĀdīl, son of ʿAbd al-Raḥmān I [q. v.], was the second Umayyad Emir of Cordova (172—180/788—796). Although more humane, just and pious than his energetic, cunning father, he was able to maintain himself against his rebellious brothers and to carry the Muslim arms once more, after an interval of several decades, into the Christian lands to the north and even into southern France, as far as Astorga, Oviedo, Gerona, and Narbonne. It was he who first gave a stimulus to the influence of the stricter school of law and theology of the contemporary Medina teacher Mālik b. Anas in Spain and thus prepared the way for the narrow-minded fanatical views of the Spanish fakīhs. He completed the great mosque of Cordova which had been begun by his father and restored the bridge (Alcántara), built by the governor al-Samḥ [q. v.] over the Guadalquivir, which had fallen into ruins. This capable ruler died all too soon at the age of 37 and was succeeded by his son al-Hakam I (796—822) [q. v.].

**Bibliography**: Ibn ʿAdhārī, Al-Bayān al-muḥqīb, ii. 62—70, trad. 96—100; Aḥkām maḏahīb, p. 120—124; al-Marrākūshī (ed. Dozy), p. 12; Ibn Khalūdūn (ed. Bulāk), iv. 164 sq.; Maḵkāṭī, i. 216—219; Dozy, Histoire des Musulmans d’Espagne, ii. 54—57; do., Recherches, i. 127—139; (Gayangos, History, ii. 95—100); Aug. **HISHĀM II.** Abu Ḭaʾlāl al-Muʿayyād b. Al-Hakam II al-Muṣṭanṣir, was the tenth Umayyad of Cordova (766—399 = 976—1000) and again from 400—403 = 1010—1013. While under his nine predecessors on the throne of Cordova the whole administrative power had been actually in the hands of the rulers (Amirs and Caliphs) themselves, Hishām II’s personality falls into the background and disappears as a mere shadow behind the all-powerful chancellor, the Ḥādījähr (grand vizier) Almānẓor [cf. Al-Maʾṣūr] the great statesman and general (died 1002) and his son ʿAbd al-Malik al-Muṭṭafir [q. v.], (died 1001), while Al-
manzor’s second and incapable son ‘Abd al-Rahman Sancho was soon overthrown (1009). Hishām II was placed in tutelage immediately on his accession, when only ten years of age, by his unnatural mother, the Basque Sūba (= Aurora), al-Ḥakām’s favourite wife, in conjunction with her favourite and lover Almanzor, educated to bigotry, and finally interned in the new Royal residence al-Zahrā west of Cordova, till he became the veriest puppet in their hands, whereby a way was prepared for the rapid decline of monarchical power and the speedy fall of the once brilliant caliphate of Cordova. A pseudo-Hishām, alleged to have reappeared (he was said to have disappeared during the massacre by the Berbers in Cordova in 1013) also served the unsuspicious ‘Abbadīd [q.v.] Abu ‘I-Kāsim Muḥammad ibn Ismā’il of Seville as a figurehead to deceive the people.

HISHĀM III, al-Mu’ta’addī, son of the incapable, ephemeral Caliph ‘Abd al-Rahmān IV al-Murtadā (408 = 1015) great great-grandson of the great ‘Abd al-Rahmān III (912–961), was the sixteenth and last feeble Umayyad of Cordova, who could not prevent the breaking up of the great caliphate into smaller and smaller local kingdoms (Span. Reyes de Taifa, arab. Mātāk al-Ta’awif), which had been going on since the beginning of the xi century: 418–422 = 1027–1031 (died 1036).

HĪSN (a.), fortress, citadel.

HĪSN AL-ÂKRĀD, originally called HĪSN AL-SAF, ‘castle on the slope’, see van Berchem, Journ. Asiat., 1902, p. 446 sq., now often pleonastically called Kalat al-Hīṣ, is situated on the plateau of al-Bukā‘a, which is bounded on the south by Djebel ‘Ākkār and Lebanon, on the north by the Nuṣāri‘ hills. It is the official residence of a kāsimmāl. It takes its name ‘castle of the Kurds’ from a Kurdish garrison established there by Shīb al-Dawla Naṣr, king of Aleppo, in the first half of the fifth century A. H., who were granted the surrounding lands and forests in fief on condition that they protected the important road between Ḥamā and Hīṣ, the great towns of the Oronates plain, and Tripolis, from the enemy. The castle of the Kurds is said to be identical with one built there by Rameses II. It was taken during the Crusades by Tancred of Antioch in 503 (this date is not quite certain) and transferred to the knights of St. John in 537 by Raymon d II of Tripolis. The knights had more and more cause to feel insecure as the position of the Crusaders in Syria became weaker. Their situation was all the more dangerous because they had been excluded from the ten years’ truce of 626 between the Emperor Frederick II and Sulṭān al-Malik al-Kāmil, as they had not taken the side of the Emperor who was conducting the war for the recovery of the territories of the Pope. They had therefore every reason to strengthen the defences of the castle more and more. Nūr al-Dīn and Saladin had endeavoured in vain to capture Hīṣn al-Âkrād. The citadel is protected by two lines of defences, an outer and an inner. It lies on the top of the hill which slopes to the north and east. On the west it is protected by a ditch which is continued round on the south side at no great depth. Thus defined it is approximately a trapezium, of which the south is the most vulnerable. The strongest defences had therefore to be built there. From the description of the capture of the fortress it appears that further earth- and wood works were raised outside the outer surrounding wall, which would have perhaps become quite gigantic, if the Sulṭān had not kept the Knights from increasing them by agreements and threats (the Emperor Frederick II had actually pledged himself to see that the defences of castle of the Kurds were not strengthened). On the north and west it is surrounded by ramparts which at certain distances are strengthened by round towers.

The hall in the tower vaulted with pointed arches and lit by great embrasures is built to accommodate ballistas and a gallery runs along the ramparts provided with protruding sentry boxes. Over this gallery is a pinnacled parapet with shot-holes in the middle. The door of the entrance tower was difficult to take, for in consequence of its low situation it could be defended through the three small rooms projecting over it with openings in the floors. Through the gateway one enters a covered gallery, which turns to the south but turns again on reaching the south of the corner tower and ascends to the upper entrance at the east tower.

A portion of the west side of the open space between the outer and inner lines of defence is so built as to collect water in it. It is connected with the cisterns which are below the castle. The inner defences rise on the south and west side above a masonry escarpment of great strength obviously an escarpment lining the natural rock, while on the north and east side the rock is not escarped. A great open staircase leads from the courtyard to the terrace.

The Knights of St. John were able to maintain a garrison of 2000 men in this strongly fortified castle. With their help they forced the princes of Hīṣ and Ḥamā to pay tribute in return for freedom of passage for their caravans. They had afterwards to give this up and their situation became more and more precarious. Sulṭān Baibars, who wished to free Syria entirely from the Crusaders, decided to take Hīṣn al-Âkrād. After taking advantage of a stay in Syria to make a reconnaissance in person accompanied only by 40 horsemen, he led a great expedition against the fortress next year in 669. On the first day of the attack, 19th Radjab 669 = 3rd March 1271, he took the weakly defended outer works; next he soon succeeded in piercing the earth ramparts and capturing the entrance tower, which was now exposed to attack from the inner gallery as well as the outside. On the 13th March the second tower was taken, on the 29th Baibars fought his way into the courtyard and erected ballistas there to attack the donjon. On the 8th April the Knights were reduced to surrender and were granted a safe conduct to Tripolis. Sulṭān Baibars remained there till the end of the month and conducted the restoration operations in person. Hīṣn al-Âkrād was selected as the residence of the governor of the Syrian ‘conquests’ and it was not till the capture of Tripolis in 686 by Sulṭān Khālīṣ that the governor’s residence was transferred to the latter town. After peace and security had been
restored to Syria with the departure of the last Franks Hisn al-Akrād gradually lost its importance. It suffered nothing from Timūr Lank's invasion (about 803). The fortress, which is the residence of a kā'īm malām, is still for the most part well preserved.

**Bibliography:** The architectural history of the castle has been studied in detail by Baron Rey, to whom the accompanying plan is also due, in his *Etude sur les Monuments de l'Architecture militaire des Croisades en Syrie*, Paris 1841, p. 46 sqq.; extracts from it are contained in A. v. Essewein's *Die Romanische und Gothicke Baukunst*, iv., 1, Military Architecture.

The Arabic inscriptions in the castle (only briefly discussed by Ch. Schefel in Rey) have been fully edited by van Berchem in *Inscriptions arabes de Syrie*, Cairo 1897 (p. 64—69) and in Freiherr v. Oppenheim's *Inschriften aus Syrien* etc., with an account of the capture of the Hisn by Baibars. All the inscriptions of the fortress and town with their history (with extracts from the sources and bibliography) have been edited by Sobermann in the *Corpus Inscriptionum Arabum*, ii. 14—35 (with a plan of the mosque and illustrations).

(M. SOBERMANN)

**HİSN AL-GHURĀB** ('Raven Castle'), a hill with a fortress upon it in South Arabia, near the harbour of Bir 'Alli Madīdahā in 30° 59' 20" North. Lat. and 45° 24' 30" East. Long. in the land of the Wālīlīs [q.v.]. The harbour of HİSN al-Ghurāb in ancient times was the well-known Canis Emporium (Kān ḋāmu) of the *Periplus Maris Erythræi* and of Pliny, the *I* of the South Arabian inscriptions, a very important centre for the frankincense trade of the neighbourhood and an intermediate station for the trade between Egypt and India. The name Hisn al-Ghurāb is derived from the black colour of the hill, which is about 1500 feet high, of volcanic origin and composed of different formations such as basalt, sandstone, trap, and slates. HİSN al-Ghurāb was probably in very early days an island; now it is connected with the mainland by a isthmus of sand, on which a town used to stand, of which now only the ruins are to be seen in the form of huge pieces of basalt lying scattered at the foot of the hill. Ruins of houses, walls and defensive works are also found towards the top of the hill. On the topmost slope is a quadrangular tower. The hill can only be ascended from one side; the route is by a zigzag way (mangal) hewn out of the rock.

Not far from HİSN al-Ghurāb is a group of small, uninhabited islands, of which the most important are Sīhā, also called Kanīsūs, and Barraqa. The little island of Hilliyāna with pearl-fisheries is quite near HİSN al-Ghurāb on the west side. Opposite HİSN al-Ghurāb rises the isolated hill of Shawrān, at the foot of which lies a plain, called Mādinā, at the top of which hundreds of small black, probably volcanic mounds called bāšīka. On the summit of the Djebel Shawrān is a very deep round crater called Karaf (Basin) of Shawrān, surrounded by shrubs.

In the rocky face of the hill four South Arabic inscriptions are engraved of which the most important is the well-known ten-line inscription of HİSN al-Ghurāb which belongs to the time of the Himyar-Ethiopic kings and was inscribed to commemorate the fortification of HİSN al-Ghurāb. It is of particular importance, as it is dated (640 = 525 H. R.). From the inscription it seems that HİSN al-Ghurāb in ancient times was known as Urr Māwiyat.

HİSN al-Ghurāb was first visited by Captain Haines and J. Wellsted in 1834. Wellsted, Cottenden and Hulton made the first copies of inscriptions the same year. In 1870 HİSN al-Ghurāb was visited by Miles and Munzinger who took new and more reliable copies. Lastly Comte de Landeburg took photographs as well as copies of the inscriptions when he visited HİSN al-Ghurāb on the 21st February 1896 along with General Cunningham.

**Bibliography:** In addition to the works already mentioned, J. R. Wellsted, *Account of some Inscriptions in the Abyssinian character, found at Hassan Gharab etc. in the Journal of the Asiat. Soc. of Bengal (Calcutta*, Vol. iii. [1834], 554—556; K. Ritter, *Erdbunde*, xii. 312—322, 624, 862—863; H. Freiherr von Maltzan, *Reise nach Südarabien*, p. 225—227 (also contains translation of the inscriptions); A. Sprenger, *Die alte Geographie Arabiens*, p. 83 (310, 102); Comte de Landeburg, *Abessinien*, iv. (Leiden 1897), p. 65—75 (and appendix with photograph of HİSN al-Ghurāb and neighbourhood and the large inscription) and *Abessinia*, v. (Leiden 1898), 151. (J. SCHIEFFER)

**HİSN KAIFE,** a town in the Dijāzirā (Mesopotamia), on the right (south or east) bank of the Tigris, in 37° 40' N. Lat. and 41° 30' East. Long. (Greenw.), about halfway between Diyyar Bakr and Dijāzirā Ibn ʿUmar, about 3 days' journey (60—70 miles) from either.

HİSN Kaife dates from very ancient times. The many ancient caves and grottos still exist in existence belong to the pre-Armenian (Chaldean) period and show that there was a settlement here as early as about 800 n. c. In the border wars between Romans and Persians during the later Empire the town (Kēfēr, Cepha) played an important part on account of its commanding fortress. As the see of a Syrian bishop it is mentioned at the council of Chalcedon (451); Muḥammad (c. 535—985) particularly notes the numerous churches there. HİSN Kaife during the middle ages also enjoyed no mean strategic and commercial importance. The former was due to its strong citadel, the latter to its position as a centre of trade between Diyyar Bakr and Dijāzirā Ibn ʿUmar. Since about the xith century a fine bridge has existed over the Tigris, the traffic over which had probably been busy for centuries.

When the ʿAbbāsid power gradually declined, the real authority in Mesopotamia as in other provinces of the Caliphate passed into the hands of prominent local dynasties. HİSN Kaife in this way passed in turn to the Ḥamdānids, Marwānids and Urtukids. Under the latter, who had their
Plan of Hiṣn al-Akrād according to Rey.

Reconstruction of Hiṣn al-Akrād according to Rey.
The name Hissân Kêf is clearly only the result of a popular etymology. Equally worthless are the "Turkish" etymologies: Hâsan Kêf = Hânas's "delight" and hisân (Hâsan)-Kêf = "good (beautiful) humour".

Hîşân Munsûr, the capital of the kald of the same name in the sandjak of Malatia, usually called Adîmân, with about 10,000 inhabitants, mainly of Armenian origin. The name Hîsh Munsûr is derived from an Omayyad Emir Mansûr b. Dâ'wâna who was slain in 141 (758) by command of the Abbâsîd al-Mansûr. Hûrin al-Raghiq afterwards had the citadel fortified and placed a garrison in it. Hîsh Mûnsûr or Adîmân was thus the successor of the ancient adjacent town of Paro, the site of which is still traceable by aqueducts and rock-tombs. It is nevertheless only rarely mentioned in later times; in the viii (xii)th century it belonged to the Ortoûds.
HİSİN MANŞUR — HİZB.

Trade in bituminous products from Hit, they are carried down the river in boats and the busy shipbuilding trade of Hit is also directly due to the asphalt. South of Hit are several quarries which were worked even in ancient times: at the present day there is a line of rails from them to the Euphrates; cf. A. Musil in the *Ztschr., der Wiss. Akad., der Wissensch.* 1913, i. (L. E. Arabia and Southern Mesopotamia, p. 11). The Arab geographers of the middle ages also note the wealth of datepalms and the extensive cultivation of cereals around Hit. It was further noted for its excellent wine: cf. the poems of Abi Nabi (ed. Krencker, p. 49), and R. Geyers *Mālik b. al-Aswād* (Stud. et Diss. d. Wiss. Akad., Vol. 149, vi), p. 145, i. Near Hit a ruined area, called Ulûya al-Maktila (= "the transformed city"), is pointed out: there is a legend attached to it which, as Mez in the *Zeitschr. für Assyriol.,* xxiii, 220, points out, strikingly recalls the Frau Hitt legend in Inshrub.

HİZB (Apl. pl. aţâba) means "a party, faction, division." It is probably an Ethiopic loan-word, the original Arabic meaning of the root being "to befall" of a misfortune (aţāba) and "be rough, coarse" (gHALIPA); so formerly Noldeke (*Neuf Beiträge,* p. 59, note 3). In the Kur'an the word is used of confederates and mostly in a bad sense. Thus the *Sûrat al-aţâba* (xxiii) deals with the siege of Medina by the Jewish tribes confederated with those of Mecca, Nadţ and Tihâma (*ibid.* pp. 688 sqq. *Ghawwat al-bghtâd*). In a good sense it occurs of the *alb Allâb* in Kur. v. 61, liii, 22. But from "portion, division" it soon acquired the same technical meaning ascribes i.e. a set portion of the Kur'an, or of devotional formulae of any kind, imposed by any one upon himself for recitation; for cases of this use in the traditions see *Liûn,* i. p. 299 ii. 9 sq. As applied to the Kur'an this developed in some Muslim countries until there was a normal division of the text into sixty aţâba, like that into the thirty aţâfa. So in Egypt; see *Lan, Modern Egyptians,* chap. xxvii, *Arabian Nights,* chap. v. note 38. But apparently this did not and does not hold everywhere. Al-Ghazâlî, in the *Ihyâ, in dealing with the tâbil (tibâla)," of the Kur'an (Book viii of Quarter iii. 1 Bb iii.; ed. with comm. of Siâyid Murâdî ii. pp. 470 sq.) speaks of the thirty aţâba, but of the only generally; the
number of ḥibā does depend upon the usage of each worshipper. So still in India, for Hughes' Dict. of Islam, does not recognize the word nor, apparently, does the Dict. of Tech., Terms. With the rise of the derwish fraternities the word became peculiarly associated with them. In Egypt each fraternity is a ḥizb (Lane, Modern Egyptians, chap. xviii) and ḥizb is also used of the "office" of each fraternity recited at the regular Friday service (ḥajrā) in the sāʿiyah or taḥṣilah, and consisting of extended selections from the Kurān and of other prayers (see ḤIJKR above). From this apparently, came a narrower use as applied to forms of prayer (duʿāʾ) drawn up by conspicuous saints and to be recited, either regularly or in special cases of need. Islām has always treasured such forms. The latter part of Book ix of Quarti. of the Ḥayāt (Kitāb al-adhākār; ed., above, vol. v, pp. 62 sq.) consists of a collection of such celebrated duʿāʾyā of authorship from Adam to the Šūf saints; see also, al-Dābījī, Kātab Bayān ī, ii. 127 sqq. of ed. of Cairo 1311). But to judge from the hizb’s described by Brockelmann (Gesch. index unter ḥizb, vol. ii. pp. 622 sqq.) and by Ḥājjī Khalīfa (iii. pp. 56–60) the word ḥizb was not applied to such prayers until well on in the sixth Muslim century. Al-Ghazālī (d. 505 = 1111) speaks only of duʿāʾs and the first recorded hizb is by Ḭâb al-Kādir al-Dīlātī (d. 561). After that there are many: Ibn ‘Arabī (d. 638), Ahmad al-Badawī (d. 675), al-Nawawī (d. 676), etc. The most famous of all is the ḥizb al-bāṣr by al-Shāhīdī, called also ḥizb al-ṣaḥīfīs, to distinguish it from one longer but less celebrated by the same author. It is a favorite with travellers, especially those by sea, as it is in great part a "subjecting" (tasbikh) of the sea to them. It was written in 656, the year of his death, by inspiration from the Prophet, and contains the Most Great Name of Allāh. That same year Baghādād was taken from the Mongols, and al-Shāhīdī is asserted to have said that it could not have been captured if his hizb had been recited there. The text is given in full by Ibn Bāṭṭīṭa (vol. i. pp. 40 sqq.; cf. also Zeitscr. d. Deutsch. Morgenl. Ges. vol. vii. p. 251; the transl. by Burton, Pilgrimages, chap. xi. is very incomplete) and is poor structurally, but has many Kurānic references and quotes repeatedly the mysterious letters which occur at the beginnings of certain sūras. This has given it a talismanic value and ensured its popularity. A plural, ḥīzāb, occurs in the Fihrist, p. 307, l. 7 (see also note) with the meaning "spells"; but the text is uncertain. The authority for Ahlwardt's assertion (Verzeichn. der. d. Handschr. zu Berlin, vol. iii. pp. 407–414. (D. B. MACDONALD.)) ḤIZKĪL (EZEKIEL) b. BURĪ, whose mother when advanced in years prayed to God for offspring and had her prayer granted, was the successor of Kālidī. He is not mentioned by name in the Kurān but in Sāra i. 244 ("Didst thou not see those ones who abandoned their dwellings in their thousands from fear of death? and God said "Die!" Then he restored them to life") an allusion to Ezekiel xxxvii, 1–10 is generally recognised. Of the various traditions in Tha‘labī, p. 148 and Tābarī, i. 539, 538, the following, which are of Talmudic origin may here be mentioned. In the days of Ḥijīl a plague carried off numerous Israelites. Many corpses could not be buried and became food for birds and beasts. By God’s command Ḥijīl proclaimed: "Ye dead bones, God commands you to assume again the flesh that rescued you!" At once the bones clothed themselves with flesh and once more had skin, blood, veins, and arteries. Ḥijīl continued: "O breath of life, make these bodies live again!" They were breathed upon by the spirit of life and rose in their dead clothes. They returned to their people again, founded families and multiplied (Sanh., 92, Gen. R., 14, Cant., 7.

According to Tha‘labī, p. 101, one of the members of Fir‘awn’s council in Egypt was likewise called Ḥijīl, while Kīsā calls him ‘Ibrīl. He was originally a carpenter. Mūsā’s mother applied to him to make a small box in which to place her new born son and throw him into the sea; but he hurried to the royal police to tell them of it. His tongue then became paralysed and he lost the power of speech. He only regained it after swearing that he would betray nothing. Henceforward he honoured Mūsā in secret and protected him from all danger. (Cf. Kurān, 40, 29.)

(J. EISENBERG.)

AL-ḤOĐAIMA (Hodāde, Hadīda), a seaport in Arabia, on the Red Sea about 110 miles N.N.W. of Mokha [q.v.], the most important port for the coffee trade in Yemen and a landing-place for pilgrims to Mecca from Central Africa. It is under the protection of a patron saint, Shāhīf Sādik, whose festival is celebrated on the fifteenth day of the month Shaba‘n. In the time of Niebuhr and Rebenstock, al-Ḥođaima belonged to the Imām of San‘ā. In 1837 Ibrahim Paşa was commander in the town. Since 1899, al-Ḥođaima, which was previously a part of the great wilāyat of Yemen, has been a separate wilāyat. The town is fortified and is surrounded by many palmtrees and other fruit trees. It has a considerable garrison and possesses a post and telegraph office, a military hospital and a powder magazine. The streets are small and irregular and densely populated. Most of the houses are straw huts, only the houses of rich merchants being of stone. The bazaar is small and very dirty but well stocked with all necessaries. In the suburbs live, besides Arabs, many Banians, Somalis, Persians, Jews and Abyssinians. The climate of al-Ḥođaima is healthy and the town free from fever. The temperature which is always very hot reaches its height in April, May, August, and September. Among the articles brought to this port to be exported are besides the staple coffee, (the export of which, however, is now considerably diminished particularly on account of the vast supplies exported from Brazil), goat- and ox-hides (for Europe, America and Australia), millet and materials for packing coffee; dried fruits, dates, frankincense, resin, clothstuffs and rose-red pearls, which are obtained among the reefs at al-
Hodaida, were also at one time exported. The imports include English, American, and Indian silk and woollen goods, sugar (from India, China, France and Austria), tobacco, (from Egypt, Turkey and Persia), petroleum (at one time mainly from America, now from Batumi), rice (from India) raisins, dates and honey, which are transported hence to other towns, particularly San'a. The trade with al-Hodaida is mainly carried on by British Indian ships; in recent years Greek and particularly Italian ships have had an increasing share in it. Manzon in 1883 estimated the number of inhabitants of al-Hodaida at 20,000; according to other statements, the town has nearly 50,000 inhabitants. Bibliography: C. Niermth, Beschreibung von Arabien, p. 228; s. Reisenschreibung nach Arabien, i. 324—325; K. Ritter, Erdkunde, xiv. 873—877; Renzo Manzoni, El Yemen (Roma 1883), Chap. viii., 357—361; W. Schmidt, Das sydwestl. Arabien (Halle 3/S. 1913), p. 81—100. (J. Schieffer.)

AL-HODH (Hod), a semi-desert region in Western Africa. It is a plain, lying to the east of Timbuktu between the Sahel on the south and the Tagonit on the north, stretching over a distance of about 200 miles. A zone of steppes called Mafya (mirror) separates the Hodh from that part of the western Sahara known by the name of al-Djuf. Three well-defined divisions may be distinguished in the Hodh. In the south is a region of sand and thorny bushwood, fairly rich in water and sustaining quite a numerous population of Ful and Sarakola as well as Moorish herdmen. To the north of this lies rocky plateau, often ferruginous, separated by valleys with black soil bottoms, which the winter rains turn into impassable marshes. Lastly, the northern part is covered with white sand dunes, separated by basins of black earth. Arab or Arabicised Berber tribes, of whom the chief are the Aghelal, the Udld al-Nasir, the Ida Badjellan of whom some, like the Nomadi, are only Muslims in name, roam freely over the Hodh. Lying outside the main caravan routes, the Hodh is the least known region of the Sahara. Bibliography: Barth, Travels, v.; Le Sahel maure et le Hodh in La Geographie, xii. (1905) 130 sqq.; Arnaud, Chasseurs et echeurs du Tagonit et du Hodh in La Geographie, xiii. (1906), 148 sqq.; Marquart, Beni Samhedin, v. Leyden 1913, p. clxvi. sqq. There is further information on Hodh in two chronicles still inedi, recently discovered in the Sudim, the Tirthik of the Kunta, by Sidi Muhammad b. Sidi al-Habib and the chronicle known as the Chronicle of Ibn 'Isa ibn Sani. (G. Yver.)

HODJAILA, a village in South Arabia, at the foot of Haraz [q.v.] about 1900 feet above the sea level, a border village of the Tahama. It belongs to the kadah of Manakha [q.v.] and to the mudirik of Mitawah on the Jebel Safan (Haraz). It has a market and Turkish barracks. The low cottages (arnawak) of the village are built of large unhewn stones without mortar. The people of Hodjaila are of a chestnut brown colour and resemble gipsies; they belong some to the tribe of Khamil, others to the Ziyadini. Around the village many partridges are found whence its name. Moreover a kind of wild duck called khalat is found in the waters of the neighbourhood and there are also many other kinds of birds. The women of Hodjaila dress their hair in a peculiar fashion: they twine the plait around their ears. Glaser proposes to identify Hodjaila with the Shat al-Hadjal of Hamdani (Quzirra, p. 105, 106.)

AL-HOFHUF (Hoff, Hoof), a town in Arabia, capital of the province of Hasa (Hasa [see Al-Ahsa]. The town, which is surrounded by extensive gardens and date-palm groves, is divided into three parts: I. the Khat (fortress) in the northeast; 2. the Rafi'ya (Refie'yaa, ‘eminenence’ so called on account of its rising ground) in the northwest and west; 3. the Na'far (in the south and west). The Khat, a large fortress with very high, thick walls and towers (about 16 on each side with winding stairways) is about 500 yards long and 400 broad and surrounded by a deep ditch; it contains 2000—3000 people. The governor of Hasa (during Palgrave's stay in Hofhuf he was a negro named Belid) resides in the Khat and the Na'djad zealots (the fanatic members of the Wahhabi sect) dwell there also; in it is the Wahhabi mosque. A second isolated fortress dating from the eighteenth century, called Khutham (‘muzzle’) is situated near the southern gate of the town. The Rafi'ya quarter is inhabited by abbeys and aristocratic families, hostile to the Wahhabis; its situation is a very healthy one and it contains many fine houses and broad, clean streets. In this quarter is the market place, a long pillared hall with an arched roof, al-kaisarya, with workshops of shoemakers, smiths and carpenters, and shops containing weapons, clothes, emboideries, gold and silver ornaments and other wares, partly imported from Bahrain, O'man, Persia and India. The Na'far quarter is the most thickly populated; it occupies about half the town and contains a large mosque; its population is a mixed one, consisting chiefly of merchants, small tradesmen, weavers, artisans and some also strangers from Persia, O'man, Bahrain, Harik [q.v.] and Kusar [q.v.]. In the centre of the town opposite the market place is the public square, a long quadrangle about 300 yards by 80, where the stands of the barbers and the workshops of numerous smiths and shoemakers stand and dates (the fine khalat kind, the best in Arabia, which are grown only in Hasa), vegetables, firewood, smoked locusts, etc are sold in numerous booths. The weekly market of Hofhuf is held on Thursdays on an open space before the north gate of the town. Here coarsely woven clothes, old brass vessels, old swords, sandals, carpet, gromedaries and asses are sold by the country people, while bracelets and anklets, looking glasses, European drinking glasses, strings of beads, also cereals and fruits (corn, meal, khalat dates, sugarcane), coal, wood, etc. are sold by the regular traders. According to information supplied to W. Schimpers by a Wahhabi, in 1836 the town had 40,000 inhabitants; W. Palgrave gives the figure at 23,000—24,000 for the year 1862.

In the tenth century Hofhuf like the rest of Hasa was the scene of the Karmanat wars; it was from here that the Karmanat leaders undertook their raids into Syria and Mesopotamia. In the beginning of last century Hofhuf fell into the power of the Wahhabis who as elsewhere introduced their views here by force. The rule
of the Wahhabiis was a heavy burden on the town and the people of Hofhüf as of the rest of Ḥaṣā enthusiastically welcomed the Egyptians when Nadji was conquered by Ibrahim Pasha; the oppressive taxes which the Egyptians levied on them as well as the servile treatment with which the citizens of the town were treated soon brought about a general rising nominally in the town but throughout the country which put an end to Egyptian rule for ever and restored its independence to Hofhüf as to the rest of Ḥaṣā. After the reconquest of Nadji by the Wahhabiis Hofhüf was only taken after stubborn fighting. The walls of the town, like those of other towns, were partly destroyed, the fortress levelled to the ground, new mosques built and old ones restored.

Before the conquest of Ḥaṣā by the Wahhabiis, Hofhüf was a flourishing emporium of trade. It had busy relations with Oman, Persia and India on the one side and Baghdaḍ and Damascus on the other. Hardware, cloths of the poorer qualities, other goods, gold and silver thread, ironmongery, swords, spears, earthenware, and other articles were imported. Besides khūṭū Dates (which still are a lucrative article of export, particularly to India) and sugar-cane, the robes of Hofhüf highly prized on account of their excellent quality and fine make, were exported and brought the merchants rich profits; the copper and silver vessels (coffee-pots) manufactured in Hofhüf also used to enjoy a great reputation. On account of the fanatic hatred with which the Wahhabiis in the provinces under their rule put down all that is connected with fine raiment (particularly silk) and adornment, trade has now quite declined. The people of Hofhüf before Wahhabi rule had been accustomed from ancient times to make excursions, particularly in autumn, often for longish periods to the Djebel Moghūr, situated to the southeast of Ḥaṣā, where they sought to recuperate themselves, with music, song, and other recreations after their strenuous labours; now Wahhabi fanaticism forbids them to do this openly, under penalty of fines or even imprisonment.

HOLWĀN. [See Ḥulwān.]

HORMUZ (ORMAZD, AHURA MAZDA), the name of the supreme being of the Zoroastrians, at a much later period applied to the planet Jupiter), the name borne by five kings of the Sasanian dynasty.

Hormuz I, son of Shāhpūr, reigned for only a year (272—3). He had previously been governor of Khurāsān and had distinguished himself in war with the Romans; he is also said to have given Māni when persecuted a place of refuge in his palace in Dastagird.

Hormuz II (308—9), son of Nares and grandson of Shāhpūr I, was killed by the Arabs after he had defeated them. He was the father of Shāhpūr II, who was born after his death and of a prince named Hormuz; the latter was kept in confinement but managed to escape after thirteen years and went to Constantinople from which he accompanied the Emperor Julian on his Persian campaign. The ruins of the palace of Hormidas (the Greek form of his name) are still pointed out in Stambul, in the wall which separates the city from the sea of Marmora.

Hormuz III was the son of Yezeqīlid II and succeeded his father. During his brief reign, (457—9) he had to fight his younger brother Frīzū, who had procured the assistance of the Hephthalites (White Huns) by ceding them the cities of Talekān and Tiran in Bactria. Frīzū was victorious and killed his brother. During this war Dinak, the mother of the two brothers, took over the government in Ctesiphon.

Hormuz IV (578—90) was the son of Khusraw Anōshak-Ruwan and the daughter of the khanān of the Turks, whence he was called Turk-zād (prince of the Turks). (Tabari, Annals, i. 965; al-Birūnī, Chronology, p. 123). According to the Byzantine sources, he was a haughty and foolish ruler, who imprisoned the Emperor's envoys and only released them under pressure from the Magi. His troops were several times defeated in battle by the Romans (586). The rebellion of Bahram Čōbin also took place in his reign. Hormuz was deposed, thrown into prison and strangled without his son Khusraw Parviz preventing it.

Hormuz V, grandson of Khusraw Parviz, fought against his aunt Azarm-dōght and maintained his position till the first year of Yezeqīlid III's reign, when he was put to death by his own soldiers in Nišiβin (632).

Bibliography: Fr. Spiegel, Ernährliche Alterthumskunde, i. 254, 262, 369, 463, 532; F. Justi, in the Grundriss d. Iran. Philologie ii. 520, 539, 541, 545; Noldeke—Tabari, Geschichten der Sassaniden, Index, s. v. Hormizd. (Cl. Huart.)

HORMUZ (HORMUZ, ORMUZ), in the middle ages the most important commercial port of Asia, situated at the entrance to the Persian Gulf; about 1300 the name was transferred to a small island opposite the ancient town and is still attached to it. Hormuz was of importance for the lands on the Indian ocean as trade between Western Asia and India passed through it; traffic by sea had also been established between China and Hormuz. A district of 'Araq was first mentioned by Nearchus, who explored the Persian coast from the mouth of the Indus. (Arrian, Indus, 32—35; Onesikritos in Juba's Epitome in Pliny, Hist. Nat., VI, 27—28). The location of this district is established by the fact that the Ananis (An- danis) flowed into the sea here. The town (Har darz) was mentioned by Cl. Ptolemaeus Marcianus. (Peripl. Maris exteri, 27); the Hermopolis of Ammian. Marcellinhus (XXIII, 6, 49) is probably identical with it. The situation of the town is wrongly given in Ptolemy; Marcianus agrees with Nearchus and is perhaps indirectly dependent on him.

The district of Hormuz, the land of Caramania, was very rich in agricultural products (wine, wheat, barley, rice and indigo) as well as in minerals (gold, silver, copper, iron, cinnamon, and salt); but it had no importance in the world's commerce. It was established by the Arabs, who first opened up this district to foreign trade, whereupon Hormuz attained its great importance in the XIV—XVIth century. The medieval accounts, European as well as Oriental, show that Hormuz was a port of world wide
fame. The foundation of the town is ascribed to Ardashir Pāpakān (224–241), founder of the Sasanian dynasty, but it was only after the Arab conquest that it attained prominence. From it huge quantities of goods were exported to India, which was the case as late as the xvth century. The fact that China under the T'ang dynasty (627–961) attained great importance, at the same time as the Arab empire, brought about closer relations between Western Asia and China, in which trade played an important part. The Arabs visited India mainly by the sea route while in return Indian and Chinese ships came to the Persian Gulf to Hir and Hormuz. Hormuz is mentioned by Ibn Khordadbeh as a calling-place on the route from Bassā to China. A Chinese account (of circa 785–805) describes the sea-route from Canton to the Persian Gulf and mentions as the most westerly point the "important market of the Ta-Shi (Arabs)" the harbour of Molo, which Rockhill and Hirth take to be Hormuz, while A. Hermann identifies it with Bassā.

Of the older Hormuz on the mainland, we learn that it was situated one parasang (four miles) from the sea on a river, which ships ascended to the town. Idrisi, Is̱aḵkhārī and Mīkaddāsī describe the town as the chief market of Kirmān. Indigo is mentioned as the most important product of the district. Yakītī particularly notes that Hormuz had attracted all the trade with India.

After about 1100 Hormuz was under Arab rulers, of whom Ruka al-Din Mahmūd (1246–1277) is known to us from Marco Polo. A full history of the dynasty is given from a lost Persian source in Teixeira, Relaciones de P. Teixeira d'al origin descendance y successión de los Reyes de Persia y de Hormuz, etc. After 1262 Hormuz was under the rule of the Ilkhān of Persia. It cannot be certainly ascertained what brought about the transference of the town from the mainland to the island, barren island. Abu 'l-Fida' says that the old town was destroyed by 'Tatars'. But the Mongols hardly touched the coast of Kirmān. Ibn Battūta expressly distinguishes between the Hormuz of the mainland and 'New Hormuz', an island 3 parasangs from the coast. The references of Marco Polo, who twice visited the place (1272 and 1293) are to the Hormuz on the mainland. He describes the business of the port in a striking fashion and particularly notes the export of horses to India. The island town founded by Kūch al-Dīn was, in spite of unfavourable natural conditions, a thriving centre of the world's commerce from the xivth to the xvith centuries. The appearance of the Portuguese in India decided the fate of Hormuz; in 1507 the island was taken by a Portuguese fleet, but the Portuguese allowed the native rulers to remain on condition that they paid tribute. With the help of an English fleet Shâh 'Abbâs the Great won Hormuz from the Portuguese, which, apart from an interval under the rule of 'Oman, had ever since belonged to Persia. It was the will of Shâh 'Abbâs that his new foundation Bender 'Abbâs [s. v. i. 694 sq.]* should take the place of Hormuz. The decline of Hormuz dates from this time and now it no longer exists as a town.

We have brief accounts of the island town in Ibn Batūta who stayed there in 1331 and in 'Abd al-Razzāk. The town was very frequently visited by European travellers, first in 1321 by Odorico of Pordenone. He was followed by Odoardo Barbarosa, Caes. Frederick (1589) and Jos. Salbancke. The account of the Russian merchant Annaasī Niktīn (c. 1580) is of particular interest. The information afforded by these sources on the nature of the town, its trade and its highly developed civilisation, have been collected by R. Stube in his monograph mentioned below.

HORMUZAN, HORMIZDAN. [See HURLANZAN.]

HORUK. [See 'AURUD.]

HOSANGSHĀH GHŪRĪ, the second king of the Ghūrī dynasty of Mālwa, ascended the throne in 1405–1406. In 1407 Mujażar I of Gudjarāt invaded Mālwa, defeated and captured Hosphangshah, and imprisoned him on the ground that he had poisoned his father, who had been Mujażar's friend. Hosphangshah was released and regained his kingdom but throughout his reign was engaged in constant hostilities with Gudjarāt, from which his kingdom suffered severely. In 1420 Hosphangshah annexed the Gond state of Kherla to his kingdom, as a feudatory state, and in 1422 led a most daring raid to Dājjinagar (perhaps Dājjīpur) in Uṣpa, captured the ražā by an artifice and
compelled him to surrender several elephants as the price of his freedom. On returning to his kingdom he discovered that Ahmad I of Gudjarat was besieging his capital, Mándú. Hoshangsháh, seizing a favourable opportunity, threw himself into Mándú, whereupon Ahmad Shih raised the siege and marched towards Sárangpur. Hoshang followed and attacked him but was defeated and shut himself in Sárangpur. He was again defeated when following Ahmad, who retired from Sárangpur. Later in the same year Hoshang made a rash and ineffectual attempt to seize the strong fortress of Gvályár. In 1428 Ahmad Sháh Bahmani of the Dakhán appeared before Kherla, which he claimed as an appanage of Berár, but retreated when he heard that Hoshang was marching to relieve the place. Hoshang followed him and forced an action, in which he sustained a severe defeat. In 1433-34 Hoshang marched against Kálpí and Ibrahim Sháh Sháh Sháhi of Dájpur marched to oppose him, but was recalled by the news that Mubárak Sháh of Díhí was advancing on Dájpur, and Kálpí fell, without a blow, into Hoshang's hands. On his way to Mándú, Hoshang punished some Hindú marauders who had invaded his dominions and then hastened on his way to compose the quarrels between his sons, which embittered his later years. Disputes and intrigues regarding the succession were so virulent as to disturb the unfortunate monarch's last months and hasten his end. He died on July 6, 1425, and was succeeded by his eldest son, Gházní Khán, entitled Múullam Sháh Sháh.

HÓT, a Balú tribe, one of the five main divisions of the race. The tribe is still found under this name in Makrán, but those who invaded the Pandjáb in company with the Rinds and Dódáis are better known by the names of the tribes formed at a later date, such as part of the Kóbsa tribe and the Báláčání section of the Mazáris. The Hót ruled as Nawábás at Dera Ismaíl Khán for two hundred years until they were conquered by Afghans. Hótés are still numerous throughout the South Pandjáb.

Forvéry alludes to them as Hótés, but confounds them with the Dódáis, from whom they were distinct.

Bibliography: Hughes, Balochistan, (London 1877); Ravery, Notes on Afghanistán, (London 1886), p. 4; Longworth Dames, The Baloch Race, (London, 1904); Bray, Balochistan Report, Census of India 1911, § 268. (M. Longworth Dames.)

HUBAL, the name of an idol, which was worshipped at Mecca in the Ka'bah but otherwise is only known from a Nabataean inscription (Corp. Insr. Semita, ii. n. 189 = Jassen et Savignac, Mission Archéol. en Arabie, i. 169, 170) where it is mentioned along with Dúghará and Manúttu. It is thus probable that the tradition according to which 'Amr b. Láháy (q. v.) brought the idol with him from Mesopotamia is correct in retaining a memory of the foreign, to be more accurate Aramaic, origin of Hubal, although the substance of the tradition is otherwise quite legendary. The name cannot be explained from the Arabic for the etymologies in Yákbi etc. condemn themselves, but Pocock's supposition that Hubal is equivalent to ʿHubal, although defended by Dory, is hardly better founded. Another tradition indeed relates that Hubal was an idol of the Banú Kifán, worshipped also by the Kuraish, and had been placed in the Ka'bah by Khuzaima b. Mudrika, wherefore it used to be called Hubal Khuzaima. It is further related that the idol was of red carnelian in the form of a man; the Kuraish replaced the right hand which was broken, by a golden one; it was the custom to consult the idol by divination with arrows; this was done for example by 'Abd al-Muṭṭalih with reference to his son 'Abd Alláh, etc. We learn nothing further about the cult of this idol and the legends are quite worthless for the comprehension of the real nature of the deity. After the conquest of Mecca Hubal shared the lot of all other idols and the image was removed from the Ka'bah and destroyed.

HÚD, the prophet who, according to the Kurán, appeared among the 'Ad [q. v.]. He is represented as one of their kinsmen (qáb) and his genealogy (which is transmitted in various forms), therefore coincides in part with that of their founder 'Ad. He is also identified with 'Abir (the Biblical 'Eber, the ancestor of the Hebrews); in another reference he is called the son of 'Abir [q. v.]. His figure is even more shadowy than the picture of his people and like every Warner he is represented in the same position as Muhammad in Meccan, i.e. he found only infidelity and pride among the people and his followers were few. God, therefore punished the 'Ad with a three-years' drought, as the later legend tells us. A deputation was sent to Mecca to pray for rain whereupon threes three clouds appear in the sky, one white, one red and one black. One of the deputation, called Káil, was given the choice of the three by a voice from heaven. He chose the black one with the result that a terrible storm broke over the 'Ad and destroyed the whole people with the exception of Húd and his followers (Súra, 69, 5). Húd is said to have lived 150 years. There are various traditions regarding his grave: there is a Kabir Húd not far from Hi't Barahat [q. v.]; in Ibn Batúta (ed. Paris, ii. 205; ii. 209) it is mentioned that the grave of Húd is in the great mosque at Damascus; according to other traditions he rests near the Ka'bah with 98 other prophets.

In the article 'Ad attention has already been called to the fact that the existence of a tribe of 'Ad is problematic. This is still truer of Húd. The word Húd in the Kurán is a name for the Jews as a body (Súra, i. 105, 139, 134. and the root H.W.D means to profess Judaism (i. 59, xv. 48 etc.). The proper name looks as if it had been derived from the verb and the noun: the tradi-
tional identification of Hūd with the ancestor of the Hebrews probably points in the same direction. Hirschedel is perhaps correct when he calls Hūd an allegorical figure (Beiträge zur Erklärung des Korān, Leipzig 1886, p. 17, note 4). Von Kremer’s suggestion (Über die südasirische Sagas, p. 21 sqq.), that the crater of Barahut was the immediate cause of the rise of the Hūd legend is worthy of note.

Hūd. After the assassination of Mundhir II b. Yahyā (cf. TOPJ) in the year 430 (1039) Abū Aiyāb Sulaimān b. Muhammad seized the government of the town of Saragossa and became the founder of a dynasty which ruled there and, according to Codera, in Lerida, Calatayud, and Tudela also till 503 (1110). The dynasty is known as the Banū Hūd, because Hūd, one of the Arabs who came to Spain at the conquest, was the ancestor of the family. There are various forms of the genealogy of Hūd preserved. The founder of the dynasty was commander of the Christian troops at Lerida in Mundhir’s reign and when he became lord of Saragossa took the name al-Mustāʿim. According to Codera, Estudios críticos de Historia Arába española, p. 562 sqq., he divided his power among his sons so that each of them became governor of one of the above mentioned towns, when Sulaiman died in 438 (1046–7). Of the rulers of Saragossa alone do we possess further details. In it there reigned in succession Abbad al-Muḍṭadir till 474 (1081), his son Yūsuf al-Mustāʿim till 478 (1085), his son Abū al-Mustāʿim (ii.) till 507 (1107). The last-named’s son ‘Amīd al-Dawla ‘Abd al-Malik lost his throne to the Almoravids ‘Alī b. Yūsuf in 503 (1110); authorities differ as to how this happened. ‘Amīd al-Dawla escaped to Rueda and lived there till 524 (1130). Cf. also the article MUHAMMAD b. Yūsuf B. Hūd.

Hūdibiya. A valley a short day’s journey (marbala) from Mecca, i.e. about 9 miles distant. A portion of it was included in the karam of Mecca, which extended farthest in this direction. About the time of the Hijra this barren valley was the centre of a local cult with a well and a sacred tree. A modest village afterwards arose here as the centre of the surrounding lands, which were rich in subterranean water.

It was towards the last months of the year 6 A.H. after the destruction of the Jewish clans and the hambing of the munākhān in Medina, that Muhammad was able to consider himself master of the situation. He therefore thought the moment had arrived for conducting a demonstration against Mecca as an answer to the siege of the Khābiṣ, which had been attempted by the Kuraishi. His persistent policy had made all preparations. He had assiduously concentrated the attention of his people on the metropolis of Mecca; the alteration of the kibāla, the application of the legend of Abraham, who was represented as the builder of the Ka‘ba, and the obligation to pilgrimage, which was now laid upon all believers, had no other object. The Prophet, seems at first to have meditated a military demonstration: 1400–1600 armed men were to have accompanied him. He then altered his plan and expressed his intention of performing the umra (lesser pilgrimage); the sacrificial animals taken with him were to complete the illusion. He would enter Mecca as a sovereign or force the Kuraishi to negotiate with him. His military escort was strong enough to gain the respect of the Meccans but too small to suggest thoughts of an attack. The Kuraishi took no risks and occupied the approaches. Muhammad had scarcely entered the sacred territory when he wasupon their outposts. Before this resistance he returned to Hūdibiya and entered into negotiations with them. He limited his demands to a request to be allowed to visit the national sanctuary with his followers, which was at first refused. Long and wearisome negotiations followed. As ‘Omar did not dare to go to Mecca as plenipotentiary, ‘Othman was chosen for the purpose, as the prestige of his family, the influential Omayyads, protected him. When the rumour of his death became current, Muhammad collected his followers at the sacred tree of Hūdibiya and demanded the oath of fealty from them. This is the ba‘a of Hūdibiya, also called the ‘abā‘ia of the agreement, an ambiguous allusion to a passage in the Kurān (sūra viii. 18) which is traditionally said to allude to these events. All the participants bear the name Shadhārī in the history of Islam, from the tree under which the ceremony took place. A few days later ambassadors arrived from Mecca. The treaty to be concluded was discussed clause by clause and word by word. In the protocol Muhammad had to refrain from using the formulee of Islam and the style of Prophet. He even pledged himself henceforth to send back deserters from the Kuraishi, while the Meccans made no such pledge with respect to Muslims. As to the umra, they were to be allowed to perform this in the following year provided they came without weapons except the swords by their sides.

This agreement severely disillusioned the companions who had already become impatient of the long period of inactivity and the want of water. In reality, however, in his struggle against Mecca the Prophet had here obtained an important diplomatic success. While on his side he surrendered no rights that he had won but only simple claims, he brought the Kuraishi oligarchy to negotiate with him on equal terms. He was for the first time recognised before all Arabia as a power in the land. The Kuraishi entered into negotiations with the former fugitive and leader of a band of fugitives, who had broken all bonds with their homes and the Dār al-Nadwa [q. v.] entirely binned out the past. Abū ‘I-Kāsim would take full advantage of it and be able to make full use of the freedom of movement now guaranteed him by a formal agreement. Medina had nothing more
to fear from Mecca. A means would be found to get round the burdensome concessions and to rescind the treaty. In the meanwhile Muhammad decided to stay in Ḥudaybiya the sacrificial animals he had brought with him and added certain ceremonies of the pilgrimage to the site.

(H. LAMMENS.)

**HUDHAIL, a large Arab tribe,** belonging to the North Arabian group. Their genealogy is Hudhai b. Madrika b. al-ʿYās b. Muʿāṣar. They were a brother tribe of the Khurais. They inhabited the mountains of Sarat Ḥudhai, which bear their name, between Mecca and Medina and were neighbours of the Sulaim [q. v.] and Kināna [q. v.]. In the time of Ḥajjāliya they worshipped the idol Suwāt (destroyed by ʿAmr b. ʿĀṣ in S = 630) at Ruhāṭ and, like the Kuraishi, Khuraṣa, and other tribes, also Manḥit (destroyed in S = 630 by Saʿd b. Zaid) at Kudaid, mentioned in Kurān lii. 19, 20. The Hudhai produced a great many poets, of whom the most important are the contemporaries of the Prophet, Abu Ǧussayb (q. v.) and Abu Ǧuraṣh.

The following places are mentioned, with others, as belonging to the Hudhai: Aththal (in Ṭhāmān), ʿĀdh, al-ʿAbdah (Wustenfeld, Register, p. 233, al-ʿAbdah), Ḍūrād, al-ʿAṣwāl, ʿĀly, Allāma, al-ʿArḍj (a large town near Ṭafṣ), Ṭāshm, Ṭan Anf, Batu Nūmān, Ḏjadad, al-Ḍajjā, Ḫudhun, al-Ḥarūda, al-Ḥijāb, Ḥayyār, Durā Farwā, Dabūt, Khaṣṣal, al-ʿArūn, al-Ṭāṭh, al-Manḥit, al-Muʿants, Nun (several villages), Rāy, Ṭarīṯ b. Rāḥib, Ṭarīṣ, Rakhmuṭ, Ṭuraita, Ṭuḥāt (3 miles from Mecca, also given as a wādī), al-Tillah, and ʿUrās; mountains: Arsal, ʿĀṣf, al-Ṣ̄īm (ʿUṣm, in Wustenfeld, Register, p. 133, given both as a mountain and a village), al-Ḍajjā, Fahl, Ghawāṣ (a very high peak, on which the town of Ṭafṣ stands, rich in game and honey), Ḥaid, Ḳabak, al-Karās, Khandhal, Kinthūl, Kurāsah, Ṭabān, Māḏīd (Wustenfeld, Register, l. c. Māḏī), Makā, Numār, Nubās (also given as a wādī), Salām, Sāl, ʿṢAAD, Shamsīr, ʿUṣm, ʿUṣr, al-Muṭṭalib and Khwālid b. Wāḥīla, the chiefs of the Hudhai, and Yaʿmar b. Nufūlha, chief of the Bakr. ʿAbd Manāṭ, then offered to cede him the third part of Ṭhāmān, if he would spare the Kaʿba and leave the country, but Abrah declined.

After the battle of Ḫudaybīya in 4 = 626, the Banū Lihyān, a clan of the Ḥudhai, assembled at ʿArna with other tribes around Mecca under Sufyān b. Khālid, to conspire against Muhammad. The Prophet, being told of this, had Sufyān murdered by ʿAbd Allāh b. ʿUwaiss. ʿAbd Allāh brought his head to the Prophet and was presented by him with a stick which, according to the Prophet, was to serve as a mark of recognition on the day of resurrection. ʿAbd Allāh is said to have been buried with this stick, which he carried all his life. In the same year a number of Ḥudhai fell upon six companions of the Prophet at the watering-place of Raḍji; they were on their way from Muhāmmad to the ʿAdal and Khara to instruct them in the principles of Islam. The Hudhai slew four and brought the others to Mecca, where they sold them to the Kuraishi. After the conquest of Mecca by the Prophet in S = 630, a number of the Khuraṣa fell upon a section of the Ḥudhai and slew one of them: the Prophet, learning of this, during the midday service next day before the Kaʿba made an appeal to the Khuraṣa, urging them to refrain from further bloodshed.

The Ḥudhai still exist on the Ṭijbel Kora, a number of ranges round Taʿif, on one of which is the village of Raʾs al-Kora, according to Burckhardt, the most beautiful spot in the Ḥijāz, and far famed for the quality of its water. Here they encamp with their numerous herds and grow wheat and barley in the very charming valleys of these hills. Their clean little houses, scattered over the plain in groups of four or five, are built of stone or earth. There are also settlements of the Ḥudhai at Mabeda, the southern suburbs of Mecca, where they sell dates, corn and cattle. Before their conquest by the Wāḥhābi, they were only provisionally under Mecca and paid no taxes.

(J. SCHLEIFER.)

**HUDUD, the hoopoe,** belongs to the order Sturnores and bears a remarkable tuft of feathers on its head. Much is related concerning its habits and character, of which only a part can be mentioned here. Its piety is particularly emphasised.

In Umayya b. Abī ʿSalṭ (ed. Schultes), in Reit- träge zur Assyriologie, viii. 86, 84 sq. cf. also Ibn ʿAbītaiba, Kitab al-Safir, ed. de Goeje, p. 279.
there is a story that the hoopoe enthroned its dead mother and carried the body on its back and head till it found a resting-place for it; this is why its back is brown. It is also related that the tuft of feathers was a reward for this act. — When its mate dies, the hoopoe does not look for a new wife. — When its parents grow old, it feeds them. It bears different kunya’s in Arabic, e.g. Abū Ṭūdād, Abū ’l-Qayyīda, after the numerous bows of its tuft as it walks. It makes its nest in dung so that it has an unpleasant smell. Its feathers, heart etc. are used in various ways. The Prophet is said to have forbidden it to be killed; according to some, its flesh is forbidden, according to others, it is permitted. The hoopoe plays a prominent part in the legend of Solomon and Bilqis. This was apparently already developed by Muḥammad’s time as may be concluded from Sūra xxvii. 20 sqq. In this passage we are told that Solomon assembled the birds and the hoopoe was missing. When he arrived late, he gave an account of the queen of Saba’ and was entrusted by Solomon with the bearing of a letter to the Sa’baeans. The later writers as a rule give the whole story as follows. The hoopoe possesses the power of seeing where water is through the earth. He was therefore used by Solomon on his pilgrimage to Mecca to find water. But on one occasion the hoopoe whom Solomon had appointed for this purpose, named Ya’far or Yaghfir, while on the journey, took a trip to the south and reached the garden of Bilqis where he made the acquaintance of another hoopoe named ‘Ufar. The latter told him a great deal about the queen of Saba’. In the meanwhile Solomon was looking in vain for water for his army (or according to another version for ritual ablutions). He sent the vulture (nasr) to assemble the birds and the hoopoe was missing. The eagle (naṣīb) was sent to fetch him. But he was already on his way back and was brought by the eagle before Solomon, who talked to him severely but finally, after hearing his account of Bilqis sent him with a letter to the Sa’baeans. Another version of the beginning of the story, relates that Solomon on his pilgrimage was being carried with all his retinue on a carpet by the winds to Arabia. The birds were ordered to fly above the carpet in such a compact mass that those sitting on it should be entirely protected from the sun. But Solomon detected a little ray of light in one place; so he concluded that one bird was missing. He then held a roll-call and it was found that the hoopoe was absent; the story continues as before. It is also related that the hoopoe once invited Solomon and his army to a feast on an island. When the guests had arrived, he threw a dead locust into the fire and said “Now eat, 0 thou Prophet of God! If the meat be lacking, there is at least plenty of sauce”. Solomon and his soldiers laughed for a year at this joke. On the relationship of the Jewish hoopoe-legend to the Muslim, see Grünbaum, Neue Beiträge zur Semitischen Sagenkunde. In North Africa, hoopoes are made out of silk, feathers, etc., and used for magical purposes (Doutté, Magie et Religion dans l’Afrique du Nord, p. 270 sqq. Bibliography: Damir, Ḥāyāt al-Hayawan, s. v. ḥudūd; Ǧāḥis, Ḥayāt al-Hayawān (Cairo, 1323), iii. 160 sqq.; Kamm, Ḥayāt al-Malakāt (ed. HUDDR. [See Ḥuduras.]

HUEDJIRA. [See Hīdjiyā.] HUDDJA, e. ‘Adi of the tribe of Kinda, the “first martyr” of the Shī’a. The sect would like to give him the title of “companion of the Prophet” but it is denied by the oldest authorities. The Shī’a likewise, with as little ground, makes him take part in the first Syrian campaigns, when he is said to have conquered the district of Mārdj ’Adhār; but the object of this clearly is simply to connect him from the earliest time with this place, which was to be the scene of his martyrdom. At an early period Ḥudjr threw himself heart and soul into ‘Ali’s cause and fought for him at the battle of the Camel and at Siffin. We later find him in Egypt with Muhammad, son of the Caliph Abū Bakr, who was governing this province in ‘Ali’s name. After Abī’s son Ḥasan had given up his claim to the Caliphate, Ḥudjr became the moving spirit in all the ‘Alid intrigues in Kūfah. The governor Mughira b. Shu’ba had even to offer him money to obtain peace. Mughira’s successor, Ziyād b. Abīhi, endeavoured to bring him to a more reasonable frame of mind; but his efforts failed with this unruly spirit, who always played an important part. On Ḥasan’s death, Ḥudjr entered into negotiations with his brother Ḥusain; the pretender had been invited to take command over the army in Kūfah. During Ziyād’s absence in Basra Ḥudjr had attempted to stir up a revolutionary movement. Ziyād hurried back with all possible speed and endeavoured to settle the affair peacefully. But when the negotiations fell through, Ziyād had Ḥudjr arrested along with those leaders of the Shī’a party who were most deeply compromised. The matter was taken to the courts and an indictment prepared and signed by the most prominent men in Kūfah; finally Ḥudjr was taken with his companions to Mu’āwiya in Syria. After the Caliph had arranged a new trial and asked the advice of the leading men of Syria, he sentenced Ḥudjr to death and had him executed in Mārdj ’Adhār near Damascus. In his last moments ‘Ali’s follower utterly lost his courage. His
death opens the mythology of the She'ā; hence the importance assigned to this rather everyday episode, which was really nothing more than an incident in the domestic troubles of the ʿIraq. ʿAbbās “throughout maintained a correct attitude and Muʿṭawwa even inclined to the side of leniency” (Willenschon), for he pardoned the majority of Ḥudriya’s accomplices.

HUDRA (A.), room, chamber, particularly (with the article) ʿIṣba's room, where the Prophet and his two successors Abū Bakr and ʿOmar were buried, now one of the greatest sanctuaries of Islam. [ Cf. the article MEDINA.]

Ḥudriya is derived from the same word; it was the term applied in Egypt to the slaves who were quartered in barracks near the royal residence. During the Fatimid period, these were organised by al-Afjāl on military lines as an emir, a kind of bodyguard under the command of an emir, who bore the title al-Muwaṣṣal. Their number then amounted to 3000 men: Cf. Makrī, Kitāb, i. 442.

ḤUDRIYA, (Hodjriya, Hodseyrie), the name of a tribe in South Arabia. Their land lies to the north of the land of the Sohbē (Subaih, [q.v.]) between 43° 40' and 44° 42' East Long. Greew. and 13° 5' and 13° 15' North. Lat. and is entirely mountainous. The climate is tropical; the principal product is coffee. Among the mountains we may mention Djbel Sabr (Sabir [q.v.]) which is described by Hamdānī in his Dāʾira as a very high mountain, among wādis, the Wādi Warasan which joins the Wādi Tubhān, the river of Lahji [q.v.], and belonged in Hamdānī’s time to the Sakkār, and the Wādi Muṣka (Moṣka); among towns, Dohban belonging to the important clan of Sherdjib (Shergeb), which at one time had an independent Sultan, with about 500 inhabitants (of whom about a fifth are Jews), an old Hamyder palace, a bazaar and a Saturday market, Dār Shawwar, the chief place of the powerful clan of Hammād, which has an ʿādī of its own, with about 300 inhabitants (including only a few Jews), several hin and a Friday market, Ḥeruwa on the wādī of the same name with about 300 inhabitants (including a few Jews), a small bazaar and a Tuesday market, Dimena, near Taʿīraz [q. v.] with about 600 inhabitants (of whom a tenth are Jews). In the land of the Hammād there is a hot mineral well with a bath, called Birket Hammām, visited by many Arabs, but access to it is forbidden to Jews.

The Ḥudriya claim to be true Ḥumyar, and are said to have at one time formed one tribe with the Soubē. They were earlier under the Imāmate of Sanāʾ, but became independent on the decline of its power. Since the middle of the 9th century they have become for the most part sub-

ject to the Dhu Muḥammad, who are descended from the Bakil (see Khāqān and Bakil), and were formerly in the pay of the Imāms of Sanāʾ, and obtained possession of a large part of the Yemen on the latter’s overthrow.

The Dhu Muḥammad maintain small garrisons among the Ḥudriya, levy taxes on them and administer justice among them. Their chief representative bears the title Khāʾid. Many Ḥudriya seek to escape the rule of the Dhu Muḥammad, who as followers of the heterodox Zaidi sect are hateful to them as Shīʿa, by migrating to Aden, where they earn a livelihood as labourers.

AL-ḤUDRIYĀT, plur. of Ḥudra (q. v.); title of Sara ʿlix.

AL-ḤUDRIYIR. [See ḪĀṬA GANDI KĀRISHI.]

HUDNA, a calm, truce, armistice; al-Hudna denotes especially the truce made between Muḥammad and Kūraishi at al-Ḥudaybiya. [See this art.]

HUDUD (A.), Plur. of Hadd [q. v.]

HUELVA, the ancient Onuba, Arabic Walba, a town in the province of Spain of the same name, on the left bank of the Odiel, an important port, accessible at high tide to seafaring ships, for the copper and sulphur mines of Rio Tinto and Tharsis, which are near it. In the middle ages it was, according to Idriśi, a small, thickly populated, walled town with flourishing trade and industries. The present population is 29,000. After the fall of the Omayyad dynasty, Huelva had its own rulers, the Bakri Abū Zaid Muḥammad b. Aiyūb and Abū Muḥṣab ʿAbd al-ʿArīf. In 1051 the latter ceded the town to al-Muṭājīd of Seville on condition that he was left the little island of Shaliṭ (Saltes), but when he saw that this was of no use to him, he sold his ships and armaments to al-Muṭājīd and went to Cordova. Huelva henceforward shared the fortunes of Cordova.

HUESCA, the ancient Osca, Arabic Waskha, a town in the Spanish province of the same name, 50 miles E. of Saragossa. The number of inhabitants is now 12,600. Huesca was conquered as early as 96 (713) by the Arabs, and seems during the period of Arab rule to have formed for a time an independent principality under Muḥammad b. ʿAbd al-Malik al-Tawil, died 301 (913–4). Cf. Codera, Estudios criticos de Historia arabe Española, p. 234 sqq. In 1096 the rule of the Moors ended and Huesca became for a brief period capital of Aragon, till the seat of the government was moved to Saragossa in 1118. Idriṣi, op. cit., p. 176, only mentions the name of the town.

HUFASH, a high mountain in South Arabia, belonging to the al-Muṣainī range of the Sarāt group, on the Wādi Surud near Ḥaraz [q. v.]. It is often mentioned by Hamdānī in his
HÜLĂGÜ (also written Hulagü) a Mongol conqueror and founder of a Mongol kingdom in Persia, born about 1217 A. D. Sent by his brother Mongke to be the head of an army against the Iłgāš and the Caliph, he left Mongolia in 611 = 1253 but did not cross the Amū-darīa till the 1st Dhu'l-Hijjah 653 = 1st January 1256. There he received the homage of most of the petty rulers of Persia and the Caucasian lands; in the course of the year 614 = 1256 the greater number of the Iłgāši strongholds were taken without difficulty; on the fall of the dynasty cf. the article ASSASSINS (i. 491). On Wednesday and Thursday 9th—10th Muḥarram 656 = 16th—17th January 1258 the Caliph's army was routed in a pitched battle and on the following day Hulagü stood before the walls of Baghdad, where he met with no resistance to speak of; on the fate of the Caliph, his line and his capital, cf. the article BAGHDĀD (i. 563). An attempt made in 657 = 1260 to conquer Syria failed; Hulagü succeeded in taking Ḥalab and advanced as far as Ḥāṭirn (q. v.) himself, sending his generals to lay siege to Damascas, but was forced to return to Persia on hearing of the death of the Great Khān Mongke; on 25th Ramāḍān 658 = 3rd Sept. 1260 the army which he had left behind was destroyed by the Egyptians. Hulagü later tried to renew the struggle and with this object entered into an alliance with the Franks but was unable to execute his purpose. On the unsuccessful war with the kingdom of the Golden Horde 660 = 1262 cf. BERKE (i. 738).

The petty kingsoms in al-Jīzāra, Kūrtiṣān and Asia Minor as well as the Christian territories south of the Caucasus were incorporated as vassal states in the kingdom founded by Hulagü so that his power stretched from the Amū-darīa almost to the Mediterranean and from the Caucasus to the Indian Ocean. The sovereign took the title Ilkān ("subordinate khan" or "khan of the tribe"); he, like his successors down to Ghāzān Khān (cf. ii. 149), reigned in the name of the Great Khān living in Mongolia (later in China). Hulagü himself was also called "the great Ilkān" (Iltīkān-buzur). The Christian element in his people was particularly favoured by Hulagü and especially by his Christian wife Dōkār Khātūn, often to the detriment of the Muslims. The towns destroyed during his wars were in part rebuilt even in Hulagü's time; he himself in times of peace delighted to live in northwestern Aḏharbidājān, particularly on the banks of Lake Urmia, where many edifices, such as the famous observatory on a hill north of Marāgā, a palace in Aḏātāgh, temples of idols (baḥrānāhā) in Khōl, etc. were built. Most of these buildings were still standing 40 years later when Rāshīd al-Dīn was writing his work; remains have not yet been discovered. Hulagü built or restored (cf. Yākūt, i. 513, on the earlier fortress on the same island) a strong castle on the mountainous peninsula of Shāhī on the east shore of the lake, which had once been an island (whether this was still the case in Hulagü's time is not certain; Rāshīd al-Dīn only speaks of a mountain on the bank of the lake); the treasures won in battle in Persia and other lands were kept there; Hūlägū and his successor Abāk (q. v., i. 4) were
buried there. According to Egyptian sources, the tower in Sīrah collapsed in 681 = 1282-3 and fell into the lake with all its treasures; no such catastrophe is mentioned in the Persian authorities. 1Juflāb ʿAbrū (cf. above ii. 213) only says that in his time the castle was quite uninhabited (cf. Raušid al-Dīn, ed. Quatemere, p. 316 sq.; Le Strange, The Lands of the Eastern Caliphate, p. 160 sq.). Hūlānī died on Sunday 19th Rabi’I 11 663 = 8th February 1265. According to the Mongol custom, beautiful young maidens were buried with him; this is the last occasion on which this custom is mentioned among the Persians, even in the heathen period. 2Bilbliography: D’Ohsson, Histoire des Mongols, iii. 134 sq.; Hammer-Purgstall, Geschichte des Islāmus, i. 79 sq.; Howorth, History of the Mongols, iii. 90 sq.; Histoire des Mongols de la Perse par Raušid al-Dīn, publ. par M. Quatemere, Paris 1836; Hammer-Purgstall, Geschichte unserer Völker, 49 sq. (Tartaria Wastyp), 49, edited 1839, p. 275 sq. (W. Barthold.) 3Al-HULUL AL-MAWṣIYYA FT DIHK AL-ĀKU-RAB AL-MARrimonKHAYA, an anonymous work, does begin especially with the history of Merrāskūsh. The author begins his history with the foundation of the city; he deals in detail with the history of the Almoravids and Almohads but on reaching the Marinids, he only gives a summary list of the rulers of this dynasty. We find at the end of the book that he lived in Merrāskūsh. The work has been attributed to Ibn ʿAbīḥā (17) and by its recent editor to Lišān al-Dīn b. ʿAbīḥā (17); but the author himself tells us (p. 136) that he compiled (completed?) the work on the 12th Raušid 11 786 (4th May 1384), Dozy’s manuscripts are dated 783 and Ibn al-ʿAbīḥā was assassinated at the beginning of 776 (1374). The preface and the chapter on Yūsūf b. Tāshirūn’s expeditions to Spain were published by Dozy, Scriptores Arabum loci de Barbadiis, i. 182–209; he has also given the chapter on the Almohad Alūd Yaḥyā’s expedition in his Recherches sur l’histoire et la littérature de l’Espagne (3rd ed., Appendix xxvii). p. lxx-lxxix). A short extract is given in Amari’s Appendice alla Biblioteca Arabo-Sicula (Leipzig 1875), p. 62–63. The text has been published very inaccurately at Tunis (n.d.) with the biography of the supposed author Ibn al-ʿAbīḥā. In the xvith century Spanish translation was made which is now in the Government House at Algiers; it was inserted (without indication of provenance) by Conde in his Historia de la dominacion de los Arabes en España, iii. ch. ix.—lviili. 4Bilbliography: R. Basset, Notice sommest des manuscrits orientaux de deux bibliothèques de Lisbonne (Lisbon 1894), p. 11–24; Jacques ton, Les Archives espagnoles du Gouvernement Général de l’Algérie (Algiers 1894), p. 98–109; Pons Boigues, Estudy bi-bibliogràfico, p. 393–5. (René Basset.) 5HULMĀNYA, a mystic sect founded in Damascus by Abū Hulmān al-Fārisī al-Halabī. He appears to have been a disciple of Ibn Sālim of Basra (died 297 = 909); he was admitted among the Šufī Shīʿahs in the Taʿarruf of Kalażādhī (s. v. sim) but excommunicated by the Shīʿahs. After having maintained the theses 1. that God is present in the person of men endowed with physical beauty (iṣṭāb) 2. that everything is allowed (išāb) to him who knows to worship the presence of God in them. This is perhaps a corruption of the Sālimīya thesis on the divine taʿaffūl. 6Bilbliography: Maktū, Badī Damascus, ed. Huart, ii. 90–92; Salmān (cf. s. v. Hulūl); Baghdādī, Farāk, ed. Badr, p. 245–6; Ḥujjāwīrī, Kašif al-Mahṣūbī, transl. Nicholson, p. 131, 260. (Louis Massignon.) 7HULUL, a philosophical term, derived from ḥalla “to loosen, unfold, alight, settle in a place (maḥshīl),” whence its classical acceptions in Muslim theology, the relation between a body and its place, an accident and its substance. Ḥulūl has also been applied to the substantial union 1. of the body and the soul, Ḥulūl al-nābī f. l-badan, 2. of a divine spirit with man, Ḥulūl al-ʿāk al f. l-nūrī f. l-nūrī (Fārābī, ʿArī Abī ʿAlī al-Mādinī al-qāsimī; ed. Cairo, 1906, p. 86), Ḥulūl al-lāhā f. l-nūrī (cf. al-Hallaj). The Aristotelian doctrine of hylomorphism, like the Christian doctrine of the incarnation, proposed the union to matter of a spiritual substance, its specific form; it may be compared to a force in its sphere of action. Almost all Muslim theologians (Maturākīns) reject it; followers of atomism such as ʿAṣārī, al-Nāṣirī, and Ḥuṣain al-Tabarsi, added Ḥulūl in case 1., for they saw in the raḥ a subtle body, even in the angels and demons, but they rejected it in case 2. as submitting the divine essence to a partition (taṣawwuf), and to transmigration (taḥāyīqa), whence the excommunication both by Ṣunnī and Shiʿa of the following sects as Ḥulūlīya on the same grounds as the Christians: (a) the extreme Ṣūrī (Ẓāhirī): Shāhīya, Ḥaynāya, Ḍaŋānīya, Ḥassānīya, Ṣafāwīya, Tāmrānīya, ʿĀzārīya, Druses, b. ʿAṣārī ʿAlī al-Hulūlīya (q. v.), Fārisīya (cf. al-Hallaj), Shabbāsīya. c. Monists: Iṭḥāḍīya (Inb Taimiyya calls Ḥulūl ʿalā nūrī their “maḥshīl al-nūrī”), cf. “taṣawwuf al-ʿāmīl,” Farghānī, Mūṭahāra ʿl-Mādinī, (ed. Cairo 1293, ii. 84–86; cf. ibn al-ʿArabi.) 8Bilbliography: Sulami, ʿAlāṣār al-Ṣufī, MS. Cairo, Führ. vii. p. 174 sqq., 77–79; al-Ḥujjāwīrī, ʿAlāṣār al-maḥṣūbī, transl. Teheran, p. 406, 419; Ibn Taimiyya, Awāmiqī, Ms. Damascus xxii, (extrait printed in Alūsī, Ḳulā, p. 54–61); Ḥaṭāmī, Fārāwī šaṭaṭīya, p. 238–9; Dalldī, Sharī ʿal-ṣulāḥīya, chap. iv. 3, n. 5; Ḥa ṭāḏī, id., ibid.; al-Ṭahānawī, Ṣuḥbaṭ ʿal-furūnā, ed. Spenger, p. 349–354; Friedlander, in J. Am. Or. Soc. xxvii. 34, 36, 65– 72; xxix, 13, 52, 98, 99. (Louis Massignon.) 9HULWĀN, Greek Xάλα, a very ancient town at the entrance to the Zagros passes, Zagrī Pylac = ʿAḵāba-i Hulwān, now utterly deserted. The site of the town on the left bank of the Hulwānācāi south of Seri Pūl is still recognisable by the ruins of a building called Tāk-i Gīra (illustrated in Flândin and Coste, Voyage En Perse, iv. Pl. 214), which dates from Sassanian times. According to Arab tradition (cf. Tābarī, in Noldeke, Geschichte der Perser und Araber, p. 138), the town was founded by Kyawād 1 (488–496) but in reality it is much older and existed under the same name (Khalamān) even in the Assyrian period. The surrounding country is very fertile, fruit-trees being particularly numerous, and the figs of Hulwān are celebrated in the east under the
name šāhk anjīr (king’s figs). There are also many sulphur springs around the town.

When the Arabs under Idrīs l. ‘Abd Allāh captured Hulwān in 19 (649), it was a flourishing town and continued to enjoy its prosperity in the early centuries of the Ḥijāra. The Arab geographers sometimes place it in ʿIrāq ʿArab but more usually in the province of Dībāl. The town was surrounded by a wall, which had 8 gates, which are detailed by al-Muqaddasi. The great mosque was in an ancient castle in the centre of the town, and the Jews had a synagogue, which was held in great reverence, outside the walls. Towards the end of the fourth (beginning of the tenth) century an almost independent dynasty was ruling in Hulwān, which was founded by Muhammad b. Anūz and became very important under his son Abū l-Shawk (cf. Fāris b. Muḥammad, ii. 68). In 437 (1046) Hulwān was burned by the Sa’dījīs under Ibrāhīm Ināl; it also suffered severely from an earthquake, for example in 544 (1149), so that by the seventh century it was in ruins. The Arab poets devote much attention to Hulwān on account of two palm-trees which used to be there and on which they have much to tell.

**HULWĀN, a village in Egypt on the right bank of the Nile, 3 farsakh south of Fustāṭ, celebrated by the Arab poet Ibn Khāl Khayyāt (ed. Rhodokanakis, iii. 6 sqq.) in a panegyric on ‘Abd al-ʿAzīz b. Marwān [g.v.], who had a pleasure-garden there. The village still exists and has given its name to the health resort of Helwān, which lies farther inland and is of modern origin; it now has over 8,000 inhabitants and is much visited.**

**Bibliography:** Yākūt, Muḥammad, ii. 321; Baedeker, Egypt 6th.**

**HUMA (v.), the bearded griffon, the largest of the birds of prey of the old world, which lives by preference in the neighbourhood of eternal snows; it is the Lämmergeier of the Alps. It carries off which of those dead animals, smashes them on the rocks and eats the fragments; so that the poet Sa’dī is able to say that the humā is superior to other birds, because instead of feeding on living flesh it only requires bones (Gulista, i. story 15). According to a popular belief, which is ancient, the shadow of a humā falling on a person’s head is a sign that he will be raised to a throne, whence the epithet humayyān, “august”. One who deliberately kills a humā will perish within forty days. The good omen associated with this bird is again shown in another verse of the Gulista (Book i, story 3) “No one shall go to seek the shadow of an owl, even if there were no humā in the universe.”**

**Bibliography:** D. C. Philott, Bāʿr-nāme-i Nāṣīr, p. 27, note 1; Rīdā-Kullé Khān, Farhang-i Nāṣīrī (rationalist objections). (CL. Huart.)

**AL-ḤUMAIDĪ, Abū ʿAbd Allāh Muḥammad b. Abī Naṣr Fūṭuḥ b. ʿAbd Allāh b. Fūṭuḥ b. Muḥammad b. Yāṣīr al-ʿAzīz, whose father was born in Cordova in the quarter of al-Ruṣāfa, and afterwards went to live in Majorca, was born in the latter place some years before 420 = 1029. After studying in Spain under the direction of Abū ʿOmar Yūsūf b. Abū al-Harrur and Abu Muḥammad Ḥasan b. Ḥasan al-Zahrār, to whom he was particularly attached, he set out for the east in 448 = 1056. During his travels he studied the Rūṣāfa and the Muṣṭafar al-Muṣṭafara, with their author, the jurist Ibn Abī Za‘id. He visited Cairo, Mecca and Medina, Syria and the ʿIrāq and settled in Bagdād where he died in the end of the year 491 = 1098 December 1095. He was buried in the ʿAbāb Ḥabūn cemetery but his remains were removed in 491 = 1098 to the ʿAbāb Ḥabūn cemetery and interred near the tomb of Bishr al-Hāfiz. Among his eastern teachers are mentioned Abū ʿAbd Allāh b. Abī l-Fath, the historian Abū Bakr al-Khaṭīb, Abī Naṣr Ibn Māki, and among his pupils, Yūsuf b. Ayyūb al-Nahār, Muḥammad b. Tārkhān, and his teacher Abū Bakr al-Khaṭīb, Jurist, tradi-

**HUMAYUN PĀDHĀN. Full name Nasir al-Dīn Humayun, also styled Dāhān bānī, and after his death, Dānāt Ashtiānī (nesting in Paradise), eldest son of Bābur and Māhmūd Begān, born Kabul citadel 6 March 1508, emperor of India end of December 1556, died at Dihlī a fall down stairs from the roof of his library, 27 Jan. 1556; father of Akbar by Miyrām Makhānī, Hāmīdā Bānī. He was a good natured and generous prince, and inherited graceful manners from his father and from his mother who was of a Persian, saintly family and related to Sulṭān Ḥusain. He was also a scholar and a mathematician, but he was indolent and addicted to his opium. In his youth he was an active soldier, and conquered Gudjarat. But he could not control his brothers or himself. He bore with the former for a long time, but at last caused Kāmān to be blinded. He went to Bengal and lived carelessly at Gau. Twice defeated by Ḥīrā Khān he had to fly to Persia. There Ṭāmānšāh helped him to recover his throne. His**
success in regaining India was chiefly due to his general Bairam Khan who won for him the victory at Machtawîr and also that over Sikandar Sûr at Sîrîn in June 1555. He had a poetical talent and wrote a Divân. His widow Hâdîji Begam, erected a massive tomb over him near Dhilli.

HUMAYûN-NAMA, the title of the Turkish version of the Kitâlî wa-Dimnâ [q. v.]

AL-HUMAZA (A.), the slânderer; title of Sûrâ cîv.

AL-HUMS. This is the same traditionally given to the inhabitants of the haram of Mecca at the time of Muhammad's appearance, in so far as they were distinguished by special customs during the Iftâr, but made waqf in al-Mudâlîfah (according to Arab tradition in Nâmira). Snouck Hurgronje, op. cit., p. 130 sqq.) and from there began the Iftâr (this is said to be forbidden in Kur'ân ii. 195 cf. al-Tabarti, Tâfarî, ii. 163 sqq.), that they only lived in leather tents, made the circuit of the Ka'ba in sandals and did not enter their dwellings through the usual entrance (but, for example, through an opening in the roof). On the last named custom, against which Kur'ân ii. 185 is directed, there are discrepant traditions, according to which it was rather the Ansâr who practised it (see also al-Tabarti, op. cit., ii. 195 sqq.); in al-Azraqî, p. 112 infra; however, the Aws and Kha'rajd included among the Hums.

It is further stated that the clothes of the Hilla, after they had completed the waqf, had to remain at the sacred place. They were thrown around the Ka'ba as lasâfî (in other circumstances also a garment could become lasâfî, cf. al-Azraqî, p. 118, 4 sqq.) and mouldered away under the influence of the weather. One who wished to keep his robe, took it off at the entrance to the sanctuary and made the circuit naked or in a garment borrowed or hired from one of the Hums (cf. Robinson Smith, Lectures on the Religion of the Semites, p. 451). It is also said that the Hilla, who came to perform the Hâdîjî or Umrah, were not allowed to wash them while they carried with them from the hîlî. They could only eat food given by or purchased from the people of the haram. Kur'ân vii. 27, 29 is said to refer to these last customs (cf. also al-Tabari, op. cit., viii. 104, 19 sqq., 108–111).

The meaning of the word Hums (sg. AHamaz; also AHamais) is obscure; the opposite Hilla, according to Wellhausen, points to the meaning 'consecrated'; according to Noldeke (in a private letter), who is inclined to doubt the reality of this contract, al-Hums, like al-Áfânîs (Hamâsa, p. 283, v. 1), might mean 'the hot' with reference to the corresponding root; the denominative hamâsa is used in al-Azraqî, p. 123, 123, of a mother, who by a vow dedicates her son to be an áhmas; cf. I Sam. i. 10 sq.

HUMAIN, a deep and irregular valley, with clusters of palm-trees, situated a day's journey from Mecca on one of the roads to Tâif; the scene of the famous battle, the second mentioned by name in the Kur’ân (v. 96) fought soon after the surrender (faţah) of Mecca. The confederate tribes of the Hawâzîn did not wish to await the result of this last trial of strength before mobilising all the forces at their disposal. They posted themselves in the defiles commanding the plain of Hûmain. Their commander Malik b. Æwîf brought their families and flocks with them; their presence, he thought, would make his men invincible.

On the course of the battle we have a number of notices, all inspired by the text of the Kur'ân. The latter testifies that— in spite of the imposing number of Muslim warriors— the action began with a complete rout of the Prophet's forces. His army owed its safety to the intervention of 'invisible troops'. Setting out from this statement each author has set about a compilation representing these two phases of the battle, not forgetting to magnify the valour of his own fellow tribesmen or of individuals of special interest for the early history of Islam. For the rest the confusion and the contradictions of these accounts show that at quite an early period the Sîra found great difficulty in reconstructing the development of the manoeuvres in the battle.

On leaving the narrow oasis of Hûmain the road enters winding gorges, suitable for ambushes. In them Malik b. Æwîf awaited the Muslims, coming along in no order and not suspecting the presence of the enemy. Surprised by the sudden attack of the Bedouin cavalry, overwhelmed by a hail of arrows, the Prophet's soldiers retired in disorder. 'In spite of its size, the earth appeared too small for the fugitives' (Kur'ân ix. 23); for a moment Muhammad, left alone, was in great danger. Tradition has great difficulty in glossing over this cowardly desertion; it throws the responsibility for it on the Bedouin allies of the tribe of Sulaîm and on the faţîb or still insed Meccans. The accounts — according to their Kâraish or Ansâri origin — claim for the Muâhadjîr or Medine respectively the honour of not having given way. Those versions which are inspired by the court of Baghdâd display no less zeal in favour of the Hâshîmids. All authors, except the Shi'îs, endeavour to protect the reputation of the future Caliphs Abû Bakr and Ùmar. In the hagiologies of Islam it is considered a signal merit, indeed a marvel, to have stood firm at Hûmain.
Victory finally rested with the Muslims. On this point we have the statement of the Kur'an, confirmed by the advance of the Prophet to lay siege to Ta'if. The access to this town was therefore open. How then was the advantage restored to the Muslim arms? Here again the Kur'an suggests the answer: "God sent innumerable troops from on high to chastise the unbelievers". Khālid b. al-Walid, who commanded the cavalry, was among the few Muslims wounded that day. He must therefore have been risking his life and it seems legitimate to give him the credit of the victory, equally claimed for the Antioch of the Medesene school. Hunain was not a battle, but two routes; first that of the Muslims, then that of the Bedouins of Hwazān. This account for the large number of prisoners — 6000 women and children are mentioned — and the almost negligible losses of the Muslim troops, about twelve killed. The booty captured was enormous, over 24,000 camels. The fleeing Bedouins sought refuge behind the ramparts of Ta'if.

(From: *H. Lammens.*)

**ḤUINAIN B. ISḥĀKH.** His full name was ABDUZĀDI ḤUINAIN. He was a member of a family belonging to the Christian Arabic tribe of Ḥiyyād and was born at Hira in 194 = 809-810, where his father was an apothecary; he was educated as a physician and as the translator of numerous Greek works into Syriac and Arabic. As a young man he came to Baghdad where he became a pupil of the physician Yahyā b. Māsāwālī. He completed his education in Asia Minor and became particularly proficient in the Greek language, which qualified him for his later translations. On returning to Baghdad he began his literary activity with the support of the Banū Musa, for whom he had collected Greek works, and became physician to the Caliph al-Mutawakkil. On account of his attitude to iconoclasts he was suspected of blasphemy and excommunicated by Bishop Theodore; thereupon took poison out of melanclys and died in Ṣafar 260 = December 873.

Of his own works there have survived the Kātāb al-Mudkhal fī 'l-Tībī, translated into Latin and printed as Itagoge Johannis ad Tegni Galeni or Johannitii Isagoge in artein partum Galeni; another version of the same work entitled Kitāb al-Maṣāzil fī 'l-Tībī li-Ṭūfatulimīn; a Kitāb al-Mawalid; ein Kātāb Idrīmsīrat al-Falārisa fī Būyūt al-Hikmat fī 'l-Ayyād wa-Tayārūd al-Hikma bainahun; several works on physics and astronomy; the "Aphorisms of the Philosophers" in a Hebrew translation. Among translations it is principally those of Platonic, Aristotelian or Hippocratic works that are ascribed to him, also that of Dioscorides' ṭalī 'l눔 nlstnłc, but especially almost all the works of Galen, so that, according to Ibn Abī Usāba, "hardly anything by Galen exists which was not translated or improved by him". In addition, translations of the Quadrupartition of Ptolomy etc., are ascribed to him.

There can be no doubt that of the numerous translations ascribed to him a portion at least are to be placed to the credit of his son Isḥākh b. Ḥuina, his nephew Ḥuibaish and others. It may be particularly mentioned that the translation of Galen edited by M. Simon is ascribed to Ḥuibaish as a result of a critical analysis of its language by G. Bergstrasser. For the details see the Bibliography.

**HUNZA—NAGIR.** The two districts of Hunza and Nagar, which occupy an isolated valley between 36° and 37° N. and 74° 25' and 75° E., are generally considered as one country under the joint name of Hunza Nagar (often written Hunza-Nagyr). This valley communicates by difficult gorges with Gilgit, and is drained by the Kundūr River which falls into the Gilgit River a tributary of the Indus. From the north it can be approached by passes leading on to the Taghua-dambar Pāmir, by which there is communication with Sarikil and Yarkand. On the North-West and South-East the valley is bounded by impassable mountains, spurs of the Hindukush and Muztagh ranges, some peaks exceeding 25,000 ft. in height, of which Rakkipūsh south of Nagar is the best known. The population is Muhammadan, but while the people of Nagar are Shi'a those of Hunza, like their neighbours of Wakhān, belong to the Mawlāi sect. The Hunza people are more warlike than those of Nagar. They are apparently of the same race. They speak two languages; the Shina dialect of Gilgit being spoken in lower Nagar, and the Burushaski, a non-Aryan and non-Turkic tongue of uncertain affinities, being spoken in Hunza and upper Nagar. In the northern district a branch of the Wakhi race, speaking its own Ghalīka tongue, is found. The easy communications with Wakhān by the Kīlīk Pass have led to the intrusion of a Ghalīka race south of the Hindū-Kush. The same cause made it easy for robbers from Hunza to raid the traffic from Yarkand to India by the Karakoram Pass where the so-called Kundūr robbers inspired great terror until restrained by the extension of British power. The name Kandjūt is derived from Kandjūt, the name by which Hunza is known in the Pāmrīs and Sarıkol, a name which Biddulph compares with Hanza, one of the local form of the name Hanza. The people of Nagir took no part in these raids, which were winked at by the Chinese authorities as a reward for assistance given by Hunza in suppressing a rebellion at Yarkand in 1847. The Chinese also paid a subsidy to the ruler of Hunza. The traffic in slaves carried on by the Hanza raiders was a great scourge to the races under Kashmir rule, especially the people of Bīlūtān.
Hunza and Nagir were and still are governed by separate chiefs, each known by the name of Thum, a word of uncertain origin.

Little is known of the early history of this region. The easy passes leading to the north may have been traversed by Kushān invaders from Badakhshān in the second century B.C. but the routes leading into Cītrāl were more probably followed. Buddhism was certainly the prevailing creed from the commencement of the Christian era, and a well preserved tope still exists at Thol in Nagir. The date of the introduction of Islam is not known, but the prevalence of the Shī'a and Mawālī sects seems to point to its having come in by Badakhshān and Wakhān, and not from the south. But few European travellers visited the country before the war of 1891, the principal were Lockhart, Biddulph, Gromshewitsky, Durand and Younghusband. The Sikhs attempted to subdue it after their occupation of Gilgit, in consequence of the perpetual raids from Hunza, but met with a disastrous defeat in 1848. Further unsuccessful attempts were made by the Dogra rulers of Kashmīr, but in 1869 the Thum of Hunza agreed to pay tribute. No Kashmīr was however allowed to enter the valley. After the appointment of British agents at Gilgit the Thums of Hunza and Nagir entered into agreement to put an end to the raids, but in 1891 they recommenced and the chiefs threatened to attack the fort of Ĉalt. A small force of Gurkhas and Dogras under British officers was then sent into the country, and after the brilliant storming of the hill forts of Nith and Thol, the Gorge of the Kandjūt river was forced, the Thum of Nagir submitted and the Thum of Hunza fled over the Pamirs. Since that time the country has been included within the boundary of British India. The internal administration has not been interfered with, but it is traversed by a good road and travellers can pass through it in safety. A body of Kandjātis served under British officers in the Cītrāl campaign of 1895.

The town of Baltit, at an altitude of 8400 feet is the capital of Hunza and the town of Nagir that of Nagir. The territories of the two countries are separated by the Kandjūt River.

(See also: Wensinck, *Hūraimilla*, a town in Arabia in the north of Riyād [q.v.], the capital of the nebris in the province of Sedehy [Ṣadīr] on the borders between the latter and the province of Ḥadramāt, the birthplace of the founder of the Wahḥābi sect, Muḥammad b. Ḥudaydah, which is surrounded by strong fortifications and in 1861 had according to Palgrave, 10,000 inhabitants. Inside the town on an elevation is a large fortified citadel of architectural importance, which was erected along with the other citadels in Ḥudayd after the conquest of Darīya [q.v.] by the Egyptians under Abd-al-Wahhab in 1861.

Al-Hurmuza, King of Susiana. As a commander of a Persian division he took part in the battle of al-Kadsiyah in 16 = 637, but escaped by flight and retired to his country of Khuzistan, from which he offered a vigorous resistance to the Muslims. According to the usual statement, he invaded Maysan and Dauhtu, but was driven out by the united forces of Bagra and Kufa and had to sue for peace and cede the Muslims a considerable portion of his lands. In consequence of a border feud with the Banu 1-Am, he is said to have taken up arms and for a second time was forced to make peace on disadvantageous terms. It is clear at any rate that the cunning and energetic Persian was a very dangerous opponent and the troops of the Arab Caliph were only able to overcome him with difficulty. The population of the two provinces of Fors and al-Ahwaz was stirred up to renewed resistance by emissaries of the Persian king Yazadjiird III and as al-Hurmuza's attitude grew more and more threatening, the Caliph 'Omar sent a small army against him under al-Nu'mān b. Muqarrin. The opposing forces met at Arbuk. After a stubborn resistance al-Hurmuza had to take to flight and went to Tustar, while al-Nu'mān entered Rāmhumuz. He then advanced against Tustar and joined forces with other Arab divisions which had meanwhile come up; al-Hurmuza was blockaded, but only after eighteen months or, according to another statement two years, did the besiegers succeed in taking the strong fortress and then only by treachery. The Arab general, Abū Mūsā al-Aghārī, declined to decide al-Hurmuza's fate himself but sent him to the Caliph. The year of the taking of Tustar is variously given as 17 = 638-9, 19 = 640, 20 = 640-1, 21 = 641-642. When al-Hurmuza was brought before 'Omar, he succeeded in saving his life by his cunning but only on condition that he adopted Islam. He was able to be useful to the Caliph in various ways on account of his knowledge of Persian affairs. But when 'Omar was murdered in 23 = 644 by a Persian Christian, al-Hurmuza, probably without reason, was suspected of being an accomplice and killed by 'Ubayd Allah, son of the Caliph.

Al- Hurūf b. 'Aed al-Rahman al-Tagkafi, governor of Spain. His period of office is said to have covered about three years (98-100 = 717-719). During this time he was made many districts of Spain tributary and extended his raids beyond the Pyrenees. The Arab chronicles, however, have little to tell of his rule; the Christian (Chron. Par.,) who calls him Alahor (Alhoto), also give no details. It is clear from their allusions, however, that he was feared by the Christians as well as hated by a section of his countrymen for his extortions and therefore dismissed by 'Omar II.

(Louis Masson.)

Huruf (A.), Plur. of Huruf (n. v.).

Hurufi, a Shī' sect founded by Faḍl Allah of Asṭarābād at the end of the viii. or (xii.) century. A. H., introduced into the Ottoman empire by one of his disciples, 'Ali al-'Attar, and adopted by the Bektash dervishes. Their creed, which is epitomized in the Maḥārīm-nāme, composed in 828 = 1425, is based on the idea that the universe is eternal and moves with an unceasing rotation, which is the cause of the changes observed in it. These changes are divided into cycles, the beginning and end of which are marked by similar phenomena, the appearance of an Adam at the beginning and a last judgment at the end. God is manifest in the person of man, particularly his face, for man was made in the image of God.

This manifestation is produced under the successive forms of the prophet, saint and God; Muhammad was the last of the prophets, then came the saints, from 'Ali to Hasan 'Askari, the eleventh Imām; Faḍl Allah, the last of the saints is also the first of the divine series, he is God incarnate. The distinguishing feature of man is speech or language which is written with the 28 characters of the Arabic alphabet; calculations derived from the numerical value of the letters borrowed from the Ismā'īliya (St. Guyard, Fragments Ismā'īliens, p. 108 sqq.) play a great part in their doctrines, but they also make use of groupings of the alphabet by letters composed of one, two, three or four written characters. The lines in the features number seven (four eyelashes, two eyebrows, and the hair, or else two halves of the moustache, two whiskers, the beard divided into two, and tuft on the lower lip, multiplied by the number of the elements, we get 28, the number of letters in Arabic alphabet. Their chief books are the six Dīwāni, the Ḥaḍrat-nāme, Istīwā- nāme, Ḥadiyyet-nāme and Maḥārīm-nāme, some in Persian mingled with passages in the Asṭarābād dialect, others in Ottoman Turkish (Cf. Faḍl Allah and Pirhāfezādeh). Unlike other dervishes, they have no qoira or sikr; every morning they meet in the house of their spiritual chief, called bābā, and he gives each one by the hands of a servant, a glass of wine, a slice of bread and a piece of cheese, those present make a great noise; the superior takes the glass of wine and gives it to each one present who takes it respectfully, touches his face and eyes with it and drinks it. They have a kind of confession to the bābā.
AL-HUSAIN, the second son of 'Ali and Fāţima, born in Medina in the fourth or fifth year A.H. As in the case of his brother al-Hasan [q.v.] — the two are known together as al-Hasanīn, the 'two Hasans' — tradition pictures the young Husain overwhelmed with marks of tenderness by his maternal grandfather. This is what 'Ali is said to have thought of them: 'Hasan is a spendthrift thinking of nothing but the pleasures of the table and entertaining. As to Husain he is mine and I am his.' Unhappy for a future of his like events were to verify the truth of this judgment of Fāţima's husband; they were to prove the existence in the son of the same indecision and the same lack of intelligence that had been the ruin of the father. During the troubled Caliphate of 'Ali, Husain remained in obscurity. Less lively than Hasan, he did not imitate his life of foolish extravagance and pleasure. After 'Ali's death he followed his elder brother into retirement in Medina and during Mu'awiya's reign, particularly after Hasan's death made him head of the Shi'a, he resisted the solicitations of his partisans in the Irāq and maintained a more dignified attitude to the Umayyads than the dissipated Hasan. The accession of Yazid altered his views and Husain decided to listen to the appeal once more made by his Irāq partisans. But before doing anything he resolved to test how matters stood through his cousin Muslim b. 'Aṣīl [q.v.]. On the latter's arrival thousands of Shi'sis rushed to swear fidelity to Husain. Muslim wrote to the son of 'Ali to persuade him to come to take charge of the movement. In the meanwhile 'Ubaid Allah b. Ziyād [q.v.], being appointed governor of the Irāq, had succeeded in capturing Muslim and executed him. Leaving Mecca, where he had sought refuge after refusing to swear fealty to Yazid, Husain took the road to Kūfā, according to Muslim's instructions. A few stages from this town he learned of the tragic end of his emissary. 'Ubaid Allah had established outposts on all the roads leading from the Hidżār to the Irāq and parties of cavalry were patrolling the roads. The weak escort of relatives and devoted followers attached to Husain came in contact with one of these detachments. Taking advantage of the refusal to halt 'Ubaid Allah's horsemen accompanied them at a short distance. In this fashion they reached Karbalā [q.v.], destined to be ten days later the scene of Husain's death. During these ten days the character of the pretender proved more and more feeble. His former irresolution seized him again. The circle of steel formed by the soldiers sent by 'Ubaid Allah closed in around him. The Omayyad governor wished to persuade or force him to surrender. He cut off all access to the Umayyads, hoping to reduce him by thirst. Husain remained obstinate, being persuaded of the inviolability of his person and hoping for a revulsion of feeling in his favour among the soldiers of Kūfā, who had been secretly won over to the Shi'a but had been terrorised by the execution of Muslim.

The 10th Muḥarram 61 A.H. (10th October 680) dawned. 'Omar b. Sa'd b. Abī Waḳīṣ [q.v.] had taken command of the 4000 men assembled at Karbalā. Husain was summoned to surrender at discretion. The ultimatum being unanswered, 'Omar executed a turning movement to envelope the son of 'Ali. His partisans tried to resist. Husain did not stir; he played none of the heroic parts so fondly described by the Shi'as. An engagement resulted in which Husain fell wounded in many places. His tents were pillaged. At first merely a police operation, the scheme degenerated into a general mêlée. "It did not last long; just time to slay a camel or to take a nap". Thus a verbal report delivered to Yazid describes it. The Caliph deplored this ending; he had neither desired nor ordered it. His instructions were to secure the person of Husain, to prevent him prolonging a dangerous agitation. He treated the 'Alids who survived the catastrophe of Karbalā with honour, provided generously for their needs and gave them an escort to Medina. Husain's descendants venerated there in obscurity, at variance with their relatives the Umayyads. They usually left to their cousins the right of enforcing the political privileges of 'Ali's family in Arabia.

On the significance of the death of Husain in the faith of the Shi'is see this article and the article Muḥarram.

AL-HUSAIN, b. 'Ali, Bey of Tunis (1705—1735), founder of the Husain dynasty still reigning there. He was the son of a Greek renegade and set out the Algerian invasion of 1705-1706 held the office of an Agha. After the capture of the Dey Ibrahim, Husain was elected Bey by the Aghas while Muḥammad Khoji was elected Bey on the 20th Rabi' I 1117 (10th July 1705). After Husain had driven back the Algerians he rid himself of Khoji Muḥammad, who was put to death along with the ex-Dey Ibrahim who had been meanwhile released. When soon afterwards a son was borne to him by a Genoese captive, he had it decided by a council specially summoned for the purpose that his power should be transmitted to his descendants (1710).

Throughout his reign Husain, whose confidant was a Frenchman named Raynaud, endeavoured to live on good terms with European powers. He concluded treaties with France (1710 and 1728), England (1716), Spain (1729), Holland (1728) and Austria (1725). On the other hand he did not succeed in restraining piracy and the attacks of the corsairs forced France twice (1728 and 1731) to send a fleet to Goletta. At first Husain's reign was a very peaceful one at home, and the people enjoyed peace such as they had not known for long. "The roads", writes Muḥammad al-Ṣaḥīr b. Yusuf *were safe and the land flourishing, the country-houses and gardens became populous again and numerous palaces were
built in the country, which had never happened before. The Bey himself undertook important works; he restored the walls of Kairawan, improved the aqueducts of Tunis, erected bridges and reservoirs and finally built mosques and madrasas in Sfax, Gafsa, Sousse, and Tunis (mosque of Bardo and al-Madrassa al-Husainiya).

From 1729, however, Tunisia suffered from severe disturbances. Ali Pasha, the Bey's nephew, discontented because he was excluded from the government, had fled to Tunis with his son Yûnus and stirred up a rising of the tribes in the interior. Defeated by Husain he fled to Algeria where he was imprisoned by the Bey Kurbàbi. The latter's successor Ibrahim released him and by arrangement with him made an attack on Tunisia. Husain abandoned by a portion of his Arab troops was defeated at Smendja (4th Sept. 1735) and had to retire to Kairawan, while Ali entered Tunis and had himself proclaimed Bey after promising to pay a yearly tribute to Algeria. Husain now sought to take the offensive again; after defeating 'Ali's son Yûnus' on 3rd November 1735 he advanced up to the walls of Tunis but did not dare storm the town. Returning to Kairawan he was besieged by Yûnus' troops for five years. On the 16th Safar 1152 (18th May 1740), the town was taken by storm. Husain, who had succeeded in escaping, was brought back by the enemy's cavalry and Yûnus cut off his head.

(G. Yver.)

AL-HUSAIN b. 'ALI. [See Ibn Mâkulâ, al-Maghârî, al-Tughrâti.]

AL-HUSAIN b. Hamdân was the son of the founder of the Hamdânid dynasty (q. v.). At the beginning of 282 (895), when the Caliph al-Mu'tadid was reducing the Hamdânid family to obedience, Husain, who was in the castle of Dair Za'amân, surrendered and was with his father carried to Baghdad. In 283 Husain undertook to capture the fugitive Khârijite leader Hârûn on condition that his father should be set free. In this he succeeded and the Caliph kept his promise. From this moment the Hamdânids occupied a high place at the court of the Caliph Ten years later Husain was in pursuit of Abū Ghânim the Carmatian (Karâmî), who had invested Damascus, but failed to overtake him, but in the following year (294 = 906-7) he defeated the followers of Zikrawi in Syria.

When the end of the Caliph al-Mu'tadid drew near, Husain put forward Ibn al-Mu'tazz as successor. When al-Mu'tadid became Caliph (295 = 908), Husain attacked the palace in order to seize his person. The attempt failed and Husain and the other conspirators scattered. Husain fled to Mosul, but was captured at Takrit. He was, however, pardoned and made prefect of Kumm and Kâşân. From Kumm in 297 (909) he set out against the Şaffârî Lâîth b. 'Amr, but the armies did not meet. Later he took part in the expedition against Sabbâkî the opponent of Lâîth, who was taken prisoner (middle of 298 = 910).

In 301 (913-4) Husain's brother Abû Allah b. Hamdân rebelled, but, on the advance of the Caliph's troops, submitted and was restored to his province.

In the following year Husain, who was now governor of Diyar Kabûr, threw off his allegiance, and Abu Allah was again deposed and imprisoned. The greater part of the Caliph's troops were in Egypt, and as soon as they returned, Husain fled, but he was arrested and his whole family carried to Baghdad. He did not lose heart, as he believed his brothers and himself were indispensable to the Caliph. His brothers were in fact set at liberty and shortly afterwards restored to office. Husain alone was put to death (305 = 917).

(T. H. Weir.)

AL-HUSAIN b. AL-HUSAIN, last Dey of Algiers (1818-1830). Born in Smyrna about 1765, Husain was filling the office of Khâbîr al-Khâlîfî when the Dey 'Ali struck down by the plague appointed him his successor. Husain was proclaimed without opposition. He was a well educated man, moderate in his views, who did not desire power and only accepted it with reluctance. He was considered benevolent and just, and hastened to inaugurate his reign by an amnesty and the abolition of various violent measures taken by his predecessors. Nevertheless, soon after his accession his assassination was twice attempted by the Janissaries. He therefore lived in the kâsha under the protection of a guard of Zwâwa.

The situation in the Regency at this time was a very complicated one. The provinces in the east and in the west were in full rebellion. The Nememsha, the tribes of the Awwâs and of the Sûfî, and the natives of Great Kabylia had taken up arms against the Turks. The Derkâwâ marabouts, followed by the Tidjâniya preached rebellion in the Tell and Southern Oman. Husain undertook to restore Turkish authority; in this he succeeded with the help of the Beys of Constantine and Oran and through the military talents of the Agha Yâhûz. Peace was restored in the east about 1826 and in the west also in 1828. At the same time the Dey showed his devotion to the Muslim cause by sending a fleet to the Levant, which from 1821 to 1827 took part in the Ottoman fleet in the struggle against the insurgent Greeks.

Husain's relations with the European Powers were also very strained. His refusal to adhere to the decisions of the Congress of Aix-la-Chapelle regarding the abolition of privateering provoked a naval demonstration by the English and French, which however was without result (1819). The expulsion of Macdonnell, the English Consul, had more serious consequences. England sent Admiral Sir Harry Neale to demand reparation; after fruitless parleys (February—March 1824) the fleet bombarded the town from the 17th to 29th June. The damage done was insignificant however and the Algerians imagined they could brave the Christian powers with impunity.

While the affairs of the bankrupt Bakri Bussach were being arranged, the Dey, who felt himself wronged by the French government, made violent recriminations. His discontent made itself manifest in the insult to Consul Deval on the 30th April 1827. Not content with refusing all satisfaction for this outrage, Husain ordered the destruction of the French establishments at La Calle. These outrages resulted in the blockade of the Algerian coast (1827-1830). During this period the French government made several attempts to negotiate with the Dey, but he, probably
relying on the support of the British government, refused to come to any arrangement. He scarcely disavowed the attack on the ship "La Provence" which was fired on by the Algerian batteries on the 30th July 1829, although it was protected by a flag of truce. Unable to obtain any redress by diplomatic means, Charles X's ministers changed their methods. An expedition against Algiers was decided upon the 31st January 1830 and the troops disembarked at Säfi Ferruch on the 14th June. Left to his own resources, and deprieved of the best general Yahya Agha, whom he had himself put to death in 1828, Husain was incapable of resisting for long. On the 4th July, after the occupation of Fort l'Empereur by the French, he resigned himself to accepting the terms imposed by General de Bournon.

Articles 2 and 3 of the capitulation guaranteed the ex-Dey the retention of all his private property and the right to retire whither he pleased. The French government, however, objected to his going to Malta and Husain demanded to be conducted to Naples, where he arrived on the 9th August 1830. After a short sojourn in this city he went to Leghorn from where, through Jewish merchants in regular relations with Algiers, he was able to negotiate with the malcontents of the town and the native chiefs of the interior. Arriving in Paris in 1831 to beg a pension and the restitution of his estates he received an honourable welcome but obtained nothing from the government, now enlightened on his real attitude. On his return to Leghorn he continued his tactics. Then feeling himself too closely watched, he left Leghorn for Alexandria, where he died in obscurity in 1838.

AL-HUSAIN B. MANSUR. [See al-Hallâj.]

AL-HUSAIN B. MUSAEMAD. [See al-Râghib al-Iṣfahání.]

AL-HUSAIN B. NUMAIR. The kindred tribe of Sakhr, leader of the Sufyanids. He fought in the Omayyad ranks at Šîfiḥ. On the accession of Yazid I he governed the important district of Ḥimāṣ. While holding this office he intervened with the Caliph on behalf of Ibn Mufarrigh, the sâristâ, imprisoned by Ubâd Allah b. Ziyâd. When the expedition against the sacred towns of the Hijaz was decided upon, Husain was appointed lieutenant to the commander in chief, Muslim b. 'Ukba [q. v.]. In this capacity he distinguished himself at the battle of the Ḥjarra. On the death of Muslim during the advance on Mecca he took command of the expedition. For two months he besieged the town and was about to take it, when the death of Yazid suspended operations. After vainly endeavouring to persuade Ibn al-Ẓahâr to accompany him to Syria to be proclaimed Caliph there, Husain led his army back to Syria. Mar-
nephew of the murdered Gurgin Khan with Georgian and Persian troops to enforce obedience upon the rebel Afghans, but they were put to flight by Mir Wais. Nevertheless, affairs seemed to be taking a better turn for the Persians when Mir Wais died in 1715 and his brother Abd Allah Khan succumbed later in 1723 with the Persian government, but the latter was soon after murdered by Mahmud, a son of Mir Wais, who continued the resistance to the Persian troops.

In the meanwhile difficulties had been raised also in other parts of the kingdom by the Kurds and Usbeqs, while the Arabs of Maskat seized Bahrain. The Persians hoped to regain this island with the help of the Portuguese fleet, but the commander-in-chief, Lutfi Ali Khan, a brother-in-law of the prime minister, rightly thought it an urgent necessity to suppress the Ghalzai who, under Mahmud, had invaded Kerman. He actually succeeded in defeating the rebels but was prevented from following up his victory by the discontent in Isfahan at his abandoning the Baharin expedition, and was refused the necessary supplies with which to advance on Kandahar. His and the Timurd al-Dawla’s enemies even took the advantage of the occasion to rouse the Shah’s wrath against them with the result that the prime minister was blinded and Lutfi Ali Khan, who had returned to Shiraz, was thrown into prison. Husain thus prepared for his own downfall, for Mahmud immediately occupied Kerman and advanced with his troops against Isfahan. The Safavids once more collected a considerable army to check the Afghan advance but in the battle of Gubanbad, east of Isfahan, the Persians suffered a terrible defeat (1722). Isfahan itself was thereupon besieged and, although it held out for a long time as the Afghans lacked any of the necessary siege artillery—Tahmasp, the Shah’s son had in the meanwhile escaped to Kazvin and Tiflis and was endeavouring to raise a new army with which to relieve the capital—such a terrible famine at length arose in it that Husain was forced to capitulate and resign the Persian throne in favour of Mahmud. The unfortunate prince was forced to be a spectator, when some time later, after the Persians had treacherously massacred the Afghan garrison of Kazvin, which Mahmud had meanwhile captured, Mahmud in revenge instituted a terrible massacre in Isfahan and afterwards put to death over a hundred members of the Safavid family. Mahmud then went mad, and, as a son of the Abd Allah Khan who had been murdered by him, made it a condition that, if he was to succeed to the throne, his father’s assassin should be put to death, which was done in 1725. The new Khan Ashraf was comparatively lenient in his treatment of Husain, but Russia and Turkey had been exploiting the unsettled state of Persia to their own advantage and left him no rest. Although he made peace with Turkey in 1727, he had again to take up arms when the general, later famous as Nadir-Shah, took up Tahmasp’s cause that was supported by the Russians. He was repeatedly defeated by Nadir and had to take to flight. In revenge he had the aged Husain put to death in 1729 but was himself murdered by robbers a year later. On Tahmasp’s fate and the end of the Safavid dynasty see the articles Nadirshah and Safawids.

In this article the Turkish translation entitled Tarikh-i Sâ'yî, ed. Constantinople 1722, has been used. Mahmud was in Isfahan during the siege; Relation de Dourry Esenfry, Ambassadeur de la Porte Ottomane auprès du roi de Perse, Paris 1810; Hanway, The Revolutions of Persia containing the Reign of Shah Husein, London 1753; Malcolm, History of Persia, i. 592 sqq.; R. S. Poole, Coins of the Shahs of Persia in the British Museum (1887), p. xxxvi, lxxx. 39–54.

HUSAIN ʿAWNĪ PASHA, four times War Minister and once Grand Vizier under Abd al-Aziz, one of the most remarkable personalities of his age, was a native of Isfahan, where he was born in 1820, the son of a tax-farmer. When sixteen he came to Constantinople to study theology but entered the military school in which he ultimately became a teacher of military sciences. On the outbreak of the Crimean War (1855) he entered the army with rank of Lieutenant-Colonel and distinguished himself in the fighting at Balaklava and Çetate. At the end of the war he took part in the Mingrelian campaign as chief of the general staff of the Serdar i-ktest Omur Paşa. On the conclusion of the war he became director of the military school; during the war with Montenegro (1860) he commanded a division under Omur Paşa; for the next two and a half years (August 1863 till the beginning of 1866) he acted as interim War Minister and was in 1867–1868 entrusted with the suppression of the Cretan revolution; on performing this task, he was promoted to be mughir (general commanding). From the beginning of 1869 till September 1871 he was War Minister in ʿAli Paşa’s cabinet; a few days after the latter’s death (6th Sept. 1871) he was dismissed by his successor, the notorious Mahmud Nedim Paşa, and banished to Anatolia, recalled from exile in 1872, and sent to Smyrna in November of the same year as wali of the province of Aydın. The Grand Vizier Muterdjim Muhammad Rüshdi Paşa appointed him the to Ministry of Marine on the 25th January 1873 but he exchanged this for the War Office after a few weeks on the 15th February, when Esâd Paşa became Grand Vizier. A year later — on the 14th February 1874 — he became Grand Vizier in place of Şirwanizade Muhammad Rüshdi, successor of Esâd Paşa, but continued to hold the portfolio of War Minister. On the 25th April 1875 he was dismissed from both offices and a few days later sent a second time as wali to Smyrna. By the 22nd August of the same year he was back at the War Office for the third time; a few days later his enemy Mahmud Nedim became Grand Vizier a second time and dismissed him on the 2nd October, to be sent after a few weeks as wali to Brusa. After Mahmud Nedim’s fall (13th April 1876) he was again summoned to Constantinople as War Minister and in this office along with Midhat Paşa supported by Muterdjim Muhammad Rüshdi and the Şahîc al-Islâm, Ḥasan Khairullâh, brought about the deposition of the Sultan ʿAbd al-Aziz (30th May 1876). On the 4th June the dethroned Sultan committed suicide; Ḥasan Bey, a Circassian officer devoted to him,
resolved to avenge his death and shot Husain 'Awni Pasha in the night of 15th—16th June 1876 in Midhat Pasha's konak, where he and the other ministers had assembled at a council.

HUSAIN DŽAHANOŠ, "ALI" AL-DIN THE GHĐRĐ. [See HAJANOŠ, i. 998.]

HUSAIN HAMADHĀNI, a Bābī author, who wrote the history of the Bāb, edited by E. G. Browne under the title, The Tarīḫ-i-Fudūlid or New History of Mirzā 'Ali Muhammad the Bāb (Cambridge 1893). In his office of secretary to a minister Mirzā Husain accompanied the Shāh on his journey to Europe, spent some time in Stambul and on his return to Persia in 1291 (1874) was thrown into prison but afterwards released. He then entered the service of a Zoroastrian named Mānūkī (or Manudkij) who asked him to write a history of the Bāb. When he had finished this task, he intended to give a full exposition of the Bāb's teaching but was prevented by his death in 1299 (1881-1882). The above information is given by Browne, op. cit., Introduction, p. xxxiv sqq. from Tumanski in Zapiski Vost. Otd. Imp. Arch. Ób., vol. vii, 33-45. In a later publication, entitled Khiid-i Muqaddat-i-Kāf, compiled by Hāji Mirzā Žan'ān-i Khāndān (Gibb Memorial Series, vol. XV), Browne has given a full account of the relationship between the works of Mirzā Husain and Mirzā Dżán Žāshānī, Introduction, xxxiv. sqq. and A New History, etc., p. 339 sqq.}

Husain Mirzā B. Mānsūr B. Bābakār (Black Prince), and styled Abūl Ghuţā. This famous king of Khūšān was born at Herāt in Mūharram 842 A. H., June 1438, and reigned there, with one interruption, from Rāmān 873 (March 1469), to the last month of 911 (May 1506). He was a distinguished soldier and sovereign, and was a munificent patron of letters. He also attempted poetry, and composed a divān, but it does not seem to have been of much value. According to Ţām Mirzā, he is also the author of a book called the Maqālīl Abīl-Usbğāš, which is a mixture of prose and poetry, and contains biographies of a number of mystics and spiritual lovers (Rieu's Catalogue, 1, 351[1]). But though his name appears on the manuscript as the author, both Bābūr in his Memoirs, and Khwāndānī in his Ḥabīb al-Siyār (vol. iii. Part 3, p. 330 of Bombay ed.), say that the real author is Kamāl Husain Gazārgāhī. And this seems probable, for if Sulṭān Husain had written the book, he would hardly have put himself at the end of it as one of the mystics, and have described himself. He was of very high birth for he was a direct descendant of Timūr, both by his father and his mother (Firuzā Bégam). His career resembled that of the emperor Bābūr, for he suffered much distress in his early years and afterwards attained to great prosperity. He had contests with Abū Sa'id and his sons, and it was not until the death of the former that he got possession of Herāt. He was a younger son, and his undistinguished elder brother Bābakār served under him for several years as governor of Bālkh. His court was the most brilliant in Asia, and as Bābūr says, his Age was a wonderful Age. The poets Džamī, Hāfiţī, 'Alī Šāh, Hilālī, Bānbā, the painters Bīzād and Shāh Muqāfar, various musicians, and Husain Wāžī, the author of Awārār-i Suḥailī, 'Abd Allāh Mānīwardī who was a sort of Admirable Creighton, the two historians (grand father and grandson) Mir Khwānd and Khwāndāmīr, and Dāwbāt Shāhī, the biographer of poets, and the famous calligrapher, Sulṭān 'Ali of Mašhad, adorned his court.

One of Sulṭān Husain's greatest feats was his long and rapid march to Herāt in August 1470 which resulted in the capture and execution of his competitor Yādgār Mūhammad, a great grandson of Shāhrukh. Sulṭān Husain was a man of passionate character, and a wine-bibher. He divorced his first wife, although she was the mother of his eldest son, and, according to Bābūr he was so infatuated with one of his pages, that he put his name and all his goods was Bhībūr appears on his coins, but it is not certain if they refer to the page, whose name and title were Bhībūr Beg. Sulṭān Husain had a large family of sons and daughters, but seven of the sons died in his life time, and the others were, for the most part, no credit to him, and only survived him for a year or two. The eldest, Bādī al-Zamān lived the longest, not dying till 1517, when he succumbed to the plague at Constanti-

Bibliography: Djewdet, Te'tebk,’ xii. So. Lutfi, Te'tebk,’ viii. 178—182: Segiili-'Osmâni, li. 226 (biographical notes); v. Molk, Der russisch-türkische Feldzug in der europäischen Türkei 1828 und 1829; Rosen, Geschichte der Türkei, i.; Djewdet, l.c.; Lutfi, Te'tebk,’ i.—iv. (J. H. Mörkmann.)

HUSAIN PASHA, called Amâkâžâ‘i (Uncle’s son), a name given him by his cousin Fâdîl Ahmad Pasha, was the son of Hasan Agha, the younger brother of the great Koprulu Muhammad Pasha; he grew up during the golden period of the Koprulu and reached the age of thirty without discovering himself further than for his attachment to be delights of a life of careless ease. After the defeat of Kara Muşafa before Vienna in 1683 and the fall of this grand vizier, who was devoted to the Koprulu, he was sent in disgrace from the capital, first of all as governor of Shahbîzir and a year later as muhajî (military governor) to Cârdaš in the Dardanelles, where he spent five years. In Râljeb 1100 (April-May 1699) he received the rank of vizier and was sent as muhajî to Sâdíl al-Bahr at the entrance to the Dardanelles. In Shabân 1102 (May 1699) he returned to Constantinople and was appointed nâzîm ol-âmîn, the affairs of the grand vizier who was absent in the fleet. He fulfilled the same duties again from Djamâdâ II till the middle of Shawâl 1105 (end of January till the 9th June 1694) and then went back to his former post on the Dardanelles. On the 14th Djamâdâ I 1106 (31st December 1674) he was appointed kâppân pasha and entrusted with the recapture of Chios which had been occupied by the Venetians. He succeeded in defeating the Venetian fleet in two battles (9th and 18th February 1695) off the Spalmadoro Islands in the Bay of Chios, whereupon the Venetians abandoned the island without striking a blow. At the end of Râmâdân 1106 (middle of May 1695) he resigned his command of the fleet and remained in Chios as muhajî. In Muharrâm 1107 (Aug.-Sept. 1695) he went as wâli to Könya and Adana; in the early months of 1108 (Aug.-Sept. 1696) he was transferred to Belgrade as muhajî. The grand vizier Emîrsu Muhammad Pasha fell in the battle of Zenta on the 1st Rabi‘ 1109 (11th Sept. 1697); Husain was appointed his successor and led the defeated army back to Adriânpole. In the following year he concluded the fifteen years’ war with Austria and its allies — Venice, Russia and Poland — by the treaty of Carlowitz. After holding the reins of government for five years he resigned on the 17th Rabi‘ II 1114 (4th Sept. 1702) in consequence of an incurable disease and retired to his estate at Siliâvî, where he died on the 29th Rabi‘ of the same year (22nd Sept.). Apart from his attachment to strong waters, with which his countrymen reproached him, and which earned him the nickname of sârboskh (the drunken), there were no serious defects in his character. A contemporary (Paul Lucas, Voyage au Levant, ii. 154) justly says of him: ce l’homme de tout l’Empire qui avait le mieux servi... fort honnête homme, et dont tout le monde parloit bien; the French ambassador Ferriol (Bonnac, Mémoire historique sur l’Arm. de France, p. 116) says: il a gouverné l’Empire pendant cinq ans avec tant de noblesse qu’on a dit que le zèle et l’état étaient avec lui. He was in fact distinguished not only for probity and magnanimity but also for a rare states-
manship; nor was it mere love of ease but a wise self-restraint when he entrusted the execution of his plans to tried men like Husain Mezzomorto, Rəmî Muhammad and Alexander Mavrocordato. His memory is not less honoured for the numerous public buildings and institutions which he left behind him in various towns of the empire, notably in Adrianople. His summer-residence (yaarı) at Anadolu Han on the Bosporus forms one of the sights of the capital and still testifies to the love of splendour and artistic sense of its builder. *Bibliography: Hādiḳat al-Wacara, p. 124 sq.; Sîdīqī, M. Osmānī, ii. 202 (biographical articles); Ta'rīkh of Rashid, i.; the *History of the Ottoman Empire* by Kantemir and v. Hammer (vol. vi. and vii.); Hādiḳat al-Develānî, i. 91. (J. H. Mordtmann.)

**HUSAIN PASHA,** called DELİ (the devil), a native of Yeşilhisır in Anatolia, served in the imperial palace as a common wood-cutter till he attracted the attention of Murad IV by an example of his extraordinary physical strength; his rough pranks and witty sallies were no less pleasing to the sultan, who after a short time made him his muşkât (confidant) and bayyuk nakhrâr (hanger of the Horse). On the 4th Mevlîmâr 1444 (30th June 1634) he was appointed kapudan paşa and accompanied the sultan on his campaign against Erivan; on his way back, on the 6th Dirâmâd I 1045 (21st October 1635), he received the governorship of Egypt, which he held till the 15th Dirâmâd II 1047 (4th November 1637). On the accession of Sultan Ibrahim (Shawal 1049 = February 1640) he was again appointed kapudan paşa and soon afterwards on the 22nd Dirâmâd I 1050 (9th Sept. 1640) muşkât (military governor) of Oczakow. In the following year he besieged for three months Axos, which had been taken by the Cossacks and then went in late autumn to Bosnia as wâli. In 1054 (1644) we find him for a brief period governor of Bagdad; from there he was transferred to Ramadi of the same year (November 1644) as wâli to Būdīn (Oßen). After the outbreak of the war with Venice he went to Crete as muşkât of the fortress of Canaia, taken on the 17th August 1645, and landed there on the 15th Dhu'l-Hijjâ 1055 (1st February 1646). In July of the same year he took over the supreme command of the forces in the island, captured the important town of Rhethymnos and conducted the siege of Kandia in the following years but was unable to take this last bulwark of Venetian power. After being thirteen years in the field and having on the one hand assured the success of Turkish arms by his remarkable bravery, and on the other won over the native Greek population to Turkish rule by diplomatic measures, he was recalled towards the end of 1668 (middle of 1669) and on the 14th Shawal (15th July 1669) appointed kapudan paşa. On the 7th Rabî I 1069 (3rd December 1668) he received the governorship of Rumeli; the grand vizier Köprülü Muhammed Pasha, who had long been meditating the ruin of Husain, was hated by him on account of his popularity and because he was a candidate for the highest office in the empire, succeeded by his intrigues in persuading the Sultan some months later — in the spring of 1669 — to imprison him in the Seven Towers and have him executed for alleged abuse of his powers. *Bibliography: Naḥm, Ta'rīkh (particularly ii. 688 sq.); Hâdiji Khalîfa, Fârdîkî and Taqsim al-Tawârîkh; Kantemir, *History of the Ottoman Empire*, p. 514 sq.; v. Hammer, do., vol. v. and vi.; Zinkeisen, do., vol. v. and vi. The exact date of Husain Pasha's execution is not given. The year and approximate date — shortly after Dirâmâd I 1069 (March-April 1669) — are certain from Na'ma and Levin Warner's letter of the 22th April 1669 (De Ribus Turcicis Epistolas ineditas, p. 57 sq.). (J. H. Mordtmann.)

**HUSAIN PASHA,** surnamed KİCİK on account of his diminutive stature, was originally a Georgian slave, who was offered to Sultan Mustafa III by his master, the Sâlîhdâr İbrahim Pasha in 1767-1768. He grew up in the Imperial Serai together with his foster brother, afterwards the Sultan Selim III. When Selim came to power on the 11th Redjeb 1203 (9. 4. 1789) Husain became his first attendant (baş kadıncı) and a few years later on the 16th Redjeb 1206 (10th March 1792) he was appointed kapudan paşa with the rank of a vizier. In accordance with Selim's plans of reform and with almost unrestricted authority from him, Husain worked hard for the twelve years during which he occupied this post, at the reorganisation of the imperial navy and the arsenal. He succeeded in reorganising the whole Ottoman navy, on the model of the British and the French navies, with the help of foreign technologists, so that he is fully entitled to be called the founder and creator of modern Ottoman naval power. As leader of the fleet he had less occasion to add to his fame. It was difficult to defend the oppressive contributions levied on him by the islands of the Archipelago, during his annual expeditions in the Aegean Sea; these were partly the cause of the Greek insurrections. On the other hand he managed more or less to suppress piracy in these districts; on his first cruise, for instance, he destroyed Lambro Katoou's (Caniati) pillaging fleet (1792) and even captured this latter's infamous lieutenant, the pirate Karakazani. Although he knew little or nothing of military matters, he was entrusted in 1212 (1798) with the command of the army sent against the famous Pas naar oğlu of Widdin. Husain Pasha besieged and blockaded him with a fleet of gunboats, but without success, so that he gave up and returned to Constantinople in autumn. In 1800 he spent several months cruising in the waters of Alexandria, and in the following year he united his forces to the British sent to reconquer Egypt. At the beginning of March he landed in the vicinity of Alexandria at the head of 6000 men, mostly Albanians, and, joining the British forces, took part in the campaign against the French. As is well known, this expedition ended with the latter's retreat from Egypt. At the beginning of Şabbiya 1216 (Dec. 1801) he returned to Constantinople, where he was received and celebrated by the people as the reconqueror of Egypt, and covered with honours by the Sultan. On the 23rd Şabbiya 1218 (7th Dec. 1803) Husain Pasha died in Kuruçeşme (Bosphorus), not yet 46 years of age, in the summer residence of his wife, the Princess Esma Sultan. His mausoleum in Éjyub was long considered a curiosity of the capital, and became famous as did the epitaph on it composed by the historian Wâṣif (cf. v. Hammer, Constantinopolis und der Bosphorus, Vol. ii. p. lxviii.; Wâṣif, Ta'wilük, p. 11).
His first independent work devoted to ridiculing the habits of European customs: İkisiyle Ağıl (The Looking-glass and the Cock) already shows the true character of his talent. In 1315 (1895) appeared the humorous satirical novel, Murahhibe (The Lady Teacher), 2nd ed. 1315: probably on the whole his best work, which at once made him famous. He boldly attacks the system of education in vogue in Constantinople with its usual formlness and artlessness of the surroundings. In his work there is a certain connection with the popular art of the storytellers (matâbâk, q.v.) and their masterly skill in imitating the real, rough everyday life of the people, which Rahmi was the first to introduce into Turkish literature. His scenes from everyday life reproduce the vernacular and form a regular mine for linguistic and ethnographic research with their idioms, the exact wording and meaning of which seems sometimes even to escape the author himself and which will be sought in vain anywhere else. In striking contrast with this natural, realistic style, which assures Rahmi an abiding importance, is his other style supposed to be distinguished and professing to be cultured, which is a hybrid between the language of journalism and the intolerably involved Turkish official language, the notorious bab-i-âliâyî ʻüssîhî, and lowers him to the most ordinary mediocrity. Apart from the composition of his scenes of popular life, the whole of the rest of his artistic technique is on the same level of commonplace mediocrity. In his novels one cannot help receiving the impression of seeing before one's eyes a collection of splendid pictures with a very poor explanatory text.

In spite of his polemical theorising of recent years, Rahmi does not take his work as an author very seriously. His easily won reputation prevented a strenuous, profitable development of his talent and a thorough and artistic working up of his usually licentious themes. The construction of the plot almost always leaves everything to be desired. The plots are too obvious and awkwardly developed. The endeavour to be didactic in the secondary episodes not infrequently destroys the artistic effect of the scenes borrowed from the life of the people. Rahmi who had studied French models, professes to be a realist, although he condemns Zola as too extreme. His humour, his choice of subject and his method have earned him the not unappropriate name of the Turkish Paul de Kock. An ardent patriotism impels him to emphasise the characteristics of his own people which he vindicates in contrast with the sickly imitation of foreign customs and to lay bare the hain caused by slavish imitation of the pseudo-European in Ottoman society. But he firmly avoids any idealising and does not spare with his humour the old types of Turkish society, whom he draws in contrast to the modern excessences. He began his activity as an author with translations from the French of which an example may be seen in vol. iii. of the Arakel kitab-i-khânesî djebe romanlary (Constantinople 1309 = 1891-2), which contains the Parida bir tečâhî (A Marriage in Paris) and a humorous story by Jules Clarétie (İki refîk-i tahvîr) and also a translation of Alfred de Musset's Frédéric et Bernette.
continued, with brief intervals of peace, until Bahāʾ entered Dzhənpur at the head of a victorious army and established his son Bābār there as viceregal. Husain Shāh fled to Bīhār, but was treated with great generosity by his conqueror, who allowed him to retain a tract of country yielding a revenue of five lakhs a year. Bahāʾ died in 894 (1498) and was succeeded by his son Si-
kandar; in 1493 Husain Shāh made a last at-
tempt to recover his kingdom, and collecting a large force marched against Sikandar Lodi; but he was defeated in the neighbourhood of Banfras and fled to Gaur to the court of ʿAlāʾ al-Dīn Husain Shāh, king of Bengal, by whom he was honourably received; he died there in 905 (1499), but his body was interred at Dzhənpur, close to the superb Džamīʿ Masjīd which had been erected during his reign.

Bibliography: Frischka, Gulshan-i-Ibrāhīmi (Makāla vii); Nīmat Allūh, Muḥāsan al-Aṣfīḥīn (chap. III); Elliot-Dowson, History of India, v. 82 sqq. B. Dorn, History of the Afghans, translated from the Persian of Neamat Ullāh, i. 49 sqq.

HUSAIN_WĀʾIZ KASHIPI. [See Khāsimi.]

HUSAINĀBĀD, the name of a town in Ben-
gal, which was a mint of the Kings of Bengal Husain Shāh, Naṣrāt Shāh and Mahmūd Shāh III between the years 899 (1493) and 939 (1532). It is generally supposed to be a name of the ca-
pital Gaur [q. v.], bestowed on it by Husain Shāh, but Blochmann held that it was near Gaur but not identical with it. The identity of Gaur does not admit of much doubt, and similar titles (Naṣrātābād, Mahmūdābād) seem to have been bestowed upon the same capital by Naṣrāt Shāh and Mahmūd Shāh. The name Husainābād (or Ḥusainābād) on the copper coins of the Mughal Emperor Shāh ʿAlam II probably also refers to Gaur.

HUṢAINĪ, plur. Huṣainiyān, a name borne by those sherifs of Morocco who trace their descent from al-Ḥusain, son of ʿAlī and Fāṭima, the daughter of the Prophet. Unlike the Ḥasanī [q. v.] the Huṣainī came at a relatively late date to Morocco, where they in numbers at any rate never attained the importance of their cousins. They form two main groups, the Ṣaffāliyūn and the Ṣafāliyūn.

The Ṣafāliyūn (i. e. those who came from Sicily) were driven from their original home by the Nor-
man conquest. They fled first to Spain and thence to Morocco in the reign of the Marinid Sultān Abu l-ʿAbbās Aḥmad b. Abū Sālim (end of the xivth century). They trace their descent from al-Ḥus-
ain through ʿAlī al-Riḍā.

The Ṣaḥāliyūn, the descendants of al-Ḥusain through ʿIbrāhīm al-Murtada, left Spain after the conquest of Granada by the Christians and sought refuge in Fās (1492).

wat al-Anfāṣ, Fās, 1316, ii. 218. (A. COUR.)

HUṢAINĪ-preview AMĪR, (RUKN AL-DĪN ḤU-
SAIN B. ʿALĪM ʿABD AL-ḤASAN), born at Guzīl, a village in Ghūr, in 671 (1272), was a famous a-
thor and a renowned Sūfī poet. He came to Multān and became a disciple of Ṣukn al-Dīn Abu l-ʿAṭāʾ (b. 738 = 1335) the grandson and successor of Bahāʾ al-Dīn Zakariyāʾ of Multān (ob. 666 = 1267). He afterwards settled in Herāt where he died, according to the Nafṣār al-Uns, in 738 (1318), according to the most recent researches however not till 729 (1270). Among his works the following may be mentioned: Nafṣāt al-Arwāḥ a Sūfī work in mixed prose and verse, in which the rules of the spiritual life are explained and illustrated by anecdotes and sayings of holy men; Zad al-Muṣafīrīn "Provisions for travellers", rules of the religious life, illustrated by anecdotes and fables, and many other tracts such as Kasr al-
Rumāz, Khūṣ al-Arwāḥ, Shārīʿ muṣafīrīn, Ni ʿAm, Tūrūb al-Muṣafīrīn, all of them treating of mystic love.

(M. HIDAYET HOSEIN.)

AL-ḤUSAIN B. DĪKR AL-KALBĪ, ABU L-KHAṬṬĀB, GOVERNOR OF SPAIN 1255-1277 (748-765). After Bulāq b. Bishr [q. v.] had fallen in battle in 1242 and his successor Thālabā b. Sālāma had sold the Spanish Anāris defeated and taken prisoner by him as slaves for a low price, Ḥanūqālā b. Saʿwān, governor of Ibrīriya, sent Abu l-Khaṭṭār to Spain as governor. According to Ibn al-Kītiya and Ibn al-
aṭīr, this was done at the express command of the Caliph Ḥīṣām, after Abu l-Khaṭṭār, who hated the Syrians bitterly, had sent him a poem in which he reminded him of the enmity of the Kai-
sus. Abu l-Khaṭṭār once set free the imprisoned Arabs and thus broke the resistance of the Syrians by sending a number of their chiefs to Africa and dividing the rest among various towns and dis-

tracts in Spain, where they were allotted for their support one third of the harvest which the na-
tives had to pay to the state treasury. But their discontent continued and became dangerous to the governor, when a certain chief named al-Ṣumail [q. v.], who had been personally insulted by him, undertook the leadership of the Syrians and caused the civil war to flare forth again. When Abu l-Khaṭṭār met them on the banks of the Guada-
lete, a portion of his troops failed him so that he had to take to flight and was captured (745). Soon afterwards, however, he was released by some of his followers but a new attempt to face the Syrians had the same lamentable result except that Abu l-Khaṭṭār escaped his enemies this time. But he had now to agree to make common cause with Ibn Ḥūraith, who had at first been on the side of his enemies but whose claims to be re-

cognised as Emir of Spain had met with the re-

cistance of al-Ṣumail; Abu l-Khaṭṭār had even to grant him precedence. Nevertheless, both were captured in an encounter at Secunda on the Guad-
dalquivir, opposite Cordova, and put to death (130 = 747).

Bibliography: al-Kaṣīm al-Maghribī, ed.
Huta'i was published with an introduction and explanatory notes by the present writer (in vol. 46 and 47 of the Zeitschr. d. Deutsch. Morgenl. Gesellschaft, and repinted, Leipzig, 1893), and later with Sukkar’s commentary and glosses by the editor, Aljadid al-Shajjii (Cairo, Taktaddum press, n.d.). In addition to the ms. mentioned in the former edition the Dīwān (with Sukkar) also exists in Stamboul, Fatih-Library, no. 382 (a copy of it in Cambridge, see E. G. Browne’s Handbook n°. 384); a portion in the catalogue ‘Atīf Ef. no. 2777 (according to Rescher).

Bearers of the name al-Huta’i are also found in later times; an Abu l-‘Abbās b. al-Huta’i is quoted by Subkī, Tāhāt al-Shāfi’īyya, iv. 234. 2, and an Ahmad b. al-Huta’i, ibid., 279, 12 (both in the vih century A. H.). (I. GOLDBERG).

HUTAIM (HETEIM, HETEMI, HETEM, HETO, plural. Hutaimān, Hetaimān), a large tribe of nomads which is scattered throughout the Hijāz, Najd, and Egypt. Their chief settlements are at Djjald, the Wa’ab, and al-Wadż. Smaller bodies of the Hutaim live near al-Hijr, al-Ulah (‘Aliya), Khaibar (there they are called Abi Ameen), in the Harrat al-Ebhnin (near Khaibar), in the Harrat al-Wadi, in the Harrat al-‘Abi, and in the Harrat al-Hafr, where they are neighbours of the Ḥjar, and in the vicinity of Mecca. In Egypt they are found south of Helwān and in considerable numbers in the eastern delta near Za‘ānik. During the spring after the rainy season many of the Hutaim encamp with their herds of sheep and goats on the eastern shore of the Red Sea at the exit from the Gulf of Ḍakaba (Nu’mān [Nasām, Neīmān, etc.]), and on the west coast of the sea at Abū Sha’r, where they catch fish, which are numerous there, and tortoises which yield excellent shell.

In Djjald, al-Wadż, Yamna, and other ports they sell fish, butter, milk, honey, goats, and sheep to the pilgrims and caravans. The following subdivisions of the Hutaim are mentioned: Ibn Barrak, Ibn Damuq (son al-Khulai), Ibn Djellad, ‘Arab, al-Kabid (Gahid), Fehiyt (see Fehiy), al-Khairat, al-Noqābāra, Bedwana (on the Jubbel Dokhan below al-‘Aliyya), Banū Rashid (numbering about 2000 souls), al-Dirabāsiya, Kerabas (al-Wadż), al-Noqām, al-Thiabba or Ibn Simra (Simeri, the three latter at Khaibar), also the so-called ‘Arab al-Hisar (south of Helwān, very prosperous) and the Banū ‘Atha (in the eastern Delta).

The origin of the Hutaim is unknown; they are therefore not regarded as Bedouins and are despised by the Arabs who do not intermarry with them; the ‘Arab (al-Hisar) so feared for their treachery are held to be related to them; the traveller Rappel considers them to have come from Yemen. According to legend, the Prophet once visited a camp of the Hutaim where a dog was served up to him as a meal; Mu‘ammad in anger is said to have forbidden his followers to enter into marriages with them or to eat with them. The travellers Dürkhardt, Ruppel, and Wellsted describe them as industrious, kind and hospitable. The Hutaim on the islands of the Red Sea are poor and live under wretched conditions, they dwell partly in caves and caverns; they pay tribute (two dollars a head) to the Jujwāt (q. v.). The Hutaim in Hijjāz and Najd are more prosperous than Bedouins usually are. Their camels are of the finest. They are well armed and excellent shots. A portion of the Hutaim pays tribute to the Shammar chief Ibn Rashid.
HUWA HUWA, literally "he is he", or "it is it", means:

a. in logic what is represented as entirely identical e. g. "Muhammad b. 'Abd Allah" and "the Prophet": (Peano and the modern logicians express this equation by the sign =).

b. in Mysticism the state of the same which completed personal unity testifies to divine unity in the world.

AL-ḤUWAṬTĀT (Ḥwētāt, Ḥwētāt, Ḥwētāt, Ḥwētāt, Ḥwāsāt, Ḥwāsāt, sing. Ḥwāṣāt), an Arab tribe in the northern Ḥijāz and on the Sinai peninsula; their settlements in the Ḥijāz reach southwards from al-ʿAqaba to beyond al-Walīdih; they are neighbours of the Balī [q. v.] and Djuhānā [q. v.] with the latter of whom they are on bad terms. Formerly the Djuhānā [q. v.] occupied their settlements.
